## **SAFETY INFORMATION**

### **WARNING**

Any person performing the procedures described in this manual will be exposed to hazardous voltages and the risk of electric shock.

Carver Corporation assumes that any person who removes the cover from the unit has been properly trained in protecting against avoidable injury and shock.

Therefore, the procedures described here are to be performed by qualified electronics service personnel only.

We recommend that the unit be tested only when line isolation is provided by an isolation transformer. The line cord of the unit must be disconnected and the power supply fully discharged before any components are replaced. Failure to do so may result in severe damage to the unit and the risk of electric shock.

The safety tests described in the CAUTION information located on the schematic diagram must be performed properly.

### PROCEDURE

1. Remove top cover of CT-6. Locate IC514 and connector CN420 near left rear of main board.
2. Verify presence of high frequency oscillation at L & R pins of CN420. Use 50MHz scope and X10 probe.
3. Install 100pF disc caps between jumper J183 and R607, R608 (see drawing below).
4. Confirm that HF oscillation has been eliminated.

**PROCEDURE**

Performing this procedure will reduce the overall gain of the preamplifier by 10dB.  
It does not affect the Tape Outputs.

1. Turn power switch off and remove plug from AC outlet.
2. Remove top cover by removing 9 screw (3 from top, 2 from each side, 2 from back).
3. Remove Main PCB from chassis:
  - a) Remove 6 screws from rear panel securing RCA connectors to chassis.
  - b) Remove 2 screws from rear panel providing chassis to PCB ground connection.
  - c) Remove 2 screws from rear panel securing antenna inputs to chassis.
  - d) Release 6 nylon standoffs securing Main PCB to chassis.
  - e) Pull Main PCB toward front of unit until connecting jacks clear the rear panel.  
Lift up on back edge of PCB.
  - f) Flip Main PCB over towards front of unit, exposing solder side of board.
4. Remove and replace R585, R586, R609, R610 (see page 2 for part locations).

## PROCEDURE

If the customer complains of interference when the Hologram is switched on (i.e. faint radio station, intermittent buzzing or whistling noises), perform this modification.

1. Turn power switch off and remove plug from AC outlet.
  2. Remove top cover by removing 9 screw (3 from top, 2 from each side, 2 from back).
  3. Locate R687 and R739 ( $6.8k\Omega$  resistors) on the Main PCB (see Figure 2).
  4. Install a  $470pF$  capacitor in parallel with each resistor.
  5. Install  $0.1\mu F$  bypass capacitors from the  $\pm 15V$  supply to ground at IC611 (see Figure 2).
  6. Solder a jumper wire from the top tab on the PRE OUT jacks to the ground bracket EL501.
  7. Replace top cover.
  8. Verify correct operation of unit.
