MODEL GXC-570D

PRELIMINARY SERVICE MANUAL

AKAI

No. 1

PRELIMINARY SERVICE MANUAL

MODEL GXC-570D

DATE August 1976

Technical Data

1) Track System	4 track 2 channel stereo system
2) Tape	Philips type cassette
3) Tape Speed	1-7/8 ips. (Pitch Control $\pm$5%)
4) Wow and Flutter	Less than 0.06% WRMS
	Less than 0.17% (DIN 45500)
5) Frequency Response	30 Hz to 15,000 Hz ($\pm$3 dB), using low noise tape
	30 Hz to 16,000 Hz ($\pm$3 dB), using CrO_2 tape
	30 Hz to 19,000 Hz ($\pm$3 dB), using Fe-Cr tape
6) Distortion	Less than 1% (1,000 Hz "0" VU),using low noise tape
7) Signal to Noise Ratio	Better than 52 dB (measured via tape with peak recording level of +5 VU)
	Dolby Switch ON: Improves up to 10 dB above 5 kHz
8) Erase Ratio	Better than 70 dB
9) Bias Frequency	100 kHz
10) Heads	GX recording/playback head and erase head (3 head system)
11) Motors	One AC Servo outer-rotor motor for capstan drive and two DC motors for reel drive
12) Fast Forward and Rewind Time	60 to 80 seconds (Variable) using a C-60 cassette tape
13) Output Jacks	Line(2): 0.775V ("0" VU) Required load
	Impedance: More than 20 k ohms
	Phono(1): 50 mV/8 ohms
14) Input Jacks	Microphone(2): 0.3 mV. Required microphone
	Impedance: 600 ohms
	Line(2): 70 mV/100 k ohms
15) Semiconductors	Transistors 110, Diodes 159, FETs 12, ICs 9
16) Power Requirements	CSA, UL and LA Models: 120V, 60 Hz only
	CEE Models: 220V, 50 Hz only
	Other Models: 100V to 240V, 50/60 Hz,(Switchable)
17) Dimensions	440(W) x 255(H) x 225(D)mm
	(17.3 x 10.0 x 8.9")
18) Weight	13.5 kg (28.5 lbs)

AKAI ELECTRIC CO., LTD.
(P.O.BOX 21, Tokyo International Airport, Japan)
12-14, 2-chome, Higashi-Koijiya, Ohta-ku, Tokyo, Japan

1. Principal Parts Location

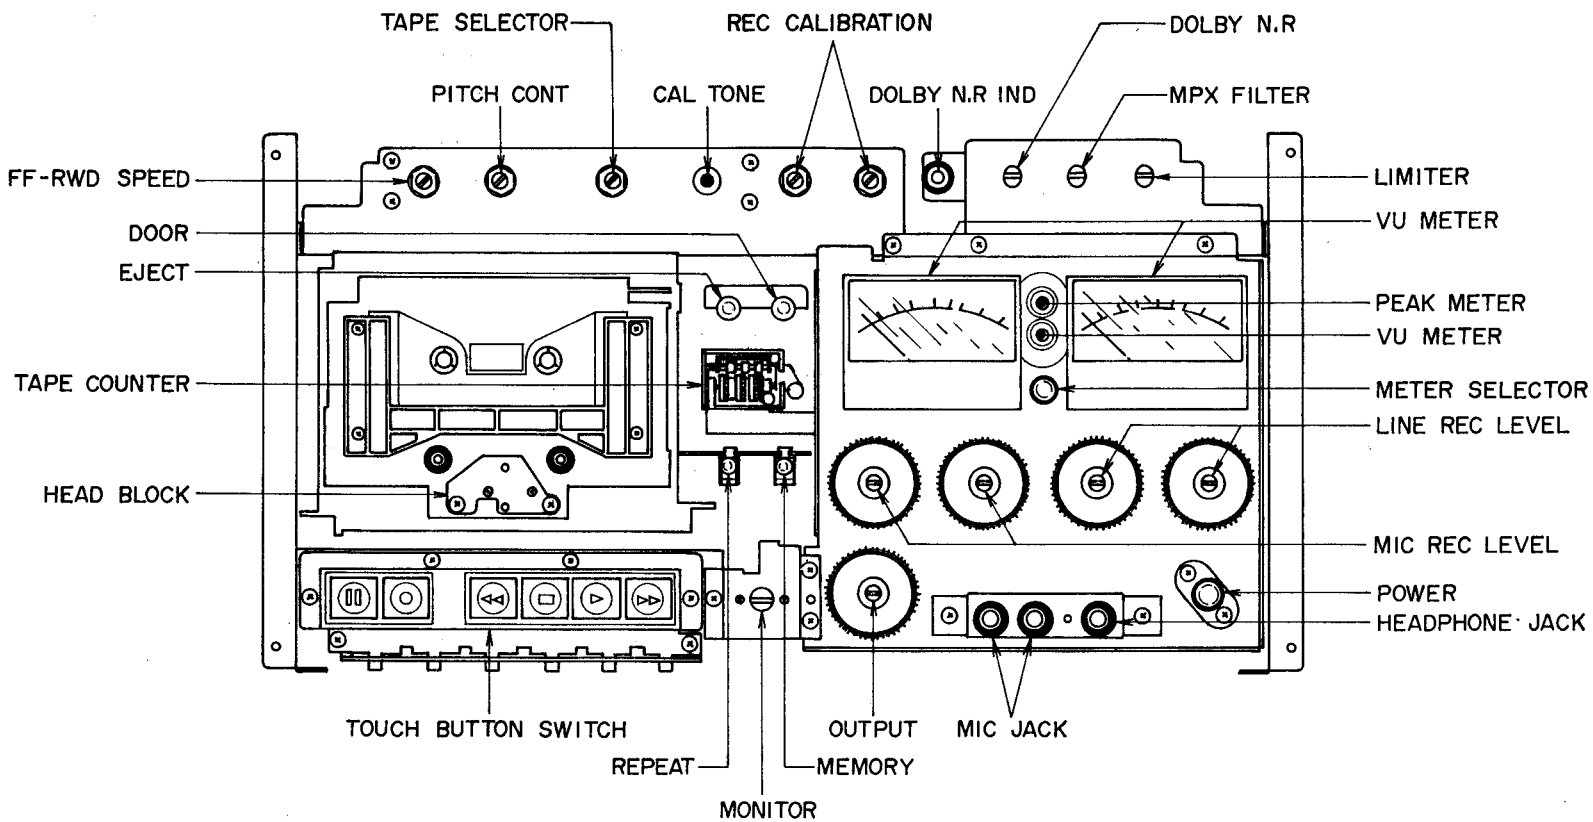

Fig. 1 Front View

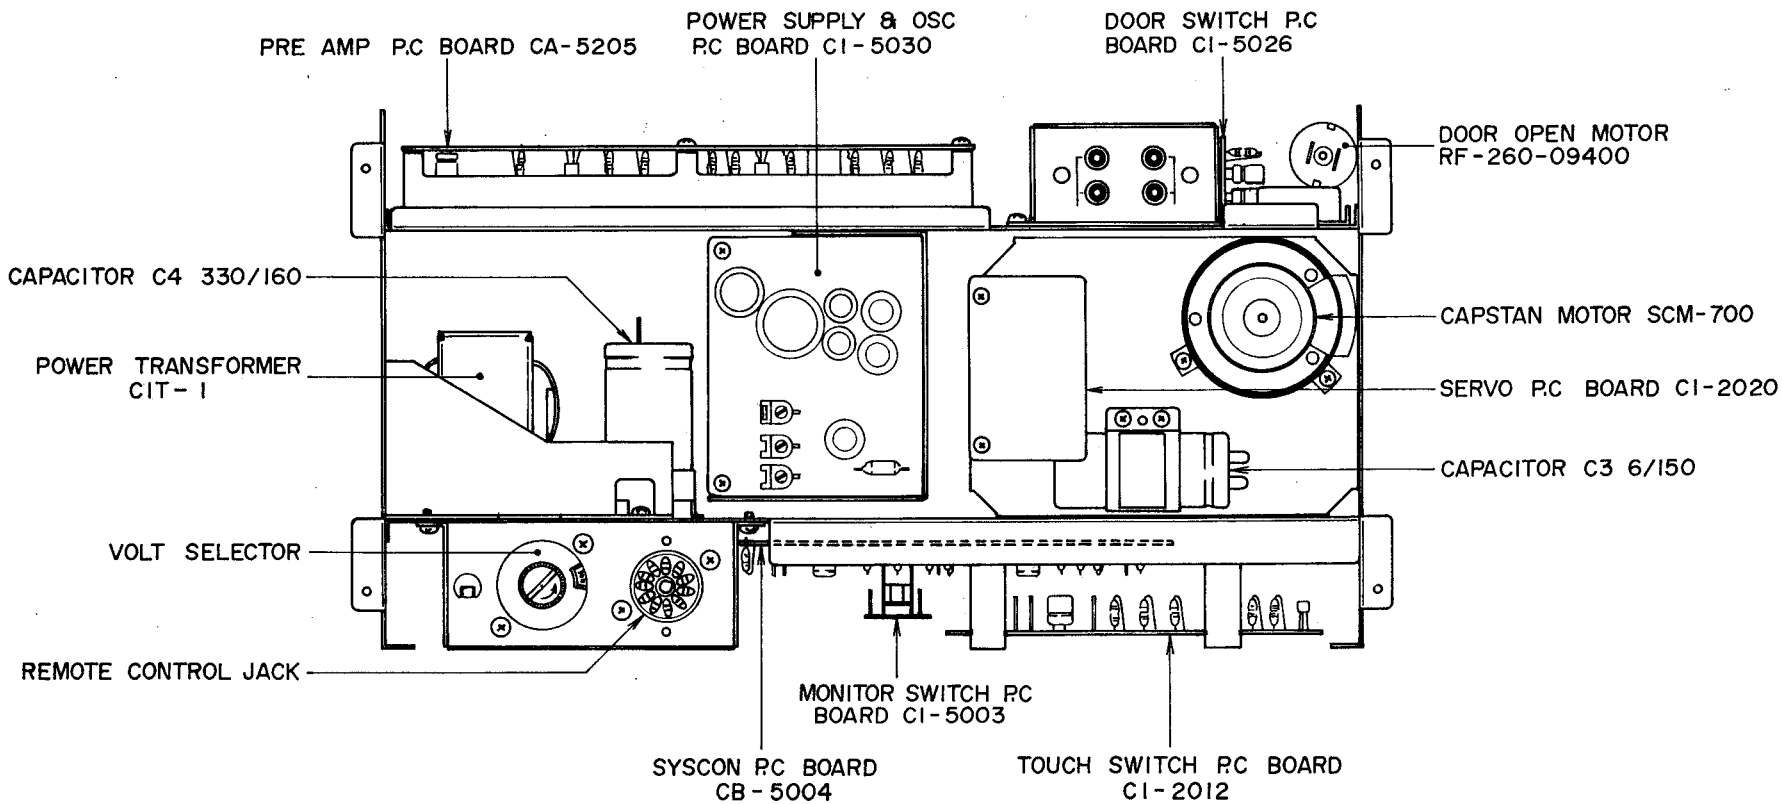

Fig. 2 Rear View

2. Mechanism Adjustment

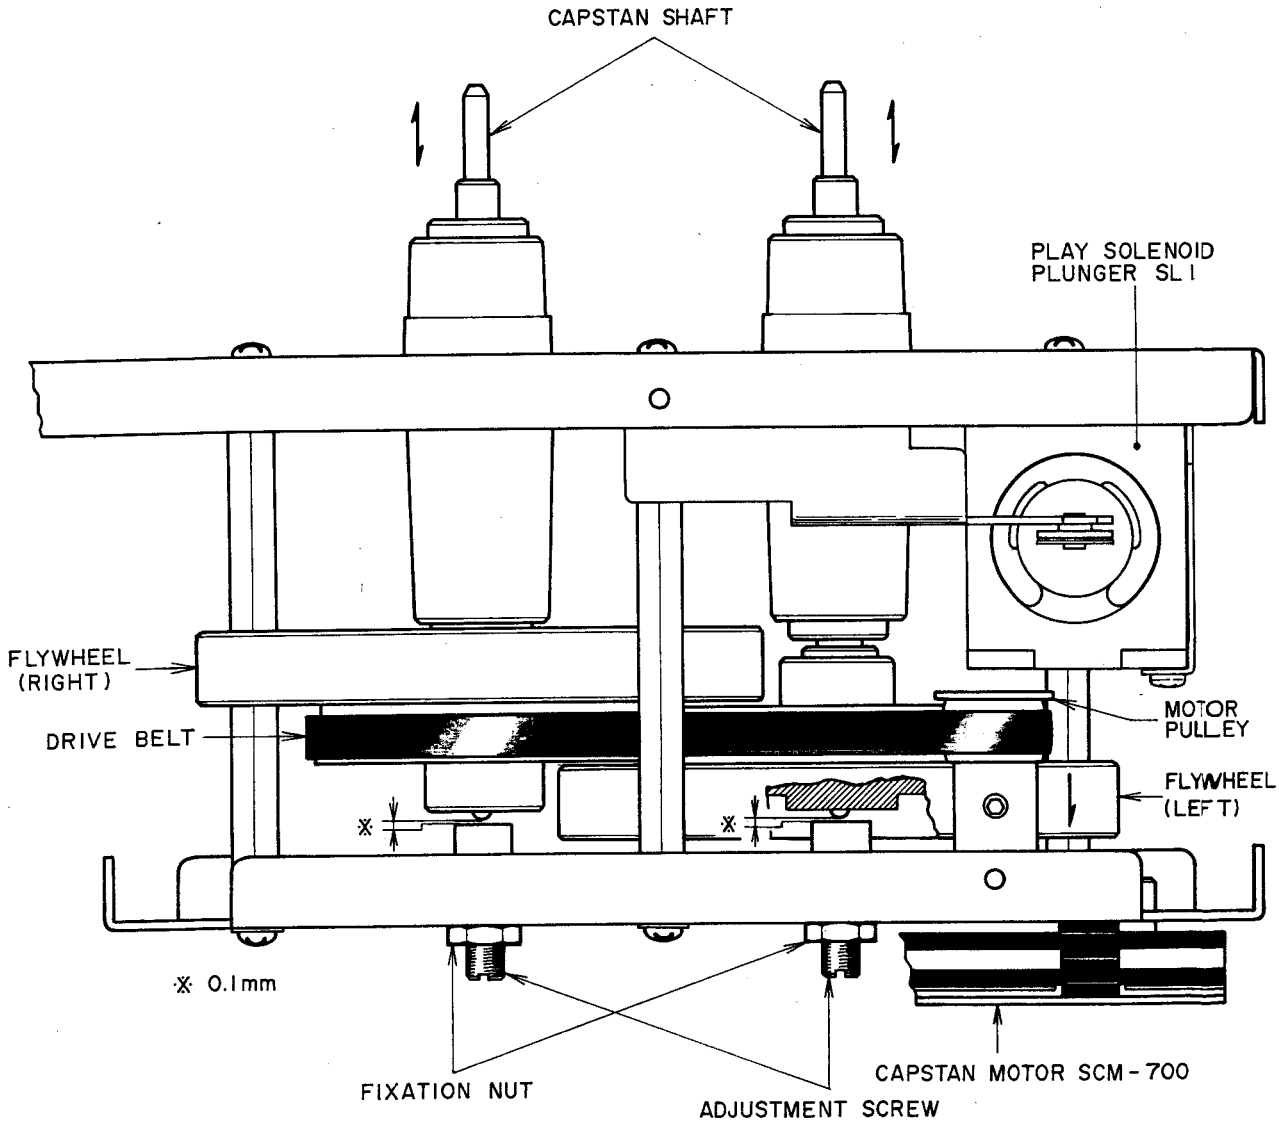

Fig. 3

1) Capstan Shaft Loose Play Adjustment (Refer to Fig. 3)

Adjust by turning adjustment screws to obtain a 0.1 mm degree of loose play (space indicated by * mark in fig. 3) when the capstan shaft is moved as indicated by the arrow mark. Tighten fixation nut to maintain optimum adjusted condition.

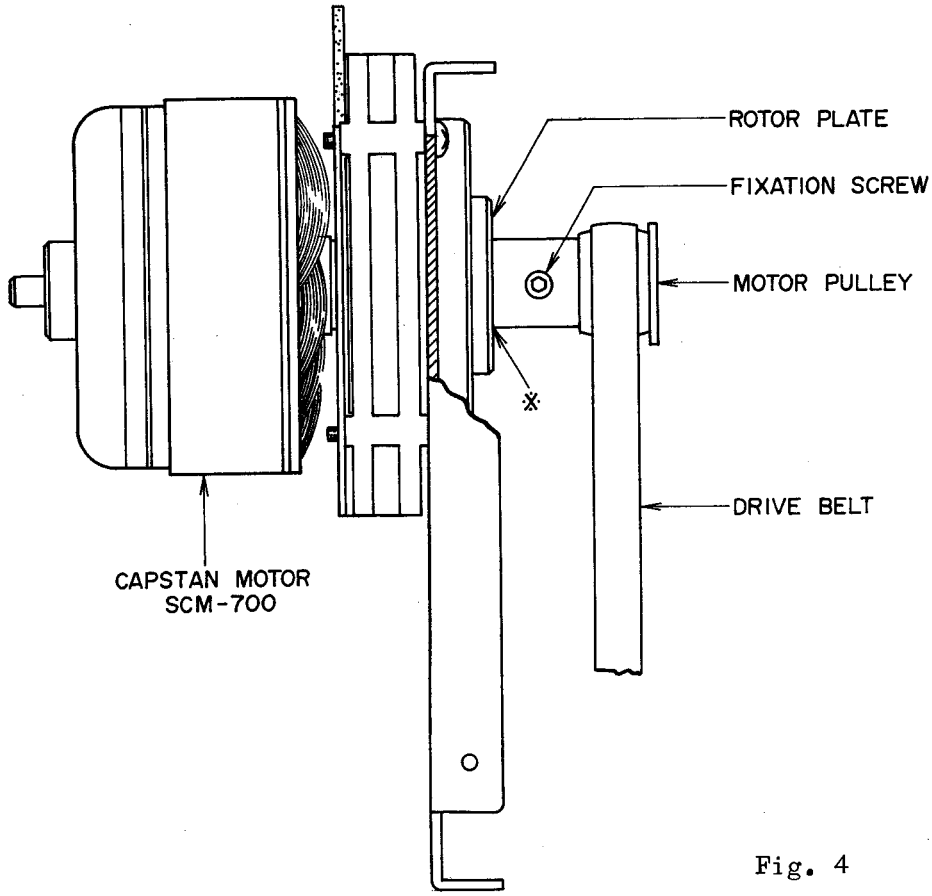

Fig. 4

2) Motor Pulley Installation Position Adjustment (Refer to Fig. 4)

Tighten fixation screw at position at which the parts indicated by the * mark in fig. 4 makes contact with the rotor plate.

NOTE: After above adjustment, in case the drive belt does not run on the center of Motor Pulley, re-adjust installation position of Motor Pulley so that the drive belt comes to the center of the Pulley.

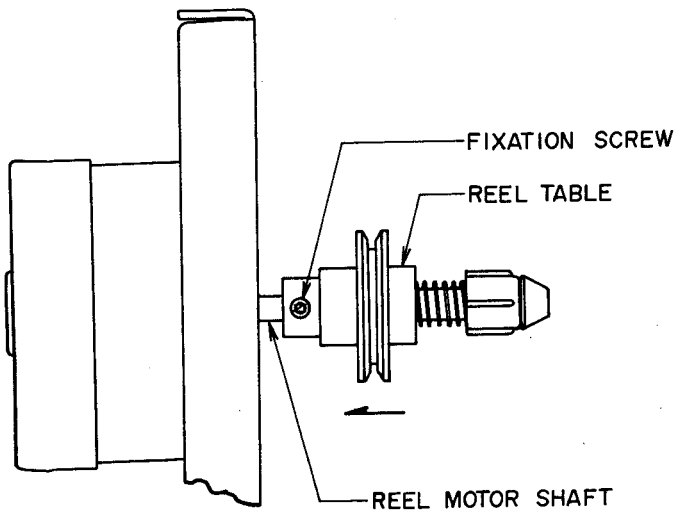

Fig. 5

3) Reel Table Installation Position Adjustment (Refer to Fig. 5)

As shown in Fig. 5, with reel table firmly and completely fitted on motor shaft, tighten fixation screw.

4) Pinch Roller Pressure Adjustment (Refer to Fig. 6)

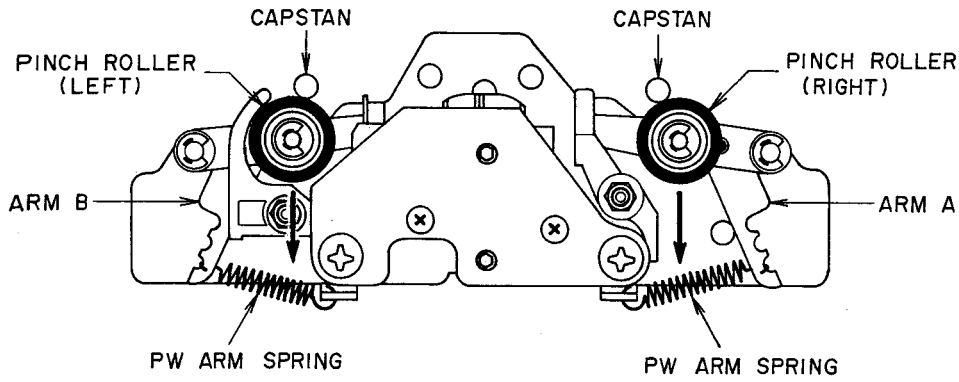

Fig. 6

Pull back the Pinch Roller with a spring gauge, and then gently return. Take a reading of the spring gauge scale indication at the moment the Pinch Roller touches the capstan and begins to rotate. Adjust pressure to specified value by changing position of the PW ARM SPRING.

Specified Pinch Roller Pressure: Pinch Roller (right) 400 $\pm$50 grm
Pinch Roller (left) 300 $\pm$50 grm

5) Play Solenoid Installation Position Adjustment (Refer to Fig. 7 and Fig. 8)

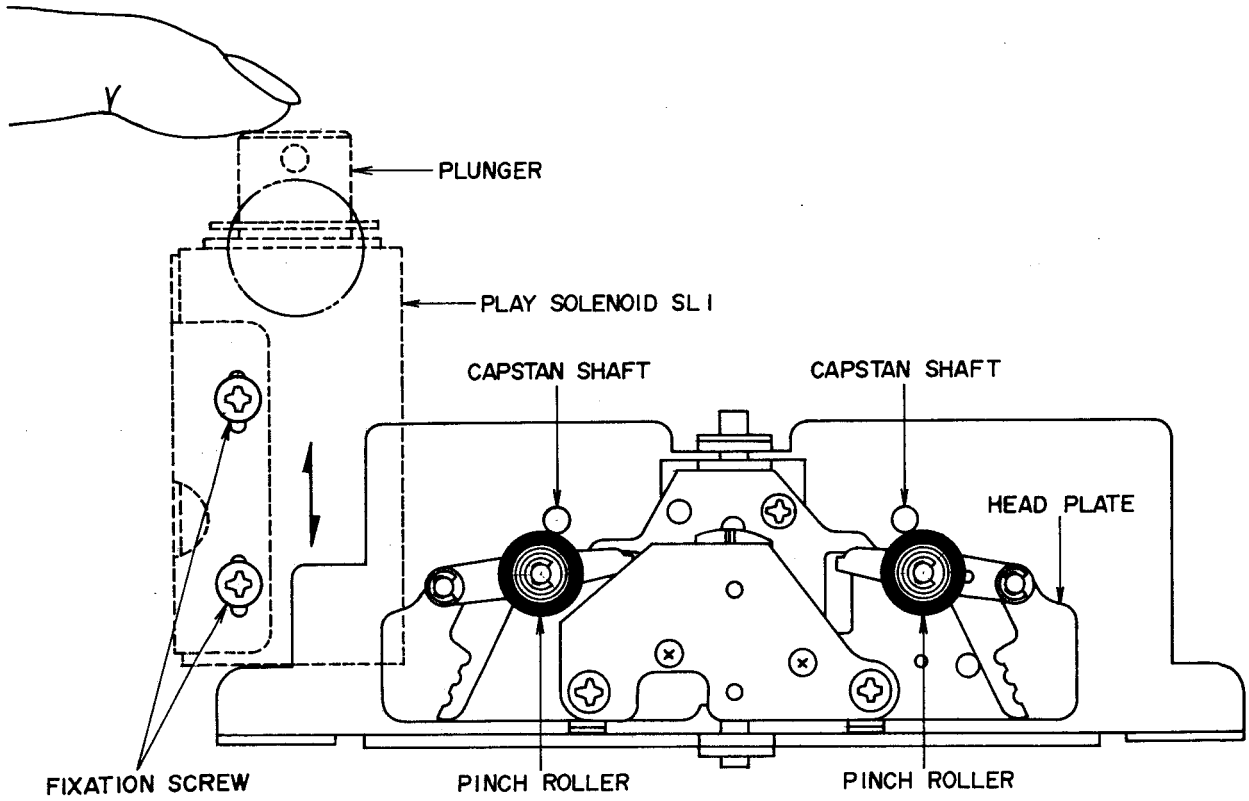

Fig. 7

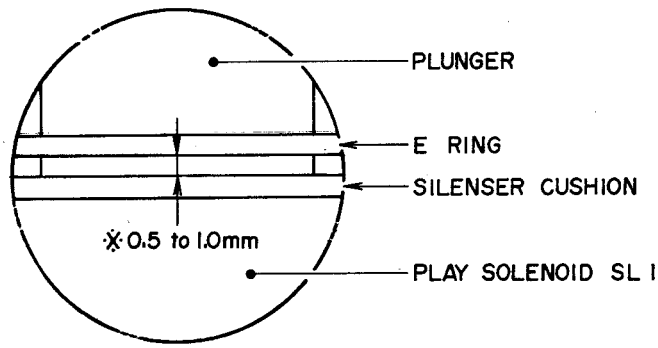

Fig. 8

As shown in Fig. 7, at stop mode, when the tip of plunger is gently depressed, the pinch roller contacts the capstan shaft, at this time confirm that the gap between "E" ring and silencer cushion is 0.5 to 1.0 mm. (See fig. 8)
If not, adjust play solenoid installation position as indicated by the arrow mark in Fig. 6 to obtain specified gap.

6) Adjustment of Eject Micro Switch Actuating Position (Refer to Fig. 9)

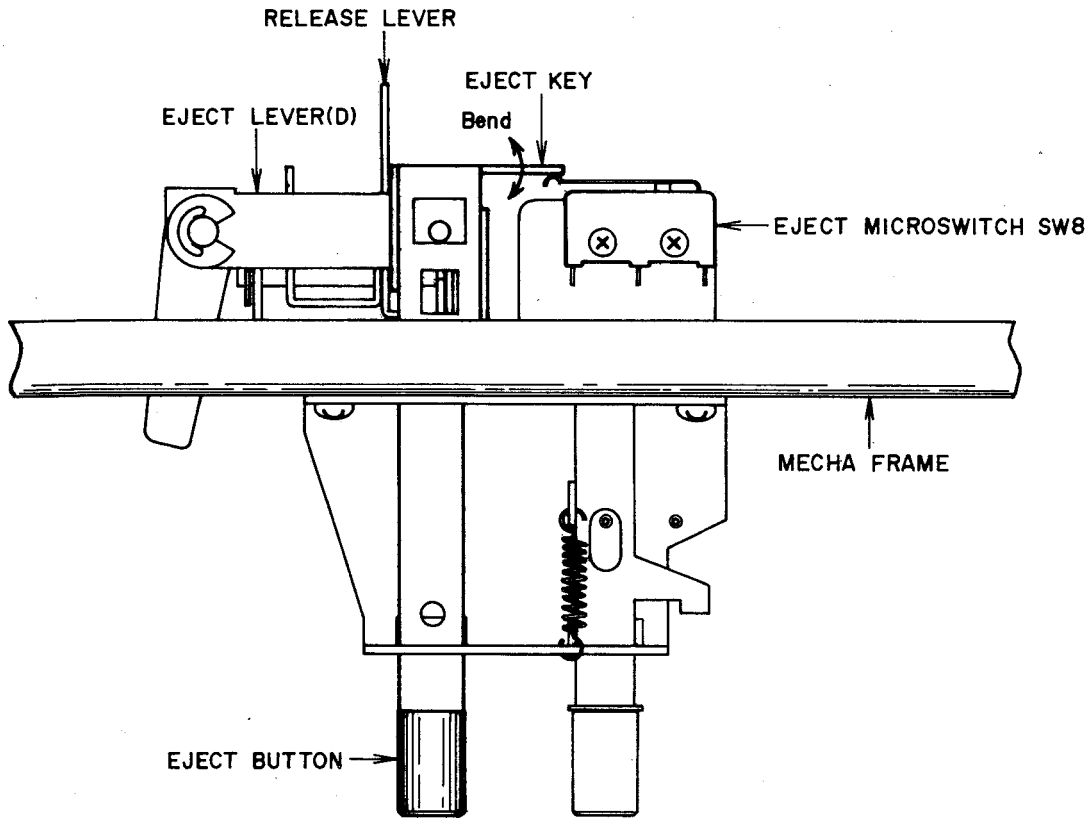

Fig. 9

Adjust by bending Eject Key so that when the Eject Key is depressed, Eject Micro Switch (SW8) shown in fig. 9 is perfectly actuated.
After adjustment, depress Eject Button and confirm that Eject Micro Switch (SW8) switches before the Release Lever operates.

7) Adjustment of Recording Micro Switch (SW3) and Cassette Micro Switch (SW6) Actuating Position (Refer to Fig. 10)

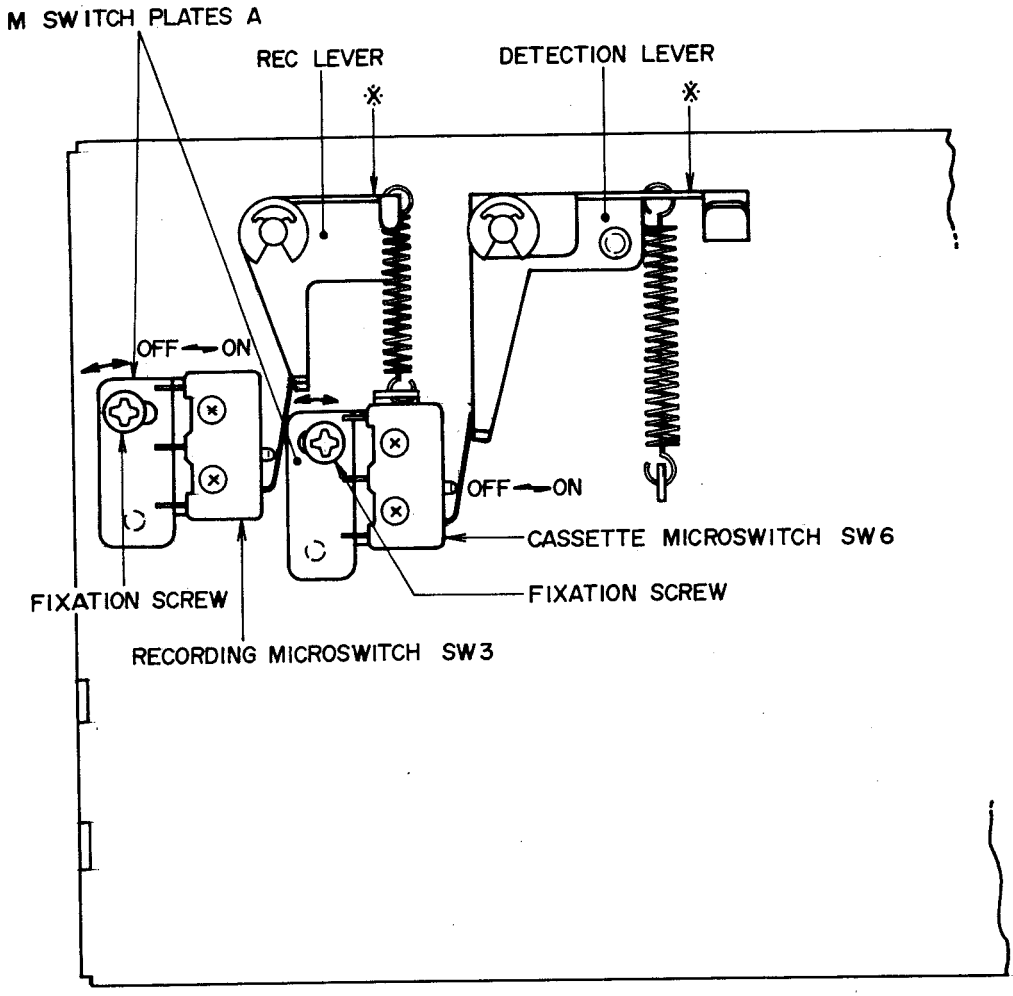

Fig. 10

Move M Switch Plate A as indicated by the arrow marks in the figure and adjust so that when the parts of Recording and Detection Levers marked with * mark in Fig. 10 are at a horizontal level, Recording Micro Switch (SW3) and Cassette Micro Switch (SW6) are turned ON respectively. Further, confirm that when a cassette from which the recording safety tabs have been removed is loaded, Recording Micro Switch (SW3) switches, and when the cassette is removed, Cassette Micro Switch (SW6) switches. Tighten fixation screws to maintain ideally adjusted positions of M Switch Plates A.

8) Reel Motor (GSM-300) Replacement (Refer to Fig. 11)

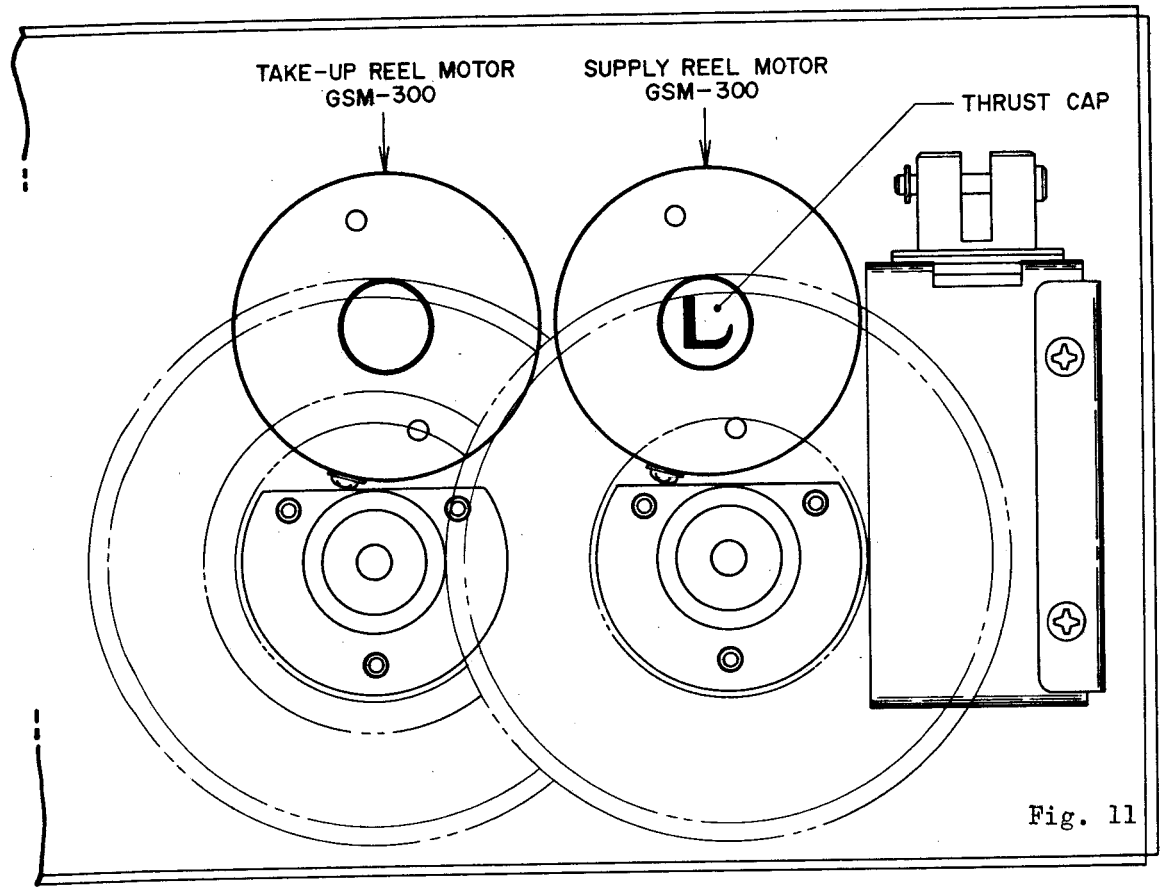

Fig. 11

While the reel motors of this Deck are basically the same, because left and right characteristics differ, check as described below prior to replacement.

Supply Reel Motor: marked with L on thrust cap

Take-up Reel Motor: no marking

NOTE: If same type motor is not used, brush noise will occur.

9) Front Panel Lid Case Spacing Adjustment (Refer to Fig. 12)

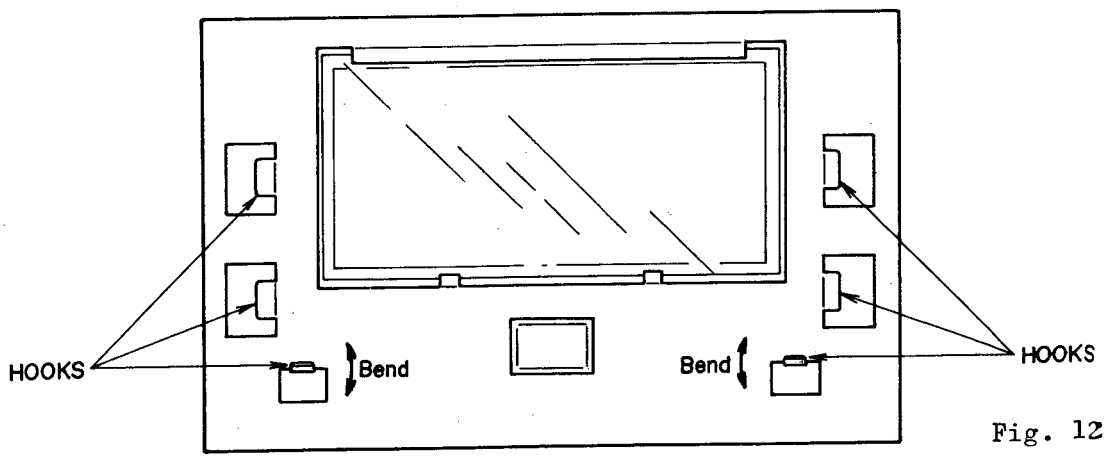

Fig. 12

In case the Lid Case comes too far toward either side, adjust by bending the two lower hooks as indicated by the arrow marks in Fig. 12.

10) Position Adjustment of Lid Case (Refer to Fig. 13)

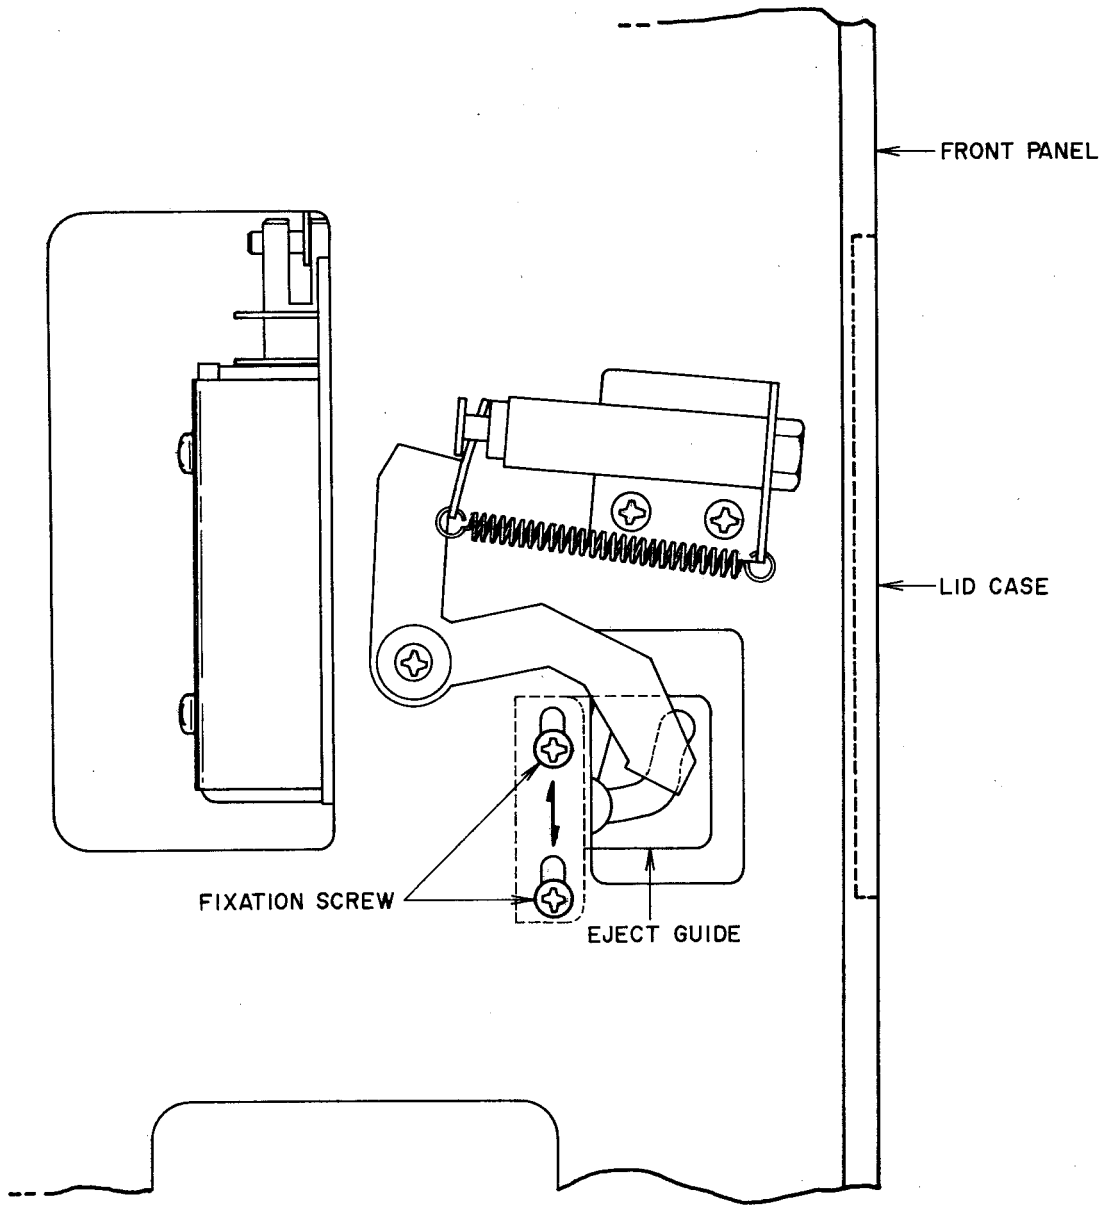

Fig. 13 Left Side of the Deck

Move the Eject Guide shown in Fig. 13 (direction indicated by arrow mark) up and down and adjust Lid case so that it is even with the front panel. If the upper part of Lid case comes too far inward, raise the eject guide, and if too far outward, lower eject guide.

11) Clearance Adjustment Between Hall IC and Rotary Magnet (Refer to Fig. 14)

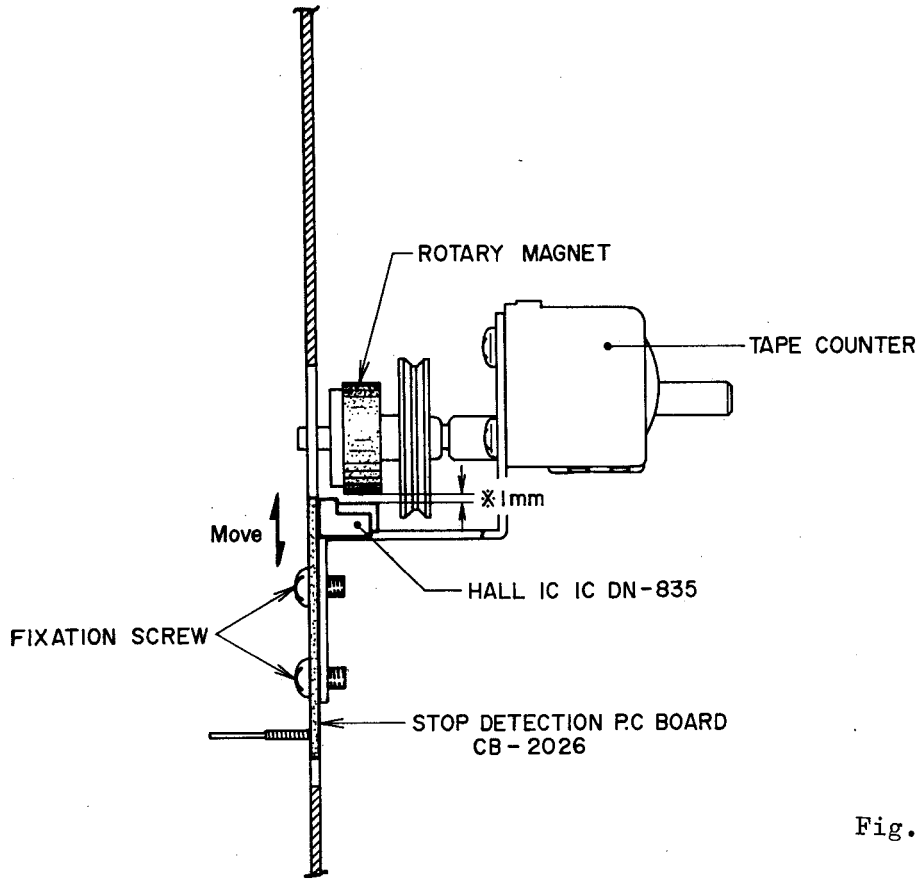

Fig. 14

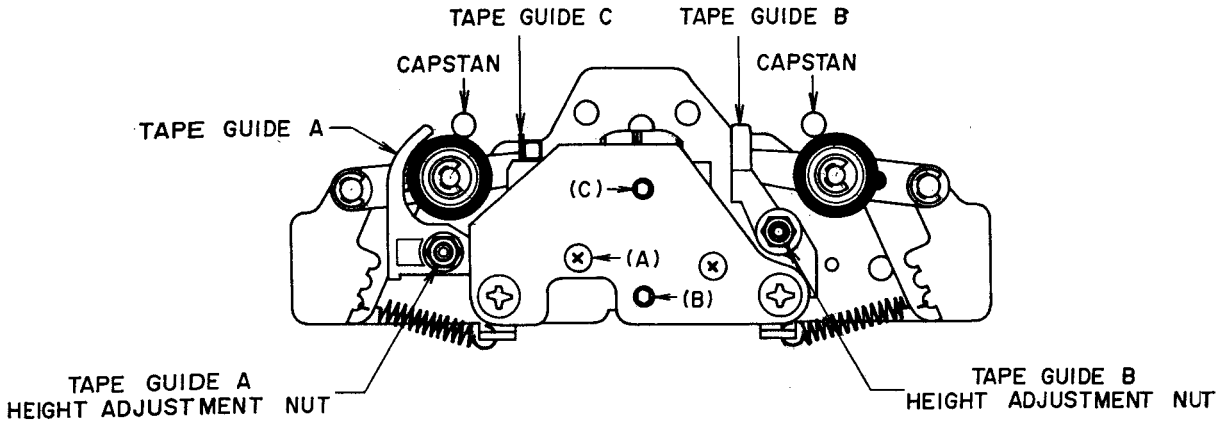
This adjustment is necessary for the perfection of the Automatic Stop Function. If adjustment is necessary due to poor Automatic Stop Function or instability, proceed as follows:

a. As shown in Fig. 14, move Stop Detection P.C Board as indicated by the arrow mark in the figure, and adjust position so that the clearance between the Hall IC and rotary magnet is 1 mm.

b. In case this clearance is over 1 mm, faulty Automatic Stop Function will occur.

3. Head Adjustment



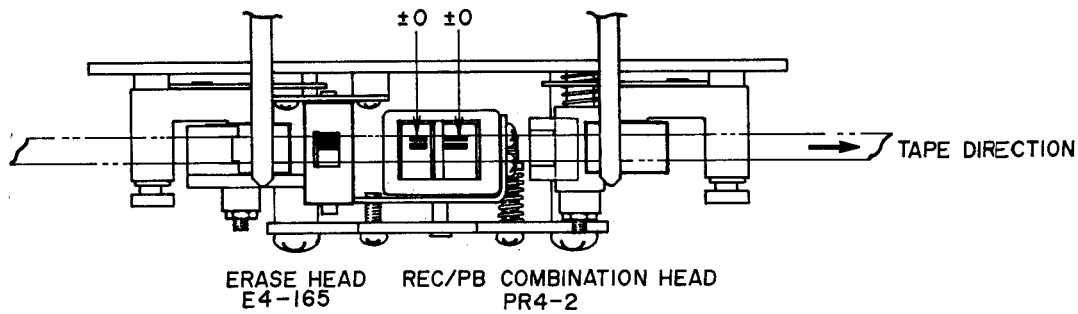


Fig. 15

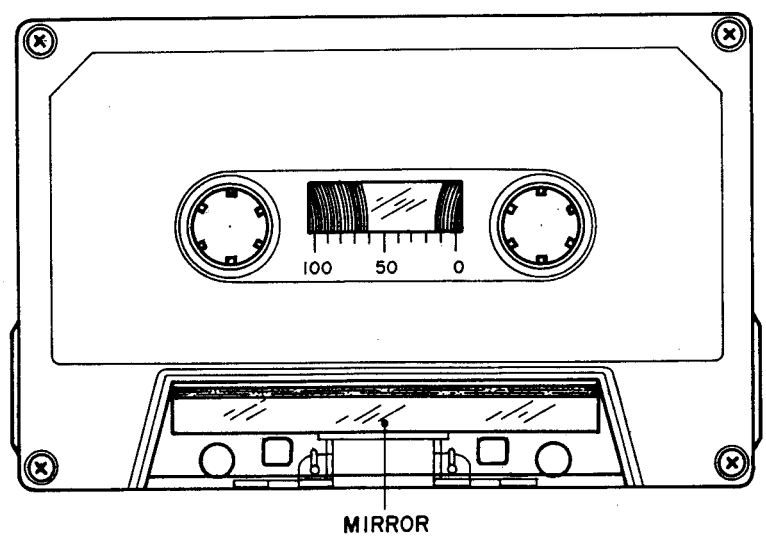

Fig. 16

1) Tape Guide Height Adjustment (Refer to Fig. 15 and Fig. 16)

a. When using an ordinary cassette, the tape guides and heads, etc. are not visible. As shown in Fig. 16, use a cassette tape from which part of the cassette case has been cut out and a mirror installed for easy visibility of the head area when making tape guide height adjustment.

b. At playback mode, using the erase head guide C shown in Fig. 15 as standard for height, adjust tape guide A and tape guide B height with tape guide height adjustment nuts so that the tape runs smoothly and does not each on the tape guides.

2) Height Adjustment of Recording/Playback Combination Head (Refer to Fig. 15)

a. Utilize the cassette tape used in Tape Guide Height Adjustment above, and playback the leader tape part of cassette tape.

b. As shown in Fig. 15, adjust head height with screws (A),(B), and (C) until the upper edge of the tape is the same height as the upper edge of the left channel REC/PB Comb. head core.

3) Azimuth Alignment Adjustment of Recording/Playback Combination Head (Refer to Fig. 15)

a. Playback a 10 kHz pre-recorded cassette azimuth alignment test tape and adjust screw (A) shown in Fig. 15 to obtain maximum output on both channels.

b. Invert cassette and confirm that the output level does not change from that obtained in Item 3)-a above. If the output level differs, adjust in the same way as in Item 3)-a above until both sides of the test tape display equal output

c. Supply a 10 kHz signal from an audio frequency oscillator to the line inputs and record at -20 VU on a blank tape.

d. Set Monitor Switch to "TAPE" position and adjust screw (A) shown in Fig. 16 to obtain maximum output on both left and right channels.

e. The recording and playback heads are joined to form a single structure. Therefore, when making azimuth alignment adjustments, because both head cores (recording and playback) move, repeat adjustments outlined in Items 3)-a through 3)-d above until optimum azimuth alignment of the two head cores are obtained.

NOTES: 1. Be sure to clean the heads prior to head adjustment.

2. Be careful not to use a magnetized driver or other magnetized tools in the vicinity of the heads.

3. Be sure to demagnetize the heads with a Head Demagnetizer before and after head adjustment.

4. When a mirror installed cassette test tape as shown in Fig. 16 is required, it can be ordered from AKAI Electric Co.

4. Amplifier Adjustment

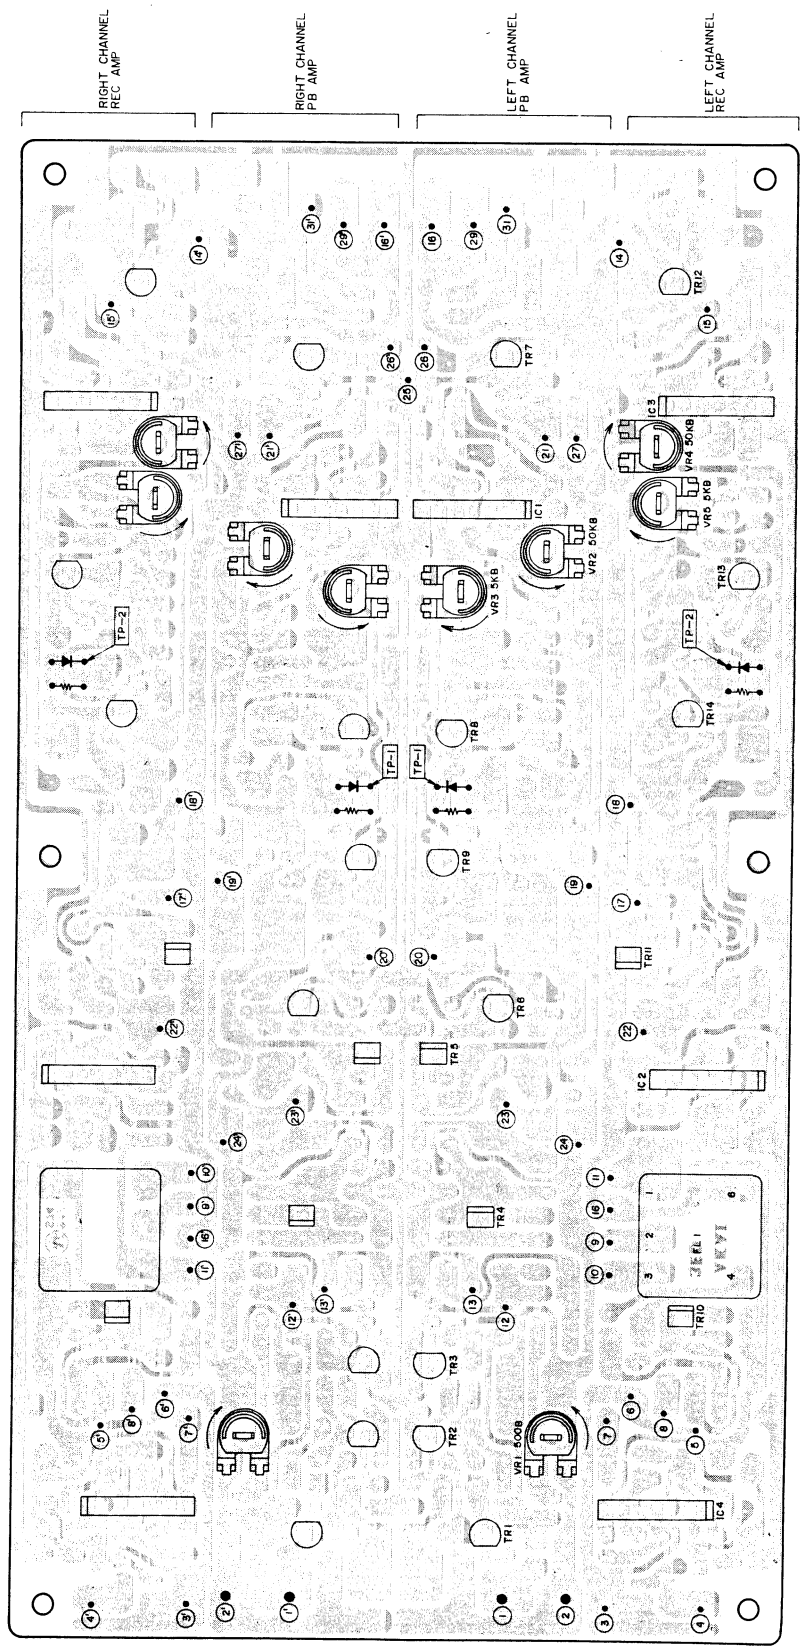

Fig. 17 Pre Amp P.C Board CA-5205

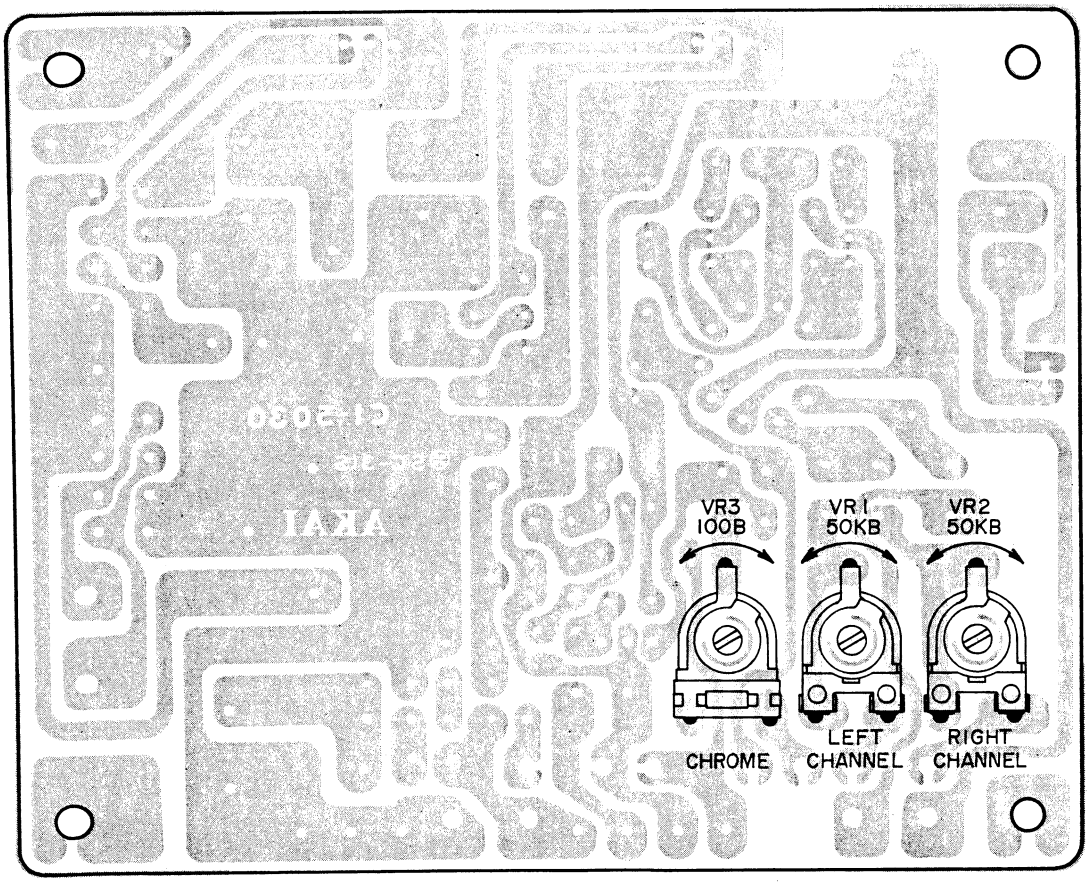

Fig. 18 Power Supply & OSC P.C Board CI-5030

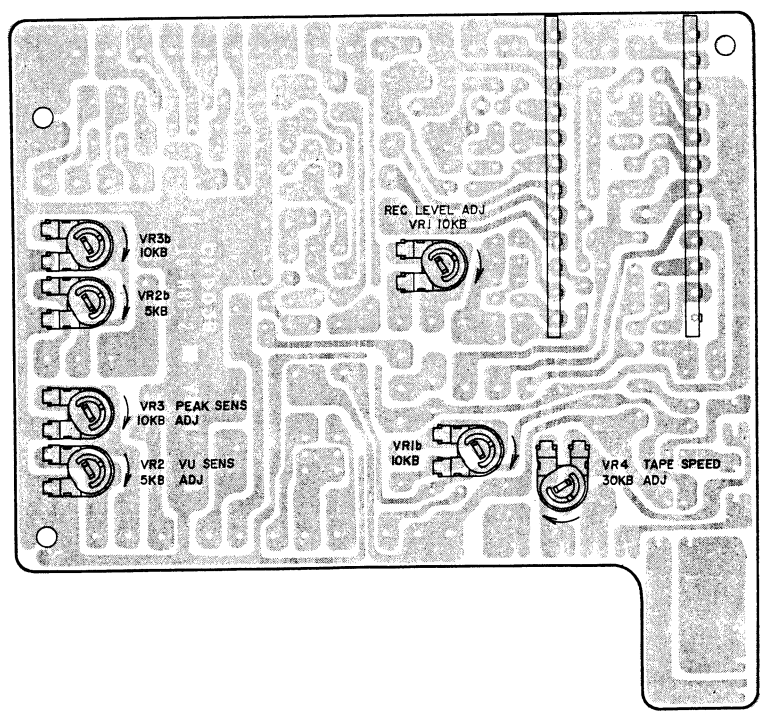

Fig. 19 Equalizer P.C Board CI-5028

1) Recording/Playback Amplifier Adjustment(Refer to Fig. 17,18 and 19 and Chart 1)

Step	Adjustment Item	Test Tape Supply Signal	Mode	Adjustment point	Result	Remarks
1	Playback Level Adjustment	333 Hz 0 VU Test Tape	PLAY	VR1 500B (CA-5205)	0 ±0.5 dBm (0.775V)	Set Monitor Switch to "TAPE".
2	Recording Level Adjustment (low noise tape)	Low Noise Blank Tape 1,000 Hz 0 VU recording	REC	VR1 10 kB (left channel) VR1b 10 kB (right channel) (CI-5028)	0 ±0.5 dBm (0.775V)	Set Monitor Switch to "TAPE" Refer to Note-1)
3	Recording Level Adjustment (chrome tape)	Chrome Blank Tape 1,000 Hz 0VU recording	REC	None	0 ±0.5 dBm	Set Monitor Switch to"TAPE" Refer to Note-2)
4	Frequency Response Adjustment (low noise tape)	Low Noise Blank Tape 1,000 Hz 10,000 Hz -20 VU recording	REC	VR1 50 kB (left channel) VR2 50 kB (right channel) (CI-5030)	1,000 Hz 10,000 Hz Flat response	Set Tape selector to "LOW NOISE"
5	Frequency Response Adjustment (chrome tape)	Chrome Blank Tape 1,000Hz 10,000 Hz -20 VU recording	REC	VR3 100B (CI-5030)	1,000 Hz 10,000 Hz Flat response	Set Tape selector to "CHROME"
6	Recording Level Confirmation (low noise tape)	Low Noise Blank Tape 1,000 Hz 0 VU recording	REC	VR1,VR1b 10 kB (CI-5028)	0 ±0.5 dBm	Refer to Note-3)
7	VU Meter Sensitivity Adjustment	1,000 Hz	STOP	VR2,VR2b 5 kB (CI-5028)	0 VU	Set Meter Selector to "VU METER" Refer to Note-4)
8	Peak Meter Indication Adjustment	1,000 Hz	STOP	VR3,VR3b 10 kB (CI-5028)	-8 VU	Set Meter Selec- to "PEAK METER" Refer to Note-4)

Chart 1

Notes:

a. Recording level adjustment volumes (REC CAL) VR5 and VR6 are not located on the Pre-Amp P.C Board as in the case of an ordinary tape deck, but are installed on the front panel. When adjusting VR1 and VR1b, set VR5 and VR6 to center position.

b. After low noise tape adjustments, confirm recording level only.

c. Following Step 4 frequency response adjustment, because the recording level may be slightly changed, confirm level and if necessary, carry out Step 2 adjustment again.

d. Set Monitor Switch to "SOURCE" and supply a 1,000 Hz signal to line input to obtain a 0 dBm line output level.

e. Because each of these adjustments are vital to perfect Dolby N.R. circuit operation, be sure that they are carried out with as little error as possible.

f. Use the following cassette measuring tape:

Low Noise Tape: Fuji C-60LN

Chrome Tape: BASF #SM Chrome C-60

2) Dolby Noise Reduction Circuit Adjustment (Refer to Fig. 17)

NOTES:

a. Because the establishment of the (5 kHz) adjustment signal and level etc. is vital to correct Dolby Noise Reduction circuit adjustment, use only calibrated measuring instruments.

b. Level deviation must be within $\pm$0.5 dB.

c. After Dolby Noise Reduction circuit adjustments have been made, do not change recording and playback levels.

3) Recording Dolby Noise Reduction Amplifier Adjustment (Refer to Fig. 17)

a. Set Monitor Switch to "SOURCE", and Tape Selector Switch to "LOW NOISE".

b. Ground Test Point TP2 and turn adjustment semi-fixed resistors VR4(50 kB) and VR5 (5 kB) as far as they will go in the direction of the arrow mark.

c. With Line Recording Level Volume set to 12 o'clock position, supply a 5 kHz signal to the line input and obtain a -28.5 dBm line output level.

d. Connect a Voltmeter to the center terminal of EQ P.C Board Rec Level Volume VR1 (left channel) and VR1b (right channel), and adjust Rec Level Volume obtain a -30 dBm AC Voltmeter indication.

e. With the Dolby Noise Reduction Switch at ON, adjust semi-fixed resistor VR4 (50 kB) shown in Fig. 17 to obtain a -20 dBm level at center terminal of Rec Level Volume

f. Disconnect Test Point TP2 from ground and adjust semi-fixed resistor VR5 (5 kB) shown in Fig. 17 to obtain a -22 dBm level at center terminal of Rec level Volume.

4) Playback Dolby Noise Reduction Amplifier Adjustment (Refer to Fig. 17)

a. Set Monitor Switch to "TAPE" and Tape Selector Switch to LOW NOISE.

b. Ground Test Point TP1 and turn adjustment semi-fixed resistors VR2 (50 kB), and VR3 (5 kB) as far as they will go in the direction of the arrow mark.

c. Set deck to playback mode.

d. Supply a 5 kHz signal to terminal (13) shown in Fig. 17 and obtain a -20 dBm line output level.

e. Set the Dolby Noise Reduction Switch to ON and adjust semi-fixed resistor VR3 (5 kB) to obtain a -30.5 dBm line output level.

f. Disconnect Test Point TP1 from ground and adjust semi-fixed resistor VR3 (5 kB) to obtain a -28.5 dBm line output level.

PRE AMP P.C BOARD CA-5205

NOTES
1. UNLESS OTHERWISE SPECIFIED
   ALL RESISTORS IN OHMS 1/4(J)
   ALL CAPACITORS IN uF 50WV(J)
2. ※ MARK INDICATES LOW LEAKAGE CAPACITORS
3. NL INDICATES NOISE LESS RESISTORS
