ELECTROSTATICALLY SENSITIVE (ES) DEVICES

Some semiconductor (solid state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive (ES) Devices. Examples of typical ES devices are integrated circuits and some field effect transistors and semiconductor "chip" components.

The following techniques should be used to help reduce the incidence of component damage caused by static electricity.

1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any electrostatic charge on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed for potential shock reasons prior to applying power to the unit under test.
2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge build-up or exposure of the assembly.
3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.
4. Use only an anti-static solder removal device. Some solder removal devices not classified as "anti-static" can generate electrical charges sufficient to damage ES devices.
5. Do not use freon-propelled chemicals. These can generate electrical change sufficient to damage ES devices.
6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material.)
7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.

CAUTION : Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.

8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity sufficient to damage an ES devices.

PRODUCT SAFETY NOTICE

Each precaution in this manual should be followed during servicing.

Components identified with the IEC symbol  in the parts list are special significance to safety. When replacing a component identified with , use only the replacement parts designated, or parts with the same ratings or resistance, wattage, or voltage that are designated in the parts list in this manual. Leakage-current or resistance measurements must be made to determine that exposed parts are acceptably insulated from the supply circuit before returning the product to the customer.

LEAKAGE TEST(FOR SERVICE ENGINEERS IN THE U.S.A)

Before returning the unit to the user, perform the following safety checks :

1. Inspect all lead dress to make certain that

leads are not pinched or that hardware is not lodged between the chassis and other metal parts in the unit.

2. Be sure that any protective devices such as nonmetallic control knobs, insulating fish-papers, cabinet backs, adjustment and compartment covers or shields, isolation resistor-capacity networks, mechanical insulators, etc. Which were removed for the servicing are properly re-installed.

3. Be sure that no shock hazard exists ; check for leakage current using Simpson Model 229 Leakage Tester, standard equipment item No. 21641, RCA Model WT540A or use alternate method as follows : Plug the power cord directly into a 120 volt AC receptacle (do not use an Isolation Transformer for this test). Using two clip leads, connect a 1500 ohms, 10watt Resistor paralleled by a 0.15uF capacitor, in series with all exposed metal cabinet parts and a known earth ground, such as a water pipe or conduit. Use a VTVM or VOM with 1000 ohms per volt, or higher sensitivity to measure the AC voltage drop across the resistor. (See diagram) Move the resistor connection to each exposed metal part having a return path to the chassis (antenna, metal, cabinet, screw heads, knobs and control shafts, escutcheon, etc.) and measure the AC voltage drop across the resistor. (This test should be performed with the 0.35 volt RMS or more is excessive and indicates a potential shock hazard which must be corrected before returning the unit to the owner.

Technical Specifications

Audio Section

Stereo Mode
 Continuous Average Power (FTC)
 80 Watts per channel, 20Hz–20kHz,
 @ < 0.07% THD, both channels driven into 8 ohms

Five-Channel Surround Modes
 Power Per Individual Channel

Front L&R channels:
 70 Watts per channel
 @ < 0.07% THD, 20Hz–20kHz into 8 ohms

Center channel:
 70 Watts @ < 0.07% THD, 20Hz–20kHz into 8 ohms

Surround channels:
 70 Watts per channel
 @ < 0.07% THD, 20Hz–20kHz into 8 ohms

Input Sensitivity/Impedance
 Linear (High-Level) 200mV/47k ohms

Signal-to-Noise Ratio (IHF-A) 95dB

Surround System Adjacent Channel Separation
 Analog Decoding 40dB
 (Pro Logic, etc.)
 Dolby Digital (AC-3) 55dB
 DTS 55dB

Frequency Response
 @ 1W (+0dB, -3dB) 10Hz – 100kHz

High Instantaneous Current Capability (HCC) ±35 Amps

Transient Intermodulation Distortion (TIM) Unmeasurable

Rise Time 16 µsec

Slew Rate 40V/µsec

FM Tuner Section

Frequency Range 87.5–108MHz

Usable Sensitivity IHF 1.3 µV/13.2dBf

Signal-to-Noise Ratio Mono/Stereo 70/68dB

Distortion Mono/Stereo 0.2/0.3%

Stereo Separation 40dB @ 1kHz

Selectivity ±400kHz, 70dB

Image Rejection 80dB

IF Rejection 90dB

Tuner Output Level 1kHz, ±75kHz Dev 500mV

AM Tuner Section

Frequency Range	520–1710kHz
Signal-to-Noise Ratio	45dB
Usable Sensitivity	Loop 500µV
Distortion	1kHz, 50% Mod 0.8%
Selectivity	±10kHz, 30dB

Video Section

Television Format	NTSC
Input Level/Impedance	1Vp-p/75 ohms
Output Level/Impedance	1Vp-p/75 ohms
Video Frequency	
Response	10Hz–8MHz (-3dB)

General

Power Requirement	AC 120V/60Hz
Power Consumption	78W idle, 694W maximum (2 channels driven)
Dimensions (Max)	
Width	17.3 inches (440mm)
Height	6.5 inches (165mm)
Depth	17.1 inches (435mm)
Weight	35 lb (15.9 kg)

Depth measurement includes knobs, buttons and terminal connections.

Height measurement includes feet and chassis.

All features and specifications are subject to change without notice.

HDCD system manufactured under license from Pacific Microsonics, Inc. This product is covered by one or more of the following: In the USA: 5,479,168; 5,638,074; 5,640,161; 5,808,574; 5,838,274; 5,854,600; 5,864,311; 5,872,531; and in Australia: 669114. Other patents pending.

Front Panel Controls

- 1** Main Power Switch
- 2** System Power Control
- 3** Power Indicator
- 4** Headphone Jack
- 5** Selector Buttons
- 6** Tone Mode
- 7** Surround Mode Selector
- 8** Tuning Selector
- 9** Tuner Band Selector
- 10** Preset Stations Selector

1 Main Power Switch: Press this button to apply power to the AVR 510. When the switch is pressed in, the unit is placed in a Standby mode, as indicated by the amber **Power Indicator** **3** surrounding the **System Power Control** **2**. This button MUST be pressed in to operate the unit. To turn the unit off and prevent the use of the remote control, this switch should be pressed until it pops out from the front panel so that the word "OFF" may be read at the top of the switch.

NOTE: This switch is normally left in the "ON" position.

2 System Power Control: When the **Main Power Switch** **1** is "ON," press this button to turn on the AVR 510; press it again to turn

- 11** Input Source Selector
- 12** FM Mode Selector
- 13** Digital Optical 3 Input
- 14** Input/Output Status Indicator
- 15** Digital Coax 3 Jack
- 16** Video 4 Input Jacks
- 17** Bass Control
- 18** Balance Control
- 19** Treble Control
- 20** Volume Control

the unit off. Note that the **Power Indicator** **3** surrounding the switch will turn green when the unit is on.

3 Power Indicator: This LED will be lit in amber when the unit is in the Standby mode to signal that the unit is ready to be turned on. When the unit is in operation, the indicator will turn green.

4 Headphone Jack: This jack may be used to listen to the AVR 510's output through a pair of headphones. Be certain that the headphones have a standard 1/4" stereo phone plug. Note that the main room speakers will automatically be turned off when the headphone jack is in use.

- 21** Set Button
- 22** Input Indicators
- 23** Delay
- 24** Digital Input Selector
- 25** Main Information Display
- 26** Channel Select Button
- 27** Speaker Select Button
- 28** Test Tone Selector
- 29** Surround Mode Indicators
- 30** Remote Sensor Window

5 Selector Buttons: When you are establishing the AVR 510's configuration settings, use these buttons to select from the choices available, as shown in the **Main Information Display** **25** or the on-screen displays.

6 Tone Mode: Pressing this button enables or disables the Bass and Treble tone controls. When the button is pressed so that the words TONE IN appear in the **Main Information Display** **25**, the settings of the **Bass** **17** and **Treble** **19** controls may be used to adjust the output signals. When the button is pressed so that the words TONE OUT appear in the **Main Information Display** **25**, the output signal will be "flat," without any bass or treble alteration, no matter how the actual **Bass** and **Treble** controls **17** **19** are adjusted.

Front Panel Controls

7 Surround Mode Selector: Press this button to change the surround mode by scrolling through the list of available modes. Note that depending on the type of input, some modes are not always available. (See page 27 for more information about surround modes.)

8 Tuning Selector: Press the left side of the button to tune lower-frequency stations and the right side of the button to tune higher-frequency stations. When a station with a strong signal is reached, the **TUNED** indicator **W** will be lit in the **Main Information Display** **25**.

To tune manually, tap the button lightly and note that the tuner will step up one frequency increment per button press. When the button is held for a few seconds you will note that the unit will quickly search the frequency band. Release it once the fast tuning starts; the tuner will automatically scan for the next station with an acceptable signal and then stop.

9 Tuner Band Selector: Pressing this button will automatically switch the AVR 510 to the Tuner mode. Pressing it again will switch between the AM and FM frequency bands. (See page 30 for more information on the tuner.)

10 Preset Stations Selector: Press this button to scroll up or down through the list of stations that have been entered into the preset memory. (See page 30 for more information on tuner programming.)

11 Input Source Selector: Press this button to change the input by scrolling up or down through the list of input sources.

12 FM Mode Selector: Press this button to select Auto or Manual tuning. When the button is pressed so that the **AUTO** indicator **X** lights, the tuner will search for the next station with an acceptable signal when the **Tuning Selector** **8 21 E** is pressed. When the button is pressed so that the **AUTO** indicator **X** is not lit, each press of the **Tuning Selector** **8 21 E** will increase the frequency. (See page 30 for more information on using the tuner.)

13 Digital Optical 3 Input: Connect the optical digital output of an audio or video product to this jack. When the input is not in use, be certain to keep the plastic cap installed to avoid dust contamination that might degrade future performance.

14 Input/Output Status Indicator: These LED indicators will normally light green to show that the front panel Video 4 A/V jacks or the Coaxial 3 digital jack is operating as an input. When either of these jacks has been configured for use as an output, the indicator will turn red to show that the jack may be used for recording. (See page 20 for more information on configuring the front panel jacks as outputs, rather than inputs.)

15 Digital Coax 3 Jack: This jack is normally used for connection to the output of portable audio devices, video game consoles or other products that have a coax digital jack. It may also be configured as an output jack, to feed a digital signal to a CD-R, MiniDisc or other digital recording device. (See page 31 for information on configuring the Digital Coax 3 Jack to an output.)

16 Video 4 Input Jacks: These audio/video jacks may be used for temporary connection to video games or portable audio/video products such as camcorders and portable audio players.

17 Bass Control: Turn this control to modify the low-frequency output of the left/right channels by as much as $\pm 10\text{dB}$. Set this control to a suitable position for your taste or room acoustics.

18 Balance Control: Turn this control to change the relative volume for the front left/right channels.

NOTE: For proper operation of the surround modes this control should be at the midpoint, or "12 o'clock", position.

19 Treble Control: Turn this control to modify the high-frequency output of the left/right channels by as much as $\pm 10\text{dB}$. Set this control to a suitable position for your taste or room acoustics.

20 Volume Control: Turn this knob clockwise to increase the volume, counterclockwise to decrease the volume. If the AVR 510 is muted, adjusting volume control will automatically release the unit from the silenced condition.

21 Set Button: When making choices during the setup and configuration process, press this button to enter the desired setting as shown in the **Main Information Display** **25** into the AVR 510's memory.

22 Input Indicators: A green LED will light in front of the input that is currently being used as the source for the AVR 510.

23 Delay: Press this button to begin the sequence of steps required to enter delay time settings. (See page 21 for more information on delay times.)

24 Digital Input Selector: When playing a source that has a digital output, press this button to select between the **Optical** **13 31** and **Coaxial** **15 32** **Digital** inputs. (See page 28 for more information on digital audio.)

25 Main Information Display: This display delivers messages and status indications to help you operate the receiver. (See pages 7 & 8 for a complete explanation of the Information Display.)

26 Channel Select Button: Press this button to begin the process of trimming the channel output levels using an external audio source. (For more information on output level trim adjustment, see page 31.)

27 Speaker Select Button: Press this button to begin the process of selecting the speaker positions that are used in your listening room. (See page 22 for more information on setup and configuration.)

28 Test Tone Selector: Press this button to begin the process of adjusting the channel output levels using the internal test tone as a reference. (For more information on output level adjustment, see page 23.)

29 Surround Mode Indicators: A green LED will light in front of the surround mode that is currently in use.

30 Remote Sensor Window: The sensor behind this window receives infrared signals from the remote control. Aim the remote at this area and do not block or cover it unless an external remote sensor is installed.

Front Panel Information Display

- A** Bitstream Indicators
B Optical Source Indicators
C DTS Mode Indicator
D Dolby Digital Indicator
E Coaxial Source Indicators
F Dolby Pro Logic Indicator
G Analog Input Indicator
H Dolby 3 Stereo Indicator
I VMAX Mode Indicator

- J** 5-Channel Stereo Indicator
K Logic 7 Mode Indicators
L Hall Mode Indicators

N Theater Mode Indicator
O Night Mode Indicator
P Multiroom Indicator
Q Speaker/Channel Input Indicators
R Preset Number/Sleep Timer

- S** Preset Indicator
T Sleep Indicator
U Memory Indicator
V Stereo Indicator
W Tuned Indicator
X Auto Indicator
Y Main Information Display
Z Mute Indicator

A Bitstream Indicators: When the input is a digital source, one of these indicators will light to display the specific type of data signal in use.

B Optical Source Indicators: These indicators light to show when an Optical Digital Input has been selected.

C DTS Mode Indicator: This indicator lights when a DTS-encoded source is playing.

D Dolby Digital Indicator: This indicator lights when a Dolby Digital source is being played.

E Coaxial Source Indicators: These indicators light to show when a Coaxial Digital Input has been selected.

F Dolby Pro Logic Indicator: This indicator lights when the Dolby Pro Logic mode has been selected.

G Analog Input Indicator: This indicator lights when an analog input source has been selected.

H Dolby 3 Stereo Indicator: This indicator lights when the Dolby 3 Stereo Mode has been selected.

I VMAX Mode Indicator: This indicator lights when the VMAX mode is in use.

VMAX F appears when the Far Field VMAX mode is selected; **VMAX N** appears when the Near Field VMAX mode is selected. (See page 27 for a description of the VMAX modes.)

J 5-Channel Stereo Indicator: This indicator lights when the 5-Channel Stereo mode has been selected.

K Logic 7 Mode Indicators: These indicators light when the Logic 7 mode is in use.

LOGIC 7C appears for the Cinema version of Logic 7, **LOGIC 7M** appears for the Music version of Logic 7. (See page 27 for a description of the Logic 7 Modes.)

L Hall Mode Indicators: These indicators light when one of the Hall modes has been selected.

M OSD Indicator: When the OSD system is in use, this indicator lights to remind you that the other indicators in this display do not function when the On Screen Display is being used.

N Theater Mode Indicator: This indicator lights to show that the Theater mode is in use.

O Night Mode Indicator: This indicator lights when the AVR 510 is in the Night mode, which preserves the dynamic range of digital program material at low volume levels.

P Multiroom Indicator: This indicator lights when the multiroom system is active. Note that it will remain lit when the multiroom system is in use even though the main room system is in the Standby mode and all other indicators are dark. (See page 35 for more information on the Multiroom system.)

Q Speaker/Channel Input Indicators: These indicators are multipurpose, indicating either the speaker type selected for each channel or the incoming data-signal configuration. The left, center, right, surround and left surround speaker indicators are composed of three boxes, while the subwoofer is a single box. The center box lights when a "Small" speaker is selected, and the two outer boxes light when "Large" speakers are selected. When none of the boxes are lit for the center, surround or subwoofer channels, no speaker has been selected for one of those positions. (See page 22 for more information on configuring speakers.) The letters inside each of the center boxes display the active input channels. For standard analog inputs, only the L and R will light, indicating a stereo input. When a digital source is playing, the indicators will light to display the channels being received at the digital input. When the letters flash, the digital input has been interrupted. (See pages 23 & 29 for more information on the Channel Indicators.)

R Preset Number/Sleep Timer: When the tuner is in use, these numbers indicate the specific preset memory location in use. (See page 31 for more information on preset stations.) When the Sleep function is in use, these numbers show how many minutes remain before the unit goes into the Standby mode.

Front Panel Information Display

S Preset Indicator: This indicator lights when the tuner is in use to show that the **Preset**

Number/Sleep Timer R is showing the station's preset memory number. (See page 31 for more information on tuner presets.)

T Sleep Indicator: This indicator lights when the Sleep function is in use. The numbers in the **Preset Number/Sleep Timer** indicator will show the minutes remaining before the AVR 510 goes into the Standby mode. (See page 26 for more information on the Sleep function.)

U Memory Indicator: This indicator flashes when entering presets and other information into the tuner's memory.

V Stereo Indicator: This indicator lights when an FM station is being tuned in stereo.

W Tuned Indicator: This indicator lights when a station is being received with sufficient signal strength to provide acceptable listening quality.

X Auto Indicator: This indicator lights when the tuner's Auto mode is in use.

Y Main Information Display: This display shows messages relating to the status, input source, surround mode, tuner, volume level or other aspects of the AVR 510's operation.

Z Mute Indicator: This indicator lights to remind you that the AVR 510's output has been silenced by pressing the **Mute** button  38. Press the Mute button again to return to the previously selected output level.

Rear Panel Connections

① Tape Inputs: Connect these jacks to the PLAY/OUT jacks of an audio recorder.

② Tape Outputs: Connect these jacks to the RECORD/INPUT jacks of an audio recorder.

③ Video 1 Audio Inputs: Connect these jacks to the PLAY/OUT audio jacks on a VCR or other video source.

④ AM Antenna: Connect the AM loop antenna supplied with the receiver to these terminals. If an external AM antenna is used, make connections to the **AM** and **GND** terminals in accordance with the instructions supplied with the antenna.

⑤ Video 1 Audio Outputs: Connect these jacks to the RECORD/INPUT audio jacks on a VCR.

⑥ DVD Audio Inputs: Connect these jacks to the analog audio jacks on a DVD or other video source.

⑦ FM Antenna: Connect the supplied indoor or an optional external FM antenna to this terminal.

⑧ CD Inputs: Connect these jacks to the output of a compact disc player or CD changer.

⑨ 6-Channel Direct Inputs: If an external digital audio decoder is used, connect the outputs of that decoder to these jacks.

⑩ Multiroom Outputs: Connect these jacks to an optional audio power amplifier to listen to the source selected by the multiroom system in a remote room.

⑪ Amplifier Inputs: When the jumper pins that link the **Preampl Outputs** ⑪ with these inputs are removed, these jacks may be used to connect an external source or the AVR 510's multiroom system to the internal amplifiers. (See page 17 for more information on using these connections.)

⑫ Preampl Outputs: When the jumper pins that link the **Amplifier Inputs** ⑪ with these outputs are removed, these jacks may be connected to an external power amplifier.

⑬ Subwoofer Output: Connect this jack to the line-level input of a powered subwoofer. If an external subwoofer amplifier is used, connect this jack to the subwoofer amplifier input.

⑭ Video Monitor Outputs: Connect this jack to the composite or S-Video input of a TV monitor or video projector to view the on-screen

menus and the output of any standard video source selected by the receiver's video switcher.

⑮ Speaker Outputs: Connect these outputs to the matching + or – terminals on your left and right surround speakers. When making speaker connections always make certain to maintain correct polarity by connecting the red (+) terminals on the AVR 510 to the red (+) terminals on the speakers and the black (–) terminals on the AVR 510 to the black (–) terminals on the speakers. See page 15 for more information on speaker polarity.

⑯ Switched AC Accessory Outlet: This outlet may be used to power any device you wish to have turned on when the AVR 510 is turned on with the **System Power Control** button ②.

⑰ Unswitched AC Accessory Outlet: This outlet may be used to power any AC device. The power will remain on at this outlet regardless of whether the AVR 510 is on or off.

Note: The total power consumption of all devices connected to the accessory outlets should not exceed 100 watts.

⑱ AC Power Cord: Connect the AC plug to an unswitched AC wall output.

⑲ Component Video Outputs: Connect these outputs to the component video inputs of a video projector or monitor. When a source connected to one of the two **Component Video Inputs** ⑳㉑ is selected the signal will be sent to these jacks.

⑳ Video 2 Component Video Inputs: Connect the Y/Pr/Pb component video outputs of a set top converter box or other video product to these jacks.

㉑ DVD Component Video Inputs: Connect the Y/Pr/Pb component video outputs of a DVD player to these jacks.

㉒ Remote IR Output: This connection permits the IR sensor in the receiver to serve other remote controlled devices. Connect this jack to the "IR IN" jack on Harman Kardon (or other compatible) equipment.

㉓ Remote IR Input: If the AVR 510's front-panel IR sensor is blocked due to cabinet doors or other obstructions, an external IR sensor may be used. Connect the output of the sensor to this jack.

㉔ Multiroom IR Input: Connect the output of an IR sensor in a remote room to this jack to operate the AVR 510's multiroom control system.

㉕ DVD Video Inputs: Connect these jacks to the composite or S-Video output jacks on a DVD or other video source.

㉖ Video 1 Video Outputs: Connect these jacks to the RECORD/INPUT composite or S-Video jack on a VCR.

㉗ Video 3 Video Inputs: Connect these jacks to the PLAY/OUT composite or S-Video jacks on a VCR or other video source.

㉘ Video 2 Video Outputs: Connect these jacks to the PLAY/OUT composite or S-Video jacks on a VCR or other video source.

㉙ Video 2 Video Inputs: Connect these jacks to the RECORD/INPUT composite or S-Video jacks on a VCR.

㉚ Video 1 Video Outputs: Connect these jacks to the PLAY/OUT composite or S-Video jacks on a VCR or other video source.

㉛ Optical Digital Inputs: Connect the optical digital output from a DVD player, HDTV receiver, LD player or CD player to these jacks. The signal may be either a Dolby Digital signal, a DTS signal or a standard PCM digital source.

㉜ Coaxial Digital Inputs: Connect the coax digital output from a DVD player, HDTV receiver, LD player or CD player to these jacks. The signal may be either a Dolby Digital signal, DTS signal or a standard PCM digital source. Do not connect the RF digital output of an LD player to these jacks.

㉝ Digital Audio Outputs: Connect these jacks to the matching digital input connector on a digital recorder such as a CD-R or MiniDisc recorder.

㉞ Video 3 Audio Inputs: Connect these jacks to the PLAY/OUT audio jacks on a VCR or other video source.

㉟ Video 2 Audio Inputs: Connect these jacks to the PLAY/OUT audio jacks on a VCR or other video source.

㉟ Video 2 Audio Outputs: Connect these jacks to the RECORD/INPUT audio jacks on a VCR or other video source.

- 40 Light Button

NOTE: The function names shown here are each button's feature when used with the AVR 510. Most buttons have additional functions when used with other devices. See pages 41–42 for a list of these functions.

Main Remote Control Functions

IMPORTANT NOTE: The AVR 510's remote may be programmed to control up to eight devices, including the AVR 510. Before using the remote, it is important to remember to press the **Input Selector** button **5** that corresponds to the unit you wish to operate. In addition, the AVR 510's remote is shipped from the factory to operate the AVR 510 and most Harman Kardon CD or DVD players and cassette decks. The remote is also capable of operating a wide variety of other products using the control codes that are part of the remote. Before using the remote with other products, follow the instructions on pages 36–40 to program the proper codes for the products in your system.

It is also important to remember that many of the buttons on the remote take on different functions, depending on the product selected using the Device Control Selectors. The descriptions shown here primarily detail the functions of the remote when it is used to operate the AVR 510. (See page 40 for information about alternate functions for the remote's buttons.)

1 Power On Button: Press this button to turn on the power to a device selected by pressing one of the **Input Selectors** **5**.

2 IR Transmitter Window: Point this window towards the AVR 510 when pressing buttons on the remote to make certain that infrared commands are properly received.

3 Program/SPL Indicator: This three-color indicator is used to guide you through the process of programming the remote or learning commands from a remote into the AVR 510's remote code memory and it is also used as a level indicator when using the remote's EzSet capabilities. (See page 23 for more information on setting output levels, and see page 36 for information on programming the remote.)

4 Power Off Button: Press this button to place the AVR 510 or a selected device in the Standby mode. Note that this will turn off the main room functions, but if the Multiroom system is activated, it will continue to function.

5 Input Selectors: Pressing one of these buttons will perform three actions at the same time. First, if the AVR 510 is not turned on, this will power up the unit. Next, it will select the source shown on the button as the input to the AVR 510. Finally, it will change the remote control so that it controls the device selected. After pressing one of these buttons you must press the **AVR Selector** button **6** again to operate the AVR 510's functions with the remote.

6 AVR Selector: Pressing this button will switch the remote so that it will operate the AVR 510's functions. If the AVR 510 is in the Standby mode, it will also turn the AVR 510 on.

7 AM/FM Tuner Select: Press this button to select the AVR 510's tuner as the listening choice. Pressing this button when the tuner is already in use will select between the AM and FM bands.

8 Learn Button: Press this button to begin the process of "learning" the codes from another product's remote into the AVR 510's remote. (See page 37 for more information on using the remote's learning function.)

9 Test Button: Press this button to begin the sequence used to calibrate the AVR 510's output levels. (See page 23 for more information on calibrating the AVR 510.)

10 Sleep Button: Press this button to place the unit in the Sleep mode. After the time shown in the display, the AVR 510 will automatically go into the Standby mode. Each press of the button changes the time until turn-off in the following order:

Note that this button is also used to change channels on your TV when the TV is selected.

When the AVR 510 remote is being programmed with the codes to operate another device, this button is also used in the "Auto Search" process. (See page 36 for more information on programming the remote.)

11 Surround Mode Selector: Press this button to begin the process of changing the surround mode. After the button has been pressed, use the **▲/▼** buttons **14** to select the desired surround mode. (See page 28 for more information.) Note that this button is also used to tune channels when the TV is selected using the device **Input Selector**

5. When the AVR 510 remote is being programmed with the codes of another device, this button is also used in the "Auto Search" process. (See page 36 for more information on programming the remote.)

12 Night Mode: Press this button to activate the Night mode. This mode is available in specially encoded digital sources, and it preserves

dialog (center channel) intelligibility at low volume levels.

13 Channel Select Button: This button is used to start the process of setting the AVR 510's output levels to an external source. Once this button is pressed, use the **▲/▼** buttons **14** to select the channel being adjusted, then press the **Set** button **16**, followed by the **▲/▼** buttons again, to change the level setting. (See page 31 for more information.)

14 ▲/▼ Buttons: These are multi-purpose buttons. They will be used most frequently to select a surround mode. To change the surround mode, first press the **Surround Mode ▼** selector **11**. Next press these buttons to scroll up or down through the list of surround modes that appear in the **Main Information Display** **25**. These buttons are also used to increase or decrease output levels when configuring the unit with either the internal test tone or an external source. They are also used to enter delay time settings after the **Delay** button **30** has been pressed.

15 ◀ Button: This button is used to change the menu selection or setting during some of the setup procedures for the AVR 510.

16 Set Button: This button is used to enter settings into the AVR 510's memory. It is also used in the setup procedures for delay time, speaker configuration and channel output level adjustment.

17 Digital Select: Press this button to assign one of the digital inputs **13** **15** to a source. (See page 28 for more information on using digital inputs.)

18 Numeric Keys: These buttons serve as a ten-button numeric keypad to enter tuner preset positions. They are also used to select channel numbers when **TV** has been selected on the remote, or to select track numbers on a CD, DVD or LD player, depending on how the remote has been programmed.

19 Tuner Mode: Press this button when the tuner is in use to select between automatic tuning and manual tuning. When the button is pressed so that the **AUTO** indicator **X** goes out, pressing the **Tuning** buttons **21** **8** **E** will move the frequency up or down in single-step increments. When the FM band is in use, pressing this button when a station's signal is weak will change to monaural reception. (See page 30 for more information.)

Main Remote Control Functions

20 Direct Button: Press this button when the tuner is in use to start the sequence for direct entry of a station's frequency. After pressing the button, simply press the proper **Numeric Keys** **18** to select a station. (See page 30 for more information on the tuner.)

21 Tuning Up/Down: When the tuner is in use, these buttons will tune up or down through the selected frequency band. If the **Tuner Mode** button **19** **12** has been pressed so that the **AUTO** indicator **X** is illuminated, pressing and holding either of the buttons for three seconds will cause the tuner to seek the next station with acceptable signal strength for quality reception. When the **AUTO** indicator **X** is NOT illuminated, pressing these buttons will tune stations in single-step increments. (See page 30 for more information.)

22 OSD Button: Press this button to activate the On Screen Display (OSD) system used to set up or adjust the AVR 510's parameters.

23 Macro Buttons: Press these buttons to store or recall a "Macro", which is a preprogrammed sequence of commands stored in the remote. (See page 37 for more information on storing and recalling macros.)

24 Transport Controls: These buttons do not have any functions for the AVR 510, but they may be programmed for the forward/reverse play operation of a wide variety of CD or DVD players, and audio or video cassette recorders. (See page 38 for more information.)

25 Skip Up/Down Buttons: These buttons do not have a direct function with the AVR 510, but when used with a compatibly programmed CD or DVD changer they will change the disc currently being played in the changer.

26 Disc Skip Buttons: These buttons have no direct function for the AVR 510, but they are often used when the remote is programmed to operate a CD or DVD changer to change the discs in the changer. (See page 38 for more information on using the remote with other devices.)

27 Preset Up/Down: When the tuner is in use, press these buttons to scroll through the stations programmed into the AVR 510's mem-

ory. When some source devices, such as CD players, VCRs and cassette decks, are selected using the device **Input Selectors** **5**, these buttons may function as Chapter Step or Track Advance.

28 Clear Button: Press this button to clear incorrect entries when using the remote to directly enter a radio station's frequency.

29 Memory Button: Press this button to enter a radio station into the AVR 510's preset memory. Once the **MEMORY** indicator **U** flashes, you have five seconds to enter a preset memory location using the **Numeric Keys** **18**. (See page 31 for more information.)

30 Delay/Prev Ch.: Press this button to begin the process for setting the delay times used by the AVR 510 when processing surround sound. After pressing this button, the delay times are entered by pressing the **Set** button **16** and then using the **▲/▼** buttons **14** to change the setting. Press the **Set** button **16** again to complete the process. (See page 21 for more information.)

31 ► Button: Press this button to change a setting or selection when configuring many of the AVR 510's settings.

32 Speaker Select: Press this button to begin the process of configuring the AVR 510's bass management system for use with the type of speakers used in your system. Once the button has been pressed, use the **▲/▼** buttons **14** to select the channel you wish to set up. Press the **Set** button **16** and then select another channel to configure. When all adjustments have been completed, press the **Set** button **16** twice to exit the settings and return to normal operation. (See page 22 for more information.)

33 Multiroom: Press this button to activate the multiroom system or to begin the process of changing the input or volume level for the second zone. (See page 35 for more information on the multiroom system.)

34 Volume Up/Down: Press these buttons to raise or lower the system volume.

35 TV/Video Button: This button does not have a direct function on the AVR 510, but when used with a compatibly programmed VCR, DVD or satellite receiver that has a "TV/Video" function, pressing this button will switch between the output of the player or receiver and the external video input to that player. Consult the Owner's Manual for your specific player or receiver for the details of how it implements this function.

36 SPL Indicator Select: This button activates the AVR 510's EzSet function to quickly and accurately calibrate the AVR 510's output levels. Press and hold the button for three seconds and then release it. Note that the test tone will begin circulating, and the **Program/SPL Indicator** **3** will change colors. During this sequence, EzSet will automatically adjust the output levels for all channels until they are equal, as shown by the **Program/SPL Indicator** lighting green for each channel. Press this button again when the adjustment is complete to turn off the test tone. (See page 23 for more information on EzSet.)

37 6-Ch. Direct Input: Press this button to select the component connected to the **6-Channel Direct Input** **9** as the source.

38 Mute: Press this button to momentarily silence the AVR 510 or TV set being controlled, depending on which device has been selected. When the AVR 510 remote is being programmed to operate another device, this button is pressed with the **Input Selector** button **5** to begin the programming process. (See page 36 for more information on programming the remote.)

39 EzSet Sensor Microphone: The sensor microphone for the EzSet microphone is behind these slots. When using the remote to calibrate speaker output levels using EzSet, be sure that you do not hold the remote in a way that covers these slots. (See page 23 for more information on using EzSet.)

40 Light Button: Press this button to activate the remote's backlight for ease of use in darkened rooms.

Troubleshooting Guide

SYMPTOM	CAUSE	SOLUTION
Unit does not function when Main Power Switch is pushed	• No AC Power	• Make certain AC power cord is plugged into a live outlet • Check to see whether outlet is switch-controlled
Display lights, but no sound or picture	• Intermittent input connections • Mute is on • Volume control is down	• Make certain that all input and speaker connections are secure • Press Mute button • Turn up volume control
Unit turns on, but front panel display does not light up	• Display brightness is turned off	• Follow the instructions in the Display Brightness section on page 33 so that the display is set to VFD FULL
No sound from any speaker; light around power switch is red	• Amplifier is in protection mode due to possible short • Amplifier is in protection mode due to internal problems	• Check speaker wire connections for shorts at receiver and speaker ends • Contact your local Harman Kardon service depot
No sound from surround or center speakers	• Incorrect surround mode • Input is monaural • Incorrect configuration • Stereo or Mono program material	• Select a mode other than Stereo • There is no surround information from mono sources • Check speaker mode configuration • The surround decoder may not create center- or rear-channel information from nonencoded programs
Unit does not respond to remote commands	• Weak batteries in remote • Wrong device selected • Remote sensor is obscured	• Change remote batteries • Press the AVR selector • Make certain front panel sensor is visible to remote or connect remote sensor
Intermittent buzzing in tuner	• Local interference	• Move unit or antenna away from computers, fluorescent lights, motors or other electrical appliances
Letters flash in the channel indicator display and digital audio stops	• Digital audio feed paused	• Resume play for DVD • Check that Digital Input is selected

Processor Reset

In the rare case where the unit's operation or the displays seem abnormal, the cause may involve the erratic operation of the system's memory or microprocessor.

To correct this problem, first unplug the unit from the AC wall outlet and wait at least three minutes. After the pause, reconnect the AC power cord and check the unit's operation. If the system still malfunctions, a system reset may clear the problem.

To clear the AVR 510's entire system memory including tuner presets, output level settings,

delay times and speaker configuration data, first put the unit in Standby by pressing the **System Power Control** button **2**. Next, press and hold the **Tone Mode** **6** and the **FM Mode Selector** **12** buttons for three seconds.

The unit will turn on automatically and display the **RESET** message in the **Main Information Display** **1**. Note that once you have cleared the memory in this manner, it is necessary to reestablish all system configuration settings and tuner presets.

NOTE: Resetting the processor will erase any configuration settings you have made for

speakers, output levels, surround modes, digital input assignments as well as the tuner presets. After a reset the unit will be returned to the factory presets, and all settings for these items must be reentered.

If the system is still operating incorrectly, there may have been an electronic discharge or severe AC line interference that has corrupted the memory or microprocessor.

If these steps do not solve the problem, consult an authorized Harman Kardon service depot.

AVR110/210/310/510 IDLE CURRENT ADJUSTMENT:

Turn main power on; let unit idle (no load) for 5 minutes.

Check points: White female connectors: WA401,WA402,WA403,WA601,WA602

Adjust – Variable resistors: VR401,VR402,VR501,VR601,VR602

to **21mV +/- 3mV**.

Use caution not to short the two pins together in each connector.

After 5 min. more check again, and re-adjust if necessary.

AVR110/210/310/510 TUNER ALIGNMENT

There is no tuner alignment possible on the AVR110/210/310/510 series. In the event of a misalignment or problem, traced to the Tuner PCB, order complete PCB below:

harman/kardon

Service Bulletin

Service bulletin # H/K2001-01 June 2001

Warranty labor rate: MINOR repair

To: All harman/kardon Service Centers

Models: AVR110/210/310/510, AVR3000/4000/5000

Subject: Unit Goes into Protection

In the event you receive an AVR110,210,310,510,3000,4000 or 5000 A/V receiver with the complaint: "The Receiver is going into protection (Red indicator in the power switch) as soon as it's turned on, or after a short delay", check both items below for possible solutions:

AVR/210/310/510, AVR3000/4000

1. Possible bad solder connection at jumper JW-38 on main PCB:

- Disconnect all external cables, lay unit on its left side on a padded surface.
- Remove the (10) Phillips screws holding the bottom chassis grille on, exposing the Main PCB.
- Refer to the illustration below; locate area of concern and resolder exposed ends of jumper JW-38 if needed.
- Reassemble and test unit.

Model	Serial Number 120V	Serial Number 230V RDS	STATUS	ACTION
AVR210	TH0015~01001 to TH0015~02966	n/a	Check jumper JW-38 for solder	Resolder JW-38 if needed
AVR310	TH0016~01001 to TH0016~04408	n/a	Check jumper JW-38 for solder	Resolder JW-38 if needed
AVR510	TH0017~01001 to TH0017~04403	n/a	Check jumper JW-38 for solder	Resolder JW-38 if needed
AVR3000	n/a	TH0019~01001 to TH0019~03369	Check jumper JW-38 for solder	Resolder JW-38 if needed
AVR4000	n/a	TH0020~01001 to TH0020~03423	Check jumper JW-38 for solder	Resolder JW-38 if needed

AVR110/210/310/510, AVR3000/4000/5000

2. Possible blown line fuse; inspect and replace if necessary: When line fuse FU981 is blown in the AVR series, the Amber Standby Indicator will still light, but when unit is switched ON, the unit will go into protection. (Red indicator)

- a) Remove (14) Phillips screws holding the top cover to the receiver; remove the cover.
- b) Line fuse FU981 is located at the rear, on the vertically mounted Standby PCB close to the connector where the main AC power cord enters the receiver. Long-nosed pliers or similar tool may be used to remove it. Connectors nearby it may have to be unplugged to access the fuse.
- c) See chart below for proper replacement fuse:

MODEL	DESCRIPTION	H/K PART#
AVR110/210	5A Slo-Blo 5x20mm 125V	J5502250320X
AVR310	6.3A Slo-Blo 5x20mm 125V	A091-0013-0
AVR510	7A Slo-Blo 5x20mm 125V	J5502270320X
AVR3000	2.5A Slo-Blo 5x20mm 250V	G65025225114
AVR4000	3.15A Slo-Blo 5x20mm 250V	J5503331330X
AVR5000	4A Slo-Blo 5x20mm 250V	J5502240320X

- d) Replace any connectors that were disconnected, replace the top cover; test the unit

NOTE: If line fuse FU981 blows again after a short period, with no speaker loads connected, problem is another, more serious issue not covered in this bulletin.

harman/kardon

Service Bulletin

Service bulletin # H/K2001-03 Rev1 January 2003

Warranty labor rate: MAJOR repair

To: All harman/kardon Service Centers

Models: AVR110/210/310/510

Subject: No Output In Surround Mode

In the event you receive an AVR110,210,310, or 510 A/V receiver with the complaint: "The receiver has no output when any surround mode is chosen, when using any input, digital or analog.", check the item below for a possible solution:

Probable Cause: Defective IC4 EEPROM AT27LV020 on the DSP board.

Solution: Replace IC4 (called IC04 in the parts list) following these instructions:

- 1) Remove the top cover, (14) Black Phillips screws at the sides and rear of the unit.
- 2) Locate the DSP PC Board; Figure 1. Remove the metal brace at the top of the unit.
- 3) Pull the white 21 conductor ribbon cable at the rear of the DSP PC Board straight out of its receptacle.
- 4) Unplug the multicolor 5 conductor molex cable at the top of the DSP PC Board.
- 5) Remove the (33) black Phillips screws on the left side of the rear backplate; see Figure 2. Do not remove any additional screws on the right side. Remove all three black plastic plugs that cover the optical inputs at the rear of the DSP PC Board.
- 6) Pull on the left side of the rear backplate, away from the receiver chassis; you should be able to pull it away enough to allow the DSP PC Board to be pulled straight up and out of the receiver. If necessary, cut any additional cable ties that would prevent removal of the DSP board.
- 7) Replace IC4 (called IC04 in the parts list); obtain part number from chart below. Caution: IC4 is an electrostatically sensitive device and can be damaged by careless handling; you must follow proper static control procedures to prevent damage to the IC.
- 8) Replace DSP PC Board and follow the above procedures in reverse order. Screws: If using a power tool, use care and minimum effort to avoid damaging the various plastic receptacles.
- 9) Test unit to assure original problem has been corrected.

REMOVE ALL PHILLIPS SCREWS ON THIS SIDE OF THE RECEIVER**

harman/kardon**Service Bulletin**

Service bulletin # H/K2003-02 January 2002

Warranty labor rate: MINOR repair

To: All harman/kardon Service Centers

Model: AVR310, AVR510

Subject: Hum

In the event you receive an AVR310 or AVR510 with the complaint of Hum in all channels (speaker output), check and replace C487 (6800U 16V) in the regulated power supply on the main PCB.

Procedure:

- 1) Remove the top cover (14 Phillips screws)
- 2) Turn the unit on its side and remove the bottom grille (10 Phillips screws).
- 3) Locate and replace C487, (6800U 16V) The capacitor is located in the power supply section in the front right quadrant of the main PCB. Replace only with h/k part number 647-UVZ1C682MHH. (**DO NOT** replace with original capacitor h/k part number J3420668236X).
- 4) Replace the bottom grille, top cover, and test the unit.

MODELS	SERIAL NUMBER 120V	STATUS	ACTION
AVR310 AVR510	All serial numbers affected	C487 may be defective	Replace C487

harman/kardon

Service Bulletin

Service bulletin # H/K2003-07 Sept. 2003

Warranty labor rate: MINOR repair

To: All harman/kardon Service Centers

Model: AVR110/210/310/510, AVR120/220; AVR320/520

Subject: Various Complaints

For Complaints:

NO AUDIO

NOISE

INTERMITTENT NOISE

INTERMITTENT AUDIO

Possible Solution:

Voltages may be too high on DSP Buffer IC or DSP IC

All modifications are done to the DSP board.

AVR110/210/310/510

AVR120/220

Remove BD5 and replace with two 1N4148 diodes in series.

Remove R43 and R90 (3.3Ω) and replace each with a 1N4148 diode.
(See diagram Page 2 for location and polarity)

AVR320/520

Remove BD25 and replace with two 1N4148 diodes in series.

(See diagram Page 2 for location and polarity)

In all cases the 1N4148 diode(s) you need to add should be normal 2-lead axial components, like h/k part# 13-0482 or equivalent (not SMD devices).

AVR110/210/310/510
AVR120/220/320/520

TIP# HKTT2002-01

Complaint:

The components on many of these PCB's can't be accessed with a test probe or other device because the boards are mounted so close together. If the board is physically removed, signal & power to the board is lost and the board/component cannot be tested.

Solution:

Order h/k extension cable kit #AVR-CABLEASSYII. This kit, consisting of various ribbon cable assemblies, will allow you to extend the connectors so any PCB can be removed from the unit and still be "live".

Kit includes:

Qty. in bag	Conductors	Comment
5	2	3 pin connector but only 2 wires
6	3	
2	4	
2	5	
2	6	
6	7	
2	8	
2	9	
2	10	
6	11	
1	12	
1	14	
4	15	
1	16	
1	17	
4	19	
1	21	Split connector male/female *
1	22	Split connector male/female *
1	27	Split connector male/female *
1	29	Split connector male/female *
1	30	Split connector male/female *
1	31	Split connector male/female *

* Connectors are wired together side-by-side to equal the higher pin counts

SONY

CXP82832/82840/82852/82860

CMOS 8-bit Single Chip Microcomputer

Description

The CXP82832/82840/82852/82860 is a CMOS 8-bit single chip microcomputer integrating on a single chip an A/D converter, serial interface, timer/counter, time base timer, capture timer/counter, fluorescent display panel controller/driver, remote control reception circuit, and PWM output besides the basic configurations of 8-bit CPU, ROM, RAM and I/O port.

The CXP82832/82840/82852/82860 also provides sleep/stop function that enables lower power consumption.

Structure

Silicon gate CMOS IC

Features

- Wide-range instruction system (213 instructions) to cover various types of data
 - 16-bit arithmetic/multiplication and division/boolean bit operation instructions
 - Minimum instruction cycle
 - 400ns at 10MHz operation
(122μs at 32kHz operation)
 - Incorporated ROM capacity
 - 32K bytes (CXP82832)
 - 40K bytes (CXP82840)
 - 52K bytes (CXP82852)
 - 60K bytes (CXP82860)
 - Incorporated RAM capacity
 - 1536 bytes (including fluorescent display area)
 - Peripheral functions
 - A/D converter
 - 8 bits, 8 channels, successive approximation method
(Conversion time of 32μs/10MHz)
 - Serial interface
 - 8-bit, 8-stage FIFO incorporated
(Auto transfer for 1 to 8 bytes), 1 channel
 - 8-bit clock synchronized type, 1 channel
 - Timers
 - 8-bit timer, 8-bit timer/counter, 19-bit time base timer
 - 16-bit capture timer/counter, 32kHz timer/counter
 - Fluorescent display panel controller/driver
 - Supports the universal grid fluorescent display panel.
 - High voltage drive output port of 56 pins (40V)
 - Maximum of 640 segments display possible
 - Display timing number of 1 to 20
 - Dimmer function
 - Incorporated pull-down resistor (Mask option)
 - Hardware key scan function (Maximum of 16 × 8 key matrix supportable)
 - Remote control reception circuit
 - PWM output
 - Interruption
 - Standby mode
 - Package
 - 100-pin plastic QFP
 - CXP82800 100-pin ceramic QFP
 - Piggyback/evaluation chip

Pin Assignment (Top View)

Note) 1. NC (Pin 3) must be connected to V_{DD}.

2. V_{DD} (Pins 44 and 89) must be connected to V_{DD}.

Pin code	I/O	Functions	
PA0/AN0 to PA7/AN7	I/O/ Analog input	(Port A) 8-bit I/O port. I/O can be set in a unit of single bits. Incorporation of the pull-up resistor can be set through the software in a unit of 4 bits. (8pins)	Analog inputs to A/D converter. (8 pins)
PB0/CINT	I/O/Input	(Port B) 8-bit I/O port. I/O can be set in a unit of single bits. Incorporation of the pull-up resistor can be set through the software in a unit of 4 bits. (8 pins)	Capture input to 16-bit timer/counter.
PB1/CS0	I/O/Input		Chip select input for serial interface (CH0).
PB2/SCK0	I/O/I/O		Serial clock I/O (CH0).
PB3/SI0	I/O/Input		Serial data input (CH0).
PB4/SO0	I/O/Output		Serial data output (CH0).
PB5/SCK1	I/O/I/O		Serial clock I/O (CH1).
PB6/SI1	I/O/Input		Serial data input (CH1).
PB7/SO1	I/O/Output		Serial data output (CH1).
PC0/KR0 to PC7/KR7	I/O/Input	(Port C) 8-bit I/O port. I/O can be set in a unit of single bits. Can drive 12mA sync current. Incorporation of the pull-up resistor can be set through the software in a unit of 4 bits. (8 pins)	Serves as key return inputs when operating key scan with fluorescent display panel (FDP) segment signal. (8 pins)
PD0/A55 to PD7/A48	Output/Output	(Port D) 8-bit output port. (8 pins)	FDP segment signal (anode connection) outputs.
PE0/INT0/ EC0	Input/Input/Input	(Port E) 8-bit port. Lower 6 bits are for inputs; upper 2 bits are for outputs. (8 pins)	Inputs for external interruption request. (4 pins)
PE1/INT1/ EC1	Input/Input/Input		External event inputs for timer/counter. (2 pins)
PE2/INT2	Input/Input		
PE3/INT3/ NMI	Input/Input/Input		Non-maskable interruption request input.
PE4/RMC	Input/Input		Remote control reception circuit input.
PE5	Input		
PE6/PWM	Output/Output		14-bit PWM output.
PE7/TO/ADJ	Output/Output/ Output		Output for the 16-bit timer/counter rectangular waves, and 32kHz oscillation frequency division.
PF0/A47 to PF7/A40	Output/Output	(Port F) 8-bit output port. (8pins)	FDP segment signal (anode connection) outputs.

Pin code	I/O	Functions	
PG0/A39 to PG7/A32	Output/Output	(Port G) 8-bit output port. (8 pins)	FDP segment signal (anode connection) outputs. (8 pins)
PH0/A31 to PH7/A24	Output/Output	(Port H) 8-bit output port. (8 pins)	FDP segment signal (anode connection) outputs. (8 pins)
A16 to A23	Output	FDP segment signal (anode connection) outputs. (8 pins)	
G0/A0 to G15/A15	Output/Output	Outputs for FDP timing signals (grid connection)/segment signals (anode connection). (16 pins)	
V _{FDP}		FDP voltage supply when incorporated pull-down (PD) resistor is set by mask option.	
EXTAL	Input	Crystal connectors for system clock oscillation. When the clock is supplied externally, input to EXTAL; opposite phase clock should be input to XTAL.	
XTAL	Output		
TEX	Input	Crystal connectors for 32kHz timer/counter clock oscillation. For usage as event input, input to TEX, and open TX.	
TX	Output		
RST	Input	Low-level active, system reset	
NC		NC. Under normal operation, connect to V _{DD} .	
AV _{REF}	Input	Reference voltage input for A/D converter.	
AV _{ss}		A/D converter GND.	
V _{DD}		Vcc supply.	
V _{ss}		GND.

Ē _a	Side A Enable Input
Ē _b	Side B Enable Input
Z _a	Side A Output
Z _b	Side B Output

Connection Diagram

Functional Description

The VHC153 is a dual 4-input multiplexer. It can select two bits of data from up to four sources under the control of the common Select inputs (S₀, S₁). The two 4-input multiplexer circuits have individual active-LOW Enables (Ē_a, Ē_b) which can be used to strobe the outputs independently. When the Enables (Ē_a, Ē_b) are HIGH, the corresponding outputs (Z_a, Z_b) are forced LOW. The VHC153 is the logic implementation of a 2-pole, 4-position switch, where the position of the switch is determined by the logic levels supplied to the Select inputs. The logic equations for the outputs are shown below.

$$Z_a = \bar{E}_a \cdot (I_{0a} \cdot \bar{S}_1 \cdot \bar{S}_0 + I_{1a} \cdot \bar{S}_1 \cdot S_0 + I_{2a} \cdot S_1 \cdot S_0 + I_{3a} \cdot S_1 \cdot \bar{S}_0)$$

$$Z_b = \bar{E}_b \cdot (I_{0b} \cdot \bar{S}_1 \cdot \bar{S}_0 + I_{1b} \cdot \bar{S}_1 \cdot S_0 + I_{2b} \cdot S_1 \cdot S_0 + I_{3b} \cdot S_1 \cdot \bar{S}_0)$$

X = Immaterial

Functional Description

The VHC157 is a quad 2-input multiplexer. It selects four bits of data from two sources under the control of a common Select input (S). The Enable input (\bar{E}) is active-LOW. When \bar{E} is HIGH, all of the outputs (Z) are forced LOW regardless of all other inputs. The VHC157 is the logic implementation of a 4-pole, 2-position switch where the position of the switch is determined by the logic levels supplied to the Select input. The logic equations for the outputs are shown below:

$$Z_a = \bar{E} \cdot (I_{1a} \cdot S + I_{0a} \cdot \bar{S})$$

$$Z_b = \bar{E} \cdot (I_{1b} \cdot S + I_{0b} \cdot \bar{S})$$

$$Z_c = \bar{E} \cdot (I_{1c} \cdot S + I_{0c} \cdot \bar{S})$$

$$Z_d = \bar{E} \cdot (I_{1d} \cdot S + I_{0d} \cdot \bar{S})$$

A common use of the VHC157 is the moving of data from two groups of registers to four common output busses. The particular register from which the data comes is determined by the state of the Select input. A less obvious use is as a function generator. The VHC157 can generate any four of the sixteen different functions of two variables with one variable common. This is useful for implementing gating functions.

Logic Diagram

74VHC574

OCTAL D-TYPE FLIP FLOP WITH 3 STATE OUTPUTS NON INVERTING

- HIGH SPEED:
 $f_{MAX} = 180$ MHz (TYP.) at $V_{CC} = 5V$
 - LOW POWER DISSIPATION:
 $I_{CC} = 4 \mu A$ (MAX.) at $T_A=25^\circ C$
 - HIGH NOISE IMMUNITY:
 $V_{NIH} = V_{NIL} = 28\%$ V_{CC} (MIN.)
 - POWER DOWN PROTECTION ON INPUTS
 - SYMMETRICAL OUTPUT IMPEDANCE:
 $|I_{OH}| = I_{OL} = 8$ mA (MIN.)
 - BALANCED PROPAGATION DELAYS:
 $t_{PLH} \cong t_{PHL}$
 - OPERATING VOLTAGE RANGE:
 $V_{CC(OPR)} = 2V$ to $5.5V$
 - PIN AND FUNCTION COMPATIBLE WITH
74 SERIES 574
 - IMPROVED LATCH-UP IMMUNITY
 - LOW NOISE: $V_{OLP} = 0.9V$ (MAX.)

DESCRIPTION

The 74VHC574 is an advanced high-speed CMOS OCTAL D-TYPE FLIP FLOP with 3 STATE OUTPUTS NON INVERTING fabricated with sub-micron silicon gate and double-layer metal wiring C²MOS technology.

These 8 bit D-Type flip-flop is controlled by a clock input (CK) and an output enable input (OE).

On the positive transition of the clock, the Q outputs will be set to the logic states that were setup at the D inputs.

While the \overline{OE} input is low, the 8 outputs will be in a normal logic state (high or low logic level) and

PIN CONNECTION AND IEC LOGIC SYMBOLS

ORDER CODES

PACKAGE	TUBE	T & R
SOP	74VHC574M	74VHC574MTR
TSSOP		74VHC574TTR

while high level the outputs will be in a high impedance state.

The Output control does not affect the internal operation of flip flop; that is, the old data can be retained or the new data can be entered even while the outputs are off.

Power down protection is provided on all inputs and 0 to 7V can be accepted on inputs with no regard to the supply voltage. This device can be used to interface 5V to 3V.

All inputs and outputs are equipped with protection circuits against static discharge, giving them 2KV ESD immunity and transient excess voltage.

74VHC574**INPUT EQUIVALENT CIRCUIT****PIN DESCRIPTION**

PIN No	SYMBOL	NAME AND FUNCTION
1	OE	3-State Output Enable Input (Active LOW)

Features

- Fast Read Access Time – 120 ns, see AT27BV020 for Faster Speeds
- Dual Voltage Range Operation
 - Low Voltage Power Supply Range, 3.0V to 3.6V or Standard 5V ± 10% Supply Range
- Compatible with JEDEC Standard AT27C020
- Low Power CMOS Operation
 - 20 μ A Max (Less than 1 μ A Typical) Standby for $V_{CC} = 3.6V$
 - 29 mW Max Active at 5 MHz for $V_{CC} = 3.6V$
- JEDEC Standard Packages
 - 32-lead PLCC
 - 32-lead TSOP
 - 32-lead VSOP
- High Reliability CMOS Technology
 - 2,000V ESD Protection
 - 200 mA Latchup Immunity
- Rapid Programming Algorithm – 100 μ s/Byte (Typical)
- Two-line Control
- CMOS and TTL Compatible Inputs and Outputs
 - JEDEC Standard for LVTTL
- Integrated Product Identification Code
- Industrial Temperature Range
- Green (Pb/Halide-free) Packaging Option

1. Description

The AT27LV020A is a high-performance, low-power, low-voltage 2,097,152 bit one-time programmable read-only memory (OTP EPROM) organized as 256K by 8 bits. It requires only one supply in the range of 3.0 to 3.6V in normal read mode operation, making it ideal for fast, portable systems using battery power.

Atmel's innovative design techniques provide fast speeds that rival 5V parts while keeping the low power consumption of a 3V supply. At $V_{CC} = 3.0V$, any byte can be accessed in less than 120 ns. With a typical power dissipation of only 18 mW at 5 MHz and $V_{CC} = 3.3V$, the AT27LV020A consumes less than one fifth the power of a standard 5V EPROM. Standby mode supply current is typically less than 1 μ A at 3.3V.

The AT27LV020A is available in industry-standard JEDEC approved one-time programmable (OTP) plastic PLCC, TSOP, and VSOP. All devices feature two-line control (\overline{CE} , \overline{OE}) to give designers the flexibility to prevent bus contention.

The AT27LV020A operating with V_{CC} at 3.0V produces TTL level outputs that are compatible with standard TTL logic devices operating at $V_{CC} = 5.0V$. The device is also capable of standard 5-volt operation making it ideally suited for dual supply range systems or card products that are pluggable in both 3-volt and 5-volt hosts.

Atmel's AT27LV020A has additional features to ensure high quality and efficient production use. The Rapid Programming Algorithm reduces the time required to program the part and guarantees reliable programming. Programming time is typically only 100 μ s/byte. The Integrated Product Identification Code electronically identifies the device and manufacturer. This feature is used by industry standard programming equipment to select the proper programming algorithms and voltages. The AT27LV020A programs exactly the same way as a standard 5V AT27C020 and uses the same programming equipment.

AT27LV020A

0549F-E PROM-05/05

AT27LV020A**3. System Considerations**

Switching between active and standby conditions via the Chip Enable pin may produce transient voltage excursions. Unless accommodated by the system design, these transients may exceed datasheet limits, resulting in device non-conformance. At a minimum, a 0.1 μ F high frequency, low inherent inductance, ceramic capacitor should be utilized for each device. This capacitor should be connected between the V_{CC} and Ground terminals of the device, as close to the device as possible. Additionally, to stabilize the supply voltage level on printed circuit boards with large EPROM arrays, a 4.7 μ F bulk electrolytic capacitor should be utilized, again connected between the V_{CC} and Ground terminals. This capacitor should be positioned as close as possible to the point where the power supply is connected to the array.

4. Block Diagram**5. Absolute Maximum Ratings***

Temperature Under Bias.....	-40°C to +85°C
Storage Temperature.....	-65°C to +125°C
Voltage on any Pin with with Respect to Ground.....	-2.0V to +7.0V ⁽¹⁾
Voltage on A9 with Respect to Ground	-2.0V to +14.0V ⁽¹⁾
V_{PP} Supply Voltage with Respect to Ground	-2.0V to +14.0V ⁽¹⁾

*NOTICE: Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Notes: 1. Minimum voltage is -0.6V DC which may undershoot to -2.0V for pulses of less than 20 ns. Maximum output pin voltage is $V_{CC} + 0.75V$ DC which may be exceeded if certain precautions are observed (consult application notes) and which may overshoot to +7.0V for pulses of less than 20 ns.

Multimedia ICs

The BA7603 and BA7603F are switching ICs developed for use in VCRs. Each contains three two-channel analog multi-plexers. The switches have sync-tip clamped inputs and are ideal for switching video signals.

● Applications

Video cassette recorders and televisions

● Features

- 1) Three 2-input / 1-output switches.
- 2) Sync-tip clamped inputs.
- 3) 5V power supply.
- 4) Low power consumption (62.5mW Typ.).
- 5) Excellent frequency characteristics (10MHz, 0dB Typ.).
- 6) Wide dynamic range (2.9V_{P-P} Typ.).
- 7) Fast switching speed (50ns Typ.).

8-channel analog multiplexer / demultiplexer

BU4051BC / BU4051BCF / BU4051BCFV

The BU4051BC, BU4051BCF and BU4051BCFV are analog multiplexers / demultiplexers which use three-input digital signals for control via an 8-channel analog switch.

These products feature high on / off output voltage ratio and low crosstalk between analog switches.

Triple 2-channel analog multiplexer / demultiplexer

BU4053BC / BU4053BCF / BU4053BCFV

The BU4053BC, BU4053BCF, and BU4053BCFV are multiplexers / demultiplexers capable of selecting and combining analog signals and digital signals in a 2 ch × 3 configuration. Inhibit signals and control signals are used to turn on the switch corresponding to each of the channels. In addition, even if the logical amplitude ($V_{DD}-V_{SS}$) of the control signal is low, signals with a large amplitude ($V_{DD}-V_{EE}$) can be switched.

Also, as each switch has a low ON resistance, it can be connected to a low impedance circuit.

8-bit compatible shift / store register BU4094BC / BU4094BCF / BU4094BCFV

The BU4094BC, BU4094BCF, and BU4094BCFV are shift / store registers, each consisting of an 8-bit register and an 8-bit latch.

As the data in the shift register can be latched by an asynchronous strobe input, it is possible to hold the output in the data transfer mode.

The tri-state parallel output can be connected directly with an 8-bit bus line.

These registers are suitable for in-line / parallel data conversion, data receivers and other similar applications.

CS4391

24-Bit, 192 kHz Stereo DAC with Volume Control

Features

- Complete Stereo DAC System: Interpolation, D/A, Output Analog Filtering
- 108 dB Dynamic Range
- 94 dB THD+N
- Direct Stream Digital Mode
- Low Clock Jitter Sensitivity
- +5 V to +3 V Power Supply
- ATAPI Mixing
- On-Chip Digital De-emphasis for 32, 44.1, and 48 kHz
- Volume Control with Soft Ramp
 - 119 dB Attenuation
 - 1 dB Step Size
 - Zero Crossing Click-Free Transitions
- 36 mW with 3 V supply
- Direct Interface with 5 V to 1.8 V Logic

Description

The CS4391 is a complete stereo digital-to-analog system including digital interpolation, fourth-order delta-sigma digital-to-analog conversion, digital de-emphasis, volume control, channel mixing and analog filtering. The advantages of this architecture include: ideal differential linearity, no distortion mechanisms due to resistor matching errors, no linearity drift over time and temperature and a high tolerance to clock jitter.

The CS4391 accepts PCM data at sample rates from 2 kHz to 192 kHz, DSD audio data, consumes very little power and operates over a wide power supply range. These features are ideal for DVD, A/V receivers, CD and set-top box systems.

M74HCU04

HEX INVERTER (SINGLE STAGE)

DESCRIPTION

The M54/74HCU04 is a high speed CMOS HEX INVERTER (SINGLE STAGE) fabricated in silicon gate C²MOS technology. It has the same high speed performance of LSTTL combined with true CMOS low power consumption.

As the internal circuit is composed of a single stage inverter, it can be used in crystal oscillator.

All inputs are equipped with circuits against static discharge and transient excess voltage.

CS5360

24-Bit Stereo A/D Converter for Digital Audio

Features

- 24 Bit Conversion
- 105 dB Dynamic Range
- -95 dB THD+N
- 128X Oversampling
- Fully Differential Inputs
- Linear Phase Digital Anti-Alias Filtering
 - 21.7 kHz passband ($F_s = 48\text{kHz}$)
 - 85 dB stop band attenuation
 - 0.0025 dB pass band ripple
- High Pass Filter - DC Offset Removal
- Peak Signal Level Detector
 - High Resolution and Bar Graph Modes
- Pin Compatible with CS5334 and CS5335

Description

The CS5360 is a 2-channel, single +5 V supply, 24-bit analog-to-digital converter for digital audio systems. The CS5360 performs sampling, analog-to-digital conversion and anti-alias filtering, generating 24-bit values for both left and right inputs in serial form. The output word rate can be up to 50 kHz per channel.

The CS5360 uses 4th-order, delta-sigma modulation with 128X oversampling followed by digital filtering and decimation, which removes the need for an external anti-alias filter. This ADC uses a differential architecture which provides excellent noise rejection.

The CS5360 has a filter passband to 21.7 kHz. The filter has linear phase, 0.0025 dB passband ripple, and >85 dB stopband rejection. An on-chip high pass filter is also included to remove DC offsets.

ORDERING INFORMATION

Frame Signal	FRAME	10	11	PU	Peak Update

High Pass Filter Defeat - HP DEFEAT

*Pin 1, Input
Function:*

A high logic level on this pin disables the digital high pass filter. A low logic level on this pin enables the high pass filter.

Overflow - OVFL

*Pin 2, Input
Function:*

Overflow indicates analog input overrange, for both the Left and Right channels, since the last update request on the PEAK UPDATE (PU) pin. A value of 1 in the register indicates an overrange condition. The left channel information is output on OVFL during the left channel portion of LRCK. The right channel information is available on OVFL during the right channel portion of LRCK. The registers are updated with a high to low transition on the PEAK UPDATE pin. A 47 kΩ pull-down resistor on this pin will set the CS5360 in Master Mode.

Positive Analog Power - VA+

*Pin 3, Input
Function:*

Positive analog supply. Nominally +5 volts.

Analog Ground - AGND

*Pin 4, Input
Function:
Analog ground reference.*

DGND - Digital Ground

*Pin 5, Input
Function:
Digital ground reference.*

CS5360

Positive Digital Power - VD+*Pin 6, Input**Function:*

Positive digital supply. Nominally +5 volts.

Master Clock - MCLK*Pin 7, Input**Function:*Clock source for the delta-sigma modulator sampling and digital filters. In Master Mode, the frequency of this clock must be 256x the output sample rate, F_s . In Slave Mode, the frequency of this clock must be either 256x, 384x or 512x F_s .**Serial Data Clock - SCLK***Pin 8, Input/Output**Function:*Clocks the individual bits of the serial data out from the SDATA pin. The relationship between LRCK, SCLK and SDATA is controlled by DIF0 and DIF1. In Master Mode, SCLK is an output clock with a frequency of 64x the output sample rate, F_s . In Slave Mode, SCLK is an input.**Serial Data Output - SDATA***Pin 9, Output**Function:*

Two's complement MSB-first serial data of 24 bits is output on this pin. Included in the serial data output is the 8-bit Input Signal Level Bits. The data is clocked out via the SCLK clock and the channel is determined by LRCK. The relationship between LRCK, SCLK and SDATA is controlled by DIF0 and DIF1.

Peak Update - PU*Pin 11, Input**Function:*

Transfers the Peak Signal Level contents of the Active Registers to the Output Registers on a high to low transition on this pin. This transition will also reset the Active register.

Frame Signal - FRAME*Pin 10, Output**Function:*Frames the Peak Signal Level (PSL) Bits. FRAME goes high coincident with the leading edge of the first PSL bit and falls coincident with the trailing edge of the last PSL bit as shown in Figures 8-10. A 47 k Ω pull-down resistor on this pin will set the Peak Signal Level Monitoring format to "Bar Graph" mode.**Left/Right Clock - LRCK***Pin 12, Input/Output**Function:*LRCK determines which channel, left or right, is to be output on SDATA. The relationship between LRCK, SCLK and SDATA is controlled by DIF0 and DIF1. Although the outputs for each channel are transmitted at different times, Left/Right pairs represent simultaneously sampled analog inputs. In Master Mode, LRCK is an output clock whose frequency is equal to the output sample rate, F_s . In Slave Mode, LRCK is an input clock whose frequency must be equal to F_s .

CS5360

Differential Right Channel Analog Input - AINR+, AINR-*Pin 13 and Pin 14, Input**Function:*

Analog input connections of the right channel differential inputs. Typically 2 Vrms differential (1Vrms for each input pin) for a full-scale analog input signal.

Common Mode Output - CMOUT*Pin 15, Output**Function:*

This output, nominally 2.2 V, can be used to bias the analog input circuitry to the common mode voltage of the CS5360. CMOUT is not buffered and the maximum current is 10 µA.

Differential Left Channel Analog Input - AINL+, AINL-*Pin 16 and Pin 17, Input**Function:*

Analog input connections of the left channel differential inputs. Typically 2 Vrms differential (1Vrms for each input pin) for a full-scale analog input signal.

Reset - RST*Pin 18, Input**Function:*

A low logic level on this pin activates Reset.

Digital Interface Format - DIF0, DIF1*Pins 19 and 20, Input**Function:*

These two pins select one of 3 digital interface formats or power-down. The format determines the relationship between SCLK, LRCK and SDATA. The formats are detailed in Figures 8-10.

Power Supply Connections**VD+ - Positive Digital Power, PIN 7.**

Positive supply for the digital section. Nominally ± 5 volts.

VA+ - Positive Analog Power, PIN 22.

Positive supply for the analog section. Nominally $+5$ volts.

DGND - Digital Ground, PIN 8.

Ground for the digital section. DGND should be connected to same ground as AGND.

AGND - Analog Ground, PIN 21.

Ground for the analog section. AGND should be connected to same ground as DGND.

CS8413 CS8414

*Audio Output Interface***SCK - Serial Clock, PIN 12.**

Serial clock for SDATA pin which can be configured (via the M0, M1, M2, and M3 pins) as an input or output, and can sample data on the rising or falling edge. As an output, SCK will generate 32 clocks for every audio sample. As an input, 32 SCK periods per audio sample must be provided in all normal modes.

FSYNC - Frame Sync, PIN 11.

Delineates the serial data and may indicate the particular channel, left or right, and may be an input or output. The format is based on M0, M1, M2, and M3 pins.

SDATA - Serial Data, PIN 26.

Audio data serial output pin.

M0, M1, M2, M3 - Serial Port Mode Select, PINS 23, 24, 18, 17.

Selects the format of FSYNC and the sample edge of SCK with respect to SDATA. M3 selects between eight normal modes (M3 = 0), and six special modes (M3 = 1).

*Control Pins***VERF - Validity + Error Flag, PIN 28.**

A logical OR'ing of the validity bit from the received data and the error flag. May be used by interpolation filters to interpolate through errors.

U - User Bit, PIN 14.

Received user bit serial output port. FSYNC may be used to latch this bit externally. (Except in I²S modes when this pin is updated on the active edge of FSYNC.)

C - Channel Status Output, PIN 1.

Received channel status bit serial output port. FSYNC may be used to latch this bit externally. (Except in I²S modes when this pin is updated on the active edge of FSYNC.)

CBL - Channel Status Block Start, PIN 15.

The channel status block output is high for the first four bytes of channel status and low for the last 20 bytes.

SEL - Select, PIN 16.

Control pin that selects either channel status information (SEL = 1) or error and frequency information (SEL = 0) to be displayed on six of the following pins.

CS8413 CS8414

C0, Ca, Cb, Cc, Cd, Ce - Channel Status Output Bits, PINS 2-6, 27.

These pins are dual function with the 'C' bits selected when SEL is high. Channel status information is displayed for the channel selected by CS12. $\overline{C0}$, which is channel status bit 0, defines professional ($C0 = 0$) or consumer ($C0 = 1$) mode and further controls the definition of the Ca-Ce pins. These pins are updated with the rising edge of CBL.

CS12 - Channel Select, PIN 13.

This pin is also dual function and is selected by bringing SEL high. CS12 selects sub-frame 1 (when low) or sub-frame 2 (when high) to be displayed by channel status pins $\overline{C0}$ and Ca through Ce.

FCK - Frequency Clock, PIN 13.

Frequency Clock input that is enabled by bringing SEL low. FCK is compared to the received clock frequency with the value displayed on F2 through F0. Nominal input value is 6.144 MHz.

E0, E1, E2 - Error Condition, PINS 4-6.

Encoded error information that is enabled by bringing SEL low. The error codes are prioritized and latched so that the error code displayed is the highest level of error since the last clearing of the error pins. Clearing is accomplished by bring SEL high for more than 8 MCK cycles.

F0, F1, F2 - Frequency Reporting Bits, PINS 2-3, 27.

Encoded sample frequency information that is enabled by bringing SEL low. A proper clock on FCK must be input for at least two thirds of a channel status block for these pins to be valid. They are updated three times per block, starting at the block boundary. These pins are invalid when the PLL is out of lock.

ERF - Error Flag, PIN 25.

Signals that an error has occurred while receiving the audio sample currently being read from the serial port. Three errors cause ERF to go high: a parity or biphase coding violation during the current sample, or an out of lock PLL receiver.

Receiver Interface

RXP, RXN - Differential Line Receivers, PINS 9, 10.

RS422 compatible line receivers.

Phase Locked Loop

MCK - Master Clock, PIN 19.

Low jitter clock output of 256 times the received sample frequency.

FILT - Filter, PIN 20.

An external 470Ω resistor and $0.068\mu\text{F}$ capacitor is required from FILT pin to analog ground.

SCREEN CHARACTER and PATTERN DISPLAY CONTROLLERS

DESCRIPTION

The M35012-XXXSP and M35013-XXXSP are TV screen display control IC which can be used to display information such as program schedules, the date and messages on the TV screen.

The differences among M35012-XXXSP and M35013-XXXSP are noted below.

The descriptions that follow describe the M35013-XXXSP unless otherwise noted.

Type name	M35012-XXXSP	M35013-XXXSP
Characters available	256	128
Data input	16 bits serial input	8 bits serial input
Exclusion function	Exclusion 1 and 2 function	Exclusion 1 function
CONT7F function	Normal/FF ₁₆ writing mode	Normal/7F ₁₆ writing mode

For M35013-001SP and M35012-001SP that are standard ROM version of M35013-XXXSP and M35012-XXXSP respectively, the I/O polarity of pin and the character pattern are also mentioned.

FEATURES

- Screen composition 24 columns X 10 lines
- Number of characters displayed 240 (Max.)
- Character composition 12 X 18 dot matrix
- Characters available
 - M35013-XXXSP 128 characters
 - M35012-XXXSP 256 characters
- Character sizes available 4 (horizontal) X 4 (vertical)
- Display locations available
 - Horizontal direction 62 locations
 - Vertical direction 64 locations
- Blinking Character units
 - Cycle : approximately 1 second, or approximately 0.5 seconds
 - Duty : 25%, 50%, or 75%
- Data Input
 - M35013-XXXSP By the 8-bit serial input function
 - M35012-XXXSP By the 16-bit serial input function
- Coloring
 - Background coloring (composite video signal)
- Blanking
 - Total blanking (14 X 18 dots)
 - Border size blanking
 - Character size blanking
- Synchronization signal
 - Composite synchronization signal generation (PAL, NTSC, M-PAL)
- Synchronized separation circuit Built-in
- 4 output ports (2 digital lines)
- Oscillation stop function
 - Be possible to stop the oscillation for display and for synchronized signal generation

PIN CONFIGURATION (TOP VIEW)

Outline 20P4B

Note : The pins remarked "*" are selectable by the input or output polarity when the character ROM masked.

PIN DESCRIPTION

Pin Number	Symbol	Pin name	Input / Output	Function
1	OSC1	Pins for attachment of external oscillator circuit	Input	There are the pins for attaching an external display oscillator circuit. The standard oscillation frequency is approximately 7MHz. This oscillation frequency determines the horizontal position of the display on the TV screen and the width of the characters.
2	OSC2		Output	
3	\bar{CS}	Chip select input	Input	This is the chip select pin, and when serial data transmission is being carried out, it goes to "L". Hysteresis input. Includes built-in pull-up resistor.
4	SCK	Serial clock input	Input	When \bar{CS} pin is "L", SIN serial data is taken in when SCK rises. Hysteresis input. Built-in pull-up resistor is included.
5	SIN	Serial data input	Input	This is the pin for serial input of data and addresses for the display control register and the display data memory. Hysteresis input. Includes built-in pull-up resistor.
6	\bar{AC}	Auto-clear input	Input	When "L", this pin resets the internal IC circuit. Hysteresis input. Includes built-in pull-up resistor.
7	V _{DD2}	Power pin	—	Please connect to +5V with the analog circuit power pin.
8	CVIDEO	Composite video signal output	Output	This is the output pin for composite video signals. It outputs 2V _{p-p} composite video signals. In superimpose mode, character output etc. is superimposed on the external composite video signals from CVIN.
9	LECHA	Character level input	Input	This is the input pin which determines the "white" character color level in the composite video signal.
10	CVIN	Composite video signal input	Input	This is the input pin for external composite video signals. In superimpose mode, character output etc. is superimposed on these external composite video signals.
11	V _{SS}	Earthing pin	—	Please connect to GND using circuit earthing pin.
12	P0	Port P0 output	Output	This pin can be toggled between port pin output and BLNK1* (character background) signal output. Polarity can be selected when the character ROM is masked.
13	P1	Port P1 output	Output	This pin can be toggled between port pin output and CO1* (character) signal output. Polarity can be selected when the character ROM is masked.
14	P2	Port P2 output	Output	This pin can be toggled between port pin output and BLNK2* (character background) signal output. Polarity can be selected when the character ROM is masked.
15	P3	Port P3 output	Output	This pin can be toggled between port pin output and CO2* (character) signal output. Polarity can be selected when the character ROM is masked.
16	OSCOUT	Pins for attachment of external oscillator circuit	Output	These are the pins for attaching an external oscillator circuit for generating the synchronization signal. An oscillation of 14.32MHz is needed for NTSC, 17.73MHz is needed for PAL and 14.30MHz is needed for M-PAL.
17	OSCIN	circuit for synchronization signal generation	Input	
18	HOR*	Horizontal synchronization signal input	Input	This pin inputs the horizontal synchronization signal. Hysteresis input. Polarity can be selected when the character ROM is masked.
19	VERT*	Vertical synchronization signal input	Input	This pin inputs the vertical synchronization signal. Hysteresis input. Polarity can be selected when the character ROM is masked.
20	V _{DD1}	Power pin	—	Please connect to +5V with the digital circuit power pin.

Note : The pins remarked "*" are selectable the input or output polarity when the character ROM masked.

NJM2068**LOW-NOISE DUAL OPERATIONAL AMPLIFIER****■ GENERAL DESCRIPTION**

The NJM2068 is a high performance, low noise dual operational amplifier. This amplifier features popular pin-out, superior noise performance, and superior total harmonic distortion. This amplifier also features guaranteed noise performance with substantially higher gain-bandwidth product and slew rate, which far exceeds that of the 4558 type amplifier. The specially designed low noise input transistors allow the NJM2068 to be used in very low noise signal processing applications such as audio preamplifiers and servo error amplifier.

■ FEATURES

- Operating Voltage ($\pm 4V \sim \pm 18V$)
- Low Total Harmonic Distortion (0.001% typ.)
- Low Noise Voltage (FLAT+JISA, $0.56\mu V$ typ.)
- High Slew Rate ($6V/\mu s$ typ.)
- Unity Gain Bandwidth (27MHz @ $f=10kHz$)
- Package Outline DIP8,DMP8,SIP8,SSOP8
- Bipolar Technology

5-INPUT 3PUTPUT VIDEO SW

■GENERAL DESCRIPTION

The NJM2296 is a 5-input 3-output video switch. Its switches select one from five signals received from VTR, TV, TV GAME and others.

This IC is designed for audio items, such as AV amplifier and receivers, and others

■PACKAGE OUTLINE

NJM2296D **NJM2296M**

■FEATURES

- 5-input 3-output
- Operating Voltage ± 4.0 to $\pm 6.5V$
- Operating Current $\pm 31mA$ typ. at $V_{cc}=\pm 5V$
- Crosstalk -65dB typ.
- Internal 6dB Amplifier
- Internal 75Ω Driver
- Bipolar Technology
- Package Outline DIP16,DMP16

■BLOCK DIAGRAM

NJM4556A**DUAL HIGH CURRENT OPERATIONAL AMPLIFIER****■ GENERAL DESCRIPTION**

The NJM4556A integrated circuit is a high-gain, high output current dual operational amplifier capable of driving $\pm 70\text{mA}$ into 150Ω loads ($\pm 10.5\text{V}$ output voltage), and operating low supply voltage ($V^+/V^- = \pm 2\text{V} \sim$).

The NJM4556A combines many of the features of the popular NJM4558 as well as having the capability of driving 150Ω loads. In addition, the wide band-width, low noise, high slew rate and low distortion of the NJM4556A make it ideal for many audio, telecommunications and instrumentation applications.

■ FEATURES

- Operating Voltage ($\pm 2\text{V} \sim \pm 18\text{V}$)
- High Output Current ($I_o = 70\text{mA}$)
- Slew Rate ($3\text{V}/\mu\text{s}$ typ.)
- Gain Band Width Product (8MHz typ.)
- Package Outline DIP8, DMP8, SIP8, SSOP8
- Bipolar Technology

■ EQUIVALENT CIRCUIT (1/2 Shown)

C-MOS QUAD SPST ANALOG SWITCH

■ GENERAL DESCRIPTION

The NJU201A is a quad break-before-make SPST analog switch protected up to 44V operating voltage.

All switches are controlled by TTL or C-MOS compatible input.

The low on-state resistance is about half compare with the NJU7301.

The NJU201A is functionally and pin-to-pin compatible with SILICONIX DG201A.

■ PACKAGE OUTLINE

NJU201AD

NJU201AM

■ FEATURES

- High Break Down Voltage -- 44V
- Low On-state Resistance
- Package Outline -- DIP/DMP 16
- C-MOS Technology

■ PIN CONFIGURATION

■ EQUIVALENT CIRCUIT

* Logic input threshold voltage V_{TH} is about $V^+ \times 0.128(V)$.
When the designing, enough margin is required.

QUARTZ CRYSTAL OSCILLATOR

■ GENERAL DESCRIPTION

The NJU6324 series is a C-MOS quartz crystal oscillator which consists of an oscillation amplifier, 3-stage divider and 3-state output buffer.

The oscillation frequency is as wide as up to 50MHz and the symmetry of 45-55% is realized over full oscillation frequency range.

The oscillation amplifier incorporates feed-back resistance and oscillation capacitors(C_g , C_d), therefore, it requires no external component except quartz crystal.

The 3-stage divider generates f_0 , $f_0/2$, $f_0/4$ and $f_0/8$ and only one frequency selected by internal circuits is output.

The 3-state output buffer is C-MOS compatible and capable of 10 LSTTL driving.

■ FEATURES

- Operating Voltage -- 3.0~6.0V
- Maximum Oscillation Frequency -- 50MHz
- Low Operating Current
- High Fan-out -- LSTTL 10
- 3-state Output Buffer
- Selected Frequency Output (mask option)
 - Only one frequency out of f_0 , $f_0/2$, $f_0/4$ and $f_0/8$ output
- Oscillation Capacitors C_g and C_d on-chip
- Oscillation and/or Output Stand-by Function
- Package Outline -- CHIP/EMP 8
- C-MOS Technology

TOSHIBA**TC74VHC240,244F/FW/FT**

TOSHIBA CMOS DIGITAL INTEGRATED CIRCUIT SILICON MONOLITHIC

**TC74VHC240F, TC74VHC240FW, TC74VHC240FT
TC74VHC244F, TC74VHC244FW, TC74VHC244FT****OCTAL BUS BUFFER**TC74VHC240F / FW / FT INVERTED, 3 - STATE OUTPUTS
TC74VHC244F / FW / FT NON - INVERTED, 3 - STATE OUTPUTS

The TC74VHC240 and 244 are advanced high speed CMOS OCTAL BUS BUFFERs fabricated with silicon gate C²MOS technology.

They achieve the high speed operation similar to equivalent Bipolar Schottky TTL while maintaining the CMOS low power dissipation.

The 74VHC240 is an inverting 3 - state buffer having two active - low output enables. The TC74VHC244 is a non - inverting 3 - state buffer, and has two active - low output enables.

These devices are designed to be used with 3 - state memory address drivers, etc.

An input protection circuit ensures that 0 to 7V can be applied to the input pins without regard to the supply voltage. This device can be used to interface 5V to 3V systems and two supply systems such as battery back up. This circuit prevents device destruction due to mismatched supply and input voltages.

FEATURES :

- High Speed..... $t_{pd} = 3.9\text{ns}(\text{typ.})$ at $V_{CC} = 5\text{V}$
- Low Power Dissipation $I_{CC} = 4\mu\text{A}(\text{Max.})$ at $T_a = 25^\circ\text{C}$
- High Noise Immunity..... $V_{NIH} = V_{NIL} = 28\% V_{CC}$ (Min.)
- Power Down Protection is provided on all inputs.
- Balanced Propagation Delays..... $t_{pLH} \approx t_{pHL}$
- Wide Operating Voltage Range..... $V_{CC} (\text{opr.}) = 2\text{V} \sim 5.5\text{V}$
- Low Noise $V_{OLP} = 0.9\text{V}$ (Max.)
- Pin and Function Compatible with 74ALS240/244

(Note) The JEDEC SOP (FW) is not available in Japan.

TOSHIBA CMOS DIGITAL INTEGRATED CIRCUIT SILICON MONOLITHIC

TC9459N, TC9459F**ELECTRONIC VOLUME CONTROL**

The TC9459N, TC9459F are electronic volume control ICs developed for use in home stereos and other audio equipment.

Using serial data input from external sources, it controls the sound volume, balance and loudness circuits.

FEATURES

- Sound volume can be controlled in 91 steps from 0 to -89dB or up to an infinite level in 1dB increments.
- Incorporating two channels of volume control circuits, the device allows independent volume control : therefore, it also provides the balancing function.
- A loudness circuit (20dB tap) is built in.
- Can operate with a single or dual power supplies.
- Can control up to 4 chips on the same bus by using chip select input.
- Thanks to its polysilicon resistor, the device allows you to configure a low-distortion, high-performance volume control system.

TOSHIBA CMOS DIGITAL INTEGRATED CIRCUIT SILICON MONOLITHIC

TC9482N, TC9482F**SYSTEM ELECTRONIC VOLUME CONTROL**

The TC9482N and TC9482F are six-channel electronic volume control ICs developed for Hi-Fi audio equipment. Since all six channels can be individually controlled, the devices are optimum for audio equipment with multiple outputs.

FEATURES

- Sound volume can be controlled in 97 steps from 0 to -95dB or up to an infinite level in 1dB increments.
- Incorporating six channels of volume control circuits, the device allows independent volume control.
- Can operate with a single or dual power supplies.
- Can control up to 4 chips on the same bus by using chip select input.
- Built-in interface for 5-V microcomputers.
- Thanks to its polysilicon resistor, the device allows you to configure a low-distortion, high-performance volume control system.
- Two packages supported: 28-pin shrink DIP and 28-pin flat package.
