

DENON

Hi Fi Component/Record Player

SERVICE MANUAL

**SERVO-CONTROLLED
DIRECT DRIVE RECORD PLAYER**

**MODELS DP-57L/62L
DP-67L/72L**

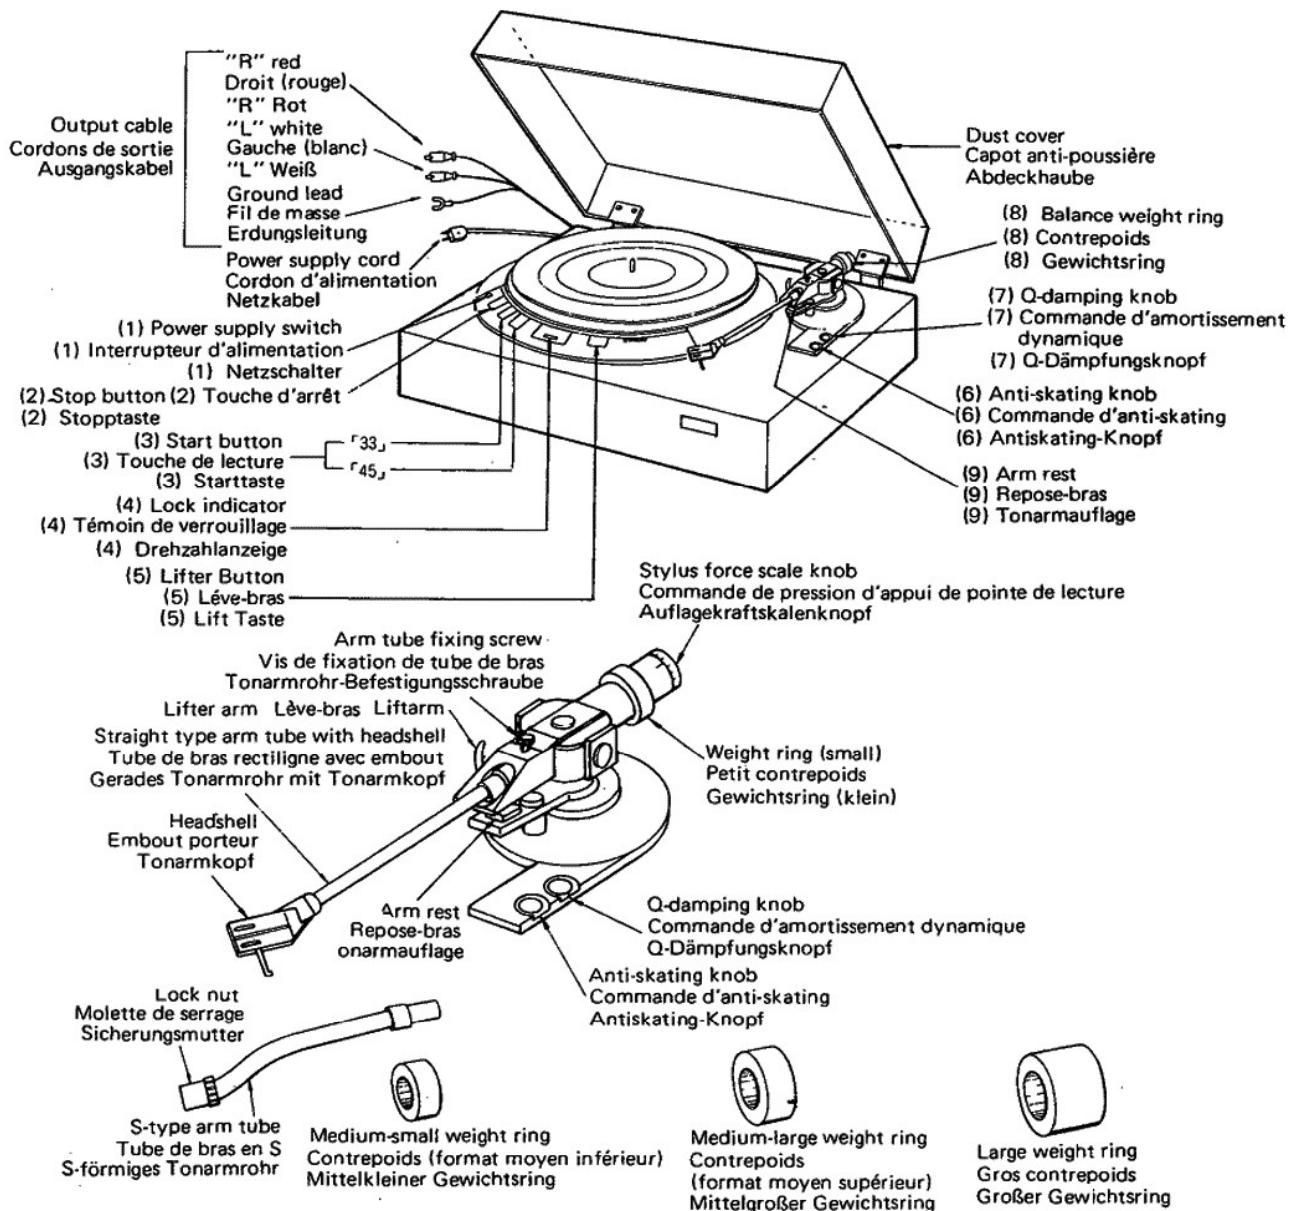

Model DP-67L

NIPPON COLUMBIA CO., LTD.

NAMES OF PARTS AND FUNCTION

(DP-67L's/DP-72L's)

1. Power switch

When the switch is pressed (ON), the power is turned ON and the stop button will light. When the switch is pressed again (OFF), the power is turned OFF and the lamp is turned OFF. If the power switch is turned ON () while the arm lifter is lowered, the tonearm will rise.

2. Stop button

When this button is pressed, the lifter button lamp is turned OFF. The arm lifter rises and after a short pause, the "33" or "45" button lamp is turned OFF, the stop button lamp will light and the turntable will then stop.

3. Start button 33 START 45

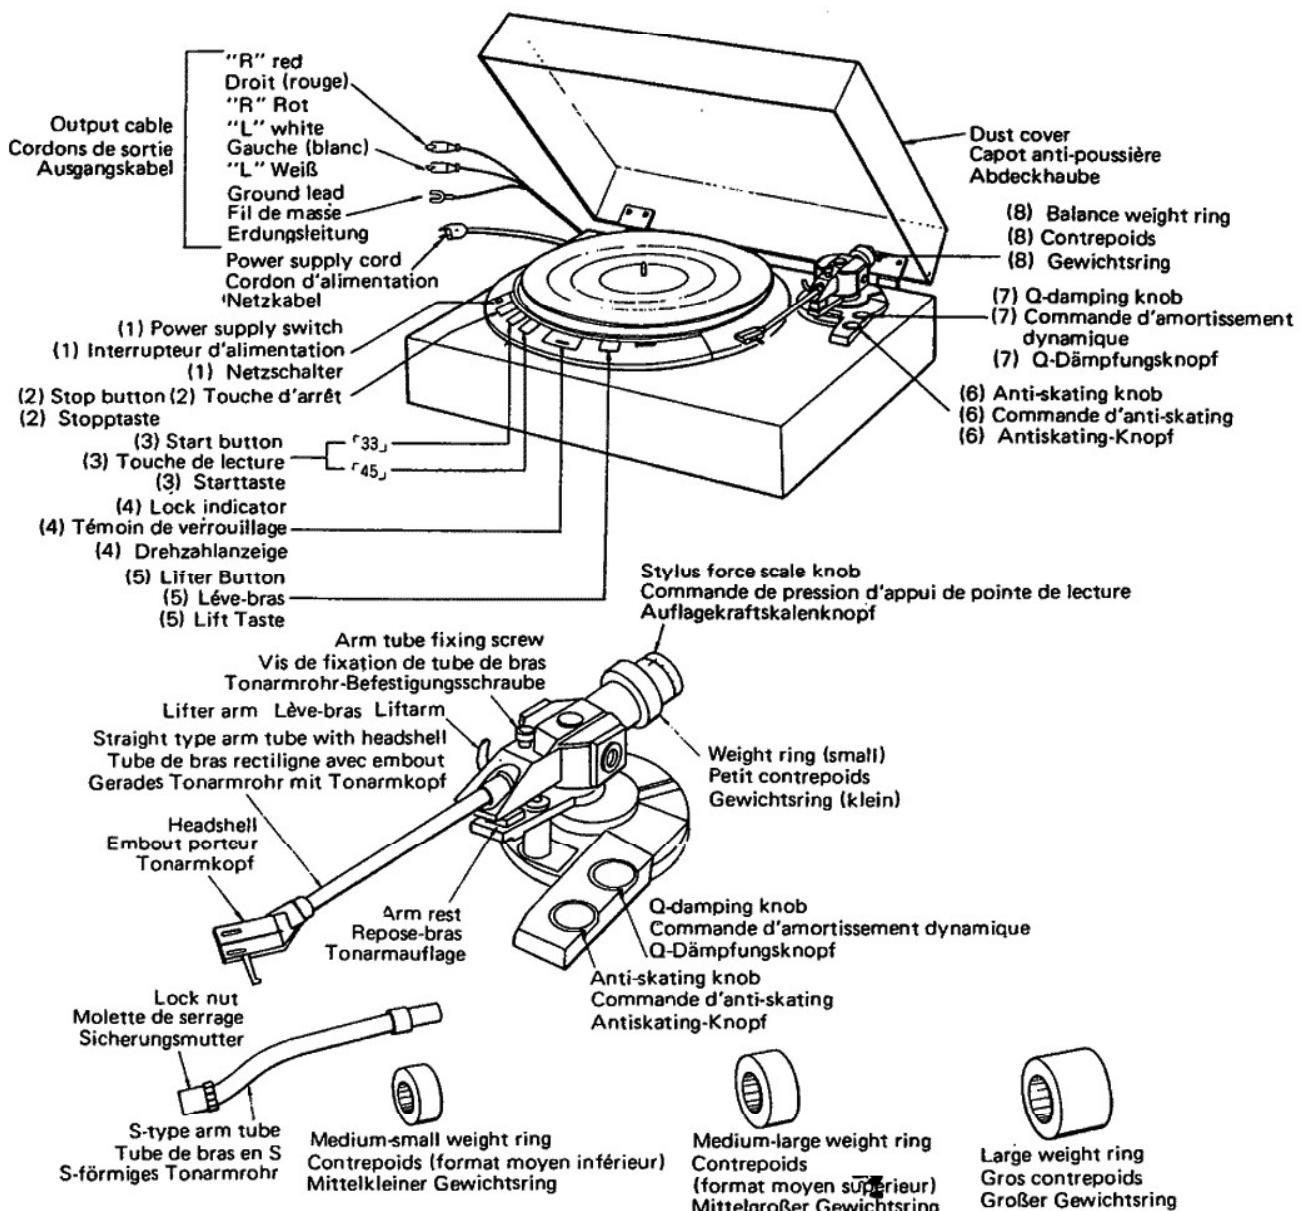

Press "33" for 33-1/3 rpm records, "45" for 45 rpm records.

When the start button is pressed, the button lamp will light and the turntable will start to rotate.

The lifter button will light and the arm lifter is lowered.

4. Lock indicator

The lock indicator will light when the turntable speed reaches the specified phase-lock state. It flickers when the turntable speed is in transition, such as when stopping, starting or changing speeds. It remains off during stop.

5. Lifter up/down (cueing) button

Each time the button is pressed, the arm lifter moves up/down. The lamp will light when the lifter is down.

6. Anti-skating knob

When a record is being played, a force which pulls the stylus towards the center of the turntable is generated. This force is compensated for by adjusting the Anti-skating knob.

7. Q damping knob

The recommended amount of Q damping can be achieved by setting the Q damping knob to the same value as the stylus force.

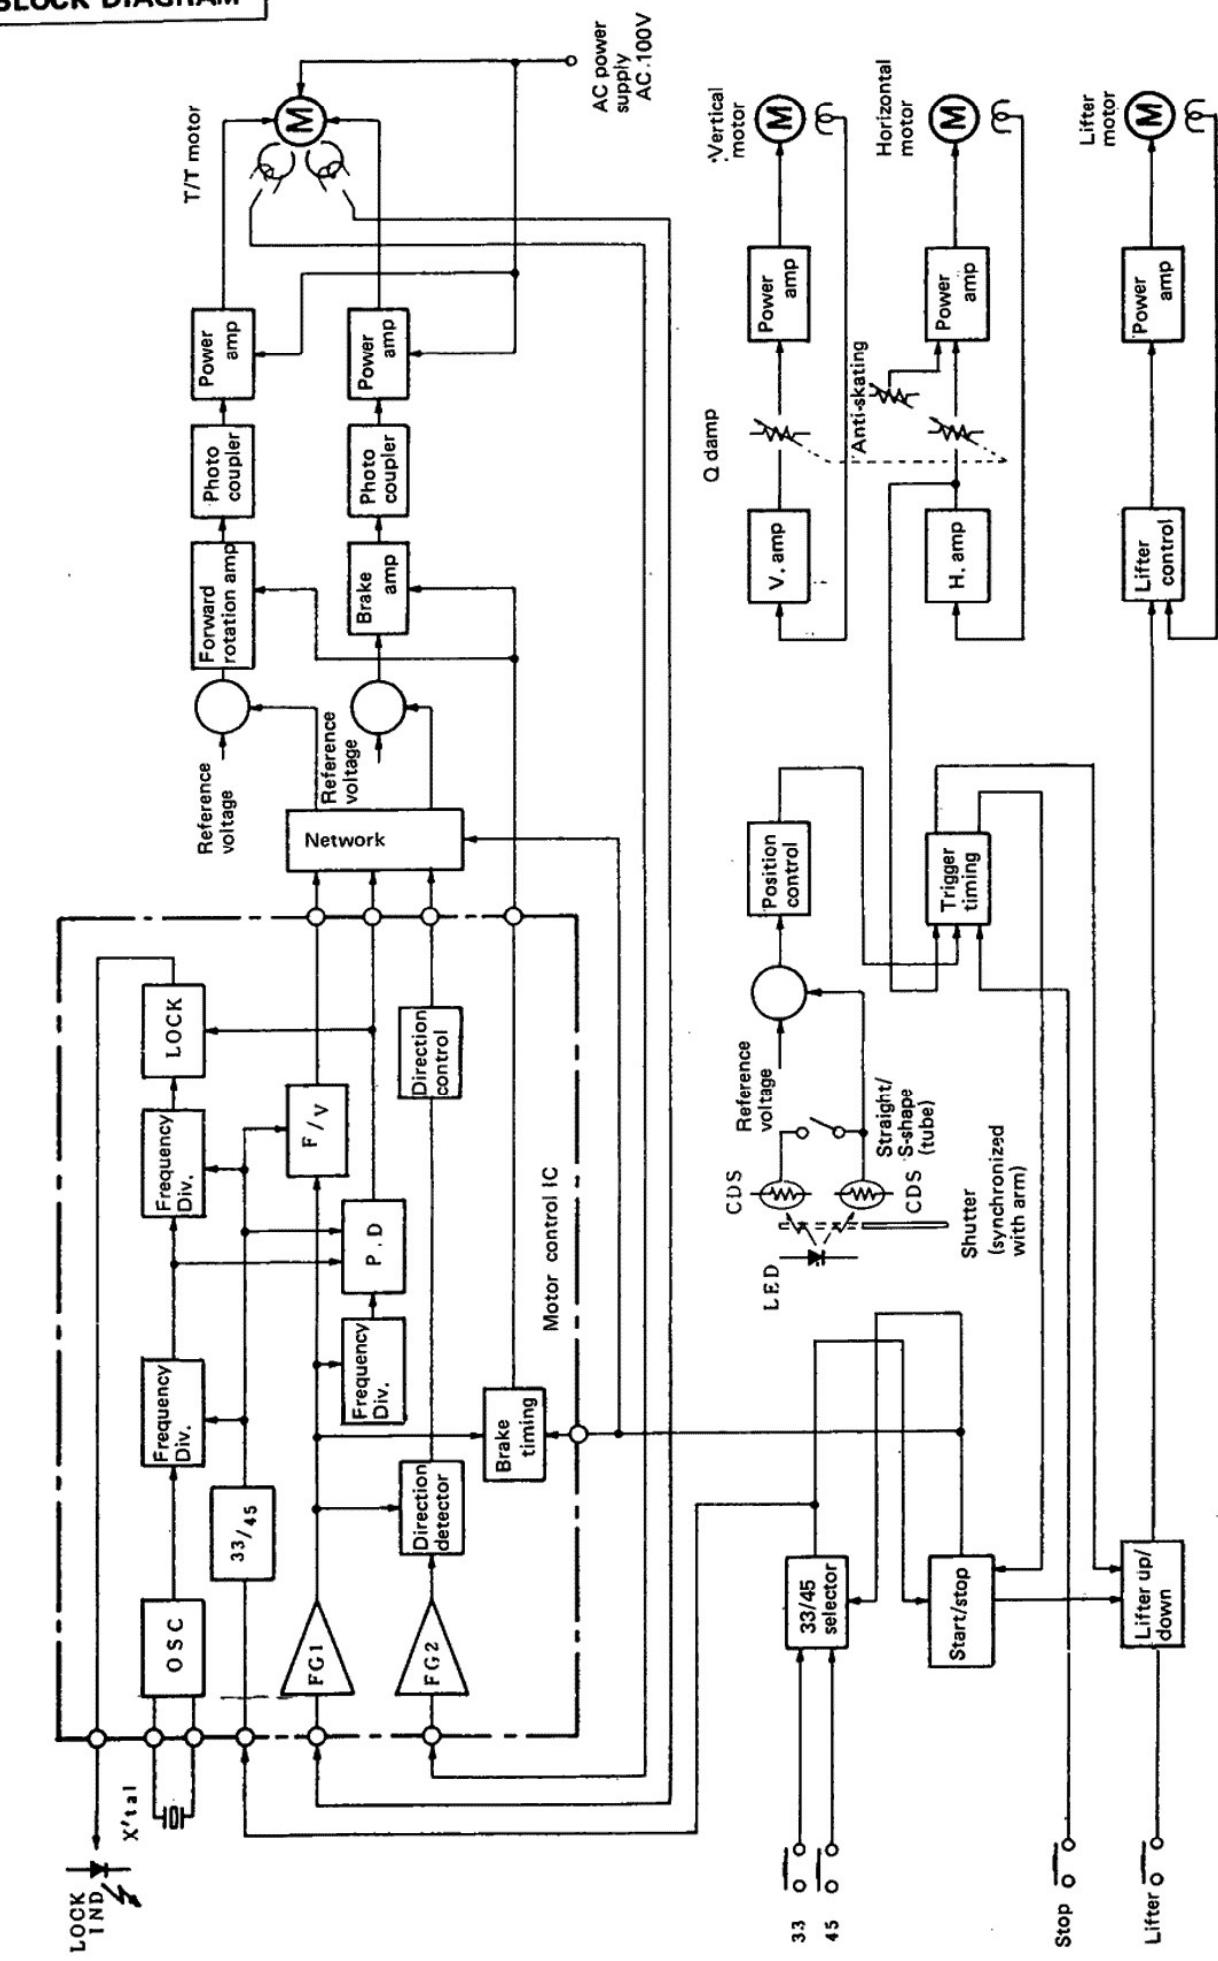

8. Weight ring

Use this ring to obtain zero balance of the tonearm.

9. Arm rest

By holding the finger grip of the headshell and moving it to the left, the tonearm lock is disengaged. When locking the tonearm, push it in the opposite direction.

BLOCK DIAGRAM

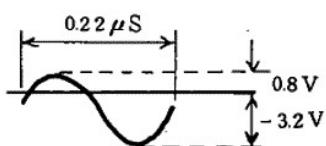

EXPLANATION OF THE MICROPROCESSOR

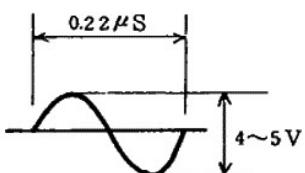

- Motor Control IC . . . IR3T02 (at standard revolution of 33 rpm)

The numbers on the left hand side indicates the terminal number.

2. 4.5MHz OSC

3. 4.5MHz OSC

4. rpm selector

H: 45 rpm
L: 33 rpm

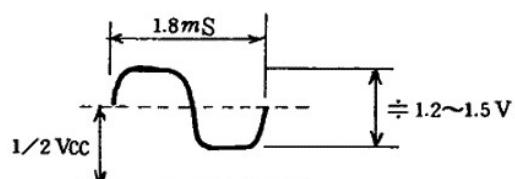

5. power source input

V_{cc}: 5V ±0.5V

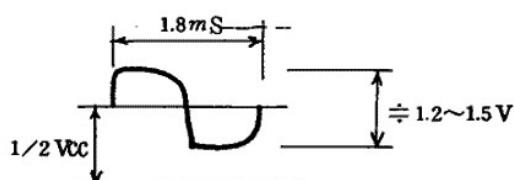

6. FG I bypass terminal

E6 ≈ ½V_{cc}

7. FG I lowpass terminal

8. FG I output

9. FG I inverse input

The gain set element is connected.
E9 ≈ ½V_{cc}

10. FG I non-inverse input

10mVpp ~ 100mVpp
E10 ≈ ½V_{cc}

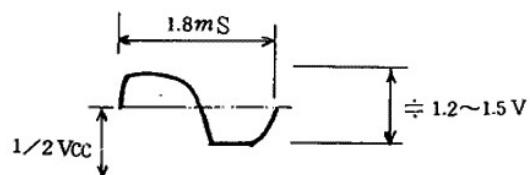

11. FG II non-inverse input

10mVpp ~ 100mVpp
E11 ≈ ½V_{cc}

12. FG II inverse input

The gain set element is connected.
E12 ≈ ½V_{cc}

13. FG II output

14. ground terminal

15. F/V output

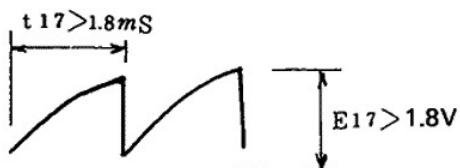

slower than normal revolution: 1.8 ~ 4.5V
normal revolution: ≈ 1.8V
faster than normal revolution: 0 ~ 1.8V

16. F/V hold terminal

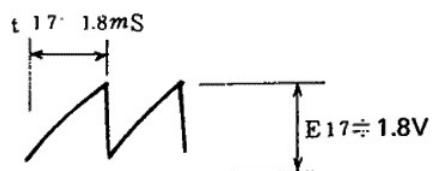

same as terminal 15

17. F/V triangular wave

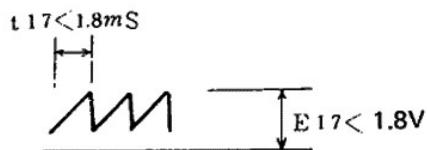

slower than normal revolution

normal revolution

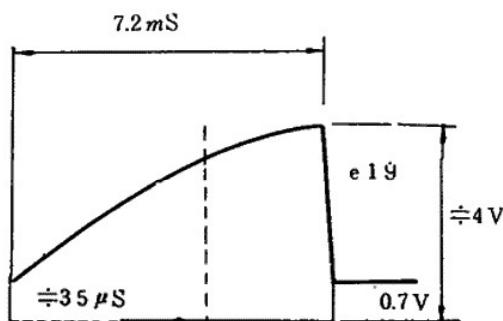

faster than normal revolution

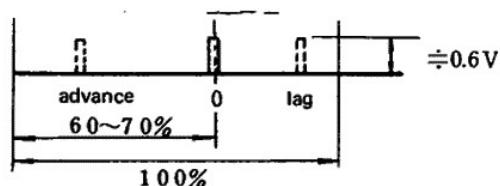

18. timing pulse width-set terminal

$E_{18} \approx 0.6\text{V}$

19. PD triangular wave

20. sample pulse monitor terminal

21. PD hold terminal

slow phase: $1.8 \sim 4\text{V}$
normal phase: $\approx 1.8\text{V}$
advanced phase: $1 \sim 1.8\text{V}$

22. PD output

same as terminal 21

23. Lock detector time set terminal

during lock: 0.6V
lock disengaged: 0V

24. Direction detector output

normal revolution: 0V
reverse revolution: $\approx 4\text{V}$

25. Revolution detector

during revolution: $\approx 4\text{V}$

stop: 0V

26. START/STOP terminal

H → START
L → STOP

27. Stop output

during stop control: 0V
during start: open

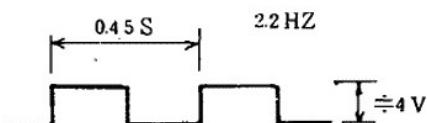

28. Lock indicator

during lock (LED lit dimly)

stop (LED lit)

during transition . . . (LED flashes)

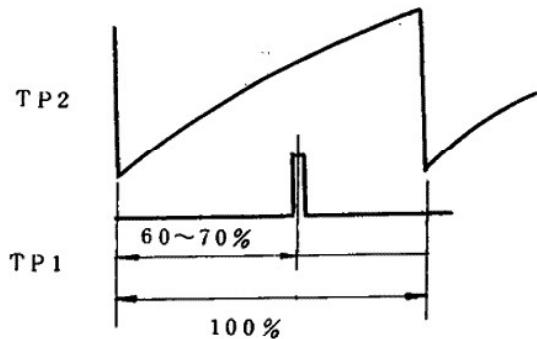

ADJUSTMENT METHOD

• PHONO MOTOR ADJUSTMENT

1. Speed Adjustment

- 1) Connect TP1 and TP2 to CH1 and CH2 terminals and connect TP4 to the ground terminal when using the dual trace oscilloscope.
- 2) Set the turntable speed to 45 position. Adjust the TP1 pulse to stop at a position of between 60% and 70% of the TP2 triangle wave cycle with VR2. (Refer to Fig. 1)
- 3) Set the turntable to 33 position. Adjust in the same way as above with VR1.

(Fig. 1)

• TONEARM CONTROL ADJUSTMENT

1. Horizontal Amp Off-set Voltage Adjustment

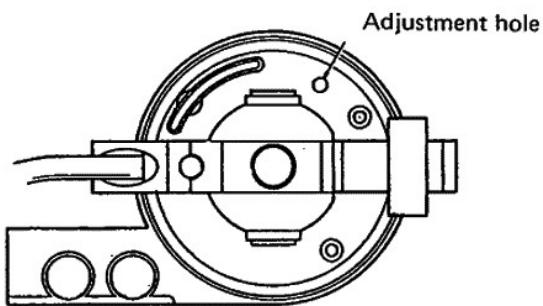

- 1) Fix the tonearm to the arm rest. Connect the high input resistance DC voltmeter (tester) between TP3 and TP4.
- 2) Adjust the voltage to $0 \pm 0.01V$ with VR3.

2. Lifter Amp Off-set Voltage Adjustment

- 1) Connect the DC voltmeter (tester) to TP303 and TP304 while short circuiting the test points TP302 and TP304.
- 2) Adjust the voltage to $0 \pm 0.1V$ with VR301.

3. End Detecting Position Adjustment

- 1) Fix the stylus point at a position 60 mm from the center spindle by using the straight arm.
- 2) Connect the DC voltmeter (tester) to the test points TP301 and TP304.
- 3) Adjust the voltage to $1.55 \pm 0.05V$ by adjusting the cam with a flat headed screwdriver. The cam adjustment hole is located at the back of the arm base. (Refer to Fig. 2)

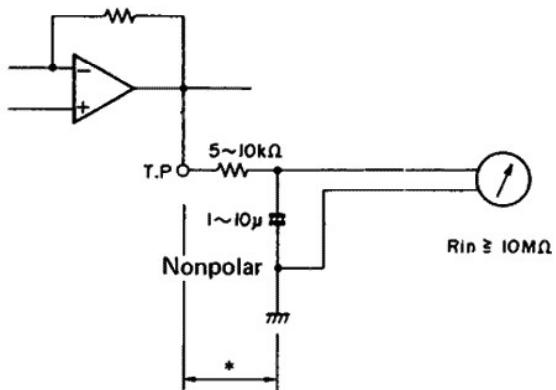

(Fig. 2)

NOTE:

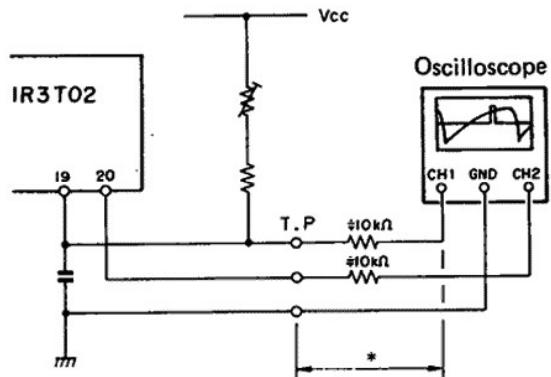

1. Be sure not to interfere with the function of any parts when connecting the measuring instrument for adjusting. Check that there is no loading resistance or loading capacity problem. Refer to the following example for the exact measuring technique.
2. While adjusting or measuring the detecting positions, close the bottomplate or cover the unit with a black cloth or paper so that no light enters. Also when adjusting the speed detector, be sure no magnetic sources are near and that there are no vibrations.

* Off-set Voltage Measurement

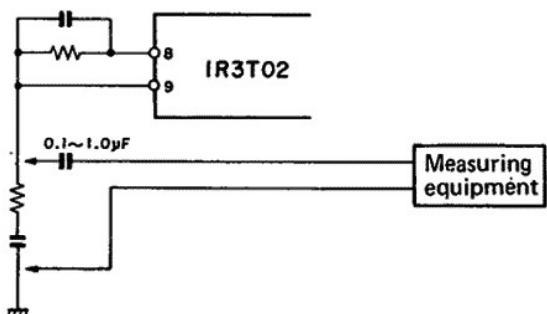

* This distance should be as short as possible.

* Speed Adjustment

* Keep the wire as short as possible. If it is long, connect the resistors in series.

* FG Signal Check or Wow/Flutter Measurement

WARNING:

1. Component parts

Parts marked with and/or shading in this service manual have special characteristics important to safety. Be sure to use the specified parts for replacement.

2. Leakage current

Before returning the appliance to customer, test the leakage current when the power plug is connected. Use a calibrated (with an error of not more than 5%) leakage current tester and measure the leakage current from any exposed metal to the earth ground. Reverse the power plug polarity and test the above again.

Any current measured MUST NOT EXCEED 0.5 milamps. Corrective measure must be taken if it exceeds the limit.

CONNECTIONS OF P.W. BOARD

MODEL DP-57L/67L

SCHEMATIC DIAGRAM OF DP-57L/67L

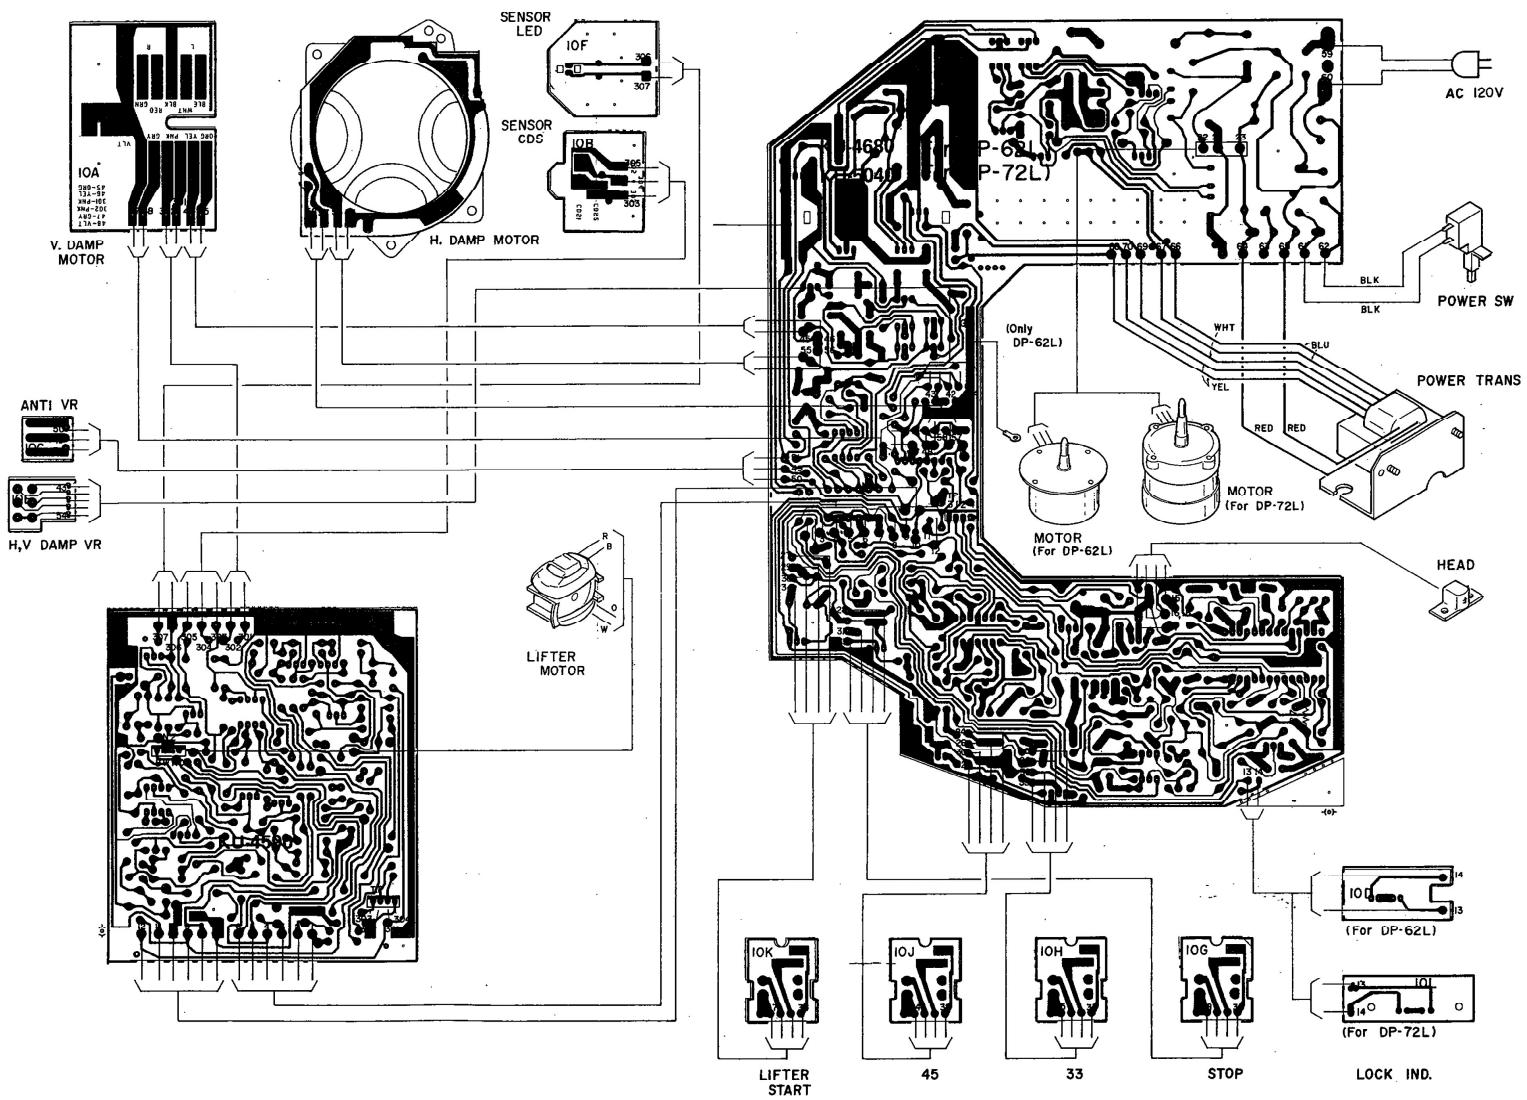

(Note)

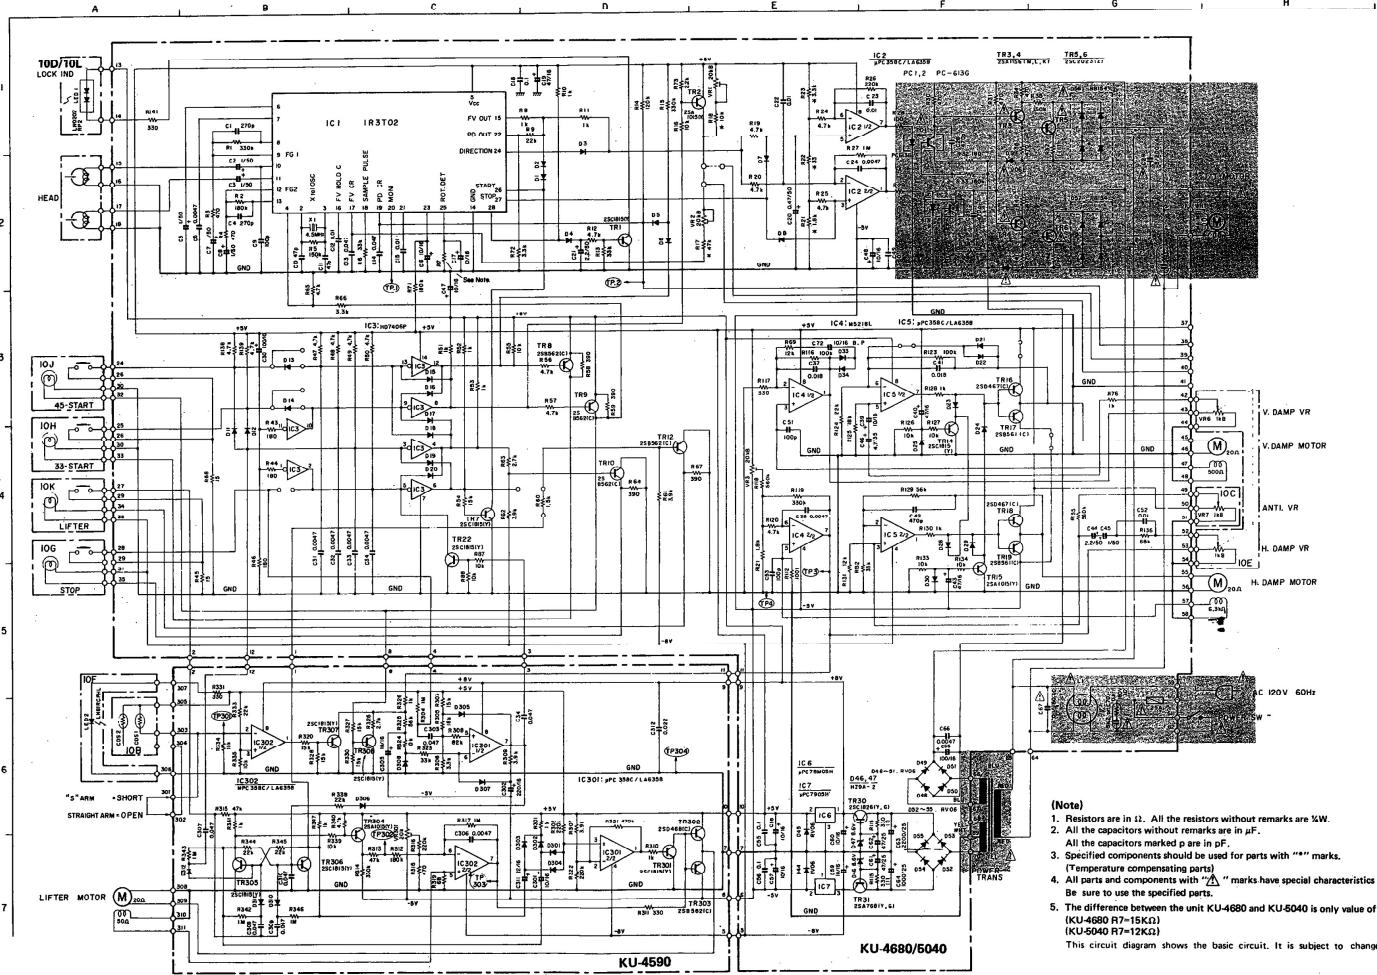

1. Resistors are in Ω. All the resistors without remarks are 1kΩ.
2. All the capacitors without remarks are in µF.
3. All the capacitors marked p are in pF.
4. Specified components should be used for parts with "*" marks.
5. Components marked with "Δ" have special characteristics important to safety.
6. Be sure to use the specified parts.
7. This circuit diagram shows the basic circuit. It is subject to change for the purpose of improvement.

CONNECTIONS OF P.W. BOARD

MODEL DP-62L/72L

SCHEMATIC DIAGRAM OF DP-62L/72L

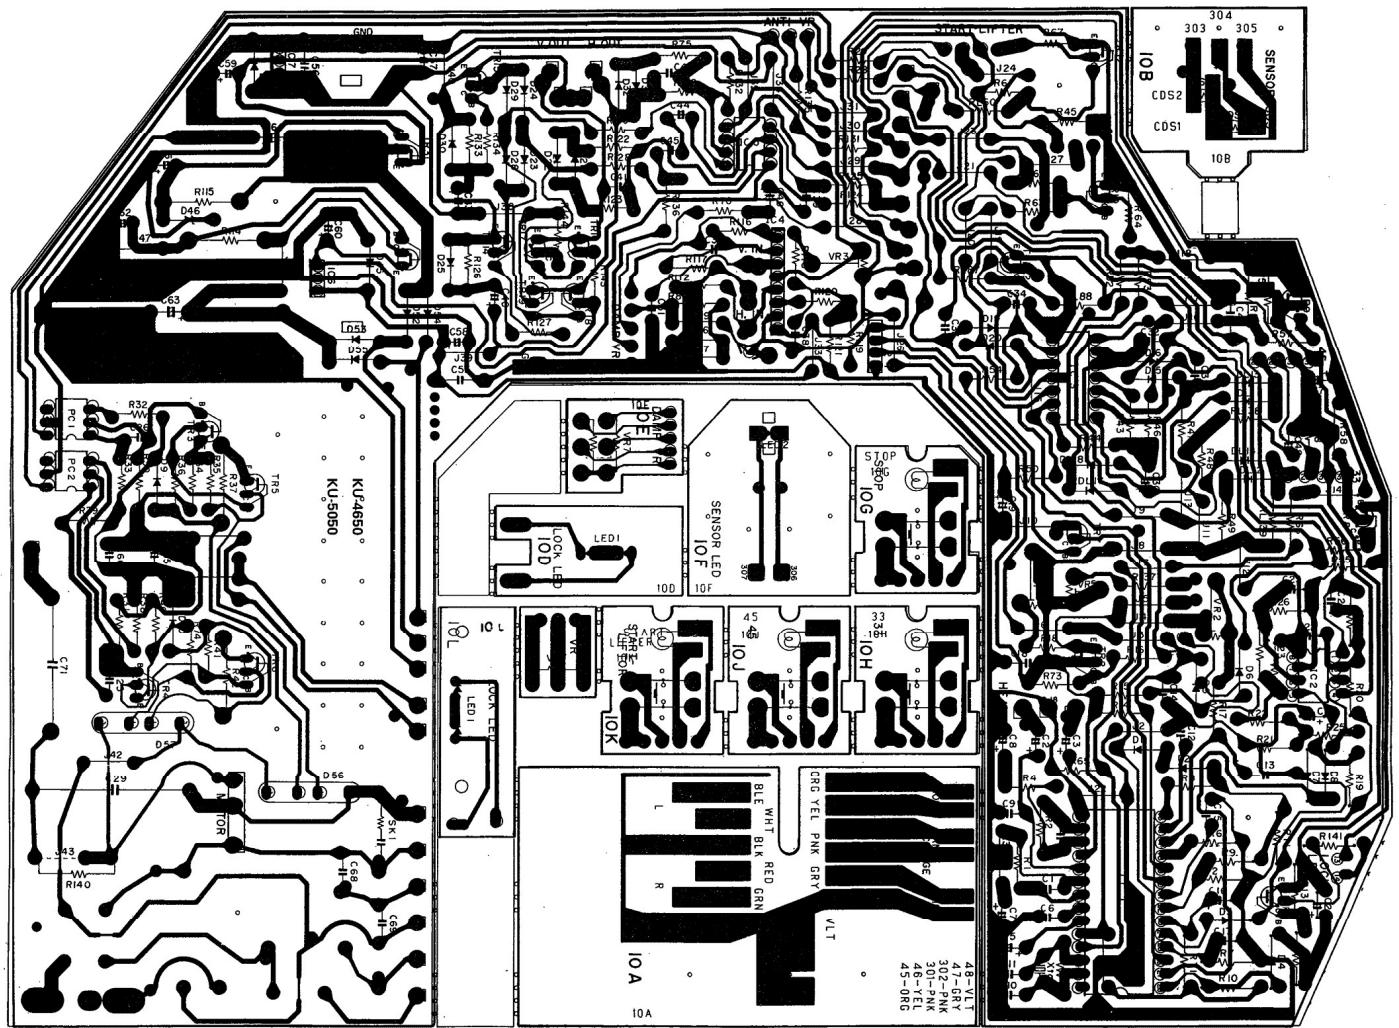

(Note)

1. Resistors are in Ω . All the resistors without remarks are $1\text{k}\Omega$.
 2. All capacitors without remarks are in μF . All the capacitors marked Δ are in pF .
 3. Specified components should be used for parts with "*" marks. (*Temperature compensating parts).
 4. All parts and components with " \triangle " marks have special characteristics important to safety. Be sure to use the specified parts.
 5. The difference between the unit KU-4680 and KU-5040 is only value of resistor marked R7. (KU-4680 R7=15k Ω) (KU-5040 R7=12k Ω)
- This circuit diagram shows the basic circuit. It is subject to change for the purpose of improvement.
