SPECIFICATIONS

MINI DISC RECORDER AM-X10

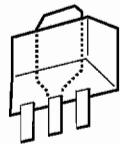

Disc	MiniDisc
Scanning method	Non-contact optical scanner (Semiconductor laser application)
Recording system	Magnetic polarity modulation overwrite system
Rotation speed	Aprox. 400 - 900 rpm (CLV)
Sampling frequency	44.1 kHz
No. of channels	Stereo: 2 channels Monaural: 1 channel
A-D, D-A converter	1-bit
Frequency	20 - 20000 Hz +0.5 - -1.0 dB
Wow and flutter	Unmeasurable (±0.001% W.PEAK)
Input	RCA phono jack (REC/LINE IN) Optical cable jack (DIGITAL IN (OPTICAL))
Output	RCA phono jack (PLAY/LINE OUT) Optical cable jack (DIGITAL OUT (OPTICAL)) Headphones jack (PHONES, stereo minijack)
Power	230 V AC, 50 Hz
Power consumption	16 W
Dimension (W × D × H)	260 × 325.1 × 88.5 mm
Weight	3.0 kg

SPEAKER SYSTEM SX-NAVH80

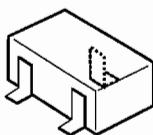

Cabinet type	3 way, bass reflex (magnetic shielded type)
Speakers	Woofer: 160 mm cone type Tweeter: 60 mm cone type Super tweeter: 20 mm ceramic type
Impedance	6 ohms
Output sound pressure level	88 dB/W/m
Dimensions (W × H × D)	250 × 396 × 250 mm
Weight	5 kg

- Design and specifications are subject to change without notice.

PROTECTION OF EYES FROM LASER BEAM DURING SERVICING

This set employs laser. Therefore, be sure to follow carefully the instructions below when servicing.

WARNING!

WHEN SERVICING, DO NOT APPROACH THE LASER EXIT WITH THE EYE TOO CLOSELY. IN CASE IT IS NECESSARY TO CONFIRM LASER BEAM EMISSION. BE SURE TO OBSERVE FROM A DISTANCE OF MORE THAN 30cm FROM THE SURFACE OF THE OBJECTIVE LENS ON THE OPTICAL PICK-UP BLOCK.

- Caution: Invisible laser radiation when open and interlocks defeated avoid exposure to beam.
- Advarsel: Usynlig laserstråling ved åbning, når sikkerhedsafbrydere er ude af funktion. Undgå udsættelse for stråling.

VAROITUS!

Laiteen Käyttäminen muulla kuin tässä käyttöohjeessa mainitulla tavalla saattaa altistaa käyt-täjän turvallisuusluokan 1 ylit-täälle näkymättömälle lasersäteilylle.

VARNING!

Om apparaten används på annat sätt än vad som specificeras i denna bruksanvisning, kan användaren utsättas för osynlig laserstrålning, som överskrider gränsen för laserklass 1.

CAUTION

Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

ATTENTION

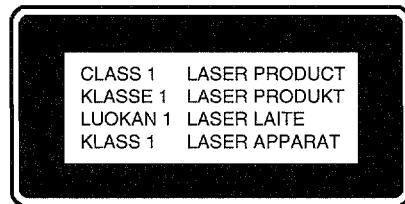

L'utilisation de commandes, réglages ou procédures autres que ceux spécifiés peut entraîner une dangereuse exposition aux radiations.

ADVARSEL!

Usynlig laserstråling ved åbning, når sikkerhedsafbrydere er ude af funktion. Undgå udsættelse for stråling.

This Compact Disc player is classified as a CLASS 1 LASER product.

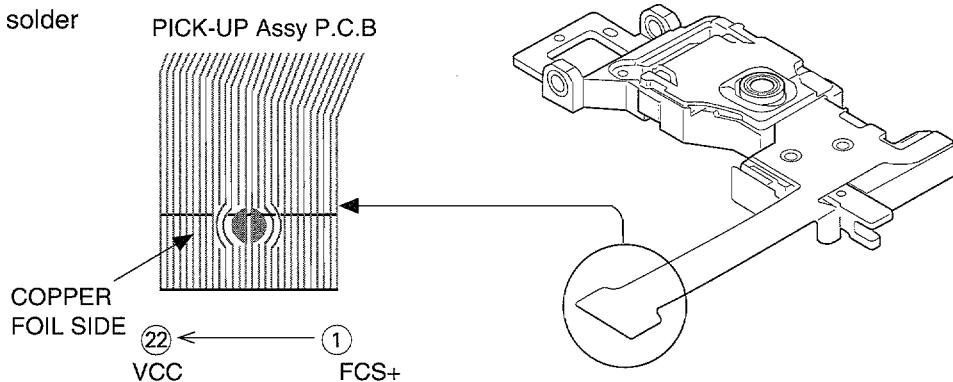

The CLASS 1 LASER PRODUCT label is located on the rear exterior.

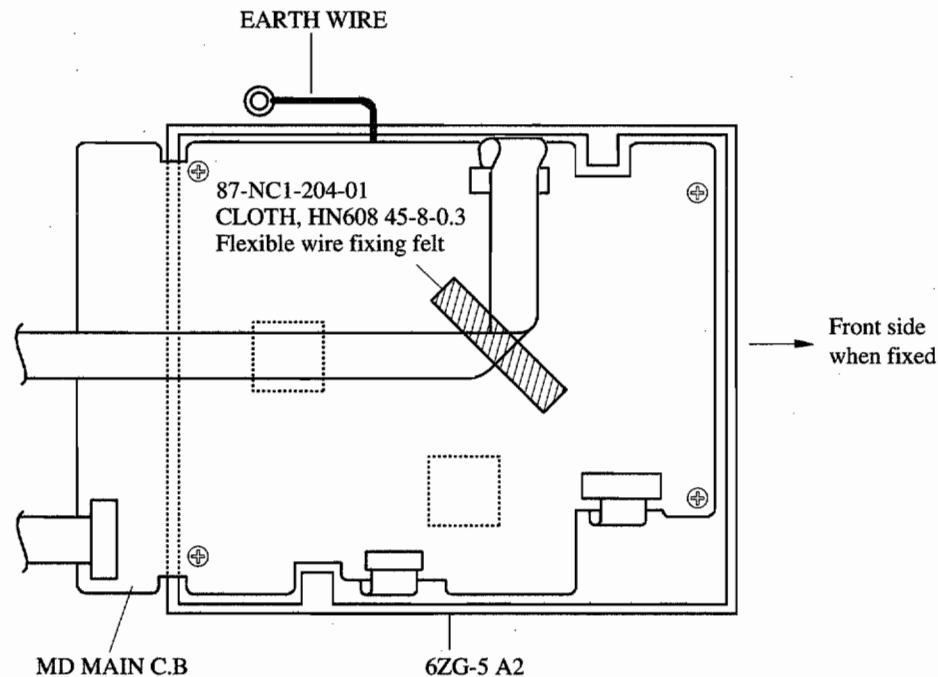

Precaution to replace Optical block (KMS-194C)

Body or clothes electrostatic potential could ruin laser diode in the optical block. Be sure ground body and workbench, and use care the clothes do not touch the diode.

- 1) After the connection, remove solder shown in the right figure.

MD DISASSEMBLY INSTRUCTIONS

1. Remove the HLDR, MD.

- 1) This MD mechanism uses the three types of spring. Be careful for the types of spring when attaching the HLDR, MD.
 Spring **A**: Black 10 turns
 Spring **B**: Silver 11 turns
 Spring **C**: Green 9 turns

<BOTTOM VIEW>

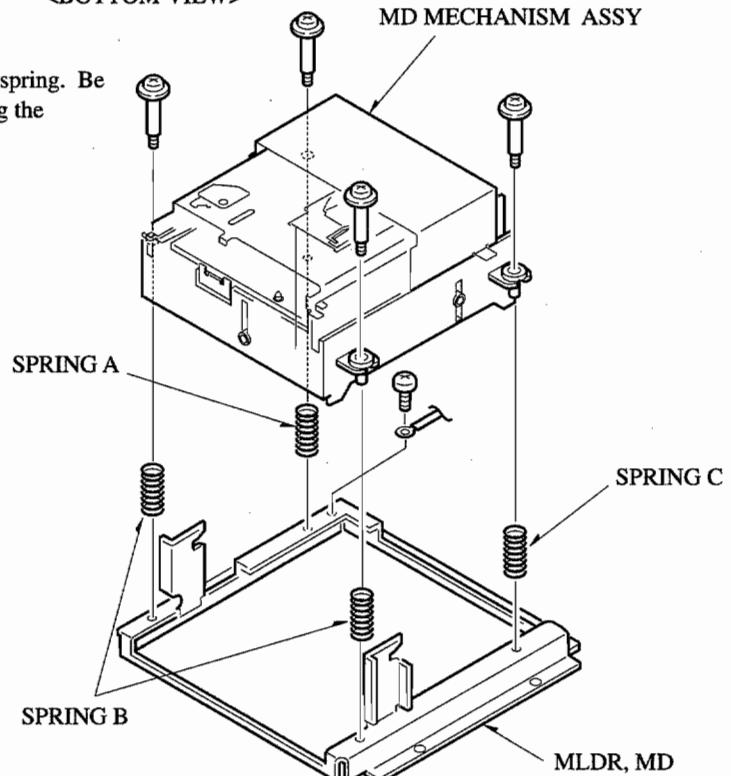

Fig-1

2. Remove the HOLD, RACK.

- 1) Rotate the GEAR, RELAY so that the HLDR, RACK moves to the PLAY position.
- 2) Deflect the hook (①) and pull out the HLDR, RACK in the direction of the arrow (②).

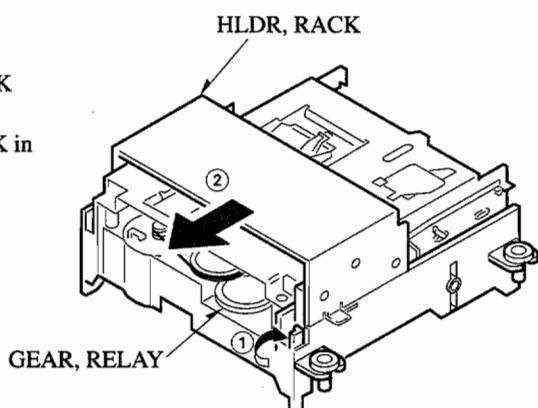

Fig-2

3. Remove the CHAS, LOADING ASSY.

- 1) Remove the two screws, connector and FLEX C.B.
Remove the HLDR ASSY, LOADING.

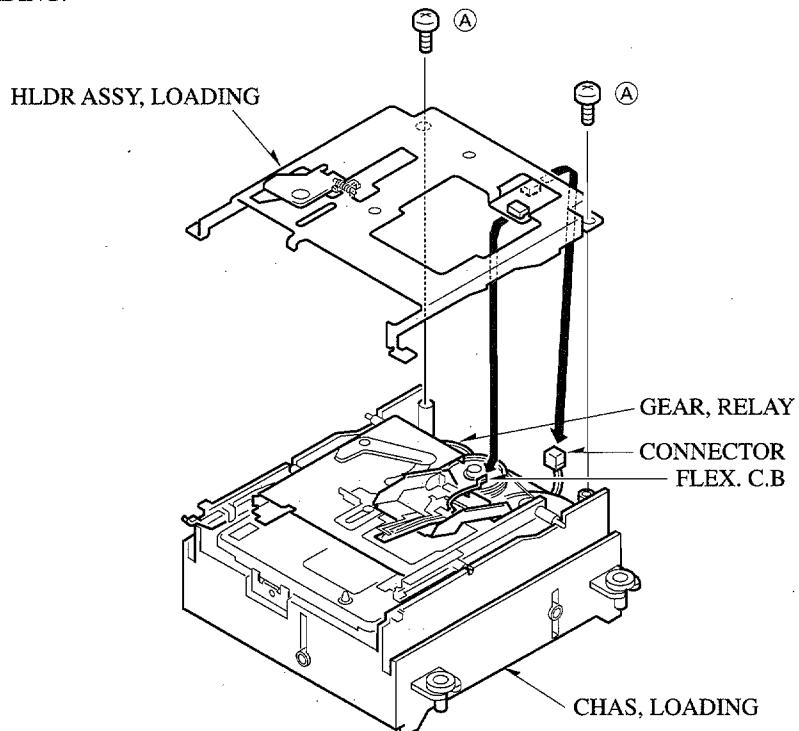

Fig-3

- 2) Confirm that the OWH has moved up. Then pull out the HLDR ASSY, CTRG in the direction of the arrow.

Note: Before starting this work confirm that the OWH (over-write head) has completely moved up. When the OWH is lowered, the HLDR ASSY, CTRG will be caught and the OWH will be bent.

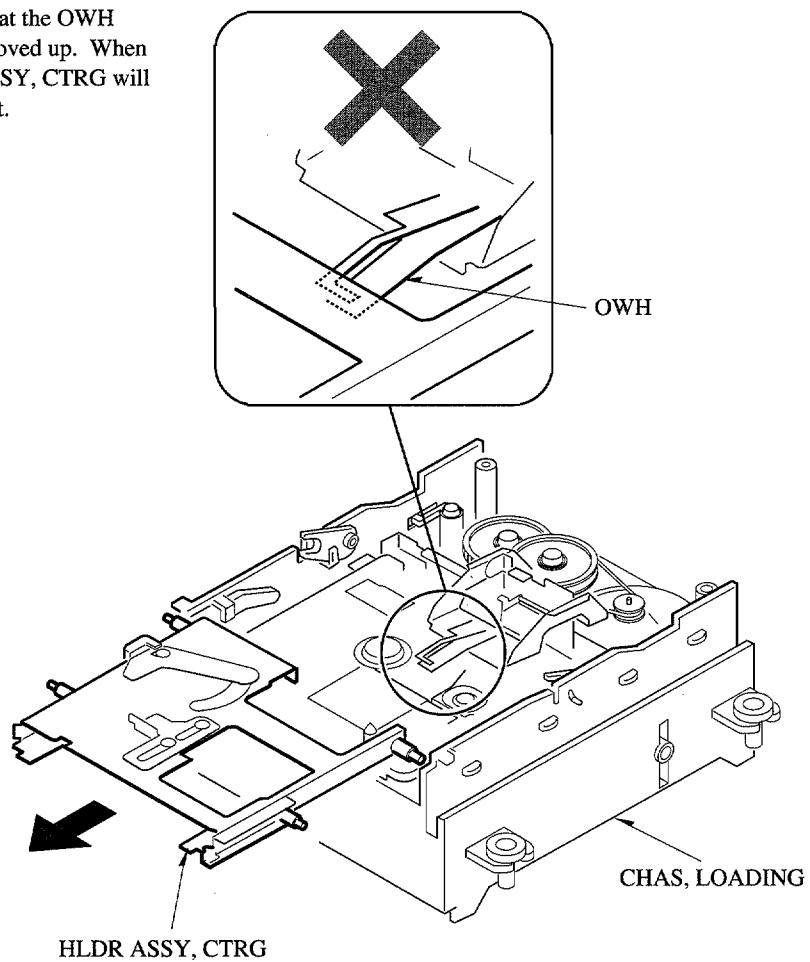

Fig-4

4. Remove the MD mechanism.

- 1) Remove the two screws **(A)** and the screw **(B)**, then remove the MD mechanism.

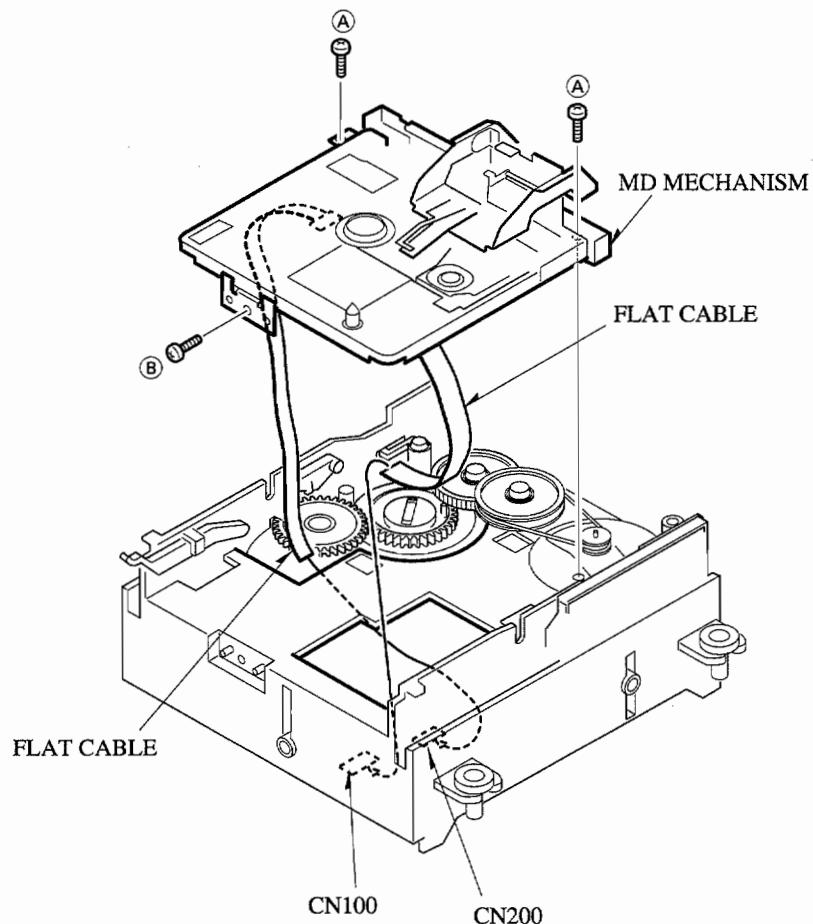

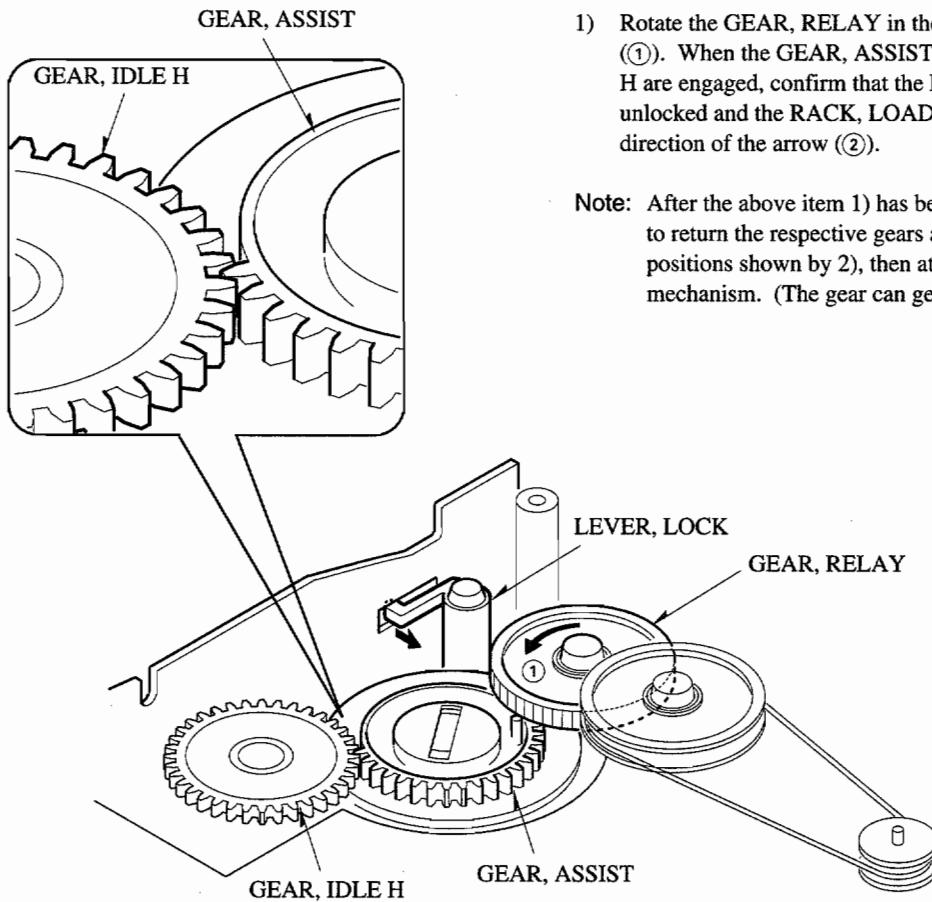

Fig-5

5. Gear and Lever Positions

- 1) Rotate the GEAR, RELAY in the direction of the arrow (①). When the GEAR, ASSIST and the GEAR, IDLE H are engaged, confirm that the LEVER, LOCK is unlocked and the RACK, LOADING L moves in the direction of the arrow (②).

Note: After the above item 1) has been confirmed, be sure to return the respective gears and levers to the positions shown by 2), then attach the MD mechanism. (The gear can generate the phase error.)

Fig-6

- 2) Confirm that the RACK, LOADING L is located at the loading end position, and the LEVER, LOCK locks the RACK, LOADING L when boss of the GEAR, ASSIST is located in the position as shown.

Note: When boss of the GEAR, ASSIST is positioned off the center in the direction of the arrow, EJECT cannot be performed. After the above item 2) has been confirmed, be sure to return the respective gears and levers to the positions as shown, then attach the MD mechanism. (The gear can generate the phase error.)

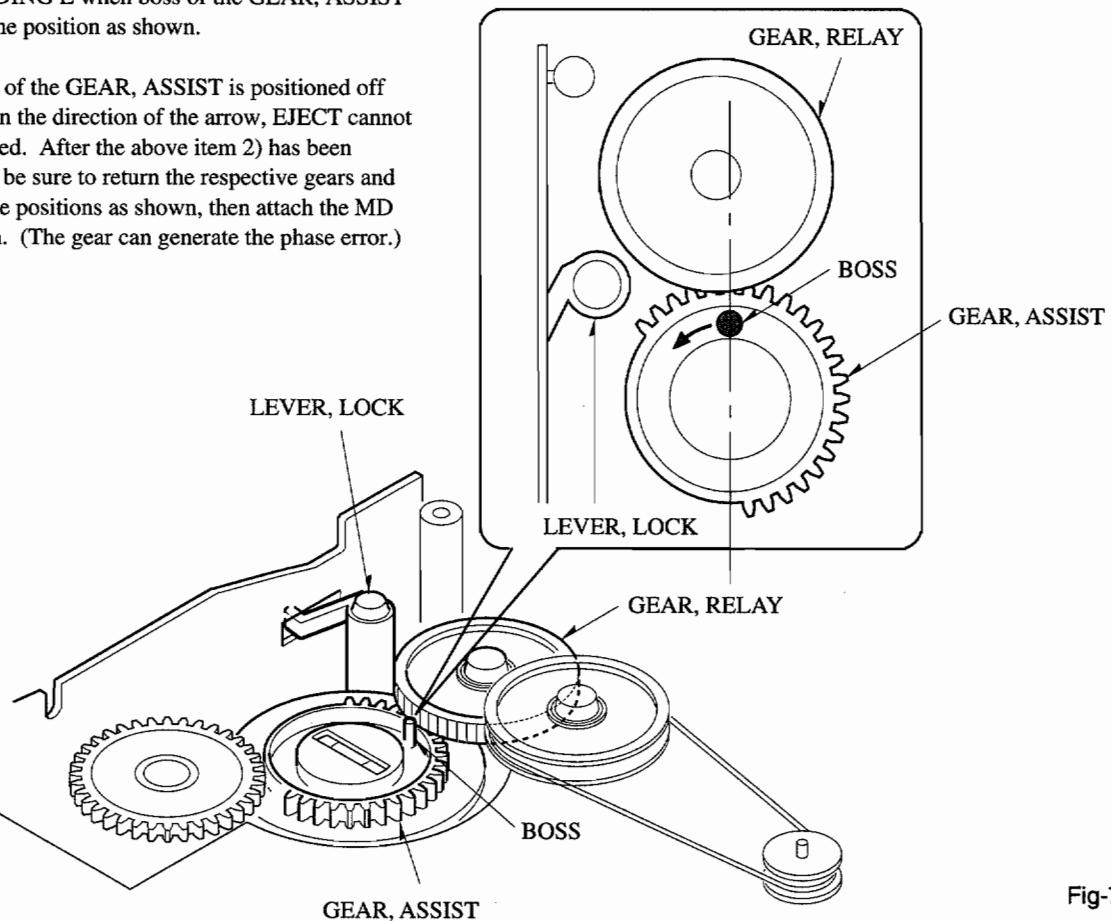

Fig-7

6. How to attach the MD mechanism

6-1. Gear and lever positions

- 1) Boss of the GEAR, ASSIST must face with the GEAR, RELAY when the boss is located at the center. When they are facing each other, confirm that the RACK, LOADING L is positioned at the loading end position and the LEVER, LOCK locks the RACK, LOADING L. (Refer to Fig-8.)

Note: When boss of the GEAR, ASSIST is positioned off the center in the direction of the arrow, EJECT cannot be performed.

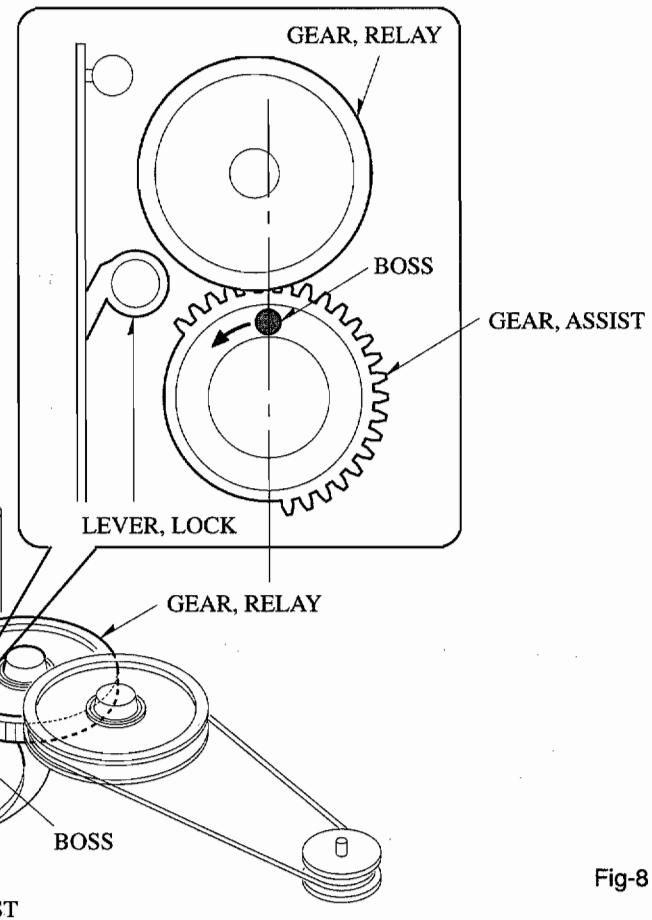

Fig-8

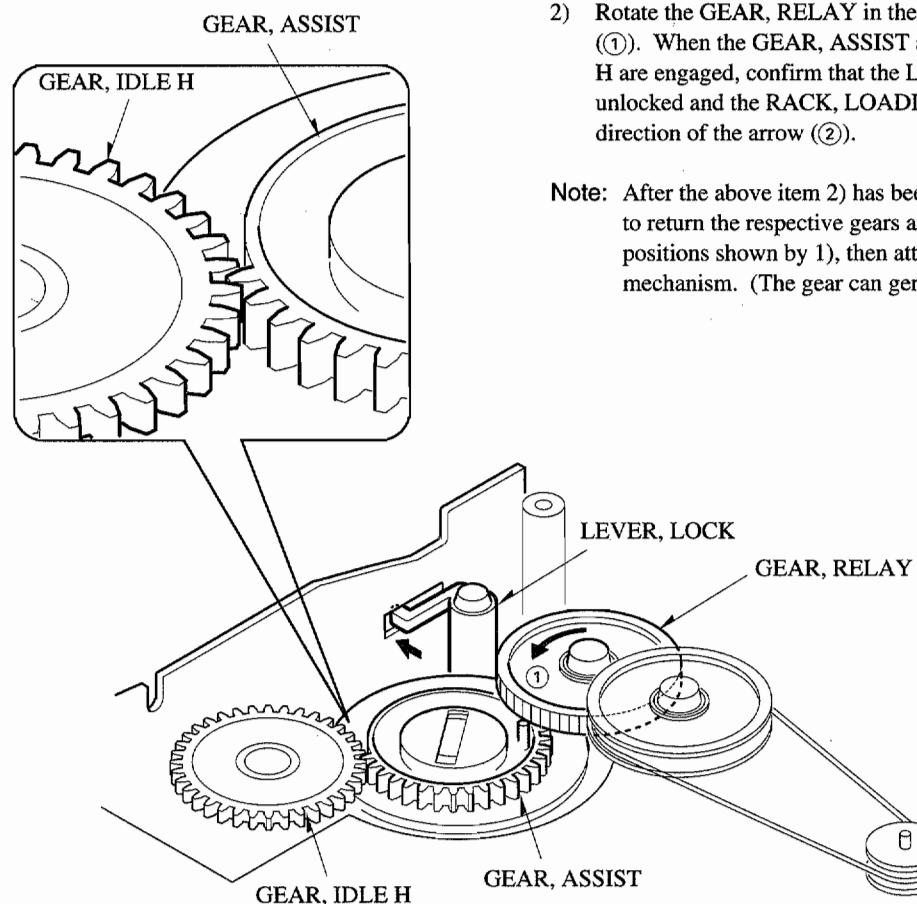

Fig-9

- 2) Rotate the GEAR, RELAY in the direction of the arrow ((1)). When the GEAR, ASSIST and the GEAR, IDLE H are engaged, confirm that the LEVER, LOCK is unlocked and the RACK, LOADING L moves in the direction of the arrow ((2)).

Note: After the above item 2) has been confirmed, be sure to return the respective gears and levers to the positions shown by 1), then attach the MD mechanism. (The gear can generate the phase error.)

- 3) Before attaching the MD mechanism, remove the SPR-T, LEV LOADING L/R from the boss of the LEVER, LOADING. (Refer to Fig-10.)
- 4) Attach the MD mechanism using two screws (Ⓐ) and the screw (Ⓑ).

Note: Be sure to route the two flat cables through the positions as shown.

- 5) Return the SPR-T, LVR LOADING L/R to the boss of the LEVER, LOADING. Place the arrow portion of the spring on top of the MD mechanism as shown.

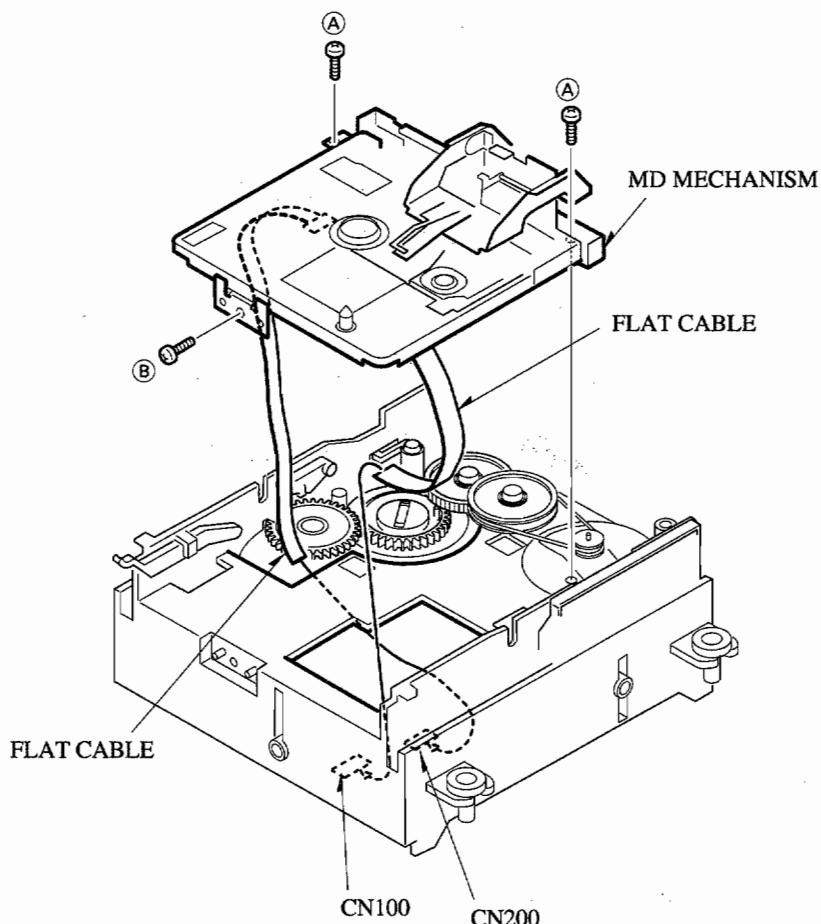

Fig-10

6-2. How to attach the CHAS, LOADING ASSY

(Refer to Fig-11.)

- 1) Confirm that the OWH has moved up. Then attach the HLDR ASSY, CTRG in the direction of the arrow.

Note: Before starting this work confirm that the OWH (over-write head) has completely moved up. When the OWH is lowered, the HLDR ASSY, CTRG will be caught and the OWH will be bent.

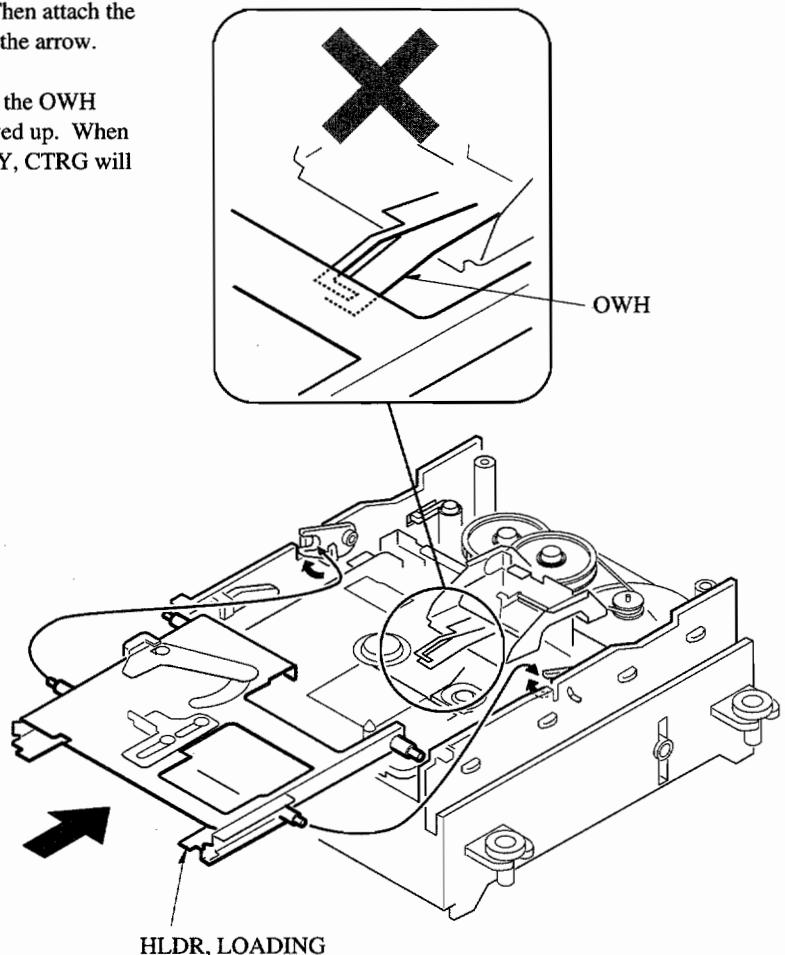

Fig-11

- 2) Attach HLDR ASSY, LOADING, insert the connector, FLEX C.B and fix them with two screws (Ⓐ).

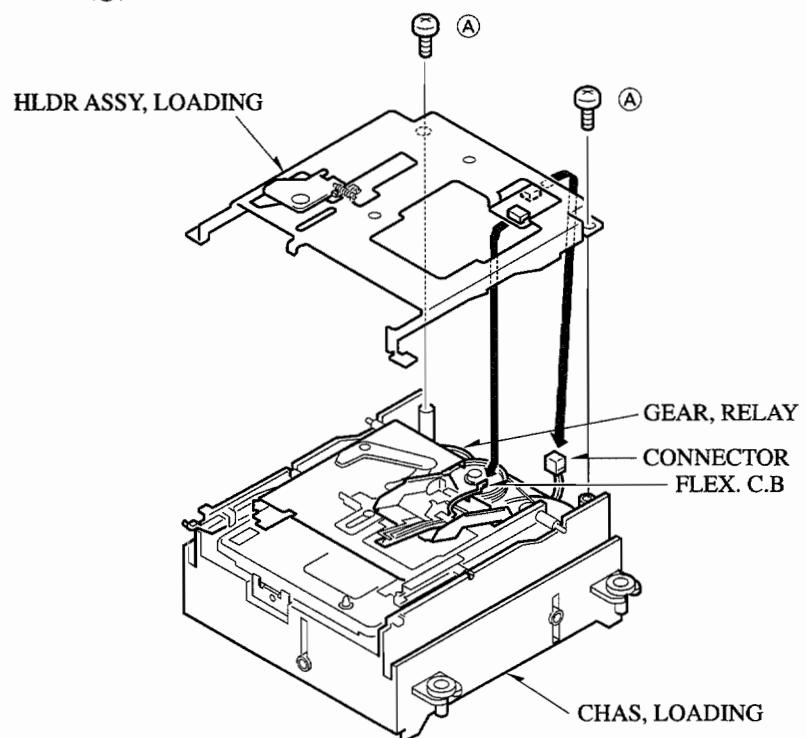

Fig-12

- 3) Deflect the hook (①) and attach the HLDR, RACK in the direction of the arrow.

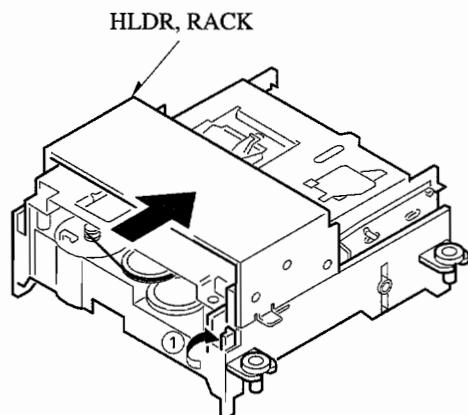

Fig-13

6-3. How to attach the HLDR, MD (Refer to Fig-14.)

- 1) This MD mechanism uses the three types of spring. Be careful for the types of spring when attaching the HLDR, MD.

Spring Ⓐ: Black 10 turns

Spring Ⓑ: Silver 11 turns

Spring Ⓒ: Green 9 turns

IC DESCRIPTION
IC, M38198MC-107FP

Pin No.	Pin Name	I/O	Description
1, 2	KEY0, 1	I	Key input 0, 1 (AD).
3	LDSW	I	Loading control : LOAD switch input.
4	RECSW	I	Loading control : REC switch input.
5	PBSW	I	Loading control : PB switch input.
6	LOAD	O	Loading control : Motor output 1.
7	EJECT	O	Loading control : Motor output 2.
8, 9	—	—	GND
10	SLOW	O	Loading control : Motor speed SLOW output.
11	LLATCH	O	AI NAVI: Latch output.
12	DATA	O	AI NAVI: Data output.
13	LCLK	O	AI NAVI: Clock output.
14, 15	ENC-A, B	I	Rotary encoder phases A and B input.
16	RCLK	O	To electronic volume control Clock output (Not used).
17	RDATA	O	To electronic volume control Data output (Not used).
18	—	—	GND
19	ARDY	O	Main CPU handshake: Data ready output.
20	ACLK	I	Main CPU handshake: Clock input.
21	MD DISP OUT	O	Main CPU handshake: Data output. (LSB first).
22	MD DISP IN	I	Main CPU handshake: Data input (LSB first).
23	—	—	GND
24	SREQ	O	Main CPU handshake: Send request output.
25	T-REQ	I	Timer recording input
26	S-PW	I	Power switch input
27	F-MD	I	Function switch input
28	M-REC	O	Recording detection:"H" when recording
29	—	—	Not used. (Connected to GND)
30	MREQ	I	Main CPU handshake: Receive request input.
31	—	—	Not used.
32	REMOTE	I	Infra-red remote control input.
33	TEST	I	Test mode input. Turning on the main power while this pin is L enters the test mode.
34	ACOFF	I	AC power failure detection input. Judged as power failure when L is input to this pin.
35	RESET	I	Reset input.
36, 37	—	—	Not used.
38	OSC1	I	An external 8 MHz ceramic oscillator is connected to pin.
39	OSC2	O	An external 8 MHz ceramic oscillator is connected to pin.
40	GND	—	CPU digital GND.
41	SRST	O	Main CPU reset control output. Reset when this pin is set to L.
42	START	O	Hot start output of the main CPU. Re-start at L.
43	SEG37	O	FL's ever lighting segment control output.
44	MODE	I	MODE input (during initialization only).
45-60	GRID1-16	O	FL digit output.

Pin No.	Pin Name	I/O	Description
61	SEG36	O	FL segment output
62	SEG35	O	FL segment output.
63	SEG34	O	FL segment output.
64	SEG33	O	FL segment output.
65-90	SEG32-7	O	FL segment output.
91	VCC	I	4.2 to 4.7V is input to this pin.
92-97	SEG6-1	O	FL segment output.
98	VEE	I	Vdd -38V (-33V) is input to this pin.
99	AVSS	—	CPU analog GND.
100	AVREF	I	4.2 to 4.7V is input to this pin.

IC, CXD2535CR

Pin No.	Pin Name	I/O	Description
1	FS256	O	256 Fs output. (11.2896 MHz)
2	FOK	O	Focus OK signal output. Focus OK at "H".
3	DFCT	O	Defect sense output. Defect at "H".
4	SHCK	O	Track jump sense output.
5	SHCKEN	I	Track jump sense enable input. Enable at "H".
6	WRPWR	I	Laser power switching input. Laser record power at "H". Laser playback power at "L".
7	DIRC	I	Track jump control signal.
8	SWDT	I	Microprocessor serial interface data input.
9	SCLK	I	Microprocessor serial interface shift clock input.
10	XLAT	I	Microprocessor serial interface latch input. Latch at fall-down.
11	SRDT	O	Microprocessor serial interface data output.
12	SENS	O	Internal status is output corresponding to microprocessor serial interface address.
13	ADSY	O	ADIP sync output
14	SQSY	O	Disc sub-code Q sync/ADIP sync output.
15	DQSY	O	U-bit CD or subcode Q sync output of the MD format is output when the source of the DIGITAL IN is CD or MD.
16	XRST	I	Reset input. Reset at "L".
17	TEST4	I	Test terminal. Connect to GND.
18	CLVSCK	O	Clock output for spindle servo evaluation. (5.6448 MHz).
19	TEST5	I	Test terminal. Connect to GND.
20	DOUT	O	Digital audio interface signal output.
21	DIN	I	Digital audio interface signal input.
22	FMCK	O	ADIP FM demodulation clock output.
23	ATER	O	ADIP CRC flag output. Error at "H".
24	REC	I	Switching between record and playback. Record at "H". Playback at "L".
25	DVSS	I	Digital GND.
26	DOVF	I	V-bit input of the signal to be output from the DOUT terminal.
27	DODT	I	Signal to be output from the DOUT terminal and audio data input for peak level detection.
28	DIDT	O	Audio data output of the signal which is input from the DIN terminal.
29	DTI	I	Record data input from CXD2536A.
30	DTO	O	Playback data output to CXD2536A during playback. "Z" during recording.
31	C2PO	O	C2 pointer of the playback data is output during playback. V-bit of the DIGITAL IN is output during digital recording. Analog recording at "L".
32	BCK	O	64 Fs output. (2.8224 MHz).
33	LRCK	O	Fs output (44.1 kHz).
34	XTAO	O	Crystal oscillator circuit output terminal. (Inverted output of the X'TAL terminal).
35	XTAI	I	Crystal oscillator circuit input terminal. (512 Fs = 22.5792 MHz).
36	MCLK	O	Master clock output. (512 Fs = 22.5792 MHz).
37	XBCK	O	BCK inverted output.

Pin No.	Pin Name	I/O	Description
38	DVDD	—	Digital power supply.
39	WDCK	O	2 Fs output. (88.2 kHz).
40	RFCK	O	Read frame clock output. (Fs/6).
41	WFCK	O	Write frame clock output.
42	GTOP	O	Monitoring the operating status of the frame sync protection window. Frame sync protection window is open at "H".
43	GFS	O	Frame sync OK at "H".
44	XPLCK	O	PLL clock output of the EFM decoder. (98 Fs = 4.3218 MHz).
45	EFMO	O	"L" output during playback. EFM (encode data) output during recording.
46	RAOF	O	RAM overflow output during playback.
47	MVCI	I	Clock input of the externally connected VCO for DIGITAL IN PLL.
48	TEST2	I	Test terminal. Connect to GND.
49	DIPD	O	DIGITAL IN PLL phase comparator output.
50	DVSS	—	Digital GND.
51	DICV	I	Voltage input to control the internal VCO for DIGITAL IN PLL.
52	DIFI	I	Input to filter when the internal VCO for DIGITAL IN PLL is used.
53	DIFO	O	Filter input when the internal VCO for DIGITAL IN PLL is used.
54	AVDD	—	Analog GND.
55	ASYO	O	Playback EFM full swing output. ("L" = Vss, "H" = VDD).
56	ASYI	I	Playback EFM comparator slice voltage input.
57	BIAS	I	Playback comparator bias current input.
58	RFI	I	Playback EFM RF signal input/.
59	AVSS	—	Analog GND.
60	CLTV	I	Master PLL for playback digital PLL and also input control voltage to internal VCO for recording EFM PLL.
61	PCO	O	Master PLL for playback digital PLL and also phase comparator output to recording EFM PLL.
62	FILI	I	Master PLL for playback digital PLL and also filter input to recording EFM PLL.
63	FILO	O	Master PLL for playback digital PLL and also filter output to recording EFM PLL.
64	PEAK	I	Peak-hold signal input of laser light.
65	BOTM	I	Bottom-hold signal input of laser light.
66	ABCD	I	Laser light amount input signal.
67	FE	I	Focus error signal input.
68	AUX1	I	Auxiliary input-1.
69	VC	I	Center voltage input.
70	ADIO	O	Monitor output of the A/D converter input signal.
71	TEST3	I	Test terminal. Connect to GND.
72	AVDD	—	Analog GND.
73	ADRT	I	Input voltage indicating upper limit of A/D converter operation range.
74	ADRB	I	Input voltage indicating lower limit of A/D converter operation range.
75	AVSS	—	Analog GND.

Pin No.	Pin Name	I/O	Description
76	SE	I	Sled error signal input.
77	TE	I	Tracking error signal input.
78	AUX2	I	Auxiliary input-2.
79	DCHG	I	Connect to GND.
80	TEST6	I	Test terminal. Connect to GND.
81	APC	I	Test terminal. Connect to GND.
82	ADFG	I	ADIP binary FM signal (22.05 ± 1 kHz) input.
83	TS25	I	Test terminal. Connect to GND.
84	LLDR	O	Laser drive output.
85	TRDR	O	Tracking servo drive output (-).
86	TFDR	O	Tracking servo drive output (+).
87	FFDR	O	Focus servo drive output (+).
88	DVDD	—	Digital power supply.
89	FRDR	O	Focus servo drive output (-).
90	FS4	O	4 Fs output. (1764 kHz).
91	SRDR	O	Slid servo drive output (-).
92	SFDR	O	Slid servo drive output (+).
93	SPRD	O	Spindle servo drive output (-).
94	SPFD	O	Spindle servo drive output (+).
95	DCLO	O	Serial data output for spindle servo evaluation.
96	DCLI	I	Serial data input for spindle servo evaluation.
97	XDCL	O	Serial data load signal output for spindle servo evaluation.
98	OFTRK	O	OFF-track signal output. OFF-track at "H".
99	COUT	O	Track jump count signal output.
100	DVSS	—	Digital GND.

IC, CXD2536CR

Pin No.	Pin Name	I/O	Description
1	VDD	—	Power supply terminal.
2	SWDT	I	Microprocessor serial interface, data input.
3	SCLK	I	Microprocessor serial interface, shift clock input.
4	XLAT	I	Microprocessor serial interface, latch input. Latched at fall down.
5	SRDT	O	Microprocessor serial interface, data output.
6	SENS	O	Internal status output corresponding to the address of microprocessor serial interface.
7, 8	SMD0, SMD1	I	Serial command, command mode.
9	XINT	O	Interrupt request output terminal. "L" when interrupt status occurs.
10	RCPB	I	"H" at record mode, "L" at playback mode.
11	WRMN	I	"H" at write mode, "L" at monitor mode.
12	TX	I	Enable signal input terminal of the recording data output. Enable at "H".
13	VSS	—	GND.
14-16	TST0-TST2	I	Test terminal. Connect this pin to GND.
17	XRST	I	Reset input. Reset at "L".
18-21	TS0-TS3	I	Test terminal. Connect this pin to GND.
22-24	TST3-TST5	I	
25	VSS	—	GND.
26	AIRCPB	O	ATRAC block record/playback mode output. Record mode at "H". Playback mode at "L".
27-35	TST6-TST14	O	Test terminal. Leave this pin to open.
36	OSCO	O	Crystal oscillator circuit output terminal. (Inverted output of the OSC1 terminal).
37	OSCI	I	Crystal oscillator circuit input terminal. (1024 Fs).
38	VSS	—	GND.
39, 40	TST15, TST16	O	Test terminal. Leave this pin to open.
41	DOUT	O	Record monitor output/decoded audio data output.
42	ADIN	I	Analog record input terminal. (External A/D converter output is connected to this terminal.)
43	ABCK	O	XBCK (64 Fs) output terminal to external audio block.
44	ALRCK	O	LRCK (Fs) output terminal to external audio block.
45-47	SA2-SA0	O	SRAM address bus.
48, 49	A11, A10	O	RAM address bus.
50	VSS	—	GND.
51	VDD	—	Power supply terminal.
52-55	A03-A00	O	RAM address bus.
56-60	A04-A08	O	
61	XOE	O	RAM output enable.
62	XCAS	O	RAM <u>CAS</u> output.
63	VSS	O	GND.
64	XCS	O	RAM chip select. DRAM at "H". SRAM at "L".
65	A09	O	RAM address bus.
66	XRAS	O	RAM <u>RAS</u> output.

Pin No.	Pin Name	I/O	Description
67	XWE	O	RAM write enable.
68, 69	D1, D0	I/O	RAM data bus.
70-74	D2-D6	I/O	
75	VSS	—	GND.
76	D7	I/O	RAM data bus.
77	ERR	I/O	Data input/output terminal for C2PO exclusive RAM.
78	EXTC2R	I	Selector of C2PO exclusive RAM. “H” to use. “L” not to use.
79	BUSY	O	Busy output of RAM access. RAM access at “H”.
80	EMP	O	The signal output indicating immediately before empty or full of the ATRAC data.
81	FUL	O	The signal output indicating immediately before full or empty of the ATRAC data.
82	EQL	O	ATRAC data empty. (“H” when ASC = DSC).
83	MDLK	O	Indicating main/sub of the record/playback data. Sub or linking at “H”. Main at “L”.
84	CPSY	O	Sync input to be inserted internally.
85, 86	CTMD1, CTMD0	O	Internal counter mode output.
87	SPO	O	512 Fs output.
88	VSS	—	GND.
89	MDSY	O	Sync detection output of the main data.
90	LRCK	I	LRCK (Fs) input terminal from the EFM encoder/decoder.
91	BCK	I	BCK (46 Fs) input terminal from the EFM encoder/decoder.
92	C2PO	I	C2PO input terminal from the EFM encoder/decoder.
93	DATA	I/O	Data input/output terminal from the EFM encoder/decoder.
94	DIDT	I	Digital recording input terminal.
95	DODT	O	Record monitor output/decode audio data output.
96	DIRCPB	O	Record/playback mode output to the EFM encoder/decoder. Record mode at “H”. Playback mode at “L”.
97	MIN	I	External monitor signal input terminal.
98	TST17	I	Test terminal. Connect this pin to VDD.
99	TST18	O	Test terminal. Leave this pin to open.
100	VSS	O	GND.

IC, CXP81952-504R

Pin No.	Pin Name	I/O	Description
1-8	NC	—	Not used.
9	DISCPRO	I	Disc PROTECT switch input.
10	RFLCT	I	Disc REFLECT switch input.
11	B-CAS	O	DRAM self-refresh control output. (Not used).
12	LS	I	Pickup most-inner-circumference switch input.
13, 14	NC	—	Not used.
15	V-FLAG	I	Subcode V plug input of DIGITAL IN. (Not used.)
16, 17	NC	—	Not used.
18	ACOFF	I	Power failure input. Fixed to H.
19	S-REQ	I	Serial interface: Sub interrupt request signal.
20	START	I	Hot start input. Fixed to H.
21	B-RAS	O	DRAM self-refresh control output. (Not used).
22, 23	NC	—	Not used.
24	M-REQ	O	Serial interface: MD microprocessor interrupt request signal.
25	DRIVE	O	Record current control. "L" during recording.
26-28	NC	—	Not used.
29	DAPON	O	D/A converter ON/OFF control. H: ON. (Not used).
30	DMUTE	—	Not used. Open drain. (Not used).
31	REC	O	Power supply ON/OFF control for record circuit. H: ON. Open drain. (Not used).
32	AMUTE	O	Analog mute. H: Mute.
33-36	NC	—	Not used.
37	MP	I	Connected GND.
38	SRST	I	MD microprocessor starts up when it receives P-CON from system microprocessor. (Reset terminal).
39	DGND	—	Connected GND.
40	XTALO	O	Connected to 12 MHz ceramic oscillator.
41	XTALI	I	
42	ARDY	I	Serial interface: Ready signal.
43	SIN	I	Serial interface: SI signal.
44	SOUT	O	Serial interface: SO signal.
45	ACLK	O	Serial interface: Clock signal.
46	XLAT	O	Serial data strobe output.
47	XRST0	O	Reset signal to CXD2533BR/CXA1981. Reset at "L".
48	XRST1	O	Reset signal to CXD2536. Reset at "L".
49	NC	—	Not used.
50	AVSS	—	Connected to GND.
51	AVREF	—	Connected to power supply.
52	AVDD	—	
53-56	NC	—	Not used. (Pull up).
57-59	NC	—	Not used. (Connected to GND).
60	NC	—	Not used. (Pull up).

Pin No.	Pin Name	I/O	Description
61	COUT	I	Track jump count input.
62	SP-FG	I	Spindle FG input.
63	SHCK	I	Shock detection input.
64	FOK	I	FOK input. FOCUS ON at "H".
65	GFS	I	Guard frame sync input. Frame sync OK at "H".
66	SENS	I	CXD2535 internal status monitor input.
67	NC	—	Not used. (Connected to GND).
68	CS	I	Serial data strobe input.
69	NC	—	Not used.
70	EXTVCO	O	VCO ON/OFF control. ON at "L". (Not used).
71	P-CONT	O	DSP power supply control. Turn off the power of DSP/RF/MOTOR at "L".
72	RFSW	—	Not used.
73, 74	NC	—	
75	DQSY	I	Digital recording Sub-Q sync input.
76	XINT	I	Interrupt request from CXD2536. Interrupt at "L".
77	SRDT	I	CXD2536 serial data.
78	SWDT	O	CXD2536R/CXA1981A serial data.
79	SCLK	O	Serial clock of SRDT/SWDT.
80	SQSY	O	EFM subcode Q sync/ADIP sync.
81-83	NC	—	Not used.
84	NC	—	Not used. (Watch is not supported). Connected to GND.
85	NC	—	Not used. (Watch is not supported).
86	VSS	—	Connected to GND.
87, 88	VDD	—	Connected to power supply.
89	SHCKEN	O	Shock detection request output.
90	WRPWR	O	Laser power control output to CXD2536BR. Record power at "H".
91	DIRC	O	Track jump control.
92, 93	SMD0, SMD1	O	CXD2536R serial data control mode.
94	RCPB	O	CXD2536R record/playback control. Record mode at "H".
95	WRMN	O	ATRAC encode and external RAM write control.
96	TX	O	CXD2536R record data enable control. Enabled at "H".
97	MOD	O	Laser diode high frequency superimposition control.
98	OPMUTE	O	Laser diode control. ON at "H".
99	ADPON	O	AD converter power supply control. ON at "H". (Not used).
100	EMPH	O	AD converter emphasis control. ON at "L".

IC, CXA1981AQ/AR

Pin No.	Pin Name	I/O	Description
1	VC	O	Vcc/2 voltage output.
2	A	I	Main beam servo signal A, current input.
3	B	I	Main beam servo signal B, current input.
4	C	I	Main beam servo signal C, current input.
5	D	I	Main beam servo signal D, current input.
6	E	I	Main beam servo signal E, current input.
7	F	I	Main beam servo signal F, current input.
8	FI	I	EF balance adjustment.
9	FO	O	EF balance adjustment.
10	PD	I	Amount of light, monitoring signal input.
11	APCREF	I	Reference voltage input for laser power setting.
12	TEMPI	I	External temperature sensor is connected to this terminal.
13	GND	—	GND.
14	AAPC	O	APC output.
15	DAPC	O	Test terminal. Open.
16	TEMPR	O	External temperature sensor is connected to this terminal. Reference voltage is output.
17	TST1	I	Test terminal. Connected to Vcc.
18	SWDT	I	Microprocessor serial interface, data input.
19	SCLK	I	Microprocessor serial interface, shift clock input.
20	XLAT	I	Microprocessor serial interface, latch input. Latch at "L".
21	VREF	O	Reference voltage output.
22	TST2	O	Test terminal. Open.
23	TST3	—	Test terminal. Open.
24	VCC	—	Power supply terminal.
25	TST4	I	Test terminal. Connected to Vcc.
26	TE	O	Tracking error output.
27	TLB	—	External capacitor for low-boosting the tracking error signal, is connected to this terminal.
28	CSLED	—	External capacitor of low-pass capacitor for the sled error signal, is connected to this terminal.
29	SE	O	Sled error signal output.
30	ADFM	O	ADIP FM signal output.
31	ADIN	I	ADIP signal comparator input.
32	ADAGC	—	External capacitor for ADIP AGC is connected to this terminal.
33	ADFG	O	ADIP 2 binary signal output.
34	AUX	O	I3 output/temperature signal output. The two signals are selected by the serial command.
35	FE	O	Focus error signal output.
36	FLB	—	External capacitor for low-boosting the focus error signal, is connected to this terminal.
37	ABCD	O	Light amount signal output from the main beam servo detector.
38	BOTM	O	RF/ABCD bottom hold signal output.

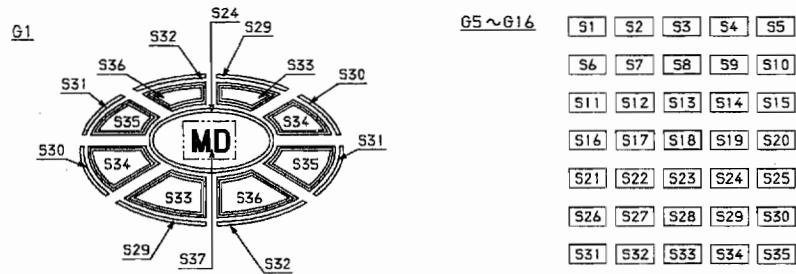

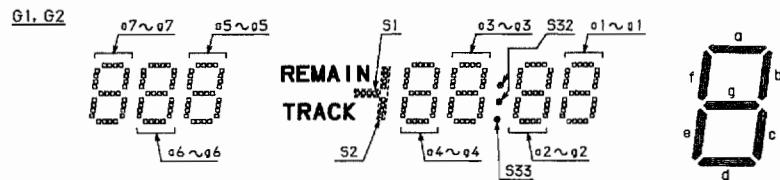

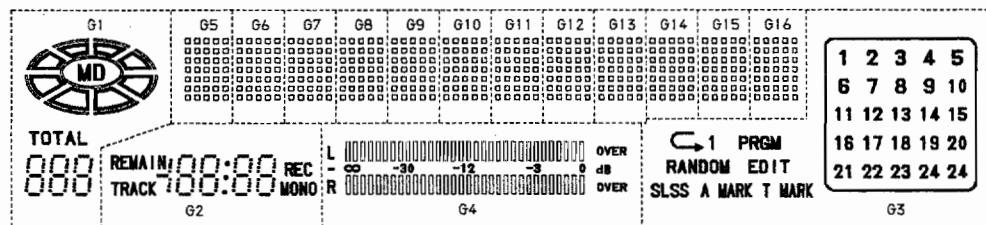

Pin No.	Pin Name	I/O	Description
39	PEAK	O	RF/ABCD peak hold signal output.
40	RFAGC	—	External capacitor for RF AGC is connected to this terminal.
41	RF	O	RF equalizer output.
42	ISET	—	BPF (fo = 702 kHz, 22 kHz) and RF equalizer setting.
43	AGCI	I	RF AGC input.
44	RFO	O	RF amplifier output. Eye pattern check point.
45	MORFI	I	The input signal in which the RF signal from groove and the RF signal are mixed.
46	MORFO	O	RF signal (I-J) output from groove.
47	I	I	I-V converted RF signal I input.
48	J	I	I-V converted RF signal J input.

IC, AK4512

Pin No.	Pin Name	I/O	Description
1	VRDA	I	Voltage Reference Input Pin for DAC, VA.
2	VRAD	I	Voltage Reference Input Pin for ADC, VA.
3	AINR	I	Rch Analog Input Pin.
4	VCMR	O	Rch Common Voltage Output Pin, VA/2. Connect a capacitor electrolytic of about 4.7 μ F and a capacitor ceramic of 0.1 μ F between this pin and AGND.
5	VCML	O	Lch Common Voltage Output Pin, VA/2. Connect a capacitor electrolytic of about 4.7 μ F and a capacitor ceramic of 0.1 μ F between this pin and AGND.
6	AINL	I	Lch Analog Input Pin.
7	PWAD	I	ADC Power-Down Mode Pin. “L”: Power down
8	PWDA	I	DAC Power-Down Mode Pin. “L”: Power down
9	MCLK	I	Master Clock Input Pin.
10	LRCK	I	Input/Output Channel Clock Pin.
11	SCLK	I	Audio Serial Data Clock Pin.
12	SDTO	O	Audio Serial Data Output Pin.
13	DGND	—	Digital Ground Pin.
14	VD	—	Digital Power Supply Pin.
15	SDTI	I	Audio Serial Data Input Pin.
16	CMODE	I	Master Clock Select Pin. “H”: 384fs, “L”: 256fs
17	DEM1	I	De-emphasis Frequency Select Pin.
18	DEM0	I	De-emphasis Frequency Select Pin.
19	AOUTL	O	Lch Analog Output Pin.
20	AOUTR	O	Rch Analog Output Pin.
21	VCOM	O	Common Voltage Output Pin, VA/2. Connect a capacitor electrolytic of about 4.7 μ F and a capacitor ceramic of 0.1 μ F between this pin and AGND.
22	AGND	—	Analog Ground Pin.
23	VB	—	Substrate Pin.
24	VA	—	Analog Power Supply Pin.

ELECTRICAL ADJUSTMENT

D MD MAIN C.B

Perform all adjustments and checks while the machine is in the test mode.

1. Temperature Compensation Adjustment

Test point: To be checked on the FL display

Adjustment point: VR702

Tool: Thermometer

Turn the JOG dial while the machine is in the SERVO OFF mode and select the TEMP\$** display and make adjustment until the temperature value shown on the thermometer and the value shown on the FL display agree. (Place a thermometer near the machine and measure room temperature.)

Perform the temperature compensation adjustment after removing the shield case.

Temperature	FL display
-7 °C to -2 °C	\$ B7 to \$ C9
-2 °C to 3 °C	\$ BF to \$ 01
3 °C to 8 °C	\$ C7 to \$ D9
8 °C to 13 °C	\$ CF to \$ E1
13 °C to 18 °C	\$ D7 to \$ E9
18 °C to 23 °C	\$ DF to \$ F1
23 °C to 28 °C	\$ E7 to \$ D9
28 °C to 33 °C	\$ EF to \$ 01
33 °C to 37 °C	\$ F7 to \$ 09

Values are shown in the hexadecimal notation on the FL display.

Note) Do not perform this adjustment when you cannot measure a room temperature because incorrect temperature compensation has an adverse effect on the recording.

2. Laser Power Adjustment

Test point: To be checked at the laser output of pickup

Adjustment point: VR703

Measuring equipment: Laser power meter

Method: Press the EDIT key four times while the machine is in the SERVO OFF mode. Check that the message "LASER WR" appears on the FL display. Adjust VR703 so that the laser power output is 6.8 ± 0.15 mW.

Note) Adjust the output carefully because the pickup may be broken if the output exceeds 7.0 mW.

3. EF Balance Adjustment

Test point: To be checked on the FL display

Adjustment point: VR701

Test disc: MO disc (for record/playback)

Method: ① Press the PAUSE key in the ALL SV OFF mode to enter SELECT GRV.
② Move the pickup a little from the innermost track toward the outer track.
③ Press the PLAY key to establish FOCUS ON and press the EDIT key. ("LASER WR" appears on the monitor.)
④ Turn JOG to adjust the VR701 so that the indication varies centering around SE\$80.

Note) The indication should stay within the range from SE\$71 to \$8E.

4. Focus, Tracking and Sled Gain Check

Test disc: TGYS-1 (for playback)

Method: ① Press the pause KEY in the ALL SV OFF mode to enter SELECT PIT.

② Turn JOG three rotations after pressing the following operation buttons in the order of "PLAY" → "ENTER" → "STOP". Check that the FL display stays within the following range.

Gf: Focus gain → 28 to 5C

t: Tracking gain → 13 to 38

s: Sled gain → 13 to 38

* The items that follows hereafter are not used in normal adjustment and check procedures.

5. Error Rate

1) Record/playback error rate

Test disc: MO Disk (for record/playback)

Test point: To be checked on the FL display

- Recording -

- ① Press the PAUSE key in the ALL SV OFF mode to enter SELECT GRV.
- ② Move the pickup a little from the innermost track toward the outer track.
- ③ Press the DISPLAY key to move down the OWH.
- ④ Press keys in the order of "REC" → "PLAY" → "ENTER" → "REC" to start recording. Check the disc address (recording start position) appearing in the left bottom of the screen. (Recording normally starts from the cluster around 600.)
- ⑤ After recording of about 15 seconds, press the STOP key to stop recording.
- ⑥ Press the FUNCTION key to move up the OWH.

- Error rate check-

- ⑦ Press keys in the order of "PLAY" → "ENTER" to enter ALL SV ON.
- ⑧ When the address indication shown in the left bottom of the screen shows the recording start position, turn JOG to select the error rate display.
- ⑨ Check that the error rate of the recorded segment is within the following values.
Cl: 0030 or less.
Err: 0000 (zero)

Note) If error rate is measured in the segment which is outside the recorded segment, the correct value cannot be obtained.

2) Playback error rate

(1) PIT disc (Playback use only)

Test disc: TGYS-1 (for playback use)

① Press the PAUSE key in the ALL SV OFF mode to enter SELECT PIT.

② Press the keys in the order: "PLAY" → "ENTER" to enter ALL SV ON.

- ③ Turn JOG to select the error rate display and check that the playback error rate is within the following values.
Cl: 0050 or less.
Err: 0000 (zero)

(2) MO PIT part (PIT segment in the MO disc)

Test disc: MO Disk (for record/playback)

- ① Press the PAUSE key in the ALL SV OFF mode to enter SELECT PIT.
- ② Move the pickup to the innermost track.
- ③ Press the keys in the order of “PLAY” → “ENTER” to enter ALL SV ON.
- ④ Turn JOG to select the error rate display and check that the error rate is within the following values.
Cl: 0060 or less.
Err: 0000 (zero)

(3) Recorded segment of the MO disc

- * The error rate of recorded segment of the record/playback discs can be checked. This error rate tells whether the recording condition of a disc is good or not good.

Test disc: Recorded MO Disk

- ① Press the PAUSE key in the ALL SV OFF mode to enter SELECT GRV.
- ② Move the pickup a little from the innermost track toward the outer track.
- ③ Press the keys in the order: “PLAY” → “ENTER” to enter ALL SV ON.
- ④ Turn JOG to select the error rate display and check that the error rate is within the following value.
Cl: 0060 or less. (Guide line value)
Err: No need to check.

Note) ② The MO disc recording starts from the cluster 32 or higher address. The error rate display of the cluster before 32 shows an incorrect value.
⑤ When error rate of a recorded disc is measured in the test mode, the Err display value increases always because of the internal data processing. This is not abnormal. This mode checks the Cl point error rate only.

TEST MODE

1. How to start the test mode and how to exit the test mode, and notes

(1) How to start the test mode

AM-X10 has the two methods to start the test mode.

Method 1: Method of starting the test mode by shorting the test-lands

Short the test lands as shown in Fig-2.

Method 2: Method of starting the test mode by pressing the operation buttons

- 1) Turn off the main power so that the machine enters Power off (STANDBY) state. Confirm that the loading mechanism is in the EJECT state. (When the test mode is started while a disc is being inserted, the mechanism starts the EJECT operation so that the test mode cannot be started.)
- 2) While pressing the Power button, depress the STOP button. (Press the two buttons simultaneously.)

Then, press the following buttons in this order: DISPLAY → MD EJECT → DISPLAY → MD EJECT.

The message "Welcome to Mini disc TEST MODE" appears after all FL displays turn on and the test mode starts.

(2) How to exit the test mode

Method 1: When the test mode is started by shorting the test lands: Unplug the AC power cord and remove soldering from the test land.

Method 2: When the test mode is started by pressing the operation buttons: Press the Power switch to turn off the main power, or alternately unplug the AC power cord.

The machine can exit the test mode when the EJECT button is pressed during the communication reliability test of the test mode.

(3) Notes

- 1) The machine ignores all mechanical abnormalities and performs the test mode when the test mode is once started. Therefore, when any abnormal operations occur during the test mode, unplug the power cord immediately.
- 2) Recording and playback cannot be performed during the test mode.

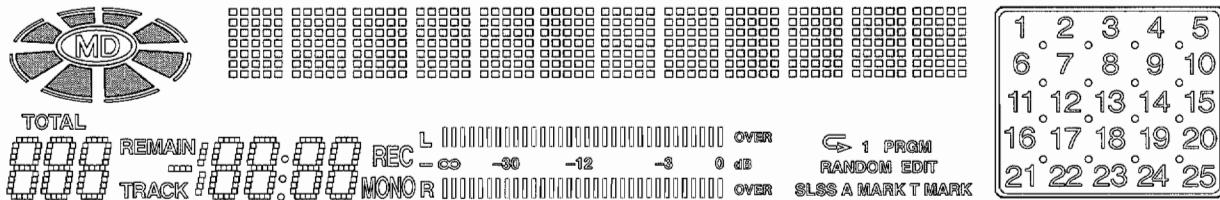

Fig-1. All segments of LCD turn on

B FRONT C.B

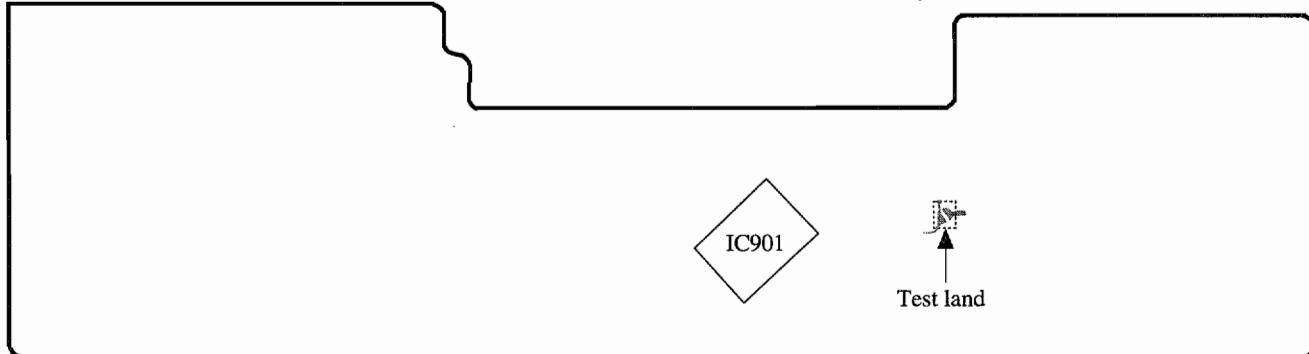

Fig-2. Test land location

2. Confirmation when test mode starts

(1) Display

All FL displays turn on.

(2) Playback system audio circuit can be checked.

- Circuits which can be checked DAC, LINE amplifier, HP amplifier, digital output, LINE output and HP output.
- Output level check 1 kHz, -12 dB (LINE output)

3. How to switch the system to the servo waiting mode

In order to switch the system to the servo waiting mode (ALL SV OFF), start up the test mode (all segment lighting mode) first, then press the EJECT button. In the servo waiting mode, the various servo test modes can be operated.

Note) The servo test modes cannot be operated directly from the all segment lighting mode.

4. Confirmation of various switch status

ON/OFF status (switch contact) of the various switches which are installed in the machine and especially in the mechanism of the machine can be checked from the FL display. Note that ON/OFF status corresponding to the frame only of each display while characters themselves turn on at all times.

Switch	Switch status	FL display		Discs to use
		SW ON	SW OFF	
REC PROTECT	When the write protection hole of the disc is closed (REC enabled).	[EDIT]	EDIT	Disc for recording
REFLECT	ON when high reflection (CD) disc is used.	[RANDOM]	RANDOM	Disc for playback
INNER	When pickup is located in the innermost track (LIMIT SW is ON).	[PRGM]	PRGM	—

- * LOADING, UNLOADING, and UP and DOWN of OWH can be checked with lighting status of the frames of three displays: SLSS, AUTOMARK and TIMEMARK.

Mechanism status	FL display		
1) LOADING status Three frames of SLSS, AUTOMARK and TIMEMARK turn on.	[SLSS]	[AUTOMARK]	[TIMEMARK]
2) UNLOADING status Frame of TIMEMARK only turns on.	SLSS	AUTOMARK	[TIMEMARK]
3) OWH DOWN status Frame of SLSS only turn on.	[SLSS]	AUTOMARK	TIMEMARK

5. Confirmation of sled movement

The movement of the sled motor and the pickup can be checked by pressing the **→** key (to outer track) or **←** key (to inner track). At the same time, the message "T. SLED FWD" is shown in the FL display while the mechanism is moving towards the outer track and "T. SLED RVS" is shown in the FL display while the mechanism is moving to the inner track.

6. Confirmation of laser output power

The laser output power can be changed by every pressing of the EDIT KEY while the machine is in the STOP mode. The laser output can be changed in the order starting from CD-R → MO-R → 1/2 LASER → MO-W → OFF, repeatedly. At the same time, the current mode can be checked by the message shown in the FL display and from the level meter.

Mode	Display
CD-R	LASER CD
MO-R	LASER MO
1/2 LASER	LASER 1/2
MO-W	LASER WR
OFF	LASER OFF

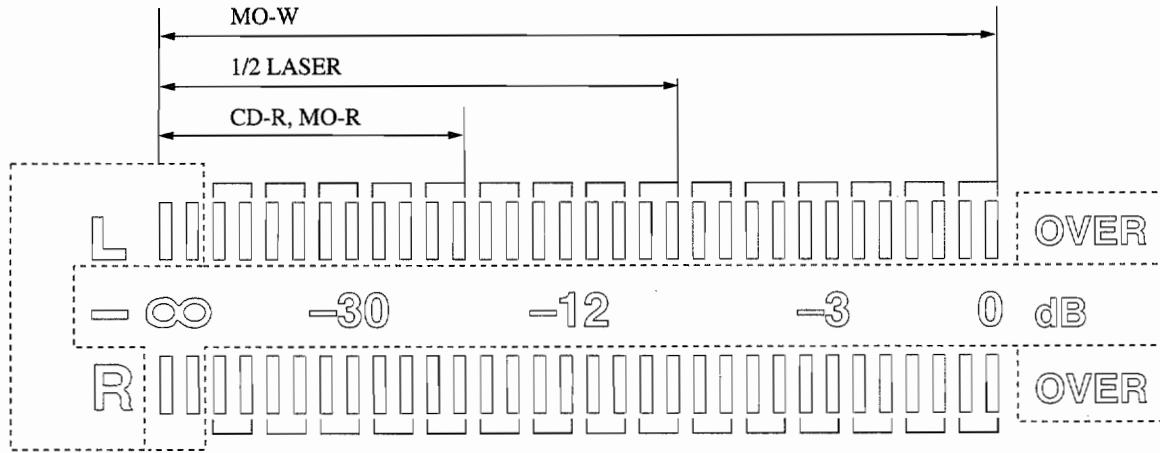

Fig-3. FL level meter (The level meter indication shows the operating modes, but not the amount of FL illumination.)

7. Confirmation of the loading mechanism operations

Operation of the loading mechanism can be checked using the DISPLAY and FUNCTION keys.

- * DISPLAY key LOADING
- * FUNCTION key UNLOADING (EJECT)

In addition, mechanism can be stopped at any position during unloading mode using this function. (During the loading mode, the mechanism performs loading automatically until it reaches the loading completed position when the KEY is pressed.)

8. OWH (Over Write Head)

Operation of the OWH can be checked by pressing the DISPLAY key or FUNCTION key while the mechanism is in the loading mode.

- * DISPLAY KEY OWH moves down.
- * FUNCTION KEY OWH moves up.

9. Confirmation of servo operations

(1) Focus search and spindle kick

The focus search and spindle kick can be checked by pressing the PLAY key while disc is not inserted. This mode is repeated until the STOP key is pressed. (Operation of the mechanism can be checked visually by putting the mechanism into the loading mode.)

(2) Focus servo

- 1) Insert a disc.
 - 2) Press the PAUSE key and select an appropriate servo mode in accordance with the disc inserted.
- * Magneto-optical disc (MO disc) Select GRV
 - * Aluminum disc (CD software) Select PIT
- 3) Press the PLAY key to set the focus servo to ON.

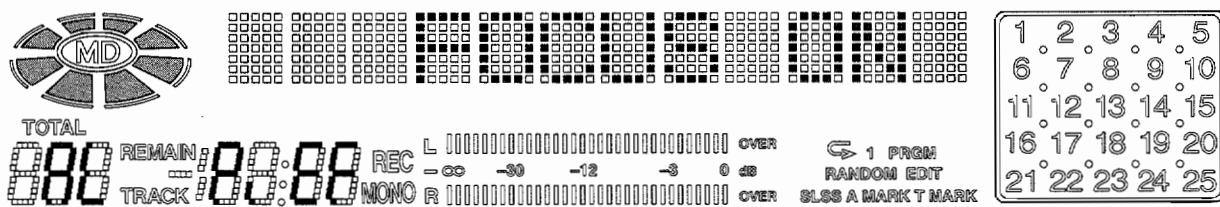

Fig-4. AL (Aluminum (CD) disc)

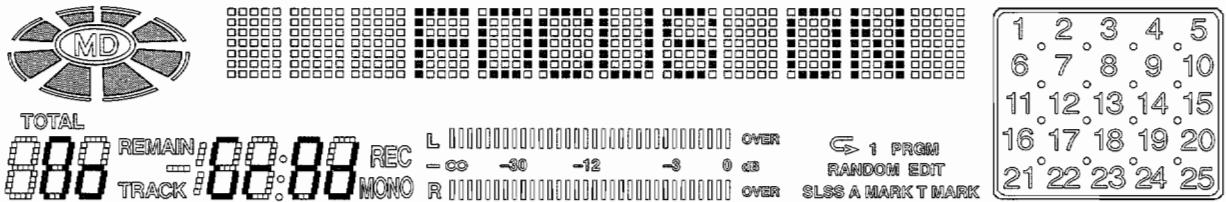

Fig-5. MO (Record/playback disc)

(3) All servo ON

When the ENTER key is pressed after the focus servo is turned, the tracking servo and the sled servo are both turned on. Then all servo loops are turned on and the message "ALL SV ON" appears on the FL display. At the same time, the disc address is indicated on left bottom of the display.

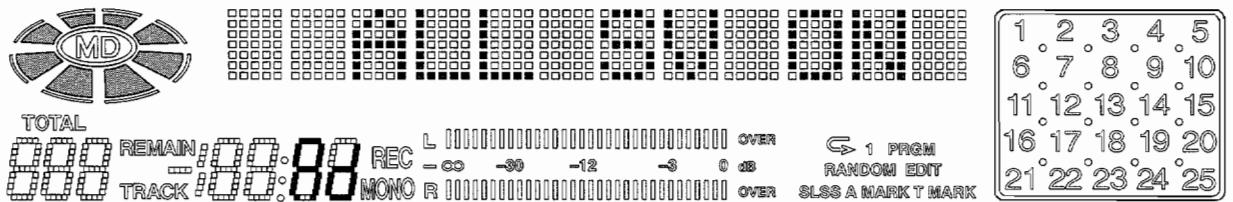

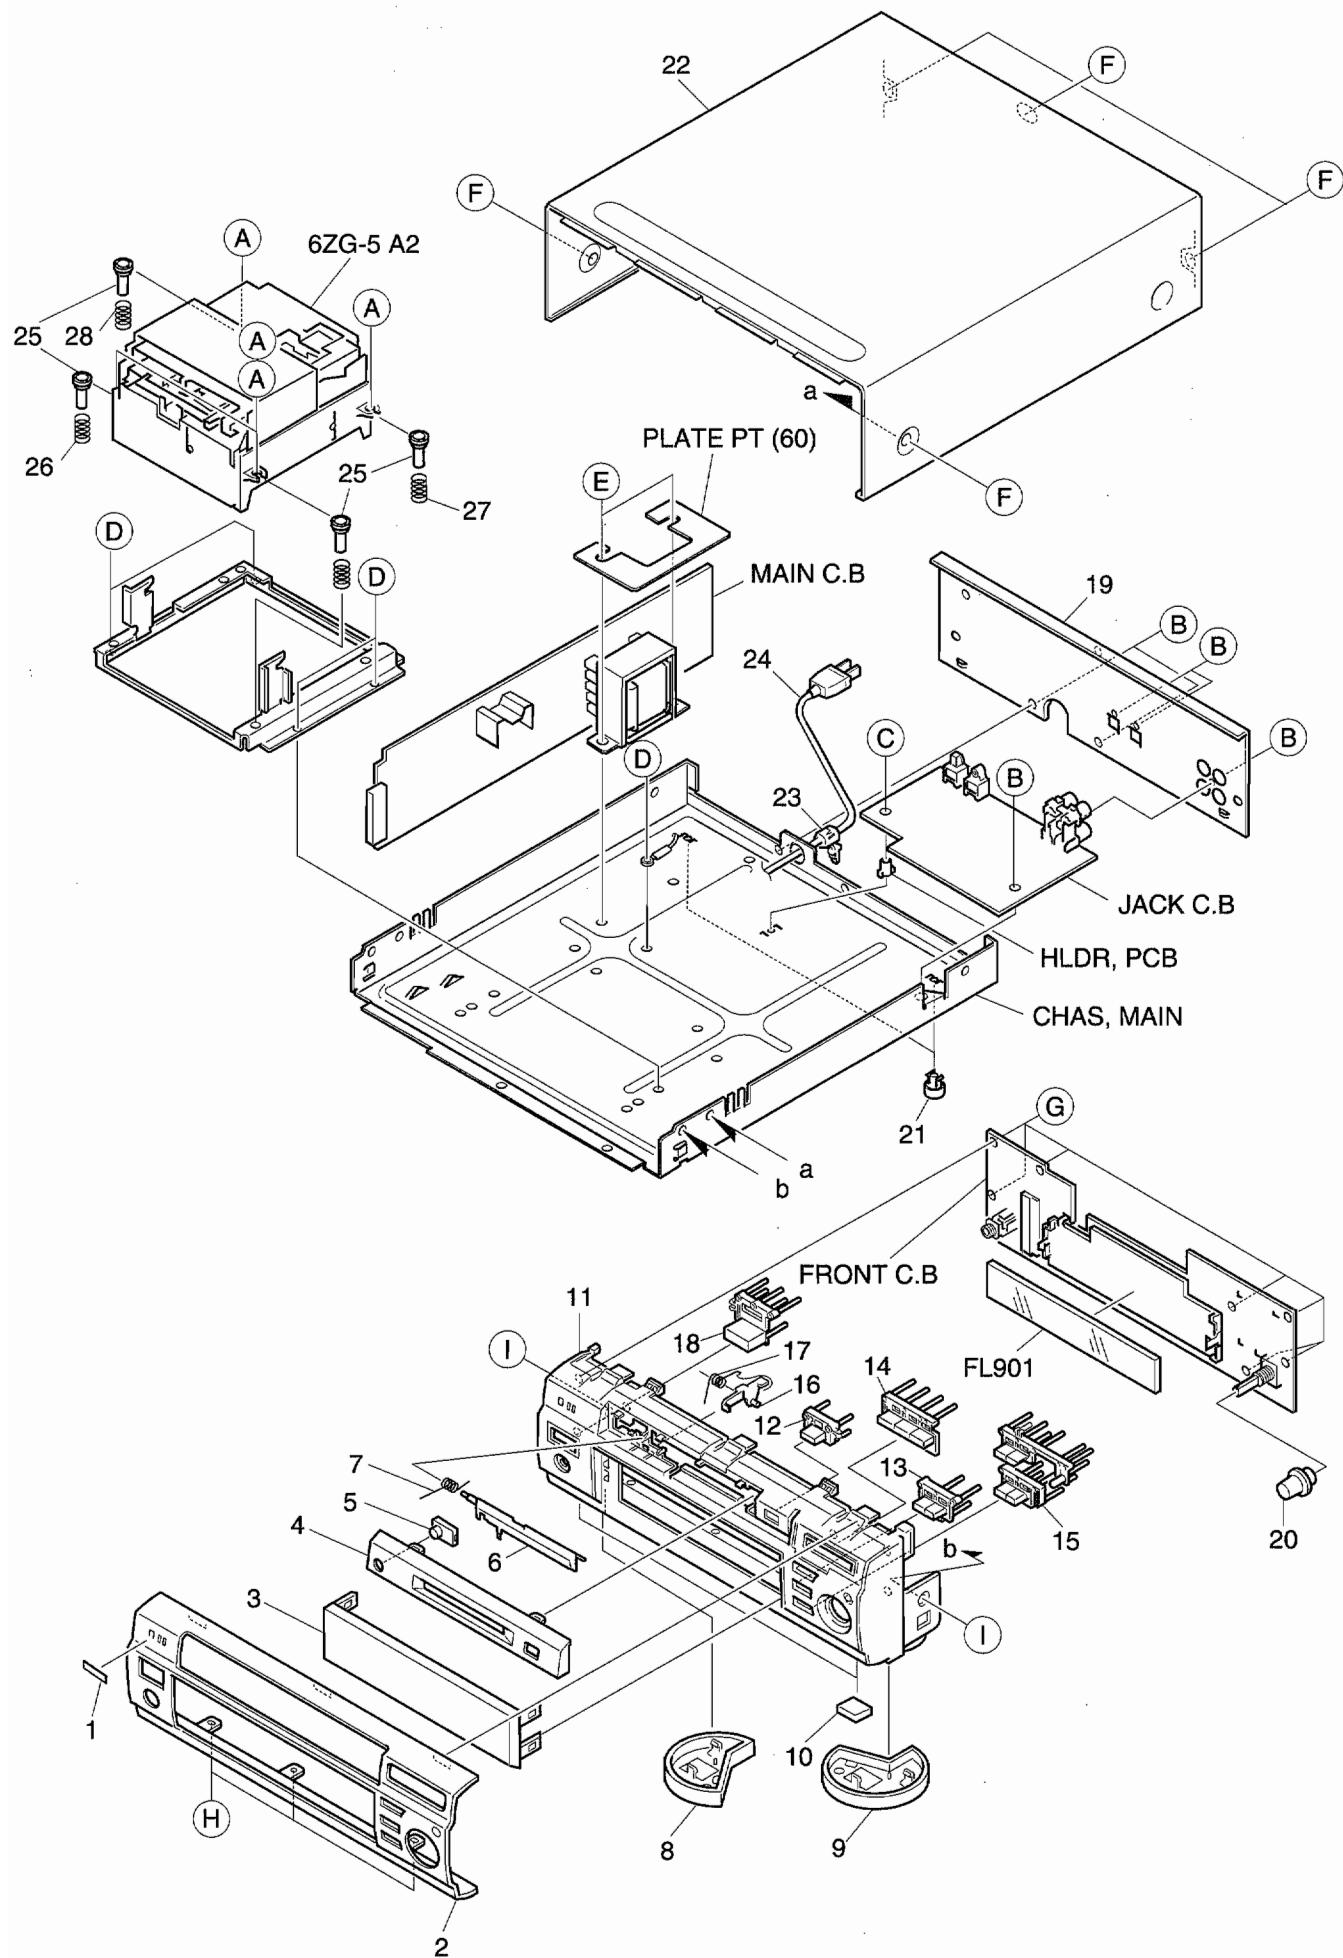

Fig-6. MO (Record/playback disc)

10. Testing reliability of communication

Pressing the EJECT button while the machine is in the servo mode enters the communication reliability test mode. This mode enables testing the communication between CPU of the front board and CPU of the MD board, and also checking the data bus line between the CPUs. Number of times of the communication test is shown in the center of the FL display (shown in units of TIMES) and number of Errors (shown as Err ○○) is shown in the left bottom of the FL display. Communication between the CPUs can be judged to operate normally if error is zero or if "E3" or "E4" does not appear up until around 1000 TIMES of the test.

The machine can exit the test mode when the EJECT mode is pressed after completing the communication reliability test.
