

SUPER CHAMP X2 COMBO/ HEAD™

(This is the model name for warranty claims)

COMBO p/n 2223000000 (120V)

HEAD p/n 2223100000 (120V)

SERVICE MANUAL

ATTENTION:

WARRANTY SERVICE PROCEDURES

The Super Champ X2 Combo and Head are considered to be field serviceable to the component level. Except for the μ DSP PCB which must be replaced as a complete module. We do however understand that some circumstances may require replacement of other PCB Assemblies. Any Fender Authorized Service Center in need of a warranty replacement PCB Assembly for this unit should contact FMIC Tech Support by phone at (866) 345-3642 or email: sevice@fender.com

specifications are subject to change without notice. This information and any copies produced electronically or otherwise must be surrendered upon demand of Fender® Musical Instruments Corporation.

- Parts marked with two asterisks (**) indicate the required use of that specific part. This is necessary for RELIABILITY and SAFETY requirements. **DO NOT USE A SUBSTITUTE!**

PARTS LIST CODES

The description codes used in the itemized Parts Lists are defined below:

CAPACITOR CODES

CAP AE = Aluminum Electrolytic
CAP CA = Ceramic Axial
CAP CD = Ceramic Disk
CAP CR = Ceramic Radial
CAP MPF = Metalized Polyester Film
CAP MY = Mylar
CAP PFF = Polyester Film/Foil

RESISTOR CODES

RES CC = Carbon Comp
RES CF = Carbon Film
RES FP = Flame Proof
RES MF = Metal Film
RES MOX = Metal Oxide
RES WW = Wire Wound

HARDWARE CODES

BLX = Black Oxide
CR = Chrome Plated
HWH = Hex Washer Head
M = Machine Screw
NI = Nickel Plated
OHP = Oval Head Phillips
PB = Particle Board
PHP = Pan Head Phillips
PHPS = Pan Head Phillips Sems
SMA = Sheet Metal "A" Point
SMB = Sheet Metal "B" Point
SS = Stainless Steel
TF = Thread Forming
ZI = Zinc Plated

SUPER CHAMP X2 COMBO/HEAD™

(This is the model name for warranty claims)

4

SERVICE NOTES

- 1. CHASSIS REMOVAL** is accomplished by first removing the COMBO or HEAD's cabinet's back panel. Then remove the four (4) screws from the top of the cabinet that secure the chassis. Disconnect the 1/4" speaker plug from the speaker jack (COMBO only). Then slide the chassis toward the rear of the cabinet.
- 2. MAIN PCB REMOVAL** is accomplished by removing the IEC Connector, the fuse holder, the speaker jack nut, the line out jack nut and the two screws that hold the chassis' rear panel to the chassis. Remove the rear panel and the vacuum tubes. Disconnect the ribbon cable that goes between the main PCB and the uDSP PCB. Remove all screws holding the main PCB to the stand offs on the chassis. Then remove the front panel knobs and the nuts holding the

controls to the front panel. Slide the front panel PCB back away from the front panel. Remove all the fast-ons connecting the main PCB to the power indicator, the power transformer and the output transformer. Now the main PCB can be lifted up and out of the chassis taking advantage of the slots in the back of the chassis.

- 3. The COMBO and the HEAD** share the same chassis and circuitry. The combo contains a captive 10" speaker while the head can be used with any suitable speaker cabinet such as the SC112 enclosure.

PCB EXCHANGE POLICY

Parts marked with a single asterisk (*) in the Part Lists are not field replaceable. If a failure due to one of these components is detected, please con-

tact the FMIC Customer Service Department to order the complete PCB Assembly.

CIRCUIT DESCRIPTION

This section provides concise information about new or unusual circuitry designs incorporated into this amplifier model. The purpose is to aid the service technician by providing insight into the design areas most likely to become obstacles in troubleshooting. Information is focused for its effective use while maintaining the security of Fender® proprietary information whenever possible.

MAIN PCB

The Main PCB Assy. contains the circuitry for the pre-amplifier, the power amplifier, and the power supply. The controls are located on a breakaway

section of the main PCB with ribbon cables connecting them.

PRE-AMPLIFIER

Op-amp U6-A provides the high impedance instrument input with 14db of gain. Op-amp U6-B is configured as an active filter producing high frequency pre-emphasis. U1-A provides another 20db of gain. Its' output is clamped to +/-2V. The uDSP PCB Assy. chooses either the low gain output from U6-B or the higher gain output from U1-A depending on the amplitude of the guitar input signal. Op-amp U3-A is configured as a differential input amp recovering the signal after uDSP processing and conversion back to an analog signal. The LOUT and

SUPER CHAMP X2 COMBO/HEAD™

5

(This is the model name for warranty claims)

ROUT signals are the input to the differential amp which acts as a three pole active low pass filter for de-emphasis. The output of U3-A is applied to a buffer amp U1-A which drives op-amp U1-B which provides the LINE OUT signal and the power amp input. FET Q-1 provides system muting during power up/down in conjunction with the power sense circuits composed of D9, Q2, and Q4.

USER INTERFACE

The 4 – 16 position encoders (S2 – S3) for the VOICE and EFFECT SELECT are sent to the GPIO buss of the uDSP and polled at a 1000Hz rate.

The 6 potentiometers CH1 VOLUME (R85), CH2 VOLUME (R83), CH2 GAIN (R84), TREBLE (R82), BASS (R81), and AND FX LEVEL (R80) generate DC Voltages (0.0V to +3.3V) that are polled at a 1000Hz rate by the uDSP's A/D converter.

POWER AMPLIFIER

The power amplifier consists of V1, V2, and V3. T2 and associated circuitry. The signal is fed to the gate of V1-B in common cathode configuration. The signal is then fed from the plate of V1-B to the gate of V1-A which is operating as a phase splitter driving V2 from its' plate and V3 from its' cathode. V2 and V3 are operating in Class A-B push-pull mode. T2 matches the impedance of V2's plate to the 8 Ohm speaker. Negative feedback is provided by R23 feeding signal back to V1-B's cathode.

μDSP PCB

The μDSP PCB is located in the back of the chassis opposite the power transformer. It provides the amplifier voicing and effects functions. The μDSP PCB is not field serviceable and must be replaced as an assembly.

USB PCB

The USB PCB provides the USB interface to the μDSP and ESD protection. The USB interface is used to communicate between the user's computer for the purpose of altering the amp's presets or restoring the amp to factory settings.

POWER SUPPLY

T1 has four secondary windings for the +5V regulator, the +/-12V supplies, the tube filaments and the high voltage supply. The violet winding is rectified by a fullwave bridge, filtered by C41 and fed to the μDSP PCB where it is regulated to +3.3VDC and fed back on to the main PCB. Similarly, the center tapped orange and yellow winding is rectified, filtered and fed to +/-12V zeners to provide power to the operational amplifiers and other circuitry. The red windings provide the high voltage for the vacuum tubes. The green winding provides 6.3VAC for the vacuum tube filaments. A voltage doubler is employed to produce -41.9VDC to bias the output tubes, V2 and V3.

- NOTES: (UNLESS OTHERWISE NOTED)
- ADJUST R6 TO ACHIEVE 40mVDC AT TP22
 - LAST REFERENCE DESIGNATOR: C77, D28, F5, J4, JMP3, P29
 - Q4, R104, S4, U8, V3, W3A (AND W3B), W8, (F1, W4, W5, W7 NOT USED)
 - AC AND DC VOLTAGES ARE +/-20% RELATIVE TO GROUND WITH A DVM UNDER THE FOLLOWING CONDITIONS:
 UNIT AT RATED LINE VOLTAGE
 8 OHM RESISTIVE LOAD CONNECTED TO J3
 FOOTSWITCH CONNECTED
 CH SEL SWITCH OUT (RED LED OFF)
 FX LEVEL CONTROL AT FULL CON. VOLUME CONTROL AT "5 1/2"
 JACK INSERTED AT J4
 - NO INPUT SIGNAL (TP1-TP15, TP34)
 ADDITIONAL CONDITIONS (TP18-TP25):
 50mV 1kHz SINEWAVE INPUT TO J4
 ADJUST R6 TO ACHIEVE 40mV AT TP22
 - THIS SCHEMATIC IS FOR PCB FABRICATION P/N 0091242000 AND PCB ASSEMBLY P/N 009125000
 - UNLESS OTHERWISE SPECIFIED, ALL DIODES ARE 1N4448.
 - ALL POLARIZED CAPACITORS IN UF, 20%; 50V MINIMUM.
 - ALL UNPOLARIZED CAPACITORS IN uF, 10% OR BETTER; 50V MINIMUM. (POWER SUPPLY BYPASS CAPACITORS ARE 20%).
 - ALL RESISTORS IN OHMS, 5%; 1/4W.
