GR-555, GR-535 DISASSEMBLY INSTRUCTIONS

In case of repairing the printed circuit board, it is more easily disassembled in the following order.

(1) Repairing of power amplifier unit, power supply and protector unit.

1. Remove the wooden cabinet by taking out the four screws fastening it.
2. Remove the bottom cover by taking out all the screws (four) fastening it.
3. Take out the upper two screws of the four ones (two each at right and left) fastening the PA. chassis and side bracket, and loosen the lower two screws.
- Fig. 1 shows the side view of the set without its wooden cabinet and bottom cover. The lengthwise black part in the figure is the PA. chassis.
- Push up the front panel at the screw part (loosened as in item 3) and the chassis will be two blocks perpendicular to each other. Thus the power amplifier unit and power supply unit can be easily removed or can have their parts replaced.
- Fig. 2 shows the side view of the set after the sequence of disassembly from item 1 to 4 has been completed, and Fig. 3 is the oblique view.
- In the above-mentioned state, take utmost care so that the bottom of both the back-and front panel may not slide.

(2) Repairing of the Preamplifier unit

1. Remove the wooden cabinet by taking out the four screws fastening it.
2. Remove the bottom cover by taking out all the eight screws.
3. Draw out all the knobs attached to the front panel.
4. Take out the upper and lower screws (four) fastening the front panel and chassis.
5. Draw out the front panel this side.
6. Take out a screw fastening the equalizer board and the shield bracket.
7. Take out all the screws (two each at right and left) fastening the control bracket and side bracket.
8. Lower the control bracket while drawing it this side.
9. Remove all the connector coupled with the main chassis.

GR-555 METHOD OF ADJUSTMENTS
