SERVICE TECHNICAL INFORMATION

ONE POINT REPAIR

UTSUNOMIYA, November 30, 1994
REF. NO. : SI-94-033
CUSTOMER SERVICE H.Q.

- MODEL : HS-JX649/JX749
SUBJECT : Noise caused by a shock when AM is on.
SYMPTOM : When AM is on, a crackling noise occurs if the cabinet on the operation panel side (under the STOP key) is pressed. This tends to occur more often when receiving high frequency in a weak electric field.
REMEDY : If the customer complains about this, replace the IF filter for AM (C-FILTER, 450K) with the following item. This will reduce the noise.

Part Number: 87-008-540-080 Part Name: C-FILTER, 450K

- Note:** 1) Units which were manufactured from the 19,000th unit (production from the middle of October) do not need this repair, because the above item is used.
2) The outer side of the new IF filter (87-008-540-080) is molded.
3) Due to a slight difference in parts of the new IF filter, soldering is not necessary.

Ref.	Part Name	Part Number
CF303	C-FILTER, 450K (ECFM2)	87-008-540-080
