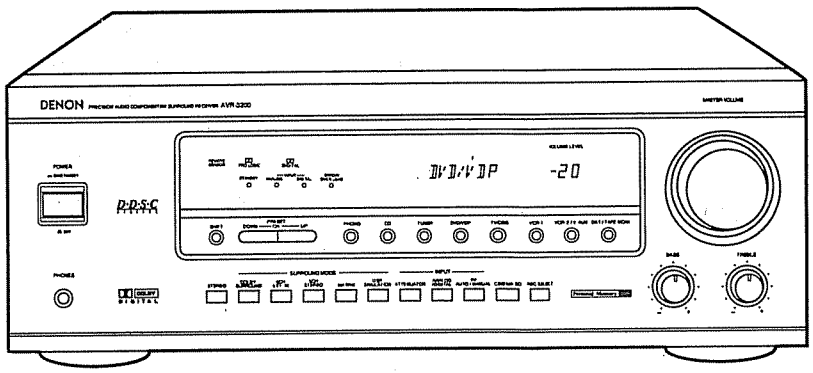
DENON

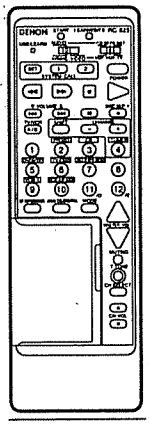
Hi-Fi AV Surround Receiver

SERVICE MANUAL

MODEL AVR-3200

AV SURROUND RECEIVER





— TABLE OF CONTENTS —

● Some illustration using in this service manual are slightly different from the actual set.

NIPPON COLUMBIA CO., LTD.

• **SAFETY PRECAUTIONS**

CAUTION

RISK OF ELECTRIC SHOCK

DO NOT OPEN

CAUTION: TO REDUCE THE RISK OF ELECTRIC SHOCK, DO NOT REMOVE COVER (OR BACK). NO USER SERVICEABLE PARTS INSIDE. REFER SERVICING TO QUALIFIED SERVICE PERSONNEL.

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

WARNING: TO REDUCE THE RISK OF FIRE OR ELECTRIC SHOCK, DO NOT EXPOSE THIS APPLIANCE TO RAIN OR MOISTURE.

CAUTION
TO PREVENT ELECTRIC SHOCK DO NOT USE THIS (POLARIZED) PLUG WITH AN EXTENSION CORD, RECEPTACLE OR OTHER OUTLET UNLESS THE BLADES CAN BE FULLY INSERTED TO PREVENT BLADE EXPOSURE.

ATTENTION
POUR PREVENIR LES CHOCS ELECTRIQUES NE PAS UTILISER CETTE FICHE POLARISEE AVEC UN PROLONGATEUR UNE PRISE DE COURANT OU UNE AUTRE SORTIE DE COURANT, SAUF SI LES LAMES PEUVENT ETRE INSEREES A FOND SANS EN LAISSER AUCUNE PARTIE A DECOUVERT.

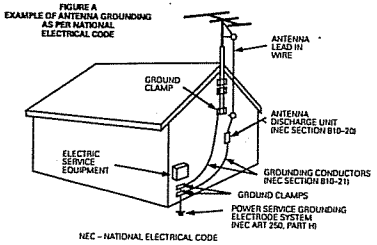
SAFETY INSTRUCTIONS

1. Read Instructions – All the safety and operating instructions should be read before the appliance is operated.
2. Retain Instructions – The safety and operating instructions should be retained for future reference.
3. Heed Warnings – All warnings on the appliance and in the operating instructions should be adhered to.
4. Follow Instructions – All operating and use instructions should be followed.
5. Water and Moisture – The appliance should not be used near water – for example, near a bathtub, washbowl, kitchen sink, laundry tub, in a wet basement, or near a swimming pool, and the like.
6. Carts and Stands – The appliance should be used only with a cart or stand that is recommended by the manufacturer.

6A. An appliance and cart combination should be moved with care. Quick stops, excessive force, and uneven surfaces may cause the appliance and cart combination to overturn.

7. Wall or Ceiling Mounting – The appliance should be mounted to a wall or ceiling only as recommended by the manufacturer.
8. Ventilation – The appliance should be situated so that its location or position does not interfere with its proper ventilation. For example, the appliance should not be situated on a bed, sofa, rug, or similar surface that may block the ventilation openings; or, placed in a built-in installation, such as a bookcase or cabinet that may impede the flow of air through the ventilation openings.
9. Heat – The appliance should be situated away from heat sources such as radiators, heat registers, stoves, or other appliances (including amplifiers) that produce heat.
10. Power Sources – The appliance should be connected to a power supply only of the type described in the operating instructions or as marked on the appliance.
11. Grounding or Polarization – Precautions should be taken so that the grounding or polarization means of an appliance is not defeated.

FIGURE A
EXAMPLE OF ANTENNA GROUNDING AS PER NATIONAL ELECTRICAL CODE



NEC – NATIONAL ELECTRICAL CODE

12. Power-Cord Protection – Power-supply cords should be routed so that they are not likely to be walked on or pinched by items placed upon or against them, paying particular attention to cords at plugs, convenience receptacles, and the point where they exit from the appliance.
14. Cleaning – The appliance should be cleaned only as recommended by the manufacturer.
15. Power Lines – An outdoor antenna should be located away from power lines.
16. Outdoor Antenna Grounding – If an outside antenna is connected to the receiver, be sure the antenna system is grounded so as to provide some protection against voltage surges and built-up static charges. Article 810 of the National Electrical Code, ANSI/NFPA 70, provides information with regard to proper grounding of the mast and supporting structure, grounding of the lead-in wire to an antenna-discharge unit, size of grounding conductors, location of antenna-discharge unit, connection to grounding electrodes, and requirements for the grounding electrode. See Figure A.
17. Nonuse Periods – The power cord of the appliance should be unplugged from the outlet when left unused for a long period of time.
18. Object and Liquid Entry – Care should be taken so that objects do not fall and liquids are not spilled into the enclosure through openings.
19. Damage Requiring Service – The appliance should be serviced by qualified service personnel when:
    - A. The power-supply cord or the plug has been damaged; or
    - B. Objects have fallen, or liquid has been spilled into the appliance; or
    - C. The appliance has been exposed to rain; or
    - D. The appliance does not appear to operate normally or exhibits a marked change in performance; or
    - E. The appliance has been dropped, or the enclosure damaged.
20. Servicing – The user should not attempt to service the appliance beyond that described in the operating instructions. All other servicing should be referred to qualified service personnel.

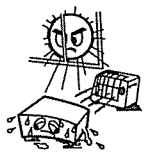
TABLE OF CONTENTS

• ACCESSORIES

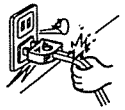
Check that the following parts are included in addition to the main unit:

① Operating instructions 1
② Warranty (for North American model only) 1
③ Service station list 1
④ Remote control unit (RC-825) 1
⑤ R6P/AA batteries 2
⑥ AM loop antenna 1
⑦ FM indoor antenna 1
⑧ FM antenna adaptor 1

1 NOTE ON USE

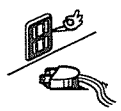


• Avoid high temperatures
Allow for sufficient heat dispersion when installed on a rack.

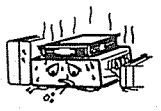


• Handle the power cord carefully.
Hold the plug when unplugging the cord.

• Keep the set free from moisture, water, and dust.

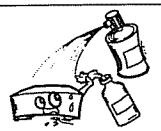


• Unplug the power cord when not using the set for long periods of time.



*(For sets with ventilation holes)
• Do not obstruct the ventilation holes.

• Do not let foreign objects in the set.



• Do not let insecticides, benzene, and thinner come in contact with the set.

• Never disassemble or modify the set in any way.

2 BEFORE USING

Pay attention to the following before using this unit:

• **Moving the set**
To prevent short circuits or damaged wires in the connection cords, always unplug the power cord and disconnect the connection cords between all other audio components when moving the set.

• **Before turning the power switch on**
Check once again that all connections are proper and that there are not problems with the connection cords. Always set the power switch to the standby position before connecting and disconnecting connection cords.

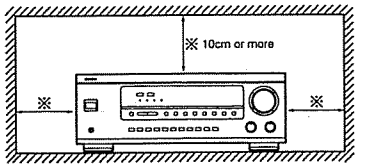
• **Store this instructions in a safe place.**
After reading, store this instructions along with the warranty in a safe place. Also fill in the items on the back page for your convenience.

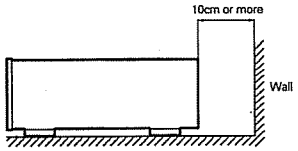
• **Note that the illustrations in this instructions may differ from the actual set for explanation purposes.**

3 CAUTIONS ON INSTALLATION

Noise or disturbance of the picture may be generated if this unit or any other electronic equipment using microprocessors is used near a tuner or TV.
If this happens, take the following steps:
• Install this unit as far as possible from the tuner or TV.
• Set the antenna wires from the tuner or TV away from this unit's power cord and input/output connection cords.
• Noise or disturbance tends to occur particularly when using indoor antennas or 300 Ω/ohms feeder wires. **We recommend using outdoor antennas and 75 Ω/ohms coaxial cables.**

For heat dispersal, leave at least 10 cm of space between the top, back and sides of this unit and the wall or other components.





4 CAUTIONS ON HANDLING

• **Switching the input function when input jacks are not connected**
A clicking noise may be produced if the input function is switched when nothing is connected to the input jacks. If this happens, either turn down the MASTER VOLUME control or connect components to the input jacks.

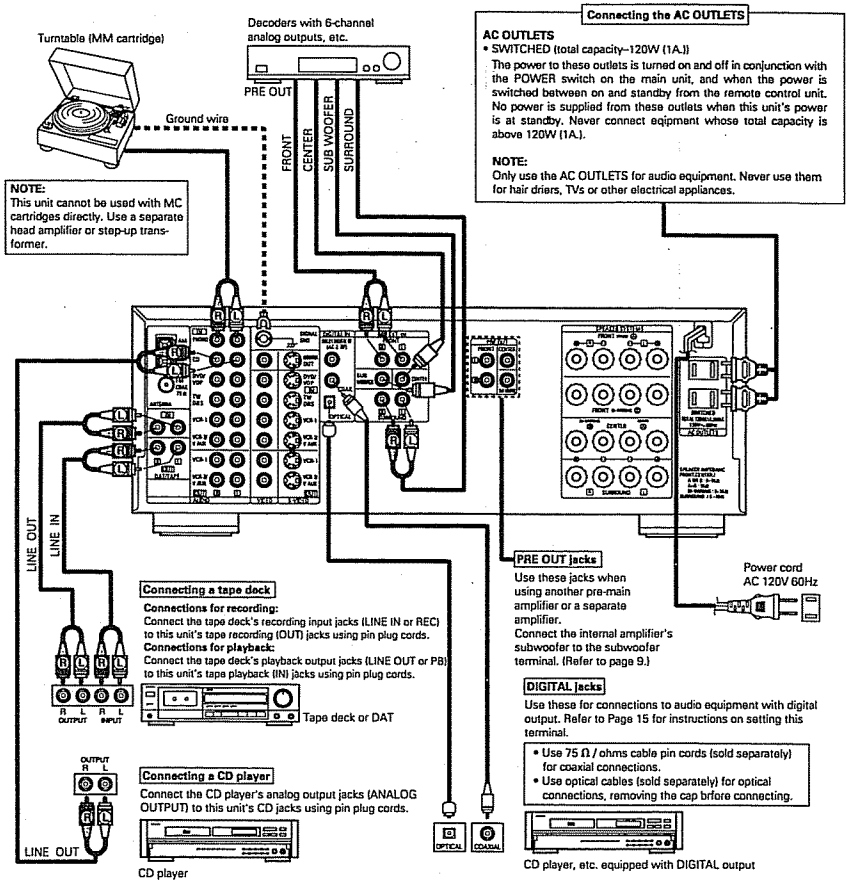
• **Muting of PRE OUT jacks**
The PRE OUT jacks include a muting circuit. Because of this, the output signals are greatly reduced for several seconds after the power switch is turned on or input function, surround mode or any other set-up is changed. If the volume is turned up during this time, the output will be very high after the muting circuit stops functioning. Always wait until the muting circuit turns off before adjusting the volume.

• **Whenever the power switch is in the OFF state, the apparatus is still connected on some AC line voltages.**
Please be sure to unplug the cord when you leave home for, say, a vacation.

5 CONNECTIONS

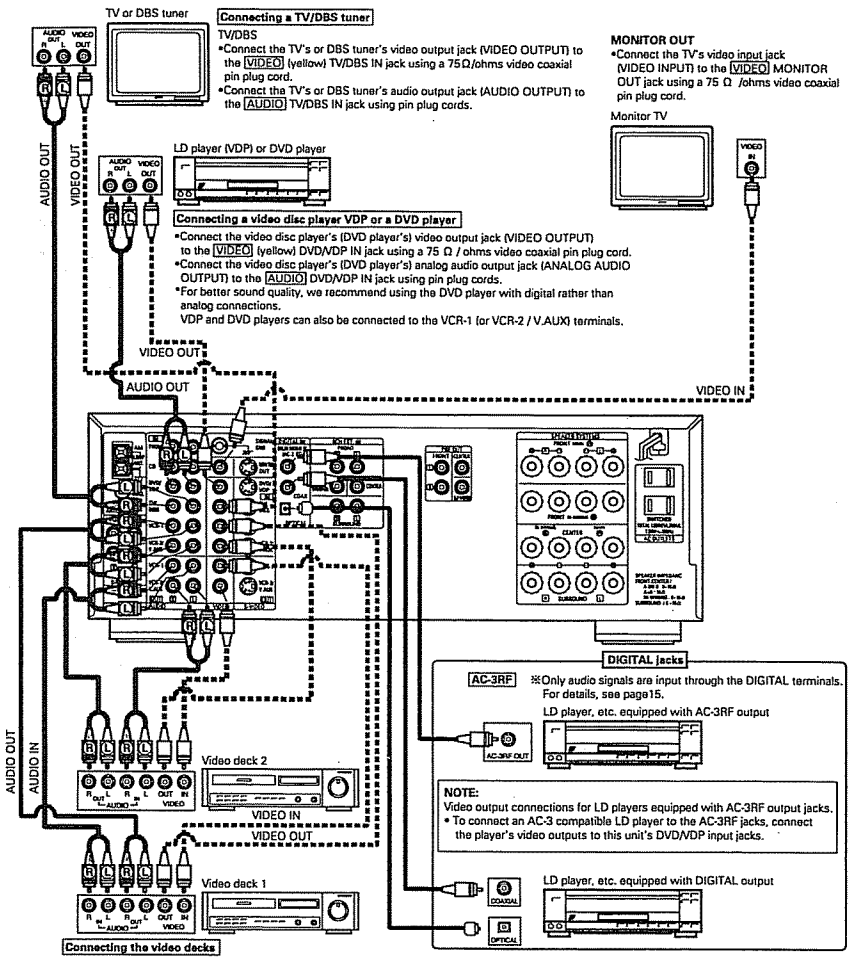
- Do not plug in the power cord until all connections have been completed.
- Be sure to connect the left and right channels properly (left with left, right with right).
- Insert the plugs securely. Incomplete connections will result in the generation of noise.
- **Use the AC OUTLETS for audio equipment only. Do not use them for hair driers, etc.**
- Note that binding pin plug cords together with power cords or placing them near a power transformer will result in generating hum or other noise.
- Noise or humming may be generated if a connected audio equipment is used independently without turning the power of this unit on. If this happens, turn on the power of the this unit.

Connecting the audio components



Connecting the video equipments

To connect the video signal, connect using a 75 Ω/ohms video signal cable cord. Using an improper cable can result in a drop in sound quality.



• There are two sets of video deck (VCR) jacks, so two video decks can be connected for simultaneous recording or video copying.

Video input / output connections:

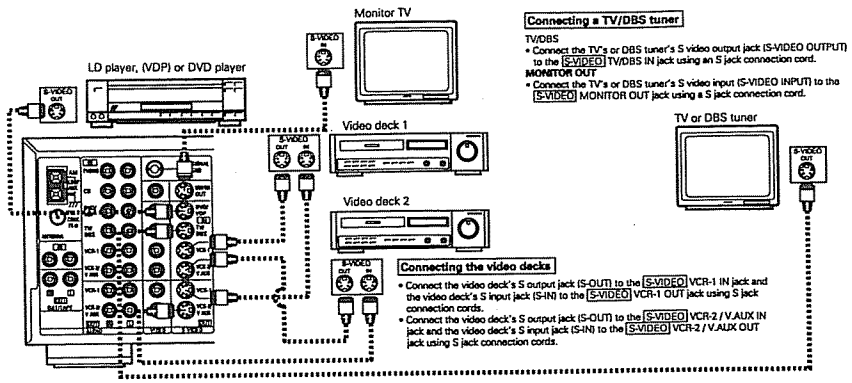
• Connect the video deck's video output jack (VIDEO OUT) to the VIDEO (yellow) VCR-1 IN jack, and the video deck's video input jack (VIDEO IN) to the VIDEO (yellow) VCR-1 OUT jack using 75 Ω /ohms video coaxial pin plug cords.

Connecting the audio output jacks

• Connect the video deck's audio output jacks (AUDIO OUT) to the AUDIO VCR-1 IN jacks, and the video deck's audio input jacks (AUDIO IN) to the AUDIO VCR-1 OUT jacks using pin plug cords.

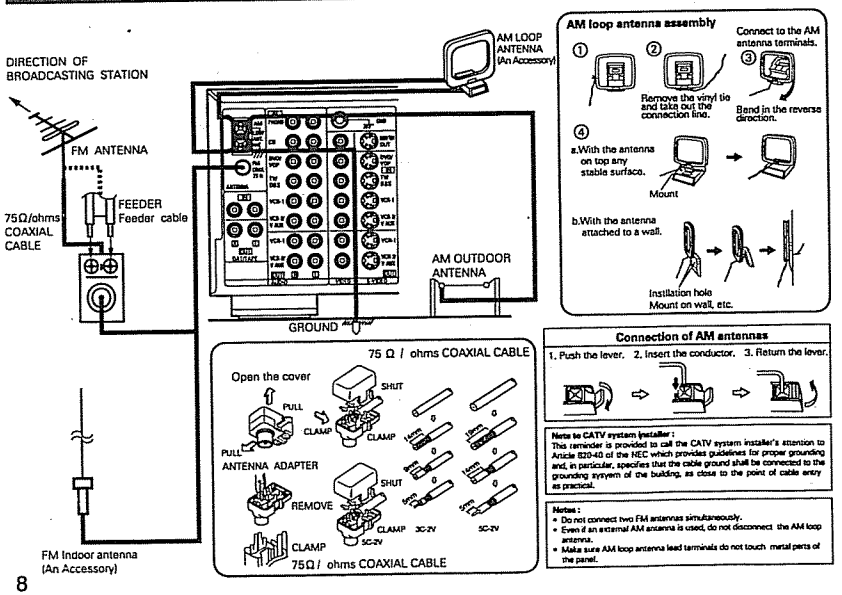
※Connect the second video deck to the VCR-2 jacks in the same way.

Connecting the S-video terminals



- **A note on the S input jacks**
  The input selectors for the S inputs and pin jack inputs work in conjunction with each other.
- **Precaution when using S-jacks**
  This unit's S-jacks (input and output) and video pin jacks (input and output) have independent circuit structures, so that video signals input from the S-jacks are only output from the S-jack outputs and video signals input from the pin jacks are only output from the pin jack outputs. When connecting this unit with equipment that is equipped with S-jacks, keep the above point in mind and make connections according to the equipment's instruction manuals.

Connecting the antenna terminals

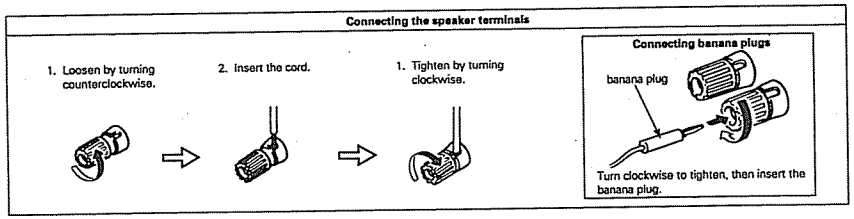


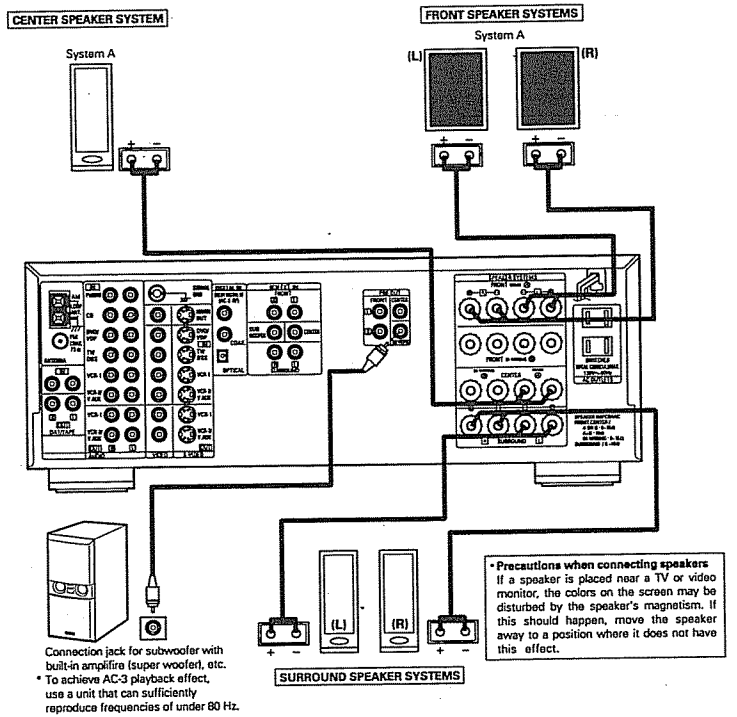
Speaker system connections

- Connect the speaker terminals with the speakers making sure that like polarities are matched (⊕ with ⊕ , ⊖ with ⊖). Mismatching of polarities will result in weak central sound, unclear orientation of the various instruments, and the sense of direction of the stereo being impaired.
- When making connections, take care that none of the individual conductors of the speaker cord come in contact with adjacent terminals, with other speaker cord conductors, or with the rear panel. Use banana plugs the speaker cords touch or if their core wire is thick and it is difficult to connect the cord to the speaker terminal.

Speaker Impedance

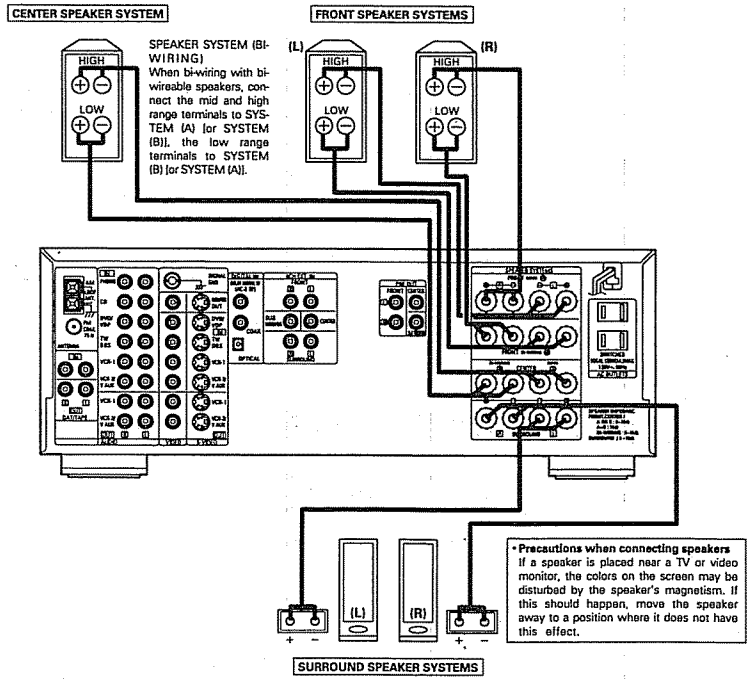
- When speaker systems A and B are use separately, speakers with an impedance of from 8 to 16 Ω/ohms can be connected for use as front and center speakers.
- Be careful when using two pairs of front or center speakers (A + B) at the same time, since use of speakers with an impedance of less than 16 Ω/ohms will lead to damage.
- Speakers with an impedance of 8 to 16 Ω/ohms can be connected for use as surround speakers.
- The protection circuit may operate or damage may occur when speakers with an impedance outside of the above range are used.





- About bi-wiring
  If your speakers have bi-wiring terminals, you can achieve higher quality sound by adding cords and using bi-wiring, as shown on the diagram below.
- By connecting speaker systems to both the speaker A and B terminals, you can play the same music source simultaneously in different rooms. (Use speakers with impedances of 16 Ω/ohms.)

Bi-wiring procedure



Protector circuit

This set has a built-in high speed protector circuit which protects the internal circuitry from strong currents that may be generated if the speakers are used with their cords insecurely connected to the speaker terminals or if the cords are short-circuited.
If this protector circuit is activated, the speaker output is automatically cut off, the display turns off and the STANDBY LED flashes rapidly. If this should happen, be sure to turn off the set's power, then check the speaker cord connections once again before turning the power back on. The sound will be muted for several seconds, after which the set will operate normally.

6 SYSTEM SETUP

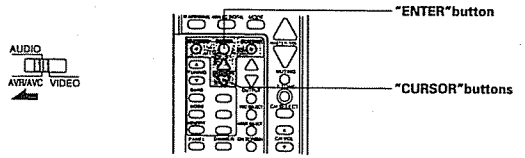
After connections with other components have been made, make the various settings on the monitor connected to the MONITOR OUT terminal using this unit's on screen display function. These settings must be made in order to complete the AV system in your listening room.
Make the seven settings described below.

Caution:
Do not play any apparatus connected to this set while in setting item ① or ② below, or some malfunction may occur.

① **Speaker Configuration**
② **Delay Time**
③ **Channel Level**
④ **Digital Input**
(only when an AV component is connected to the digital input jacks)
⑤ **DOLBY DIGITAL**
⑥ **Auto Tuner Preset**
⑦ **On Screen Display**

NOTES:
- The output from the S MONITOR OUT terminal has priority for the on screen display. For example, the S-video signals have priority if signals are input from a component on which both the S-video and regular video input terminals are connected and the output monitor is connected to both the S-video and regular video output terminals. If you want to always output the on screen display signals to the video output, do not connect a cable to the S MONITOR OUT terminal.
- This model's on screen display function is designed for high resolution monitor displays. Small characters may be difficult to read on small displays or low resolution TVs.

Use the following buttons on the remote control unit to make the settings:
* Set to the AVR/AVC side.



Before setting up the system

1

Press the POWER switch on the main unit or the POWER button on the remote control unit to turn on the power.

2

Press the ENTER button.
- The "Tuner Preset Stations" menu is only displayed when the input function is set to "TUNER".
- The "Surround Parameters" are not displayed when the parameters that should be set in the selected surround mode are not there. Examples include "5 CH STEREO", "6 CH EXT. IN", and "STEREO" (with PCM analog input) modes.

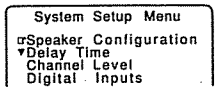
Setting the speaker configuration

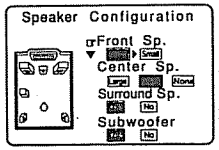
1 

Use the CURSOR △ and ▽ buttons to set the ☞ mark to "Speaker Configuration".



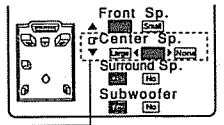
2 

Press the ENTER button to switch the screen.



3 

Use the CURSOR △ and ▽ buttons to set the ☞ mark to the speaker to be set.



Example:Center speaker selected and parameter set to "Small".

4 

Use the CURSOR ◀ and ▶ buttons to highlight the parameter to be set.

■ **Parameters**

Large ..... Select this when using speakers that can fully reproduce low sounds of below 80 Hz.
Small ..... Select this when using speakers that cannot reproduce low sounds of below 80 Hz with sufficient volume. When this setting is selected, low frequencies of below 80 Hz are assigned to the subwoofer.
None ..... Select this when no speakers are installed.
Yes/No ..... Select "Yes" when surround speakers and a subwoofer are installed, "No" when they are not installed.

NOTE: ⁎ Select "Large" or "Small" not according to the physical size of the speaker, but according to the bass reproduction capacity at 80 Hz. If you cannot determine the best setting, try comparing the sound when set to "Small" and when set to "Large", at a level that will not damage the speakers.

⁎ When "None" has been selected for the center speaker, "No" cannot be selected for the surround speakers. Also note that when "No" has been selected for the surround speakers, "None" cannot be selected for the center speaker.

5 

Press the ENTER button to enter the setting.
The "System Setup Menu" screen reappears.

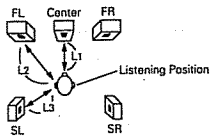
Caution:
In case the subwoofer is not used, be sure to set "Subwoofer = No", or the bass sound of front channel is divided to subwoofer channel and not reproduced in some mode.

Setting the delay time

Input the distances from the listening position to the speakers and set the surround delay time.

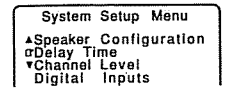
Preparations:
Measure the distances from the listening position to the speakers (L1 to L3 on the diagram at the right).

L_1: Distance from center speaker to listening position
L_2: Distance from front speakers to listening position
L_3: Distance from rear speakers to listening position



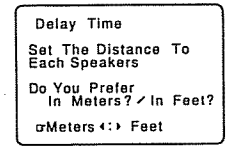
1 

Use the CURSOR △ and ▽ buttons to set the ☞ mark to "Delay Time".



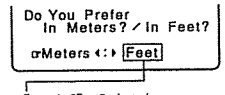
2 

Press the ENTER button to switch the screen.



3 

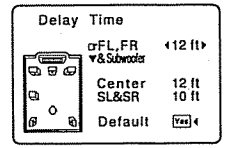
Use the CURSOR ◀ and ▶ buttons to select the unit of distance. Highlight the desired unit, "Meters" or "Feet".



Example:"Feet"selected.

4

- Selecting "Meters" or "Feet" in Step 3 will automatically change the screen to the one on the right.



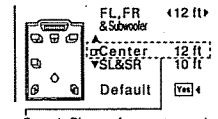
5 

Use the CURSOR △ and ▽ buttons to set the ☞ mark to speaker to be set.

6 

Use the CURSOR ◀ and ▶ buttons to set the distance from the speaker to the listening position.

- The number changes in units of 1 foot (or 0.1 meters) each time one of the buttons is pressed. Select the value closest to the measured distance.



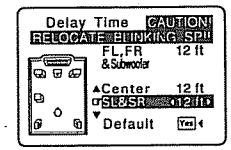
Example:Distance from center speaker to listening position set to 12ft.

⁎ The settings are reset to the factory settings when the ☞ mark is set to "Default" and "Yes". (Refer to page 18.)

⁎ If you set an invalid distance, a CAUTION notice, such as screen appear as shown right. In this case, please relocate the blinking speaker(s) so that its distance is no larger than the value shown in highlighted line. Then press the ENTER button again.

⁎ Set in such a way that the distance to the center speaker is the same as or up to 5 feet (1.5 meters) shorter than the distance to the front left and front right speakers and the subwoofer.

⁎ Set in such a way that the distance to the surround left and right speakers is the same as or up to 15 feet (4.5 meters) shorter than the distance to the front left and front right speakers and the subwoofer.



7 

Press the ENTER button to enter the setting.
The "System Setup Menu" screen reappears.
This procedure automatically sets the optimum surround delay time for the listening room.

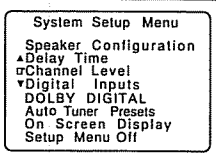
NOTE:
If the unit of distance is changed after the delay time is set, the setting is cleared and reset to the factory setting. (Refer to page 18.)

Setting the channel level

Use the following procedure to adjust the balance of the playing level between the different channels.
This sets the balance of the playing levels between the different channels to the same balance for all the surround modes.
Make the adjustment from the listening position while listening to the test tone output from each speaker.

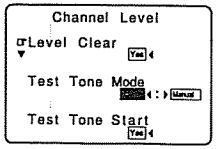
1 CURSOR

Use the CURSOR △ and ▽ buttons to set the ☞ mark to "Channel Level".



2 ENTER

Press the ENTER button to switch the screen.

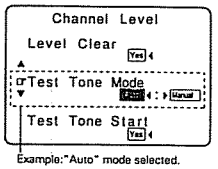


3 CURSOR

Use the CURSOR △ and ▽ buttons to set the ☞ mark to "Test Tone Mode".

4 CURSOR CURSOR

Use the CURSOR ◀ and ▶ buttons to select the mode.
Highlight "Auto" or "Manual" to select that mode.



Example:"Auto" mode selected.

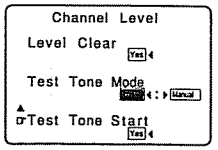
Auto: Adjust the level while listening to the test tones output automatically from the different speakers.
Manual: Select the speaker from which to output the test tone to adjust the level.

5 CURSOR

Use the CURSOR △ and ▽ buttons to set the ☞ mark to "Test Tone Start".

6 CURSOR

Press the CURSOR ◀ button and is set to "Yes".



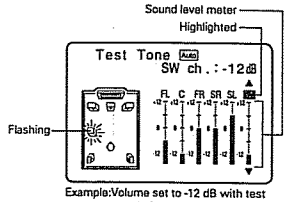
7 **A. If the "Auto" mode is selected:**

Test tones are automatically emitted from the different speakers.
The test tones are emitted from the different speakers in the following order, at 4-second intervals the first time and second time around, 2-second intervals the third time around and on:

FL → C → FR → SR → SL → SW

CURSOR

Use the CURSOR △ and ▽ buttons to adjust so that the volume of the test tones output from the different speakers sounds the same.
The volume can be adjusted in units of 1 dB from −12 to +12 dB.



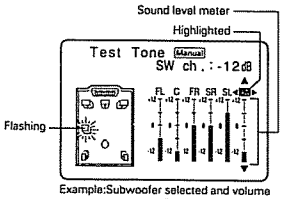
Example:Volume set to -12 dB with test tone being output from subwoofer.

B. If the "Manual" mode is selected:

CURSOR CURSOR

Use the CURSOR ◀ and ▶ buttons to highlight and select the speaker from which you want to output test tones, then use the CURSOR △ and ▽ buttons to adjust so that the volume of the test tones output from the different speakers sounds the same.

CURSOR



Example:Subwoofer selected and volume set to -12 dB.

The level of each channel should be adjusted to 75 dB (C-weighted, slow meter mode) on a sound level meter at the listening position.
If a sound level meter is not available adjust the channels by ear so the sound levels are the same. Because adjusting the subwoofer level test tone by ear is difficult, use a well known music selection and adjust for natural balance.
NOTE: When adjusting the level of an active subwoofer system, you may also need to adjust the subwoofer's own volume control.

8 ENTER

Press the ENTER button to enter the setting.
The "Channel Level" screen reappears.
To cancel the settings, select "Level Clear" and "Yes" on the "Channel Level" screen, then make the settings again.

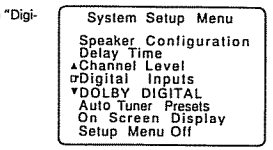
NOTE:
When the level clear operation is performed, all channel levels for all modes are set to 0 dB.

Digital input setup

Input the types of components connected to the digital input terminals.

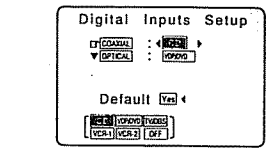
1 CURSOR

Use the CURSOR △ and ▽ buttons to set the ☞ mark to "Digital Inputs".



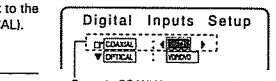
2 ENTER

Press the ENTER button to switch the screen.



3 CURSOR

Use the CURSOR △ and ▽ buttons to set the ☞ mark to the connector whose input you want to set (COAXIAL or OPTICAL).



Example:COAXIAL connector selected and input device set to CD.

4 CURSOR CURSOR

Use the CURSOR ◀ and ▶ buttons to highlight and select the type of device connected to the various terminals.
- Select "OFF" if nothing is connected.

✻ The settings are reset to the factory settings when the ☞ mark is set to "Default" and "Yes". (Refer to page 18.)
NOTE: PHONO, TUNER and DAT/TAPE cannot be selected.

5 ENTER

Press the ENTER button to enter the setting.
The "System Setup Menu" screen reappears.

DOLBY DIGITAL

Use the following procedure to set the level of the LFE (Low Frequency Effect) included in the source when playing program sources recorded in Dolby Digital.

- If the subwoofer clips due to the LFE signal during Dolby Digital playback, adjust the level as needed.

1

Use the CURSOR △ and ▽ buttons to set the ☞ mark to "DOLBY DIGITAL".

System Setup Menu
Speaker Configuration
Delay Time
Channel Level
▲Digital Inputs
☞DOLBY DIGITAL
▼Auto Tuner Presets
On Screen Display
Setup Menu Off

2

Press the ENTER button to switch the screen.

DOLBY DIGITAL
☞LFE Trim
▼ ◀ 0 dB ▶
Default Yes ◀

3

Use the CURSOR △ and ▽ buttons to set the ☞ mark to "LFE Trim".

4

Use the CURSOR ◀ and ▶ buttons to set the LFE level.
The level can be adjusted in units of 1 dB from −10 to 0 dB. Set to the desired level according to the speaker systems being used and the source to be played.

DOLBY DIGITAL
☞LFE Trim
▼ ◀ -10 dB ▶
Default Yes ◀

Example:LFE level set to -10 dB

* The settings are reset to the factory settings when the ☞ mark is set to "Default" and "Yes". (Refer to page 18.)

5

Press the ENTER button to enter the setting.
The "System Setup Menu" screen reappears.

Auto tuner presets

Use this to automatically search for FM broadcasts and store up to 40 stations at preset channels A1 to 8, B1 to 8, C1 to 8, D1 to 8 and E1 to 8.

NOTE:
If an FM station cannot be preset automatically due to poor reception, use the "Manual tuning" operation to tune in the station, then preset it using the manual "Preset memory" operation. (Refer to page 36.)

1

Use the CURSOR △ and ▽ buttons to set the ☞ mark to "Auto Tuner Presets".

System Setup Menu
Speaker Configuration
Delay Time
Channel Level

3

Press the CURSOR ◀ button.

Auto Tuning &
Preset Station Memory
Storing Preset Memory
☞Start Yes ◀

4

The set automatically starts searching for FM stations.
- "Search" flashes on the screen.
- "Completed" a appears once searching is completed.

Search

Flashing: When searching is competed, the display switches to "Completed".

5

When searching is completed, the screen automatically returns to the "System Setup Menu".

* For instructions on checking the frequencies of the preset stations, refer to page 27.

On Screen Display

This set is equipped with an on-screen display function that displays information on the various operations on the monitor TV connected to the VIDEO MONITOR OUT connector on the rear panel. These messages are superimposed on the picture when a video source is being played and displayed on a blue background when no video source is being played.
Use the following procedure to turn this function on and off.

1

Use the CURSOR △ and ▽ buttons to set the ☞ mark to "On Screen Display".

System Setup Menu
Speaker Configuration
Delay Time
Channel Level
Digital Inputs
DOLBY DIGITAL
▲Auto Tuner Presets
☞On Screen Display

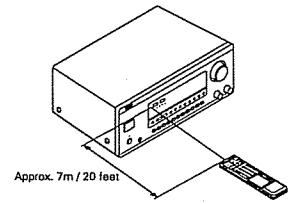
⑦ ON SCREEN DISPLY	ON					

Playback with the above setting is possible upon shipment from the factory and after initializing (refer to page 37).

7 REMOTE CONTROL UNIT

Following the procedure outlined below, insert the batteries before using the remote control unit.

Range of operation of the remote control unit

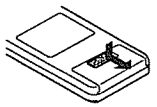


Point the remote control unit at the remote control sensor as shown on the diagram at the left.

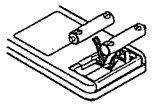
NOTES:
- The remote control unit can be used from a straight distance of approximately 7 meters/20 feet, but this distance will shorten or operation will become difficult if there are obstacles between the remote control unit and the remote control sensor, if the remote control sensor is exposed to direct sunlight or other strong light, or if operated from an angle.
- Neon signs or other devices emitting pulse-type noise nearby may result in malfunction, so keep the set as far away from such devices as possible.

Inserting the batteries

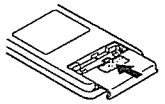
① Press as shown by the arrow and slide off.



② Insert the SUM3 batteries properly, as shown on the diagram.

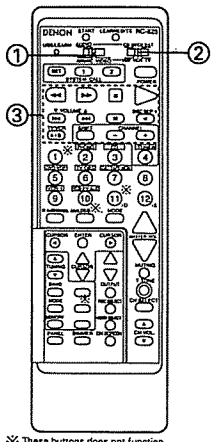


③ Close the lid.



NOTES:
- Use only AA, R6P, UM-3 batteries for replacement.
- Be sure the polarities are correct. (See the illustration inside the battery compartment.)
- Remove the batteries if the remote control transmitter will not be used for an extended period of time.
- If batteries leak, dispose of them immediately. Avoid touching the leaked material or letting it come in contact with clothing, etc. Clean the battery compartment thoroughly before installing new batteries.
- Have replacement batteries on hand so that the old batteries can be replaced as quickly as possible when the time comes.
- The codes that have been learned may be lost if removed batteries are not replaced within about 5 minutes.

System code buttons



※ These buttons does not function. (Some buttons can be used by using the pre-set memory or the learning function.)

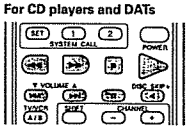
DENON remote-controllable audio components can be controlled using this unit's remote control unit. Note that some components, however, cannot be operated with this remote control unit.

1 Set to slide switch to "AUDIO" ("AVR/AVC").

2 Set the slide switch to the position for the component to be operated (CD, DECK or DAT).

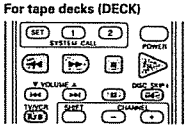
3 Use the buttons shown below to operate the audio component. For details, refer to the respective component's manual.

a. For CD players and DATs



◀◀, ▶▶ : Manual search (reverse and forward)
■ : Stop
▶ : Play
|◀◀, ▶▶| : Auto search
II : Pause
DISC : Disc selection
SKIP+ : (CD changer only)

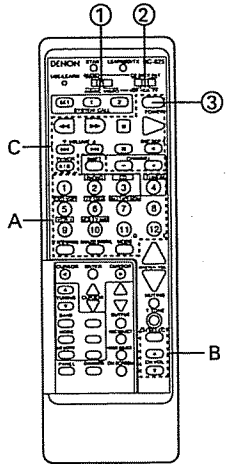
b. For tape decks (DECK)



◀◀ : Reverse
▶▶ : Forward
■ : Stop
▶ : Forward play
II : Pause
A/B : A/B deck selection
◀ : Reverse play

Preset memory

DENON and other makes of components can be operated by setting the preset memory for your make of video component. **Operation is not possible for some models, however. In this case use the learning function (see page 22) to store the remote control signals.**
For instructions on clearing the presettings stored in the preset memory, see page 23.

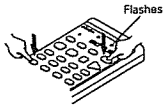


1 Set the slide switch to "VIDEO".

2 Set the slide switch to the component to be registered (VDP, VCR or TV).

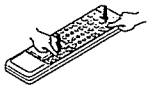
(Keep the POWER button pressed in when performing steps 3 and 4.)

3 Holding in the POWER button, press the button for the corresponding manufacturer in block A.
(Refer to Table 1.)



The LEARNED/TX LED flashes.

4 Next, while holding in the POWER button, press the button for the code in block B. (Refer to Table 7-2.) The operation is completed when the LEARNED/TX LED lights.



5 To continue registering other components, repeat steps 2 to 4.

This remote control unit can be used to operate components of other manufacturers without using the learning function by registering the manufacturer of the component as shown on Table 1.

Table 1: Combinations of Personal System Codes for Different Manufacturers

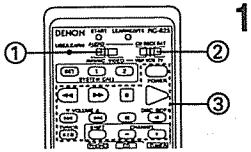
NOTES:
- The signals for the pressed buttons are emitted while setting the preset memory. To avoid accidental operation, cover the remote control unit's transmitting window while setting the preset memory.
- Some models and years of manufacture of components of the manufacturers listed on Table 1 cannot be used.

Operation after components are registered

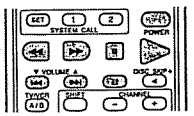


1 Set the slide switch to "VIDEO".

2 Set the slide switch to the component to be registered (VDP, VCR or TV).

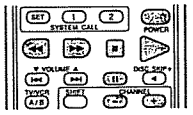
3 Use the buttons shown below to operate the video component. (Some models cannot be used.)
For details, refer to the respective component's manual.

a. VDP



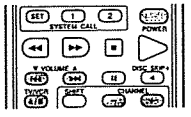
POWER : Power on/off
◀◀, ▶▶ : Manual search (reverse and forward)
■ : Stop
▶ : Play
I◀◀, ▶▶I : Auto search
II : Pause

b. VCR



POWER : Power on/off
◀◀, ▶▶ : Manual search (reverse and forward)
■ : Stop
▶ : Play
II : Pause
CHANNEL +, − : Channel selection

c. TV

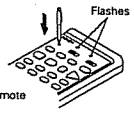


POWER : Power on/off
VOLUME ▲, ▼ : Volume up/down
TV/VCR : TV/video selection
CHANNEL +, − : Channel selection

Remote control unit learning function

If your AV components are not DENON products or if operation is not possible with the preset memory settings, the components' remote control signals can be "learned" to enable remote control operation.
The buttons that can be "learned" are the CD, DAT and DECK system buttons (see page 19) and the VDP, VCR and TV system buttons (see page 21). (For the TV only, the A block buttons can also be "learned".)

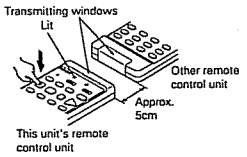
1 Press the USE/LEARN selector button with the tip of a pen etc., to set the learn mode. Both the START and LEARNED/TX indicators flash.



2 Set the program switch to the side to be "learned".
Set to the AUDIO side for the CD, tape deck or DAT position, to the VIDEO side for the VDP, VCR or TV position.

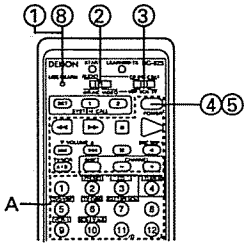
3 Set the program switch to the position to be "learned".

4 Set the remote control units so they are facing each other, then press the button to be "learned" on this unit's remote control unit.

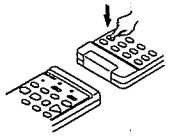


The indicator stops flashing and the START LED lights.
The learnable buttons are the buttons which can be operated with the DENON system codes for the CD player, DAT and tape deck, the buttons which can be operated with the preset memory for the VCR, VDP and TV. For the TV only, however, the buttons in the section indicated "A" on the diagram above can also be "learned". Use these to "learn" TV channels.

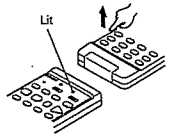
NOTE: Use button ⑪/0 as the 0 number button, button ⑫/E as the enter button.



5 Check that the START LED is lit, then press the button to be "learned" on the other remote control unit.



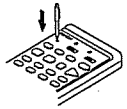
6 Once the START LED turns off and the LEARNED/TX LED lights, release the button on the other remote control unit.



The two LEDs start flashing again.

7 To "learn" other buttons, repeat steps 2 to 6.

8 Once the learning operation is completed, press the USE/LEARN selector button again.
The two LEDs stop flashing and the learning mode is cancelled.



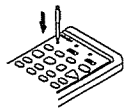
Check that the stored codes work properly.

NOTES:

- Up to 26 codes can be "learned", but this number may be lower if the codes are long.
- If a non-learnable button is pressed or two or more buttons are pressed at once, the two LEDs will once again light when the button(s) is released.
- If the codes could not be stored, the LEARNED/TX LED does not light after the START LED turns off. For limited number of models, codes cannot be stored in RC-825.
- If the two LEDs start flashing rapidly after the START LED lights, this means that the memory is already full, and the code you have just attempted to store was not stored.
  To "learn" that code, first perform the resetting operation.

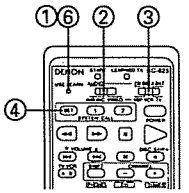
Clearing "learned" remote control signals and the preset memory settings

1 Press the USE/LEARN selector button with the tip of a pen, etc., to set the learn mode.



2 To clear "learned" remote control signals, set the slide switch to the position at which the signals were "learned". To clear the preset memory settings, set the slide switch to "VIDEO".

3 Set the slide switch to the position at which the signals were "learned" or at which the preset memory settings were set.



4 Press the SYSTEM CALL SET button, and hold it in for at least four seconds.

5 When both the START and LEARNED / TX LEDs light simultaneously, all the stored codes are cleared.

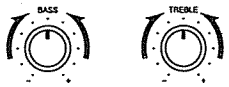
6 Press the USE/LEARN selector button.

8 OPERATIONS

Preparations for playback

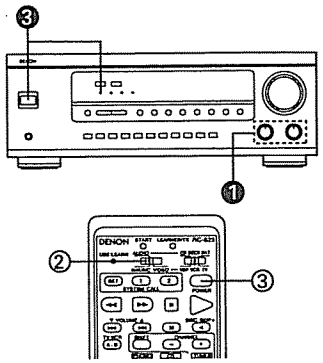
Preparations:
Check that all connections are proper.

1 Set to the center position.



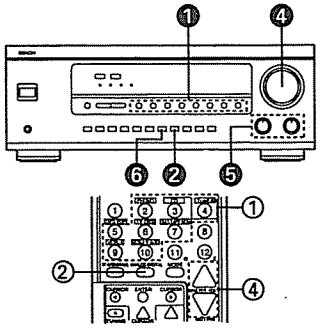
2 Set the remote control unit's slide switch to the AUDIO position.
(only when operating with the remote control unit)

3 Turn on the power.
Press the POWER switch (button).

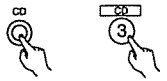


- ⏻ ON/STANDBY
  The power turns on and "STANDBY" indicator is lit.
  Several seconds are required from the time the power switch is set to the " ⏻ ON/STANDBY" position until sound is output. This is due to the built-in muting circuit that prevents noise when the power switch is turned on and off.
  Set the POWER switch to this position to turn the power on and off from the included remote control unit (RC-825).
- ⏻ OFF
  The power turns off and "STANDBY" indicator is off.
  In this position, the power cannot be turned on and off from the remote control unit.

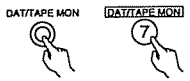
Playing the analog program source



1 Press the button for the program source to be played.
EX 1: CD

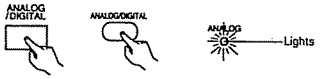


EX 2: DAT/TAPE



- Press the button once to switch the source to DAT/TAPE input, again to cancel DAT/TAPE input.

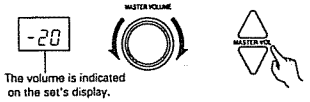
2 Select the ANALOG input mode.



Check that the "ANALOG" indicator is lit.

3 Start playback on the selected component.
For operating instructions, refer to the various components' manuals.

4 Adjust the MASTER VOLUME control.

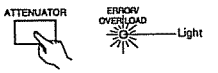


- The volume can be adjusted in units of 1 dB from −60 to 0 to +18 dB.

5 Adjust the BASS and TREBLE.

Turn the control clockwise to increase the bass or treble, counterclockwise to decrease it.

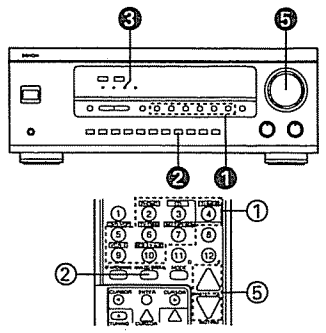
6 If the indicator lights when the "OVER LOAD" LED is lit, press the ATTENUATOR button.



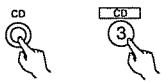
- The input level is lowered by −6 dB.

Notes:
- For digital input sources, there is no need to adjust the ATTENUATOR.
  (This button will not operate.)
- If the indicator does not turn off when this button is pressed, adjust the output level on the player.
- This button cannot be used when playing in the 6-channel EXT.IN mode.

Playing the digital program source



1 Press the button for the program source to be played that is connected to the digital input jacks.
EX: CD



2 Select the DIGITAL input mode.

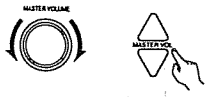
3 Check that the "DIGITAL" indicator is lit.

DIGITAL ☼ light on
ERROR/ OVERLOAD ○ light off

When digital signals are input properly, the " ERROR / OVERLOAD " indicator is not lit.
* If the "ERROR/OVERLOAD" indicator is lit, check that the system setup's input setting (refer to page 15) and the connections are proper, that the component's power is turned on, etc.

4 Start playback on the selected component.
For operating instructions, refer to the various components' manuals.

5 Adjust the MASTER VOLUME control.

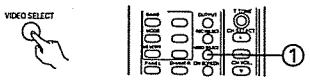


NOTE:
- NEVER try to play CD-ROM discs.
- If a CD-ROM is played, the "DIGITAL"indicator is lit green but no sound is heard.

Simulcast playback

Use this switch to monitor a video source other than the audio source.

1 Press the VIDEO SELECT button repeatedly until the desired source appears on the display.



The video source switches as follows each time the button is pressed:

DVD/VDP → TV/DBS → VCR-1 → VCR-2/V-AUX → SOURCE (= VIDEO SELECT : OFF)

* Cancelling simulcast playback.
- Select "SOURCE" using the video select button.
- Switch the program source to the component connected to the video.

Using the muting function

Use this to turn off the audio output temporarily.

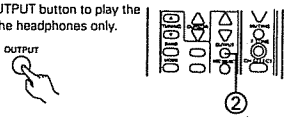
1 Press the MUTING button.
* Cancelling MUTING mode.
Press the MUTING button again.

* **Caution:** Switching off the power of the unit and the remote control unit will cancel the settings.

Listen with headphones

1 Connect the headphones to the PHONES jack of the front panel.

2 Press the OUTPUT button to play the sound over the headphones only.



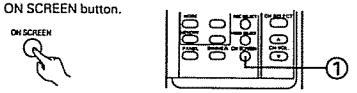
- The output to the speaker and pre-out jacks is turned off and no sound is produced from the speakers.

* **Caution:** Switching off the power of the unit and the remote control unit will cancel the settings.

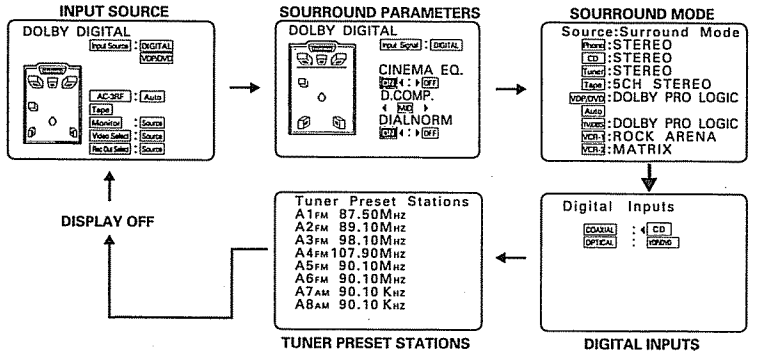
On screen display

The input and output sources and the surround setting, etc., are displayed on the monitor TV, so the various functions can be checked visually at a glance.

1 Press the ON SCREEN button.



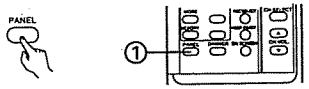
The display switches as follows each time the button is pressed (the following screens are examples):



Front panel display

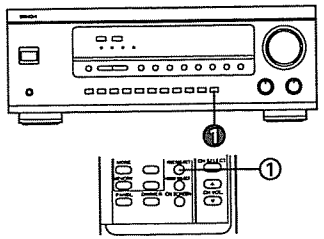
When an operation is performed on the main unit or on the remote control unit, that operation appears on the display, making it possible to check the operation visually.
The set's operating status can also be checked on the display using the procedure described below.

1 Press the PANEL button.

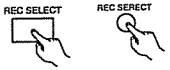


The input and output sources and the surround setting, etc., appear in order on the display each time the button is pressed.

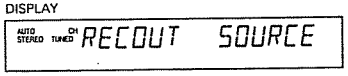
Recording the currently playing program source



1 Press the REC SELECT button and set the recording output to "SOURCE".



DISPLAY



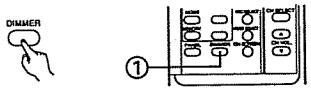
2 Set the cassette deck, video deck or other recording device to the recording mode.
For instructions, refer to the device's operating manual.

To record the sound from a tape deck, set the REC OUT mode to DAT/TAPE.

Using the dimmer function

Use this function to adjust the brightness of the main unit's display.

1 Press the DIMMER button.

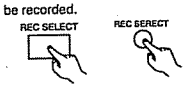


The brightness changes in the following order each time the button is pressed:

Recording using the REC OUT selector

Use the following procedure to record a source other than the one currently playing.

1 Press the REC SELECT button and set the recording output to the source to be recorded.



DISPLAY

Example: Source to be recorded set to PHONO

2 Set the video deck or other recording device to the recording mode.
For instructions, refer to the device's operating manual.

■ Tape monitor function

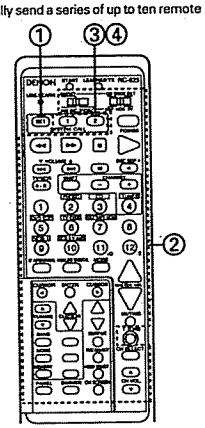
When a three-head tape deck is used, the sound actually being recorded can be monitored during recording by pressing the DAT/TAPE MONITOR button.
Press the button again to cancel monitoring.

NOTES:

- Only the currently playing source can be recorded on the tape deck.
- Digital input signals cannot be recorded. To record, connect to the analog input terminals.
- It is not possible to record between the video jack and the S-video jack.
- If the input function is set to PHONO, CD or TUNER when "TV/DBS" is selected with the REC OUT selector, the picture signals selected with the "TV/DBS" setting are output from the MONITOR OUT terminal.

System call (remote control unit)

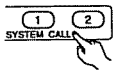
This function allows you to preset frequently used operation patterns in the remote control unit then automatically send a series of up to ten remote control codes with a single button.



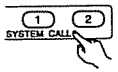
1 **Presetting**
Press the SET button.

2 Press the buttons for the codes to be sent, changing the position of the slide switch as necessary. (Up to ten buttons can be set.)
Buttons which have been "learned" and buttons which have been preset can also be selected.

3 Press the SYSTEM CALL button ("1" or "2") at which you want to store the codes.
The setting is now stored.



4 **Recalling**
Press the SYSTEM CALL button ("1" or "2") at which the desired codes have been stored.
The series of codes is now sent.



9 USING THE SURROUND FUNCTION

Dolby Surround

This unit is equipped with digital signal processing sections for decoding and reproducing movie soundtracks the same way as in movie theaters.

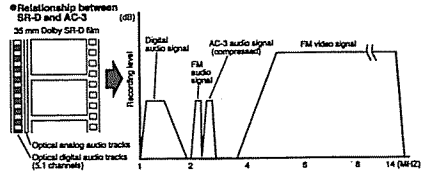
1. DOLBY PRO LOGIC

When using conventional video tapes, laser discs, TV programs or CDs with the DOLBY SURROUND mark, Dolby Pro Logic provides extremely natural sound movement and positioning, immersing you in the on screen action. Pro Logic uses a directional emphasis circuit to decode four output channels (front left and right, center and surround) from the two audio channels provided on the software.
This set is equipped with four Dolby Pro Logic play modes: Normal, Phantom, Wide and 3-channel. The set automatically selects the optimum mode according to the system setup's speaker configuration settings.

2. DOLBY DIGITAL

When you connect the DVD player or an LD player with an AC-3RF output to the AC-3RF input terminal and play DVD, laser discs with DOLBY DIGITAL (or DOLBY SURROUND AC-3 DIGITAL) mark, you can experience improved sound spatiality, positioning, and impact compared with Pro Logic. This is because Dolby Digital delivers up to 5 totally discrete, full frequency audio channels (front left and right, center, and surround left and right), plus a bass-only effects channel. Since the signal is digital from the input of the program source until to the output of this unit, a higher quality and clarity of surround sound results.
Dolby Digital AC-3 (Audio Coding 3) is a system developed by Dolby Laboratories that transmits 5.1 channels of digital signals. The surround system developed for movie theaters using this system is called "Dolby SR-D (Surround Digital)". Whereas the conventional Dolby Pro Logic Surround is an analog matrix system, Dolby SR-D is a digital discrete system in which the different channels are completely independent. This makes it possible to achieve a realistic sound field with a "three-dimensional" feel, giving the sound a sense of distance, movement and relative position, and creating a surprisingly real and powerful sense of presence when playing movie software in AV rooms.
There are "5.1 ch" playback channels: three front channels (front left, center and front right), two surround channels (surround left and surround right), plus "0.1 channel" called LFE (Low Frequency Effect) for low bass effect sounds of 120 Hz or less. The signals are recorded on the software in fully discrete fashion, eliminating crosstalk between channels and making it possible to control the sound field in the listening/viewing space with greater precision.
In addition, the frequency range of the five channels extends up to 20 kHz, (the same as CDs,) resulting in clear sound with greater richness of expression.

●Relationship between SR-D and AC-3

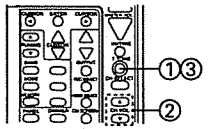


● **Dolby Digital and Pro Logic**

Home surround methods	Dolby Digital	Dolby Pro Logic
No. recording channels (material)	5.1 ch	2 ch
No. playback channels	5.1 ch	4 ch
Playback channels	L, R, C, SL, SR and SW	L, R, C, S (SW recommended)
Audio processing	Digital discrete processing, AC-3 encoding/decoding	Analog matrix processing, Dolby Surround
Upper reproduction limit of surround channel	20 kHz	7 kHz

Before playing with the surround function

Before playing with the surround function, be sure to use the test tones to adjust the playback level from the different speakers. This adjustment can be performed with the system setup (see page 14, 15) or from the remote control unit, as described below.
Adjusting with the remote control unit using the test tones is only possible in the "Auto" mode and only effective in the DOLBY PRO LOGIC and DOLBY DIGITAL modes. The adjusted levels are automatically stored in the memory.

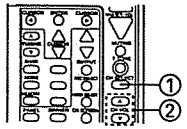


1 Press the test tone button. T.TONE

2 Test tones are output from the different speakers. Use the channel volume adjust buttons to adjust so that the volume of the test tones is the same for all the speakers. CH VOL

3 After completing the adjustment, press the test tone button again. T.TONE

After adjusting using the test tones, adjust the channel levels either according to the playback sources or to suit your tastes, as described below.

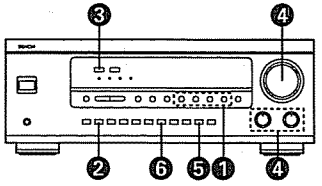


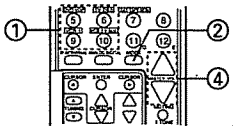
1 Press the channel select button to select the speaker to be adjusted. CH SELECT

2 Adjust the level of the selected speaker. CH VOL

Using the Dolby Pro Logic mode

Play a pre-recorded source with the DOLBY SURROUND mark.





1 Press the button for the program source to be played. **EX: VCR-1** VCR-1 VCR-1 9

2 Set the DOLBY SURROUND mode.
DOLBY SURROUND MODE PRO LOGIC Lit

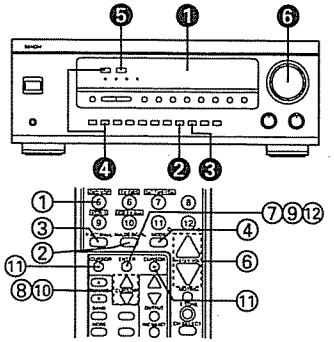
3 Start playback on the selected component.
For operating instructions, refer to the various components' manuals.

4 Adjust the MASTER VOLUME and TONE controls.
MASTER VOLUME MASTER VOL BASS TREBLE

5 Press the CINEMA EQ button when playing back movie video software and the speech portion is felt to be harsh upon the ears. The output frequency response of the center and front speakers becomes closer to that in a theater and the sound becomes more pleasant to the ears. CINEMA EQ

Using the Dolby Digital mode

Play a pre-recorded source (LD or DVD) with the DOLBY SURROUND AC-3 DIGITAL mark.



1 DVD/VDP DVD/VDP (3) Press the DVD/VDP button.

2 ANALOG /DIGITAL ANALOG/DIGITAL Select the DIGITAL input mode.

3 RF AUTO/MANUAL RF AUTO/MANUAL Select the audio input mode. The mode switches as shown on the right each time the button is pressed.
DVD AUTO → DVD AC-3RF → DVD/VDP → DVD AUTO

DVD AUTO ..... Some video discs with Dolby Digital AC-3 audio have only digital or analog audio. When using such discs, this mode automatically switches the audio input according to the type of audio Dolby Digital (AC-3), digital or analog) being played.
DVD AC-3RF ..... Only the Dolby Digital (AC-3) audio is played.
DVD/VDP ..... The audio is input according to the analog/digital input setting on the main unit or remote control unit.

NOTES:
- In the "DVD AUTO" mode, when the mode changes from pause, chapter search, etc., to playback during playback of the Dolby Digital audio on an LD, the PCM or analog sound may be output momentarily before the mode is switched to the Dolby Digital audio mode. If this happens, the sound will not be interrupted if you switch to the "DVD AC-3RF" (AC-3RF fixed input) mode.
- The audio input mode setting is reset to "DVD AUTO" when the power is turned off using the power switch on the remote control unit or on the main unit.

4 DOLBY SURROUND MODE PRO LOGIC Lit Set the DOLBY SURROUND mode.

5 Start playback on the selected component.
For operating instructions, refer to the various components' manuals.
When Dolby Digital (AC-3) encoded signals are played, the PRO LOGIC indicator turns off and the Dolby Digital indicator lights.
- The PRO LOGIC indicator lights when a 2-channel Dolby Digital (AC-3) signal is input.

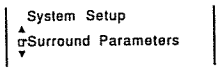
DIGITAL Lit

6 MASTER VOLUME MASTER VOL Adjust the MASTER VOLUME control.

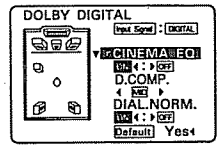
7 ENTER Set the surround parameter on the monitor according to the source and adjust the tone.
First press the ENTER button.

Menu
▫System Setup
▾ Surround Parameters
Menu Off

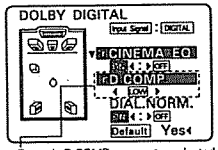
8 Use the CURSOR △ and ▽ buttons to set the ☞ mark to "Surround Parameters".



9 Press the ENTER button to switch the screen.



10 Use the CURSOR △ and ▽ buttons to set the ☞ mark to the parameter to be set.



11 Use the CURSOR ◀ and ▶ buttons to set the parameter. Display or highlight the characters for the desired setting.

Example:D.COMP. parameter selected and set to LOW.

■ Surround parameters

CINEMA EQ. ..... Use "CINEMA EQUALIZER" if dialogue audio truck sound scratchy when playing movie software. (The higher frequency component is lowered.) (Only effective in the Dolby Pro Logic, Dolby Digital modes.)
This parameter can also be turned on and off with the CINEMA button on the main unit.

D. COMP. ..... "DYNAMIC RANGE COMPRESSION" compresses the dynamic range. This is only effective for Dolby Digital program sources. — There are four parameters: "OFF" ↔ "LOW" ↔ "MID" ↔ "HIGH" (Only effective in the Dolby Digital modes.)

DIAL. NORM. ..... "DIALOG NORMALIZATON" automatically adjusts the playback level during source playback to the optimum value. This parameter is only valid for settings that use the center surround speaker with Dolby Digital program sources and in the "Speaker Configuration" screen of the "Systems Setup" menu. (Only effective in the Dolby Digital modes.)

NOTE: "DIAL. NORM." automatically restores the power to "ON" when the power of the unit has been switched "OFF".
* The settings are reset to the factory settings when the ☞ mark is set to "Default" "Yes" is highlighted. (Refer to page 34.)

12 Press the ENTER button to enter the setting.

* If for a certain source you feel that the bass is too strong, adjust the LFE level in the system setup's DOLBY DIGITAL setting. (Refer to page 16.)

NOTE:
- With the this model, **Dolby Digital encoded signals can only be played in the Dolby Pro Logic, Dolby Digital and STEREO modes.** Other surround mode buttons will not function during the Dolby Digital signal playback.
- When playing back in the Dolby Pro Logic mode, depending on the settings of each output channel, it may not be possible to make a setting of the master volume that exceeds −3 dB.

DSP surround simulation

This unit is equipped with a high precision D.S.P. (Digital Signal Processor) for processing signals digitally to simulate sound fields. Select the surround mode according to the playback source and adjust the parameters according to the conditions in the listening room to achieve realistic venue ambience.

■ Types of surround modes and their characteristics

1	STEREO	Sound is produced from the two front channels. (Nothing is output from the Surround and center channels.)
2	6CH EXT. IN	Connect the output of the external Dolby Digital decoder to this unit's 6 CH EXT IN.
3	5CH STEREO	The signals of the left and right channels are distributed to the different speakers to achieve a stereo sound from all directions at the listening position.
4	MATRIX	Use this to enjoy stereo music sources with rich reverberations.
5	MONO MOVIE	In this mode, a sense of expansion is added to monaural audio sources. This mode is best suited for playing old movies or movie tapes recorded in monaural.
6	ROCK ARENA	The powerful reverberations of this mode produce a sound field which recreates the excitement of live concerts. This mode is effective for rock, popular music, etc.
7	JAZZ CLUB	This mode creates the sound field of a live house with a low ceiling and hard wall reverberations. The result is that the artist seems to be performing right before your eyes.
8	VIDEO GAME	Use this to enjoy video game sources.

* Depending on the program source being played, the effect may not be very noticeable.
In this case, try other surround modes, without worrying about their names, to create a sound field suited to your tastes.

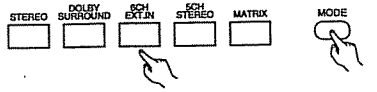
Personal Memory Plus function .... for EASY USE

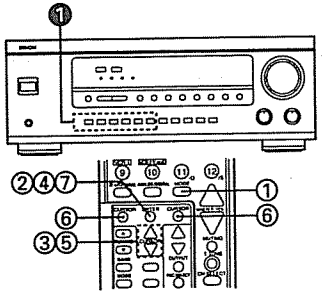
This unit automatically stores the surround mode adding selected effects for all input sources. The corresponding surround mode is recalled automatically each time an input source is selected.

Using the DSP surround simulation

Preparations: Select the input device and start playback.

1 Select the surround mode according to the input source.



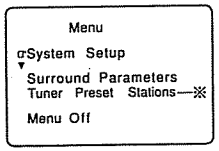


The surround mode switches in the following order each time the DSP SIMULATION button is pressed:

→ MONO MOVIE → ROCK ARENA → JAZZ CLUB → VIDEO GAME ←

2 Set the surround parameter on the monitor according to the source and adjust the tone.
First press the ENTER button.

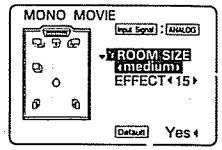
※ Displayed only when the input source is "TUNER".



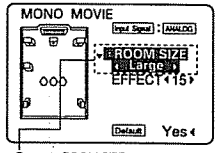
3 Use the CURSOR △ and ▽ buttons to set the ☞ mark to "Surround Parameters".

```
System Setup
▲
☞Surround Parameters
▼Tuner Preset Stations
Menu Off
```

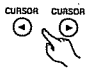
4 Press the ENTER button to switch the screen.
(The diagram at the right shows an example of the display for when the surround mode is set to MONO MOVIE.)



5 Use the CURSOR △ and ▽ buttons to set the ☞ mark to the parameter to be set.
- The parameters that can be set differ according to the surround mode. For details, see the table below.



6 Use the CURSOR ◀ and ▶ buttons to set the parameter. Display or highlight the characters for the desired setting.



Example:ROOM SIZE parameter selected and set to Large.

■ Surround parameters

ROOM SIZE ..... "Room size" refers to the size of the sound field. — There are five parameters: "Small" ↔ "med.S." ↔ "medium" ↔ "med.L." ↔ "large"

EFFECT LEVEL ..... "Effect level" refers to the strength of the effect sounds. If the sound becomes distorted, lower the level. Parameter "1" – "15"

DELAY TIME ..... This can be set to between 0 and 140 msec for the MATRIX mode.

✻ The settings are reset to the factory settings when the ☞ mark is set to "Default" and "Yes" is highlighted. (See the table below.)

7 Press the ENTER button to enter the setting.

NOTES:

✻ For analog sound only, if the ERROR/OVERLOAD indicator lights during playback, press the ATTENUATOR button on the main unit to lower the input level by –6 dB so that the indicator does not light. Note that when playing back the 6 CH EXT. IN mode, the setting of the INPUT ATTENUATOR is invalid and that it is operable.

- When the mode is switched to Dolby Digital encoded signals while playing PCM digital signals or analog signals in the surround modes except STEREO, the mode is **forcibly switched to the Dolby Surround mode. 6 CH EXT. IN, 5 CH STEREO, MATRIX, MONO MOVIE, ROCK ARENA, JAZZ CLUB or VIDEO GAME.**
- To listen to the signal of equipment that is connected to the "5.1 CH EXT. IN" input jack, make sure the video input of the equipment is selecting the connected function and select "5.1 CH EXT. IN" with the "5.1 CH EXT. IN" mode button or with the remote control mode button.

■ Surround modes and parameters

The following table shows the presence or absence of signals in the various modes, and whether or not they can be controlled. Initial settings are indicated in parentheses.

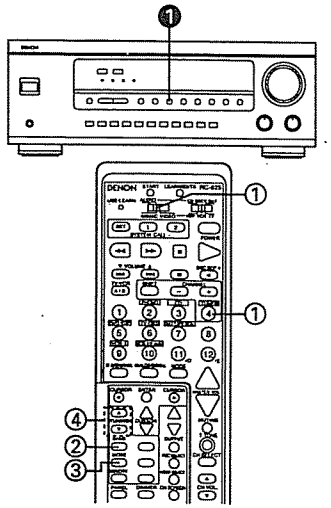
MODE	OUTPUT CHANNEL (0 dB)				PARAMETER SOURCE						When playing Dolby Digital (AC-3) data
	FRONT L / R	CENTER	SURROUND	SUBWOOFER	CINEMA EQ.	ROOM SIZE	EFFECT LEVEL	DELAY TIME	D. COMP.	DIALNORM	
STEREO	O	×	×	O	×	×	-×	×	O(Dolby Digital (AC-3) SOURCE ONLY (OFF))	×	O
DOLBY PRO LOGIC	O	O	O	O	O(OFF)	×	×	×	O(Dolby Digital (AC-3) SOURCE ONLY (OFF))	O(Dolby Digital (AC-3) SOURCE ONLY (ON))	O
DOLBY DIGITAL	O	O	O	O	O(OFF)	×	×	×	O(OFF)	O(ON)	O
6CH EXT. IN	O	O	O	O	×	×	×	×	×	×	×
5CH STEREO	O	O	O	O	×	×	×	×	×	×	×
MATRIX	O	O	O	O	×	×	×	O(20 msec)	×	×	×
MONO MOVIE	O	O	O	O	×	O(Medium)	O(10)	×	×	×	×
ROCK ARENA	O	O	O	O	×	O(Medium)	O(10)	×	×	×	×
JAZZ CLUB	O	O	O	O	×	O(Medium)	O(10)	×	×	×	×
VIDEO GAME	O	O	O	O	×	O(Medium)	O(10)	×	×	×	×

O : Signal present or controllable.
△ : Select one according to the speaker configuration setting.
◎ : Can be turned on and off according to the speaker configuration setting.
× : No signal or not controllable.

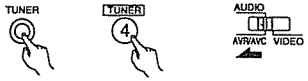
- The "INPUT ATTENUATOR" can only operate with analog inputs. The initial setting value is "0 dB". Note that this button is stored with each input source.

10 LISTENING TO THE RADIO

Auto tuning

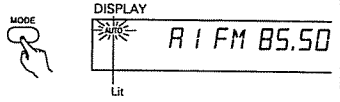


1 Set the input function to "TUNER".



2 Watching the display, press the BAND button to select the desired band (AM or FM).

3 Press the MODE button to set the auto tuning mode.



4 Press the TUNING UP or DOWN button.

- Automatic searching begins, then stops when a station is tuned in.

NOTE:

- When in the auto tuning mode on the FM band, the "STEREO" indicator lights on the display when a stereo broadcast is tuned in. At open frequencies, the noise is muted and the "TUNED" and "STEREO" indicators turn off.

Manual tuning

1 Set the input function to "TUNER".

2 Watching the display, press the BAND button to select the desired band (AM or FM).

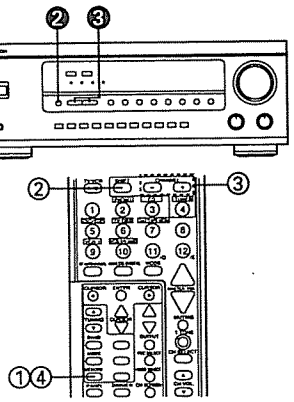
3 Press the MODE button to set the manual tuning mode. Check that the display's "AUTO" indicator turns off.

4 Press the TUNING UP or DOWN button to tune in the desired station.
The frequency changes continuously when the button is held in.

NOTE:

- When the manual tuning mode is set, FM stereo broadcasts are received in monaural and the "STEREO" indicator turns off.

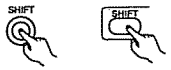
Preset memory



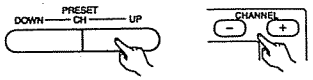
Preparations: Use the "Auto tuning" or "Manual tuning" operation to tune in the station to be preset in the memory.

1 Press the MEMORY button.

2 Press the SHIFT button and select the desired memory block (A to E).



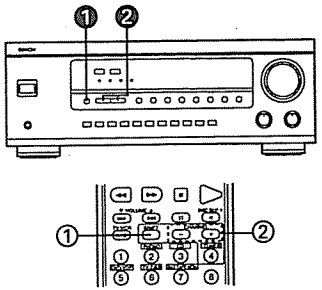
3 Press the PRESET UP or DOWN button to select the desired preset channel (1 to 8).



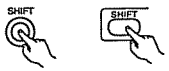
4 Press the MEMORY button again to store the station in the preset memory.

* To preset other channels, repeat steps 1 to 4.
A total of 40 broadcast stations can be preset—8 stations (channels 1 to 8) in each of blocks A to E.

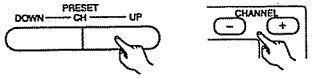
Recalling preset stations



1 Watching the display, press the SHIFT button to select the preset memory block.

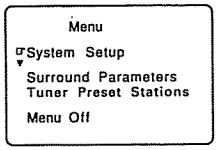


2 Watching the display, press the PRESET UP or DOWN button to select the desired preset channel.

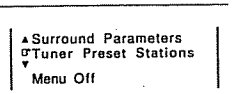


Recalling preset stations with the on screen display

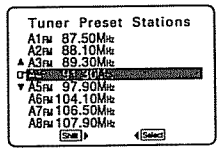
1 Press the ENTER button and call out the "Menu" screen from the on screen display.



2 Use the CURSOR △ and ▽ buttons to set the ☞ mark to "Tuner Preset Stations".

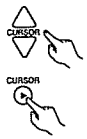


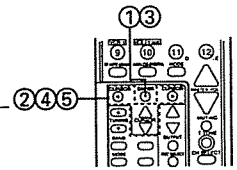
3 Press the ENTER button.
- The frequencies of the preset stations are displayed.



4 Use the CURSOR △ and ▽ buttons to highlight the station to be tuned in.

If the desired station is not displayed, press the CURSOR ▶ button and display the next page.





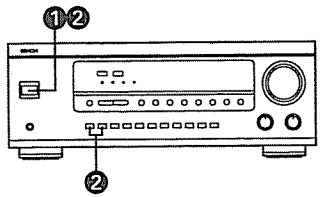
5 Press the CURSOR ◀ button. The selected station is tuned in.

11 LAST FUNCTION MEMORY

- This unit is equipped with a last function memory which stores the input and output setting conditions as they were immediately before the power is switched off.
- The unit is also equipped with a back-up memory. This function provides approximately one week of memory storage when the main unit's power switch is off and with the power cord disconnected.

12 INITIALIZATION OF THE MICROPROCESSOR

When the indication of the display is not normal or when the operation of the unit does not shows the reasonable result, the initialization of the microprocessor is required by the following procedure.



1 Switch off the unit using the main unit's power switch.

2 Hold the following STEREO button and DOLBY SURROUND button, and turn the main unit's power switch on.

3 Check that the entire display is flashing with an interval of about 1 second, and release your fingers from the 2 buttons and the microprocessor will be initialized.

13 TROUBLESHOOTING

If a problem should arise, first check the following:

1. **Are the connections correct?**
2. **Have you operated the receiver according to the Operating Instructions?**
3. **Are the speakers, turntable, and other components operating properly?**

If this unit is not operating properly, check the items listed in the table below. Should the problem persist, there may be a malfunction. Disconnect the power immediately and contact your store of purchase.

	Symptom	Cause	Measures	Page
Common problems arising when listening to the CD, records, tapes, and FM broadcasts, etc.	DISPLAY not lit and sound not produced when power switch set to on.	• Power cord not plugged in securely.	• Check the insertion of the power cord plug. • Turn the power on with the remote control unit after turning the POWER switch on.	6 24
	DISPLAY lit but sound not produced.	• Speaker cords not securely connected. • Improper position of the audio function button. • Volume control set to minimum. • MUTING is on. • Digital signals not input Digital input selected.	• Connect securely. • Set to a suitable position. • Turn volume up to suitable level. • Switch off MUTING. • Input digital signals or select input jacks to which digital signals are being input.	9, 10 25, 26 25, 26 27 26
	DISPLAY is not displayed and the "STANDBY" LED flashes at a high rate.	• Speaker terminals are short-circuited. • Block the ventilation holes of the set. • The unit is operating at continuous high power conditions and/or inadequate ventilation.	• Switch power off, connect speakers properly, then switch power back on. • Turn off the set's power, then ventilate it well to cool it down. Once the set is cooled down, turn the power back on. • Turn off the set's power, then ventilate it well to cool it down. Once the set is cooled down, turn the power back on.	9, 10 5 5
	Sound produced only from one channel.	• Incomplete connection of speaker cords. • Incomplete connection of input/output cords.	• Connect securely. • Connect securely.	9, 10 6–8
	Positions of instruments reversed during stereo playback.	• Reverse connections of left and right speakers or left and right input/output cords.	• Check left and right connections.	6–10
	The on screen display is not displayed.	• "On screen display" is set to off on the system setup menu screen.	• Set "on screen display" on the system setup menu screen to on.	17
When playing records	Humming noise produced when record is playing.	• Ground wire of turntable not connected properly. • Incomplete PHONO jack connection. • TV or radio transmission antenna nearby.	• Connect securely. • Connect securely. • Contact your store of purchase.	6 6 —
	Howling noise produced when volume is high.	• Turntable and speaker systems too close together. • Floor is unstable and vibrates easily.	• Separate as much as possible. • Use cushions to absorb speaker vibrations transmitted by floor. If turntable is not equipped with insulators, use audio insulators (commonly available).	— —
	Sound is distorted.	• Stylus pressure too weak. • Dust or dirt on stylus. • Cartridge defective.	• Apply proper stylus pressure. • Check stylus. • Replace cartridge.	— — —
	Volume is weak.	• MC cartridge being used.	• Replace with MM cartridge or use a head amplifier or step-up transformer.	6
Remote control unit	This unit does not operate properly when remote control unit is used.	• Batteries dead. • Remote control unit too far from this unit. • Obstacle between this unit and remote control unit. • Different button is being pressed. • ⊕ and ⊖ ends of battery inserted in reverse.	• Replace with new batteries. • Move closer. • Remove obstacle. • Press the proper button. • Insert batteries properly.	19 19 19 — 19
	ERROR/OVERLOAD LED lights. • During analog input playback. • During digital input playback.	— —	• See page 25. • See page 26.	— —

14 SPECIFICATIONS

- **Audio section**

(Power amplifier)

Rated output:
Front: 85 W + 85 W (8 Ω / ohms, 20 Hz – 20 kHz with 0.05% T.H.D.)
Center: 85 W (8 Ω / ohms, 20 Hz – 20 kHz with 0.05% T.H.D.)
Surround: 85 W + 85 W (8 Ω / ohms, 20 Hz – 20 kHz with 0.05% T.H.D.)

Dynamic power:
105 W × 2 ch (8 Ω / ohms)
170 W × 2 ch (4 Ω / ohms)
215 W × 2 ch (2 Ω / ohms)

Output terminals:
Front / Center: A or B or Bi-wiring 8 to 16 Ω / ohms
A + B 16 Ω / ohms
Surround: 8 to 16 Ω / ohms

(Analog)

Input sensitivity / input impedance: 200 mV/47 kΩ / kohms
Frequency response: 10 Hz – 150 kHz: +1, –3 dB
S / N: 96 dB
Distortion: 0.05% (20 Hz – 20 kHz)
Rated output 1.2 V
Maximum headphones output: 27 mW (8 Ω/ohms)
Phono equalizer (PHONO input —REC OUT)
Input sensitivity: 2.5 mV
RIAA deviation: ±1 dB (20 Hz to 20 kHz)
S / N: 74 dB (A weighting, with 5 mV input)
Rated output / Maximum output 150 mV / 8 V
Distortion factor: 0.03% (1 kHz, 3V)

(Digital)

D / A output:
Rated output – 2 V (at 0 dB playback)
Total harmonic distortion – 0.01% (1 kHz, at 0 dB)
S/N ratio – 102 dB
Dynamic range – 93 dB

Digital input:
Format – Digital audio interface

- **Video section**

(Standard video jacks)

Input / output level and impedance: 1 Vp-p, 75 Ω / ohms
Frequency response: 5 Hz – 10 MHz +1, –3 dB

(S-video jacks)

Input / output level and impedance:
Y (brightness) signal – 1 Vp-p, 75 Ω/ohms
C (color) signal – 0.286 Vp-p, 75 Ω/ohms

Frequency response:
Y (brightness) signal – 5 Hz – 10 MHz +1, –3 dB
C (color) signal – 10 Hz – 10 MHz +1, –3 dB

- **Tuner section**

		[FM] (note: μV at 75 Ω/ohms, 0 dBf = 1 × 10^{-15} W)	[AM]
Receiving Range:		87.5 MHz – 107.9 MHz	520 kHz – 1710 kHz
Usable Sensitivity:		1.0 μV (11.2 dBf)	18 μV
50 dB Quieting Sensitivity:	MONO	1.6 μV (15.3 dBf)	
	STEREO	23 μV (38.5 dBf)	
S / N: (IHF-A):	MONO	80 dB	50 dB
	STEREO	75 dB	
Total Harmonic Distortion (at 1 kHz):	MONO	0.15%	
	STEREO	0.3%	

- **General**

Power supply: AC 120 V, 60 Hz
Power consumption: 5.6 A
Maximum external dimensions: 434 (W) × 161 (H) × 416 (D) mm (17-3/32" × 6-11/32" × 16-3/8")
Weight: 14.8 kg (32 lbs 10 oz)

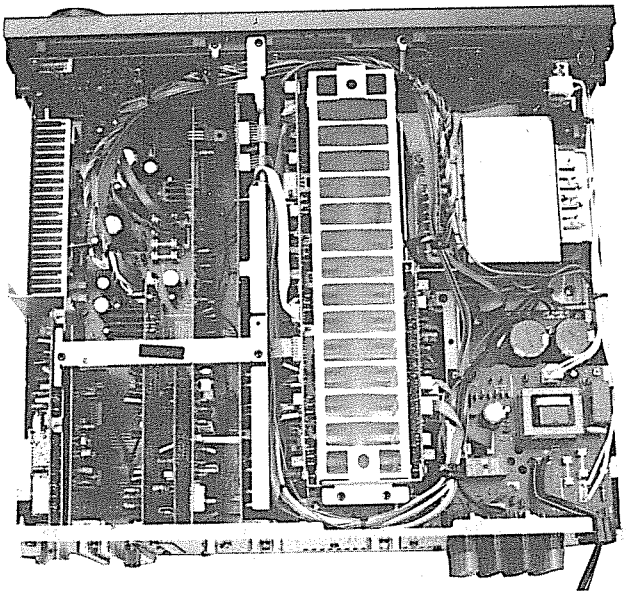
- **Remote control unit (RC-825)**

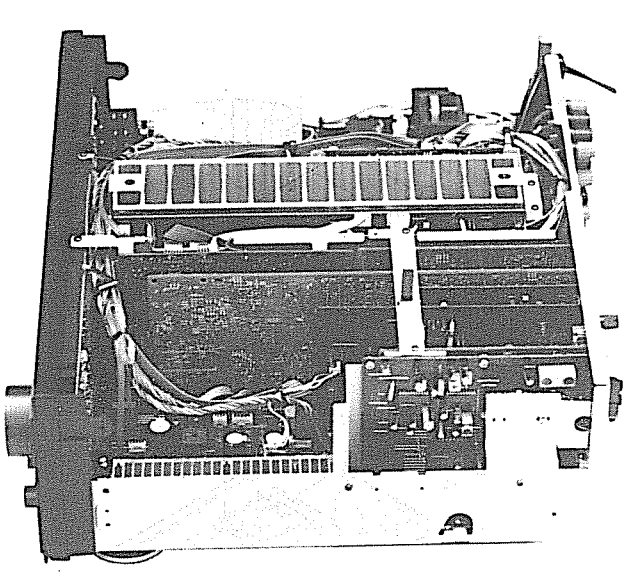
Batteries: R6P/AA Type (two batteries)
External dimensions: 70 (W) × 215 (H) × 19 (D) mm (2-3/4" × 8-15/32" × 3/4")
Weight: 180 g (Approx. 6 oz) (including batteries)

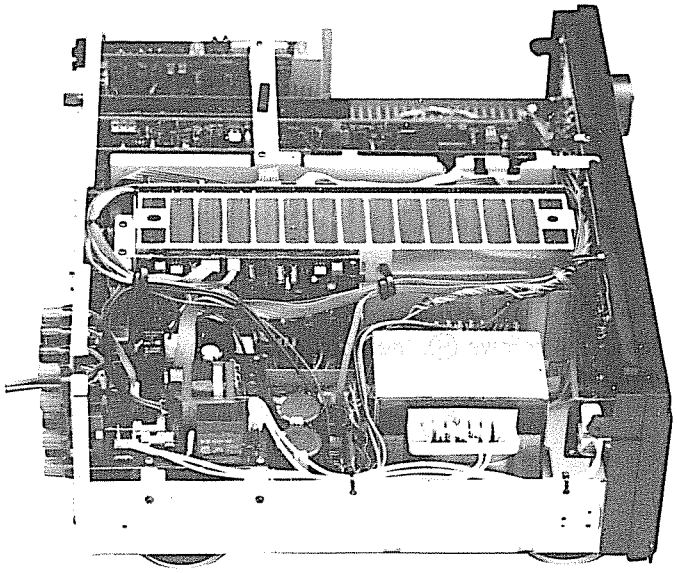
* For purposes of improvement, specifications and design are subject to change without notice.

WIRE ARRANGEMENT

In case of wires require unclasping or loosening to move the location to perform adjustment or part replacement, be sure to rearrange them neatly to restore properly in the same location as they were originally placed, or causing to produce a noise may occasionally occur.





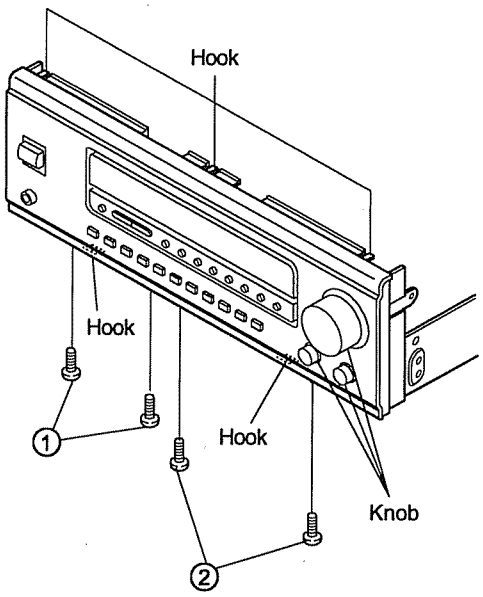


DISASSEMBLY

(To reassemble reverse disassembly)

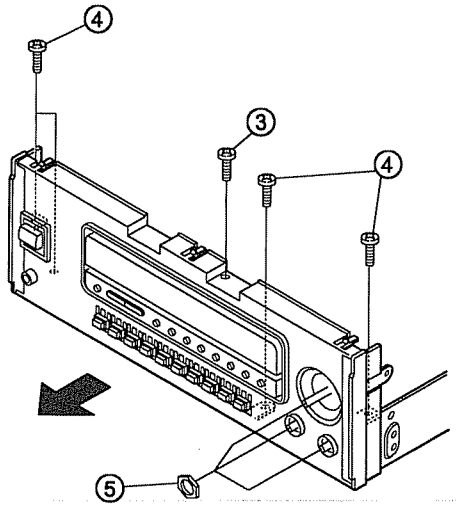
1. Front Aluminium Panel

1) Pull out 3 Knobs.
2) Remove 2 screws ① and 2 screws ②.
3) Unfasten 3 upper hooks and 2 below hooks.



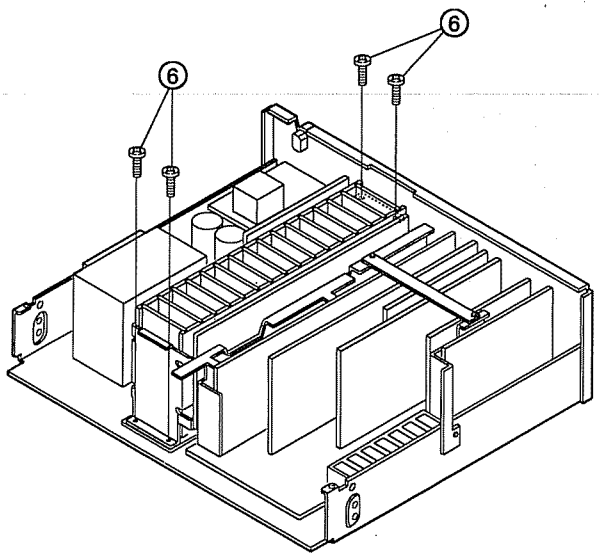
2. Front Mold Panel

1) Remove a screw ③ and 4 screws ④.
2) Remove 3 nuts ⑤.
3) Detach the Front Mold Panel in the arrow direction as it connects with connectors.

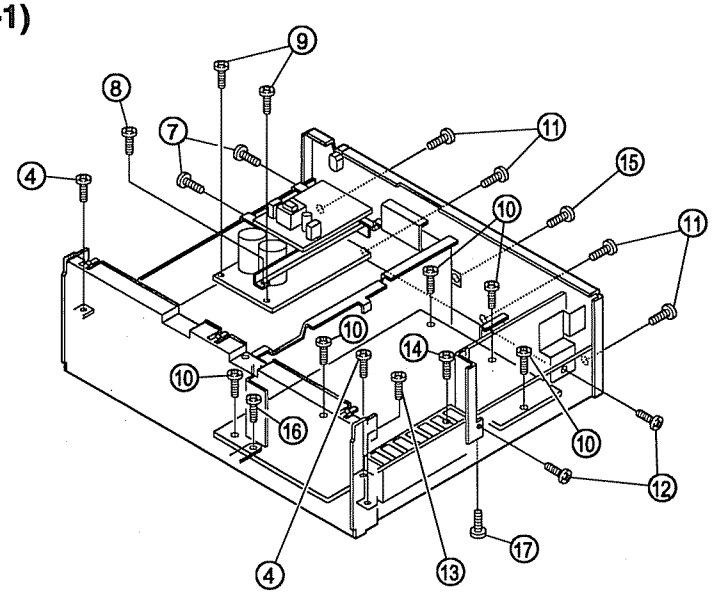


3. Power Amp. Unit

Remove 4 screws ⑥, then pull out the Power Amp. Unit upwards.



4. When Maintenance for Main Unit (1U-2994-1)



● In case the Power Supply is ON

1) Remove 2 screws ④ fixing the Front Mold Panel when detached the Front Aluminium Panel and the Power Amp. Unit.
2) Remove 3 screws ⑦ and ⑧ fixing the bracket.
3) Remove 2 screws ⑨ fixing the Power Supply Unit.
4) Remove 5 screws ⑩ fixing the Main Unit (1U-2994-1).
5) Remove 4 screws ⑪ fixing the Rear Panel.
6) Remove 2 screws ⑫ fixing the Tuner Unit.
7) Remove a screw ⑰.

Then separate the chassis only for maintenance.

● In case the Power Supply is OFF

1) Remove 7 screws ⑩ and ⑯, ⑰ fixing the Main Unit (1U-2994-1).
2) Remove 3 screws ⑪ and ⑮ fixing the Rear Panel.
3) Remove a screw fixing the Preout Unit (1U-2997-5) of the Rear Panel side, and two below screws.
4) Remove 4 screws fixing the SP terminal of the Rear Panel side and 2 screws fixing the AC Outlets.

Audio Section

Idling Current (1U-2995-2, 1U-2995-3)

Required measurement equipment : DC Voltmeter

Arrengement

(1) Avoid direct blow from an air conditioner or an electric fan, and adjust the unit at normal room tempereture 15 °C ~ 30 °C (59 °F ~ 86 °F).

(2) Presetting

- POWER (Power sourse switch) → OFF
- VOLUME (Volume control) → "---" : fully counterclockwise (◯ min.)
- BASS, TREBLE (Tone control) → FLAT: (Controls to center)
- SPEAKER-A (Speaker terminal) → No load (Do not connect speaker, dummy resistor, etc.)

Adjustment

(1) Remove top cover and set VR701, VR702, VR801 on 1U-2995-2 (Front Amp Unit) and VR901, VR902 on 1U-2995-3 (Surround Amp Unit) at counterclockwise (◯) fully.

(2) Connect DC Voltmeter to test points (FRONT-Lch: TP701, FRONT-Rch: TP702, CENTER ch: TP801, SURROUND-Lch: TP901, SURROUND-Rch: TP902).

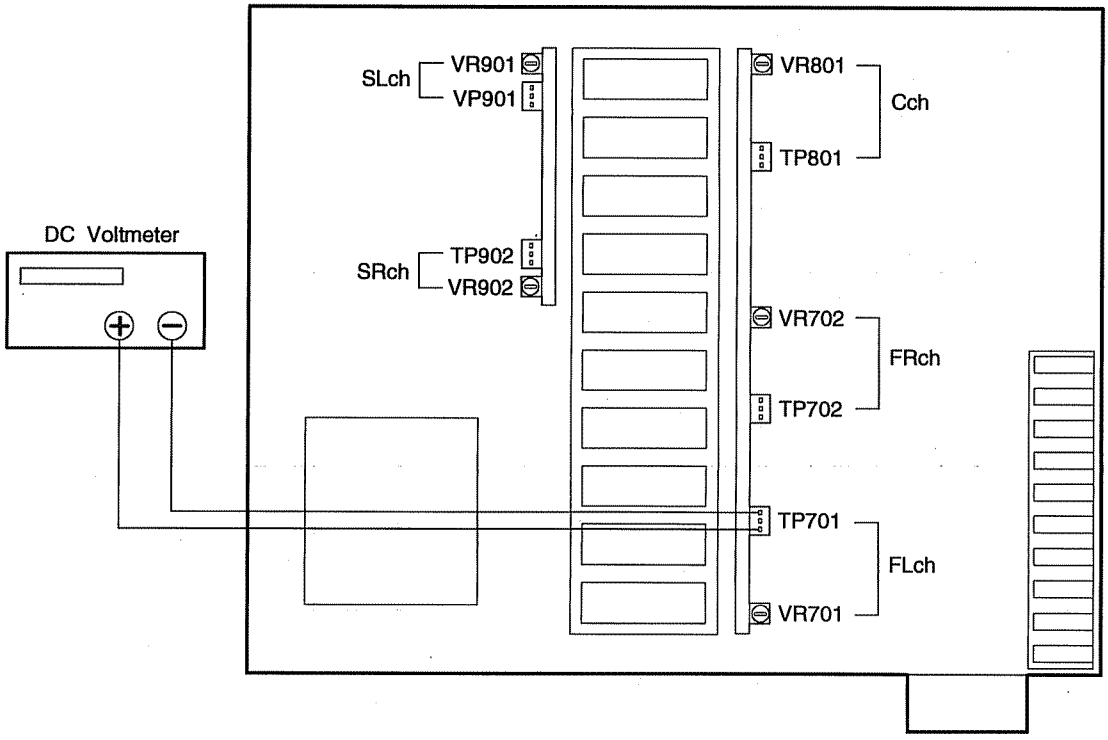
(3) Connect power cord to AC Line, and turn power switch "ON".

(4) Presetting. MODE : 5ch STEREO
FUNCTION : CD

(5) Allow 2 minutes, and turn VR701 clockwise (◯) and adjust the TEST POINTS voltage to 1.5 mV ±0.5 mV DC.

(6) After 10 minutes from preset, turn VR701 to set the voltage to 3 mV ±0.5 mV DC.

(7) Adjust the Variable Resistors of other channels in the same way.



Confirming for Digital Block (1U-2998-1)

When the unit is in normal operation, the digital signals provide as shown in figure and confirm the test points with corresponding waveforms.

When the RF signal is fed.

Horizontal: 0.5 mS/div

Confirm the normal communication waveforms (Fig.5) at 89Pin, 87Pin and 3Pin of IC457 which is fed from the microcomputer with serial data communication control.

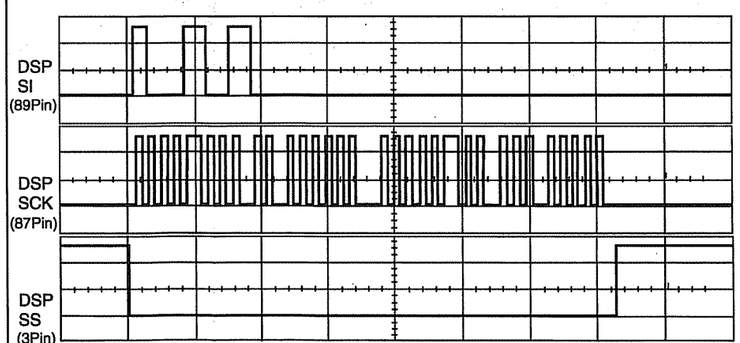

fig.5 (The DSPSI signal is a reference data)

FUNCTION OF NEW CIRCUIT

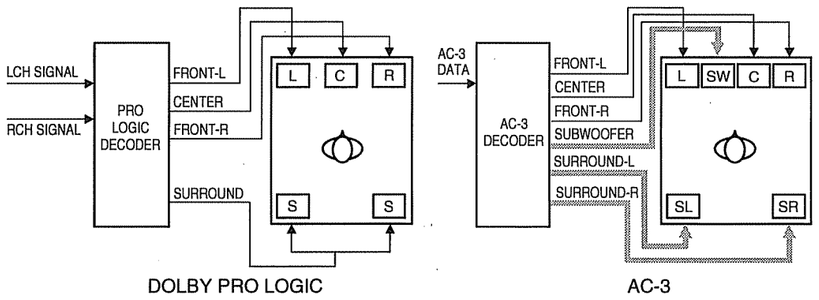
Circuit Description

DOLBY AC-3

DOLBY AC-3 is a format of new surround signal reproduces maximum 5 channels, i. e. FRONT-LEFT, -RIGHT, CENTER and SURROUND-LEFT, -RIGHT ;plus exclusive subwoofer signal (0.1 ch), totally 5.1 channels from the exclusive digital signal. Following is the featuring points of AC-3.

(1) Makes surround channel into stereo.
(2) Provides optimum separation due to independent processing of each channel signal.
(AC-3: More than 80 dB, PRO LOGIC: Approx. 25~40 dB)
(3) Resultant surpassed orientation feeling and movement feeling obtained from uniform frequency characteristic.
(AC-3: 20Hz~20kHz all channels, PRO LOGIC: 20 Hz~20 kHz FRONT, CENTER channels 20 Hz~7 kHz SURROUND channels)
(4) With the high-efficient signal coding technique, one digital cable permits transmission maintaining the above features.

Comparative Diagram of PRO LOGIC and AC-3



Two kinds of input signals: one corresponds "AC-3RF" signal emitting from LD player; the other is universal optical or coaxial digital format "IEC958" over lapped with "AC-3 exclusive" digital signal. AC-3RF signal is connected via the terminals "AC-3RF OUT" equipped with AC-3 corresponding LD player and "AC-3RF" input of AVR3200 with a general coaxial digital cable. An applied signal to AVR3200 goes through demodulator IC(IC308), delivered to DSP (IC457) through input selector (IC303), and executed decode processing of AC-3.
The other one is connected in the same way as universal optical or coaxial digital signal. AVR3200 corresponds with automatic shifting of AC-3 and other signal (PCM) according to input signal.
The signal of each input terminal is delivered to selector (IC303) and applied the same process as to AC-3RF afterward.
AC-3 data and PCM data are transmitted with a common line.

DSP (IC457) performs AC-3 decoding process, DOLBY PRO LOGIC process and PCM digital process and PCM digital process by shifting. Decoded signal to each channel after passed through DSP1 (IC457) is D/A converted and delivered to volume control.

Block Diagram of AC-3, PCM Input Section (1U-2998)

50	P80	TUNER MUTE	O	P	Id	—	H	H	Tuner mute output. (H: Mute)
51	P81	CINEMA EQ	O	P	Id	—	L	H	Cinema Eq control output. (H: ON)
52	P82	EXP CLK	O	P	Id	—	L	L	I/O Expander control output. (TC4094)
53	P83	EXP DATA	O	P	Id	—	L	L	I/O Expander control output. (TC4094)
54	P84	EXP ST	O	P	Id	—	L	L	I/O Expander control output. (TC4094)
55	P85	EXP OE	O	P	Id	—	L	L	I/O Expander control output. (TC4094)
56	P86	POWER	O	P	Id	—	L	H	Power supply relay control output. (H: ON)
57	P87	AC-3 MUTE	O	P	Id	—	L	H	Digital mute control terminal (L: AC-3).
58	P90	OVL	I	—	—	—	L	—	Over load detecting input. (H: Over load)
59	P91	AC-3 DET.	I	—	—	—	L	—	AC-3 decode data input terminal. (L: AC-3 decode)
60	P92	NC	I	P	Id	—	L	L	No connection.
61	P93	NC	I	P	Id	—	L	L	No connection.
62	P94	NC	I	P	Id	—	L	L	No connection.
63	P95	CSI	I	—	—	—	L	—	DIR control input terminal. (CS8412) (H: PCM)
64	P96	ERR	I	—	—	—	L	—	DIR control input terminal. (CS8412) (H: ERR)
65	P97	NC	I	P	Id	—	L	L	No connection.
66	VKK	VKK	I	—	—	—	—	—	Connect to ground.
67	P40/KEY0	S-MONITOR DET.	I	—	Eu	Lv	Z	—	Judgment whether S monitor is connected or not. (L: Connecting)
68	P41/KEY1	S-SIGNAL DET.	I	—	Eu	Lv	Z	—	S signal input control. (H: S signal input)
69	P42/KEY2	OSD SYNC DET.	I	—	Eu	Lv	Z	—	OSD sync switching signal. (H: External sync)
70	P43/KEY3	MVOL SELB	I	—	Eu	Lv	Z	H	Master volume setting signal. (Rotary encode)
71	P44/KEY4	MVOL SELA	I	—	Eu	Lv	Z	H	Master volume setting signal. (Rotary encode)
72	P45/KEY5	NC	O	—	—	Lv	Z	L	
73	P46/CIN5	MODE	I	—	Eu	Lv	Z	—	Connect to GND.
74	P47/CIN4	KEY5	I	—	Eu	Lv	Z	H	Key input 5.
75	P50/CIN3	KEY4	I	—	Eu	Lv	Z	H	Key input 4.
76	P51/CIN2	KEY3	I	—	Eu	Lv	Z	H	Key input 3.
77	P52/CIN1	KEY2	I	—	Eu	Lv	Z	H	Key input 2.
78	P53/CIN0	KEY1	I	—	Eu	Lv	Z	H	Key input 1.
79	P54	SUB SYNC 1	I	—	Eu	Lv	Z	H	SUB microcomputer sync input.
80	P55/PMW	SO/ZORAN	I	—	Eu	Lv	Z	H	DSP data input terminal. (ZR38600)

NOTE:

Pin No. : Terminal number of microcomputer.
Port Name : The name entered in the data sheet of microcomputer.
Symbol : Symbolized interface function.
I/O : Input or out of part.
- "I" = Input port
- "O" = Output port

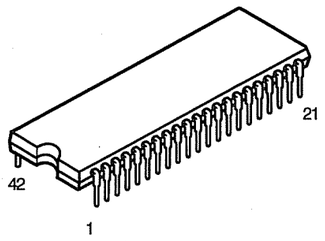
Type : Composition of port in case of output port.
- "C" = CMOS output
- "N" = NMOS open drain output
- "P" = PMOS open drain output

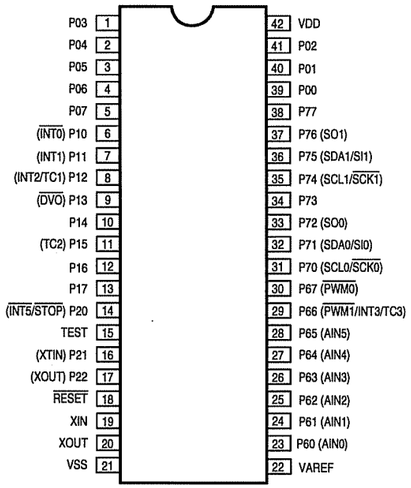
Op : Pull up/Pull down selection information.
- "Iu" = Inner microcomputer pull up
- "Id" = Inner microcomputer pull down
- "Eu"= External microcomputer pull up
- "Ed"= External microcomputer pull down

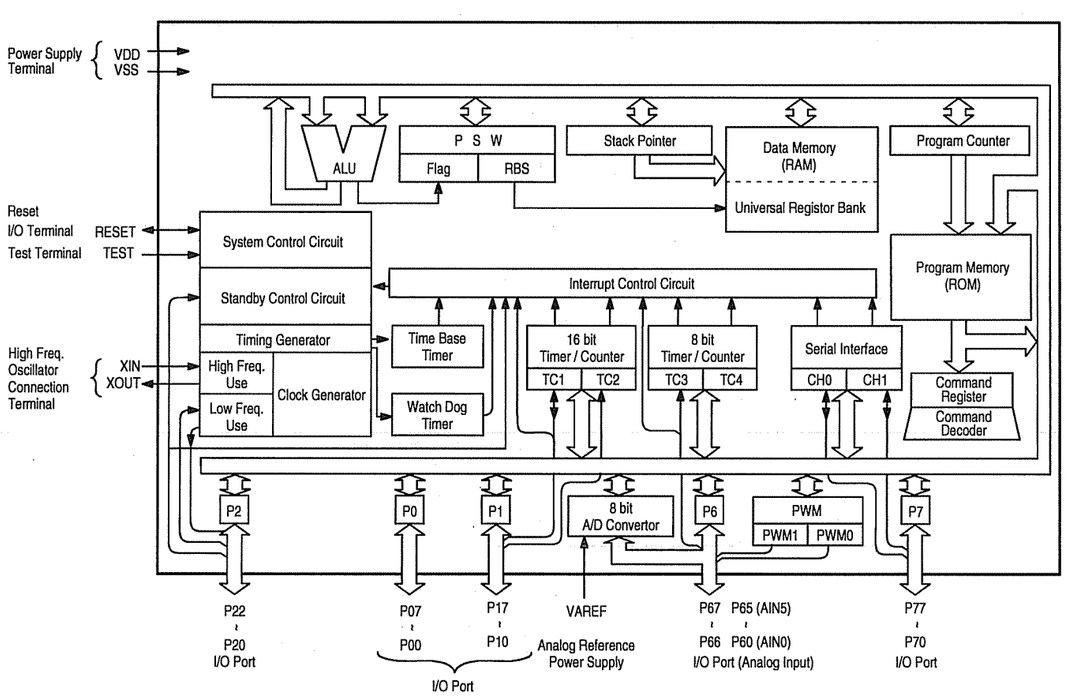
Det : Indicates judging state of input port. Level detection is "LV"; Edge detection is "Ed"; Detection by both shifting is "E&L"; Serial data detection is "S" (Serial data output is also "S").
Res : State at reset.
- "H" = Outputs High Level at reset
- "L" = Outputs Low Level at reset
- "Z" = Becomes High impedance mode at reset

Ini : Initial output state.
Function : Function and logical level explanation of signals to be interface.

TMP87CM43N-*** (DS: IC307)







TMP87CM43N-*** Terminal Function

Pin No.	Port Name	Symbol	I/O	Type	Op	Det	Res	Ini	Function
1	P03	DSP POWER	O	C	—	—	L	L	DSP power supply control output (H: ON).
2	P04	DSP RES(ZORAN)	O	C	—	—	Z	H	DSP control terminal (ZR38600) (L: reset).
3	P05	DSP DATA	O	C	—	S	Z	H	DSP control terminal (ZR38600).

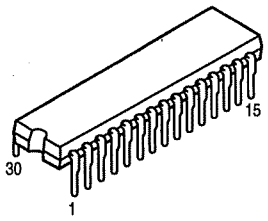
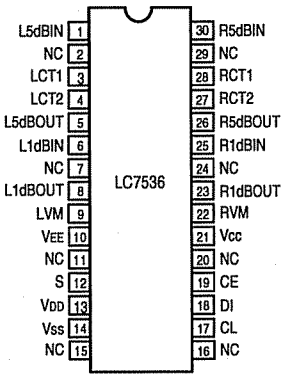
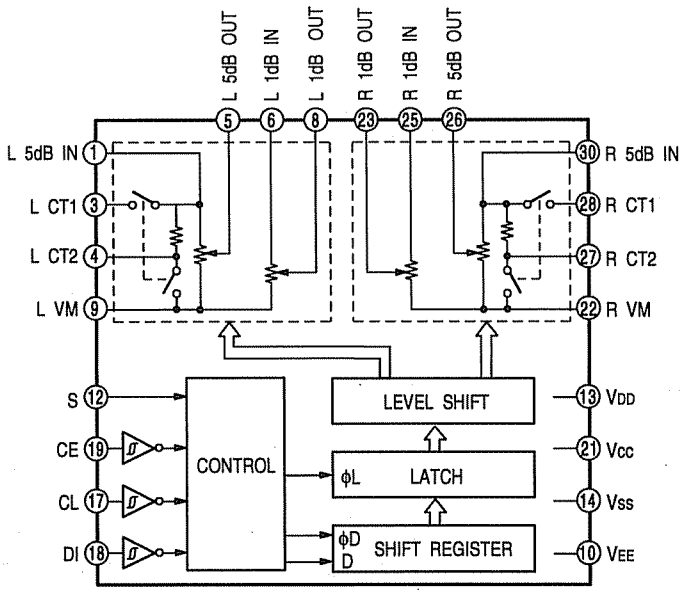
16	P21/XTIN		I	—	—	—	Z	L	Open, or connect with GND.
17	P22/XT0		I	—	—	—	Z	L	Open, or connect with GND.
18	RESET	RESET	I	—	Eu	Lv	L	—	Reset input.
19	XIN	XIN	I	—	—	—	—	—	Oscillator circuit (4 MHz).
20	XOUT	XOUT	O	—	—	—	—	—	Oscillator circuit (4 MHz).
21	VSS	VSS	I	—	GND	—	—	—	Connect with GND.
22	VAREF	VAREF	I	—	GND	—	—	—	Connect with GND.
23	P60		I	—	—	—	Z	L	Open, or connect with GND.
24	P61		I	—	—	—	Z	L	Open, or connect with GND.
25	P62		I	—	—	—	Z	L	Open, or connect with GND.
26	P63		I	—	—	—	Z	L	Open, or connect with GND.
27	P64		I	—	—	—	Z	L	Open, or connect with GND.
28	P65		I	—	—	—	Z	L	Open, or connect with GND.
29	P66		I	—	—	—	Z	L	Open, or connect with GND.
30	P67		I	—	—	—	Z	L	Open, or connect with GND.
31	P70/SCL	SCL	I	—	Eu	S	Z	—	MAIN-SUB microcomputer communication control terminal.
32	P71/SDA	SDA	I	—	Eu	S	Z	—	MAIN-SUB microcomputer communication control terminal.
33	P72	SUB SYNC1	O	N	Eu	—	Z	H	SUB microcomputer sync output.
34	P73		I	—	Eu	Lv	Z	—	Detect for stoping power supply (L: stoping power supply).
35	P74		I	—	—	—	Z	L	Open, or connect with GND.
36	P75		I	—	—	—	Z	L	Open, or connect with GND.
37	P76		I	—	—	—	Z	L	Open, or connect with GND.
38	P77		I	—	—	—	Z	L	Open, or connect with GND.
39	P00	DEMOD RES	O	C	—	—	Z	H	Demodulator reset control terminal (L: reset).
40	P01	DEMOD POWER	O	C	—	—	Z	L	Demodulator POWER ON/OFF control terminal (H: ON).
41	P02	DEMOD ON	O	C	—	—	Z	L	Demodulator oscillating control terminal (H: oscillating).
42	VDD	VDD	I	—	—	—	Z	—	Connect with +5V.

LC7536
(EV: IC101, 107, 108)



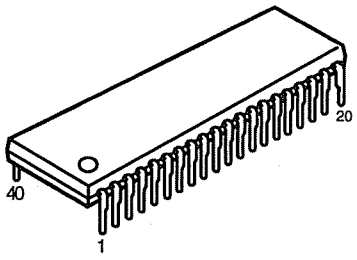


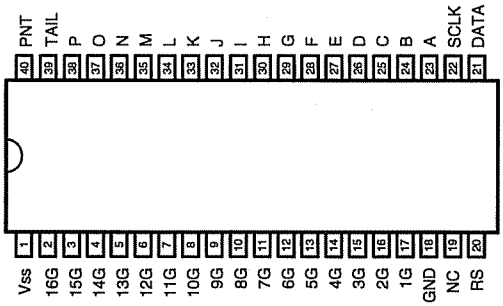


LC7536 Terminal Function

Pin No.	Symbol	I/O	Function
1	L 5dB IN	I	Input terminal for 5dB step attenuator, it should be driven with low impedance path.
2	NC	–	No connection.
3	L CT1		For loudness control, connect a capacitor between CT1 and 5dB IN with high frequency compensation, and also connect a capacitor between CT2 and Vm with low frequency compensation.
4	L CT2		
5	L 5dBOUT	O	Output terminal for 5dB step attenuator with approx. 1Mohm load impedance.
6	L 1dBIN	I	Input terminal for 1dB step attenuator, it should be driven with low impedance.
7	NC	–	No connection.
8	L 1dBOUT	O	Output terminal for 1dB step attenuator with approx. 47kohm ~ 1Mohm load impedance.
9	L VM		Common terminal for volume control.
10	VEE	I	Connect to power supply.
11	NC	–	No connection.
12	S		Selection terminal for address code during data format.
13	VDD	I	Connect to power supply (Pay attention to the rising time so that Vcc does rise up faster than VDD when the power turns).
14	Vss	I	Connect to power supply.
15	NC	–	No connection.
16	NC	–	No connection.
17	CL	I	Input terminal for controlling LC7536 serial data with 0 ~ 5V amplitude.
18	DI		
19	CE		
20	NC	–	No connection.
21	Vcc	I	Connect power supply (Pay attention to the rising time so that Vcc does not rise up faster than VDD when the power turns).
22	R VM		Common terminal for volume control.
23	R 1dBOUT	O	Output terminal for 1dB step attenuator with approx. 47kohm ~ 1Mohm load impedance.
24	NC	–	No connection.
25	R 1dBIN	I	Input terminal for 1dB step attenuator, it should be driven with low impedance.
26	R 5dBOUT	O	Output terminal for 5dB step attenuator with approx. 1Mohm load impedance.
27	R CT2		For loudness control, connect a capacitor between CT1 and 5dBIN with high frequency compensation, and also connect a capacitor between CT2 and Vm with low frequency compensation.
28	R CT1		
29	NC	–	No connection.
30	R SdBIN	I	Input terminal for 5dB step attenuator, it should be driven with low impedance path.

MSC1937-03RS
(VI: IC102)

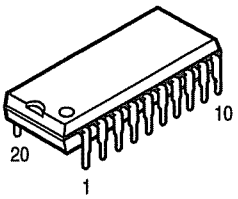


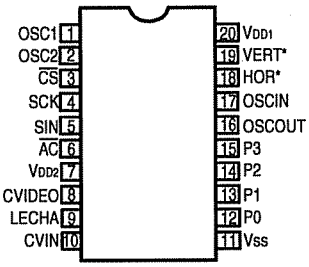


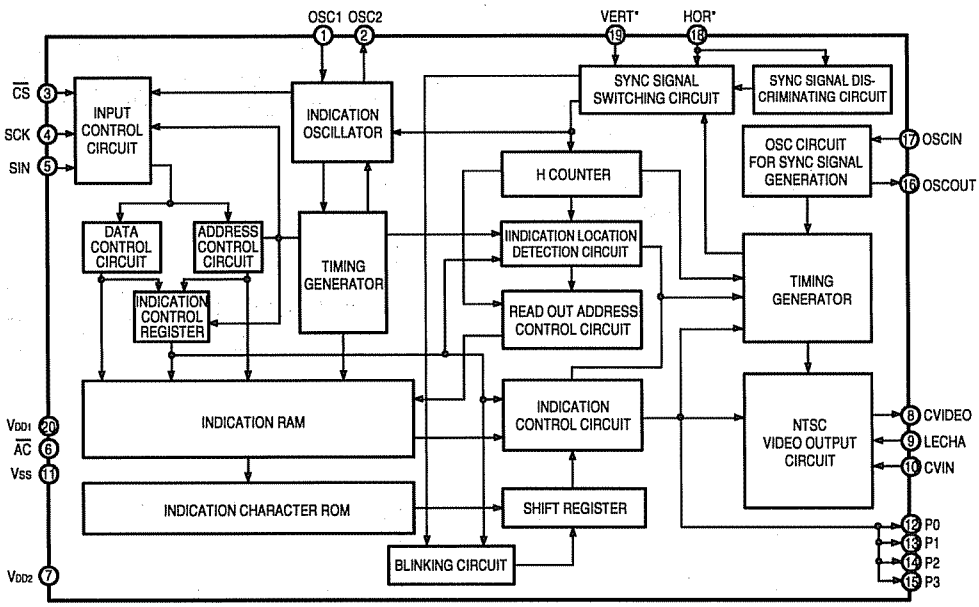
MSC1937-03RS Terminal Function

Pin No.	Symbol	I/O	Function
1	Vss	–	Power supply (+5V).
2	16G	O	Digit 16 output.
3	15G	O	Digit 15 output.
4	14G	O	Digit 14 output.
5	13G	O	Digit 13 output.
6	12G	O	Digit 12 output.
7	11G	O	Digit 11 output.
8	10G	O	Digit 10 output.
9	9G	O	Digit 9 output.
10	8G	O	Digit 8 output.
11	7G	O	Digit 7 output.
12	6G	O	Digit 6 output.
13	5G	O	Digit 5 output.
14	4G	O	Digit 4 output.
15	3G	O	Digit 3 output.
16	2G	O	Digit 2 output.
17	1G	O	Digit 1 output.
18	GND	–	Ground.
19	NC	–	No connection.
20	RS	I	POWER-ON-RESET. (H: RESET)
21	DATA	I	Data input.
22	SCLK	I	Shift clock input.
23	A	O	Seg,ent A output.
24	B	O	Segment B output.
25	C	O	Segment C output.
26	D	O	Segment D output.
27	E	O	Segment E output.
28	F	O	Segment F output.
29	G	O	Segment G output.
30	H	O	Segment H output.
31	I	O	Segment I output.
32	J	O	Segment J output.
33	K	O	Segment K output.
34	L	O	Segment L output.
35	M	O	Segment M output.
36	N	O	Segment N output.
37	O	O	Segment O output.
38	P	O	Segment P output.
39	TAIL	–	No connection.
40	PNT	O	Point output.

M35015-204SP
(VI: IC303)



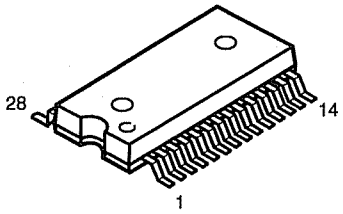


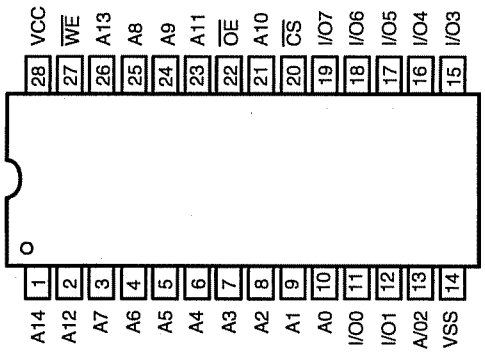


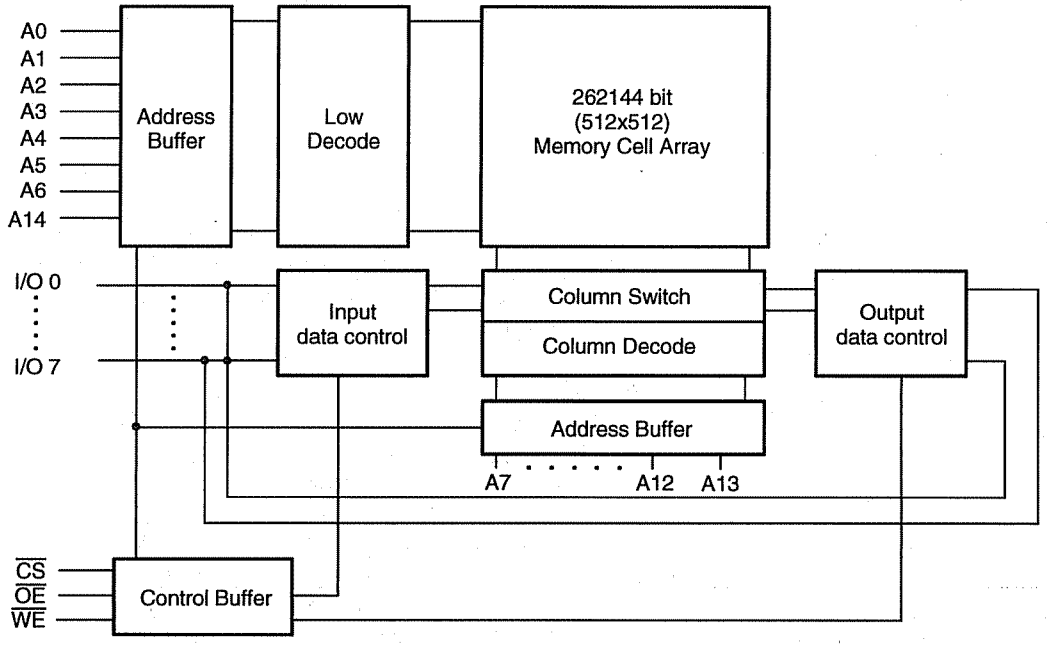
M35015-204SP Terminal Function

Pin No.	Symbol	Name	I/O	Function
1	OSC1	Osc. circuit ext. terminal.	I	External terminal for indication oscillator circuit. Standard OSC. freq. is approx. 7MHz.
2	OSC2		O	With this OSC. freq., decides horizontal indicatin and character width.
3	$\overline{CS}$	Chip select input	I	Chip select terminal and turns to "L" when transfer serial data. Hysteresis input. Pull up resistor is built-in.
4	SCK	Serial clock input	I	Takes in serial data of SIN at SCK rise when CS terminal is in "L". Hysteresis input. Pull up rersist is built-in.
5	SIN	Serial data input	I	Serial input of register for indication control and data, and address for indication data memory. Hysteresis input. Pull up rersistor is built-in.
6	$\overline{AC}$	Auto-clear input	I	Resets internal circuit of IC at "L" mode. Hysteresi input. Pull up resistor is built-in.
7	V_{DD2}	Power supply	—	Power supply terminal of analog system. Connect to +5V.
8	CVIDEO	Combined video output	O	Output terminal of combined video signal. Outputs 2Vp-p combined signal. Character output, etc. Overlap CVIN signal and outputs at superimpose.
9	LECHA	Character level input	I	Input terminal deciding character output level in combined video signal. color of character is white.
10	CVIN	Combined video input	I	Input terminal of external combined video signal. Character output etc. overlap this external combined video signal.
11	Vss	Ground	—	Ground terminal. Connect to GND.
12	P0	Output port p0	O	General output or character background signal BL NK1* output is switchable. Polarity can be selected at ROM mask.
13	P1	Output port P1	O	General output or character background signal CO1* output is switchable. Polarity can be selected at ROM mask.
14	P2	Output port P2	O	General output or character background signal BLNK2* output is switchable. Polarity can be selected at ROM mask.
15	P3	Output port P3	O	General output or character background signal CO2* output is switchable. Polarity can be selected at ROM mask.
16	OSCOUT	Ext. terminal for sync sig. OSC. Circuit	O	Terminal for external use of sync signal OSC. circuit. Use the freq.: 14.32MHz at NTSC system, 17.73MHz at PAL. system, 14.30MHz at MPAL system.
17	OSCIN		I	
18	HOR*	Horizontal sync signal	I	Inputs horizontal sync signal. Hysteresis input.
19	VERT*	Vertical sync signal	—	Input vertical sync signal. Hysteresis input. Polarity can be selected at ROM mask.
20	V_{DD1}	Power supply	I	Power supply terminal of digital system. Connect to +5V.

BR62256F-70LL
(AU: IC306)







BR62256F-70LL Terminal Function

Pin No.	Symbol	I/O	Function
1~10	A0~A7, A12, A14	I	32K byte memory address input.
11~13	I/O0~I/O2	I/O	8 bit data input/output.
14	Vss	—	GND
15~19	I/O3~I/O7	I/O	8 bit data input/output.
20	$\overline{CS}$	I	Chip select control input.
21	A10	I	32K byte memory address input.
22	$\overline{OE}$	I	Output enable control input.
23~26	A8, A9, A11, A13	I	32K byte memory address input.
27	$\overline{WE}$	I	Write enable control input.
28	Vcc	—	+5V power supply.

PM4007A

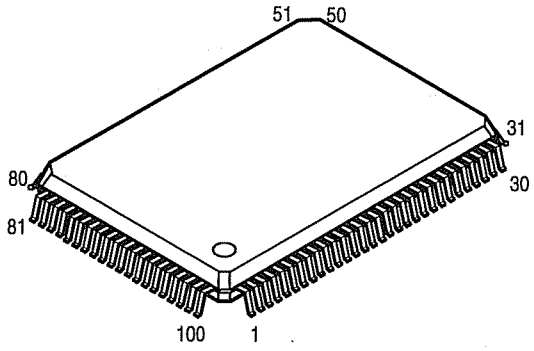
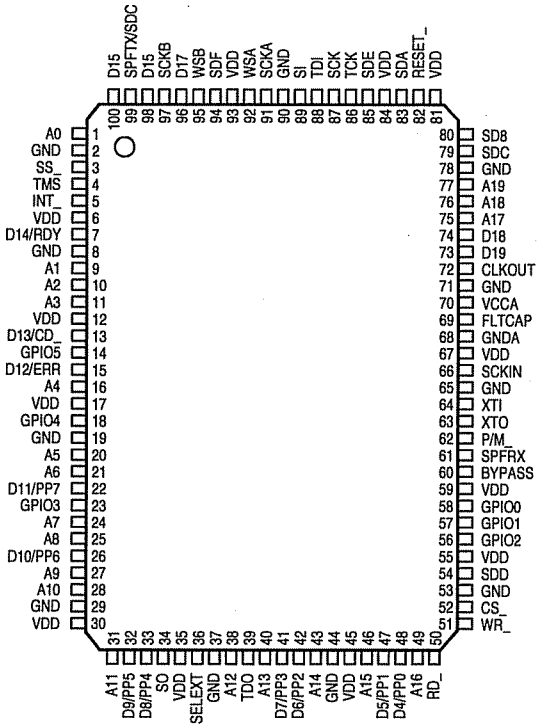
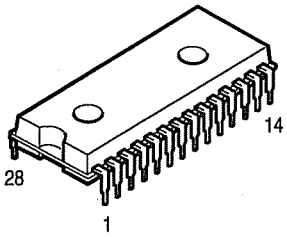
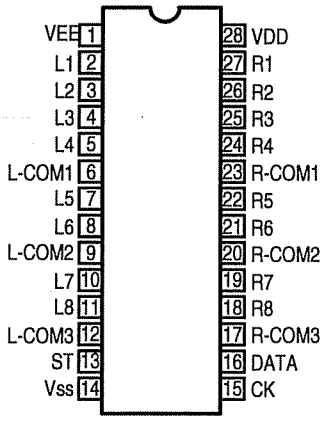
ZR38600 (AU: IC457)

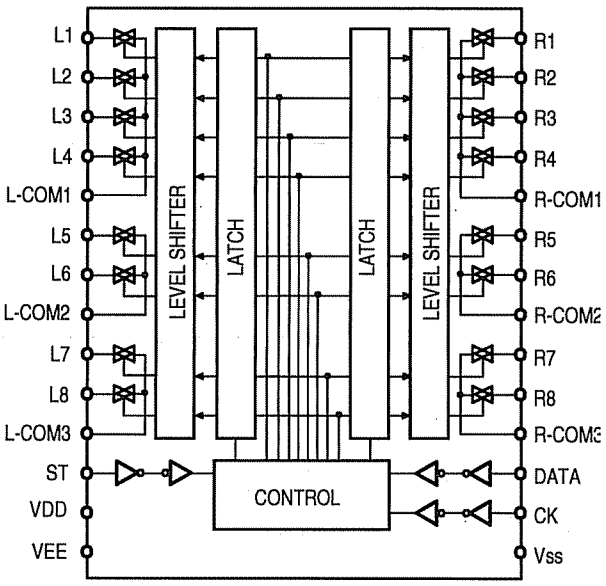




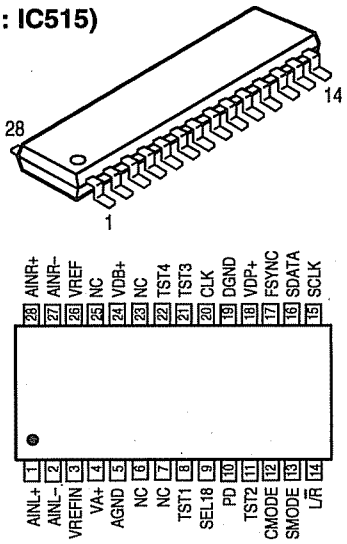
NJU7313AL (AU: IC704)

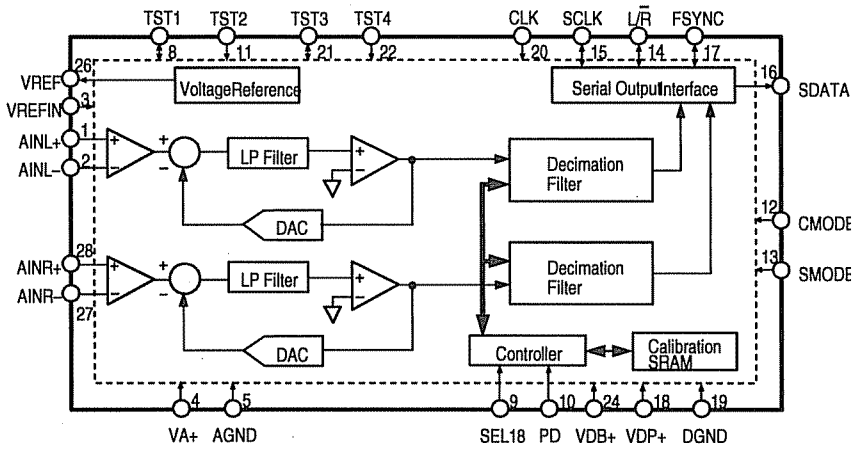






AK5340VS
(AU: IC515)





AK5340VS Terminal Function

Pin No.	Symbol	I/O	Function
1	AINL+	I	L ch analog non inverting input.
2	AINL–	I	L ch analog inverting input.
3	VREFIN	I	Reference voltage input.
4	VA+	—	Analog +5V power supply.
5	AGND	—	Analog ground.
6	NC		No connection.
7	NC		No connection.
8	TST1		Test terminal, open or connect to DGND.
9	SEL18	I	Output data length selecting terminal (built in pull down resistance) (L: 16 bit, H: 18 bit).
10	PD	I	Power down signal (H: Power down).
11	TST2		Test terminal, open or connect to DGND.
12	CMODE	I	Master clock selecting terminal. L: CLK = 256fs (12.288MHz @fs = 48kHz) H: CLK = 384fs (18.432MHz @fs = 48kHz)
13	SMODE	I	Interface clock selecting terminal (L: Slave mode, H: Master mode).
14	L/R	I/O	Input channel selecting terminal. Slave mode: fs clock input. Master mode: fs clock output.
15	SCLK	I/O	Serial data clock terminal. Slave mode: 32fs ~ 64fs clock input. Master mode: 64fs clock output.
16	SDATA	O	Serial data output terminal, data sequence output from MSB with 2's complement.
17	FSYNC	I/O	Frame sync clock terminal. Slave mode: Enable SDATA output at H. Master mode: 2fs clock output.
18	VDP+	—	Digital +5V power supply.
19	DGND	—	Digital ground.
20	CLK	I	Master clock input terminal. CMODE = "H" = 384fs CMODE = "L" = 256fs
21	TST3		Test terminal, open or connect to DGND.
22	TST4		Test terminal, open or connect to DGND.
23	NC		No connection.
24	VDB+	—	Digital +5V power supply.
25	NC		No connection.
26	VREF	O	Reference voltage output.
27	AINR–	I	R ch analog inverting input.
28	AINR+	I	R ch analog non inverting input.

Note: All other terminals except the above are no connection (NC). NC terminals are not bonded internally.

NOTE FOR PARTS LIST

- Part indicated with the mark "⊙" are not always in stock and possibly to take a long period of time for supplying, or in some case supplying of part may be refused.
- When ordering of part, clearly indicate "1" and "I" (i) to avoid mis-supplying.
- Ordering part without stating its part number can not be supplied.
- Part indicated with the mark "★" is not illustrated in the exploded view.
- Not including Carbon Film ±5%, 1/4W Type in the P.W.Board parts list. (Refer to the Schematic Diagram for those parts.)

WARNING:
Parts marked with this symbol ⚠ ▬ have critical characteristics.
Use ONLY replacement parts recommended by the manufacturer.

● Resistors

Ex.: RN (Type) 14K (Shape and performance) 2E (Power) 182 (Resistance) G (Allowable error) FR (Others)

RD : Carbon	2B : 1/8W	F : ±1%	P : Pulse-resistant type
RC : Composition	2E : 1/4W	G : ±2%	NL : Low noise type
RS : Metal oxide film	2H : 1/2W	J : ±5%	NB : Non-burning type
RW : Winding	3A : 1W	K : ±10%	FR : Fuse-resistor
RN : Metal film	3D : 2W	M : ±20%	F : Lead wire forming
RK : Metal mixture	3F : 3W		
	3H : 5W		

∗ Resistance

1 8 2 ⇒ 1800 ohm = 1.8 kohm
Indicates number of zeros after effective number.
2-digit effective number.
• Units: ohm

1 R 2 ⇒ 1.2 ohm
1-digit effective number.
2-digit effective number, decimal point indicated by R.
• Units: ohm

● Capacitors

Ex.: CE (Type) 04W (Shape and performance) 1H (Dielectric strength) 2R2 (Capacity) M (Allowable error) BP (Others)

CE : Aluminum foil electrolytic	0J : 6.3V	F : ±1%	HS : High stability type
CA : Aluminum solid electrolytic	1A : 10V	G : ±2%	BP : Non-polar type
CS : Tantalum electrolytic	1C : 16V	J : ±5%	HR : Ripple-resistant type
CQ : Film	1E : 25V	K : ±10%	DL : For change and discharge
CK : Ceramic	1V : 35V	M : ±20%	HF : For assuring high frequency
CC : Ceramic	1H : 50V	Z : +80% −20%	U : UL part
CP : Oil	2A : 100V	P : +100% −0%	C : CSA part
CM : Mica	2B : 125V	C : ±0.25pF	W : UL-CSA type
CF : Metallized	2C : 160V	D : ±0.5pF	F : Lead wire forming
CH : Metallized	2D : 200V	= : Others	
	2E : 250V		
	2H : 500V		
	2J : 630V		

∗ Capacity (electrolyte only)

2 2 2 ⇒ 2200μF
Indicates number of zeros after effective number.
2-digit effective number.
• Units: μF.

2 R 2 ⇒ 2.2μF
1-digit effective number.
2-digit effective number, decimal point indicated by R.
• Units: μF.

∗ Capacity (except electrolyte)

2 2 2 ⇒ 2200pF=0.0022μF
(More than 2) — Indicates number of zeros after effective number.
2-digit effective number.
• Units: pF.

2 2 1 ⇒ 220pF
(0 or 1) — Indicates number of zeros after effective number.
2-digit effective number.
• Units: pF.

• When the dielectric strength is indicated in AC, "AC" is included after the dieelectric strength value.

NOTES
ALL RESISTANCE VALUES IN OHM. k=1,000 OHM, M=1,000,000 OHM
ALL CAPACITANCE VALUES IN MICRO FARAD. P=MICRO-MICRO FARAD
EACH VOLTAGE AND CURRENT ARE MEASURED AT NO SIGNAL INPUT CONDITION.
CIRCUIT AND PARTS ARE SUBJECT TO CHANGE WITHOUT PRIOR NOTICE.

WARNING:
Parts marked with this symbol ⚠ have critical characteristics.
Use ONLY replacement parts recommended by the manufacturer.

CAUTION:
Before returning the unit to the customer, make sure you make either (1) a leakage current check or (2) a line to chassis resistance check. If the leakage current exceeds 0.5 milliamps, or if the resistance from chassis to either side of the power cord is less than 240 kohms, the unit is defective.

WARNING:
DO NOT return the unit to the customer until the problem is located and corrected.

NOTES
ALL RESISTANCE VALUES IN OHM. k=1,000 OHM, M=1,000,000 OHM
ALL CAPACITANCE VALUES IN MICRO FARAD. P=MICRO-MICRO FARAD
EACH VOLTAGE AND CURRENT ARE MEASURED AT NO SIGNAL INPUT CONDITION.
CIRCUIT AND PARTS ARE SUBJECT TO CHANGE WITHOUT PRIOR NOTICE.

WARNING:
Parts marked with this symbol ⚠ have critical characteristics.
Use ONLY replacement parts recommended by the manufacturer.

CAUTION:
Before returning the unit to the customer, make sure you make either (1) a leakage current check or (2) a line to chassis resistance check. If the leakage current exceeds 0.5 milliamps, or if the resistance from chassis to either side of the power cord is less than 240 kohms, the unit is defective.

WARNING:
DO NOT return the unit to the customer until the problem is located and corrected.
