## SPECIFICATIONS

Microphone Input:	1.5 mV 600 ohm
Phono Inputs:	3 mV 47 Kohms
Line Inputs:	150 mV 27 Kohms
Output:	150 mV
Headphone Monitor Impedance:	16 ohms
Sampler System:	12 Bit Sampling
Maximum Sample Length:	12 Seconds
Total Memory Capacity:	24 Seconds
Power Source:	115/230V 15W
Dimensions:	483 mm (W) x 45 mm (H) x 140 mm (D) 19" (W) x 1 3/4" (H) x 5 1/2" (D)
Approximate Weight:	5.5 lbs (2.5 kg)

## CONNECTION, OPERATING AND SAMPLER INSTRUCTIONS

## INSTRUCTIONS FOR CONNECTION

1. Be sure the POWER (1) switch is in the OFF position. All connections must be made with all equipment OFF.
2. For best sound, use only high quality RCA cables when hooking up equipment to the DS-2024. Make sure that all cables are pushed in securely.
3. To hook up your DS-2024 to your mixer, connect the OUTPUT LINE (17) jacks of the DS-2024 to any available line level input on your mixer.
4. Plug your microphones into the MIC (15) jack on the front panel of the DS-2024.
5. Using 1/4" plugs and cables, connect the MIC OUT (16) jack on the back panel of the DS-2024 to the 1/4" mic jack on your mixer.
6. Plug your headphones into the HEADPHONE (14) jack on the front panel.
7. Using 1/4" plugs and cables, connect the HEADPHONE IN (13) jack on the back panel of the DS-2024 to the 1/4" headphone jack on your mixer.
8. Tuners, cassette decks, reel to reels, video equipment, CD players and any other line level input devices may be connected to the DS-2024 by using the LINE INPUT (18) jack on the back panel. PHONO/LINE INPUT (19) on the back panel can also be used for any of these sources as long as the PHONO/LINE (20) switch, on the back panel, is in the LINE position. You may also connect a turntable instead of a line source into PHONO/LINE INPUT (19) as long as the PHONO/ LINE (20) switch on the back panel, is set to the PHONO position. If you choose to use a turntable, you must also attach the ground wire from the turntable to the GND (21) screw located on the back panel of the DS-2024.

## OPERATING INSTRUCTIONS

1. Once you have made all source connections to the DS-2024 and you have made sure that the VOLTAGE SELECTOR (24) switch is in the proper position, plug the power cord into a power source and press the POWER (1) button (LED lights red).
2. The SOURCE SELECTION (11) switch determines which input source goes through the DS-2024 to the mixer. If the PHONO/LINE position is selected on the SOURCE SELECTION (11) switch, then the source connected to PHONO/LINE INPUT (19) jack on the back panel will be selected. If the LINE position is selected, then the source connected to the LINE INPUT (18) jack on the back panel will be selected. If the OFF position is selected, then the signals of inputs (18, 19) will NOT go through the unit to the mixer.

## SAMPLER OPERATION

### SAMPLE RECORDING

1. Select the source you want to sample from by placing the SOURCE SELECTION (11) switch in the proper position. Model DS-2024 is equipped with an OVERLOAD INDICATOR (25). If this indicator is illuminated, it means that the input signal you are going to sample is too strong and will cause a distorted sample. Lower the signal intensity on the device you have selected until the OVERLOAD INDICATOR (25) turns off.

NOTICE: The SAMPLE MIC (10) button must be in the OFF mode. See the Mic Sampling section for making samples from the microphone.

2. Select the memory bank you want to record into by pressing the proper MEMORY BANK (22) button.
3. Tapping the START/STOP (2) button with the mode SELECTOR (4) switch in the WRITE position begins the sampling process (the SAMPLER INDICATOR (26) will illuminate RED). Tapping the START/STOP (2) button a second time ends the sample (the SAMPLER INDICATOR (26) will turn off). If you do not tap the START/STOP (2) button a second time, the sampling process will stop automatically after 2, 4 or 12 seconds, depending on which MEMORY BANK (22) was selected.

### **SAMPLE PLAYBACK**

1. Select the memory bank you wish to play by pushing the appropriate MEMORY BANK (22) button.
2. Tapping the START/STOP (2) button with the MODE SELECTOR (4) switch in the SINGLE position will cause the sampler to playback one time (the SAMPLER INDICATOR (26) will illuminate GREEN). Every push of the START/STOP (2) button will restart the sample from the beginning. Rapid pressing of the START/STOP (2) button will cause a stuttering effect. Once the sample has started playback and the START /STOP (2) button is not pushed a second time, the sample will play to the end and then stop (the SAMPLER INDICATOR (26) will turn off).
3. Tapping the START/STOP (2) button with the MODE SELECTOR (4) switch in the REPEAT position, will cause the sample to continually play over and over (the SAMPLER INDICATOR (26) will illuminate GREEN). The START/STOP (2) button will act as an on/off switch. The first push will start the sample, the second push will stop the sample.

### **MIC SAMPLING**

1. To make a sample from the microphone, push the SAMPLER MIC (10) button (the MIC SAMPLE INDICATOR (27) will illuminate RED). The microphone signal will now be the only signal going to the sampler. The selected source will still play through the unit but it cannot be sampled. The microphone output is controlled by the microphone section of your mixer.

### **ROBO PLAY™**

1. With the ROBO PLAY™ (9) button in the OFF position (the ROBO PLAY™ INDICATOR (28) will be off), the SOURCE SELECTOR (11) switch NOT in the OFF position and the MODE SELECTOR (4) switch in either SINGLE or REPEAT, the sample will play along with the selected source.
2. When the ROBO PLAY™ (9) button is ON (the ROBO PLAY™ INDICATOR (28) illuminates RED), starting the sampler mutes the selected source. When the sample ends, the source automatically turns back on.

### **SAMPLER LEVEL CONTROL**

1. By adjusting the SAMPLER LEVEL (6) control, you can control the output volume of the recorded sample.

NOTE: The SAMPLER LEVEL (6) control does not effect the volume of any source playing through the DS-2024.

### **PAN CONTROL**

1. Placing the PAN (8) control in the center position will cause the sample playback to evenly play through the left and right channels. Turning the PAN (8) control left or right will move the playback similar to a balance control.

### **CUE CONTROL**

1. With the CUE MODE (3) switch in the MIXER position, the cueing through the headphones is controlled by the mixer. Sampler cue is controlled by the DS-2024.
2. In the SAMPLER position, only the playback of the recorded sample comes through the headphones and the level is controlled by the CUE LEVEL (5) control.

### **PITCH CONTROL**

1. The DS-2024 comes equipped with a PITCH (7) control. To get a perfect sample, set the control to its center position and record the sample.
2. During playback, raising or lowering the control will raise or lower the pitch of the sample playback. The center position will remain as normal pitch.

### **PITCH CONTROL HELPFUL HINT**

You can record a sample with the PITCH (7) control set at any position. Whatever that position is now becomes normal sound. Turning the PITCH (7) will change the rate of pitch. If you start to record a sample with the PITCH (7) control set at minimum (this now becomes your normal pitch), by increasing the pitch to maximum, the pitch effect will double in speed. Recording at maximum and lowering to minimum will do exactly the opposite.

### **BATTERY BACKUP**

The DS-2024 is equipped with battery backup to retain samples. To activate this feature, a 9 volt battery (not included) needs to be connected to the battery clip in the compartment on the back of the unit. This will enable you to store samples in memory, and when the unit is unplugged, the battery backup will retain the samples for future use. If the unit is unplugged with no battery attached, all samples will be lost.

### **LOW BATTERY INDICATOR**

A low battery indicator is included with the DS-2024. When changing the battery, make sure the unit is plugged in and the power is ON. Failure to adhere to this will cause your memory to be lost. The low battery indicator is on when the selected memory bank LED blinks. The LED will also blink if no battery is connected to the unit.

## DISASSEMBLY PROCEDURES

### 1. Removal of Top Case and Front Panel

- (a) Removal of Top Case (Fig. 1)  
Remove 7 screws (A).
- (b) Removal of Front Panel (Fig. 1)  
Remove 6 knobs (B).  
Remove 5 socket screws (C).

### 2. Removal of Sampler P.C.B. and Bottom Cover.

- (a) Removal Sampler P.C.B.  
Remove 4 supports (D). (Fig. 2)
- (b) Removal of Bottom Cover  
Remove 1 screw (E). (Fig. 2)  
Remove 5 screws (F). (Fig. 3)  
Remove 5 screws (G). (Fig. 3)  
Remove 2 screws (H). (Fig. 6)

### 3. Removal of Each P.C.B. and Transformer

- (a) Removal of Main PCB.  
Remove 2 nuts (I). (Fig. 3)  
Remove 2 screws (J). (Fig. 3)  
Remove 3 nuts (K). (Fig. 4)  
Remove 2 plates (L) (Fig. 4)  
Remove 2 screws (M). (Fig. 4)

- (b) Removal of Sample Effect P.C.B.  
Remove 1 nut (N). (Fig. 4)  
Remove 2 screws (O). (Fig. 4)
- (c) Removal of Bank Led P.C.B.  
Remove 2 screws (P). (Fig. 4)
- (d) Removal of Start/Stop P.C.B.  
Remove 2 screws (O). (Fig. 4)
- (e) Removal of Power Led P.C.B.  
Remove 2 screws (R). (Fig. 5)
- (f) Removal of Sampler Mic P.C.B.  
Remove 2 screws (S). (Fig. 5)
- (g) Removal of Robo Play P.C.B.  
Remove 2 screws (T). (Fig. 5)
- (h) Removal of Transformer.  
Remove 2 screws (U). (Fig. 5)

### 4. Removal of Battery Holder

- (a) Remove 2 screws (X). (Fig. 6)
- (b) Remove 3 screws (Y). (Fig. 6)
