## SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

### LEAKAGE CURRENT CHECK

Before returning the unit to the customer, make sure you make either (1) a leakage current check or (2) a line to chassis resistance check. If the leakage current exceeds 0.5 millamps, or if the resistance from chassis to either side of the power cord is less than 460 kohms, the unit is defective.

## CAUTION

Please heed the points listed below during servicing and inspection.

#### ○ Heed the cautions!

Spots requiring particular attention when servicing, such as the cabinet, parts, chassis, etc., have cautions indicated on labels. Be sure to heed these cautions and the cautions indicated in the handling instructions.

#### ○ Caution concerning electric shock!

- (1) An AC voltage is impressed on this set, so touching internal metal parts when the set is energized could cause electric shock. Take care to avoid electric shock, by for example using an isolating transformer and gloves when servicing while the set is energized, unplugging the power cord when replacing parts, etc.
- (2) There are high voltage parts inside. Handle with extra care when the set is energized.

#### ○ Caution concerning disassembly and assembly!

Through great care is taken when manufacturing parts from sheet metal, there may in some rare cases be burrs on the edges of parts which could cause injury if fingers are moved across them. Use gloves to protect your hands.

#### ○ Only use designated parts!

The set's parts have specific safety properties (fire resistance, voltage resistance, etc.). For replacement parts, be sure to use parts which have the same properties. In particular, for the important safety parts that are marked  on wiring diagrams and parts lists, be sure to use the designated parts.

#### ○ Be sure to mount parts and arrange the wires as they were originally!

For safety reasons, some parts use tape, tubes or other insulating materials, and some parts are mounted away from the surface of printed circuit boards. Care is also taken with the positions of the wires. Some clamps are used to keep wires away from heating and high voltage parts, so be sure to set everything back as it was originally.

#### ○ Inspect for safety after servicing!

Check that all screws, parts and wires removed or disconnected for servicing have been put back in their original positions, inspect that no parts around the area that has been serviced have been negatively affected, conduct an insulation check on the external metal connectors and between the blades of the power plug, and otherwise check that safety is ensured.

(Insulation check procedure)

Unplug the power cord from the power outlet, disconnect the antenna, plugs, etc., and turn the power switch on. Using a 500V insulation resistance tester, check that the input and the externally exposed metal parts (antenna terminal, headphones terminal, input terminal, etc.) is 1MΩ or greater. If it is less, the set must be inspected and repaired.

## CAUTION

### Concerning important safety parts

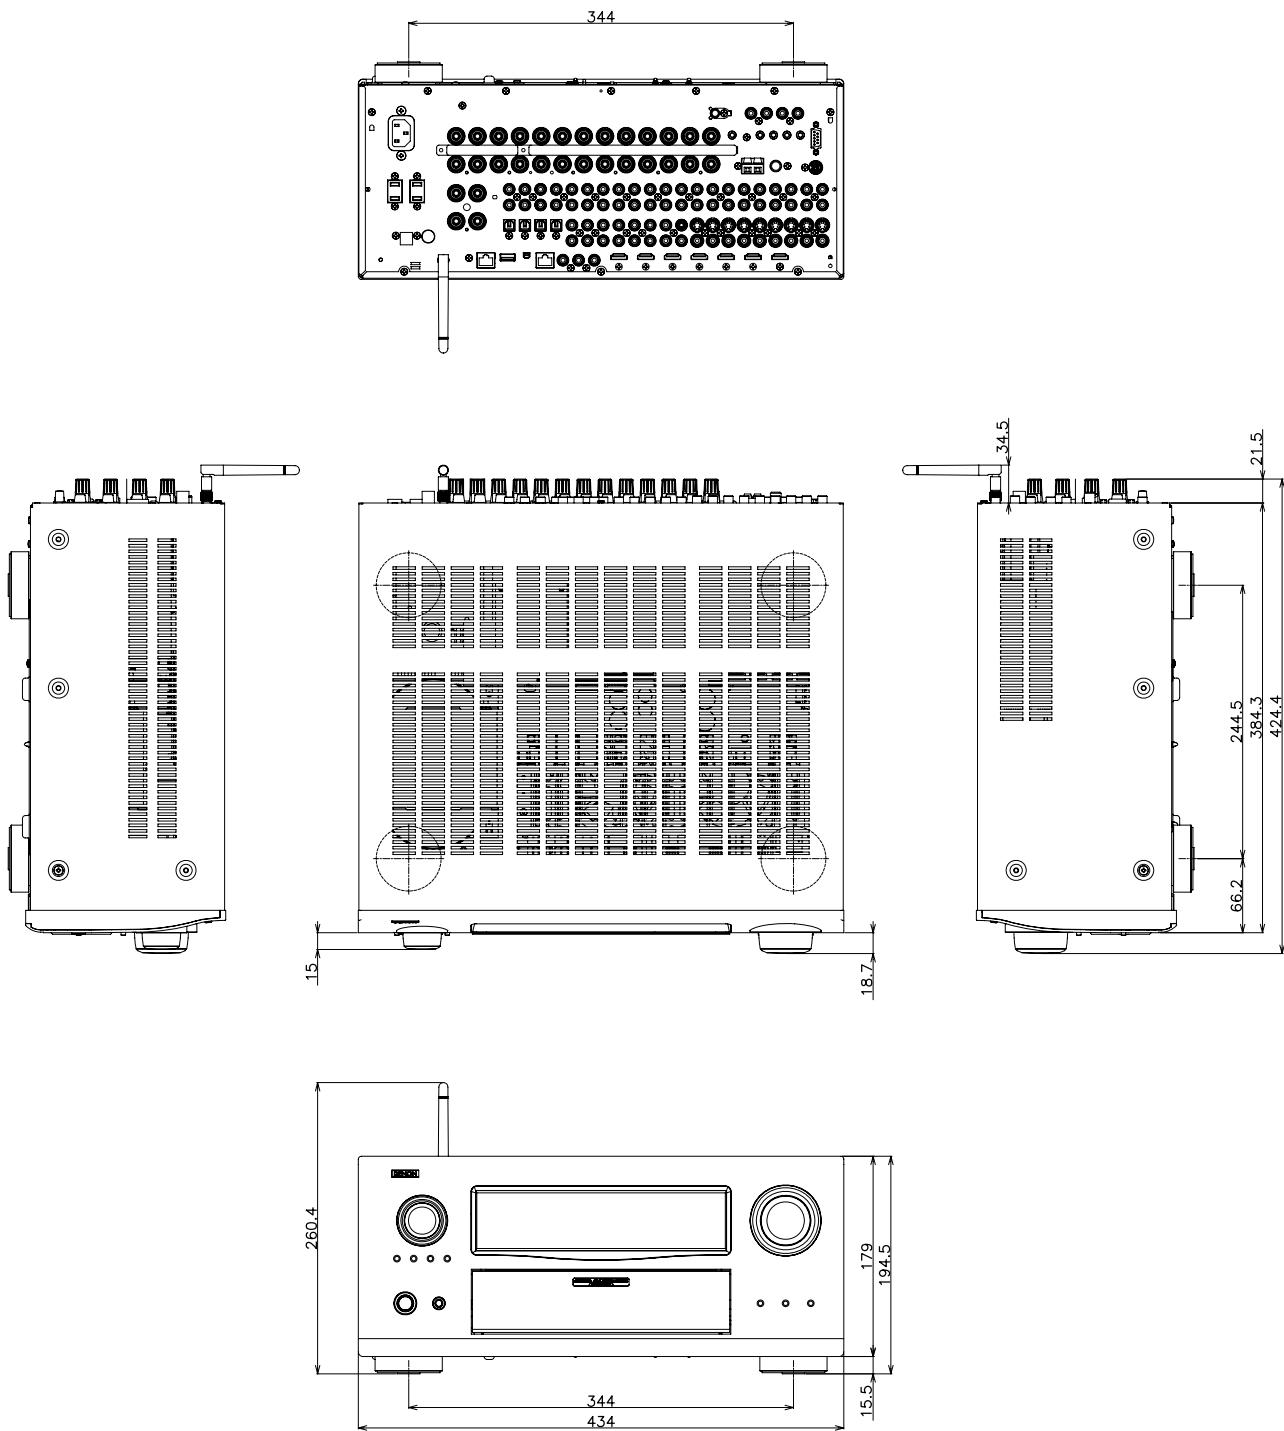

Many of the electric and structural parts used in the set have special safety properties. In most cases these properties are difficult to distinguish by sight, and using replacement parts with higher ratings (rated power and withstand voltage) does not necessarily guarantee that safety performance will be preserved. Parts with safety properties are indicated as shown below on the wiring diagrams and parts lists in this service manual. Be sure to replace them with parts with the designated part number.

(1) Schematic diagrams ..... Indicated by the  mark.

(2) Parts lists ..... Indicated by the  mark.

Using parts other than the designated parts could result in electric shock, fires or other dangerous situations.

## DIMENSION AVR-4810CI/AVR-4810

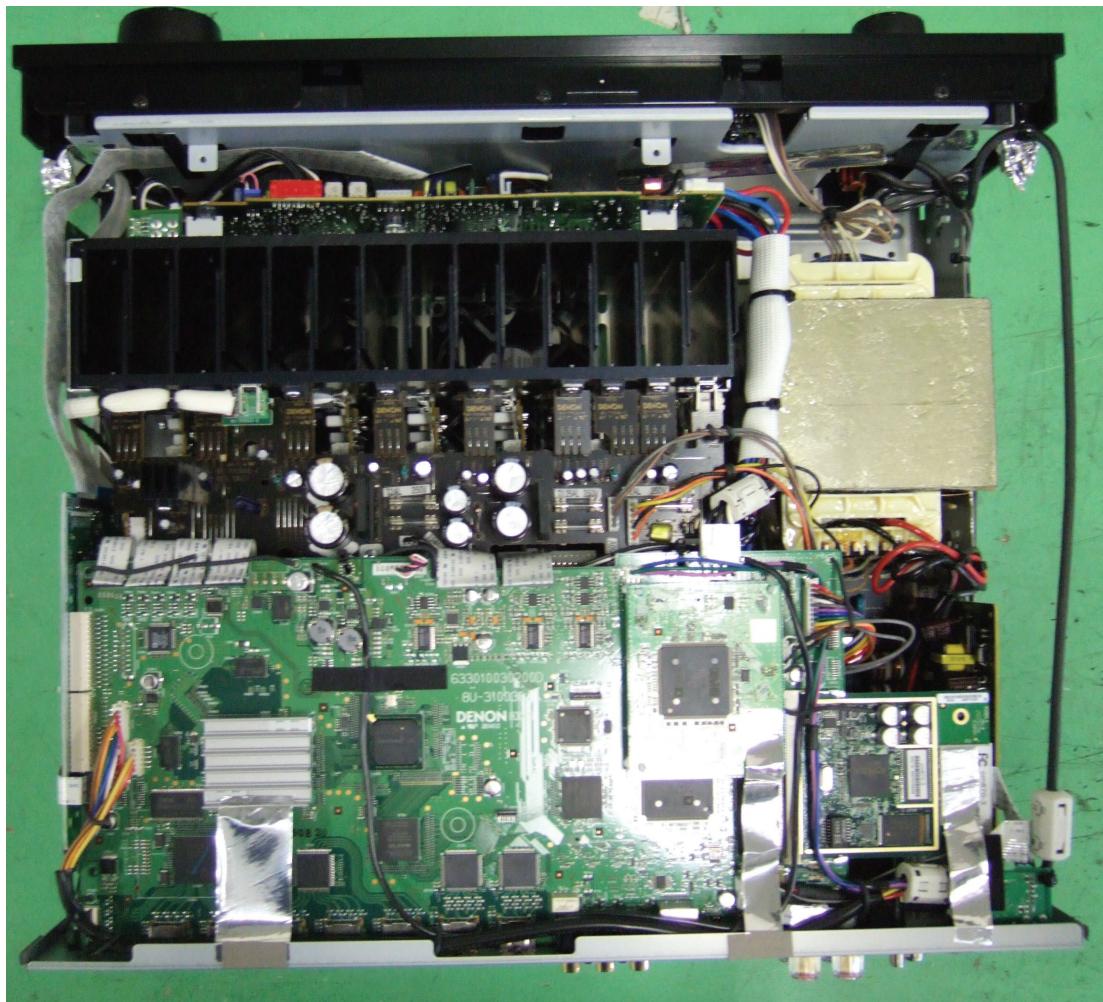

## WIRE ARRANGEMENT

If wire bundles are untied or moved to perform adjustment or parts replacement etc., be sure to rearrange them neatly as they were originally bundled or placed afterward.

Otherwise, incorrect arrangement can be a cause of noise generation.

# CAUTION IN SERVICING

## Before the Digital P.W.B. are replaced

If you cannot specify the cause of the digital PWB defect, carry out "Initializing" → "Update to latest firmware".  
The defect may be cleared.

- See the following for the method of initializing the  $\mu$ com.

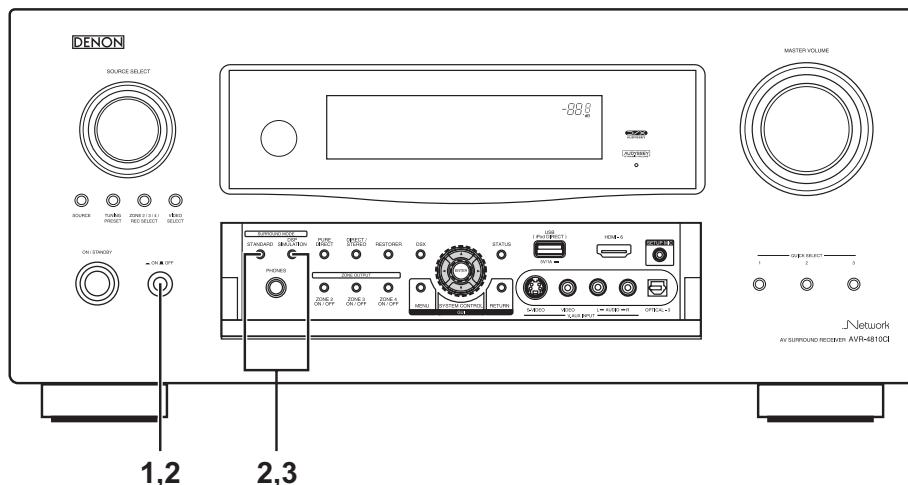

## Initializing AV SURROUND RECEIVER

AV SURROUND RECEIVER initialization should be performed when the  $\mu$ com, peripheral parts of  $\mu$ com, and Digital P.W.B. are replaced.

1. Switch off the unit.
2. Hold the following STANDARD button and DSP SIMULATION button, and switch on the unit.
3. Check that the entire display is flashing with an interval of about 1 second, and release your fingers from the 2 buttons and the microprocessor will be initialized.

**Note:** • If step 3 does not work, start over from step 1.

- All user settings will be lost and this factory setting will be recovered when this initialization mode.  
So make sure to memorize your setting for restoring after the initialization.

## JIG to use for servicing

When you repair the printing board, you can use the following JIG. Please order to Denon Official Service Distributor in your region if necessary.

## 2. Displaying the protection history mode

### 2.1. Operation specifications

ERROR MODE(displaying the protection history)

When started up, the error information is displayed.

#### Starting up:

With the "MENU" and "STATUS" buttons pressed, press the "ON/OFF" button to turn the power on. The error (protection history display) mode is set.

Then, press the "STATUS" button to turn on the FL display.

### 2.2. About the display on the FL display

When the "STATUS" button is pressed after setting the error (protection history display) mode, a history like the one shown below is displayed, depending on the conditions.

- (1) Normally (when there has been no protection incident)

- (2) For ASO (when the last protection incident was ASO protection)

- (3) For DC (when the last protection incident was DC protection)

- (4) For THERMAL (when the last protection incident was THERMAL protection)

When the "STATUS" button is pressed again after the above protection history is displayed, the normal display reappears.

### 2.3. Clearing the protection history

There are two ways to clear the protection history, as described below.

- (1) Start up the error (protection history display) mode, display the error, then press and hold in the "ENTER" button for 3 seconds.

↓ Press and hold in the "ENTER" button for 3 seconds

↓ The above is displayed and the protection history is cleared.

- (2) Initialize.

\* If you want to save a backup, use the method in 3.(1) above.

### Warning indication by the STANDBY LED

If the power is turned off when a protection incident has been detected, the STANDBY LED (red) flashes as follows as warning according to the conditions in which the protection incident occurred.

- (1) ASO/DC PROTECTION : Flashes in cycles of 0.5 seconds (0.25 seconds lit, 0.25 seconds off)  
(2) THERMAL PROTECTION : Flashes in cycles of 2 seconds (1 second lit, 1 second off)

### 3. Mode for switching tuner frequency step ---E2 model only---

2

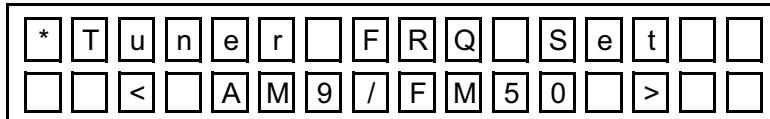

#### 3.1. Operation specification

Change tuner frequency step to FM:200kHz/AM:10kHz STEP.

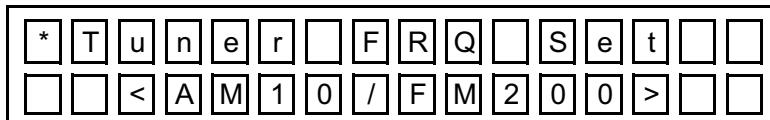

##### Starting up:

1. With the "STANDARD" and "DIRECT/STEREO" buttons pressed, press the "ON/OFF" button to turn the power on.

"Tuner FRQ Set" appears on the display.

2. Use <> and select "<AM10/FM200>".

3. Press the "ENTER" button.

4. Press the "ON/OFF" button to turn the power off.

5. Then, press the "ON/OFF" button to turn the power on.

**NOTE:** Backup data(Remove settings for Installer Setup) initialization is carried out automatically.

# VERSION UPGRADE PROCEDURE OF FIRMWARE

You can update by downloading the latest firmware from the Internet.

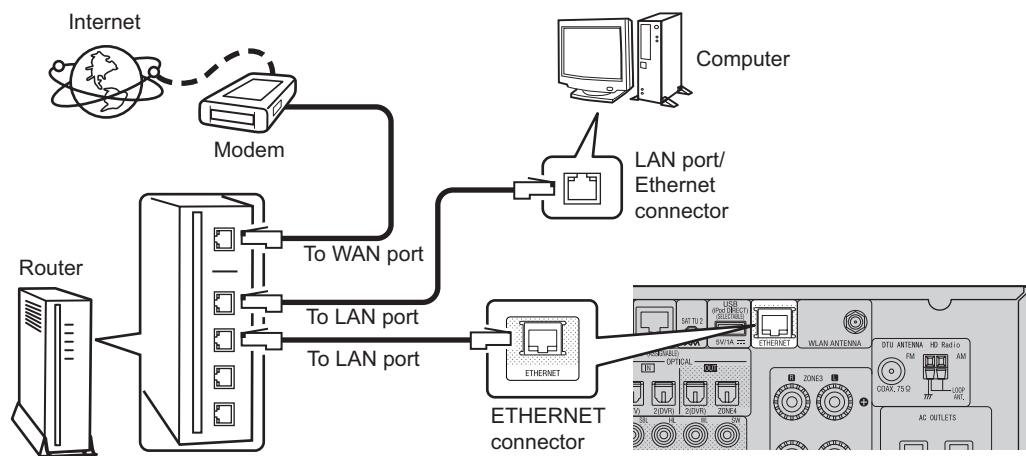

## 1. Update from the Internet

### 1.1. Connecting to the Network

#### (1) System Requirement

- Internet Connection by Broadband Circuit
- Modem
- Router
- Ethernet cable (CAT-5 or greater recommended)

#### (2) Setting

### 1.2. Check for Update and Update

Check if the latest firmware exists. You can also check approximately how long it will take to complete an update.

- (1) Press the MENU button on the remote control to display the GUI menu.
- (2) Use the cursor buttons to select "Manual Setup" → "Option Setup" → "Firmware Update" → "Check for Update".
- (3) Press the ENTER button.
  - The latest version of the firmware uploaded to the web is displayed.
  - If the latest firmware version is on the web, proceed to (4).
  - If the latest firmware is already installed, press the MENU button to close the menu.
- (4) Use the cursor buttons to select "Update", then press the ENTER button.
  - During update, the power indicator lights red and the GUI screen is shut down. And a rough remaining time is indicated on the display.
  - When updating is complete the power indicator lights green and normal status is resumed.
- (5) Press the MENU button to close the menu.

#### --- Cautions on Firmware Update ---

• In order to use these functions, you must have the correct system requirements and settings for a broadband Internet connection.

• Do not turn off the power until updating is completed.

Even with a broadband connection to the Internet, approximately about 1 hour is required for the updating procedure to be completed.

Once updating starts, normal operations on the AVR-4810 cannot be performed until updating is completed. Also, setting items of the GUI menu of AVR-4810 or setting items of the image adjustment may be initialized.

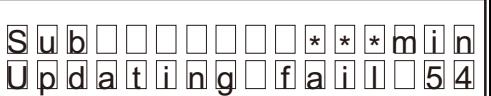

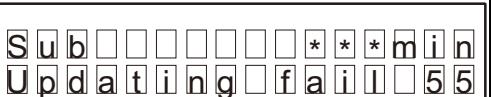

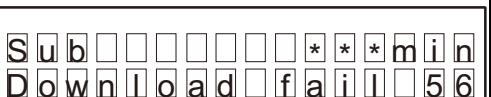

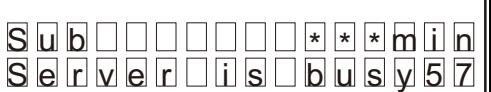

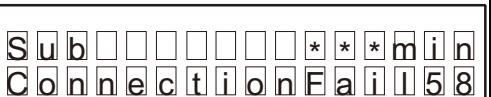

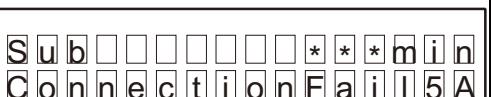

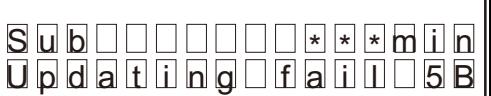

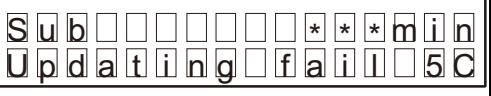

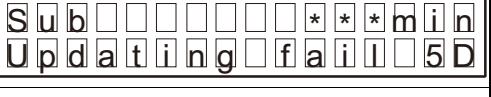

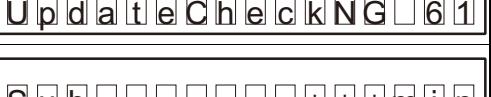

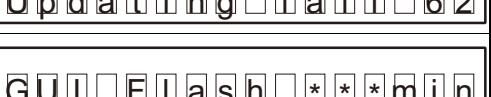

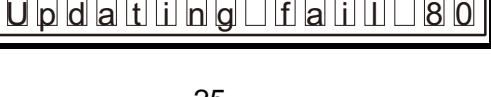

Make a note of the settings before updating, and set them again after updating.

# ADJUSTMENT

## Audio Section

### Idling Current (8U-110049, 8U-110067-3, 8U-110074-2)

Required measurement equipment: DC Voltmeter

#### Preparation

(1) Avoid direct blow from an air conditioner or an electric fan, and adjust the unit at normal room temperature 15°C ~ 30°C (59°F ~ 86°F).

(2) Presetting

POWER (Power source switch)	OFF
SPEAKER (Speaker terminal)	No load
(Do not connect speaker, dummy resistor, etc.)	

#### Adjustment

(1) Remove top cover and set VR501, VR502, on 8U-110067-3 and VR101, VR201, VR301, VR401, VR501, VR601, VR701 on 8U-110074-2 (POWER AMP Unit) at fully counterclockwise (○).

(2) Connect DC Voltmeter to test points(8U-110067-3, 8U-110074-2).

- FRONT-Lch: CX660 ⑤ ⑥ pin
- FRONT-Rch: CX660 ③ ④ pin
- CENTER ch: CX660 ① ② pin
- SURROUND-Lch: CX680 ⑤ ⑥ pin
- SURROUND-Rch: CX680 ⑦ ⑧ pin
- SURROUND BACK-Lch: CX680 ① ② pin
- SURROUND BACK-Rch: CX680 ③ ④ pin
- ZONE-Lch: CX504 ③ ④ pin
- ZONE-Rch: CX504 ① ② pin

(3) Connect power cord to AC Line, and turn power switch "ON".

(4) Presetting.

MASTER VOLUME	: "—" counterclockwise (○ min.)
MODE	: MULTI CH STEREO
FUNCTION	: CD

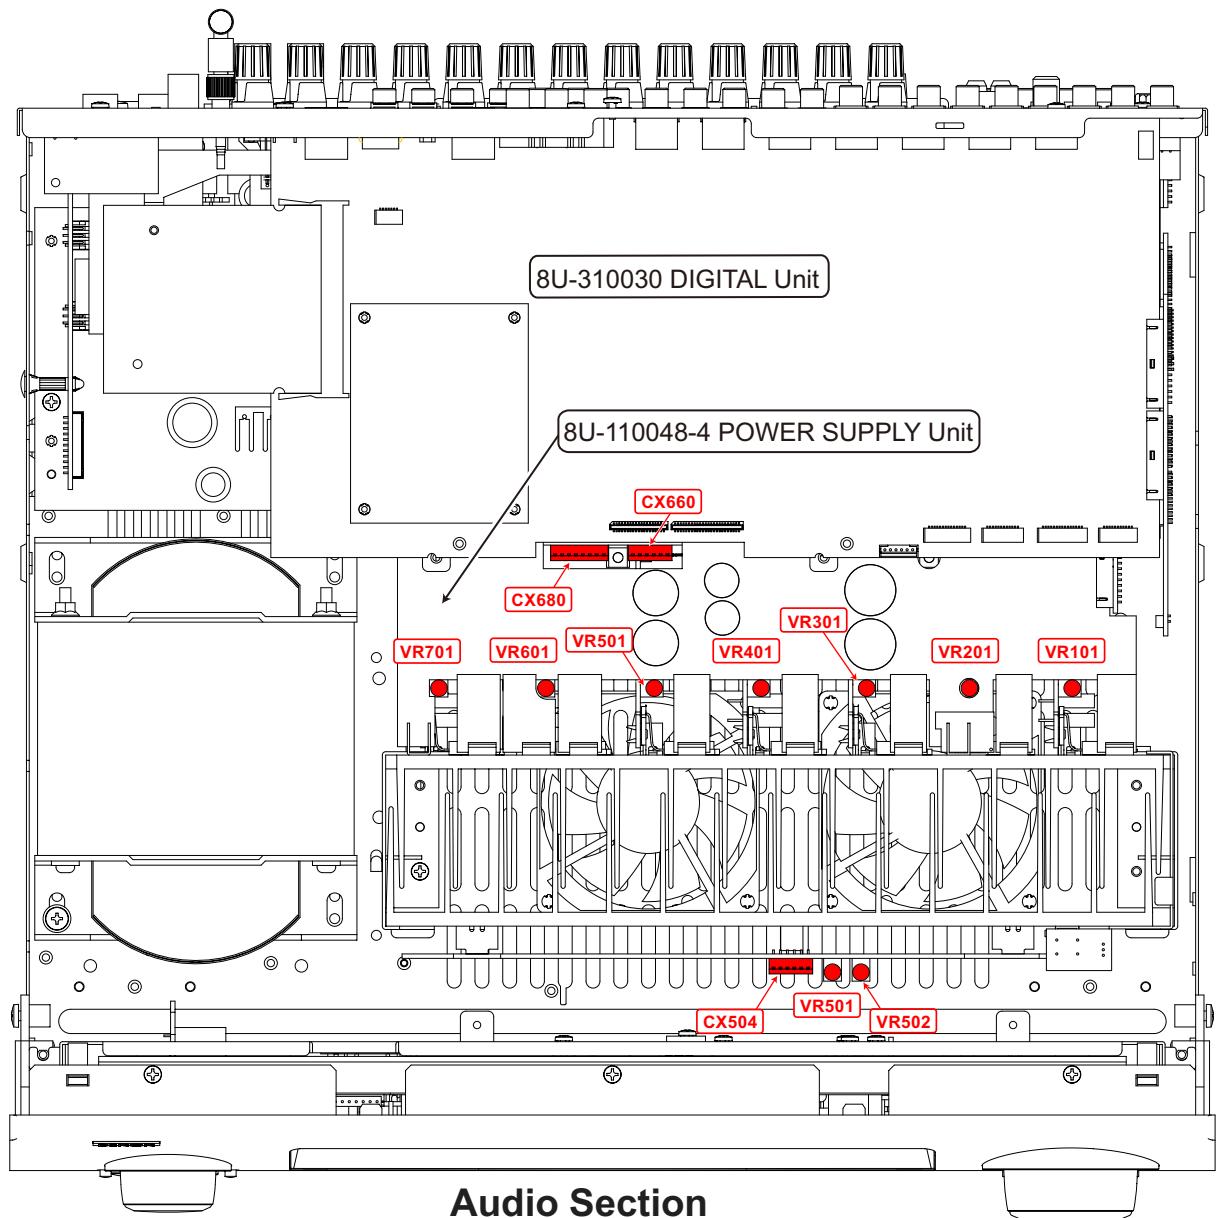

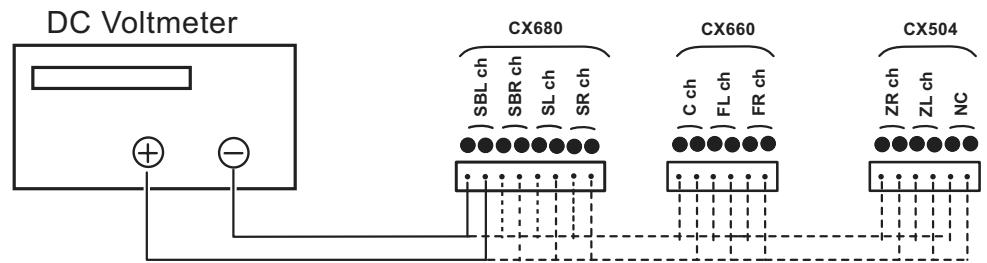

(5) Allow 2 minutes, and turn VR101 clockwise (○) to adjust the TEST POINT voltage to 6.5 mV ± 0.5 mV DC.

(6) After 10 minutes from preset, turn VR101 to set the voltage to 12 mV ± 0.5 mV DC.

(7) Adjust the Variable Resistors of other channels in the same way.

(8) After 5 minutes from (6), turn VR101 to set the voltage to 12 mV ± 0.5 mV DC.

(9) Adjust the Variable Resistors of other channels in the same way.

Adjustment volume is set for 8U-110049-1 ~ 7. The test point is at 8U-110067-3, 8U-110074-2.

Insert an adjustment driver / connection terminal from an adjustment aperture of 8U-110048-4(POWER SUPPLY Unit)P.W.B..
