SPECIFICATION GUIDELINES FOR SERVICE USE	BeoSound 3000
With FM, AM and RDS	Type 2671 EU (230V)
	Type 2672 GB (240V)
	Type 2673 USA-CDN (120V)
	Type 2674 J (100V)
	Type 2675 AUS (240V)
	Type 2676 TWN (120V)
	Type 2677 KOR (220V)
	Type 2680 LAT (230V)
Preamplifier section	
Total harmonic distortion + Noise R,L	< 0.1%/1 kHz
Response vs. frequency:	
AUX in	20-20,000Hz \pm 1dB
Input sensitivity/impedance	
AUX	200 mV
Input impedance, AUX	>22 k Ω
Max. input signal, AUX	2.0 V
Signal-to-noise ratio:	
AUX, A-weighted	>80 dB
Channel separation 10kHz, AUX	>60 dB
Channel unbalance	\pm 1.5 dB
Bass control at 100Hz	\pm 9 dB
Treble control at 10kHz	\pm 9 dB
Output:	
Source separation	>65 dB
Tone regulation Bass, 100 Hz	9.0 dB \pm 2 dB
Tone regulation Treble 10 kHz	9.0 dB \pm 2 dB
Headphones	3.5 V / 235 Ω
Tuner, FM section	
FM range (50 kHz grid)	87.5-108 MHz
FM range for type 2674 - Japan	76-90 MHz
FM aerial impedance	75 Ω
Usable sensitivity mono	14 dBf - 1.4 μ V
Usable sensitivity stereo	19 dBf - 2.5 μ V
50 dB quieting sensitivity mono	21 dBf - 2.5 μ V
50 dB quieting sensitivity stereo	40 dBf - 28 μ V
Signal-to-noise ratio mono	68 dB
Signal-to-noise ratio stereo	62 dB
Frequency response stereo	30 - 15,000 Hz +1/-3 dB
THD + noise mono	0.63 %
THD + noise stereo	0.6 %
Intermodulation distortion stereo	50 dB
Stereo channel separation	35 dB
Subcarrier product rejection	50 dB, stereo
Tuner, AM section	
AM range EU (9 kHz grid)	LW 153 - 279 kHz
	MW 522 - 1611 kHz
GB (9 kHz grid)	LW 153 - 279 kHz
	MW 522 - 1611 kHz
USA MW (10 kHz grid)	520 kHz - 1710 kHz
Japan MW (9 kHz grid)	522 kHz - 1629 kHz
AUS MW (9 kHz grid)	522 kHz - 1611 kHz
Taiwan MW (9 kHz grid)	522 kHz - 1611 kHz
Korea MW (9 kHz grid)	522 kHz - 1611 kHz
LW sensitivity 20 dB S/N ratio	80 - 72 dB μ V/m (10 - 4 mV/m) TYP 4mV/meter
MW sensitivity 20 dB S/N ratio	68 - 60 dB μ V/m (2.5 - 1mV/m) TYP 2mV/meter
Number of programmes	60
IR Operation	Beo4

CD player

CD, disc types	12 cm (5"), 8 cm (3")
Frequency response	20 - 20,000 Hz ±1 dB
SNR (digital zero)	>96 dB / 101 dB A-weighted
Dynamic range	>98 dB
Channel difference	±0.3 dB
D/A converter	Bitstream + Analog filter

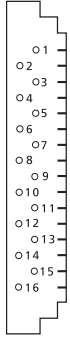

Dimensions

W x H x D / Weight	32 x 36 x 16 cm / 7 kg
Cabinet finish	Black / aluminium
Power consumption	Typical 23 watts / stand-by 3 watts

Accessories

Type 2051	Stand, silver, black, blue, green, red
Type 2052	Center wall bracket, black
Type 2087	System wall bracket, black
V-antenna with coax cable	8720039
AM loop antenna	8720043

Connections

	Master Link	Pin 1	Data- -0.25V
	Pin 2	Data+ +0.25V	
	Pin 3	ML sence 0-5V	
	Pin 4-10	N.C.	
	Pin 11	Supply voltage -7V > -15V, stand-by -3V > -15V	
	Pin 12	Supply voltage 7V > 15V, stand-by 3V > 15V	
	Pin 13	Audio L- 1V bal., Rin 2.2MΩ, Rout 75Ω	
	Pin 14	Audio L+ 1V bal., Rin 2.2MΩ, Rout 75Ω	
	Pin 15	Audio R- 1V bal., Rin 2.2MΩ, Rout 75Ω	
	Pin 16	Audio R+ 1V bal., Rin 2.2MΩ, Rout 75Ω	

	Audio Aux Link	Pin 1	Audio L out 1V RMS, Rout 1KΩ
	Pin 2	GND	
	Pin 3	Audio L in 0.25V RMS to 2V RMS, Rin 47KΩ	
	Pin 4	Audio R out 1V RMS, Rout 1KΩ	
	Pin 5	Audio R in 0.25V RMS to 2V RMS, Rin 47KΩ	
	Pin 6-7	Not used	

	Power Link	Power up (ON = >2.7V -1mA)
	Pin 2	Signal GND
	Pin 3	Audio L out 0V to 2V RMS
	Pin 4	Speaker ON (ON = >2.7V -1mA)
	Pin 5	Audio R out 0V to 2V RMS
	Pin 6	Datalink out (High = >4V, Low = <0.2V)
	Pin 7	Data GND
	Pin 8	PL+ ON

Headphones	4.1V / 235Ω

Brief operation guide

For more detailed operation see User's guide

Tune in radio stations

RADIO	Press RADIO to switch on the radio
TUNE FM ?	Press TUNE to access the tuning function. FM ? appears
▲ ▼	Switches from FM to AM, or vice versa
PLAY FM 88.9	Press PLAY to select AM or FM. FM or AM and the current frequency appears
▲ ▼	Press to search for a radio station – up or down the frequency band
0 – 9	Or, key in the exact frequency
PLAY FINE 0	Press PLAY to accept*. FINE 0 appears
▲ ▼	Press to fine tune, if necessary
PLAY STEREO ?	Press PLAY to accept. STEREO ? appears
▲ ▼	Switches from STEREO to MONO
PLAY P 15 ?	Press PLAY to accept – the first available program number appears
▲ ▼	Press to switch to a different program number
0 – 9	Or, key in the program number you want
PLAY STORED	Press PLAY to store the station on the displayed program number. STORED appears, indicating that the station is stored

Switch on the radio

RADIO	Press RADIO to switch on the radio
0 – 9	Use the number keys to select a stored station
▲ ▼	Step through all stored stations
•	Switch to standby
^ v	Adjust the volume up or down
MUTE	Silences the speakers immediately. Press again to recall the sound

Note: Pressing 0 will swap between present and previous radio station

Play a CD

CD	Plays the CD in the compartment
0 – 9	Plays specific track numbers
▲	Plays the next track
▼	Plays the previous track
STOP	Pauses playing
PLAY	Resumes playing
▶▶	Searches forwards on the CD
◀◀	Searches backwards on the CD
	Keep the button pressed down until you have reached the point you want

*Note: When the requested station is found, you can skip the fine tune and stereo/mono selection by pressing STORE instead of PLAY. Now just enter a program number and press PLAY or STORE to store the station.

Set the built-in clock

CLOCK 14 : 45	Press CLOCK to access the clock function. The time appears
▲ ▼	Press to change to the exact time, if necessary
0 – 9	Alternatively key in the exact time
PLAY 23 AUG	Press PLAY to accept. The date appears
▲ ▼	Press to change the date, if necessary
PLAY 2000	Press PLAY to accept. The year appears
▲ ▼	Press to change the year, if necessary
PLAY STORE ?	Press PLAY to accept. STORE ? appears
STORE STORED	Press STORE to store the new setting. STORED appears

Using the Beo4

RADIO	Turns on the radio
CD	Starts the CD player
▲ or ▼	Press to step through your radio programs or tracks on a CD
	Alternatively, key in the exact number, using the number keys
▶▶ or ◀◀	Searches through a CD Searches backwards through a CD
STOP	Pauses playback any time
GO	Press to resume playback
^	Raises the volume
▼	Lowers the volume
●	Switches off

Option programming

For the Beo4 terminal the key sequence is the following:

- Press and hold
 - then
 - LIST** Press to access the setup function. The Beo4 display reads [OPTION?] - let go of both buttons
 - GO** Press to access *Option*-programming
 - LIST** Press to display [V.OPT] CTV, or
[A.OPT] audio, or
[L.OPT] link room products
 - then
 - 1** Key in the number of the appropriate *Option*, e.g. 1
- The digit sequence to be used depends on the setup.
- Option 0 = No IR reception
 - Option 1 = Two IR-eyes in the same main room
 - Option 2 = One IR-eye in the main room

Explanation of diagram

Type numbers of transistors and ICs are indicated on the diagrams. If the position is followed by an asterisk the spare part number must always be used because the component in question has been specially selected, e.g. TR102*.

Component print and coordinate system

The largest PCBs have component prints and a coordinate system on both the print and the component side.

On the diagrams every component has a coordinate number. This indicates in which coordinate on the PCB the component is situated. The coordinate numbers are written in smaller print types than the position numbers.

Control circuit

In certain control circuits the active mode is indicated by a function term or by an abbreviation. This may be e.g. ST.BY. = low in the stand-by mode or $\overline{\text{ST.BY.}}$ = high in the stand-by mode.

Wiring connections

The wiring connections on the diagrams are assembled in 'bundles'. The individual wires are provided with one of the following codes:

INTERNAL CONNECTION ON ONE DIAGRAM PAGE

Internal connections on a diagram page are indicated by a number.

The bend of the wire indicates in which direction the other end of the wire is found.

CONNECTION TO ANOTHER DIAGRAM PAGE

A connection to another diagram page is indicated by a number as well as by a letter of the diagram to which the connection leads.

Supply Voltages

All supply voltages in the diagrams are indicated by an arrow and a voltage indication.

Ground symbols

Three different ground symbols are used in the set.

Symbol of safety components

When replacing components with this symbol, components with identical part numbers must be used. The new component must be mounted in the same way as the one replaced.

Measuring conditions

All DC voltages have been measured in relation to ground with a voltmeter with an input impedance of 10 Mohms.
 The DC voltages are stated in volts (V), e.g. 0.7V.
 All oscillograms and AC voltages have been measured in relation to ground with an oscilloscope or a voltmeter with an input resistance of 1Mohm.
 AC voltages are stated in millivolts (mV), e.g. 660mV.

Caution

The use of any controls, adjustments or procedures other than those specified herein may result in hazardous radiation exposure.

The black and yellow label on the compact disc player serves as a warning that the apparatus contains a laser system and is classified as a class 1 laser product. The apparatus must be opened by qualified servicemen only.

CD laserdiode

Wavelength 780 nm ±20 nm, 30°C
 Effect 2 mW ±0.1 mW, 30°C

Lithium battery

WARNING

Short-circuit and overcharging of some types of lithium batteries may result in a violent explosion.

When replacing the lithium battery in this set, note the following:

Use only batteries at the same make and type as mentioned in this service manual (see page 3.1).

Place the battery exactly like the old one.

Explanation of the fuse symboles used in the set

Replace with the same type 1 ampere 250 volts quick acting fuse.

Replace with the same type 2.5 ampere 250 volts slow acting fuse.

Explanation des symboles de fusible utilisés dans l'appareil

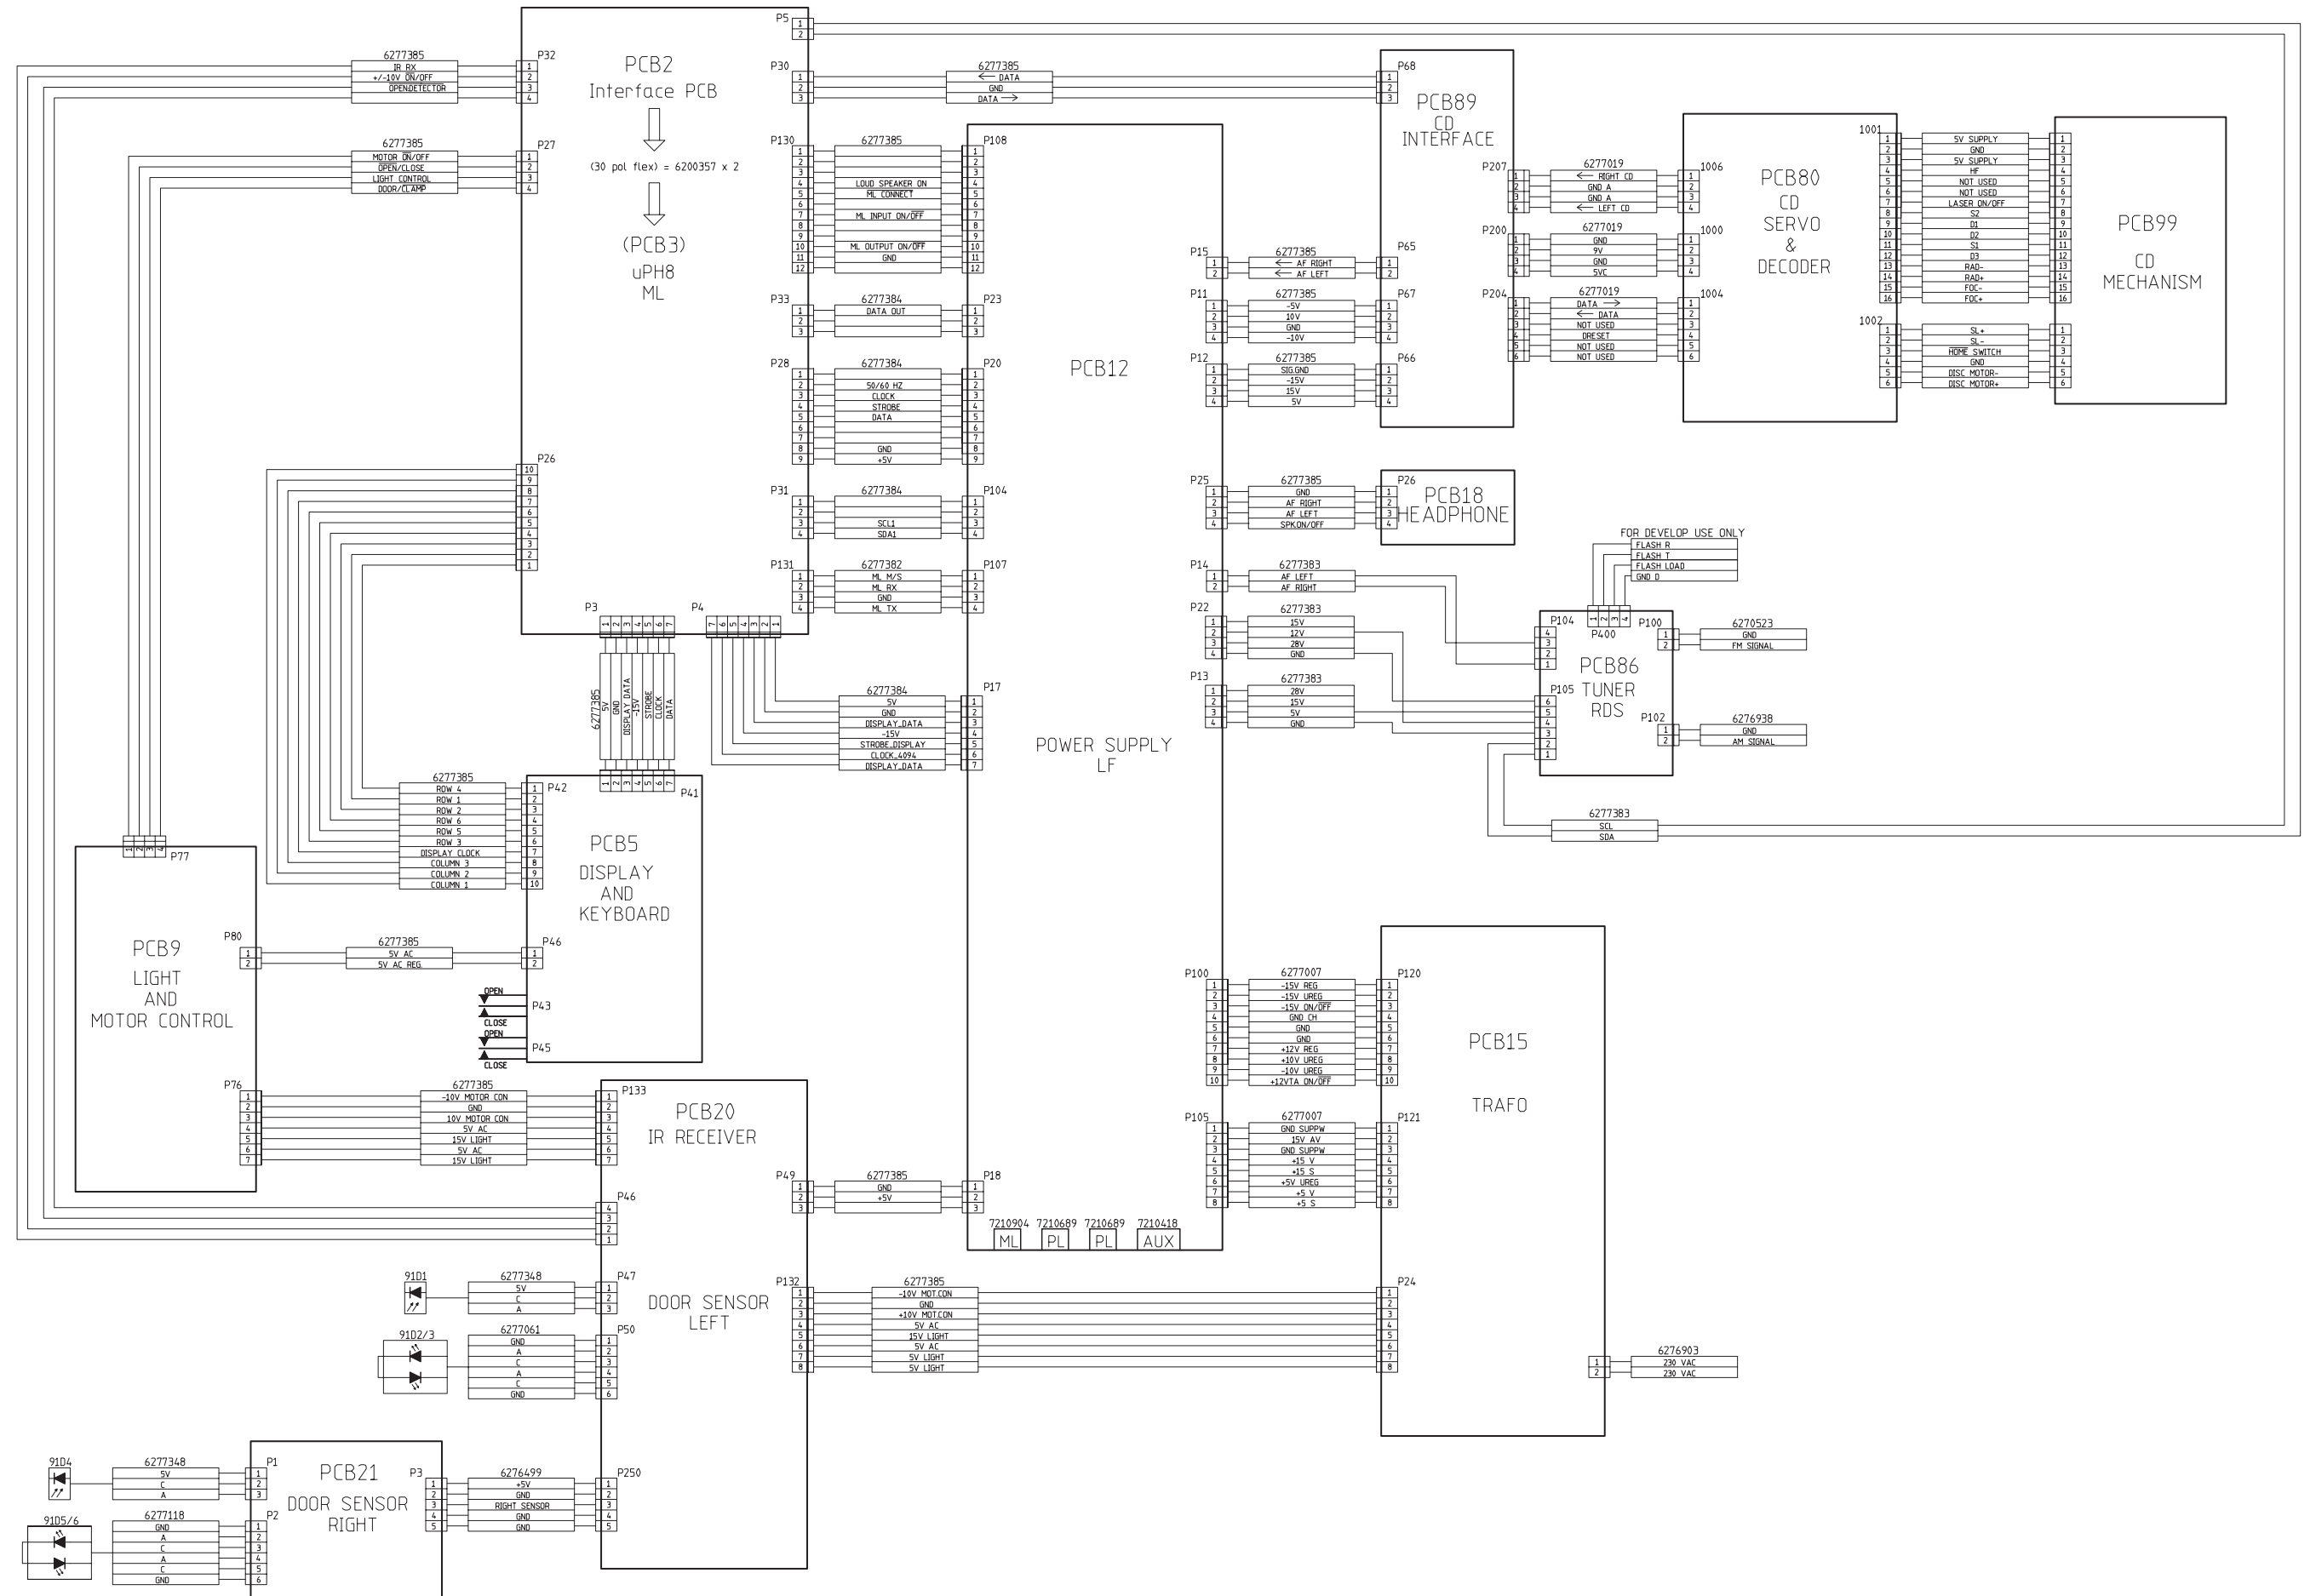

Remplacer par un fusible rapide de même type et de 1 ampères 250 volts.

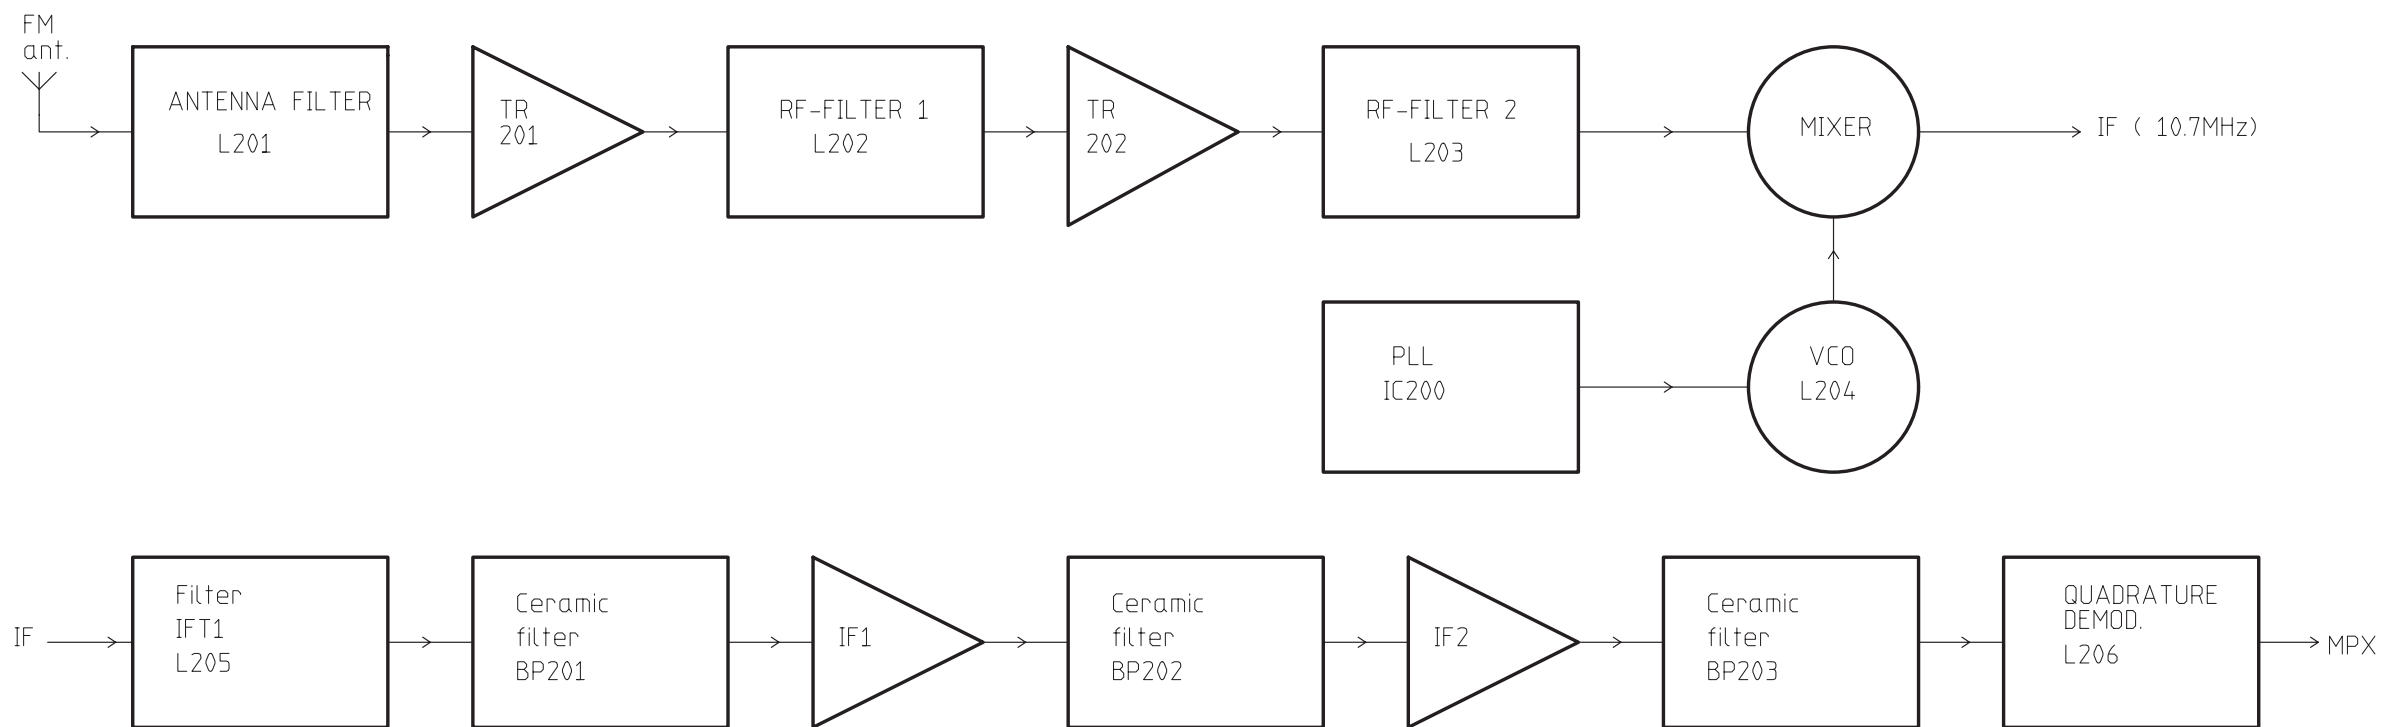

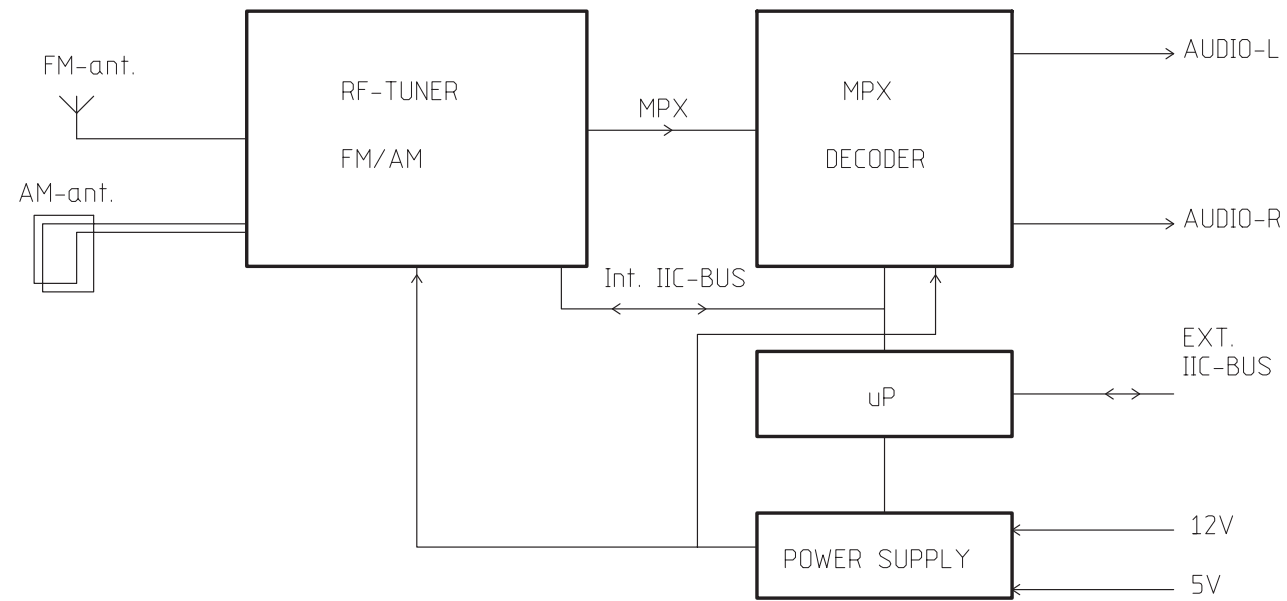

Remplacer par un fusible retardè de même type et de 2.5 ampères 250 volts.

TM (test mode) names/function for adjustments and service

Tuner test modes

TM 01: Automatic offset-adjustment for FM
TM 02: Manual offset-adjustment for FM
TM 03: Status for offset-adjustment
TM 04: Variant status
TM 06: Check RDS name
TM 07: Setting up of tuner variant

Master test modes

TM 20: Test of display functions
TM 21: Open ML-out
TM 22: Test of keyboard functions
TM 23: Software version
TM 24: Service operation counter
TM 25: Open ML-in
TM 27: Service of error detection
TM 28: Validity test for ROM/RAM/EEPROM
TM 32: Read-out of product ID
TM 34: Read-out of options
TM 35: Power down ON
TM 36: Power down OFF

CD test modes

TM 61: Focus on
TM 62: Focus off
TM 63: Starts turntable motor
TM 64: Stops turntable motor
TM 65: Light pen to outermost position
TM 66: Light pen to the innermost position
TM 67: Starts CD
TM 68: Stops CD

Test mode activating

Wait 20 - 30 sec. after connecting to mains.

By means of keyboard from St.by mode: Press **SOUND 0 2 5 8** with no more than 2 sec. between the individual enterings.

By means of remote control from St.by (can only be done if the product is not in option 0) :

Press **SHIFT 9 0 2 5 8** with only 2 sec. between.

The remote control has to be in RADIO or CD option.

In TM the tuner is fully functional and may overwrite the display but the TM will continue.

Deactivating

Press ● and the display shows "TM OFF" or disconnect from mains.

Glass doors lock

When the glass doors are locked it is not possible to open them by magic open. The glass doors can only be locked if the product is in St. by, the glass doors are closed and only by remote control.

Press **SHIFT 9 0 3 6 9** with no more than 2 sec. between the individual entering.

The display shows "LOCKED".

To unlock the glass doors press **SHIFT 9 0 3 6 9** with no more than 2 sec. between the individual entering.

The display shows "UNLOCKED".

The function will be remembered in NVRAM after disconnecting from mains.

From TM01 to TM09.

- Wait 20 - 30 sec. after connecting to mains.
- By keyboard from St.by mode: Press **SOUND 0 2 5 8 RADIO** with no more than 2 sec. between the individual entering. Then key in the TM no.
- By remote control from St.by (can only be done if the product is not in option 0):
- Press **SHIFT 9 0 2 5 8** with no more than 2 sec. between the individual entering. Then key in TM no.

TM01

Automatic offset-adjustment for FM is done by letting the tuner search for the frequency 100 MHz (84 MHz for Japan) and when the signal is found the offset will be calculated and stored in NVRAM. The display shows "A OFFSET".

If failure the display shows "TM ERROR".

TM02

Manual offset-adjustment for FM is done by key-in a frequency. The tuner search tunes for this frequency and the offset will be calculated and stored in NVRAM. The display shows "M OFFSET".

If failure the display shows "TM ERROR".

TM03

Read-out offset status.

If the offset-adjustment is needed the display shows "TM ERROR".

If the result of the offset-adjustment is positive the display shows "OFFSET n".

If the result of the offset-adjustment is negative the display shows "OFFSET -n".

The figure n is in steps of 12.5 kHz.

TM04

Read-out variant status: EUROPA (EU) FM, EUROPA (EU) FM/AM, USA (US) and JAPAN (JP). The display shows e.g. "EU FM/AM".

If failure the display shows "TM ERROR".

TM06

Checking that the RDS name of the radio programme in question is RDS-PS.

The display shows "TM OK".

If wrong RDS name or if name is missing the display shows "TM ERROR".

TM07

Tuner variant setup:

If from EU or AUS to US:

Key in the 3 digits indicating the choice.

No. 0: 003 = variant US

No. 1: 001 = RDS on, or 000 = RDS off

No. 2: 175 = FM starts in 500 kHz

No. 3: 216 = FM stops in 500 kHz

No. 4: 075 = Deemphas in μ s

No. 5: 000 = LW starts in kHz dividing with AM raster. 0 if no LW

No. 6: 000 = LW stops in kHz dividing with AM raster. 0 if no LW

No. 7: 053 = MW starts in kHz dividing with AM raster. 0 if no MW

No. 8: 171 = MW stops in kHz dividing with AM raster. 0 if no MW

No. 9: 010 = AM raster. Steps in kHz. 0 if no AM

If from US or AUS to EU.

No. 0: 001 = variant EU FM. (002 if EU FM/AM)

No. 1: 001 = RDS on, or 000 = RDS off

No. 2: 175 = FM starts in 500 kHz

No. 3: 216 = FM stops in 500 kHz

No. 4: 050 = Deemphas in μ s

No. 5: 017 = LW starts in kHz dividing with AM raster. 0 if no LW

No. 6: 031 = LW stops in kHz dividing with AM raster. 0 if no LW

No. 7: 058 = MW starts in kHz dividing with AM raster. 0 if no MW

No. 8: 179 = MW stops in kHz dividing with AM raster. 0 if no MW

No. 9: 009 = AM raster. Steps in kHz. 0 if no AM

If from EU or US to AUS

No. 0: 005 = variant AUS

No. 1: 001 = RDS on, or 000 = RDS off

No. 2: 175 = FM starts in 500 kHz

No. 3: 216 = FM stops in 500 kHz

No. 4: 050 = Deemphas in μ s

No. 5: 000 = LW starts in kHz dividing with AM raster. 0 if no LW

No. 6: 000 = LW stops in kHz dividing with AM raster. 0 if no LW

No. 7: 058 = MW starts in kHz dividing with AM raster. 0 if no MW

No. 8: 179 = MW stops in kHz dividing with AM raster. 0 if no MW

No. 9: 009 = AM raster. Steps in kHz. 0 if no AM

TM20

Checking the display by showing 3 types of letters in 3 rounds until all pixels are used/tested.

Press **PLAY** to shift between icons in the display.

TM21

Opens the signal from AUX-plug to the ML-output.

The display shows "AUX 2 ML".

TM22

Test of key-board functions.

By pressing a key for instance **CD** the display will show "CD".

The testmode can only be ended by IR-remote control command "STOP".

This testmode can only be activated by IR-remote control command.

TM23

Read out of Software version. Press **PLAY** to continue.

AP xx.xxx = Application processor. (Main CPU)

OS xx.xxx = APOS

IO xx.xxx = I/O processor

TU xx.xxx = Tuner processor. (Tuner-FEP)

CD xx.xxx = CD processor. (CD-FEP)

TM24

Service running counter.

First the Stand-by time will appear.

Press **PLAY** to toggle between the different counters.

- St. by time
- Radio-mode time
- CD-mode time
- AUX-mode time
- ML active time
- Theft protection active time

Number of times the theft protection has been unlocked.

Number of times the product has been switched on/off.

All numbers are stated in interval of 10. (e.g. 3 = 30.)

When all counters have been shown the display will ask for a new test mode.

TM25

Opens ML-in.

A source must be selected to have a correct measurement.

Signal coming from the ML-in, exit on the PL and AUX as by normal selection.

TM27

Service Error detection.

The last registered errors regarding EEPROM, ML, IIC-bus, RS232 driver, CD and lids can be read-out. This test mode is also used for deleting all error-registrations.

To toggle between error indications press **PLAY**. When all errors are read press **PLAY** to reset all errors registered or press **STOP** to keep error register.

By pressing ▲ or ▼ the time for errors will be shown.

YY.MM.DD

hh.mm.ss.

MEM: last EEPROM error.

- 2: EEPROM writes error
- 3: EEPROM reads error
- 4: EEPROM reads error only FF
- 11: EEPROM writes overflow
- 12: EEPROM controls init fail
- 13: EEPROM controls calloc fail
- 99: EEPROM content error

ML: Last error regarding to ML.

- 8: Link tied down
- 16: Link tied up
- 32: Configuration impossible

IIC: Component which gave the last error regarding IIC-bus.

- 102: Tuner FEP
- 136: Sound Processor
- 208: Clock

SER: The last error from the RS232 driver.

- 02: CDA queue not attached
- 03: CDA error timeout
- 04: CDA error unknown buf addr
- 05: CDA error data expected
- 06: CDA error unknown CMD
- 07: CDA error checksum
- 08: CDA error RX timeout
- 09: CDA error out of buffers
- 10: CDA error uart overrun
- 11: CDA error uart framing
- 12: CDA error uart parity

CD: CD error.

- 2: Focus error

The CD could not focus within the time limit.

- 3: Radial error

Set when the CD did not get on track after several retries.

- 4: Turntable motor error

Set when the disc did not spin up or down within the limit.

- 5: PLL lock error

Set when PLL is out of lock during tracking mode.

- 6: Jump error

Set when a seek could not be performed or an error occurred during a binary search.

- 7: Subcode error

Set when a subcode could not be read within the time limit.

- 8: TOC read error
Set when the TOC could not be read, no access possible to lead-in.
- 20: Serial communication overrun error
Expected command byte, but received a data byte.
- 22: Serial communication noise error
Check did not match.
- 23: Serial communication software error
Queue full.
- 37: Selection error

OS: Error in the operation system.

- 07: IL TLG from FEP to APOS
- 08: IL TLG from APOS to FEP
- 09: IL RX TX BUF limit
- 13: FEP does not exist

IO: Last error in the I/O driver.

- 01: IIC1 2 error
- 05: Cannot configure FEP
- 06: FEP communication error
- 07: IL TGL from FEP to APOS
- 08: IL TGL from APOS to FEP
- 09: Interlink RX TX BUF limit
- 14: FEP does not exist
- 21: MLSL timeout error
- 22: MLSL TX BUF full TLG does not send
- 23: ML key lost key repaired
- 24: External communication not allowed in preproject
- 25: LSL format error
- 26: LS IR format error
- 27: LSL TX imposs
- 28: LSL link tied up
- 29: LSL link tied down
- 30: Generic ICB error
- 31: ICB L7 timeout
- 32: ICB L7 illegal timeout
- 33: ICB L7 out of repositories
- 34: ICB L7 illegal L7 ack
- 35: ICB L7 Acknowledge unexpected
- 36: ICB L7 read response unexpected
- 37: ICB L7 illegal resource type
- 38: ICB L7 resource still running
- 39: ICB L7 resource already free
- 40: ICB L7 illegal IOP service
- 41: ICB L7 illegal IOP object
- 42: ICB L7 telegram flushed
- 43: ICB L7 resource disabled
- 44: ICB L7 HW clock illegal command
- 45: ICB L7 HW clock illegal event
- 46: ICB L2 retrans limit reached
- 47: IIC component disabled
- 48: Power down of IOP impossible
- 49: CDS bus disabled

E7: Last error in the main micro-processor.

- 16: Illegal timer ID
- 17: Timer not free
- 21: Illegal date value
- 22: Illegal time value
- 23: Illegal timer parameters
- 32: Illegal simple message ID
- 33: Out of message buffers
- 34: Message buffer virtual limit reached
- 64: Non ISR func. called from ISR
- 65: Physical stack limit reached
- 66: Stack virtual limit reached
- 67: Out of IAS objects
- 68: IAS signal lost
- 69: Overflow in IAS FIFO
- 70: IR queue not attached
- 71: LSL queue not attached
- 72: Scan queue not attached
- 73: Active keyscan queue not attached
- 74: Uart 0 queue not attached
- 75: TIIC queue not attached
- 76: RIIC queue not attached
- 77: Out of power down callback OBJ
- 78: Power down entered with timer running
- 79: Watchdog reset

IOP: Last error in the I/O microprocessor.

- 01: Watchdog reset
- 02: ICB layer 2 timeout
- 03: ICB layer 7 illegal service
- 04 ICB layer 7 illegal object
- 05: Reg mem data frame not valid
- 06: Data frame not valid
- 07: Illegal port ID
- 08: LSL TX impossible
- 09: LSL tied up
- 10: LSL tied down
- 11: IIC slave buffer full
- 12: IIC slave transmit timeout
- 13: IIC illegal switch port
- 14: IIC2 slave addressed
- 15: IIC conditional polling timeout
- 16: IOP IIC error
- 17: PD entered while service waitning
- 18: TP ICBL7 illegal command
- 19: TP module HW error APOS
- 21: TP clock error APOS

TM28

This TM checks the function of ROM, RAM, EEPROM. (O, A, P).
To readout TM, O and A have to be (+).
E.g. MEM +-+ indicates error in the EEPROM.

TM31

Default settings for sale purpose.
Option: 1
Volume: 32
Balance: 0
Bass: 0
Treble: 0
Loudness: OFF
Radio programs erased.
CD settings erased.
Timer settings erased.
After default settings the display shows DEFAULT TM ERROR.
If error occurs in TM the display will show TM ERROR.
Item-number, serial-number, type-number, master pin-code, running counter and all offset adjustments will not be erased.

TM32

ID-readout of the product.
Press **PLAY** to toggle between the ID-numbers.
Item = 7 figures.
Type = 4 figures.
Serial = 8 figures.
MA PIN = OK or ERR.
If error in the readout all figures = 0.

TM34

Option readout.

TM35

Power down ON.
When power down mode is possible the display = TM OK.

TM36

Power down OFF.
When power down mode is not possible the display = TM OK.

To use CD test modes it is necessary to select CD, in the TM the HF-signal will not be used

TM61

Focus ON.
The CD-pen will try to focus.
This TM can only be turned off by using TM62.

TM62

Focus OFF.
The CD-pen will be turned OFF.

TM63

Starts turntable motor.
This TM can only be turned off by using TM64.

TM64

Turns off the turntable motor.

TM65

Light pen to outermost position.
The optical pickup unit goes to the outermost position and stays there.
This TM can only be turned off by TM66. Do not give other commands in the meantime.

TM66

Light pen to the innermost position.
The optical pickup unit goes to the innermost position and stays there.

TM67

The CD starts playing.

TM68

The CD stops playing.
When error in CD-TM the Error-number refers to TM27 CD-errors.

Replacement of CD-mechanism

- Open the glass doors.
- Disconnect the main voltage.
- Dismount the glass doors by pulling forward at the bottom first and then at the top. Take care that the glass door does not scratch the display.
- Remove the seven screws A in the back cover. Pull out the back cover by wrenching the corners C of the back cover to the side.

- Dismount the two side front covers by pulling them carefully outwards at the top and bottom until a loud click is heard.
- Click off the CD-front cover.
- Remove the front panel by unscrewing the eight screws E.
- The complete CD-mechanism with CD-servo/decoder PCB can now be lifted out forwards by removing the four screws.
- Dismount the plugs connecting CD-servo/decoder PCB to the CD-interface-PCB and the CD-mechanism with CD-servo/decoder PCB can now be replaced.

Removal of gearbox for CD-clamp

The product must not be connected to the mains when dismantling.

- The clamp must be electrically sealed.
- Lift up the clamp manually.
- Dismount the spring R at its bottom most point.
- Dismount the lead to the motor, plug 9P78.
- Loosen the screw S and take out the gearbox.

Make sure that the two parts of the fitting at the top of the arm Q are pressed completely together when reassembling; then tighten the fitting.

Mounting of wire for glass doors

- Turn the wire pulley G clockwise until it stops. (Closed door position).
- Turn the wheel H in click position.
- Mount the wire in the wire pulley H (the end with the heavy spring).
- Run the wire in the second innermost groove of the wire pulley H (underneath the pulley), up around the uppermost pulleys (I, J, K and L) and down around the lowermost pulleys (M, N, and O).
- Turn the pulley G anticlockwise.
- Fasten the wire in the pulley H.
- Mount the wire on pulley P and turn pulley G to check that everything is OK.

Readjustment of wire

- Turn the pulley G such that the centre of the pulleys G and H is flush with the upper edge of the tower X.
- Push the wire clamping clip towards the centre and tighten (not too tight).

Adjustment of the glass doors

- Open the glass doors, press ● and wait for the glass doors to close and disconnect main voltage.
 - Remove the seven screws A in the back cover. Pull out the back cover by wrenching the corners C of the back cover to the side.
 - Remove the five screws B, and lift PCB12/15 out of the cabinet.
 - Loosen the top and bottom screws holding the maladjusted glass door on the wire (only one door at the time).
 - The maladjusted glass door can now be pushed to the middle-stop and the screws at the top and at the bottom of the glass door have to be tightened firmly.
 - Connect the main voltage. Open the glass doors, press ● and wait for the glass doors to close and disconnect main voltage.
 - If necessary adjust the other glass door in the same way.
- Note, be careful not to loosen both glass doors at the same time.

Test of Master Link DATA receiver/transmitter

Test of the circuits 12TR30, 12TR31, 12TR52, 12TR53, 12TR55, 12TR56 and 12IC6.

- Lift P107.
- Mount on P4.
- Connect a square-wave generator 10kHz 0-5 V to P107-4 (transmit).
- Measure P107-2 (receive) with an oscilloscope; it should produce the same signal as the one transmitted by P107-4, only here it is delayed by 10-15 μ S.

To prevent that products connected via the Master Link socket destroy the data communication in the case of an error in the data interface, the data interface circuit has been designed so that components can be defective without causing a malfunction.

For example, the diodes mounted in connection with Data- and Data+ are protection diodes which will protect against static electricity.

Consequently, when making a repair, it may be necessary to replace/check several components.

If 12TR55 is defective, both 12TR55 and 12TR56 should be replaced and the diodes 12D4, 12D5, 12D19, 12D20, 12D21 and 12D22 should be checked.

If 12TR56 is defective, both 12TR55 and 12TR56 should be replaced and the diodes 12D4, 12D5, 12D19, 12D20, 12D21 and 12D22 should be checked.

If one of the diodes 12D4, 12D5, 12D19, 12D20, 12D21 and 12D22 is defective, all of the diodes should be replaced, and 12TR55 and 12TR56 should be checked.

CD laser current

Across 80R3121 (4.7 ohm) the measurement in mV will show the current in the laser beam. Typical measure; ap. 300 mV. If over 450 mV the laser-head is defect.

Eyepattern

The eyepattern can be measured between 80P1001 pin 5 and 80C2116 (1.3Vpp).

Exchange of microprocessor module PCB3

When exchanging PCB3 remember to insert the EEPROM from the defective module, because it contains valuable data (serial no., type no., PIN-code etc.). The data is not transferred to the new module until you have been in contact with the theft protection or after 12 hours connected with mains. This means that you can try out a new PCB3 without transferring the products serial no. Etc..

Note !

When the serial no. has been transferred to the micro-processor it can only be used for this specific product; it must go back to Bang & Olufsen's module repair department as an exchange module to be erased again.

If the product functions are OK the theft protection is also OK; there is no need for testing the functionality of the theft protection.

When the product is connected to mains, wait 20-30 sec. before operating.

All addresses in ML has to be updated after disconnecting mains voltage.

Theft protection

The theft protection is a 4 digit PIN-code, of the user's own choice, which must be entered if the product has been disconnected from the mains for 15-30 min.

The theft protection is always deactivated from the factory, it is up to the user to activate it.

If the theft protection is activated, and the product has been without mains for 15-30 minutes, the user will be asked to enter the 4 digit PIN-code.

Before the product is handed in to service it is a good idea to ask the customer to deactivate the theft protection.

Service code

If the PIN-code is activated and the product is in a service situation, there is a possibility of 12 hours service by entering a 5 digit Service code which is 11111.

This gives 12 hours of full functionality to service the product and make module changes without naming/registering the exchanged modules to the Customer's product. The 12 hours are only running when the product is connected to mains!

If the customer's PIN-code or Master-code is entered the exchanged modules will be named/registered to the product. Registration of the modules cannot be changed. The service code must be entered when a source is selected and the product asks for the PIN-code "PIN _ _ _ _" press down the ◀ (rewind) button for three seconds and the display now writes "PIN _ _ _ _ _", and the Service code 11111 can be entered.

Master code

If the PIN-code has been forgotten (5 tries every 3 hour with mains connected), the only way to unlock the product again is by entering the 5 digit Master code.

The Master code can be ordered at Bang & Olufsen.

When a source is selected and the product asks for the PIN-code "PIN _ _ _ _" press down ◀ (rewind) for three seconds and the display asks for 5 digits instead of 4: "PIN _ _ _ _ _" ; enter the 5 digit Master code.

How to order Master code

The Master code is ordered by sending a request either via the Retail System or on the Master code formula, if non of these options are available please contact Bang & Olufsen.

Exchange of microprocessor module PCB3

When exchanging PCB3 remember to insert the EEPROM from the defective module, because it contains valuable data (serial no., type no., PIN-code etc.).

The data is not transferred to the new module until you have been in contact with the theft protection or after 12 hours connected with mains. This means that you can try out a new PCB3 without transferring the products serial no. Etc..

Note !

When the serial no. has been transferred to the micro-processor it can only be used for this specific product; it must go back to Bang & Olufsen's module repair department as an exchange module to be erased again.

If the product functions are OK the theft protection is also OK; there is no need for testing the functionality of the theft protection.

When the product is connected to mains, wait 20-30 sec. before operating.

All addresses in ML has to be updated after disconnecting mains voltage.

Exchange of software EEPROM on PCB3

When exchanging the EEPROM on PCB3, the data from the micro-processor will be written into the EEPROM when selecting any source e.g. RADIO.

It is possible to borrow an EEPROM from another BeoSound 3000 to test if there is suspicion of a fault in the original EEPROM. The EEPROM will always adopt the data from the main micro-processor.

Exchange of both micro-processor module PCB3 and software EEPROM on PCB3

If both the micro-processor and the EEPROM need to be exchanged it is necessary to have them pre-programmed from Bang & Olufsen with the correct serial number, otherwise they will not work.

Please contact Bang & Olufsen.

Important

When the product is reconnected to mains, wait 20-30 sec. before operating.
All addresses in ML has to be updated after disconnecting mains voltage.

Set and enter PIN code

It is your own choice whether or not to activate the PIN code system. However, if you choose to activate the system, your BeoSound 3000 is protected against theft with a four-digit PIN code.

The use of a PIN code means that if your BeoSound 3000 is disconnected from the mains for more than 15-30 minutes, the system can only be activated again by keying in your own personal PIN code.

If the PIN code is not entered, the BeoSound 3000 automatically switches to standby after 3 minutes.

If a wrong PIN code is entered, you get five attempts to key in the code, after which the system is switched off and cannot be switched on for 3 hours.

Should you forget your PIN code, please contact a retailer who can assist you in receiving a Master code from Bang & Olufsen. You need the Master code to reactivate your BeoSound 3000.

Activate the PIN code system

The PIN code system is easily activated, and you choose the four-digit code yourself.

Press **◀◀STOP** to key in a four-digit PIN code of your own choice.

NEW PIN appears briefly, and PIN _ _ _ _ appears.

Key in a four-digit PIN code of your own choice.

The PIN code is not displayed.

Press **▶▶PLAY** to store the PIN code.

CONFIRM appears briefly, and PIN _ _ _ _ appears. Re-enter your code. The PIN code is not displayed. Press **▶▶PLAY** to store.

STORED appears, indicating that your PIN code is stored.

Enter the PIN code

If the PIN code system is activated and your BeoSound 3000 is disconnected from the mains for more than 15-30 minutes, you are requested to key in the four-digit PIN code when the system is first switched on. The cue PIN _ _ _ _ is displayed.

Key in your personal PIN code. The PIN code is not displayed. When the four-digit code has been entered, the display returns to the relevant source e.g. RADIO 1.

Deactivate the PIN code system

You can deactivate the PIN code system at any time. All you need is to enter your PIN code first and then deactivate the system.

Press **◀◀STOP** to key in the four-digit PIN code.

PIN _ _ _ _ appears. Key in your personal four-digit PIN code.

The PIN code is not displayed. NEW PIN ? appears.

Press **▲▼** to switch the display. PIN OFF appears.

Press **▶▶PLAY** to deactivate the PIN code system.

DELETED appears, indicating that the PIN code system is deactivated.

If you have forgotten your PIN code

If you have forgotten your PIN code, you must contact a retailer who then requests a five-digit Master code from Bang & Olufsen. Once you have keyed in this code, your BeoSound 3000 is operational again and the PIN code system is deactivated. The cue PIN _ _ _ _ is displayed.

Keep **◀◀** (rewind) pressed down for 3 seconds to open for master code input.

Key in the five-digit Master code. DELETED appears, indicating that the PIN code system is deactivated and the set is ready for use.

Change your PIN code

You can change your PIN code at any time. However, for security reasons it is only possible to change the PIN code five times within a period of 3 hours.

Press **◀◀STOP** to key in the four-digit PIN code.

PIN _ _ _ _ appears.

Key in your personal PIN code.

The PIN code is not displayed.

NEW PIN ? appears.

Press **▶▶** to enter a new PIN code.

PIN _ _ _ _ appears.

Key in your new PIN code. The PIN code is not displayed.

Press **▶▶** to store.

CONFIRM appears briefly, and PIN _ _ _ _ appears.

Re-enter your code. The PIN code is not displayed.

Press **▶▶** to store. STORED appears, indicating that your changed PIN code is stored.

Dismantling

Glass door

- Open the glass doors.
- Disconnect the main voltage.
- Dismount the glass doors by pulling forward at the bottom first and then at the top. Take care that the glass door does not scratch the display.

Rear panel

- Remove the seven screws A in the back cover. Pull out the back cover by wrenching the corners C of the back cover to the side.

Front covers

- Dismount the two side front covers by pulling them carefully outwards at the top and bottom until a loud click is heard (snaplock).

Service position

PCB2 and PCB3

- Remove the five screws B.
- Lift the Power Supply and the Pre Amplifier (PCB12 and PCB15) out of the cabinet.
- Remove the three screws holding the PCB2. Lift up the two PCB's (PCB2 and PCB3).

PCB5

- Release the clamp arm and the clamp from the tab.
- Unscrew the eight screws E holding the centre plate. The product is now in service position.

To dismantle PCB5 be aware of some details.

- Disconnect 05P41, 42, 44, 45 and 46.
- Unsolder Lamp A and Lamp B. (Watch out for the flat cable).

Insulation test

Each set must be insulation tested after having been dismantled.

Make the test when the set has been reassembled and is ready to be returned to the customer.

Flashovers must not occur during the testing procedure!

Make the insulation test as follows:
Short-circuit the two pins of the mains plug and connect them to one of the terminals of the insulation tester.
Connect the other terminal of the insulation tester to the chassis pin of the headphone socket.

NOTE!

To avoid damaging the set it is essential that both terminals of the insulation tester have good contact.

Slowly turn the voltage control of the insulation tester until a voltage of 2.5kV is obtained. Maintain that voltage for one second, then slowly turn it down again.

Isolationsprüfung

Nach der Zerlegung muß bei jedem Gerät eine Isolationsprüfung vorgenommen werden.

Prüfung vornehmen, wenn das Gerät zusammengebaut und zur Auslieferung an den Kunden bereit ist.

Während der Prüfung dürfen keine Überschläge auftreten!

Isolationsprüfung folgendermaßen vornehmen:

Beide Stifte des Netzsteckers kurzschließen und mit einer der Klemmen des Isolationsprüfers verbinden. Andere Klemme des Isolationsprüfers am Masseanschluß der Kopfhörerbuchse anschließen.

ACHTUNG!

Um Beschädigungen des Geräts zu vermeiden, müssen beide Klemmen des Isolationsprüfers unbedingt einen einwandfreien Kontakt haben.

Spannungseinstellung des Isolationsprüfers langsam auf eine Spannung von 2,5 kV erhöhen. Diese Spannung eine Sekunde beibehalten, anschließend langsam verringern.

Test d'isolement

Il convient de soumettre l'appareil à un test d'isolement après l'avoir démonté.

Ce test est effectué après avoir réassemblé l'appareil et avant de le remettre au client.

Aucune étincelle ne doit se produire lors du test !

Procéder au test d'isolement comme suit :
Court-circuiter les deux broches de la fiche secteur et les raccorder à l'une des bornes du testeur d'isolement.
Raccorder la seconde borne du testeur d'isolement à la broche de masse de la fiche femelle du casque.

ATTENTION !

Pour éviter d'endommager l'appareil, il est important que les deux bornes du testeur d'isolement soient en parfait contact.

Tourner lentement la commande de tension sur le testeur d'isolement jusqu'à arriver à 2,5kV. Maintenir cette tension pendant une seconde, puis la diminuer lentement.
