RESISTOR VALUES FOR V1 & V2

1. DC voltage measurements taken only during tube test; AC voltage measured at 1000 cycles per sec.
2. Resistor connections are shown as being typical.
3. Maximum voltage from screen grid to cathode negative.
4. Line voltage is determined by 115 volts AC voltage reading.
5. Minimum resistance on component values is shown provided a variation of $\pm 5\%$ in voltage and resistance readings.
6. All components are 1/2 watt, proper output load connected.
