ALLIED RADIO CORP.

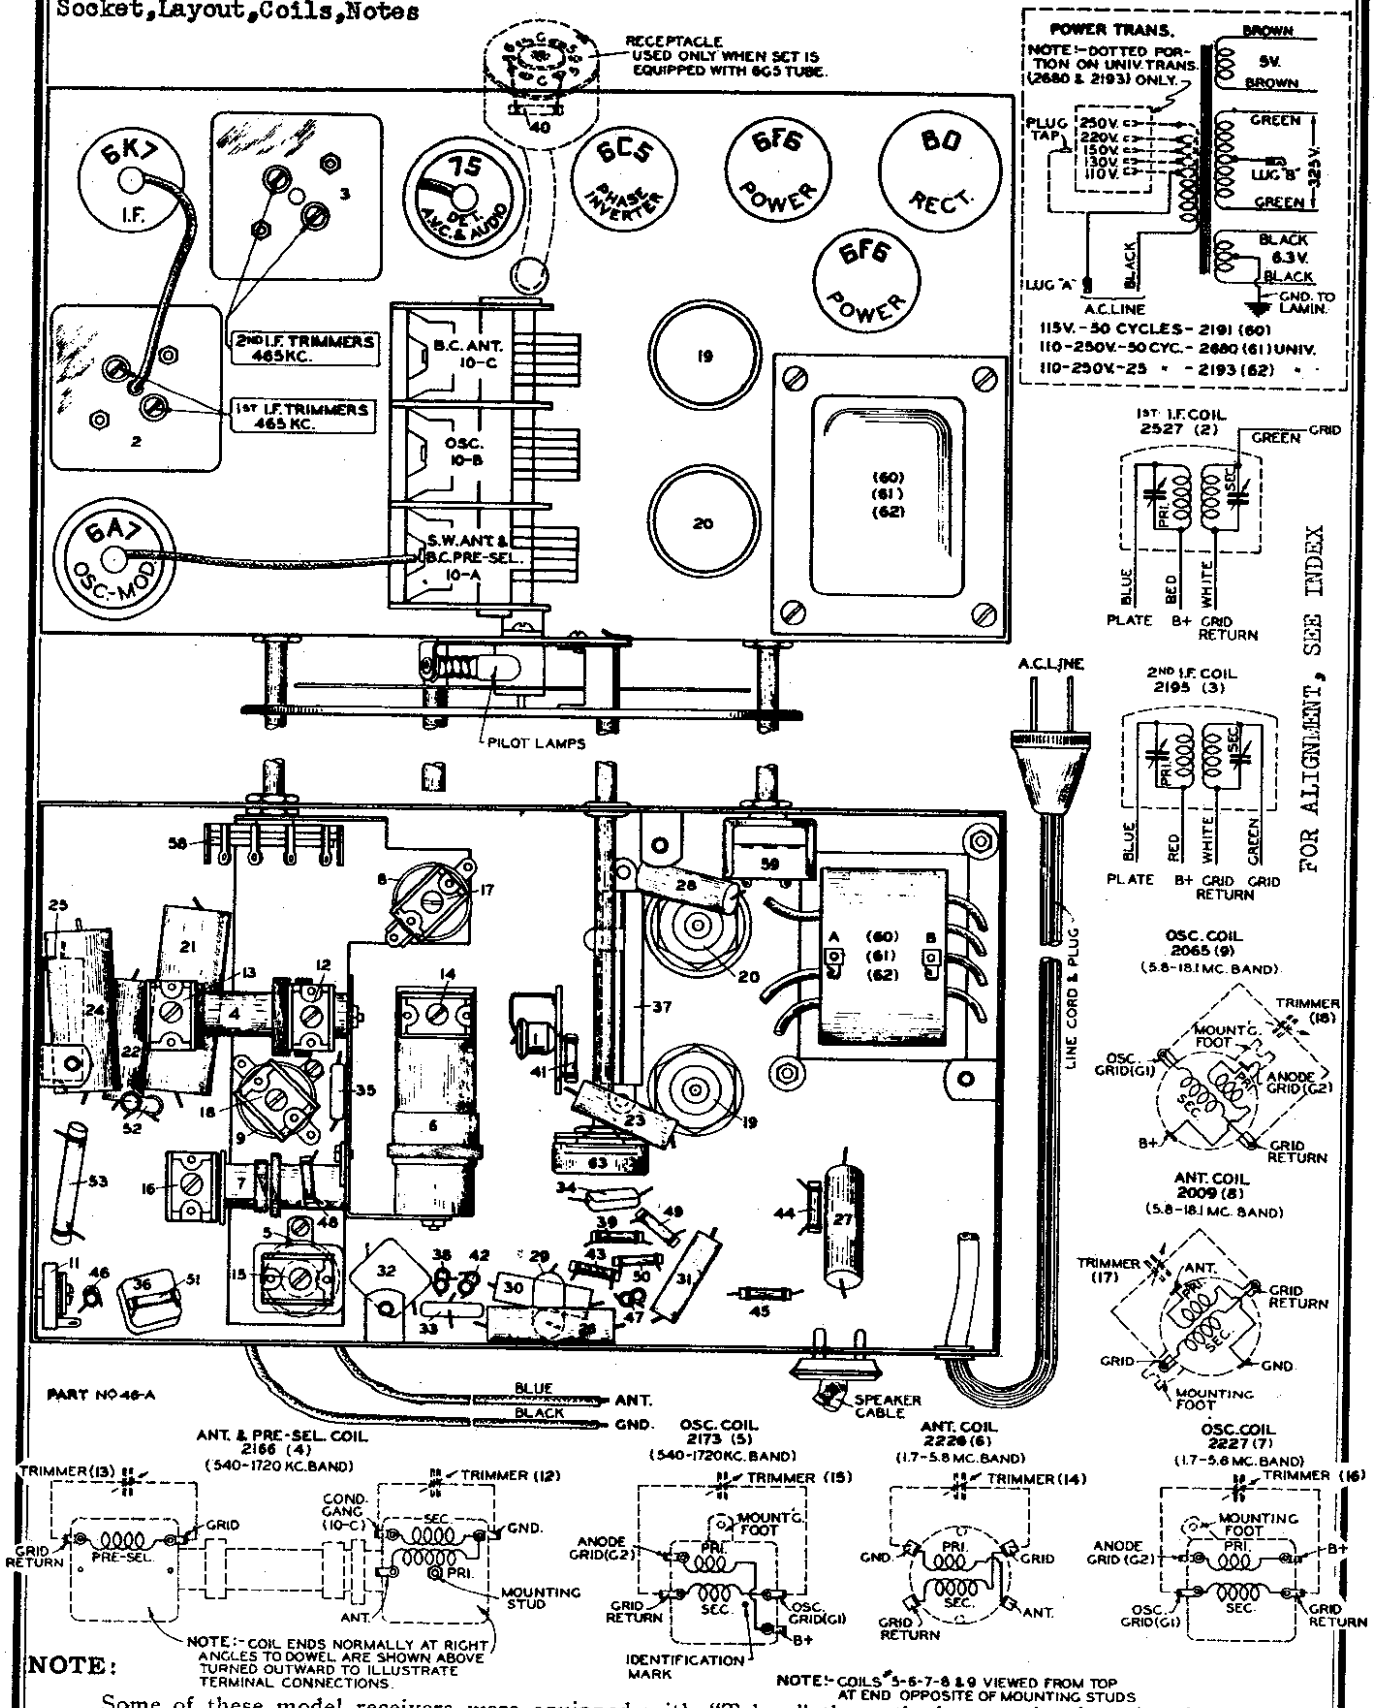
Chassis 46A
Socket, Layout, Coils, Notes



NOTE: Some of these model receivers were equipped with "Teleye" the cathode ray visual tuning indicator. A 6E5 tube was used in early production models, which was replaced by a 6G5 tube in later production. The parts and connections shown in the dotted lines on the complete circuit diagram are used only when a 6G5 "Teleye" tube is incorporated in the receiver. The **schem. diag.** shows 6E5 tube connections.
