DCM Series

Circuit Description

The DCM series are power amplifiers designed for commercial installations. They can be used for either low impedance (4 ohm/8 ohm) or constant voltage line speakers (100v/70v). These amplifiers can be mounted in a standard 19" equipment rack or they can be used on a shelf or table. The DCM series feature line level input (with parallel output) and are normally used with mixers, mixer amplifiers or other power amplifiers. The DCM series will operate from mains voltage or 24VDC. The DCM series also feature a DC battery trickle charge facility, auto-sensing fan cooling, plus overload, short circuit and over temperature protection.

Power Switch

This switch controls the switching of AC power to the amplifier. A blue 'On' LED will indicate whether the amplifier is switched on or off. This switch will not switch DC power on or off in DC operation. In DC operation mode, the amplifier is always on and the blue power LED will always be illuminated. If both AC and DC voltage supply are connected and the AC power switch is in the off position, the amplifier will continue to operate normally from the DC supply and the mains fail LED will indicate.

Level Control

The output level control is located in the centre of the front panel. It is a fully recessed screwdriver adjustable pot. Turning this pot cw will increase the gain of the amplifier. At maximum setting the input sensitivity is 300mV. The amplifier ships from the factory with the sensitivity set to 1V.

Amplifier Status Display

This VU meter indicates the output level of the amplifier. The sensing for the circuit is taken on the amplifier side of the output transformer. The 0dB level is referenced to 100V. This is an RMS meter, not a peak meter.

Protect

The protect LED will illuminate when the amplifier cuts out because of either over current or high temperature. The amplifier will switch back on after approx 4 sec for an over current trip. The amplifier will switch back on after the amplifier has cooled to 60degC for a thermal trip.

Limiter

The limiter is a hard limiter with an attack time of about 1msec. It is defeatable by removing the jumper on the solder side of the front pcb. This however is not recommended as voltage overload and speaker transformer current saturation may cause the amplifier to cut out under normal program material.

Current Limit and Setup

Current limit is controlled by a microprocessor (PIC12C509A). The detection is done by sensing voltage across the emitter resistors. Trimpot P1 on the front pcb is accessible through the hole in the top right of the chassis return (only visible with the lid off). Turning the trimpot ccw will decrease the point at which the amp cuts out ie the amp will cut out earlier. (P1 resistance is increased.)

To set the current limit:

1. Reset the trimpot P1 turning fully clockwise.
2. Connect the amplifier to half it's minimum load (10ohm for DCM500, 20ohm for DCM250, 40ohm for DCM120).
3. Run an rms 1kHz sine wave into the amplifier and set the input level so that you read 425mVDC (DCM250/500) or 825mVDC (DCM120) across the emitter resistor, measuring the side which has the higher current (measured as a voltage across the emitter resistors).
4. Turn the trimpot P1 ccw till the amplifier cuts out. The amplifier is set to the factory default.

Thermal and Fan control and Setup

The thermal cutout and fan is controlled by a microprocessor (PIC12C509A). The temperature is sensed using a 10k@25degC NTC. The fan is normally off and turns on to full speed at 60degC. This temperature is fixed and not adjustable. The thermal cutout temperature is set using the trimpot accessible through the hole in the top left side of the chassis return (only visible with the lid off). Turning the trimpot cw will decrease the point at which the amp cuts out ie the amp will cut out earlier.

Power Amp

The power amplifier is a push pull single supply amplifier driven by a class A transformer coupled front end. The drive is provided by HEXFETs (RF9520/9530) into NPN BJTs (TIP35C). When replacing the FETs it is recommended that you replace both FETs. The matching of these FETs determines the balancing of the emitter currents in the output devices. For optimum performance the emitter currents in each side should match to within 30% of each other.

Bias Setup

The amplifier is set with a bias setting of 1mV measured across the emitter resistors.

Bias is set using the trimpots located on the power pcbs on each side of the amplifier.

Turning the trimpots cw increases the bias.

If the HEXFETs have been replaced the resistor in series with the pot may need to be changed. Use a lower value resistor if the bias cannot be turned off or a higher value if the bias cannot be turn on.

AC Power Inlet

The operating voltage is 230/240 VAC @ 50 Hz. The 3 pin IEC power inlet is located on the bottom left of the rear panel and accepts a standard mains power lead fitted with an IEC connector. Before plugging in a power lead, please check the rear panel of the amplifier to ensure that the voltage switch is set correctly for your part of the world.

The inlet is equipped with an in-built AC fuse containing the rated fuse and a spare.

24 Volt DC Power Inlet

The DCM series feature optional 24VDC power to run off a battery back-up if required. This is connected via the rear binding posts. The front panel Power Switch will not switch DC power ‘on’ or ‘off’ in DC operation. In this mode the amplifier is always ‘on’.

The trickle charge resistor across the diode is a 47ohm/5watt wire wound resistor. The maximum trickle current is 300mA supplied from internal 35V rails.

230V/240V Slide Switch

The operating voltage of the amplifier is user selectable between 230V and 240V via a slide switch located on the center of the rear panel. This switch should be set to match the AC voltage of your country. The mains transformer is wound with a 230V winding plus a 10V winding internally connected.

Speaker Output Terminal Strip

The screw terminals located on the top left of the rear panel allow access to the direct speaker outputs of the amplifier. Reading from left to right the terminals are:

COM	Common or “-” for low impedance speaker loads (4 or 8 ohms)
4	Positive “+” for 4 ohm speaker loads (use with common)
8	Positive “+” for 8 ohm speaker loads (use with common) DCM120 only

COM	Common or “-” for 70v or 100v speaker loads
70	Positive “+” for 70v line speaker loads (use with common) DCM120/500 only
100	Positive “+” for 100v line speaker loads (use with common)

Please ensure that the correct “Common” is used. Low impedance and 70/100v loads can be used simultaneously but please pay careful attention to the overall speaker load.

Note: The minimum impedance (or maximum load) at 100 volt line should be no less than

DCM120 – 80 ohms
DCM250 – 40 ohms
DCM500 – 20 ohms

XLR Audio Input and Parallel Output

The DCM series includes both male and female 3 pin XLR connectors per channel. While the female is normally used as the input to the amplifier, both XLR's are connected in parallel so either will work.

The XLR's inputs are transformer balanced and wired as:

Pin 1: Shield.
Pin 2: Hot, +, Positive
Pin 3: Cold, -, Negative

Fuse Sizes

(DCM120)

Mains: 230 VAC 4 Amperes Slow Blow HRC 20x5mm
DC: 10 Amperes Slow Blow HRC 20x5mm

(DCM250)

Mains: 230 VAC 6.3 Amperes Slow Blow 20x5mm
DC: 2 x 10 Amperes Slow Blow HRC 3AG

(DCM500)

Mains: 230 VAC 10 Amperes Slow Blow HRC 20x5mm
DC: 2 x 35 Amperes Slow Blow 3AG

TESTING PROCEDURE OF DCM 120/DCM 250/DCM 500

I. PRE-TESTING (of complete sets).

• Check

- 1.1 All screw for tightness (Bridge rectifier and transistor bolts)
- 1.2 Earth Connection for good contact (solder and crimping)
- 1.3 This setup has signal input to the Amplifier through male (XLR)
- 1.4 Check with Multimeter that there is a DC resistance of about $250\ \Omega$ between Pin2 & Pin3 of each of XLR's. Also between (Pin 1 & Pin 3) and (Pin1 & Pin2). There should be very high resistance. (IE: no reading).

2. Electrical Check

2.1 Fuse Check:

	DCM 120	DCM 250	DCM 500
Mains fuse:	4AT	6.3 AT	10 AT
DC fuse:	10AT (x1)	10AT (x2)	35AT (x2)

2.2 Connect the Amplifier to the setup (Variac voltage = 0V) set all presets on front board (only) fully clockwise, voltage selector switch to 230V

2.3 Slowly increase the input voltage to 230V, keep watching the input current should not exceed 0.1A for DCM-120, 0.1A for DCM-250, 0.1A for DCM 500.

2.4 Check and reset if necessary all emitter resistor voltages with the help of preset.
(Each emitter resistor voltage should be between 0.5 mV to 0.8 mV)

2.5 Check DC voltage Main rail = 33V

7815 input = 30V

7815 output = 15.5V

2.6 Give input signal of 500 mV to get outputs as follows (@ 4Ω output load)/ 22V for DCM 120, 32VAC for DCM250, 44.7VAC for DCM 500. Check 100V O/p at 100vV line, Remove the input signal

II. FINAL TESTING

(This setup should have signal input to Amplifier through female (XLR)
(The limiter link should be out of circuit initially.)

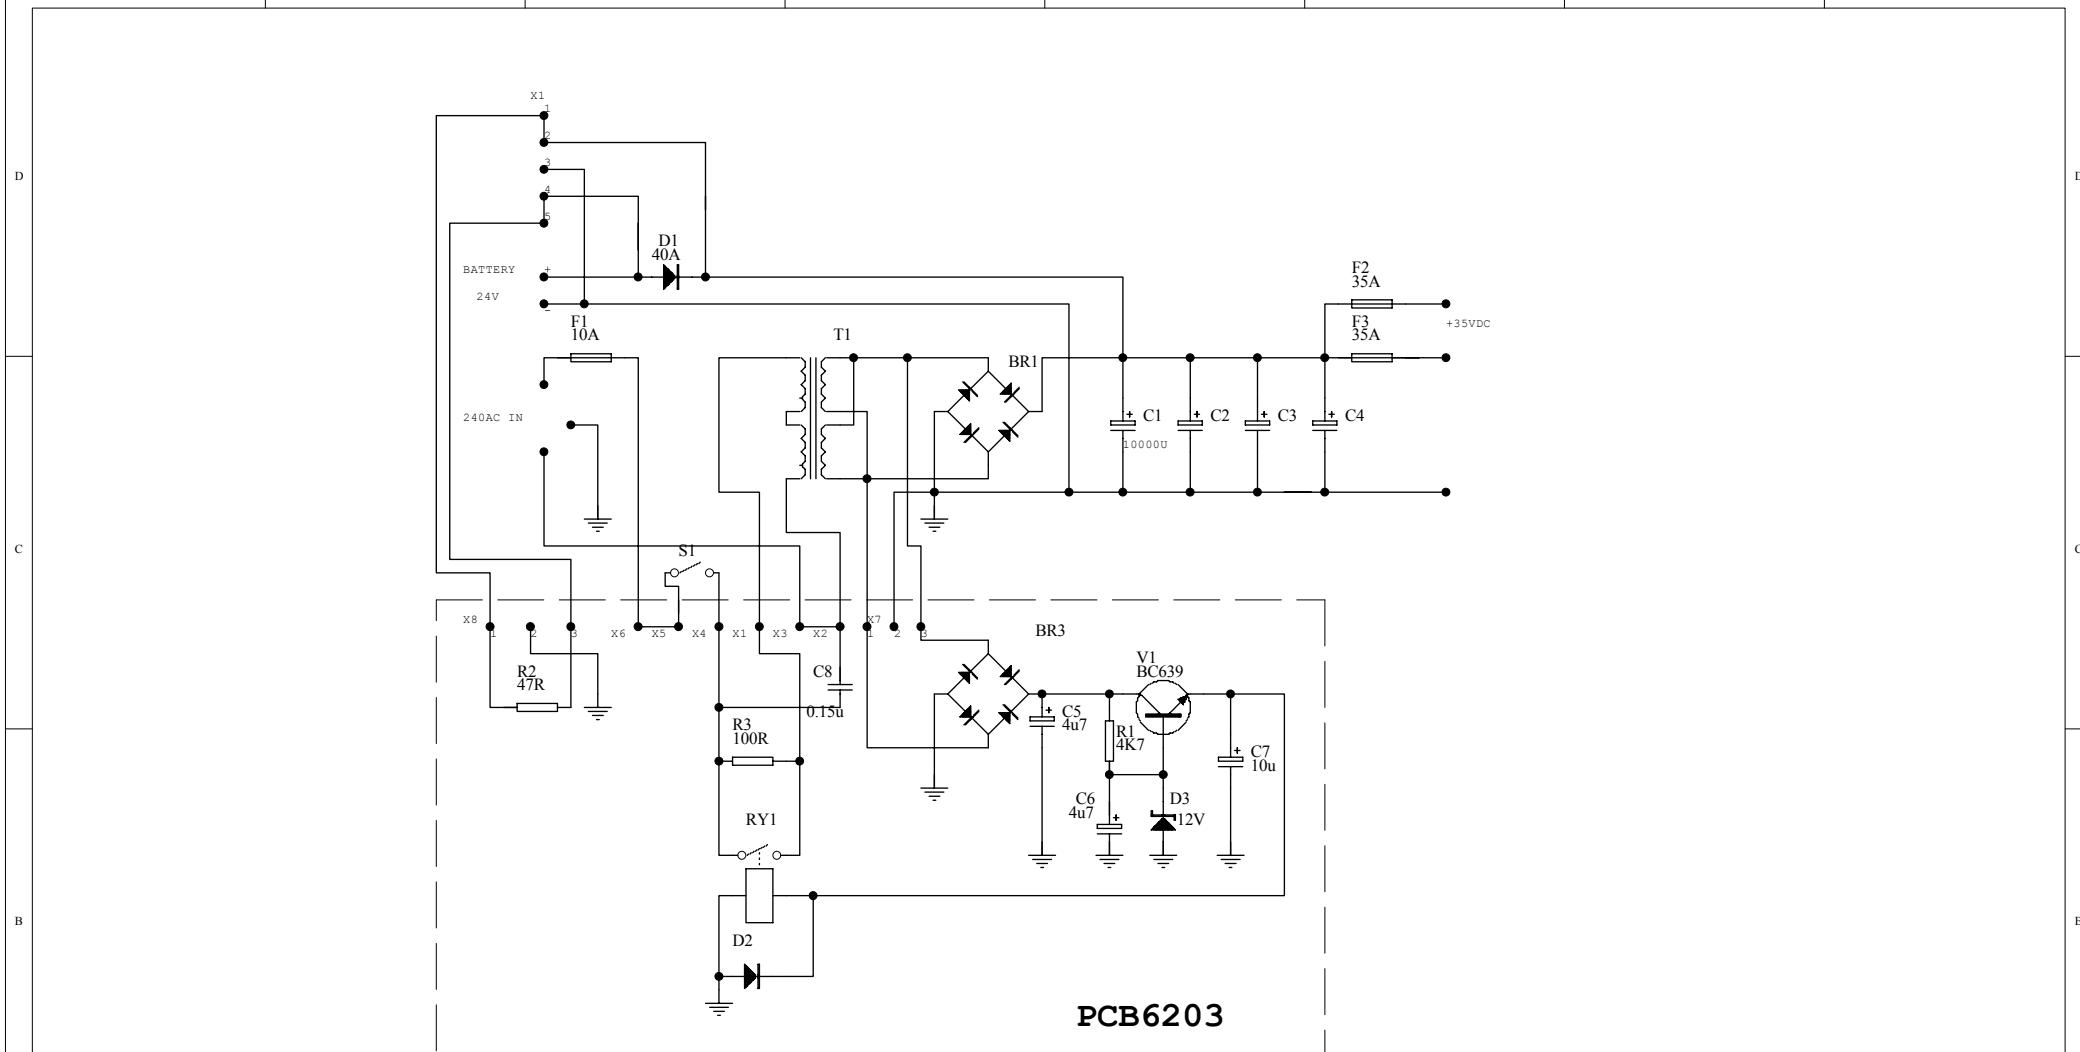

1. Connect the Amplifier to the setup, set voltage selector switch to 240V
2. Switch ON the set to 240VAC.
3. Slowly increase the input signal (of 1kHz) keep watching the 24dB LED, it should glow at approx 9V output. Increase the input signal to get 70VAC output.
4. Check Dc voltage of all emitter resistors, Minimum value should be within 30% of the maximum value.
5. Slowly increase the input signal, keep watching the 0db LED, it should glow at 100V \pm 5V output voltage.
6. Set 100V 1kHz as 0db reference. Change frequency to 10kHz check dB level drop. It should be 2.5dB \pm 0.5dB.
7. Change the frequency to 1kHz, reduce signal level to get 10VAC output. Half the output load.
8. **Overload setting:** - Check the DC voltage at the emitter resistors having the maximum voltage value. Increase input signal to get 820mV for DCM 120, 425mV (for DCM250 & DCM 500). Turn preset (P2) anticlockwise such that it just mutes the output signal and signal returns back slowly after 2 seconds.
9. Reduce the signal & re check whether the signal mutes at the corresponding above stated voltages.
10. Again make the output load to original full value. Turn volume preset fully anticlockwise, set input signal strength to 1V, set volume preset clockwise to get 100V output.
11. Set input signal strength to get output 110V VAC. Insert limiter link, the signal should reduce to 100V \pm 5V.
12. Remove the input signal and check noise. It should measure less than 25mV.

III. THERMAL & SOAK TEST

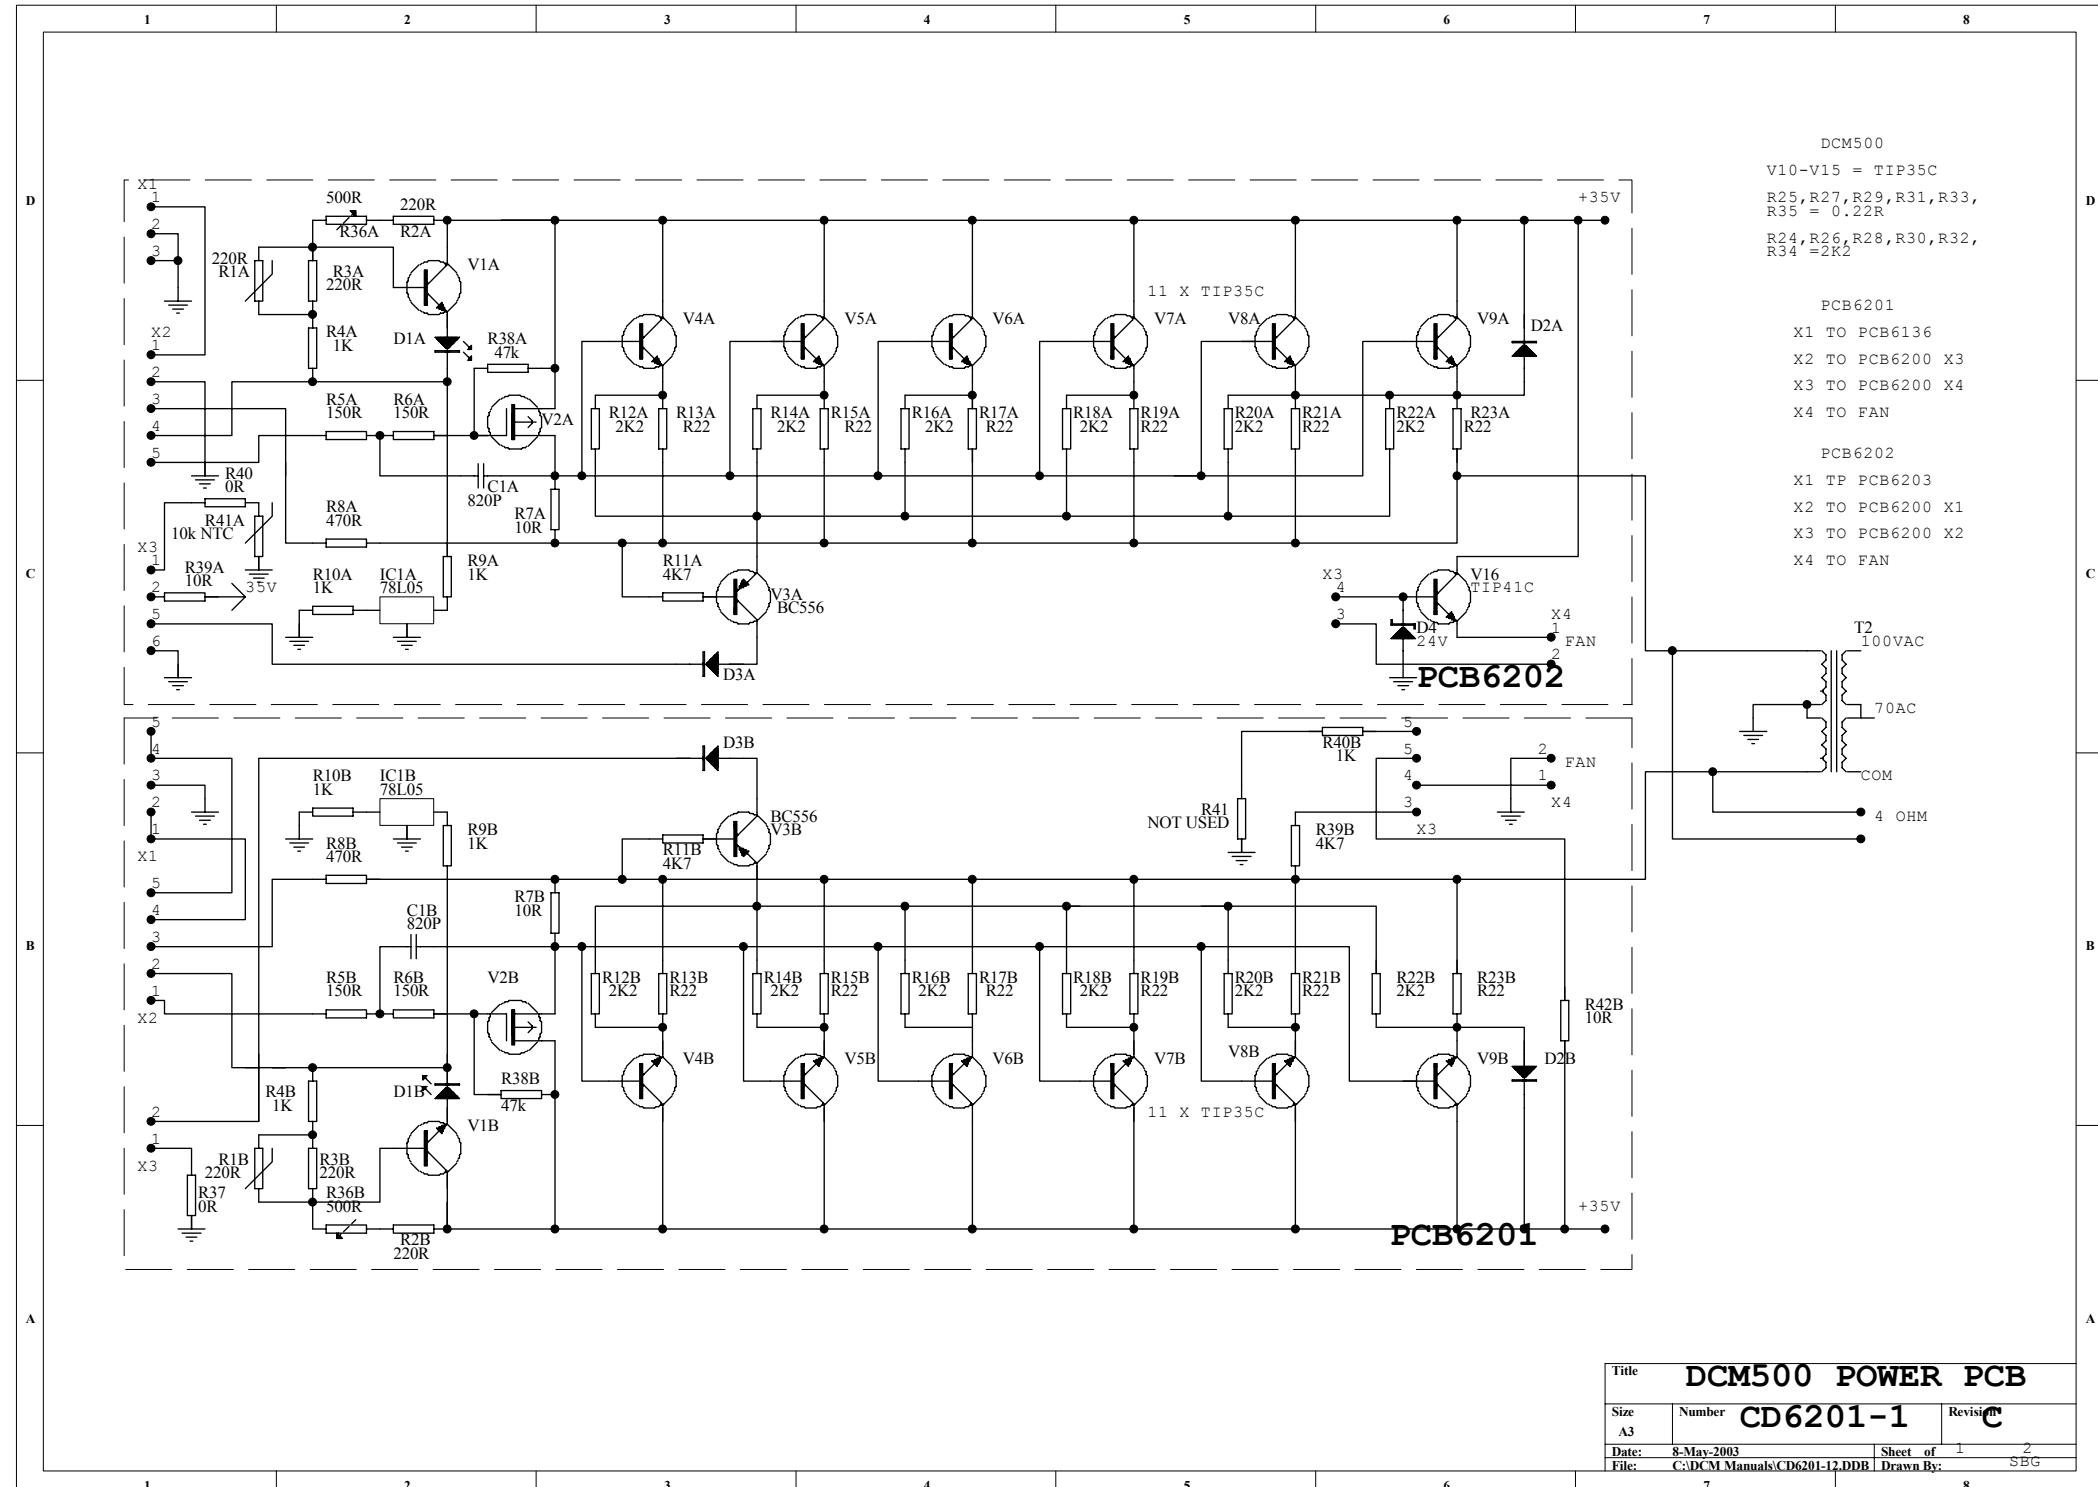

1. Connect the Amplifier to the setup : Output load = 4Ω Output Voltage: (DCM 120): 14V. (DCM 250):20V. (DCM 500): 40V
2. Set the Amplifier thermal cut off temperature at around 105°C with the help of preset P4.
3. Leave the unit “ON” (with lid fixed, if possible) for 24 hours.

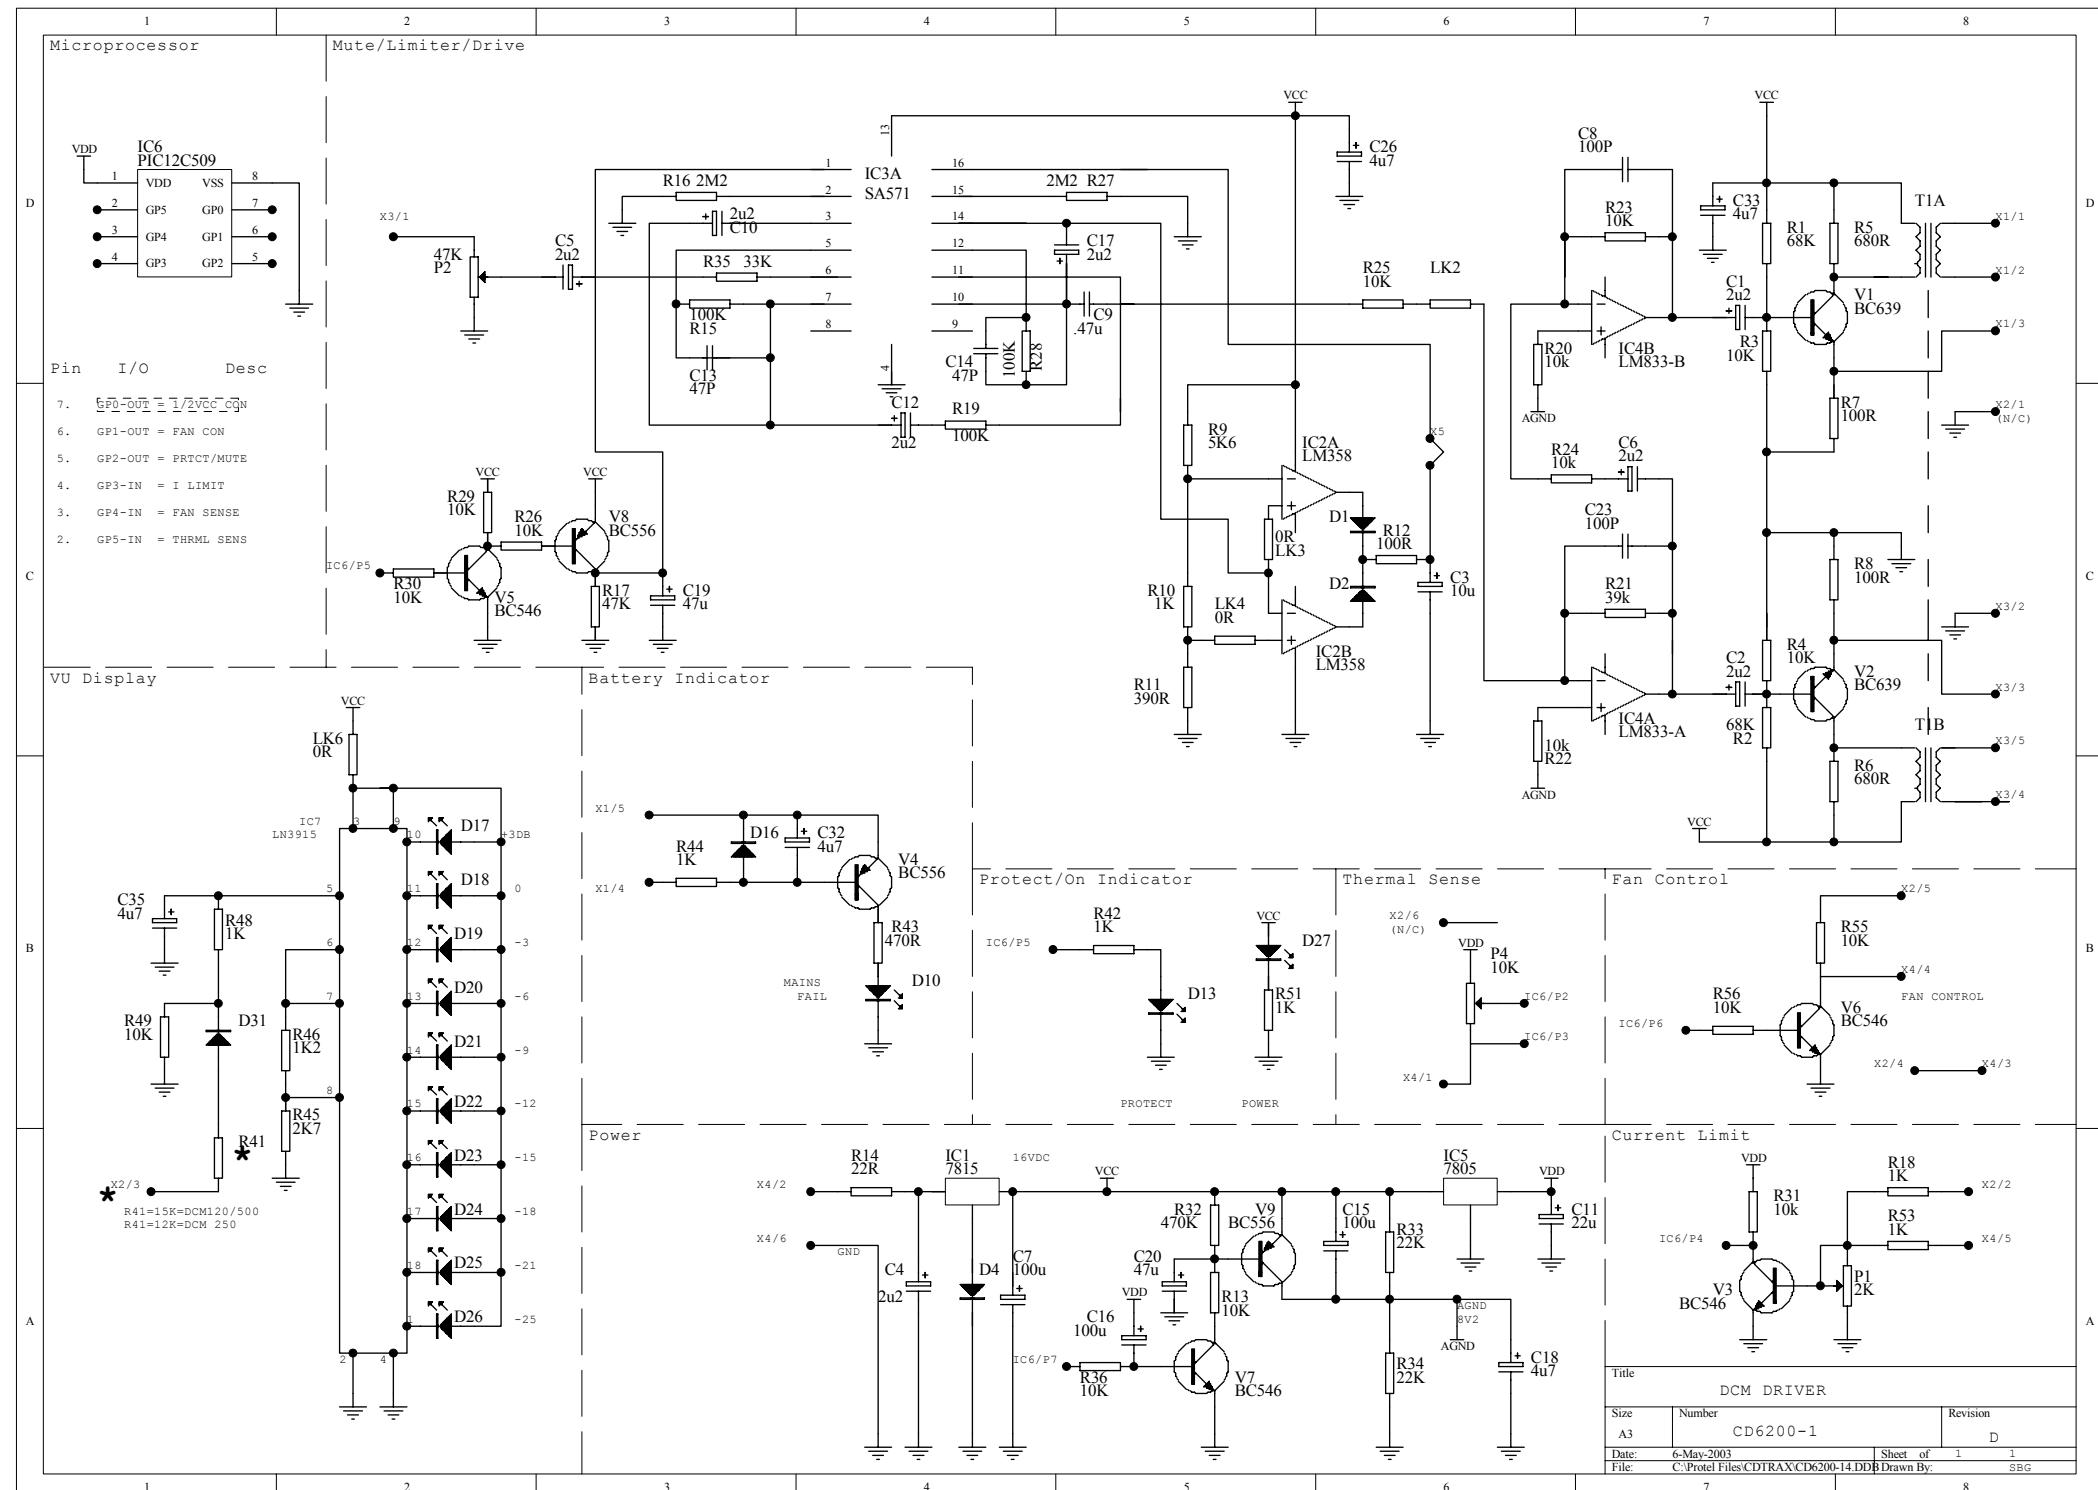

IV. Sound Test/Listening test.

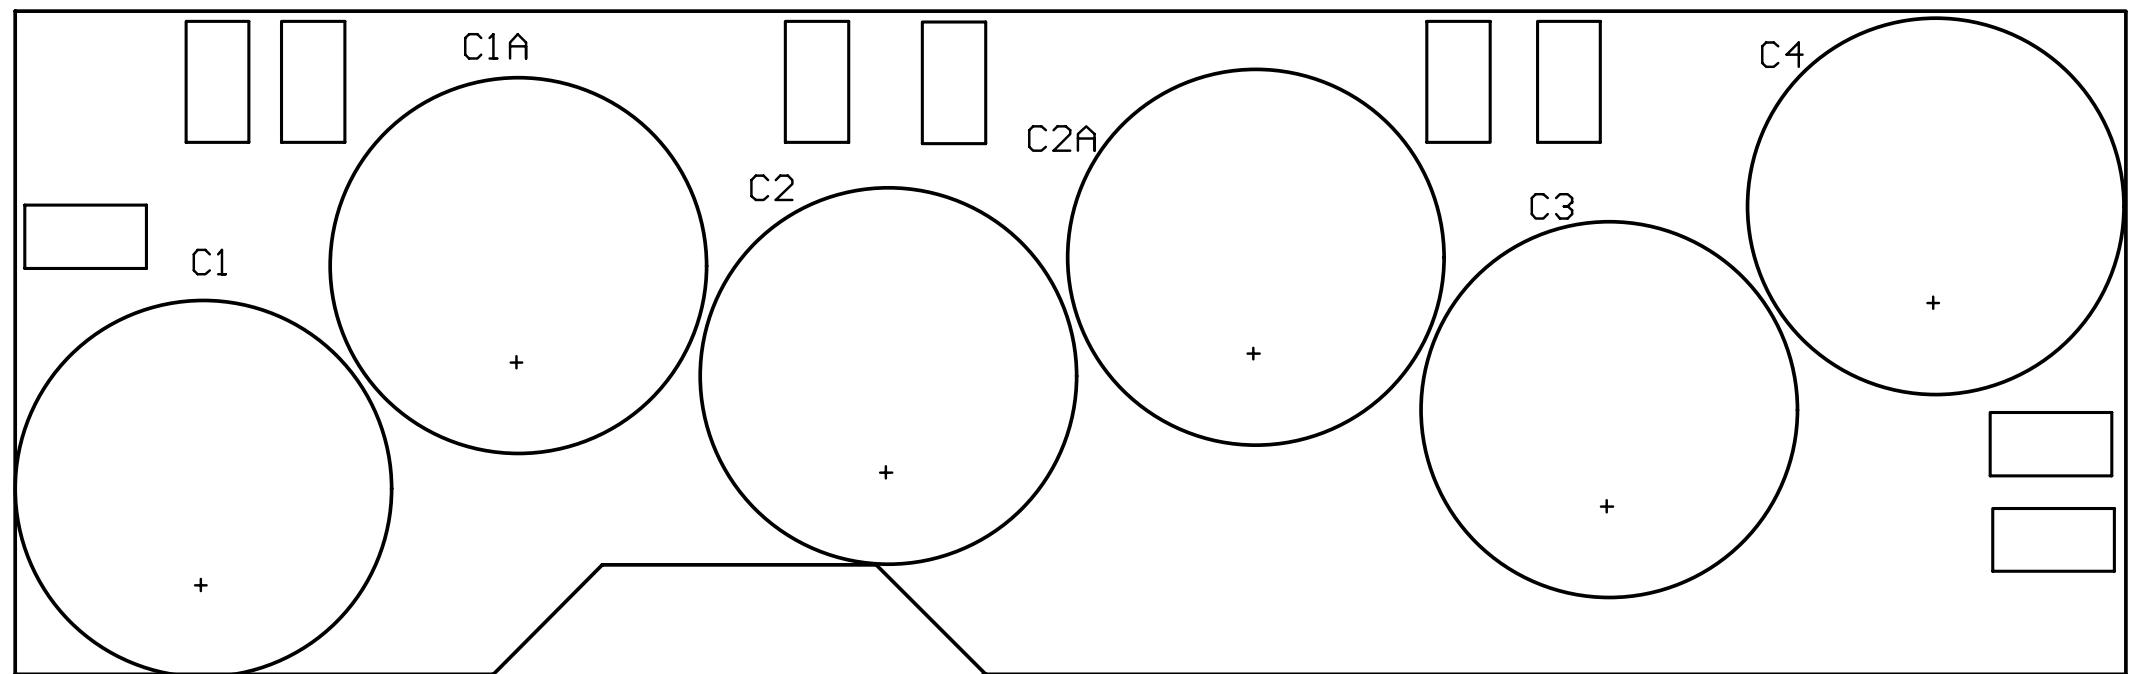

1. Switch On the set. Check for any switch on thump.
2. Connect CD player to the input, listen for irregularities if any.
3. Switch off the set check for switch off noises.

DCM500 Major Components price list				
<u>Part</u>	<u>Description</u>	<u>Manufacturer code</u>	<u>in house</u>	<u>AUD\$</u>
PCB's				
Power Supply PCB	Capacitor mount PCB	S5728MDCM50003		\$47.13
Input	Input PCB assy	S5728MDCM50005		\$10.05
Output Left	Output PCB assy	S5728MDCM50001		\$66.79
Output Right	Output PCB assy	S5728MDCM50002		\$62.75
Display-front PCB	Display PCB	S5728MDCM50006		\$33.44
Relay PCB	Relay slow start PCB	S5728MDCM50004		\$8.18
Transformers				
230/240VAC	Mains 230/240V	2561991355		\$79.36
Output	Output	2651991357		\$65.99
Fuse 35 amp	DC rail fuse	2541120350		\$0.51
Bridge Assembly	Bridge Assembly	S5728MDCM50023		\$27.31
Drive transformer	Drive Transformer	S5728MDCM50007		\$2.30
Semiconductors				
TIP35C	NPN TO3P transistor	2141600035	TIP36C	\$3.60
TIP41C	PNP TO220 transistor	2141300041	TIP42C	\$2.01
BC639	NPN TO92	2144200639	S7007	\$0.16
BC640	PNP TO92	2144200640	S7008	\$0.16
BD140	PNP TO92	2141400140		\$0.22
BD139	NPN TO92	2141400139	S7009	\$0.22
LM1458	IC Dual Op amp	2152801048	LM1458	\$0.27
LM833N	IC Dual Op amp	2157800833	LM833	\$1.05
LM358	IC Dual Op amp	2152800358	LM358	\$1.05
LM78L05	IC Regulator	2151270805	LM7805	\$0.17
LM7815	IC Regulator	2151370815	LM7815	\$0.52
LM7818	IC Regulator	2151370818	LM7818	\$0.52
10k Thermistor		2111911103		\$0.80
IRF 9530	Mosfet IRF9530	2142309530		\$3.49
PIC 12C509	PIC 12C509A, 8 PIN	2159082509		\$4.17
LED blue		2137600003		\$0.13
KBPC 3506	Bridge rectifier 35A	2134800356		\$7.49
SA 571N	Comander	2153600571		\$3.69
LM 3915N	LED driver IC	2156603915		\$3.77
Switches & Pots				
Volume Pot	Input attenuator	2112211473		\$0.56
Power switch	Rocker switch	2511210155		\$1.39

Hardware				
Front Panel	Front Panel DCM500	S600000132		\$4.88
Lid	Top cover DCM500	S600000130		\$13.14
Rack ears	Rack ears	S600000137		\$4.35
Chassis	Chassis Pan DCM500	S600000129		\$22.92
Barrier Strip	6 way barrier connector	2583528306		\$2.51
XLRF	XLF Female connector	2587210266		\$1.35
XLMR	XLR Male connector	2587110227		\$1.08
Screw + washer	Black screw w/star	2316420308		\$0.08
Screw	Black screw wo/star	2316421306		\$0.08
Acrylic cover for terminal	Clear cover for 6 way barrier connector	9347560006		\$0.31
Fuse Holder	DCM series fuse holder	2344400322		\$1.00
FAN 12V	DCM Series 12vdc fan	2571120122		\$6.33
