NIPPON COLUMBIA CO., LTD.

SPECIFICATIONS

- **Audio Section**
 - (Power amplifier)**
 - Rated output:** MAIN (main 2ch driven)
110 W + 110 W (8 ohms, 20 Hz – 20 kHz with 0.03% THD)
CENTER (center 1ch driven)
110 W (8 ohms, 20 Hz – 20 kHz with 0.03% THD)
REAR (rear 2ch driven)
35 W + 35 W (8 ohms, 1 kHz with 0.05% THD)
 - Frequency response:** 5 Hz to 50 kHz (Main in – speaker out)
 - Rated input level / impedance:** 1 V / 47 k ohms (Main in – speaker out)
 - Signal-to-noise ratio:** 120 dB (Main in – speaker out)
 - Output terminals:** Main: A or B 6 to 16 ohms
A + B 12 to 16 ohms
Center: 6 to 16 ohms
Rear: 6 to 16 ohms
 - (Pre-amplifier)**
 - Line input (Each line input – FRONT PRE OUT)**
 - Input sensitivity / impedance:** 150 mV / 47 k ohms PHONO (MM): 2.5 mV / 47 kohms, CD DIRECT: 150 mV / 33 kohms
 - Frequency response:** 5 Hz to 100 kHz: ± 3 dB
5 Hz to 150 kHz: ± 3 dB (CD DIRECT)
 - Tone control range:** BASS: ± 10 dB at 100 Hz
TREBLE: ± 10 dB at 10 kHz
 - Signal-to-noise ratio** 92 dB
 - (FRONT PRE OUT):** 95 dB (CD DIRECT)
 - Distortion factor:** 0.01% 1 kHz 1 V (BYPASS mode)
0.003% 1 kHz 3 V (CD DIRECT)
 - Rated output / Maximum output:** 1 V / 8 V (common for FRONT, CENTER, REAR, MONO, each PRE OUT)
 - Maximum headphone output:** 284 mW (8 ohms)
 - Phono equalizer (PHONO input – REC OUT)**
 - RIAA deviation:** ± 1 dB (20 Hz to 20 kHz)
 - Signal-to-noise ratio:** 76 dB (A weighting, with 5 mV input)
 - Rated output / Maximum output:** 150 mV / 8 V
 - Distortion factor:** 0.03% (1 kHz, 3 V)
- **Video Section**
 - Standard video jacks**
 - Input and output level / impedance:** 1 Vp-p / 75 ohms
 - Frequency response:** 1 Hz to 10 MHz +0, -3 dB
 - S-video output jacks**
 - Input and output level / impedance:** Y (brightness) signal: 1 Vp-p / 75 ohms
C (color) signal: 0.286 Vp-p / 75 ohms
 - Frequency response:** 1 Hz to 11 MHz +0, -3 dB
 - **General**
 - Power supply:** 120 V AC, 60 Hz
 - Power consumption:** 5.5 A
 - Maximum external dimensions:** 434 (W) \times 184 (H) \times 421 (D) mm (17-3/32" \times 7-1/4" \times 16-37/64")
 - Weight:** 15.0 kg (33 lbs 2 oz)
 - **Remote control unit (RC-162):**
 - System remote control with learning function**
 - Total buttons: 62
 - DENON system code
 - DAT: 8 buttons
 - CD player: 8 buttons
 - Cassette deck: 8 buttons
 - Tuner: 2 buttons
 - VDP: 8 buttons
 - AVC-3030 fixed codes: 47 buttons
 - Learning buttons
 - System call buttons: 3 (maximum of 10 codes per button)
 - Program – AMP: 8 buttons
 - AV: 58 buttons
 - Maximum total: 35 codes
 - Batteries: R6P/AA Type (two batteries)
 - External dimensions: 70 (W) \times 215 (H) \times 18 (D) mm (2-3/4" \times 8-15/32" \times 45/64")
 - Weight: 170 g (Approx. 6 oz) (including batteries)

* For purposes of improvement, specifications and design are subject to change without notice.

CAUTION
RISK OF ELECTRIC SHOCK
DO NOT OPEN

CAUTION: TO REDUCE THE RISK OF ELECTRIC SHOCK, DO NOT REMOVE COVER (OR BACK). NO USER SERVICE-ABLE PARTS INSIDE. REFER SERVICING TO QUALIFIED SERVICE PERSONNEL.

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

WARNING: TO REDUCE THE RISK OF FIRE OR ELECTRIC SHOCK, DO NOT EXPOSE THIS APPLIANCE TO RAIN OR MOISTURE.

CAUTION

TO PREVENT ELECTRIC SHOCK DO NOT USE THIS POLARIZED PLUG WITH AN EXTENSION CORD, RECEPTACLE OR POWER OUTLET UNLESS THE BLADES CAN BE FULLY INSERTED TO PREVENT BLADE EXPOSURE.

ATTENTION

POUR PREVENIR LES CHOCs ELECTRIQUES NE PAS UTILISER CETTE FICHE POLARISEE AVEC UN PROLONGATEUR UNE PRISE DE COURANT OU UNE AUTRE SORTIE DE COURANT, SAUF SI LES LAMES PEUVENT ETRE INSEREES A FOND SANS EN LAISSER AUCUNE PARTIE A DECOUVERT.

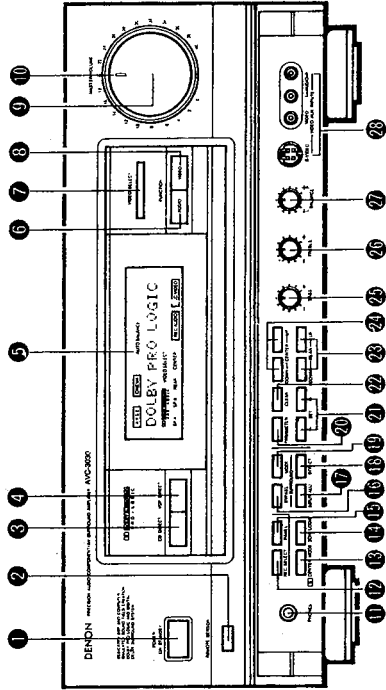

IMPORTANT SAFEGUARDS

1. Read Instructions - All the safety and operating instructions should be read before the appliance is operated.
2. Retain Instructions - The safety and operating instructions should be retained for future reference.
3. Head Warnings - All warnings on the appliance and in the operating instructions should be adhered to.
4. Follow Instructions - All operating and use instructions should be followed.
5. Cleaning - Unplug this video product from the wall outlet before cleaning. Do not use liquid cleaners or aerosol cleaners. Use a damp cloth for cleaning.
6. Attachments - Do not use attachments not recommended by the video product manufacturer as they may cause hazards.
7. Water and Moisture - Do not use this video product near water—for example, near a bath tub, wash bowl, kitchen sink, or laundry tub, in a wet basement, or near a swimming pool, and the like.
8. Accessories - Do not place this video product on an unstable cart, stand, tripod, bracket, or table. The video product may fall, causing serious injury to a child or adult, and serious damage to the appliance. Use only with a cart, stand, tripod, bracket, or table recommended by the manufacturer, or sold with the video product. Any modifications should follow the manufacturer's instructions, and should use a mounting assembly recommended by the manufacturer.
- 9A. An appliance and cart combination should be moved with care. Quick stops, excessive force, and uneven surfaces may cause the combination to overturn.
9. Ventilation - Slots and openings in the cabinet are provided for protection from overheating operation of the video product and should not be blocked or covered. The openings should never be blocked by placing the video product on a bed, sofa, rug or other similar surface. This video product should never be placed near or over a radiator or heat register. This video product should not be placed in a built-in installation. Proper ventilation is provided or the manufacturer's instructions have been adhere to.
10. Power Sources - This video product should be operated only from the type of power source indicated on the marking label. If you are not sure of the type of power supply to your home, consult your appliance dealer or local power company. For video products intended to operate from battery power, or other sources, refer to the operating instructions.
11. Grounding or Polarization - This video product is equipped with a polarized alternating-current line plug (a plug having one blade wider than the other). This plug will fit into the power outlet only one way. This is a safety feature. If you are having difficulty inserting the plug into the outlet, try reversing the plug. If the plug should still fail to fit, contact your electrician to replace your obsolete outlet. Do not defeat the safety purpose of the polarized plug.
12. Power-Cord Protection - Power-Supply cords should be routed so that they are not likely to be walked on or pinched by items placed upon or against them, paying particular attention to cords at plugs, convenience receptacles, and the point where they exit from the appliance.
13. Outdoor Antenna Grounding - If an outside antenna or cable system is connected to the video product, be sure the system is grounded so as to provide some protection against voltage surges and built-up static charges. Section 810 of the National Electrical Code, ANSI/NFPA No. 70-1984, provides information on proper grounding of the mast and supporting structure, grounding of the lead-in conductors, size of grounding conductors, location of antenna discharge unit, connection to grounding electrodes, and requirements for the grounding electrode. See Figure A.
14. Lightning - For added protection for this video product receiver during a lightning storm, or when it is left unattended and unused for long periods of time, unplug it from the wall outlet and disconnect the antenna or cable system. This will prevent damage to the video product due to lightning and power-line surges.
15. Power Lines - An outside antenna system should not be located in the vicinity of overhead power lines or other electric light or power lines. Also, avoid power lines or circuits. When installing an outside antenna system, extreme caution should be taken to keep from touching such power lines or circuits as contact with them might be fatal.
16. Overloading - Do not overload wall outlets and extension cords as this can result in a risk of fire or electric shock.
17. Object and Liquid Entry - Never push objects of any kind into this video product, or use liquid to clean the surface of this video product. Never spill liquid of any kind on the video product.
18. Servicing - Do not attempt to service this video product yourself as opening or removing covers may expose you to dangerous voltage points or short-circuit parts that could result in fire, electric shock. Never spill liquid of any kind on the video product.
19. Damage Requiring Service - Unplug this video product from the wall outlet and refer servicing to qualified service personnel under the following conditions:
 - a. When the power-supply cord or plug is damaged.
 - b. If liquid has been spilled, or objects have fallen into the video product.
 - c. If the video product has been exposed to rain or water.
 - d. If the video product does not operate normally by following the operating instructions. Adjustments or repairs are required, covered by the operating instructions as an improper adjustment of other controls may result in damage and will often require extensive work by a qualified technician to restore the video product to its normal operation.
 - e. If the video product has been dropped or the cabinet has been damaged.
 - f. When the video product exhibits a distinct change in performance - this indicates a need for service.
20. Replacement Parts - When replacement parts are required, be sure the service technician has used replacement parts specified by the manufacturer or have the same characteristics as the original part. Unauthorized substitutions may result in fire, electric shock or other hazards.
21. Safety Check - Upon completion of any service or repairs to this video product, ask the service technician to perform safety checks to determine that the video product is in proper operating condition.

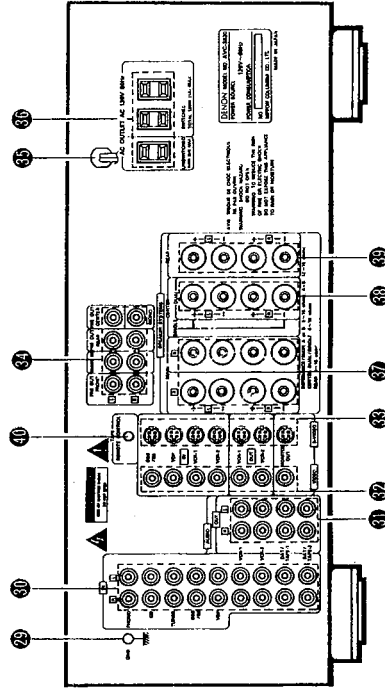

PART NAMES AND FUNCTIONS (Refer to pages 14 ~ 17)

Front panel (10 ~ 20)

Rear panel (23 ~ 31)

NOTE ON USE

 <p>Be careful of high temperatures</p> <ul style="list-style-type: none"> Do not place the set in a location where it will be exposed to direct sunlight or near a heating appliance. <p>Caution on rack/cabinet installation</p> <ul style="list-style-type: none"> Avoid installing the set in a closed-type rack. When installing in a rack or cabinet, provide a sufficiently large ventilation opening to promote heat radiation. 	 <p>Caution on humidity, water, and dust</p> <ul style="list-style-type: none"> Do not place the set in a location where there is high humidity or a lot of dust. Flower vases or other items containing water should not be placed on top of the set. 	 <p>Do not open the case</p> <ul style="list-style-type: none"> Opening the top cover or the bottom plate of the case and inserting your hand is dangerous. Do not open the case. If some trouble arises with the performance of the set, remove the power plug soon and contact the store where the set was purchased or a nearby dealer. 	
 <p>Do not allow foreign matter into the equipment</p> <ul style="list-style-type: none"> Be especially careful of needles, hair pins, and coins getting into the set. 	 <p>Care with the power cord</p> <ul style="list-style-type: none"> When removing the plug from the receptacle, do not pull the power cord; be sure to hold the plug when removing it. 	 <p>During your absence</p> <ul style="list-style-type: none"> When not using the set for an extended period such as when taking a trip, be sure to disconnect the plug from the receptacle. 	
			 <p>For sets with ventilation holes</p> <p>Do not block the ventilation holes of the set</p> <ul style="list-style-type: none"> Blocking of the ventilation holes will lead to damage of the set. The ventilation holes are very important for heat radiation from within the set. Care must be taken since placing an object against the holes will result in an extreme rise of temperature within the set.

- We greatly appreciate your purchase.
- Read these operating instructions carefully to obtain the best performance and a long, trouble-free life from this amplifier. Be sure to keep these operating instructions for future reference.

Check that the following items are included in the package in addition to the main unit:

- ① Operating instructions
- ② Remote control unit RC-162
- ③ R6P7AA batteries

1 BEFORE USING

Read the following cautions carefully before using the amplifier:

- Moving the set: correct and that there are no problems with the connection cords. Be sure to turn the power STANDBY before disconnecting or connecting cords.
- Be sure to unplug the power cord and disconnect other cords connecting the amplifier to other audio units before moving the amplifier to prevent damaging or short-circuiting the cords.
- Retain the operating instructions
- After reading this manual, store it in a safe place.
- The illustrations used in this manual may differ somewhat from the actual amplifier.

NOTICE

The DENON AVC-3030 is equipped with sophisticated heat detection circuitry to protect the unit from excessive heat. This protection circuit may be activated when the unit is operating at continuous high power conditions and/or inadequate ventilation.

When activated all signal outputs are muted and "PROTECTION!!" is indicated on the display. If protection is activated, switch off unit and allow unit to cool, this action will reset protection device. After cool down, turn on unit, it will operate normally.

Note: If unit does not receive adequate air circulation, move to location that will allow proper cooling.

2 INSTALLATION PRECAUTIONS

Using this amplifier or other electronic equipment containing microprocessors simultaneously with a tuner or TV may result in noise in the sound or picture. If this should happen, take the following steps:

- Install the amplifier as far as possible from the tuner or TV set.
- Keep the antenna lines of the tuner or TV as far as possible from the amplifier's power cord and connection cables.
- This problem is especially frequent when using indoor antennas or 300 ohm feeder lines. We recommend using outdoor antennas and 75 ohm coaxial cables.

For cooling purposes, do not place another AV component directly on top of the amplifier. Be sure to leave a space of at least 10 cm.

3 HANDLING PRECAUTIONS

- Switching the input function when the input jacks are unconnected: Switching the input function when a component is not connected to the input jacks may result in the generation of click noise. If this should happen, turn down the MASTER VOLUME or connect a component to the input jacks.
- Playback with Dolby Pro Logic: The Dolby Pro Logic position provides optimum effectiveness for sources recorded with Dolby surround. A different surround mode should be selected when playing back sources other than this type. Note in particular that when playing back monaural recording sources, the bypass mode or the simulated mode should be used. Other modes will not provide a suitable effect.
- Muting of the PRE OUT jacks: An electronic muting circuit has been connected to the PRE OUT jacks. This circuit greatly attenuates the output signal for approximately 6 seconds after the power has been switched on. Raising the volume during this operation will result in an extremely large output once the muting has ended, so volume adjustments should be made only after the completion of muting.
- Rear output level while in the surround mode: The rear level will seem small for sources other than Dolby surround sources. The reason for this is that a rear playback signal is not contained in the software. When playing back such software with a surround mode, the mode should be set to something other than Dolby Pro Logic surround. The rear output level may seem small for software having a small rear signal, even Dolby surround sources.
- Opening and closing the door: This amplifier is equipped with a door on the front panel. Press the "PUSH OPEN" portion printed at the upper right edge of the door to release and open the door. Likewise, to close the door, press in the same manner until a click sound is heard.

NOTE:
The door will open naturally once it has been released, but it may stop before fully opening. This is not a fault; just lightly push the door open.

4 INITIALIZATION OF THE MICROPROCESSOR

When the indication of the MFD display is not normal or when the operation of the unit does not show the reasonable result, the initialization of the microprocessor is required by the following procedure.

- 1 Switch off the unit and remove the AC power cord from the wall outlet.
 - 2 Hold the following 3 buttons of the main unit at the same time (as illustrated in the diagram below. ① VIDEO SELECT button, ② AUDIO FUNCTION button, and ③ VIDEO FUNCTION button) plug the power cord into the outlet.
 - 3 Check that the entire MFD display is flashing with an interval of about 1 second, and release your fingers from the 3 buttons.
 - 4 Switch on the unit and the microprocessor will be initialized. The input function is set to tuner with the bypass mode automatically.
- NOTE:**
- When the unit does not show the result of above 3 and 4, repeat the procedure from 1 again.
 - When the microprocessor is initialized, all the previous setting of the unit is released and is set to the shipping condition from the manufacturer.

5 CONNECTIONS

Speaker System Connections

- This amplifier can accommodate connections of a total of eight speakers including two sets of (front) main amplifier speakers (A and B), one set of rear speakers, and one or two center speakers.
- Connect the speaker terminals with the speakers making sure that like polarities are matched (⊕ with ⊕, ⊖ with ⊖). Mismatching of polarities will result in weak central sound, unclear orientation of the various instruments, and the sense of direction of the stereo being impaired.
- When making connections, take care that none of the individual conductors of the speaker cord come in contact with adjacent terminals, with other speaker cord conductors, or with the rear panel.

- ① Peel off the insulation from the tip of the cord.
- ② Twist the conductors.
- ③ Turn the speaker terminal counterclockwise to loosen it.
- ④ Insert the exposed portion of wire completely and turn the terminal clockwise to tighten it.

Speaker connections using the PRE OUT and MAIN IN jacks

These jacks are used when a separate pre-main (power) amplifier is used to amplify the front, rear, and center sounds. Using a second pre-main (power) amplifier [Use the included short pin, inserting it fully.

3 Using other equipment

Continued

When two speakers are connected as dual center outputs a better effect will be obtained when speakers having uniform characteristics are used.

For a single center output (when only using one speaker for the center channel), connect the speaker to the (left) "+" terminal and the (right) "-" terminal.

Connection jacks for subwoofers with builtin amplifier (super woofers), etc.

PRE OUT and MAIN IN jacks
See page 9.

Audio Section

- Do not plug in the power cord until all connections have been completed.
- Be sure to connect the left and right channels properly (left with left, right with right).
- Insert the plugs securely. Incomplete connections will result in the generation of noise.

Connecting a turntable

Plug the output cable of the turntable into the PHONO jack of the amplifier, the L plug into the left (L) jack and the right plug into the right (R) jack.

If the turntable is equipped with a ground wire, connect it to the GND terminal.

If hum or other noise is produced when the ground wire is connected, disconnect it.

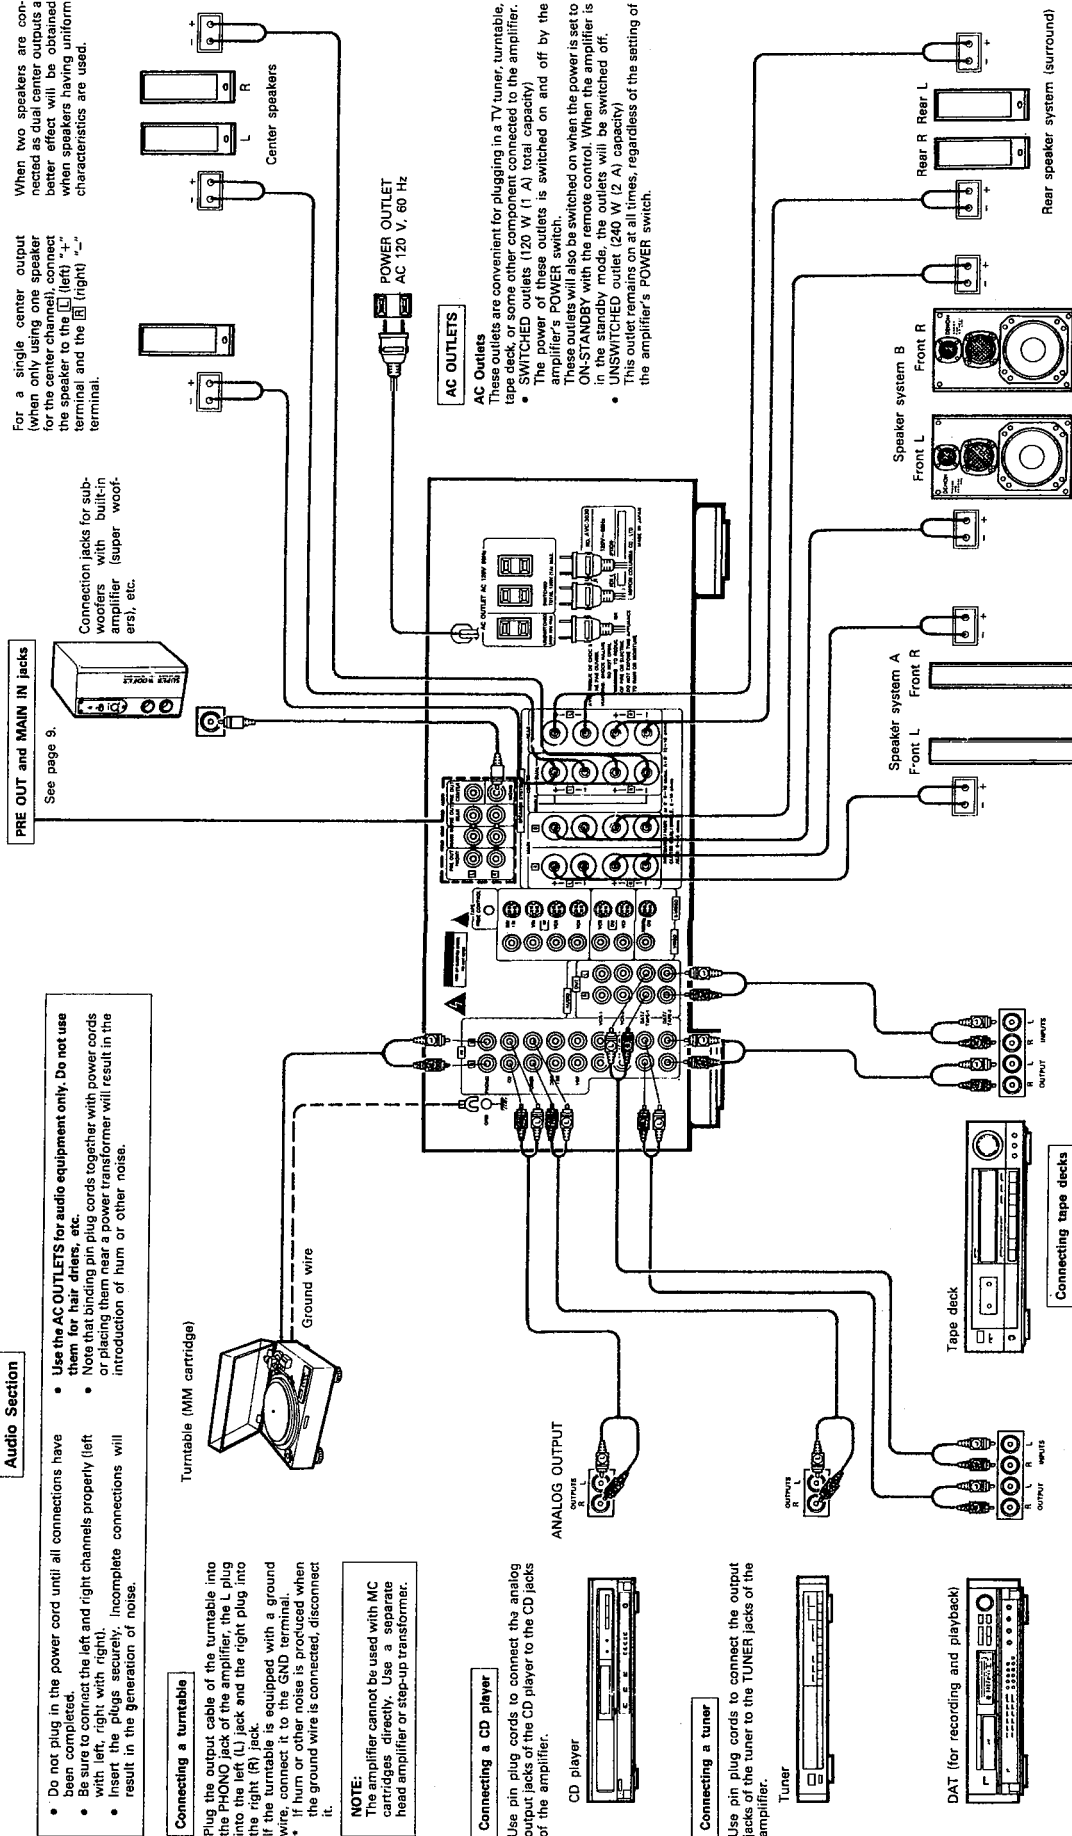

NOTE:
The amplifier cannot be used with MC cartridges directly. Use a separate head amplifier or step-up transformer.

Connecting a CD player

Use pin plug cords to connect the analog output jacks of the CD player to the CD jacks of the amplifier.

Connecting a tuner

Use pin plug cords to connect the output jacks of the tuner to the TUNER jacks of the amplifier.

Precautions when connecting speakers

If a speaker is placed near a TV or video monitor, the colors on the screen may be disturbed by the speaker's magnetism. If this should happen, move the speaker away to a position where it does not have this effect.

Connecting speaker systems

Connect the speaker systems for the left channel (the left side as seen from the front) to the L terminals, and the speaker systems for the right channel to the R terminals.

Connecting tape decks

Connections for recording: Connect the tape deck's recording input jacks (LINE IN or REC) to the amplifier's tape recording (OUTPUT) jacks using pin plug cords.

Connections for playback: Connect the tape deck's playback output jacks (LINE OUT or PB) to the amplifier's tape playback (INPUT) jacks using pin plug cords.

Connecting a DAT (Digital Audio Tape Recorder)

Connections for recording: Connect the DAT's analog recording input jacks (LINE IN or REC) to the amplifier's tape recording (OUTPUT) jacks using pin plug cords.

Connections for playback: Connect the DAT's analog playback output jacks (LINE OUT or PB) to the amplifier's tape playback (INPUT) jacks using pin plug cords.

Video Section

Connecting a BS tuner

- Connect the BS tuner's S-output jack to the amplifier's [S-VIDEO] DBS/BS-IN jack using an S-jack connection cord.
- Connect the BS tuner's video output jack to the amplifier's [VIDEO] (yellow) DBS/BS-IN jack using a 75-ohm video coaxial cable pin plug cord.
- Connect the BS tuner's analog audio output jacks to the amplifier's [AUDIO] DBS/BS-IN jacks using pin plug cords.

BS tuner

S-output Video output
Audio output

Connecting a video disc player (VDP)

- (VDP, CDV, etc.)
- Connect the video disc player's S-output jack to the amplifier's [S-VIDEO] VDP IN jack using an S-jack connection cord.
 - Connect the video disc player's video output jacks to the amplifier's [VIDEO] VDP (yellow) jack using a 75-ohm video coaxial cable pin plug cord.
 - Connect the video disc player's analog audio output jacks to the amplifier's [AUDIO] VDP jacks using pin plug cords.

LD player, CDV player, etc.

S-output

Video output

Audio output

Connecting a video deck (VCR-1)

- There are two sets of VCR jacks allowing connection of two video decks for simultaneous recording and video copying.
- Connect the VCR S-output jack to the amplifier's [S-VIDEO] IN jack using a S-jack connection cord.
- Connect the VCR video output jack to the amplifier's [VIDEO] (yellow) VCR-1 IN jack and the VCR [VIDEO] (yellow) VCR-1 OUT jack using 75-ohm video coaxial cable pin plug cords.

Video deck 1 equipped with S-jacks

- Connecting the audio input and output jacks**
- Connect the video deck's audio output jacks to the amplifier's [AUDIO] VCR-1 IN jacks and the video deck's audio input jacks to the amplifier's [AUDIO] VCR-1 OUT jacks using pin plug cords.
 - A second video deck may be connected to the VCR-2 jacks in the same way.

A note on the S input jacks

- The input selector for the S inputs and that for the pin jack inputs work in conjunction with each other.

Precaution when using S-jacks

This amplifier's S-jacks (input and output) and video pin jacks (input and output) have independent circuit structures, so that video signals input from the S-jacks are only output from the pin jacks and video signals input from the pin jacks are only output from the pin jack outputs. When connecting to the amplifier with equipment that is equipped with S-jacks, keep the above point in mind and make connections according to the equipment instruction manuals.

The AVC-3030 is equipped with VIDEO AUX jacks on the front panel for playback of video equipment. This permits video cam-corders with playback functions as well as other equipment to be connected. The connection method is the same as that for the VDP.

Connecting cam corder (V-AUX)

- Connections for video input and output:**
- Connect the cam corder's video output jack to the amplifier's [VIDEO] (yellow) V-AUX IN jack and the cam corder's video input jack to the amplifier's [VIDEO] (yellow) V-AUX OUT jack using 75-ohm video coaxial cable pin plug cords.
- Connecting the audio input and output jacks**
- Connect the cam corder's audio output jacks to the amplifier's [AUDIO] V-AUX IN jacks and the cam corder's audio input jacks to the amplifier's [AUDIO] V-AUX OUT jacks using pin plug cords.

Connecting a monitor TV

- Connect the TV's S-video input jack to the amplifier's [S-VIDEO] MONITOR OUT jack using an S-jack connection cord.
- Connect the TV's video input jack to the amplifier's [VIDEO] MONITOR OUT jack using a 75-ohm video coaxial cable pin plug cord.

Monitor TV

- Connecting the S-jacks**
- Connect the video deck's S-output jack to the amplifier's [S-VIDEO] IN jack and the video deck's S-input jack to the amplifier's [S-VIDEO] OUT jack using S-jack connection cords.

6 PART NAMES AND FUNCTIONS

(Refer to the figures on page 5.)

1 POWER switch

- ON

When this switch is pressed once, the power turns on and the MASTER VOLUME LED (1) flashes. (The muting circuit is activated while "MUTING" is flashing to prevent noise when the POWER switch is operated.) After several seconds, the LED stops flashing, remaining lit and the muting circuit turns off. The set is now in the normal operating mode.

- STANDBY

When the POWER switch is pressed once again, the power turns off and the standby mode is set. The MASTER VOLUME LED (1) remains lit. In addition, when the power turns off, the power supply from the SWITCHED AC outlets on the rear panel also turns off.

2 REMOTE SENSOR

This is where the signals from the wireless remote control unit are received. Point the remote control unit (RC-162) at this sensor when operating it.

3 CD DIRECT button

This button is used to enjoy the audio signals input from the component connected to the CD jacks on the rear panel with higher sound quality. In the CD direct mode, the audio signals bypass such circuitry as the surround and tone control circuits, and are output directly to the front speakers for higher sound quality.

- ※ Cancelling the CD direct mode

When in the CD direct mode, either press the CD DIRECT button once again, or press the AUDIO FUNCTION selector button (6) or VIDEO FUNCTION selector button (7) or BYPASS button (8) or SURROUND MODE selector button (9) to cancel the CD direct mode.

4 VDP DIRECT button

This button is used to enjoy the audio signals input from the component connected to the VDP jacks on the rear panel with higher sound quality. In the VDP direct mode, the audio signals bypass such circuitry as the surround and tone control circuits, and are output directly to the front speakers for higher sound quality.

- ※ Cancelling the VDP direct mode

When in the VDP direct mode, either press the VDP DIRECT button once again, or press the VIDEO FUNCTION selector button (6) or AUDIO FUNCTION selector button (7) or SURROUND MODE selector button (8) or BYPASS button (9) to cancel the VDP direct mode.

NOTE:

When the CD or VDP DIRECT button (3) or (4) is selected, the output of signals to the audio and video output jacks is automatically prohibited, so the REC SELECT (independent audio/video recording) and VIDEO SELECT (independent video signal selector) buttons do not work. Also, if the REC SELECT button (7) is selected, the CD and VDP DIRECT buttons (3) and (4) will not function.

5 MFD (multi-function fluorescent display)

Information such as the surround mode and the input and output are displayed here when the power is turned on.

Normally the surround mode is displayed. If another button is pressed, a display pertaining to that button is shown for approximately 5 seconds (this time differs according to the display), after which the surround mode is once again displayed. Refer to pages 18 to 21 for details on the MFD displays.

6 AUDIO FUNCTION selector button

This button is used to switch the audio input. Press this button repeatedly or hold it in to change the input in the following order:

(All the video outputs are off unless a video function is selected with the VIDEO SELECT button or the REC SELECT button.)

7 VIDEO SELECT (independent video signal selector) button

This button is used to select the video signal independently of the audio signal. When pressed once, the video selector function turns on. When the button is held in, the video input signal changes in the order shown below. Release the button when the desired video input signal is displayed on the MFD or on the monitor screen. After this is done, the video signal will not change even if the AUDIO FUNCTION selector button (6) is pressed and the audio input is changed.

To cancel the independent video signal selection mode, either press the VIDEO SELECT button again, or press the VIDEO FUNCTION selector button (6).

8 VIDEO FUNCTION selector button

This button is used to switch the video input. Press this button repeatedly or hold it in to change the input in the following order:

9 MASTER VOLUME control

Turn the control clockwise (↻) to increase the volume, counterclockwise (↺) to decrease it.

10 MASTER VOLUME LED

This LED remains lit when the set is in the normal operating mode or in the standby mode, and flashes when in the muting mode.

11 PHONES jack

This jack is for connecting headphones. To cut the sound from the speakers, either turn off the output (speakers) from the remote control unit or turn off the output of the component connected to the PRE OUT jacks.

→ Continued

12 REC SELECT (independent recording output selector) button

This button makes it possible to select the audio or video recording mode independently of the mode selected with the FUNCTION selector buttons. It selects the audio recording signals output to the DAT/TAPE-1, DAT/TAPE-2, VCR-1 and VCR-2 audio output jacks, and the video (and audio) recording signals output to the VCR-1 and VCR-2 output jacks. For the audio recording output, normally the signal input selected with the FUNCTION selector buttons is output to the recording output side, but when this button is used, signals from input jacks other than the ones selected with the FUNCTION selector buttons can be selected.

In addition, for the video (and audio) recording output, normally the video (and audio) signals selected with the VIDEO FUNCTION selector button (8) are output to the recording output side, but when this button is used, input signals other than the ones selected with the VIDEO FUNCTION selector button can be selected.

When this button is pressed once, the independent recording output selection function turns on. When the button is held in, the video and audio recording output changes in the order shown below. Release the button when the desired video and audio recording output is displayed on the MFD or on the monitor screen.

Press the REC SELECT button again to cancel the independent recording output selection mode.

If the CD DIRECT or the VDP DIRECT button is selected, the audio and video recording output is automatically prohibited, so it is advisable to use the REC SELECT button (12) to prevent accidentally interrupting the recording.

13 CENTER MODE selector button

This button is used to select the center mode when in the Dolby Pro Logic, WIDE SCREEN or LIVE modes. Select the mode according to the speaker system you are using.

The mode switches as follows in the Dolby 3CH Logic mode:

- ① NORMAL ← ② WIDE

* In the WIDE SCREEN and LIVE modes, the center mode only changes when the adaptive matrix is on.

* If this button is pressed in a mode other than Dolby Pro Logic, live, wide screen or CD DIRECT, VDP DIRECT, the Dolby Pro Logic mode is set automatically.

For details, refer to pages 38 and 39.

14 SURROUND MODE selector button
Use this button to select the surround mode. Either press it repeatedly or hold it in to change the surround mode in the order shown at the top right of this page.
For details, refer to pages 33 to 34.

15 3CH. LOGIC (three-channel logic) button
This button only functions when in the Dolby Pro Logic mode. When pressed again, the three-channel logic mode turns off and the normal Pro Logic mode is set.
The 3CH. LOGIC key does not function when in the Dolby Pro Logic Phantom mode.
For details, refer to page 39.

16 PANEL button
Pressing this button provides a display of the current operating condition on the multifunction display. Pressing this button will switch the multifunction display.
For details, see Pages 18 to 21.

17 BYPASS (surround bypass) button
When this button is pressed, the surround mode is bypassed and the normal stereo sound is produced. No signals are output to the rear channel. If the SURROUND MODE button is pressed when in the bypass mode, the mode returns to the mode which was set before the bypass mode was turned on.
* In the initial setting the center output is turned off.

18 INPUT ADJ. (input level adjustment selector) button
This function makes it possible to increase the input level by +6dB, and is used when playing a source with a low input level, such as the tuner.
For details, refer to page 33.

19 EFFECT selector button
This button turns the effect of the DSP (digital signal processor) on and off. When turned off, only direct sounds are played on the front left and right speakers. This function can be used to check the effect of the sound processor.
* The effect turns back on if this button is pressed once again when the effect is off, or when a parameter is selected and data is changed with the "←" or "→" keys.
* If the power is turned off when the effect is off, that mode is stored in the memory, so only the direct sound is played when the power is turned back on.

24 CENTER (center speaker volume adjust) buttons
Use these buttons to adjust the volume of the center (surround) speaker.
Press the UP button to increase the volume, the DOWN button to decrease the volume.
The volume changes while the button is held in, and stops changing when the button is released. The volume change is indicated on the MFD or monitor screen. These buttons only function when in the bypass, Dolby Pro (3ch.) Logic normal or wide modes, and in the normal and wide modes with the adaptive matrix on when in the WIDE SCREEN and LIVE modes.

25 BASS control
Use this to adjust the bass sound of the front speaker output or PRE-OUT FRONT jacks. The bass sound is emphasized when turned clockwise (↻) from the center position, reduced when turned counterclockwise (↻) from the center position.

26 TREBLE control
Use this to adjust the treble sound of the front speaker output or PRE-OUT FRONT jacks. The treble sound is emphasized when turned clockwise (↻) from the center position, reduced when turned counterclockwise (↻) from the center position.

27 BALANCE control
Use this to adjust the left/right balance of the front speakers (PRE-OUT FRONT jacks).
* This control does not function in the CD direct and VDP direct modes.

28 VIDEO AUX INPUTS
These are auxiliary inputs for connecting video cameras or other AV equipment.
S-VIDEO: Connect the S-jack output of the other component here.
VIDEO: Connect the video output of the other component here. (Use a 75 ohm coaxial cable pin-plug cord.)
AUDIO L and R: Connect the audio output of the other component here.

29 GND (ground) terminal
Connect the ground wire of the record player here.

30 AUDIO IN (audio input) jacks

31 AUDIO OUT (audio output) jacks

32 VIDEO (video input/output) jacks

33 S-VIDEO (video input/output) jacks

34 PRE OUT (FRONT, CENTER, REAR and MONO) jacks
Refer to page 9.
Connect the monaural audio input jack of a separately sold subwoofer or TV here.

35 AC cord (power cord)

36 AC OUTLETS
Refer to page 11.

37 MAIN SPEAKER SYSTEMS terminals

38 CENTER SPEAKER SYSTEMS terminals

Note on the center speaker terminals:
The center channel output on the AVC-3030 is dual center compatible, so two center speakers can be used. The Pro Logic surround effect can be obtained with a single center channel speaker, but connecting two speakers with similar performance are connected to the L and R terminals creates a more effective dual center channel output.
For details, refer to pages 10 and 11.

39 REAR SPEAKER SYSTEMS terminals

40 TAPE/REMOTE CONTROL
This terminal is exclusively used for sending the remote control signals to the tape deck. Connect it with a 3.5mm mini-jack cord.

NOTE:
Do not hook up a headphones or microphone jack cord. Use this jack to connect a Denon cassette deck with a remote control jack (wired). If the cassette deck does not have this jack, wired remote control is not possible.

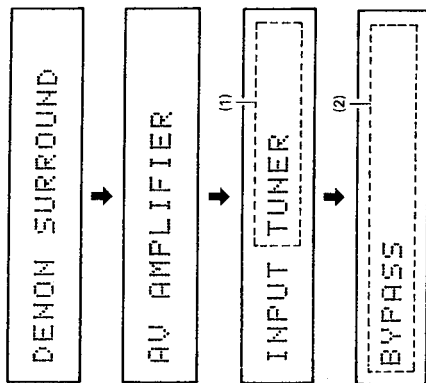

→ Continued

Multi-function fluorescent Display (MFD)

The multi-function fluorescent display indicates the status of the mode which has been operated by pressing the buttons on the front panel or on the remote control unit.

Display pattern examples

1. When the power is turned on

(1) The function name is displayed.

(2) The surround mode name is displayed.

Display

1 Multi-function fluorescent display

A maximum of 16 letters are displayed. The mode to which this display is set changes successively each time the PANEL button on the remote control unit is pressed. Normally, the display is set to the surround mode.

2 AV.S.E. indicator

This lights when the A.V.S.E button on the remote control unit is pressed. When pressed again, the indicator turns off.

3 CINEMA indicator

This lights when the CINEMA button on the remote control unit is pressed. When pressed again, the indicator turns off.

4 AUTO BALANCE indicator

This lights when the adaptive matrix is on when the Dolby Pro Logic, theater and live surround modes are set.

5 DOLBY SURROUND* indicator

This lights when the SURROUND MODE button is pressed and the Dolby Pro Logic mode is selected.

6 Output channel indicators

These indicate the speaker channel(s) to which signals are currently being output.
* None of these indicators lights when all the speakers are turned off.

7 VIDEO SELECT indicator

This indicates that video input signals have been selected independently of the audio input signals.

8 Recording select indicators

REC AUDIO lights when one of positions PHONO through DAT/TAPE-2 is selected with the REC SELECT button, and both REC AUDIO and REC VIDEO light when one of positions DBS/BS through VAUX is selected.

→ Continued

2. Surround mode display

- (3) "DOLBY PRO LOGIC", "DOLBY 3CH-LOGIC", "WIDE SCREEN", "LIVE", "MONO MOVIE", "CLASSIC CONCERT", "ROCK CONCERT", "CHURCH", "JAZZ", "STADIUM" or "BYPASS" is displayed.

- (4) "NORMAL", "PHANTOM" or "WIDE" is displayed. * These are not displayed in modes not using the Dolby center modes or when the adaptive matrix is off in the WIDE SCREEN or LIVE modes.

- (5) The delay time is displayed. * The delay time is not displayed in the Dolby 3ch. Logic mode or any surround modes other than the ones shown above, the CD direct, the VDP direct.

3. Center level display

- (6) "MATRIX" is displayed. "DELAY" is displayed when the adaptive matrix is off in the WIDE SCREEN or LIVE modes.
- (7) "CENTER" is displayed when one of the CENTER buttons is pressed.
- (8) The level is displayed in steps of 2dB, from -48dB (minimum) to 0dB (maximum).

NOTE: This is not displayed in modes in which no signals are output to the center speaker(s).

4. Rear level and balance display

- (9) This is displayed when one of the REAR buttons is pressed.
- (10) The level is displayed in steps of 2dB, from -48dB (minimum) to 0dB (maximum).

NOTE: This is not displayed in modes in which no signals are output to the rear speakers.

5. Input display

- (11) "INPUT" is displayed when one of the FUNCTION buttons (AUDIO or VIDEO) is pressed, and the name of the function is displayed in section (12). If the video signal has already been selected with the VIDEO SELECT button, the audio input and video input are displayed for 3 seconds when the AUDIO FUNCTION button is pressed.

6. Recording output display

- (13) "REC" is displayed when the REC SELECT button is pressed.
- (14) The name of the function ("PHONO", "CD", "TUNER", "DAT/TAPE-1", "DAT/TAPE-2", "DBS/BS", "VDP", "VCR-1", "VCR-2", or "V-AUX") is displayed. Normally the source is displayed. When the recording output selection function is off and the video selection function is on, the source is displayed for the audio output and the selected signal ("DBS/BS", "VDP", "VCR-1", "VCR-2", or "V-AUX") is displayed for the video output.

7. Test tone display

This is displayed when the T.TONE button on the remote control unit is pressed. The arrow moves as the output changes. This message is displayed until the test tone function is turned off.

8. DSP parameter display

- (15) The following are displayed in modes for which the PARAMETER key is effective:

"SURR.SIGNAL"
"ADAPT.MATRIX"
"7kHz L.P.F."
"SOUND SIM."
"INIT.DELAY"
"ROOM SIZE"
"EFFECT LEVEL"
"EFFECT"

- (16) The parameter settings are displayed here.

9. Clear display

- This is displayed when the CLEAR button is pressed.
- * This is not displayed in the CD direct, VDP direct modes.

10. Input level adjustment display

- This is displayed when the INPUT ADJ. button is pressed, and the level (0dB or +6dB) is displayed at section (17).
- * This is not displayed in the CD direct, VDP direct modes.

11. Muting display

- This is displayed when the MUTING button on the included remote control unit is pressed, and remains displayed until the muting function turns off.

12. Protection display

- This is displayed when the protection circuit is on. For details, refer to page 30.

13. No display (MFD off)

- Use this when you do not need or do not want to use the MFD.
- When the PANEL key on the remote control unit is pressed and held in, the display on the MFD changes continuously and finally turns off. After this is done, when a button is pressed, the corresponding display appears for several seconds, but the MFD then automatically turns back off. To turn the MFD back to the normal display mode, press the PANEL button on the remote control unit once again.

7 REMOTE CONTROL UNIT

Following the procedure outlined below, insert the batteries before using the remote control unit.

■ Cautions for batteries

- Use R6P/AA batteries in the remote control unit.
- Replace the batteries with new ones approximately once each year, though this depends on the frequency with which the remote control unit is operated.
- If the remote control unit does not operate from close to the main unit, replace the batteries with new ones even if less than one year has passed since the new batteries were inserted.
- Be sure that the ⊕ and ⊖ ends of the batteries match the marks on the battery case of the remote control unit.
- Replace weak batteries as soon as possible.
- Do not mix new batteries with used ones.
- Do not use batteries of different types together. Note that some batteries of the same shape and size may provide different performance.
- Some batteries are rechargeable, others are not. Read the battery instructions carefully.
- Do not connect the ⊕ and ⊖ ends of the batteries directly with metal objects. (Do not short-circuit the batteries.)
- Do not disassemble, heat, or dispose of batteries in a fire. If the batteries should leak, carefully wipe off any fluid from the battery case, then insert new batteries.

■ Using the remote control unit

The remote control unit uses highly linear infrared rays. Point it at the amplifier's remote sensor when operating it. The amplifier will not operate if the remote sensor is covered or if there is an obstacle between the remote control unit and the sensor.

Also note that strong light shining on the remote sensor may result in mistaken operations. In addition, using the amplifier near neon signs which generate pulse type noise may result in mistaken operations, so keep the amplifier as far as possible from such neon signs.

■ Range of operation of the remote control unit

Point the remote control unit at the remote sensor when operating it, as shown on the diagram. The remote control unit can be used at a direct distance of approximately 7 meters from the main unit, though this distance will be shorter if there is an obstacle between the remote control unit and main unit or if the remote control unit is operated from an angle.

→ Continued

Part names and functions of the remote control unit

AVC-3030 codes

System codes

■ A note on battery replacement

Have replacement batteries on hand so that the old batteries can be replaced as quickly as possible when the time comes. The codes that have been learned may be lost if removed batteries are not replaced within about 5 minutes.

1. Open the bottom cover of the remote control unit and remove the battery cover.

2. Insert the two R6P/AA batteries, matching the ⊕ and ⊖ marks on the batteries with those in the case.

3. Close the bottom cover until it clicks shut.

AVC-3030 Codes

Use with the PROGRAM switch ④ set to the AMP side.

- ① **Transmitting window**
The remote control signals (infrared rays) are sent from this window.
- ② **Indicator section (START, LEARNED/TX)**
- ③ **USE/LEARN (normal use/learn mode) selector button**
Press this button with the tip of a pen, etc., to set the learn mode. Both the START and LEARNED/TX indicators in the indicator section ② flash and codes can be learned.

- ④ **PROGRAM switch**
- ⑤ **Video input selector buttons**
These buttons are used to select the video input signals directly. They select the input signals and switch the video signals.
DBS/BS: Use this to play the BS tuner connected to the DBS/BS jacks.
VDP: Use this to play the VDP connected to the VDP jacks.
VCR-1: Use this to play the video deck connected to the VCR-1 jacks.
VCR-2: Use this to play the video deck connected to the VCR-2 jacks.
V. AUX: Use this to play the cam. corder with playback function, etc., connected to the V-AUX jacks on the front panel.

- ⑥ **Audio input selector buttons**
This can only be set from the remote control unit. These buttons select the audio input signal directly.
PHONO: Use this to play the record player connected to the PHONO jacks.
CD: Use this to play the CD player connected to the CD jacks.
TUNER: Use this to play the tuner.
DAT/TAPE-1: Use this to play the DAT or tape deck connected to the DAT/TAPE-1 jacks.
DAT/TAPE-2: Use this to play the DAT or tape deck connected to the DAT/TAPE-2 jacks.

- ⑦ **TUNER | PRESET ▼ and ▲ buttons**
With these buttons, a Denon remote controllable tuner can be controlled directly.
For details, refer to the tuner's operating instructions. Note that operation may not be possible for some models.
▲ : Preset (preset channel up).
▼ : Preset (preset channel down)

⑩

- SURROUND MODE button**
- **BYPASS (Surround bypass) button**
- **SURR. MODE (Surround mode) button**
- **□ CENTER MODE Selector button**
(Same function as on amplifier.)
- **T.TONE (test tone) button**
This can only be set from the remote control unit. To obtain the maximum Dolby Pro Logic surround effect, the volume of all the speakers must be adjusted to the same level. When this button is pressed, test tones are produced from each of the speakers in the following order:
→ Front left → Center → Front right → Rear

In addition, there are two modes, auto and manual. The speaker volume balance can be adjusted in either of these modes.
For details, refer to page 39.

⑪

- DSP parameter adjustment buttons**
(Same functions as on amplifier.)
- **EFFECT selector button**
- **PARAMETER (DSP parameter selector) button**
- **CLEAR (User preset clear) button**
- **“-” and “+” SET button**

⑫

- INPUT ADJ. button**
(input level adjustment selector) button
(Same function as on amplifier.)

⑬

- DELAY time buttons**
This can only be set from the remote control unit. When these buttons are pressed, the delay time changes in steps of 1.5ms from 6ms to 60ms, 10.0ms from 60ms to 370ms.
The delay time increases when the ▲ button is pressed.
The delay time decreases when the ▼ button is pressed.

⑭

- Center level adjustment buttons**
(setting range → 15.0ms to 30.0ms)

⑮

- REAR Speaker adjustment buttons**
(Same function as on amplifier.)
- **BALANCE adjustment buttons**
This can only be set from the remote control unit. Use these to adjust the output balance of the rear speakers.
When the ◀ button (left) is pressed, the volume of the right rear speaker decreases.
When the ▶ button (right) is pressed, the volume of the left rear speaker decreases.

⑰

- OUTPUT (speaker output selector) buttons**
This can only be set from the remote control unit. Use these buttons to turn the speaker outputs on and off.
The settings are displayed on the MFD and on-screen display.

SP-A: The speaker systems connected to the FRONT MAIN "A" speaker output terminals operate.

SP-B: The speaker systems connected to the FRONT MAIN "B" speaker output terminals operate.

CENTER: The speaker system(s) connected to the CENTER speaker output terminals and the PRE OUT CENTER terminal operate(s).

REAR: The speaker systems connected to the REAR speaker output terminals and the PRE OUT REAR terminal operate.

MASTER VOLUME buttons
These button functions in the same way as the MASTER VOLUME control on the main unit.

MUTING button
When this button is pressed, the output from the PRE OUT jacks and SYSTEM SPEAKERS terminals is cut. The MASTER VOLUME LED flashes when the muting mode is set. Press this button again to cancel the muting mode.

AV.S.E (Bass correction button)
This button is used to emphasize the bass range of the front speakers.
Setting this switch to ON when using movie video software provides even greater impressiveness. Use this function as desired.

CINEMA (Treble correction button)
This button is used when playing back movie video software and the speech portion is felt to be harsh upon the ears.
This function attenuates the treble range of the center speaker.

SYSTEM CALL buttons
This button cannot be used in the CD direct mode and the VDP direct mode.

For details, refer to page 27.

→ Continued

AVC-3030 Code Buttons

26

When the PROGRAM switch ④ is set to the AMP side:

VDP system buttons

With these buttons, a Denon remote controllable LD player can be controlled directly. For details, refer to the LD player's operating instructions. Note that operation may not be possible for some models.

- : Power on/off
- : Play
- : Pause
- : Stop
- : Manual search (reverse and forward)
- : Auto search (reverse and forward)

27

When the PROGRAM switch ④ is set to the AV side:

CD system buttons

With these buttons, a Denon remote controllable CD player can be controlled directly. For details, refer to the CD player's operating instructions. Note that operation may not be possible for some models.

- : Play
- : Pause
- : Stop
- : Manual search (reverse and forward)
- : Auto search (reverse and forward)
- : CD changer, disc skip

30

DAT system buttons

With these buttons, a Denon remote controllable DAT can be controlled directly. For details, refer to the DAT's operating instructions. Note that operation may not be possible for some models.

- : Play
- : Pause
- : Stop
- : Record
- : Manual search (reverse and forward)
- : Auto search (reverse and forward)

31

Tape deck system buttons

With these buttons, a Denon remote controllable tape deck can be controlled directly. For details, refer to the tape deck's operating instructions. Note that operation may not be possible for some models.

- : Forward play
- : Reverse play
- : Pause
- : Stop
- : Record
- : Rewind
- : Fast-forward
- : Switching between decks A and B for double decks

32

VCR system buttons

No system codes are stored here.

33

TV system buttons

No system codes are stored here.

System Call Buttons

The system call function is a function which allows you to store a series of remote control operations consisting of the operations of up to a maximum of ten buttons, then perform this series of operations by pressing a single button.

Storing the System Call Operations

1. Press the **SET** button.
2. The START LED in the indicator section flashes.
3. Set the PROGRAM switch ④ to the desired side, then press the buttons for the system call operations in the order you want to send the signals (up to a maximum of ten buttons). The LEARNED/TX LED lights each time a button is pressed.
4. It is not possible to store the codes of more than ten buttons. If the button which has been pressed is a non-storable button or if an 11th button is pressed, the START LED will turn off while that button is pressed.
5. Press one of buttons ① to ③ at which you want to store the system call series.
6. The START LED turns off. The system call series has now been stored.
7. Three system call series can be stored, one each at buttons ① to ③.

To continue storing another series, repeat steps 1 to 4.

NOTE:

Signals are sent from the remote control unit when buttons are pressed while storing the system call series, so prevent the components from operating by covering the transmitting window, etc.

Clearing the System Call Series

1. Press the **SET** button. The START LED starts flashing.
2. Press the button, ① to ③, which you want to clear.
3. The START LED turns off and the system call series is cleared.
4. To clear another button, repeat steps 1 to 3.

Using the System Call Buttons

1. Press the desired button, ① to ③, once.
2. The LEARNED/TX LED lights, and the remote control codes are sent in the order in which they were stored at a speed of approximately one second per code.
3. The LEARNED/TX LED turns off once all the codes have been sent.

28

AVC-3030 Code Buttons

29

When the PROGRAM switch ④ is set to the AMP side:

VDP system buttons

With these buttons, a Denon remote controllable LD player can be controlled directly. For details, refer to the LD player's operating instructions. Note that operation may not be possible for some models.

- : Power on/off
- : Play
- : Pause
- : Stop
- : Manual search (reverse and forward)
- : Auto search (reverse and forward)

30

When the PROGRAM switch ④ is set to the AV side:

CD system buttons

With these buttons, a Denon remote controllable CD player can be controlled directly. For details, refer to the CD player's operating instructions. Note that operation may not be possible for some models.

- : Play
- : Pause
- : Stop
- : Manual search (reverse and forward)
- : Auto search (reverse and forward)
- : CD changer, disc skip

Remote Control Unit Learning Function

Follow the procedures explained below to use the remote control unit's learning function.

Operation

1. Press the USE/LEARN (normal use/learn mode) selector button ④ with the tip of a pen, etc., to set the learn mode. Both the START and LEARNED/TX indicators in the indicator section ② flash, indicating that codes can be "learned".
2. Set the PROGRAM switch ① to the desired side, AMP or AV.
3. Point the heads (transmitting window) of the RC-162 and the other remote control unit at each other at a distance of approximately 5cm.
4. Press the button on the RC-162 at which you want to store the code for one or two seconds, then release it. The LEDs stop flashing, and only the START LED remains lit.
5. If a non-learnable button is pressed or if two or more buttons are pressed, both the LEDs will stop flashing, remaining lit, when the button(s) is (are) released.)
6. Check that the START LED ② is lit, then press in the button on the other remote control unit whose code you want to store in the RC-162.
7. When the START LED ② turns off and the LEARNED LED lights, release the button. That code is now stored. Both LEDs once again start flashing. This operation can now be repeated to store other codes in the RC-162.

NOTE:

- If the code was not stored in the RC-162, the LEARNED LED will light after the START LED turns off. For a very limited number of models, codes cannot be stored in the RC-162.
- If after the START LED lights both LEDs start flashing rapidly, this means that the memory is full. The code you just tried to store in the RC-162 was not registered. To store a different code at a certain button, first use the "Resetting Procedure".

7. To store codes at other buttons, repeat steps 4 to 6.
8. After you finish storing all the codes you want, press the USE/LEARN (normal use/learn mode) selector button ④ again. Both LEDs stop flashing and the sending (use) mode is set. Check that the stored codes work properly.

Learnable buttons:

When the PROGRAM switch is at the AMP side 8 buttons
 When the PROGRAM switch is at the AV side 58 buttons
 Maximum of 35 codes in 66 buttons

NOTE:

Depending on the types of codes stored, it may not be possible to store 35 codes.

Resetting (Clearing) Procedure

1. Press the USE/LEARN (normal use/learn mode) selector button ④ with the tip of a pen, etc., to set the learn mode.
2. Set the PROGRAM switch ① to the side whose codes you want to clear, AMP or AV.
3. Press the POWER button ⑤ and REAR ▼ button ④ simultaneously, and hold them in for at least four seconds.
4. When both the START and LEARNED LEDs ② light simultaneously, all the learned codes for the selected source are cleared.

Remote Control Operation

1. Check that both the LEDs are off. If they are flashing or lit, press the USE/LEARN (normal use/learn mode) selector button ④ so that the LEDs turn off.
2. When a button at which a code was "learned" is pressed, the LEARNED/TX LED lights and the remote control code is sent.

Preset Memory

The VDP ④, VCR ⑤ and TV ⑥ system buttons can be preset to system codes of other manufacturers instead of to the Denon component system codes. For some components, operation is possible simply by registering the manufacturer, without using the learning function.

Registering the Preset System Codes

1. Set the PROGRAM switch to the side to be preset.
 AMP VDP ④
 AV VCR ⑤ or TV ⑥
 be preset.
2. Press and hold in the POWER button for the source to be preset.
3. While pressing the POWER button, first press the SYSTEM CALL button, [1], [2] or [3], for the A block. (Select the proper SYSTEM CALL button from Table 1.) The LEARNED/TX LED ② now flashes.
4. Now press and hold in the POWER button and press the button for the B block, as shown on Table 1.
5. The LEARNED/TX LED turns off and the preset system codes have been registered.

NOTE:
 Signals are sent from the remote control unit when buttons are pressed while registering the preset system codes, so prevent the components from operating by covering the transmitting window, etc. In addition, the learning function has priority over the preset memory. If codes have been stored with the learning function at any one of the VDP ④, VCR ⑤ or TV ⑥ keys, they will remain stored even if the preset memory codes are registered.

Some models even of applicable manufacturers use different formats, in which case operation is not possible. In such cases, using the learning function.

Table 1 Combinations of Preset System Codes for Different Manufacturers

Continued

8 OPERATION

Preparations for playback

1. **Checking connections**
 - Referring to the connection diagrams (Pages 9 to 13) check to make sure that the connections are made properly.
 - Check that the left and right speakers are connected properly and also that the polarity (+, -) is correct.
 - Check that the left and right sides of the pin plug cords are connected properly.
 - Check that each cord is securely connected
 - Check that each cord is of the proper type.
2. **Checking the positions of the controls**

(See Pages 14 to 17 for a reference to the circled numbers.)

 - Turn the **MASTER VOLUME** control fully counterclockwise to the "0" position.
 - Set the **BALANCE**, **BASS**, and **TREBLE** controls to their center positions.

After making the above checks, press **POWER switch** to switch on the power.
The amplifier will be operable when the **LED of the MASTER VOLUME control stops flashing after several seconds of muting.**

Note on playback

The sound will be interrupted if one of the **FUNCTION selector buttons** is pressed during playback. This is due to the operation of the muting circuit which prevents noise from being amplified at the time of switching, and is not a malfunction.

- When using the accompanying remote control unit, press the corresponding button. For details, see Page 22 of Section 7 **REMOTE CONTROL UNIT**.

Protection Circuit

This amplifier is provided with a high-speed protection circuit. This circuit protects the internal circuitry from large currents which may be created by the output signals when the speaker terminals are not completely connected or are short-circuited. The operation of this protection circuit automatically cuts off the output to the speakers and displays "PROTECTION!" on the multi-function display. If this should happen be sure to unplug the power cord, check the speaker connections, then plug in the power cord and switch on the power again. If, after another check, the "PROTECTION!" display comes on again, contact your store of purchase.

Playback

1. Playing a program source (Normal playback)

- 1 Select the desired program source by pressing the **AUDIO FUNCTION selector button** or the **VIDEO FUNCTION selector button**.

• **AUDIO FUNCTION SELECTOR**
(Setting the program source)

Program source	AUDIO FUNCTION SELECTOR
To listen to a record	PHONO
To listen to a CD	CD
To listen to FM or AM broadcasts	TUNER
To listen to the DAT or tape deck connected to the DAT/TAPE-1 jacks	DAT/TAPE-1
To listen to the DAT or tape deck connected to the DAT/TAPE-2 jacks	DAT/TAPE-2

• **VIDEO FUNCTION SELECTOR**
(Setting the video program source)

Video program source	VIDEO FUNCTION SELECTOR
To watch a satellite broadcast	DBS/BS
To watch the video disc player connected to the VDP jacks	VDP
To watch the video deck connected to the VCR-1 jacks	VCR-1
To watch the video deck connected to the VCR-2 jacks	VCR-2
To watch the video camcorder equipped with playback function or another component connected to the (front panel) VIDEO-AUX jacks	V-AUX

MFD display

2. Simulcast playback (Playing video and audio sources)

- 1 Select the program source you wish to listen to with the **AUDIO FUNCTION selector** or the **VIDEO FUNCTION selector**.

MFD display

- 2 Hold down the **VIDEO SELECT** button for the video program source you wish to watch.

MFD display

- 3 Begin playback of the program source. For operating details, see the manual of the respective component.

- 4 Adjust the volume and tone.

Note that when the **VIDEO FUNCTION** button is again used to select the video program source during Simulcast playback, the Simulcast playback will be cancelled automatically.

- 2 Begin playback of the program source. For operating details, see the manual of the respective component.

- 3 Adjust the volume and tone.

Operations in the Different Modes

Mode	SP-A	SP-B	CENTER SPIFFE ¹⁾	REAR SPIFFE ¹⁾	CENTER LEVEL	REAR LEVEL	REAR BAL	CONVER MODE	TEST TONE	RECALL TIME	SNR SIGNAL	A. MATRIX

O: Operation possible
X: Operation not possible

- When the power is turned on and when switching from other modes, the center and rear speaker pre-outputs are automatically turned on, even if they were off. In the bypass mode, however, the center speaker pre-outputs do not change.
 - Switches to the Dolby Pro (3CH.) Logic mode for any modes other than CD direct, VDP direct, Dolby Pro (3CH.) Logic, Wide Screen, and LIVE.
 - Only when the surround signal parameter is set to "L,R".
 - Only when the sound simulation parameter is set to "ON".
- Operating the INPUT ADJ. button**
For low input sources such as records or the tuner, if the INPUT ADJ. button is pressed and the attenuator is set to +6dB when listening to low input sources, the result is quality sound with an improved SN ratio.
* If the sound seems distorted when set to +6dB, set it back to 0dB.
* This input level setting (on or off) setting for the different input functions is automatically stored in the memory.
* This operation is not possible for the CD and the VDP direct mode.

Recording (Audio and Video)

REC SELECT button

- Recording program sources (Recording the sound and picture of the source currently being monitored)
Follow the playback instructions for program sources (page 31).

Simultaneous Recording (audio or video)
The signals of the source selected with the FUNCTION selector button are output simultaneously from the DAT/TAPE-1, DAT/TAPE-2, VCR-1 and VCR-2 REC OUT jacks. If a total of four decks - two tape decks and two video decks - are connected and all four are set to the recording mode, the same source can be recorded simultaneously on all for decks.

- Press in the REC SELECT (independent recording selector) button, then release the button when the program source you want to record is displayed. The display changes in the following order:
PHONO → CD → TUNER → DAT/TAPE-1
VDP → DBS/BS → DAT/TAPE-2 → V.AUX

MFD display

REC : []

* If "PHONO", "CD", "TUNER", "DAT/TAPE-1" or "DAT/TAPE-2" is selected, no video signals will be output to the video REC OUT jacks.

- Start playback of the program source you want to record.
- Start recording on the tape deck, DAT (analog) or video deck.
For instructions on operation, refer to the manual for the corresponding component.
* This mode is cancelled if the REC SELECT button is pressed again.
* This is not possible in the CD or the VDP direct mode.

Monitoring the Recording

The actual recorded sound can be monitored when recording on a three-headed tape deck.
To monitor the sound being recorded on the tape, after performing the above settings, use the AUDIO FUNCTION selector button to select the position, DAT/TAPE-1 or DAT/TAPE-2, to which the three-headed tape deck is connected.

9 USING THE DSP (DIGITAL SOUND PROCESSOR)

DSP Modes

The AVC-3030 includes a DSP (Digital Signal Processor) for adjusting the sound field using digital signals. This DSP offers an excellent S/N ratio, channel separation, distortion characteristic, etc. The various parameters can be set according to conditions in the listening room to create a more realistic sound. The sound field processing modes are as follows:

1. **Modes not using the DSP**
 - Bypass: In this mode, the surround mode (DSP) is bypassed and the normal stereo sound is produced.
 - CD direct and VDP direct: In these modes, the CD input signals are sent directly to the output jacks. (No signals are output to the center and rear channels.)
2. **Modes using the DSP**
 - Surround modes: In these modes, signals are output to the center and rear speakers as well for four- or five-channel playback.

The surround modes are as follows:

1	Dolby Pro Logic	Use this when playing program sources recorded in Dolby Surround.
2	Wide Screen	Use this to enjoy program sources with the atmosphere of a movie theater, recorded in Dolby Surround.
3	Live	Use this to enjoy program sources with the atmosphere of a live performance, recorded in Dolby Surround.
4	Mono movie	In this mode, a sense of expansion is added to monaural audio sources. This mode is effective for old movies, bilingual TV movies, or monaural music sources.
5	Classic concert	This mode simulates the sound of a large concert hall. It is suited for classical music, etc.
6	Rock concert	This mode is best for playing rock, popular music, etc.
7	Church	Use this mode when playing religious music, pipe organ music, etc.
8	Jazz	This mode recreates the sound of a live music house with a low ceiling and strong vibrations.
9	Stadium	This mode simulates the sound field of an outdoor stadium.
10	Matrix	Use this to create a sense of expansion with sources recorded in stereo. The differential components of the input signals are output from the rear channel.

* These effects may not be very pronounced for some sources. If this is the case, try other modes, not relying too much on their names, and find the mode you like best. Also, if the sound seems distorted, either lower the effect level or press the CLEAR button and readjust the parameters. * To adjust the speaker balance for the different surround modes, first adjust for the Dolby Pro Logic Surround mode as explained on page 38, then use the position of the center level and rear level controls at this time as a guide to adjust the balance for that surround mode.

Parameters

The parameters are important data when using the DSP, and the parameters which can be used differ according to the DSP mode. (Refer to page 37 for a table of the usable parameters.) The various parameters are preset upon shipment from the factory, but can be changed to suit your own tastes.

1. **Independent functions (buttons)**
In each DSP mode, there are some functions which can be used, others which cannot.
 - (1) DELAY (▲ up and ▼ down) buttons
These adjust the delay time of the rear speaker signals. Remote control unit
 - (2) T.TONE (on/off) button
When pressed, test tones are emitted for adjusting the level, balance of the different channels. Remote control unit
(For details, refer to page 39.)
 - (3) EFFECT button
This is a parameter which turns the DSP on and off. When turned off, only the direct sounds are produced, as in the bypass mode. Main unit and remote control unit
Use this to check the effect of the DSP.

MFD display

EFFECT: []

2. **PARAMETER button**

Use this button to select the parameter. The normal procedure for setting parameters is to first select the parameter with the PARAMETER button, then use the ▲ and ▼ buttons to set the selected parameter. If no button is pressed for approximately 15 seconds, the parameter setting mode is automatically cancelled. (1) Initial delay
This parameter sets the distance (delay time) from the sound source to the reflecting walls. The larger the value, the further away the sound source seems.

MFD display

INIT. DELAY: []ms

(2) Room size

This parameter sets the time interval between the initial reflected sounds. The larger the value, the larger the sound field seems to be, and the greater the sense of expansion.

MFD display

ROOM SIZE: []

DSP Parameter Table

Parameter	Mode										
	DOLBY PRO LOGIC	WIDE SCREEN	LIVE	MONO MOVIE	CLASSIC CONCERT	ROCK CONCERT	CHURCH	JAZZ	STADIUM	MATRIX	
Independent functions											
(1) DELAY	O	O	O	X	X	X	X	X	X	O	O
(2) TEST TONE	O	X	X	X	X	X	X	X	X	X	X
(2) EFFECT	X	X	X	O	O	O	O	O	O	O	X
PARAMETER											
(1) INIT. DELAY	X	X	X	O	O	O	O	O	O	O	X
(2) ROOM SIZE	X	O	O	O	O	O	O	O	O	O	X
(3) EFFECT LEVEL	X	O	O	O	O	O	O	O	O	O	X
(4) SURROUND SIGNAL	X	O	O	X	X	X	X	X	X	X	X
(5) ADAPTIVE MATRIX	X	O	O	X	X	X	X	X	X	X	X
(6) 7kHz L.P.F.	X	O	O	X	X	X	X	X	X	X	X
(7) SOUND SIM.	X	O	O	X	X	X	X	X	X	X	X

Parameters which can be used for the different modes are stored, except for the test tone function.

NOTE:

The sound is interrupted momentarily when the delay, initial delay, room size and effect level parameters are changed, but this is normal.
For some playback sources, noise may be generated if the DSP parameters are changed.

(3) Effect level
This parameter adjusts the level of the reflected sound.
The larger the value, the greater the level of the reflected sound.

MFD display
EFFECT LEVEL: []

(4) Surround signal
This parameter is only for the WIDE SCREEN and LIVE modes.
Select the surround input signal.

MFD display
SURR. SIGNAL: []

(5) Adaptive matrix
This parameter is only for the WIDE SCREEN and LIVE modes.
The adaptive matrix is a function for emphasizing a sense of movement and positioning.
This turns the adaptive matrix, which is necessary for emphasizing the directivity, on and off.
Normally leave it on, but for sources with which emphasizing the directivity seems unnatural, turn it off.

MFD display
ADAPT. MATRIX: []

(6) 7kHz L.P.F. (low-pass filter)
This parameter is only for the WIDE SCREEN and LIVE modes.
This filter reduces the high frequencies in the reflected sound, cutting all frequencies of 7kHz and above.

MFD display
7kHz L.P.F.: []

(7) Sound simulation
This parameter is only for the WIDE SCREEN and LIVE modes.
This parameter turns various types of sound field simulations on and off. When turned off, only the direct, unprocessed signals are produced.
* If the power is turned off when the SOUND SIM. parameter set to "OFF", only the sound will be played when the power is turned back on.

MFD display
SOUND SIM.: []

DOLBY PRO LOGIC SURROUND

- Setting the delay time**
 The optimum delay time will differ depending on the listening position. Referring to the chart at right, set the optimum delay time for your room's space and setting position. For example, when the distance from the front speakers to the listening position is 4 m and that from the rear speakers to the listening position is 4 m, the optimum delay time will be 21 ms.
 The variable range of the delay time differs depending on the mode.
 For details about the variable range, see Page 25.

- Speaker arrangement and Dolby Pro Logic and the center mode**
 Ideally, center speakers are used for playback of Dolby Pro Logic surround.

Listening position and optimum delay time for playback with Dolby Pro Logic surround

PHANTOM mode

Phantom mode: Use this mode when center channel speakers are not used. A directional emphasis circuit provides signal reproduction which is electrically oriented to the center and this provides an exciting sound field for your enjoyment.

NORMAL mode

Normal mode: This mode is suited for an arrangement in which the center channel speakers are smaller than the left and right speakers. Signals below 100 Hz which have almost no effect on directional orientation are distributed to the left and right channels, whereas the center channel outputs signals greater than 100 Hz. As a result, the bass of the left and right channels increases the apparent deepness of the sound.

Continued

3CH LOGIC

Three-channel logic mode: Use this mode when rear channel speakers are not used. The rear channel information is reproduced by the front speakers.
NOTE: The Phantom mode cannot be set when in the 3CH Logic mode.

Automatic mode

The test tones are emitted in the order shown below, at four second intervals the first two times around, two second intervals from the third time around on.

(In the Dolby 3ch Logic mode!)

- The test tone is always emitted from the front left channel first.
- The tone will not switch to the next channel when adjusting the center level for the center channel output or when adjusting the rear level or rear balance for the rear channel output. The tone switches to the next channel two seconds after the level key is released.

Manual mode

In this mode, the channels from which the test tones are emitted are selected manually.

Use the [] and [] buttons to select the channels. The test tones are emitted in the following order each time the [] button is pressed:

The test tones are emitted in the following order each time the [] button is pressed:

- When switched from the automatic mode to the manual mode, test tones are emitted starting from the channel from which they were being output in the automatic mode.

MFD display

- [FL] : Front left channel
- [C] : Center channel
- [FR] : Front right channel
- [S] : Rear channels

Technical Advice

1. "Sound field"

The sounds we hear normally or in concert halls, etc., does not only consist of sounds heard directly from the sound source (direct sound). Sound disperses in all directions and is reflected repeatedly off the walls and ceilings, and these reflected sounds reach our ears with a certain delay. Reflected sounds can be classified into two main categories. The first is initial reflected sound, and this is sound which we hear after it has reflected once or a few times off of walls. This creates an echo-like effect, but as the time difference with respect to the direct sound is short, we do not perceive this initial reflected sound as a distinct sound. Rather, it has the effect of increasing the sense of expansion or depth of the direct sound. The second category of reflected sound is called reverberations. These are sounds which reach our ears after an elaborate series of reflections. These reverberations are responsible for the richness of the overall sound. These different sounds can be graphed as follows:

The above is only one example. Actually the reflected sound takes on a particular form depending on the environment surrounding the sound source, that is such conditions as the size of the room, the distance to the walls, the shape and material of the walls, and our position within the room. This reflected sound combines with the direct sound, and we recognize as it as the particular sound to the listening environment. This particular sound is called the sound field. Normally we hear it without paying special attention to it. The AVC-3030 uses an advanced DSP (digital signal processor) to create various sound fields.

2. DSP sound fields

We now have access to many types of music and movie sources, including LDs, CD, videos, satellite broadcasts, and so on. In most cases, some sort of sound field has already been added to these sound sources. For live recordings, of course, but also for studio recordings, the reflected sounds are recorded along with the direct sound. But when we listen to them, we sometimes feel we would like a richer sound, or for example that we would like to recreate the exciting sense of presence at a live concert. By adding the DSP sound fields to the sources, we can create a more real sound with greater atmosphere. The sound fields created by the DSP are created based on the sound source. Because of this, some adjustments are necessary to achieve an effect which fits the source, including the sound field already included in the source. The AVC-3030 offers various parameters so that the user can make these adjustments. Values have already been preset for the different parameters in the various modes upon shipment from the factory, they can be adjusted to create your own original sound fields.

- The parameters which the AVC-3030 includes for adjusting the sound field are as follows:
1 Initial delay
2 Room size
3 Effect level
4 Effect
5 7kHz L.P.F. (low-pass filter)

MFD display

MONO MOVIE
CLASSIC CONCERT
ROCK CONCERT
CHURCH
JAZZ
STADIUM

- The usable parameters are the same for the above six DSP surround modes.
• Set the parameters according to the DSP surround mode.
• Even if the parameters are set to the same values for all the surround modes, there are also internally fixed parameters, so the effects created with the various modes will be different.

3. Description of parameters

- (1) Initial delay
 This parameter sets the distance (delay) time from the sound source to the reflecting walls.
 Variable range: 0 to 50msec (in 10msec steps)

This adjusts the time difference between the direct sound and the initial reflected sound. Think of it like changing the distance from the sound source to the wall behind the stage. The higher the value, the deeper the stage seems to be.

- (2) Room size
 This parameter sets the time interval between initial reflected sounds.
 Variable range: 0.4 to 2.0 (in 0.2 steps)

This parameter controls the size of the room. The higher this value, the greater the time interval between initial reflected sounds, and the greater the time difference between the direct sound and the initial reflected sounds. In other words, the time until which the sound reaches the listeners ears after reflecting off walls increases, as if the size of the room increased. Inversely, the lower the value, the smaller the room. This parameter has a strong effect, so if changed the sound may seem unnatural with some sources. If so, either lower the effect level or decrease the room size parameter.

- (3) Effect level
 This parameter adjusts the level of the reflected sound.
 The higher the value, the greater the level of the reflected sound.
 Variable range: 0 to 15

Normally the number of reflected sounds runs from several sounds to several tens of sounds, and specific data is set for each of these in the different modes. For some sources, the level of the reflected sound may be too high, making the sound harsh to listen to. In other cases, the effect will be too low and not perceivable. In such cases, use this parameter to change the overall level of the reflected sounds without changing the balance between the level of the different reflected sounds, that is without changing the specific character of the sound field. If this parameter is set too high or too low, the resulting sound may be bizarre. At level 0, in particular, there is no reflected sound at all.
 Lower the effect level if the sound seems distorted.

- (4) Effect
 This parameter turns the DSP sound field effect on and off.
 When turned off, the sound is the same as in the bypass mode, and only the direct sound is played.

This parameter is used to check the effect of the DSP sound field. When turned off, only the direct sound is produced, and no reflected sounds are heard, regardless of the settings of the other parameters. The DSP sound field effect can be turned on and off without changing other parameters, making it easy to check the effect. The effect parameter turns back on automatically if other parameters are changed when the effect parameter is turned off.

5. Initial settings of parameters
 The initial settings of the different parameters are as shown below.
 When the CLEAR button is pressed, the settings are all reset to these values.

	SP-A	SP-B	CENTER SPFRE	REAR SPFRE	CENTER LEVEL	REAR LEVEL	CENTER MODE	3CH LOGIC	TEST TONE	DELAY TIME
BYPASS	ON	OFF	OFF	OFF	-12dB	-	-	-	-	-

CHURCH	-	-	-	-	0msec	1.0	10	ON	-	OFF
JAZZ	-	-	-	-	0msec	1.0	10	ON	-	OFF
STADIUM	-	-	-	-	0msec	1.0	10	ON	-	OFF
MATRIX	-	-	-	-	0msec	1.6	10	ON	-	OFF

*1: Both the left and right rear channels are set to -12dB.

- (5) 7kHz L.P.F. (low-pass filter)
 This filter cuts the high frequency range of reflected sounds.
 All frequencies of 7kHz and higher are cut.
 When the filter is turned off, all the frequencies are produced (this is the "through" mode).

Use this to change the quality of the reflected sounds.
 When turned off, the sound is as if the room has hard, concrete walls, and when turned on, the sound becomes softer.

4. Creating original sound fields

Here we offer a general example of how to create original sound fields.

- (1) Select the surround mode to use as the base.
- (2) Adjust the room size and initial delay parameters.
 First adjust the room size parameter. At this stage, roughly determine the size of the sound field. After roughly adjusting the room size parameter, adjust the initial delay parameter. If the room size and initial delay values are too high, the result may be an unnatural sound for some sources. Find the sound you like.
- (3) Adjust the 7kHz L.P.F. (for the WIDE SCREEN and LIVE modes only)
 Use the 7kHz L.P.F. to determine the quality of the reflected sound.
- (4) Overall adjustment
 Use the effect level parameter to adjust the balance between the direct sound and the reflected sound. The atmosphere changes substantially just by changing this balance.
 If you cannot achieve the desired effect, try returning to the previous step. In particular, the relationship between steps 2 and 1 is important, so it may be a good idea to try something else. Sometimes you might discover surprising effects through different combinations.
 The preset modes have been given names indicating sound fields appropriate for different types of music sources, but when creating your own original sound fields there is no need to worry too much about these names. To create a sound field to your liking, it may be best to try different variations.
 * Press the CLEAR button to start over from scratch.

10 ON-SCREEN DISPLAY

If the SCREEN button on the remote control unit is pressed when the power is turned on, the operating modes are displayed on the monitor. TV's screen when buttons are operated, etc. The displays shown below appear on the screen when the power is turned on and the SCREEN button is operated. The mode changes between screen 1, screen 2, screen 3, screen 4 and off each time the SCREEN button is pressed. When the power is turned on, screens 1 to 3 are displayed for approximately 7 seconds, after which the on-screen display automatically turns off. When other buttons are pressed, messages related to the button that was pressed are displayed for approximately 5 seconds, then automatically turn off. (The normal picture is displayed under the message, but if no picture is being input, the background turns a color which is internally produced.)

NOTES:

- The on-screen display signals are not output to the S-VIDEO MONITOR OUT jacks or the video output jacks for recording.
- If a video source is selected but no video signals are being input (when a color background is displayed), the color background turns off after the message is displayed.

The following screens are examples of displays.

Screen 1 Surround mode display

- 1 Surround mode
- 2 Center mode
- 3 A.V.S.E. setting (on/off)
- 4 Cinema setting (on/off)
- 5 Output indicators

These indicators are displayed when signals are being output to these channels.

Screen 2 Level display, etc.

- 1 Test tone display
This is displayed when the test tone mode is set.
- 2 Input level adjustment 0dB/+6dB
- 3 Center level
The level is displayed by a bar graph and by the decibel (dB) value.
If the level is increased, the bar becomes longer.
- 4 Rear level and balance
The levels are displayed by a bar graph and by the decibel (dB) value.
If the level is increased, the bar becomes longer.
- 5 Delay time
This displays the delay time.

Screen 3 Input/output display

- 1 Input selector display
The set input is displayed here.
- 2 Recording output selector
This indicates the recording output.
- 3 Select mode display
This is displayed when a select mode such as the recording output select or video select mode is set.

Screen 4 Parameter display, etc.

- 1 Parameter display
This indicates the DSP parameters.
Displayed for approximately 15 seconds.

Other 1

- 1 Muting display
This flashes when in the muting mode.

Other 2

- 1 Protection circuit display
This flashes when the protection circuit is activated.
For details, refer to page 30.

11 LAST FUNCTION MEMORY

- This amplifier is equipped with a last function memory which stores the input and output setting conditions as they were immediately before the power is switched off. This function eliminates the need to perform complicated resettings when the power is switched on.
- This amplifier is also equipped with a back-up memory. This function provides approximately one month of memory storage with the power cord disconnected.

12 TROUBLESHOOTING

- If a problem should arise, first check the following:
1. Are the connections correct?
 2. Have you operated the amplifier according to the Operating Instructions?
 3. Are the speakers, turntable, and other components operating properly?
- If the amplifier is not operating properly, check the items listed in the table below. Should the problem persist, there may be a malfunction. Disconnect the power immediately and contact your store of purchase.

Symptom	Cause	Measures	Page
LED not lit and sound not produced when power switch set to on.	<ul style="list-style-type: none"> • Power cord not plugged in securely. 	<ul style="list-style-type: none"> • Check the insertion of the power cord plug. 	11

Presat memory codes do not operate.	<ul style="list-style-type: none"> • Other code already learned at that key. 	<ul style="list-style-type: none"> • Reset. 	29

Common problems arising when listening to the CD, records, tapes, and FM broadcasts

13 SPECIFICATIONS

- **Audio Section**
 (Power amplifier)
 Rated output:
 110 W + 110 W (8 ohms, 20 Hz - 20 kHz with 0.03% THD)
 CENTER (center 1 ch driven)
 110 W (8 ohms, 20 Hz - 20 kHz with 0.03% THD)
 REAR (rear 2 ch driven)
 35 W + 35 W (8 ohms, 1 kHz with 0.05% THD)
 5 Hz to 50 kHz (Main in - speaker out)
 1 V/47 k ohms (Main in - speaker out)
 Signal-to-noise ratio:
 120 dB (Main in - speaker out)
 Output terminals:
 Main: A or B 6 to 18 ohms
 A + B 12 to 18 ohms
 Center: 6 to 18 ohms
 Rear: 6 to 18 ohms
- **(Pre-amplifier)**
 Line input (Each line input - FRONT PRE OUT)
 150 mV/47 k ohms PHONO (MMI): 2.5 mV/47 kohms, CD DIRECT: 150 mV/33 kohms
 Frequency response:
 5 Hz to 100 kHz: ±3 dB (CD DIRECT)
 5 Hz to 150 kHz: ±3 dB (CD DIRECT)
 BASS: ±10 dB at 100 Hz
 TREBLE: ±10 dB at 10 kHz
 Signal-to-noise ratio (FRONT PRE OUT): 92 dB
 95 dB (CD DIRECT)
 Distortion factor:
 0.01% 1 kHz 1 V (BYPASS mode)
 0.003% 1 kHz 3 V (CD DIRECT)
 0.003% 1 kHz 3 V (common for FRONT, CENTER, REAR, MONO, each PRE OUT)
- **Rated output/Maximum output:** 284 mW (8 ohms)
Maximum headphone output: 284 mW (8 ohms)
Phono equalizer (PHONO input - REC OUT)
 RIAA deviation: ±1 dB (20 Hz to 20 kHz)
 Signal-to-noise ratio: 76 dB (A weighting, with 5 mV input)
Rated output/Maximum output: 150 mV/8 V
 Distortion factor: 0.03% (1 kHz, 3 V)
- **Video Section**
 Standard video jacks
 Input and output level/impedance: 1 Vp-p/75 ohms
 1 Hz to 10 MHz +0, -3 dB
S-video output jacks
 Frequency response:
 Input and output level/impedance: Y (brightness) signal: 1 Vp-p/75 ohms
 C (color) signal: 0.286 Vp-p/75 ohms
 1 Hz to 11 MHz +0, -3 dB
- **General**
Power supply: 120 V AC, 60 Hz.
Power consumption: 5.5 A
Maximum external dimensions: 494 (W) x 184 (H) x 421 (D) mm (17-3/32" x 7-1/4" x 16-37/64")
Weight: 15.0 kg (33 lbs 2 oz)
 • Remote control unit (RC-102):
 • System remote control with learning function
 Total buttons: 62
 DENON system code
 DAT: 8 buttons
 CD player: 8 buttons
 Cassette deck: 8 buttons
 Tuner: 2 buttons
 VDP: 8 buttons
 AVC-3030 fixed codes: 47 buttons
Learning buttons
 System call buttons: 3 (maximum of 10 codes per button)
 Program - AMP: 9 buttons
 - AV: 58 buttons
Maximum total: 35 codes
Batteries: R6P/AA Type (two batteries)
External dimensions: 70 (W) x 215 (H) x 18 (D) mm (2-3/4" x 8-15/32" x 46/64")
Weight: 17.5 g (Approx. 6 oz) (including batteries)

* For purposes of improvement, specifications and design are subject to change without notice.

DENON SERVICE NETWORK

- Please contact one of our overseas service centers, listed below, for follow-up service consultation.
- Wenden Sie sich für anfallende Wartungs- bzw. Reparaturarbeiten bitte an eine der folgenden aufgeführten Kundendienststellen.
- Adressez-vous à nos centres de service d'outre-mer indiqués ci-dessous, pour le service après-vente.
- Per il servizio dopo vendita rivolgetevi Vi al nostro centro di servizio estero appropriato della lista seguente.
- Para consultas de servicio por favor dirigirse a cualquiera de nuestros centros de servicio en el extranjero, enlistados abajo.
- Neem contact op met één van onze reparatie-inrichtingen in het buitenland, waarvan hier een lijst volgt, voor na-service.
- Ta kontakt med nedan angivna servicecenter för rådgivning om servicearbeten efter försäljningen.
- Favor contactar um de nossos centros de serviços internacionais, abaixo listados, para consulta de serviços de acompanhamento.

- If there is no service center in your local area, consult the outlet where the equipment was purchased.
- Falls sich in Ihrer Nähe keine Kundendienststelle befindet, wenden Sie sich an das Geschäft, wo das Gerät gekauft wurde.
- Si n'y a aucun centre de service dans votre région, consultez votre revendeur.
- Se nella Vostra zona non c'è il centro di servizio, rivolgetevi al negozio dove avete acquistato l'apparecchio.
- Si no hay centros de servicio en su área local, consulte en donde haya comprado su equipo.
- Als er in uw streek geen reparatie-inrichting is, neemt u contact op met de vestiging waar u de apparatuur gekocht heeft.
- Se não existir um centro de serviços em sua área local, consulte o estabelecimento onde o equipamento foi adquirido.

H20701

DISASSEMBLY

(To reassemble reverse disassembly)

1. Top Cover

- (1) Remove 4 screws ① each on left and right sides which fix the both sides.
- (2) Remove 4 rear screws ②.

2. Front Aluminium Panel

- (1) Remove each on left and right screws ③ and detach Side Plate.
- (2) Remove 2 upper screws ④, unfasten upper hooks at two places, and detach Panel from upper-portion in arrow direction.

3. Front Mold Panel

- (1) Remove connector of wire, for LED of Motor VR ⑤, and pull out Master VR knob ⑥ and 3 round knobs ⑦.
- (2) Remove all connectors of wire, connected to FLD P.C.B.
- (3) Remove fixing screws ⑧ from upper and lower positions. (Totally 4 screws).

4. Front Chassis

- (1) Remove Master VR and 3 VR nuts of one set, and then remove bracket ⑩.
- (2) Remove 3 fixing screws of V-AUX P.C.B. ⑪.
- (3) Remove snap plate for fixing headphone jack and fixing screws for fixing wire ⑫.
- (4) Remove 2 screws ⑬ for attaching FOOT.
- (5) Remove screws for attaching chassis ⑭. (Upper 2, front 2, and lower 4 screws).

5. Rear Panel

- (1) Remove short circuit pin ⑮, and remove cord bush ⑯.
- (2) Remove 20 terminal connecting screws ⑰.
- (3) Remove panel fixing screws (Lower 4, front 6 screws).

ADJUSTMENT

Idling Current (1U-2433A-1)

Required measurement equipment: DC Voltmeter

Arrangement

- (1) Avoid direct blow from an air conditioner or an electric fan, and adjust the unit at normal room temperature 15°C ~ 30°C. (59 F ~ 86 F).

(2) Presetting

- POWER (Power source switch) → OFF
- MODE (Mode button) → BY PASS
- FUNCTION (Function button) → CD
- VOLUME (Volume control) → 0: fully counterclockwise (1 min.)
- CENTER VOLUME (Center volume control) → -12dB
- BASS, TREBLE (Tone control) → 0: (Controls to center)
- SPEAKERS (Speaker terminal) → No load (Do not connect speaker, dummy resistor, etc.)

- (3) Output 10mVrms, 1kHz sine wave from sine wave oscillator and connect it to input terminal on reverse side.

Adjustment

- (1) Remove top cover and set VR251, VR301, VR302, and VR503, VR504 of 1U-2433A-1 (Main Unit) at counterclockwise fully.
- (2) Connect DC Voltmeter to test points (Lch T.P.1, Rch T.P.2, CENTER th T.P.3).
- (3) Connect power cord to AC Line, and turn power switch "ON".
- (4) Allow 15 minutes, and turn VR301, VR302 and VR251 clockwise (1 min.) and adjust the TEST POINTS voltage to 1.5 mV ± 1.0 mV DC.
- (5) After 2 minutes from preset, turn VR301, VR302, and VR251 to set the voltage to 3 mV ± 1.0mV DC.

Idling Adjustment in Operation of OPTICAL CLASS A.

- (6) Allow 10 minutes, and turn VOLUME (Main tuning knob) to MAX (1 min.) and turn VR503, VR504 and VR253 clockwise within 15 minutes, and adjust the TEST point voltage to 15 mV ± 5mV DC.
- (7) Allow 1 minutes, and adjust the VR503, VR504 and VR253 so that the meter reads 20 mV ± 10 mV DC.
- (8) Allow 5 minutes further, and confirm that the TEST POINT Voltage is 20 mV ± 10 mV DC.

Video H SYNC-V SYNC Oscillation Frequency Adjustment

Required measurement equipment: Frequency Counter

Arrangement

Video & Microcomputer PWB (1U-2435C-2) (Component Side)

- (1) H SYNC (Horizontal synchronous pulse Adjustment)
 - Ground (-) side of frequency counter to G-terminal at the test point (T.P.) of Video and microcomputer P.W.B. (1U-2435C-2).
 - Confirm that no insertion of video input or output is made. (With optional function)
- (2) V SYNC (Vertical synchronous pulse Adjustment)
 - Connect probe for frequency counter to H.
 - Turn VR002 with non-magnetic screwdriver and adjust the frequency counter so as to read 15.734 kHz ± 200 Hz.
- (3) Adjustment completion
 - Disconnect the frequency counter.

SEMICONDUCTORS

IC's
TMP87CKM70AF-6040
(V.V:IC601)

(Note)
Indicators before IC numbers denote P.W.B. Name.

- MA : Main Amp P.W.B. Unit
- RE : Rear Input P.W.B. Unit
- VV : VFD, Video P.W.B. Unit
- SU : Surround P.W.B. Unit

LC7821 (RI: IC153, 155)
LC7822 (RI: IC154)(SU: IC605)

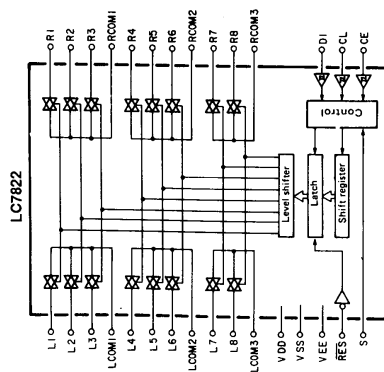

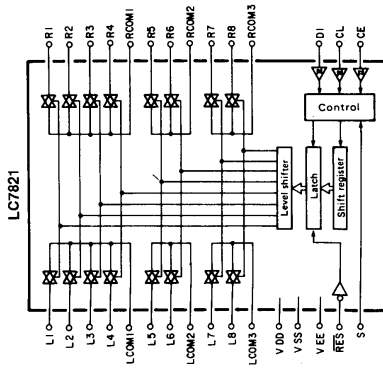

Table of LC7821, LC7822 Terminal Function

Name of Terminal	IO	Equivalent Internal Circuit	Function of Terminal
VDD, VSS, VEE L1 - L3, R1 - R3 LCOM1 - LCOM4 RCOM1 - RCOM4			Power terminal. In/Out terminal of analog switch.
CL, D1, CE	I	Serial data input terminal (Schmitt trigger). Data input terminal. Chip enable terminal. Selection terminal for using of two. Address will be shifted as per below table when switching S terminal to L or H.	
S	I		
RES	I		Reset terminal. Condition of analog switch is not fixed at the time of turning on the power. When shift this terminal to L, all analog switches become OFF.

Name of Item	S Terminal	Address
LC7821	L	A0 A1 A2 A3
LC7822	H	1 1 0 1

6. SYNC DET. Determine Control.
7. SYNC DET
8. M.M Smoother
9. V+ -5 - 10V

MSC7128-03SS (VV:IC802)

MSC7128-03SS Terminal Function

Terminal Name	Terminal No.	I/O	Connection to:	Function
Vcc1	60			Vcc1 — Vcc Internal logic power supply.
Vcc2	59			Vcc2 — Vcc Fluorescent display tube drive circuit power supply.
Vss	5		Power Supply	
VEE	6			
DA	63	I	Microcomputer	Serial data input. Input from (Positive logic) LBS.
CP	62	I	Microcomputer	Shift clock input. Data shift at rise time of CP.
CS	64	I	Microcomputer	Chip select input. Serial transfer of data is prohibited when set to "H".
OSCI	2			External terminal of CR for CR oscillation.
OSCO	1	O		fosc: 250 KHz at C=100 PF, R=47 KΩ
RESET	61	I		Reset input (Built-in Pull-up resistor). Internal logic is reset when "LOW" is set, and output of SEG1 - 36, COM1 - 16 all become "LOW".
COM1 - COM16	7 - 22	O	Fluorescent display tube grid	Drive output of fluorescent display tube grid. Able to connect directly to fluorescent display tube, and no Pull-down resistor is needed. I _o > -30 mA
SEG1 - SEG35	58 - 24	O	Fluorescent display tube anode	Drive output of anode for fluorescent display tube 5x7 dot. Able to connect directly to fluorescent display tube and no Pull-down resistor is needed. I _o > -2 mA.
SEG36	23	O	Fluorescent display tube anode	Drive output of anode for fluorescent display tube cathode. Able to connect directly to fluorescent display tube and no Pull-down resistor is needed. I _o > -10 mA.
TEST STEP	4	I		Test mode setting input (Normally opened).
TEST COUNT	3	I		Test clock input (Normally opened).

M50554-001SP (V.V.: IC004)

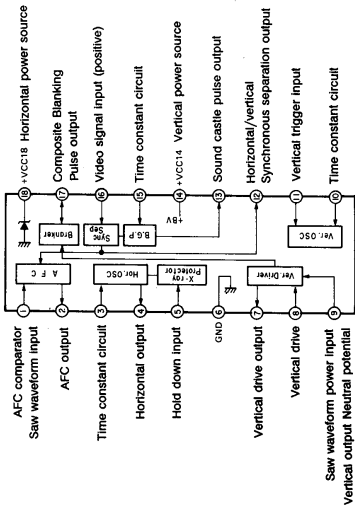

M50554-001SP Terminal Function

Pin No.	Symbol	Terminal Name	Function
1	V _{DD} 1	Ground terminal	Digital ground terminal; connect to GND.
2	SCK	Serial clock input	When "L" at CS terminal, takes in SIN serial data at rise time of SCK. Hysteresis input. Built-in Pull-up resistor.
3	AC	Auto clear input	Reset IC internal circuit at "L" mode. Built-in Pull-up resistor. Hysteresis input.
4	OSC1	Oscillator circuit external terminal	External terminal for display oscillator circuit.
5	OSC2	Oscillator circuit external terminal	Reference oscillation frequency is approx. 7MHz. Display position is horizontal of TV screen and character width are determined by this oscillation frequency.
6	N/P	NTSC/PAL switch input	Synchronous signal generator switch terminal of NTSC or PAL system. Generates synchronous signal of NTSC type at "H" mode, and synchronous signal of PAL type at "L" mode. Built-in Pull-up resistor.
7	CS	Chip select input	Chip select terminal; set to "L" mode for serial transfer. Built-in Pull-up resistor.
8	SIN	Serial data input	Serially inputs memory data and address for display control register and display data. Built-in Pull-up resistor.
9	PAOUT	Parity output	Odd number parity output; detects one-bit error in one word of SIN.
10	SYEX	Synchronous signal switch input	Switch terminal for external or internal synchronous signal. Enter external synchronous signal mode at "H" and internal synchronous signal mode at "L". SYEX comprises logic sum with EX register and address 24 in display control register and internal synchronization. Built-in Pull-up resistor.
11	V _{SS} 2	Ground terminal	Analog ground terminal; connect to GND.
12	CVIDEO	Composite Video output	Output terminal of composite video signal. Outputs 2Vp-p composite video signal. At superimpose mode, outputs output characters, etc. superimposed on CVIN signal.
13	CVIN	Composite Video input	Input terminal of composite video signal. At superimpose mode, output characters, etc. are superimposed on this composite video signal.
14	LEBK	Blanking level	Input terminal to determine blanking level of video signal.
15	LECHA	Character level input	Input terminal to determine character output level of video signal.
16	CBIN	Color burst signal input	Input CB output after converting to color burst signal level of video signal, via external circuit.
17	RSIN	Character background carrier color signal input	Input RS output after converting to carrier color signal level of video signal, via external circuit.
18	V _{DD} 2	Power supply terminal	Analog power supply terminal; connect to +5V.
19	RS	Character background carrier color signal output	Carrier color signal output for coloring character background. Outputs signal with phase angle to color burst signal CB. Amplitude 5V.
20	CB	Color burst signal output	Outputs color burst signal of 3.58MHz for NTSC system, 4.43MHz for PAL system. Amplitude 5V.
21	YH	Brightness signal output	Brightness signal output; able to select polarity at character ROM determination.
22	BLNK	Character background output	Outputs character background signal; able to select polarity at character ROM determination.
23	CO	Character output	Outputs character signal; able to select polarity at character ROM determination.
24	B	Blue color output	Blue color output; able to select polarity at character ROM determination.
25	G	Green color output	Green color output; able to select polarity at character ROM determination.
26	R	Red color output	Red color output; able to select polarity at character ROM determination.
27	CSYN	Composite synchronous signal output	Outputs composite synchronous signal of NTSC or PAL system. Negative polarity. Amplitude 5V.
28	OSCOUT	Synchronous signal generating oscillator circuit	External terminal of synchronous signal generating oscillator circuit. For NTSC system, oscillation frequency of 14.32MHz, and for PAL system, of 17.73MHz, are used.
29	OSCIN	Synchronous signal's signal	Inputs horizontal synchronous signal. Hysteresis input. Able to select polarity at character ROM determination.
30	HOR	Vertical synchronous signal's signal	Inputs vertical synchronous signal. Hysteresis input. Able to select polarity at character ROM determination.
31	VERT	Vertical synchronous signal's signal	Inputs vertical synchronous signal. Hysteresis input. Able to select polarity at character ROM determination.
32	V _{DD} 1	Power supply terminal	Digital power supply terminal; connect to +5V.

NOTE FOR PARTS LIST

- Part indicated with the mark "⊗" are not always in stock and possibly to take a long period of time for supplying, or in some case supplying of part may be refused.
- When ordering of part, clearly indicate "1" and "1" (1) to avoid mis-supplying.
- Ordering part without stating its part number can not be supplied.
- Part indicated with the mark "⊗" is not illustrated in the exploded view.
- Not including Carbon Film ±5%, 1/4W Type in the P.W.Board parts list. (Refer to the Schematic Diagram for those parts.)

WARNING:
Parts marked with this symbol have critical characteristics. Use ONLY replacement parts recommended by the manufacturer.

● Resistors

Ex.: RN 14K 2E 182 G FR
Type Shape Power Resist. Allowable Others
formance error

RD : Carbon Resistor	2B : 18W	F : ±1%	P : Pulse-resistant type
RE : Metal oxide film	2H : 12W	J : ±5%	NR : Non-burning type
RW : Wirewound	3A : 1W	K : ±10%	FR : Fuse-resistor
RK : Metal meander	3F : 3W	M : ±20%	F : Leads wire forming
	3H : 5W		

• Resistance
1 B 2 ⇒ 1800 ohm ± 1.8 kOhm
2 2 2 ⇒ 1.2 ohm
1 1 2 ⇒ 1.2 ohm
1 1 2 ⇒ 1.2 ohm effective number, decimal point indicated by R.
• Units: ohm

• Capacity (electrolyte only)
2 2 2 ⇒ 2200µF
Indicates number of zeros after effective number.
• Units: µF

• Units: µF
2 2 1 ⇒ 220PF
Indicates number of zeros after effective number.
• Units: PF

• Units: PF
2 2 1 ⇒ 220PF
Indicates number of zeros after effective number.
• Units: PF

● Capacitors

Ex.: CE 041W 2E2 M BP
Type Shape Dielectric Capacity Allowable Others
formance error

CE : Aluminum foil	DJ : 63V	F : ±1%	HS : High stability type
CA : Aluminum solid	1A : 10V	G : ±2%	BP : Non-polar type
CA : electrolytic	1C : 18V	J : ±5%	HR : Ripple-resistant type
CS : Aluminum electrolytic	1E : 25V	K : ±10%	DL : For charge and discharge
CO : Film	1V : 35V	M : ±20%	HF : Frequency
CC : Ceramic	1H : 50V	Z : ±80%	U : UJ part
CM : mica	1K : 100V		U : UJ part
CP : Metallized	2C : 180V	P : ±100%	W : UL-CSA type
CH : Metallized	2E : 250V	D : ±50PF	F : Lead wire forming
	2H : 350V		
	2J : 500V		

• Capacity (except electrolyte)
2 2 2 ⇒ 2200µF = 0.002µF
Indicates number of zeros after effective number.
• Units: µF
2 2 1 ⇒ 220PF
Indicates number of zeros after effective number.

• Units: µF
2 2 1 ⇒ 220PF
Indicates number of zeros after effective number.
• Units: PF
2 2 1 ⇒ 220PF
Indicates number of zeros after effective number.

• Units: PF
2 2 1 ⇒ 220PF
Indicates number of zeros after effective number.
• Units: PF

WIRING DIAGRAM

1 2 3 4 5 6 7 8

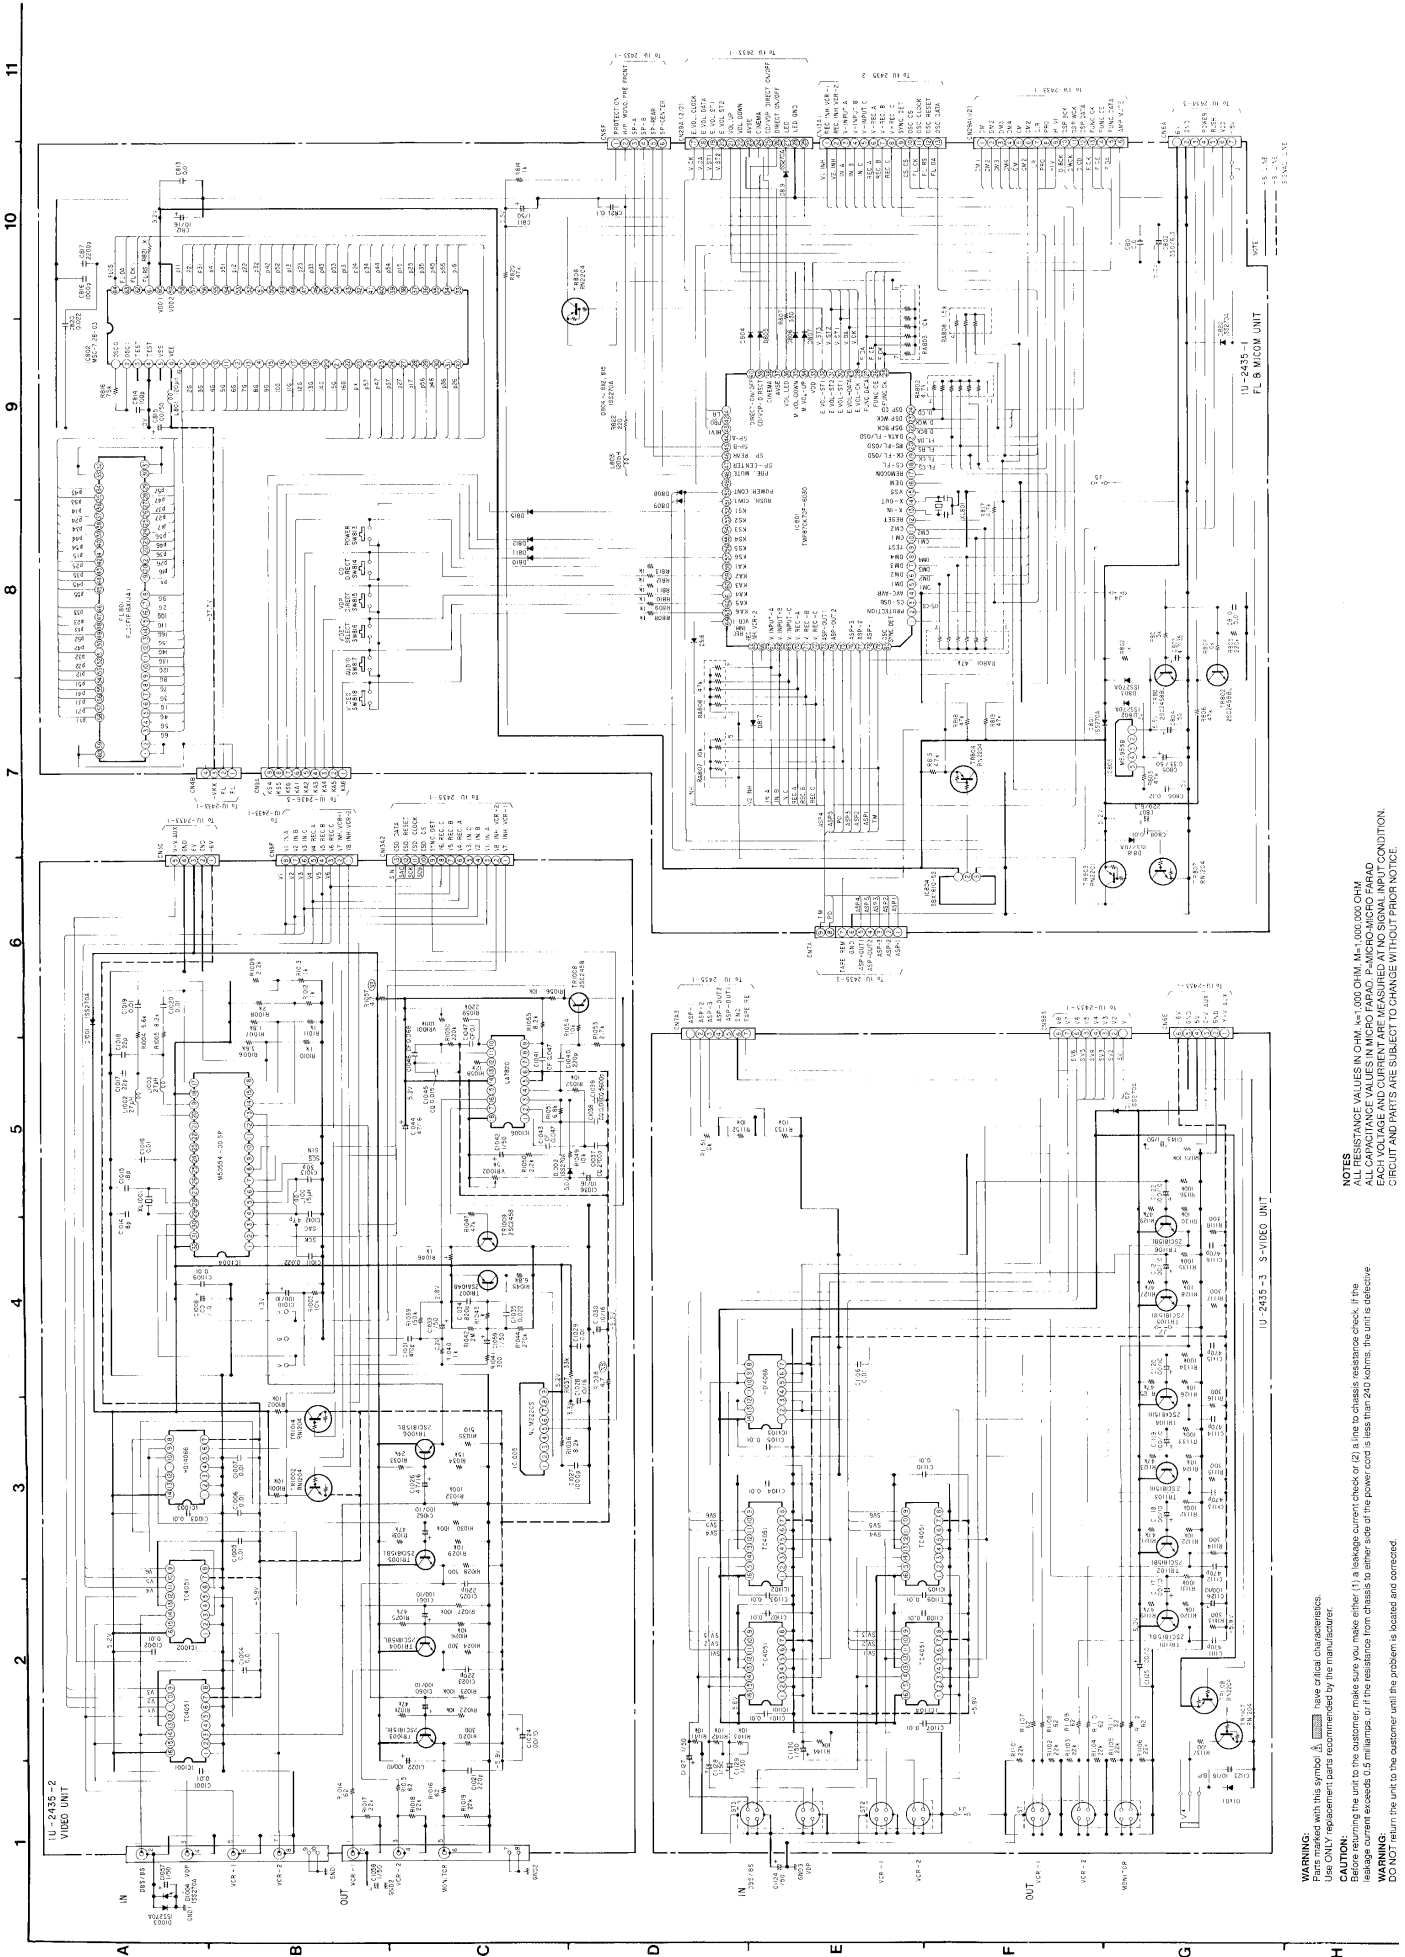

SCHEMATIC DIAGRAM - 1/4

1 2 3 4 5 6 7 8 9 10 11

NOTES
 ALL RESISTANCE VALUES IN OHM. K=1,000 OHM. M=1,000,000 OHM
 ALL CAPACITANCE VALUES IN MICRO FARAD. P=PICTO-MICRO FARAD
 EACH VOLTAGE AND CURRENT ARE MEASURED WITH INSTRUMENTS
 CROUD AND PARTS ARE SUBJECT TO CHANGE WITHOUT NOTICE

SCHEMATIC DIAGRAM - 2/4

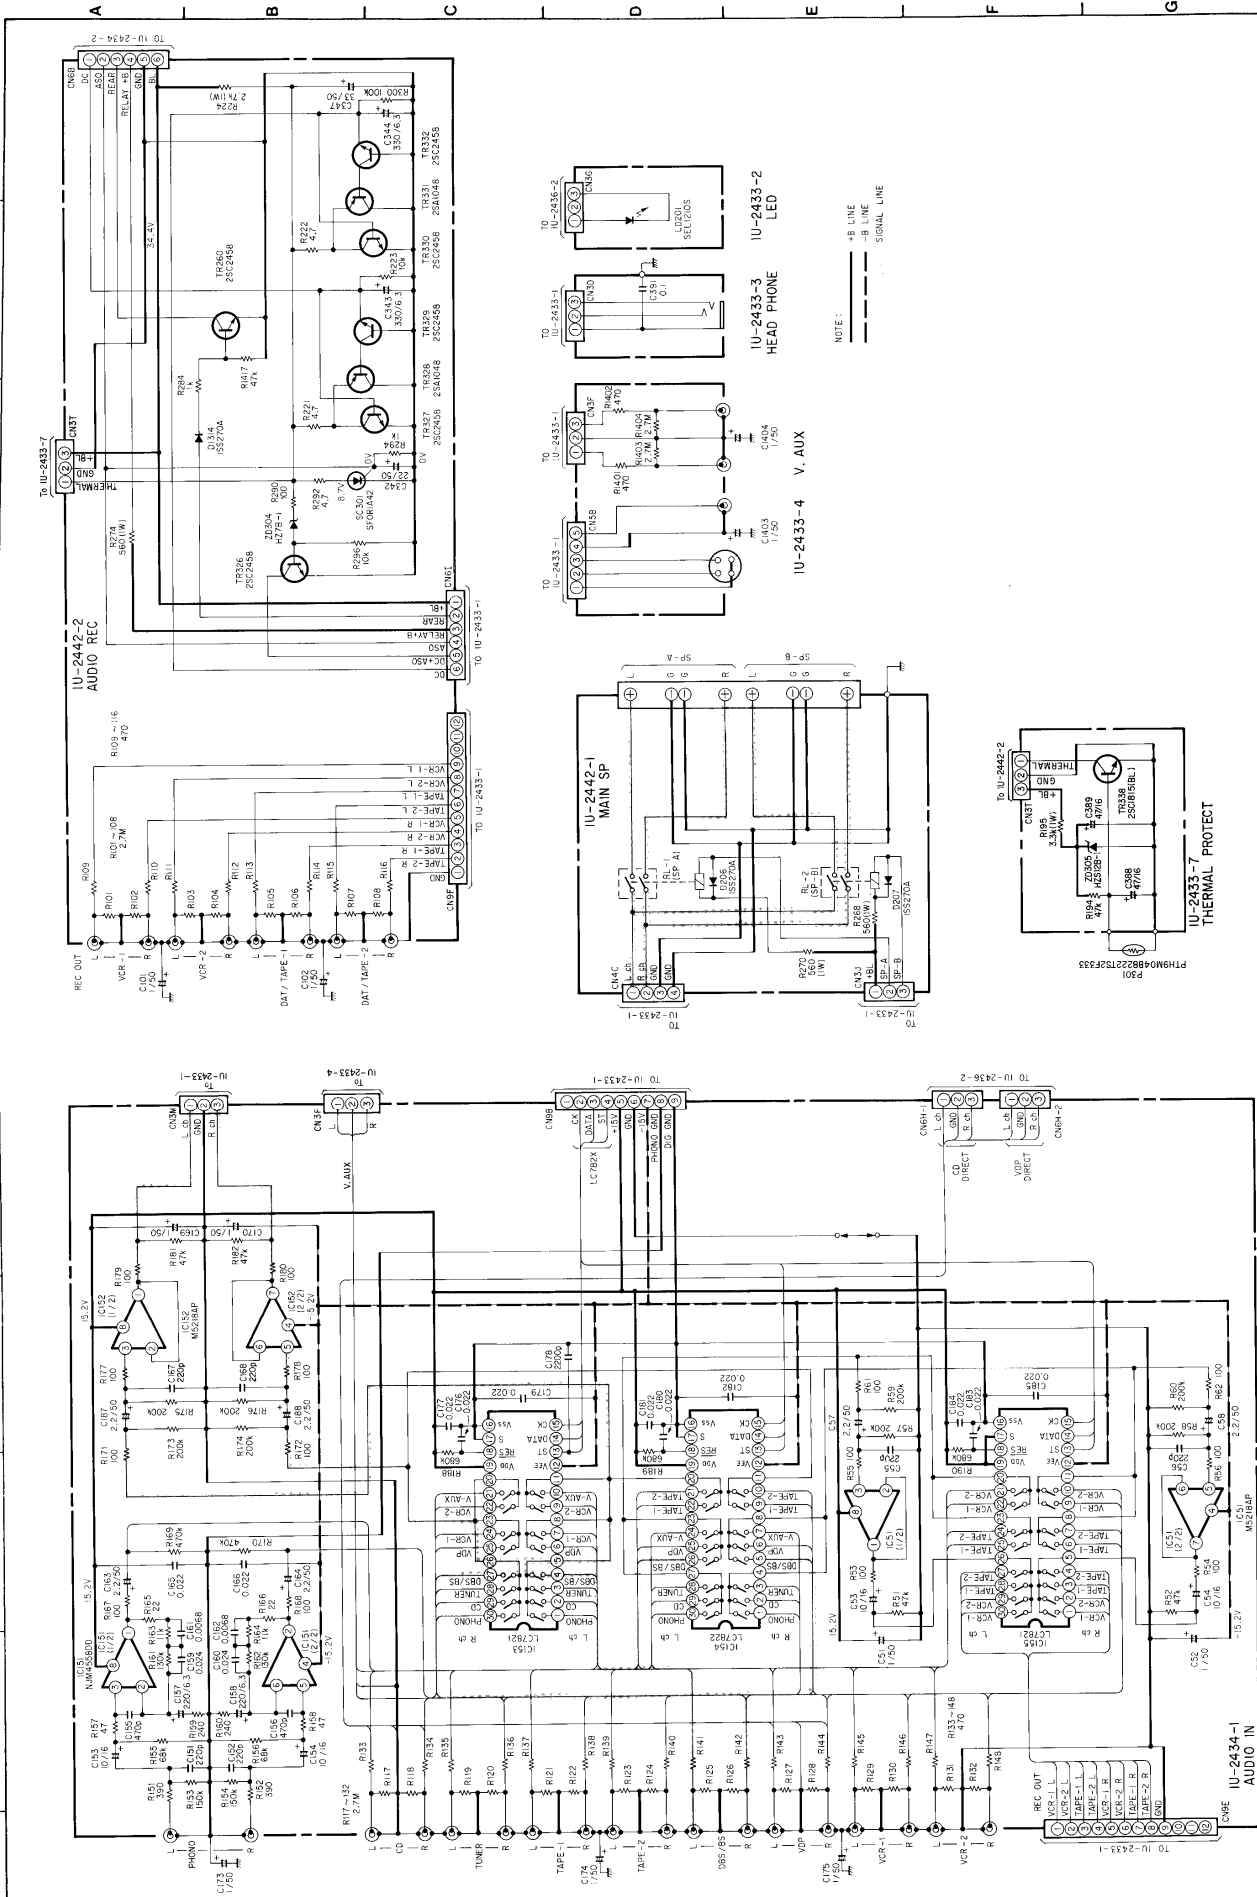

NOTES
 ALL RESISTANCE VALUES IN OHM. $\times 10^3$ KHM. $\times 10^6$ OHM.
 ALL CAPACITANCE VALUES IN MICRO FARAD. P-MICRO MICRO-FARAD.
 C-CIRCUIT AND PARTS ARE SUBJECT TO CHANGE WITHOUT PRIOR NOTICE.

WARNING:
 Use ONLY replacement parts recommended by the manufacturer.
CAUTION:
 Before returning the unit to the customer, make sure you make either (1) a leakage current check or (2) a line to chassis resistance check. If the leakage current exceeds 0.5 millamps, or if the resistance from chassis to either side of the power cord is less than 500 ohms, the unit is defective. DO NOT return the unit to the customer until the problem is located and corrected.

SCHEMATIC DIAGRAM - 3/4

1 2 3 4 5 6 7 8 9 10 11

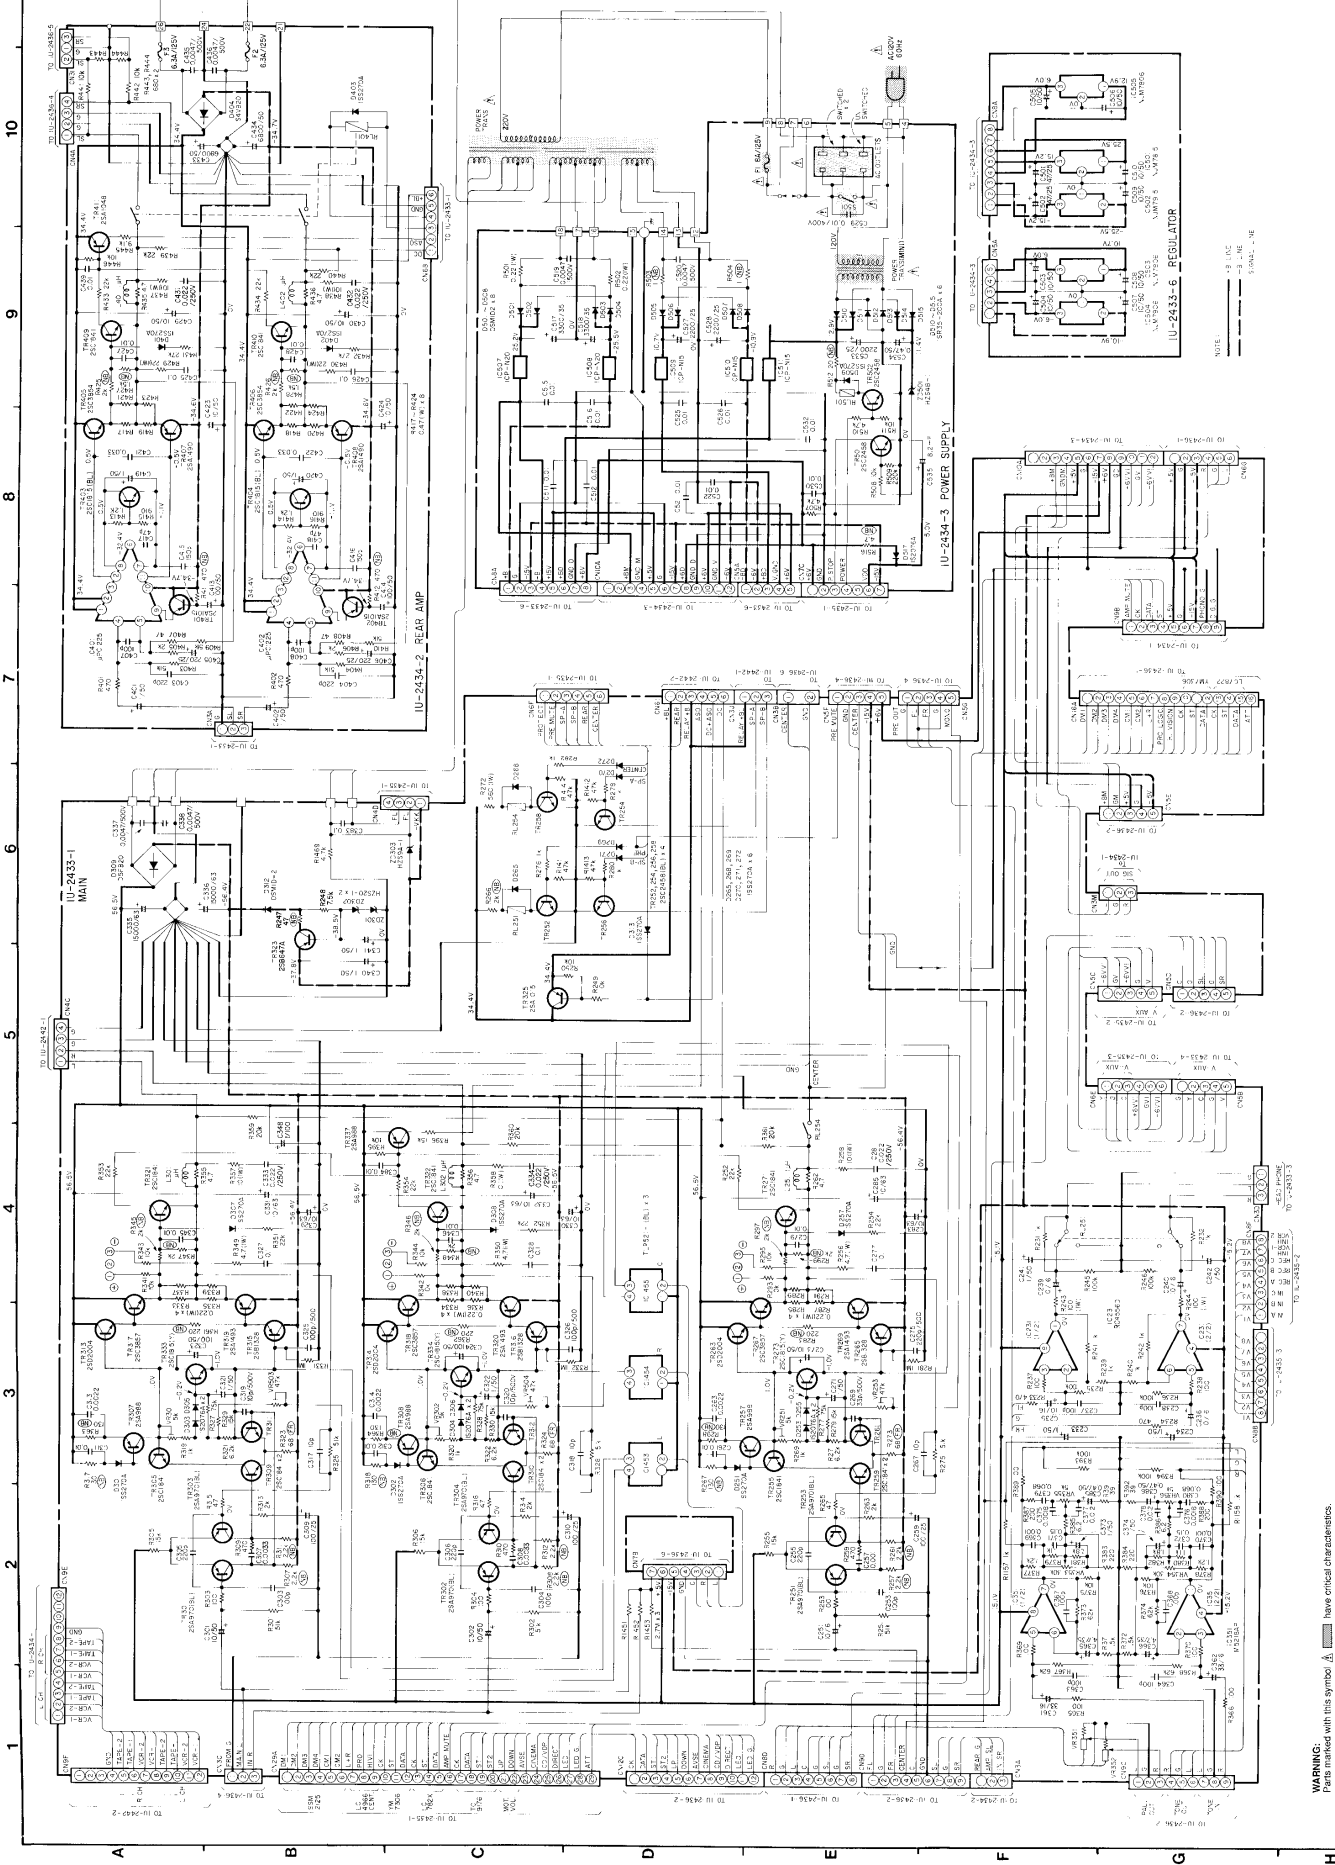

WARNINGS:
 Parts marked with this symbol have critical characteristics. Use ONLY replacement parts recommended by the manufacturer.

CAUTION:
 Before using this unit to the customer, make sure you make either (1) a leakage current check or (2) a line to chassis resistance check. If the leakage current exceeds 0.5 milliamperes, or if the resistance from chassis to either side of the power cord is less than 240 kohms, the unit is defective.

NOTES:
 RESISTANCE VALUES IN OHMS, IN K OHMS, IN M OHMS, IN G OHMS, IN MEG OHMS, IN MICRO OHMS, IN PICO OHMS, IN MICRO MICRO OHMS. EACH VOLTAGE AND CURRENT ARE MEASURED AT NO SIGNAL INPUT CONDITION. CIRCUIT AND PARTS ARE SUBJECT TO CHANGE WITHOUT PRIOR NOTICE.

NOTE:
 --- 4B LINE
 - - - - - 5B LINE
 - - - - - SIGNAL LINE

WARNING: Parts marked with this symbol Δ have critical characteristics. Use ONLY replacement parts recommended by the manufacturer.

CAUTION: When the unit is returned to the customer, make sure you make either (1) a leakage current check, or (2) a line to chassis resistance check. If the average current exceeds 0.5 millamps, or if the resistance from chassis to either side of the power cord is less than 250 kOhms, the unit is defective.

WARNING: DO NOT return the unit to the customer until the problem is located and corrected.

NOTES:
 1. CAPACITANCE VALUES IN OHMS, IN μ ARE OHMS. IN μ ARE OHMS.
 2. ALL CAPACITANCE VALUES IN MICRO-FARADS.
 3. EACH VOLTAGE AND CURRENT ARE MEASURED AT NO SIGNAL INPUT CONDITION.
 4. CIRCUIT AND PARTS ARE SUBJECT TO CHANGE WITHOUT PRIOR NOTICE.

NOTE FOR PARTS LIST

- Part indicated with the mark "●" are not always in stock and possibly to take a long period of time for supplying, or in some cases supplying of part may be refused.
 - When ordering of part, clearly indicate "1" and "1" (1) to avoid mis-supplying.
 - Part indicated with the mark "▲" is not illustrated in the exploded view.
 - Part indicated with the mark "▲" is not illustrated in the exploded view.
- WARNING:**
Parts marked with this symbol ▲ have critical characteristics. Use ONLY replacement parts recommended by the manufacturer.
