FUNCTIONAL BLOCK DIAGRAM

SPECIFICATIONS

| AMPLIFIER | CA-224 |
|---|-------------------|
| POWER AMPLIFIER SECTION | |
| Minimum RMS sine wave power per channel within stated bandwidth at no more than stated distortion and with 8-ohm load | 35 Watts |
| Power Bandwidth | 20 Hz – 20 kHz |
| Total Harmonic Distortion | 0.5 % |
| I.M. Distortion | 0.5 % |
| Speaker Damping | > 20 |
| PREAMPLIFIER SECTION | |
| Frequency Response | |
| Phono (RIAA) | ±1 dB |
| Aux (20 Hz – 20 kHz) | ±1 dB |
| Input Sensitivity and Impedance | |
| Phono | 2.5 mV/50 kΩ |
| Tape Monitor | 150 mV/50 kΩ |
| Tuner/CD | 150 mV/50 kΩ |
| Phono Max. Input Capability | 150 mV |
| Graphic Equalizer | |
| 63 Hz | ±10 dB |
| 250 Hz | ±10 dB |
| 1 kHz | ±10 dB |
| 4 kHz | ±10 dB |
| 16 kHz | ±10 dB |
| Hum & Noise (IHF Short Circuit, A Network) | |
| Phono | 68 dB |
| Tape Monitor | 85 dB |
| Tuner/CD | 85 dB |
| GENERAL | |
| Power Requirements (50 Hz) | 220 V AC |
| Power Consumption | 180 Watts |
| Dimensions (W x H x D) | 400 x 91 x 202 mm |
| Weight (approx.) | 4.1kg |

Because its products are subject to continuous improvement, Fisher Corporation reserves the right to modify product designs and specifications without notice and without incurring any obligation.

IMPORTANT NOTE

The amplifier has been Factory-adjusted for operation on 220V AC. The voltage can be changed for operation on 110V AC by making the following changes on the amplifier inside.

1. Remove the AC plug from the wall outlet.
2. Remove the screws securing the cover.
3. Disconnect Gray lead from AC Select P.C.Board Terminal No. 19, and then connect it to A C Select P.C.Board Terminal No. 16.
4. Disconnect Yellow lead from AC Select P.C.Board Terminal No. 19, and then connect it to A C Select P.C.Board Terminal No. 18.

The amplifier is now ready 110V operation. DO NOT attempt to operate the amplifier on 220V. Damage will result!

CABINET & CHASSIS PARTS LIST

PRODUCT SAFETY NOTICE

Each precaution in this manual should be followed during servicing. Components identified with the IEC symbol \triangle in the parts list and the schematic diagram designate components in which safety can be of special significance. When replacing a component identified with \triangle , use only the replacement parts designated, or parts with the same ratings of resistance, wattage or voltage that are designated in the parts list in this manual. Leakage-current or resistance measurements must be made to determine that exposed parts are acceptably insulated from the supply circuit before returning the product to the customer.

RECOMMENDED TEST EQUIPMENTS

The following test equipments are recommended to completely test and align the Amplifier:

- Line Voltage Isolation Transformer
- AC DC Multimeter
- Accurately Calibrated AC Voltmeter
- Oscilloscope (Flat to 100 kHz Minimum)
- Low-Distortion Audio Sine-Wave Generator
- Harmonic Distortion Analyzer
- Two (2) Load Resistors 8-ohms, 250 Watts (Minimum Rating)

HARMONIC DISTORTION TEST

CAUTION: Limit the following tests to no more than ten minutes each. Use 8-ohm resistors, with a minimum power rating of 250 watts when connecting a load across the SPEAKERS terminal.

CONTROL SETTINGS:

Unplug the AC power cord and set the front panel controls as follows:

- GRAPHIC EQUALIZER to center position.
- BALANCE control to center position.
- POWER switch to OFF
- FUNCTION switch to CD
- VOLUME control to MINIMUM position
- LEFT CHANNEL DRIVEN

ONE CHANNEL DRIVEN:

- 1) Connect a low distortion audio generator to LEFT CD IN jack. Set generator frequency to 1 kHz and output to minimum.
- 2) Connect an 8-ohm load resistor between SPEAKERS SYSTEM LEFT and COM terminals. Connect a Harmonic Distortion Analyzer and an AC VTVM in parallel across the 8-ohm load.
- 3) Connect the AC power cord. Turn VOLUME control to MAX.
- 4) Increase generator output for 35 Watts RMS (16.7 volts across the 8-ohm load). Harmonic Distortion Analyzer should measure 0.5 % distortion or less.
- 5) Repeat steps 1 through 4 for RIGHT CHANNEL.

BOTH CHANNELS DRIVEN

Connect 8-ohm load resistors across LEFT and RIGHT SPEAKERS SYSTEM terminals. Adjust generator output and "VOLUME" control for 35 watts at Left and Right Channels (16.7 volts across the 8-ohm loads). Harmonic Distortion Analyzer should measure 0.5 % distortion or less at each channel.

CAUTION: This precision high-fidelity instrument should be serviced only by qualified personnel, trained in the repair of transistor equipment and printed circuitry.

PRODUCT SAFETY NOTICE

Each precaution in this manual should be followed during servicing. Components identified with the IEC symbol Δ in the parts list and the schematic diagram designate components in which safety can be of special significance. When replacing a component identified with Δ , use only the replacement parts designated, or parts with the same ratings of resistance, wattage or voltage that are designated in the parts list in this manual. Leakage-current or resistance measurements must be made to determine that exposed parts are acceptably insulated from the supply circuit before returning the product to the customer.

NOTES:

1. All resistors values are indicated in "ohm" ($K=10^3$, $M=10^6$).
2. All capacitors values are indicated in " μF " ($P=10^{-12}$).
3. All voltages indicated on the schematics are measured under the following conditions.
 - a. Use a V.T.V.M.
 - b. All voltages $\pm 10\%$ with respect to chassis ground
 - c. No signals at input terminals
 - d. AC input at 220 volts 50 Hz
4. This is a basic schematic diagram.
