SPECIFICATION GUIDELINES FOR SERVICE USE

BeoSound Ouverture

With FM and AM range and RDS	Type 2631 (EU), 2632 (GB), 2633 (USA-CDN),
	2634 (JAP), 2635 (AUS)
With FM and AM range	Type 2636 (EU), 2637 (GB), 2638 (USA-CDN),
	2639 (JAP), 2640 (AUS)
Operation	Direct keypad
Recommended terminal	Beo4
	Beolink 1000
Finish	Black, aluminium, light grey

Preamplifier section

Total harmonic distortion IHF	< 0.1%/1 kHz
Response vs. frequency:	
AUX in	20-20,000 Hz ± 1 dB
Input sensitivity/impedance:	
AUX	200 mV
Input impedanc, AUX	> 22 kΩ
Max. input signal, AUX	2.0 V
Signal-to-noise ratio:	
AUX, A-weighted	> 80 dB
Channel separation 10 kHz, AUX	> 60 dB
Bass control at 100 Hz	±9 dB
Treble control at 10 kHz	±9 dB
Output:	
Headphones	4.1 V / 235 Ω

Tuner, FM section

FM range	87.5-108 MHz
	76-90 MHz f. Type 2634, 2639
FM aerial impedance	75 Ω
Usable sensitivity mono	14 dBf - 1.4µV
Usable sensitivity stereo	19 dBf - 2.5µV
50 dB quieting sensitivity mono	21 dBf - 2.5µV
50 dB quieting sensitivity stereo	40 dBf - 28µV
Signal-to-noise ratio 65 dBf mono	73 dB
Signal-to noise ratio 65 dBf stereo	66 dB
Frequency response	30-15,000 Hz +1/-3 dB
Distortion at 65 dBf mono	0.3%
Distortion at 65 dBf stereo	0.3%
Intermodulation mono	0.1%
Intermodulation stereo	0.1%
Stereo channel separation	40 dB
Subcarrier product rejection	50 dB, stereo

Tuner, AM section

AM range	LW 150-279 kHz
	MW 520-1610 kHz
LW sensitivity 20 dB S/N ratio	80 → 72dBµV/m (10 → 4mV/m)
MW sensitivity 20 dB S/N ratio	68 → 60 dBµV/m (2.5 → 1mV/m)
Number of programmes	30

SPECIFICATION GUIDELINES

Tape recorder section

Compact cassette	C46-C120
Tape recording system	HX PRO
Tape transport	Auto Reverse
Search system	Auto Track
Record level	Auto Record Level
Noise reduction	Dolby B
Tape switch	Auto ferro/chrome/metal
Tape head	Amorphous
Wow and flutter, DIN	< 0.15%
Wow and flutter, WRMS	< 0.09%
Speed deviation	< ±1.5%
Fast forward and rewind	95 sec./C60
Frequency range chrome	30-16,000 Hz ±3 dB
Signal-to-noise ratio CCIR/ARM Dolby NR ON:	
Metal	> 63 dB
Chroms	> 65 dB
Ferro	> 63 dB
Driveability 10,000 Hz, metal	0 dB
Driveability 10,000 Hz, chrome/ferro	-7 dB
Distortion, ferro	< 2%
Distortion, Crom/Metal	< 3%
Channel separation	> 45 dB
Erasure	> 70 dB
Erasure frequency	98 kHz

CD player

CD, disc types	12 cm (5"), 8 cm (3")
Frequency range	20-20,000 Hz ±0.3 dB
Signal-to-noise ratio	> 90 dB/93 dB A-weighted
Dynamic range	> 98 dB
Channel difference	±1 dB
Converter system	2 x 16 bit, 4 x oversampling
Low pass filter analog	Bessel
Damping > 20,000 Hz	> 60 dB
Phase error between L and R	0 degree at 20-20,000 Hz

Connections

Brief operation guide
For more detailed operation see User's guide.

Closeup operation:

Radio
Pressetting radio stations

RADIO — Turn on the radio
then
TUNE

▲ — Switches from FM to AM, or vice versa

then
PLAY — Press to accept FM or AM

▲ or ▼ — Press to search for a radio station - up or down the frequency band

then
PLAY — Press to accept the station you have found

▲ or ▼ — Press to change the displayed program number (1-30), if you like
then
PLAY — Press to store the radio station on the displayed program number

If you want to name the program:
▲ or ▼ — Press to reveal the characters one by one

▶▶ or ◀◀ — Moves to the next character position forwards or backwards

Keep writing the name you want, using this method ...

PLAY — Finally, press to store your new radio program

Playing Radio programs

▲ or ▼ — Press to step through your radio programs

0 through 9 — Alternatively, key in the exact program number you want (1-30)

● — Switches the system to stand-by

Tape
Playing the tape

TAPE — Starts playing the tape you have loaded

Press **1** to start playing from the very beginning of the tape

---

TURN — "Turns" the tape to start playing the other side

▲ — Press to play the next track

▼ — Press to play the current track again
Press twice to play the previous track

0 through 9 — Alternatively, key in the exact track number you want to hear

---

◀◀ — Rewinds the tape

▶▶ — Fast forwards the tape

then
PAUSE — Press to pause the tape recorder
or
PLAY — Press to resume playing

● — Switches the system to stand-by

Instant recording on tape

RADIO — Start playing the source you wish to record, for example radio
then
RECORD — Press to make the tape recorder ready for recording
then
RECORD — Press again to start recording

PAUSE — Press to pause your recording

A pause of four seconds is inserted on the tape
then
RECORD — Press to resume recording
or
RADIO — Press to stop the tape recorder and return to controlling the radio

---

At any time *before* you stop the tape recorder ...

RETURN — Press to return to the spot where your recording started

---

Dolby NR noise reduction*

NR — Press while the tape is playing to see the current setting
then
NR — Press again to switch Dolby NR from on to off, or vice versa

Dolby NR is automatically reset to ON during recording.

CD

CD — Starts playing the CD you have loaded

▲ — Press to play the next track

▼ — Press to play the current track again
Press twice to play the previous track

0 through 9 — Alternatively, key in the exact track number you want to hear

---

▶▶ — Hold down to search forward towards the end of the CD

◀◀ — Hold down to search backwards towards the beginning of the CD

PAUSE — Press to pause playback

PLAY — Press to resume playing

● — Switches the system to stand-by

---

1 - 5
BRIEF OPERATION GUIDE

Setting the clock

SETUP — Press to access the setup function
then
▼ — Press once to display CLOCK?
then
PLAY — Press to call up the built-in clock

The time is displayed ...

▲ or ▼ — Press to change the displayed time, if necessary
then
PLAY — Press to accept the displayed time

The date and month are displayed ...

▲ or ▼ — Press to change the displayed date and month, if necessary
then
PLAY — Press to accept the date

The year is displayed ...

▲ or ▼ — Press to change the displayed year, if necessary
then
PLAY — Press to accept the year

The display now reads STORE?

PLAY — Press to store your new setting of the clock

Sound

^ — Press to raise the volume

v — Press to lower the volume

MUTE — Silences the speakers immediately
Press again to recall the sound

Adjusting sound

SETUP — Press to access the setup function

The display reads SOUND?
then
PLAY — Press to access the sound adjustment function

PLAY — Press repeatedly to display the sound cue you want

Then adjust the sound to your liking ...

◀◀ or ▶▶ — Adjusts balance to the left / Adjusts balance to the right

▲ or ▼ — Raises or lowers the sound levels; cuts the loudness function in or out

then
PLAY — Press repeatedly until STORE? is displayed
then
PLAY — Press to store *all* the current sound levels

If you haven't stored your sound adjustment ....

RESET — Press any time to reset the sound levels to their original settings

---

Using the Beo4

RADIO — Turns on the radio

CD — Starts the CD player

A TAPE — Starts the tape recorder

▲ or ▼ — Press to step through your radio programs, tracks on a tape or a CD

Alternatively, key in the exact number, using the number keys

---

▶▶ or ◀◀ — Fast forwards a tape / Rewinds a tape

yellow or green — Searches through a CD / Searches backwards through a CD

STOP — Pauses playback any time

GO — Press to resume playback

---

^ — Raises the volume

v — Lowers the volume

● — Switches off

Option programming Beo4

hold
●
while pressing
LIST — Until the Beo4 display reads OPTIONS?

GO
LIST — Until the display reads A:OPT

0 — Disable the remote control function

1 — Enable the remote control function

Option programming Beolink 1000

LINK
0 — Disable the remote control function

STORE

LINK
1 — Enable the remote control function

STORE

2 - 1
EXPLANATION OF DIAGRAM

EXPLANATION OF DIAGRAM

Type numbers of transistors and ICs are indicated on the diagrams. If the position is followed by an asterisk the spare part number must always be used because the component in question has been specially selected, e.g. TR102*.

Component print and coordinate system

The largest PCBs have component prints and a coordinate system on both the print and the component side.
On the diagrams every component has a coordinate number. This indicates in which coordinate on the PCB the component is situated. The coordinate numbers are written in smaller print types than the position numbers.

Control circuit

In certain control circuits the active mode is indicated by a function term or by an abbreviation. This may be e.g. ST.BY.= low in the stand-by mode or $\overline{\text{ST.BY.}}$ = high in the stand-by mode.

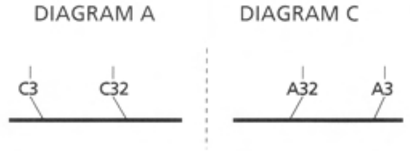
Wiring connections

The wiring connections on the diagrams are assembled in 'bundles'. The individual wires are provided with one of the following codes:

INTERNAL CONNECTION ON ONE DIAGRAM PAGE

Internal connections on a diagram page are indicated by a number.
The bend of the wire indicates in wich direction the other end of the wire is found.

CONNECTION TO ANOTHER DIAGRAM PAGE



A connection to another diagram page is indicated by a number as well as by a letter of the diagram to which the connection leads.

Supply Voltages

All supply voltages in the diagrams are indicated by an arrow and a voltage indication.

Ground symbols

Four different ground symbols are used in the set.

= Ground

= Signal ground

= Chassis

= Coarse ground

Symbol of safety components

When replacing components with this symbol, components with identical part numbers must be used. The new component must be mounted in the same way as the one replaced.

2 - 1
EXPLANATION OF DIAGRAM

Measuring conditions

All DC voltages have been measured in relation to ground with a voltmeter with an input impedance of 10 Mohms.

The DC voltages are stated in volts (V), e.g. 0.7V.

All oscillograms and AC voltages have been measured in relation to ground with an oscilloscope or a voltmeter with an input resistance of 1Mohm.

AC voltages are stated in millivolts (mV), e.g. 660mV.

Caution

The use of any controls, adjustments or procedures other than those specified herein may result in hazardous radiation exposure.

CLASS 1
LASER PRODUCT

COMPACT disc DIGITAL AUDIO

The black and yellow label on the compact disc player serves as a warning that the apparatus contains a laser system and is classified as a class 1 laser product. The apparatus must be opend by qualified servicemen only.

CD laserdiode

Wavelenght	780 nm ±20 nm, 30°C
Effect	2 mW ±0.1 mW, 30°C

Lithium battery

ADVARSEL
LITHIUMBATTERI - EKSPLOSIONSFARE
UDSKIFTNING MÅ KUN FORETAGES AF EN SAGKYNDIG OG SOM BESKREVET I SERVICE MANUAL

WARNING
LITHIUM BATTERY - RISK OF EXPLOSION
TO BE REPLACED BY QUALIFIED SERVICEMAN ONLY AND AS DESCRIBED IN THE MANUAL

WARNING
Short-circuit and overcharging of some types of lithium batteries may result in a violent explosion.
When replacing the lithium battery in this set, note the following:
Use **only** batteries at the same make and type as mentioned in this service manual (see page 3-X).
Place the battery exactly like the old one.

2 - 2
EXPLANATION OF DIAGRAM
2 - 2

Explanation of the fuse symboles used in the set

Replace with the same type 1 ampere 250 volts quick acting fuse.

Replace with the same type 2.5 ampere 250 volts slow acting fuse.

Explanation des symboles de fusible utilisés dans l'appareil

Remplacer par un fusible rapide de même type et de 1 ampères 250 volts.

Remplacer par un fusible retardè de même type et de 2.5 ampères 250 volts.

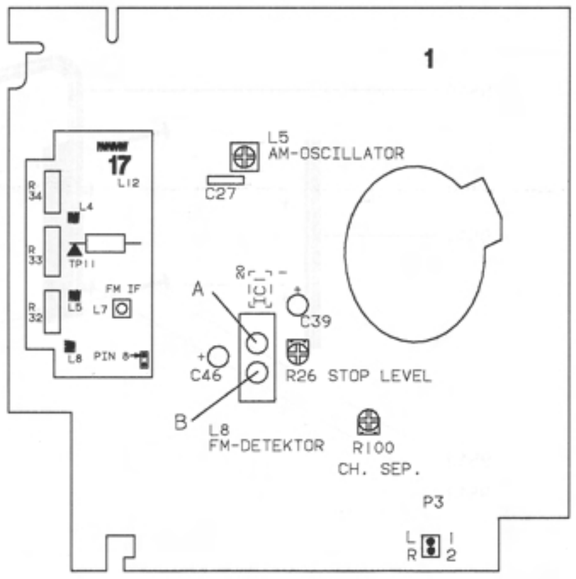
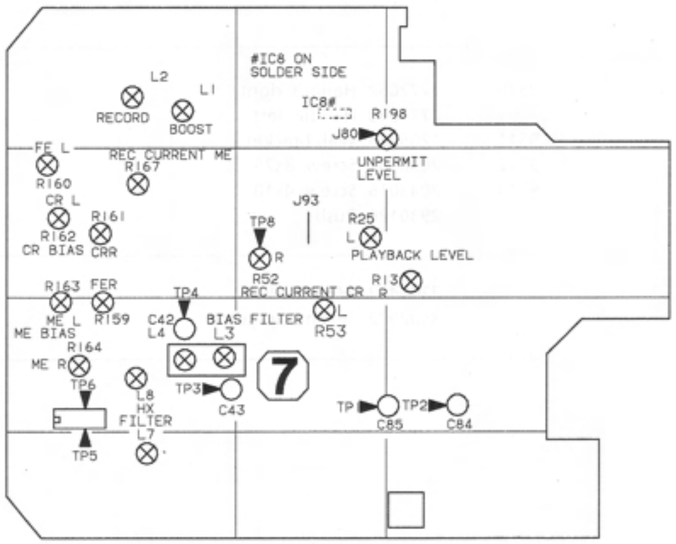
ADJUSTMENTS

ADJUSTMENTS





TEST MODE

Test mode is used in connection with adjustments, and test mode moreover gives access to a number of test functions, see page 5-16.
BeoSound Ouverture is brought into test mode in the following ways:
- Connect mains voltage
- Within 12 sec., press the following keys on the keyboard:

PROGRAM 2 6 3 0

Test mode is indicated by the display in the following way:

TESTMODE

Test mode is abandoned by disconnecting the mains voltage
or
By pressing •. Values selected in test mode are retained.

RF ADJUSTMENTS

Repair tips

It is important during servicing that the aerial plug is connected to module 1, since there would otherwise be no ground connection for the Master Link socket.

AM ADJUSTMENTS

Oscillator MW

No signal should be applied.
- Connect a DC voltmeter across 1C27.
- Tune the product to 150 kHz (520 kHz).
- Adjust 1L5 until the voltage across 1C27 is 2 V ±0.25V (4 V ±0.25 V).

FM ADJUSTMENTS

Replacement of FM tuner

- When the FM tuner is replaced, only the IF coil, 17L7, has to be adjusted.

IF

- Connect an oscilloscope to pin 8 of 1IC1 (1R26).
- Connect a sweep generator to the aerial input and tune to 87.5 MHz.
- Tune the product to 87.5 MHz
- Adjust 17L7 to maximum and symmetrical IF curve.

TUNER ADJUSTMENTS

(To be made only if the tuner is incorrectly adjusted).

Oscillator

No signal should be applied.
- Connect a DC voltmeter between 17TP11 and pin 8 of the tuner.
- Tune the product to 87.5 MHz and adjust 17L8 to 0V.

HF 87.5 MHz

- Connect an oscilloscope to pin 8 of 1IC1 (1R26).
- Connect a sweep generator to the aerial input and tune to 87.5 MHz.
- Tune the product to 87.5 MHz
- Adjust 17L2, 17L4, 17L5 and 17L7 to maximum and symmetrical IF curve.

HF 108 MHz

- Tune the product to 108 MHz.
- The sweep generator frequency is changed to 108 MHz, and 17R32, 17R33 and 17R34 are adjusted to maximum.

Detector

- 1L8 is adjusted only in connection with a replacement of 1IC1, 1BP4 and 1BP5.
- Connect an oscilloscope to pin 8 of 1IC1 (1R26).
- Connect a DC voltmeter between positive on 1C39 and positive on 1C46.
- Connect a signal testing generator to the aerial input and adjust to 98 MHz, 50dBmV (300mV EMF), ±75 kHz, 1kHz modulation.
- Tune the radio to 98 MHz.
- Fine-tune the signal testing generator frequency to minimum distortion (2nd harmonic) in the signal, as illustrated on the curve.

CORRECT

INCORRECT

- Change the level at the aerial input to 72dBmV (4mV EMF).
- Adjust 1L8A to 0V ±50mV. Metal tools must not be used when adjusting 1L8.
- 1L8B can be adjusted accurately with a distortion meter connected to 9R70 (right channel).
- Screw 1L8B up such that the core is flush with the top of the box (top position).
- Adjust 1L8B downwards until the minimum harmonic distortion is present at the AF output for the first time.
- Fine-adjust 1L8A and 1L8B.
- 1L8B is typically adjusted two turns down from the top position.

FM display adjustment

- After a repair/adjustment in the FM detector circuit or after replacement of PCB1, PCB3, 3IC6, 3B1, 3D4, 3R38 or 1BP4, the indication of the received frequency has to be adjusted, even if the display shows the correct frequency.

Offset adjustment, FM

The product must have been switched on for at least 2 minutes before the adjustment is made.

- Tune in to a known station with a known frequency by pressing RADIO TUNE PLAY ▲.
  The display will not necessarily show the correct frequency.
- Press PLAY PLAY PLAY to store the programme (the display writes STORED).
- Press 0 3 (resets the offset value). The display reads: OK 3
- Press 0 6 + correct frequency, four digits, e.g. 98.5 MHz = 0985
- The display should now write OK 6.

Display adjustment cannot be made on AM.

Channel separation

- Connect a stereo encoder to the aerial input and adjust to 88 MHz 60dBmV, (1mV EMF), 1kHz modulation in the one channel and an unmodulated signal in the other channel.
- Connect an AF voltmeter to the unmodulated channel 1P3-2 (right) or 1P3-1 (left).
- Tune the product to 88 MHz.
- Adjust 1R100 to minimum signal in the unmodulated channel.
- Connect an AF voltmeter to the other channel, and adjust in this case the stereo encoder to an unmodulated signal.
- Check whether or not the channel separation is symmetrical; if not, readjust 1R100 until this has been achieved.

FM stop level

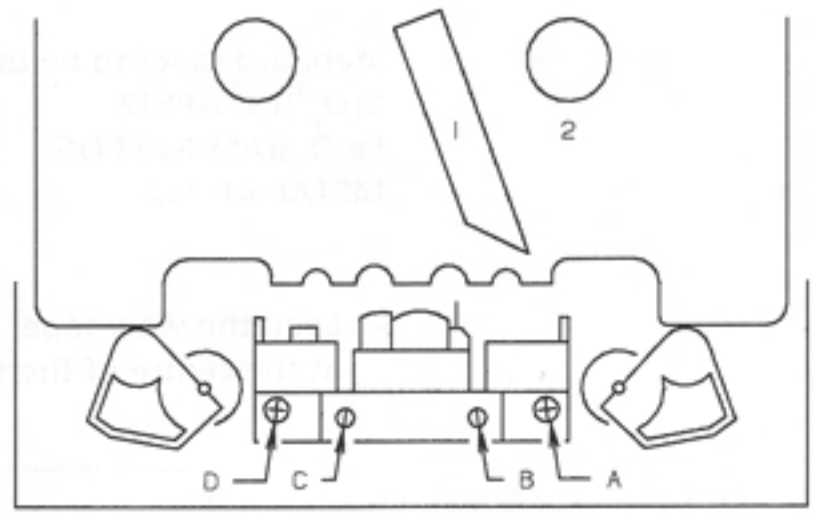
- Connect a signal testing generator to the aerial input and adjust to 88 MHz, 20dBmV (10mV EMF) ±75kHz.
- Connect a DC voltmeter to pin 16 of 1IC1.
- Short-circuit the base of 1TR6 to ground (see drawing of the location of SMD components).
- Turn 1R26 clockwise until it stops.
- Tune the product to 88 MHz.
- Turn 1R26 anticlockwise until pin 16 of 1IC1 switches from low to high.
- Remove the short-circuit from the base of 1TR6.

MECHANICAL ADJUSTMENTS, TAPE RECORDER

Height and azimuth

To obtain correct height adjustment, height adjustment tool part No. 3624026 must be used.

Approximate adjustment can be obtained using a mirror cassette.



Height, tape guide

- Load adjustment tools 1 and 2.
- Press TAPE.
  The tape transport mechanism is now able to run without a tape being loaded, and without going into autostop.
- Adjust A and D respectively in such a way that adjustment tool 1 can be pushed into the tape guides.
- The tape recorder can only be stopped by pressing •.

Azimuth side 1

- Load azimuth tape part No. 6780036.
- Connect the two Y inputs on an oscilloscope to right and left AUX outputs.
- Press TAPE and adjust screw C until the 2 curves on the oscilloscope are in phase at maximum amplitude.

Azimuth side 2

- Press TURN.
- Adjustment as for side 1 but using screw B.

ELECTRICAL ADJUSTMENTS, TAPE RECORDER

Right/left

The specifications apply to the right channel, and those in brackets apply to the left channel.

Noise reduction

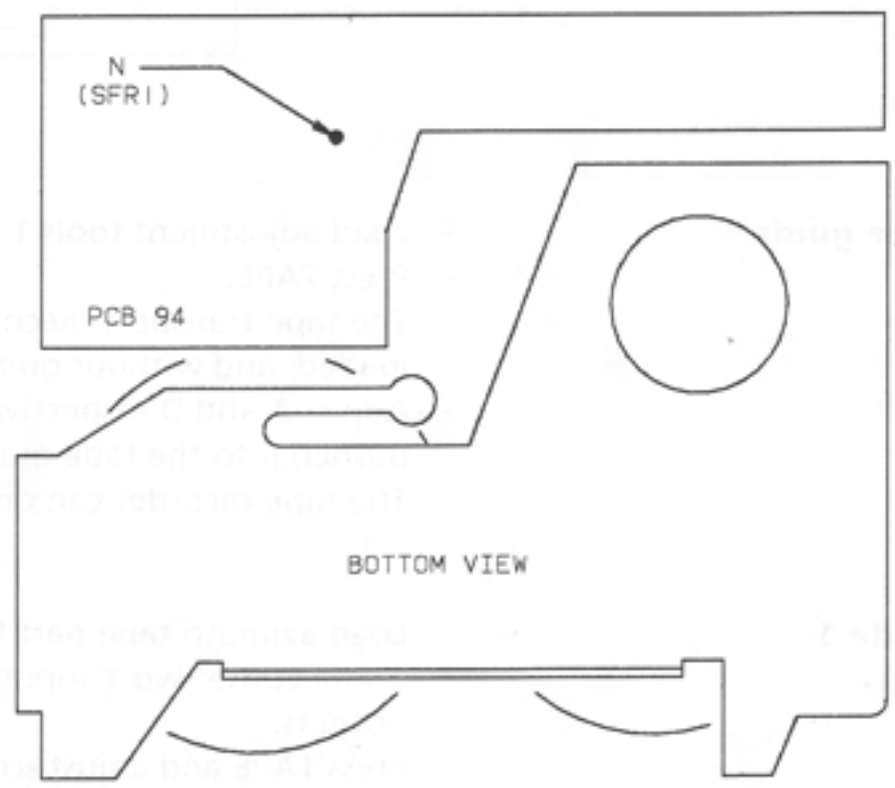
Make the electrical adjustments without Noise Reduction.
(Test mode 2 2).
Display reads OFF

Standard tapes to be used for adjustments:

CrO_2 TDK AP512	part No. 6780066
Fe_2O_3 BASF R723 DG	part No. 6780067
METAL AP 712	part No. 6780101

Speed

- Load the wow tape, part No. 6780037. (The adjustment must be made at the centre of the tape).



- Connect a wow meter with a drift meter to the AUX socket.
- Press TAPE, to play-back side 1.
- Press TURN, to play-back side 2.

The adjustment is made with SFR1 which is accessible through the hole in the PCB on the tape transport mechanism.

The adjustment is made so that the speed deviation when playing back side 1 and 2 respectively is symmetrical around 0%.

Playback level

The adjustment of the playback level, using two alternative types of standard tape, will be described below:

1. DIN standard 250 n Wb/m
2. ANSI standard 200 n Wb/m

1. Load standard level tape part No. 6780035
   Connect an AF voltmeter to 7TP2 (7TP1).
   Adjust 7R13 (7R25) until 660 mV is measured in 7TP2 (7TP1).

2. Load TEAC level calibration tape MTT-150A.
   Connect an AF voltmeter to 7TP2 (7TP1).
   Adjust 7R13 (7R25) until 580 mV is measured in 7TP2 (7TP1).

Test mode adjustment

It applies to all electrical adjustments that the product must be in test mode, see page 5-1, and in addition the automatic record level must be put out of operation, and the Noise Reduction function must be disengaged:

- Press 2 0 (automatic record level off). The display will read OK 20.
- Press 2 2 (Noise Reduction off). The display will read OFF.
- Press AUX.
- Connect an audio oscillator to the AUX input.

Noise Reduction on
Press 2 1, the display will read ON.

The product is now ready for adjustment.
- Upon completion of adjustment : press • to leave the test mode.

Recording boost

Make this adjustment in test mode (do as described under 'test mode adjustment').
- Set the audio oscillator to 333 Hz and 400 mV.
- Load a Cr tape.
- Press RECORD RECORD.
- Connect an AF voltmeter to 7TP8 (7TP7).
- Regulate the audio oscillator output level until 1 V is measured.
- Reduce the audio oscillator output level by 20 dB, and change the frequency to 18 kHz.
- Adjust 7L1 (7L2) until 760 mV is measured.

HX filter

Make this adjustment in test mode (do as described under 'test mode adjustment').
- Connect a DC voltmeter to 7TP6 (7TP5).
- Load a Cr tape.
- Press RECORD RECORD.
- Adjust 7L8 (7L7) to minimum DC voltage.

Bias filter

Make this adjustment in test mode (do as described under 'test mode adjustment').
- Connect an AC voltmeter to 7TP4 (7TP3).
- Load a Cr tape.
- Press RECORD RECORD.
- Adjust 7L4 (7L3) to minimum voltage.

Cr bias

Make this adjustment in test mode (do as described under 'test mode adjustment').
- Load a CrO_2 standard tape, part No. 6780066.
- Press RECORD RECORD.
- Set the audio oscillator to 333 Hz and 20 mV.
- Connect an AF voltmeter to 7TP2 (7TP1).
- Regulate the audio oscillator until approx. 30 mV is measured.
- Press PAUSE.
- Adjust 7R161 (7R162) until the playback levels at 333 Hz and 16 kHz are identical by first recording and then playing back 333 Hz and 16 kHz. (Less bias produces a treble boost. More bias produces a treble cut.)

Fe bias

The procedure is the same as for Cr bias, only a Fe_2O_3 standard tape, part No. 6780067, should be used, and 7R159 (7R160) should be adjusted instead.

MP bias

The procedure is the same as for Cr bias, only a metal standard tape, part No. 6780101, should be used, and 7R164 (7R163) should be adjusted instead.

Recording current, Cr

Make this adjustment in test mode (do as described under 'test mode adjustment').
- Load a CrO_2 standard tape, part No. 6780066.
- Press RECORD RECORD.
- Set the audio oscillator to 333 Hz and 100 mV.
- Connect an AF voltmeter to 7TP2 (7TP1).
- Adjust the audio oscillator until approx. 200 mV is measured.
- Press PAUSE.
- Adjust 7R52 (7R53) until the record level is 200 mV by first recording and then playing back 333 Hz.

Recording current, MP

- The Cr adjustment must have been made.
- The procedure is the same as for recording current, Cr, only use the metal standard tape , part No. 6780101.
- The adjustment applies to both channels, and it is made by means of 7R167.

Automatic record level

Make this adjustment in test mode (do as described under 'test mode adjustment').
- Load a Cr tape.
- Press RECORD RECORD.
- Set the audio oscillator to 333 Hz and approx. 400 mV.
- Connect an AF voltmeter to 7TP2.
- Adjust the audio oscillator until 660 mV is measured.
- Connect a DC voltmeter to 7IC8, pin 9 (jumper J93) and pin 10 (jumper J80/7R198).
- Adjust 7R198 until 0 mV ±10mV is measured.

ELECTRICAL ADJUSTMENT

CD

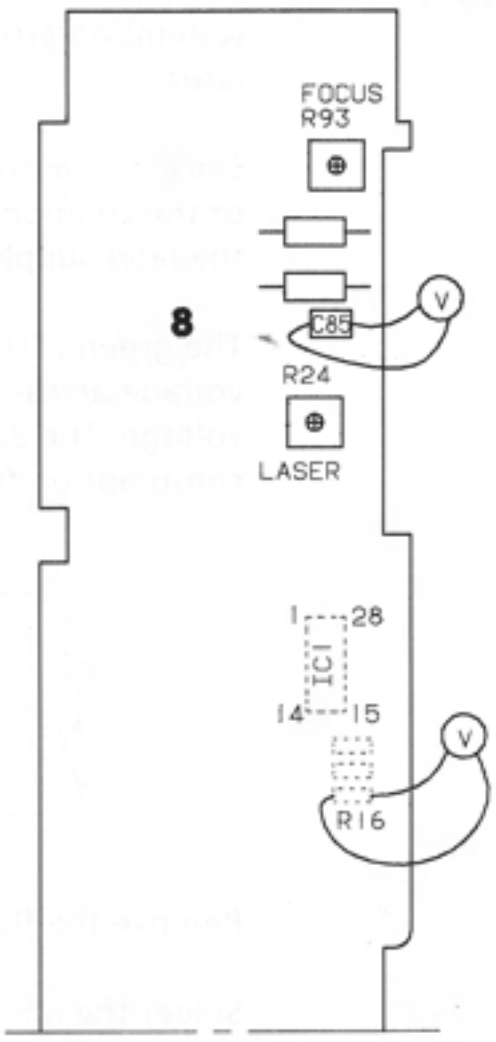
THE PHOTODIODES AND THE LASER ARE MORE SENSITIVE TO STATIC ELECTRICITY THAN MOS IC'S. CARELESS TREATMENT DURING SERVICE CAN REDUCE THEIR LIFE DRAMATICALLY. MAKE SURE, THEREFORE, THAT THE JOB STATION IS PROTECTED AGAINST STATIC ELECTRICITY.

The product must not be connected to the mains when the CD drive mechanism is replaced or if the drive mechanism and PCB 8 are not interconnected.

Laser current

Important:
Preadjust the laser current potentiometer 8R24 after a replacement of the CD drive mechanism.

Also, check the connection to the monitor diode before the product is connected to the mains.



Connect an ohmmeter from pin 18 to pin 27 of 8IC1.

Adjust 8R24 until 1 kohm +/- 10% is measured.

Connect a DC voltmeter across 8R16.

Load test disc no. 5 (disc without errors, part no. 3634031).

Connect the product to the mains, and press CD.

The voltage across 8R16 should be higher than 15 mV. If it is not, switch off the product and find the error.

If the voltage is higher than 15 mV, play track 1 on test disc 5 and adjust 8R24 until 50 mV +/- 5 mV is measured with the DC voltmeter.

NOTE: If the voltage across 8R16 is lower than 25 mV, the CD may stop shortly after starting. Consequently, this adjustment has to be made immediately after starting the CD.

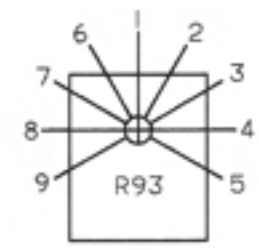
Focus offset

Load test disc no. 5 (part no. 3634031).

Connect a DC voltmeter across 8C85.

Press CD.

If the CD does not start, turn the potentiometer 8R93 in steps until it starts.



POTENTIOMETER STEP

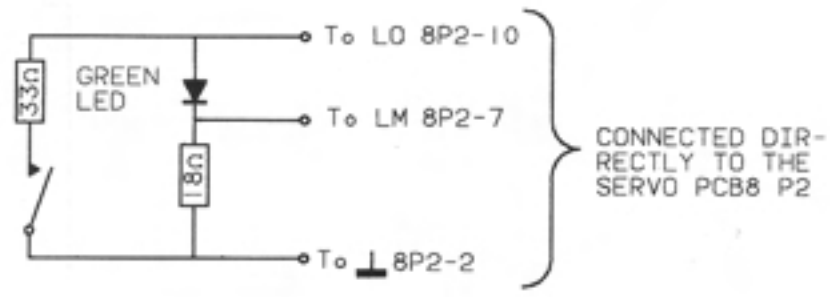
When the CD is able to start, adjust 8R93 until 400 mV +/- 40 mV is measured.

Checking the laser supply

The laser, the laser supply in 8IC1 and the monitor diode form a feedback system. An error in the laser supply can result in the destruction of the laser.

Since it is impossible to check and repair a feedback system in which one of the components is missing, the circuit below can be used for checking the laser supply.

The green LED constitutes the laser, e.g. CQY94, part no. 8330054. The voltage across the 18 ohm resistor constitutes the monitor feedback voltage. The 33 ohm resistor and the switch allow the current consumption from the laser supply to be changed.



Remove the flex-PCB from P2 on the servo PCB.

Solder the above circuit onto P2 on the servo PCB.

Short-circuit SI (pin 6 of 8IC1) to ground.

When SI (start initialization) is low, the laser supply can be switched on in service position 1 by bringing the product into test mode, see page 5-1, and then pressing CD 1.

Measure the LO voltage at pin 10 of 8P2.

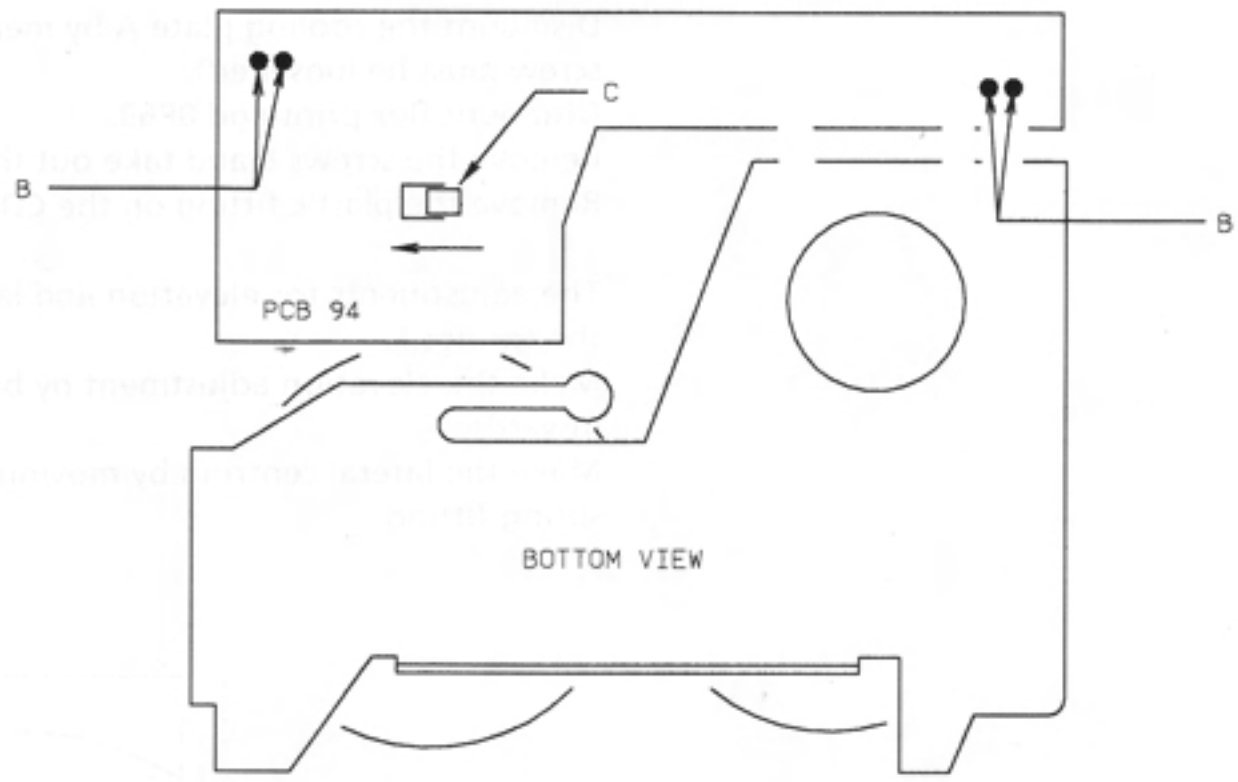
S1 disconnected:
LO from 1.8 V to 2.3V
LM from 170mV to 220mV
The green LED shines faintly.

S1 short-circuited:
LO from 1.8 V to 2.3V
LM from 170mV to 220mV
The green LED shines faintly.

When S1 is switched from short-circuited to disconnected condition, the LED will shine more brightly for a short moment. The feedback system has the effect that the same current is flowing through the LED no matter if S1 is short-circuited or disconnected.

REPAIR TIPS

Dismantling of PCB under tape transport mechanism



- Desolder the solder points B.
- Push the looking pin C in the direction of the arrow and pull out the PCB.

Lubrication chart

The need for relubrication is negligible.
In the case of overhauls and when replacing mechanical parts the directions below should be followed.

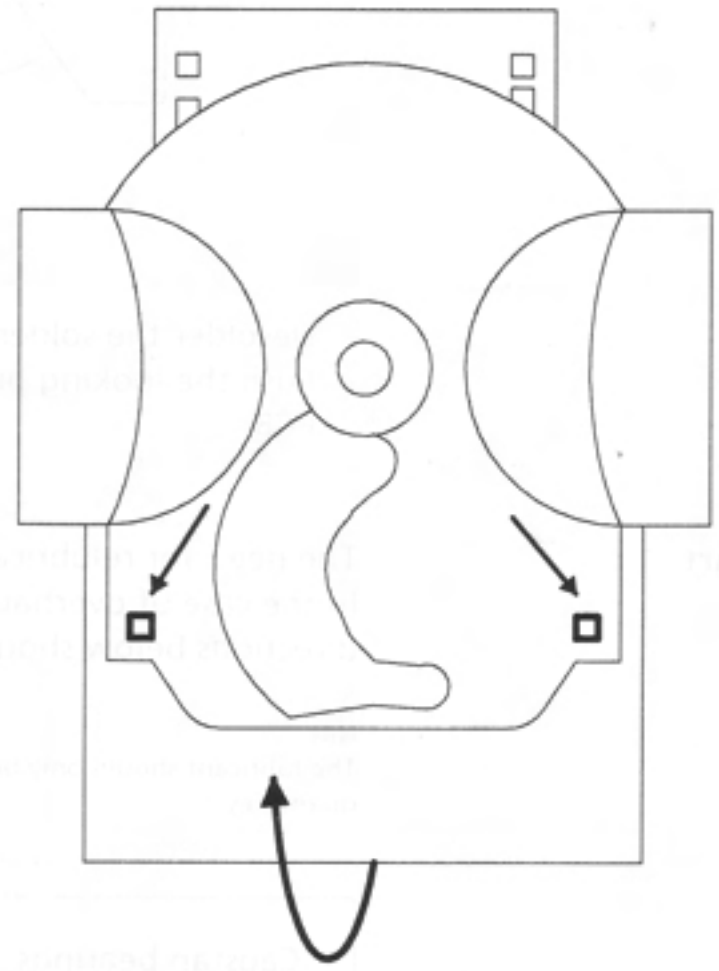
NB!
The lubricant should only be applied in small quantities.

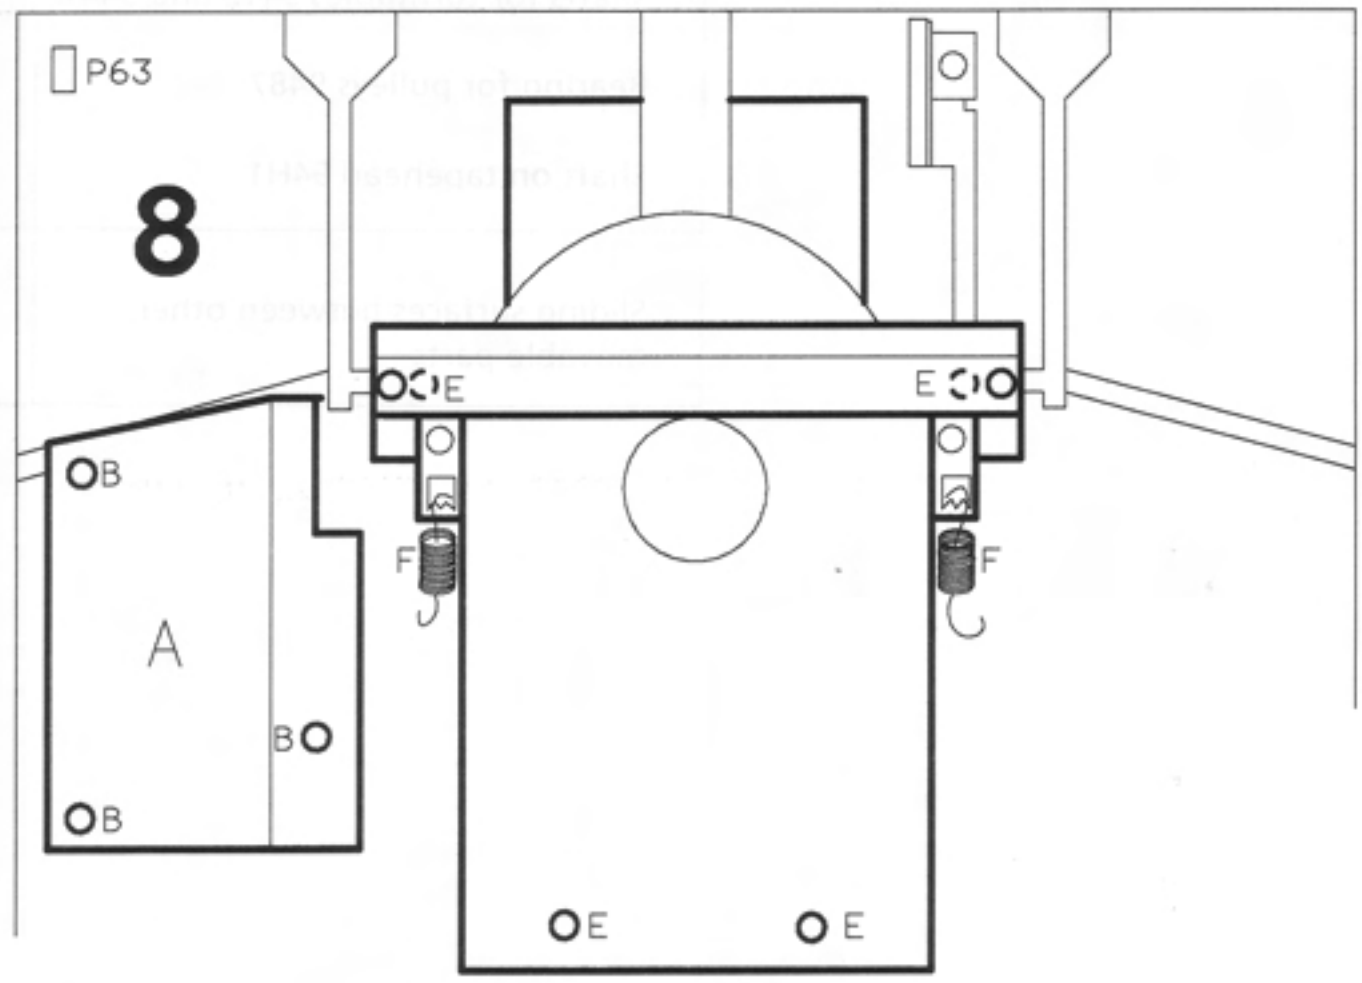
Capstan bearings Shafts for turntables 9412 and 9447 Bearing for pulleys 9487 Shaft on tapehead 94H1	3984022 Floil GB TS-1
Sliding surfaces between other movable parts	3984030 Barrierta L5512 (25gr.)

Replacement of CD transport mechanism

Remove the rear panel.
Bring the power-supply unit and AF (PCB 12 and 15) into service position.
Dismount PCB7.
Dismount the cooling plate A by means of the screw B (the CD transport screw must be loosened).
Dismount flex print and 8P63.
Remove the screws E and take out the CD transport mechanism.
Remove the plastic fitting on the CD transport mechanism.

The adjustments for elevation and lateral centering are made by means of the springs F.
Make the elevation adjustment by bending the spring fitting outwards/ inwards.
Make the lateral centring by moving the springs F to the side of the spring fitting.

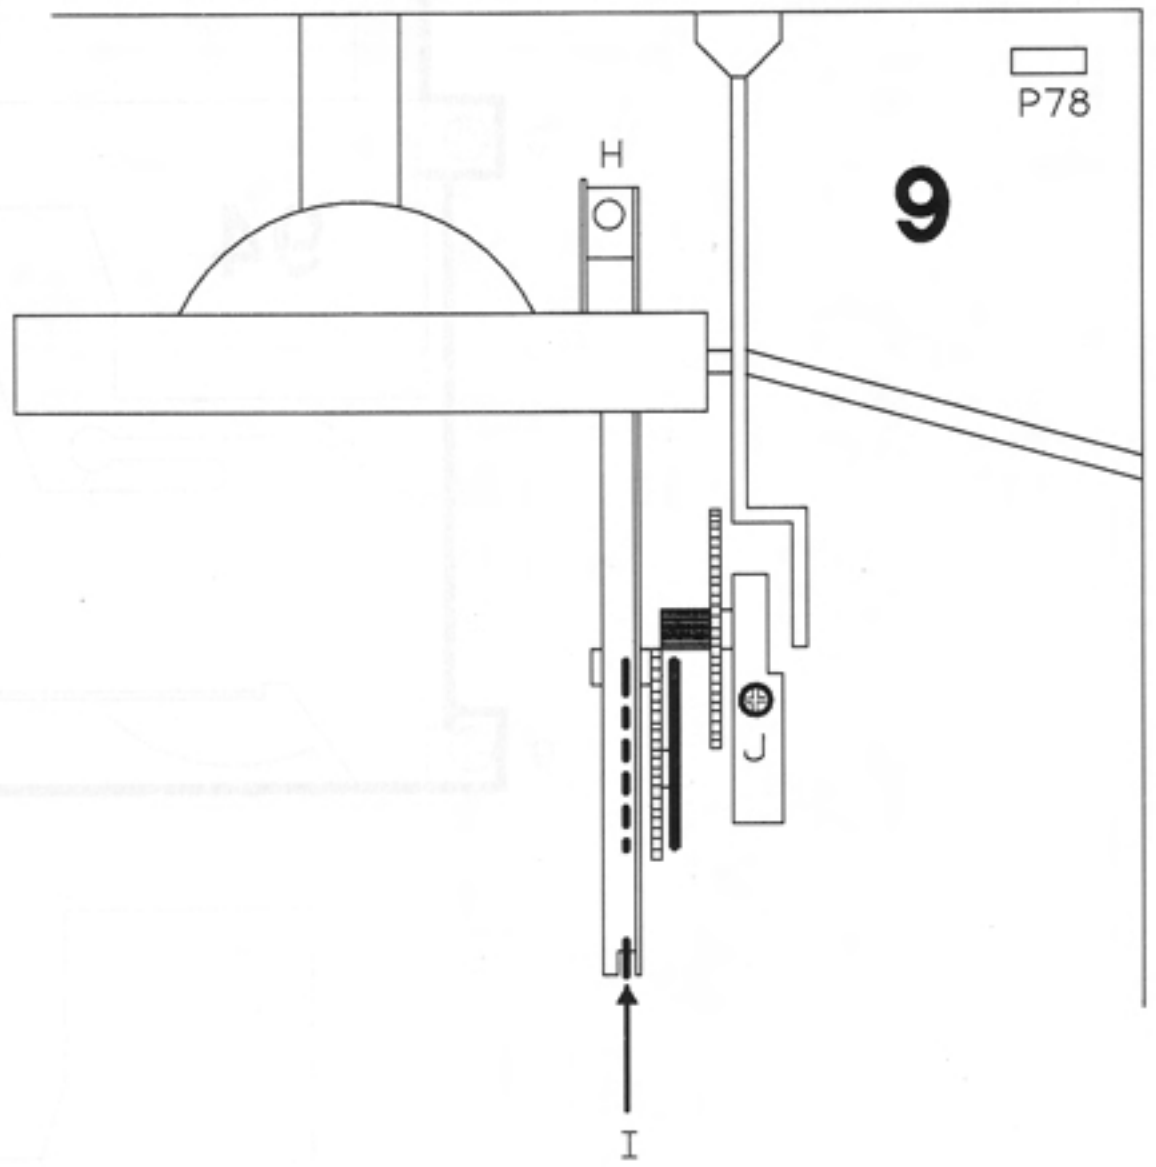




Removal of gearbox for CD clamp

Tape recorder PCB7 must be removed.
The clamp must be electrically sealed.
Lift up the clamp manually.
Dismount the spring I in its bottommost point.
Dismount the arm H.
Dismount the lead to the motor, plug 9P78.
Loosen the screw J and take out the gearbox.

Make sure that the two parts of the fitting at the top of the arm H are pressed together completely when reassembling; then tighten the fitting.

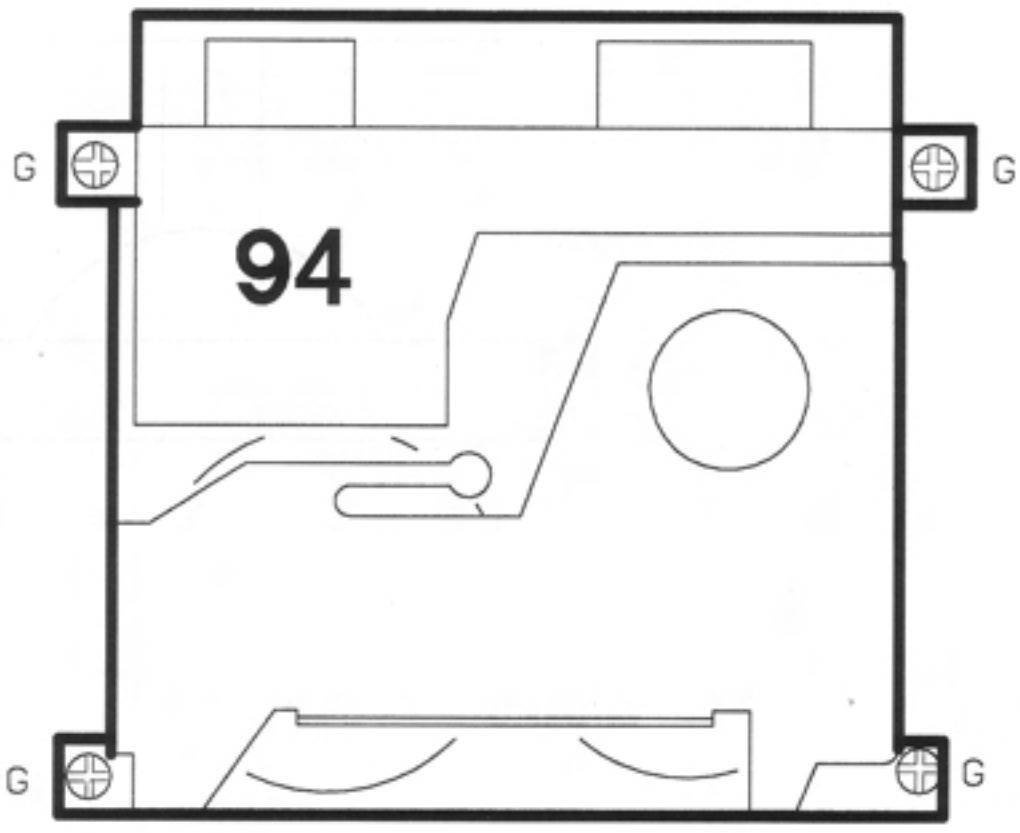


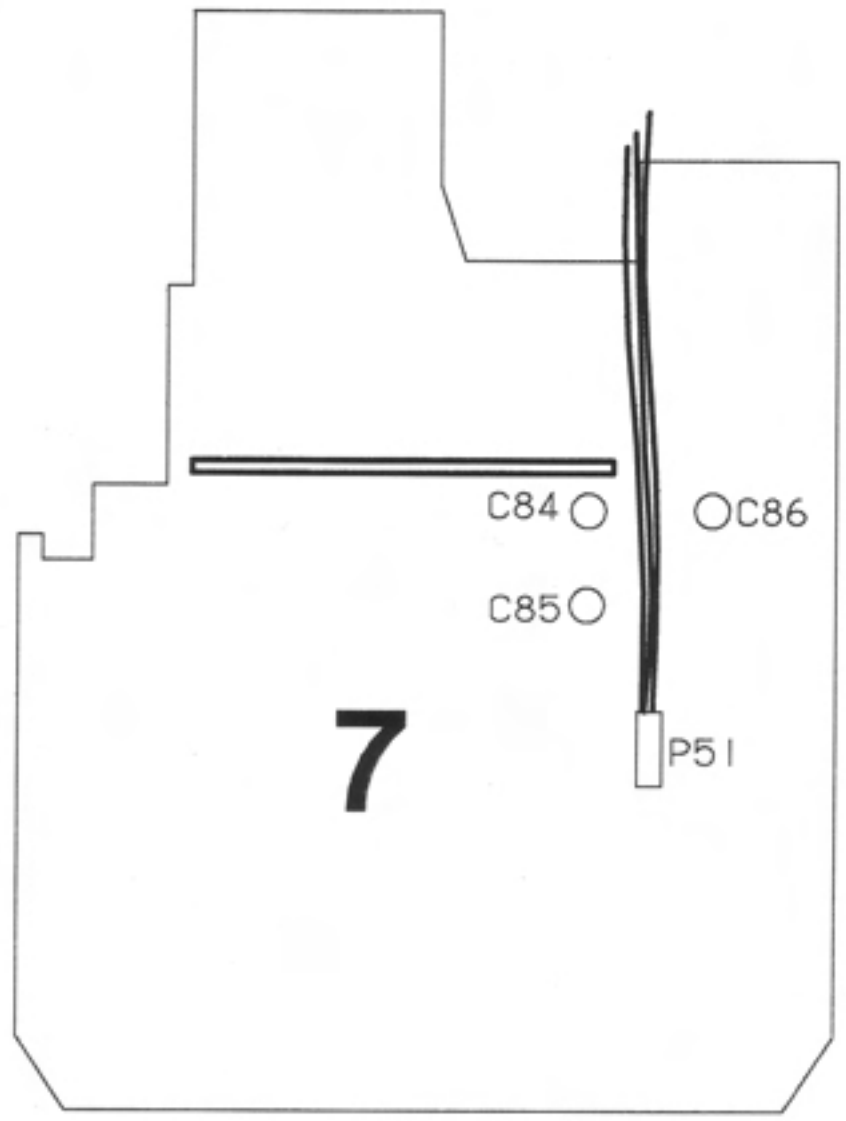
Removal of the tape recorder transport mechanism

Remove the rear panel.
Bring the power-supply unit and AF (PCB 12 and 15) into service position.
Dismount PCB7.
Remove the screws G and take out the transport mechanism.

When making electrical adjustments, the tape recorder PCB7 must be dismounted!

Make sure that the tape head leads are arranged properly when reassembling.





Wire system for glass doors.

Dismount the glass doors and cover plates.
Dismount the rear panel.
Bring the power-supply unit and AF module into service position.
Push the glass holders to the centre and loosen the wire clamping clips (one revolution).
Dismount the motor control circuit board, PCB9.

Dismounting rail A

Lift the right-hand side (as seen from the front) slightly outwards and push it towards the left.
Loosen the screws B in order to dismount the fitting with the wire pulleys.

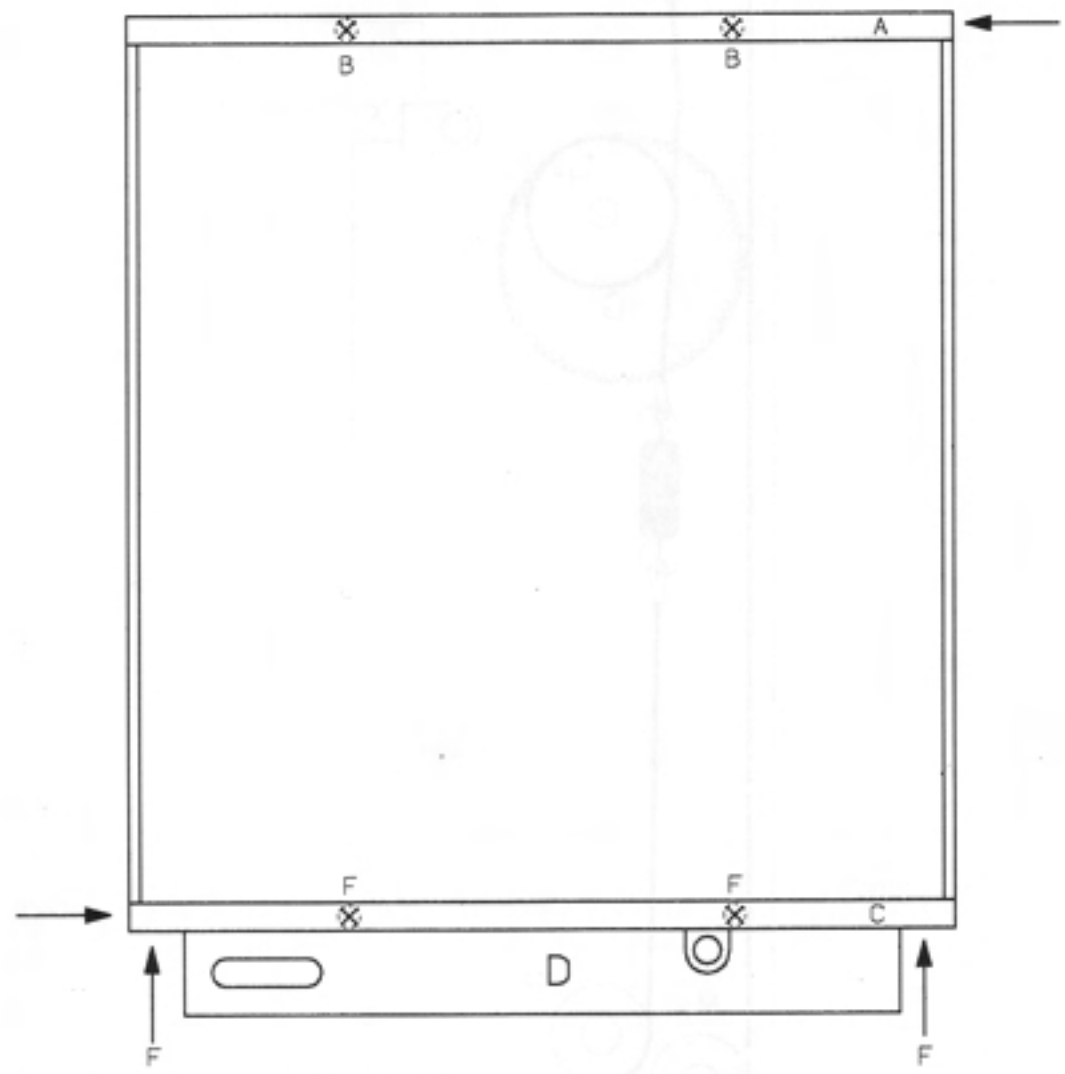
Make sure when mounting the new rail that the rail is positioned correctly in the pilot holes.

Dismounting rails D and C

Before dismounting the rail C, rail D and the front have to be dismounted.

Put out the rear edges of D in both sides and dismount the rail D. Loosen eight screws in the front to dismount it.
Lift out the left-hand side of the rail C, push it towards the right and dismount it.
Loosen the screws F.
Dismount the fitting with the wire pulleys.

Make sure when mounting the new rail that the rail is positioned in the pilot holes.



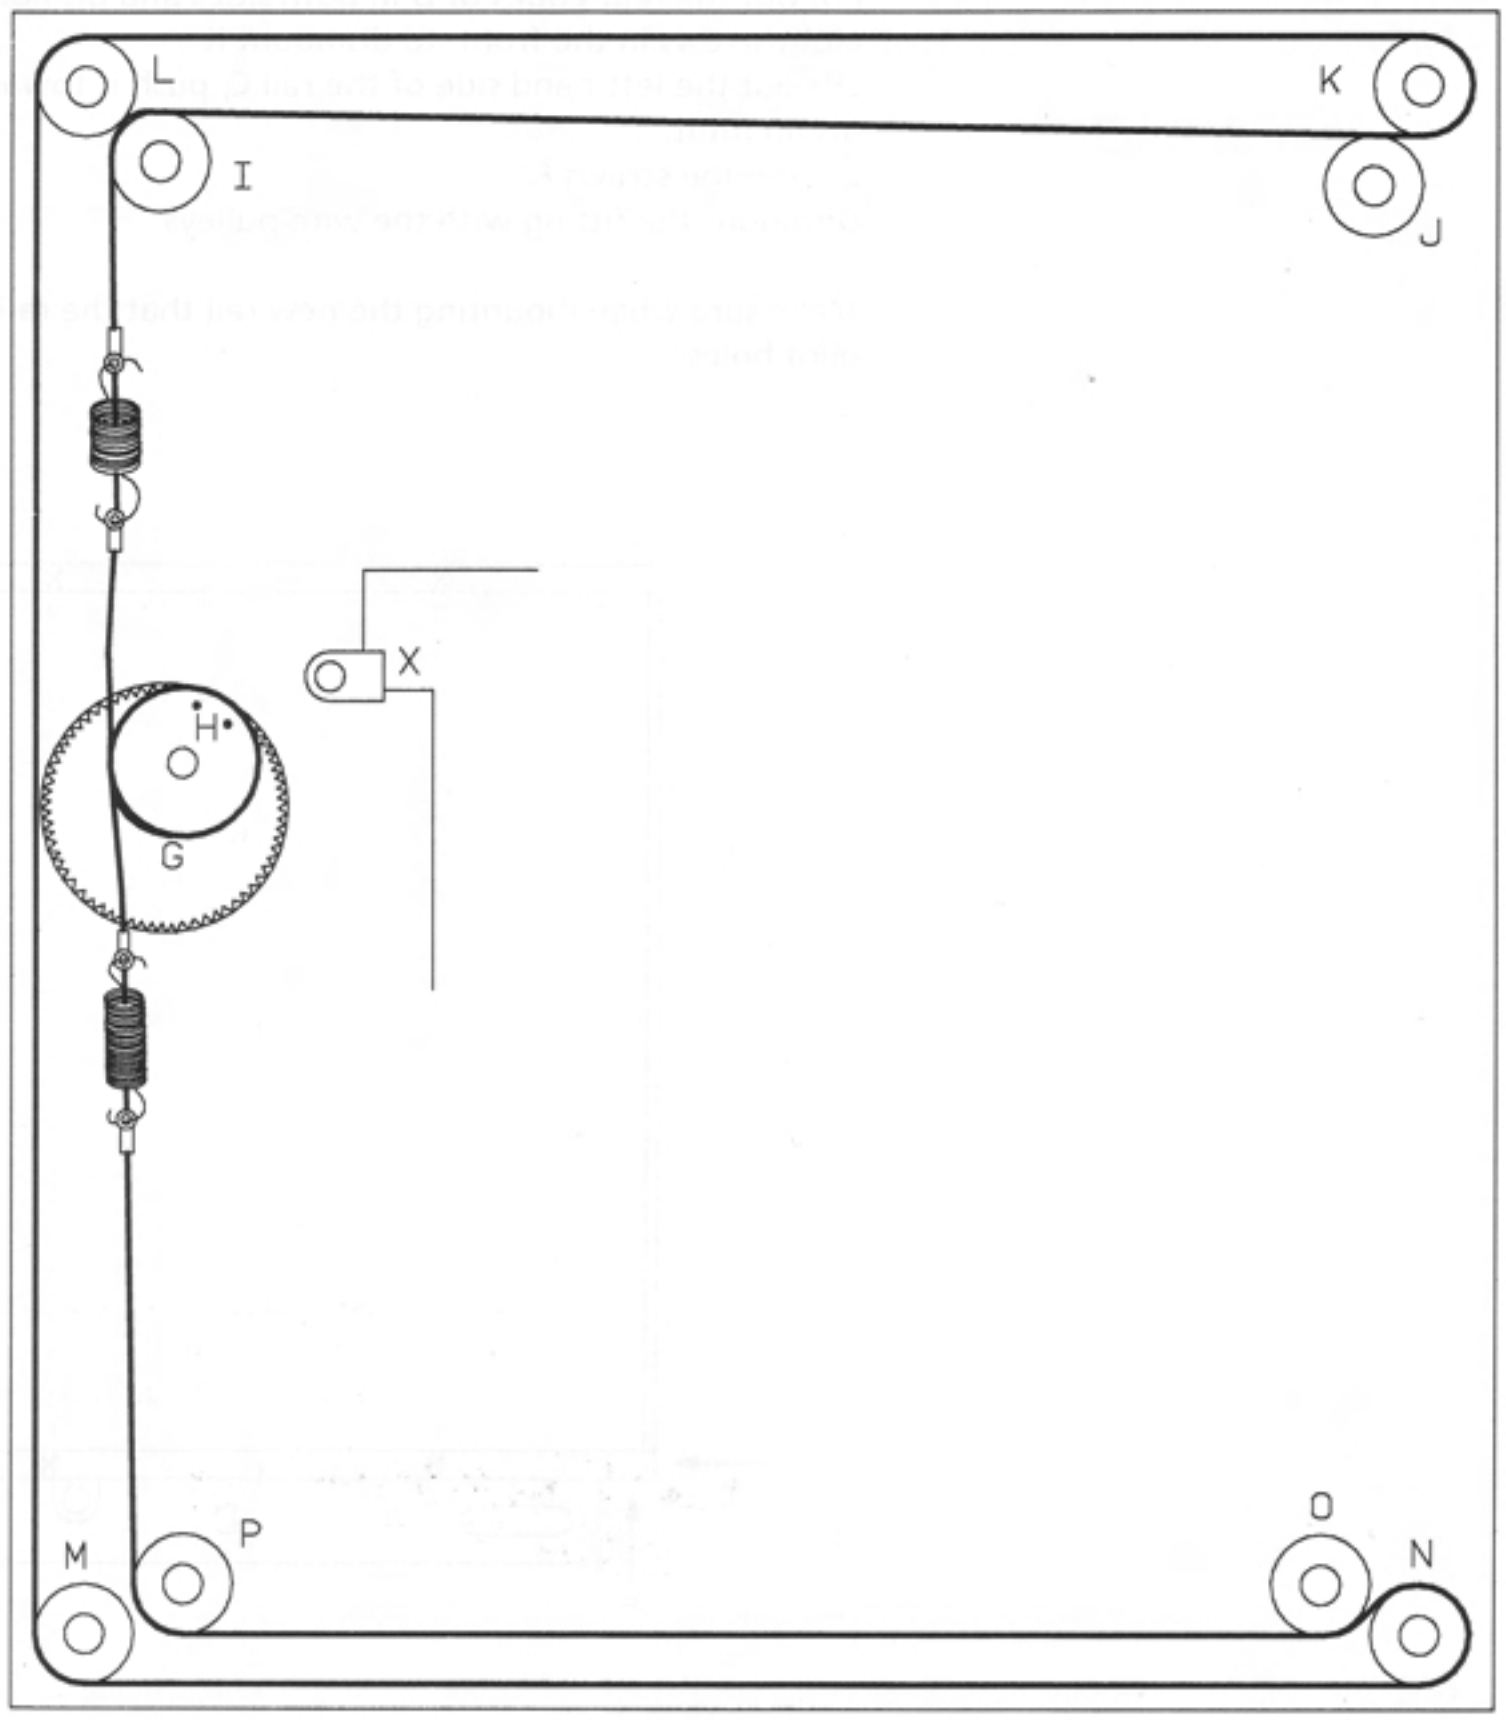
Mounting of wire for glass doors

Turn the wire pulley G clockwise until it stops.
Mount the wire in the wire pulley H (the end with the heavy spring).
Run the wire in the second innermost groove of the wire pulley H (underneath the pulley), up around the uppermost pulleys (I, J, K and L) and down around the lowermost pulleys (M, N and O).
Turn the pulley G anticlockwise.
Fasten the wire in the pulley H.
Mount the wire on pulley P and turn pulley G to check that everything is OK.

The slide rails may be lubricated with Barrierta grease L55-3 (part no. 3984030).

Readjustment of wire

Turn the pulley G such that the centre of the pulleys G and H is flush with the upper edge of the tower X.
Push the wire clamping clip towards the centre and tighten (but not too tight).



TEST FUNCTIONS

The BeoSound Ouverture has a number of built-in test functions. To gain access to these, the product has to be brought into test mode, see page 5-1.

The following options are available in test mode:

- display of tuner variant
- display of SW version (also possible without the product being in test mode)
- display test
- ROM/RAM test
- Open/close for data on AAL
- Open/close for signal on Master Link
- deletion of all preset programmes
- CD test

Display of tuner variant:

Press 0 4

Variant	Display
EU, RDS	2631
USA, RDS	2633
J, RDS	2634
AUS, RDS	2635
EU	2636
USA	2638
J	2639
AUS	2640

Display of SW version

Master Link microprocessor, 13IC2
Press 2 3 Display reads: SW: X.XX

Main Microprocessor, 3IC3
Press 2 5
Display reads: SW: X.XX

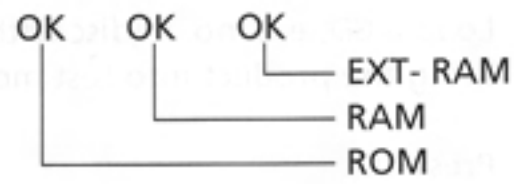
Display test

Press 3 0.

All dots must be on.

ROM/RAM test:

Press 1 0
If the RAM/ROM are OK, the display will read:



Error is indicated by - -

Open/close for data on AAL

Press 0 8
Closes for transmission of data on AAL
Display reads OK 8.

Press 0 9
Opens for transmission of data on AAL
Test mode must be abandoned before data can be transmitted.
Display reads OK 9.

Open/close for signal on Master Link

Press 2 8
Opens for signal to Master Link
Display reads OK 28.

Press 2 9
Opens for signal from Master Link and into the product.
Display reads OK 29.

Deletion of all preset programmes:

Press 0 7

All preset programmes have now been deleted.
The clock is set to 940101, 0 hours 0 minutes 0 seconds.
Option = 1
Volume =32
Balance, bass and treble in neutral.
Display reads OK 7.

Service program for the CD section:

Bring the product into test mode, see page 5-1.
Press CD

A disc need not to be inserted.

Press 1 The laser switches on and searches focus (focus is searched every time 1 is pressed).

- Does laser switch on?
- Does FE output regulate focus motor amplifier?
- Does focus motor regulate?

Press 2 The laser switches off.

Press 3 The CD motor starts running (runs anticlockwise), and the laser goes into the starting position.

Press 4 The CD motor stops.

Press 5 The laser arm moves towards its extreme outside position.

Press 6 The laser arm moves towards the centre.

Press •

Load a CD, e.g. no. 5 (disc without errors), part no. 3634031.
Bring the product into test mode, see page 5-1.

Press CD

Press PLAY The CD starts (lead in).

Press PAUSE The CD stops.

During playback, the following error messages may be displayed:

CD ERR 2 Focus error.

CD ERR 3 Radial error.

CD ERR 4 Motor error.

CD ERR 5 TL is low for 50 mS.

CD ERR 6 Step error.

CD ERR 7 Subcode error, no subcode within 3 seconds.

CD ERR 8 TOC error; outside the "lead in" area while the TOC (program content) is being read.

IR door sensors, PCB6.

Check the transmitter diodes OD2 and OD3 in the following way:

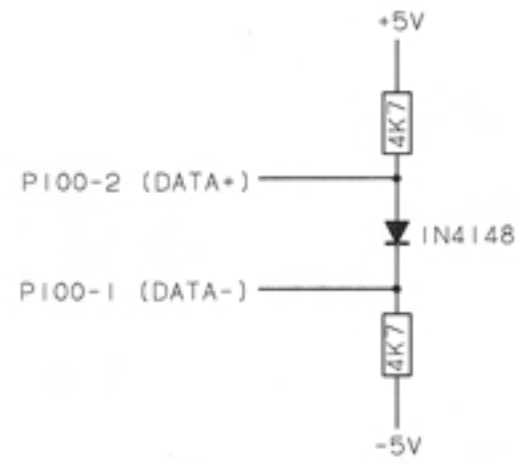
Connect in parallel an IR receiver diode and a 220 ohm resistor, and connect an oscilloscope.
Dismount 6P46.
Hold the IR receiver diode in front of each IR transmitter diode, and make sure there is some reflection behind the IR receiver diode e.g. from a piece of paper.

The oscilloscope should measure an oscillation of approx. 9 kHz if the system is "alive".

Master link DATA receiver/ transmitter

Test of the circuits 12TR30, 12TR31, 12TR52,12TR53 , 12TR55, 12TR56 and 12IC6

- lift P107
- mount on P4:



- connect a square-wave generator 10 kHz 0-5 V to P107-3 (transmit)
- measure P107-1 (receive) with an oscilloscope; it should produce the same signal as the one transmitted by P107-3, only here it is delayed by 10 - 15 uS.

To prevent that products connected via the Master Link socket destroy the data communication in the case of an error in the data interface, the data interface circuit has been designed in such a way that certain components can be defective without causing a malfunction.

For example, the diodes mounted in connection with Data- and Data+ are protection diodes which will protect against static electricity.

Consequently, when making a repair, it may be necessary to replace/check several components.

If 12TR55 is defective, both 12TR55 and 12TR56 should be replaced, and the diodes 12D4, 12D5, 12D19, 12D20, 12D21 and 12D22 should be checked.

If 12TR56 is defective, both 2TR56 and 2TR55 should be replaced, and the diodes 12D4, 12D5, 12D19, 12D20, 12D21 and 12D22 should be checked.

If one of the diodes 12D4, 12D5, 12D19, 12D20, 12D21 and 12D22 is defective, all of the diodes should be replaced, and 12TR55 and 12TR56 should be checked.

Wow frequencies:

Frequency	Error source	Pos. no.
