ELECTROSTATICALLY SENSITIVE (ES) DEVICES

Some semiconductor (solid state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive (ES) Devices. Examples of typical ES devices are integrated circuits and some field effect transistors and semiconductor "chip" components.

The following techniques should be used to help reduce the incidence of component damage caused by static electricity.

1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any electrostatic charge on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed for potential shock reasons prior to applying power to the unit under test.
2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge build-up or exposure of the assembly.
3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.
4. Use only an anti-static solder removal device. Some solder removal devices not classified as "anti-static" can generate electrical charges sufficient to damage ES devices.
5. Do not use freon-propelled chemicals. These can generate electrical change sufficient to damage ES devices.
6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material.)
7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.

CAUTION : Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.

8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity sufficient to damage an ES devices.

PRODUCT SAFETY NOTICE

Each precaution in this manual should be followed during servicing.

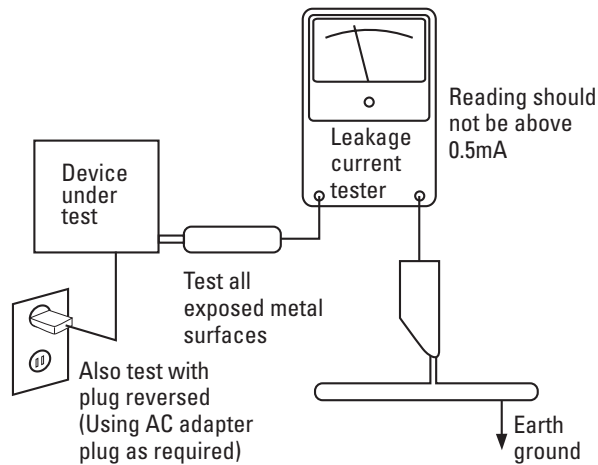

Components identified with the IEC symbol  in the parts list are special significance to safety. When replacing a component identified with , use only the replacement parts designated, or parts with the same ratings or resistance, wattage, or voltage that are designated in the parts list in this manual. Leakage-current or resistance measurements must be made to determine that exposed parts are acceptably insulated from the supply circuit before returning the product to the customer.

SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

LEAKAGE CURRENT CHECK

Measure leakage current to a known earth ground (water pipe, conduit, etc.) by connecting a leakage current tester between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120V AC 60Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5mA.

AC Leakage Test

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

AVR 745 TECHNICAL SPECIFICATIONS

Audio Section

Stereo Mode

Continuous Average Power (FTC)

100 Watts per channel, 20Hz–20kHz,
@ <0.07% THD, both channels driven into 8 ohms

Seven-Channel Surround Modes

Power per Individual Channel

Front L&R channels:
85 Watts per channel
@ <0.07% THD, 20Hz–20kHz into 8 ohms

Center channel:
85 Watts @ <0.07% THD, 20Hz–20kHz into 8 ohms

Surround (L & R Side, L & R back) channels:
85 Watts per channel
@ <0.07% THD, 20Hz–20kHz into 8 ohms

Input Sensitivity/Impedance

Linear (High-Level) 200mV/47k ohms

Signal-to-Noise Ratio (IHF-A) 100dB

Surround System Adjacent Channel Separation

Pro Logic I/II 40dB

Dolby Digital (AC-3) 55dB

DTS 55dB

Frequency Response

@ 1W (+0dB, -3dB) 10Hz – 130kHz

High Instantaneous

Current Capability (HCC) ±60 Amps

Transient Intermodulation

Distortion (TIM) Unmeasurable

Slew Rate

40V/μsec

FM Tuner Section

Frequency Range 87.5–108.0MHz

Usable Sensitivity IHF 1.3μV/13.2dBf

Signal-to-Noise Ratio Mono/Stereo 70/68dB

Distortion Mono/Stereo 0.2/0.3%

Stereo Separation 40dB @ 1kHz

Selectivity ±400kHz, 70dB

Image Rejection 80dB

IF Rejection 90dB

Supplied Accessories

The AVR 745 is supplied with the following accessory items. Please note that they are packed in different boxes, so it is important to check each individual box before reporting missing items. If any item is missing, please contact Harman Kardon customer service at www.harmankardon.com.

- TC 30 remote control
- Battery for the TC 30
- USB cable for the TC 30
- TC 30 charging cradle
- Charger for the TC 30
- TC 30 software CD-ROM
- TC 30 installation guide
- ZR 10 remote control
- Two AAA batteries for ZR 10
- **|||E=Set/EQ™** microphone
- Extender rod for microphone
- AM loop antenna
- FM wire antenna
- AC power cord

Please register your product on our Web site at www.harmankardon.com. NOTE: You'll need the serial number of your AVR. At the same time, you can choose to be notified about our new products and/or special promotions.

AM Tuner Section

Frequency Range 520–1720kHz

Signal-to-Noise Ratio 45dB

Usable Sensitivity Loop 500μV

Distortion 1kHz, 50% Mod 0.8%

Selectivity ±10kHz, 30dB

Video Section

Television Format NTSC

Input Level/Impedance 1V p-p/75 ohms

Output Level/Impedance 1V p-p/75 ohms

Video Frequency Response
(Composite and S-Video) 10Hz–8MHz (–3dB)

Video Frequency Response
(Component Video) 10Hz–100MHz (–3dB)

FRONT-PANEL CONTROLS

NOTE: To make it easier to follow the instructions that refer to this illustration, a larger copy may be downloaded from the Product Support section for this product at www.harmankardon.com.

The following controls and indicators are available on the AVR 745's front panel:

- | | | |
|---------------------------------------|--|------------------------------------|
| 1 Standby/On Switch | 7 Input Source Selector | 13 Upper Display Line |
| 2 Surround Mode Group Selector | 8 Tuning Mode Selector | 14 Lower Display Line |
| 3 Surround Mode Selector | 9 Front-Panel Door | 15 Surround Mode Indicators |
| 4 Tuning Selector | 10 Volume Control | 16 Remote Sensor Window |
| 5 Tuner Band Selector | 11 Input Indicators | |
| 6 Preset Station Selector | 12 Speaker/Channel Input Indicators | |

The following controls and jacks are located behind the front-panel door. To open the door, place the edge of a finger on the left or right edge of the panel and gently swing the door down toward you.

- | | | |
|----------------------------------|-------------------------------------|---|
| A Main Power Switch | F Digital Input Selector | K Optical 4 Digital Input |
| B Headphone Jack | G Delay Adjust Selector | L Input/Output Status Indicators |
| C Tone Mode Button | H ◀▶ Buttons | M Coaxial 4 Digital Jack |
| D Speaker Selector Button | I Set Button | N Video 4 Input/Output Jacks |
| E Channel Adjust Selector | J EzSet/EQII Microphone Jack | |

1 Standby/On Switch: When the **Main Power Switch A** is "ON," press this button to turn on the AVR 745; press it again to turn the unit off. Note that the illumination surrounding the switch will turn blue when the unit is on, or in the Multiroom mode.

2 Surround Mode Group Selector: Press this button to select the top-level group of surround modes. Each press of the button will select one of the surround mode categories. Once the button is pressed so

that the name of the desired surround mode category appears in the on-screen display and in the **Lower Display Line 14**, press the **Surround Mode Selector 3** to cycle through the individual modes available. For example, press this button to select Dolby modes, and then press the **Surround Mode Selector 3** to choose from the various mode options.

3 Surround Mode Selector: Press this button to select from among the available surround mode

options for the surround mode category selected. The specific modes will vary based on the number of speakers available, the surround mode category and whether the input source is digital or analog. For example, press the **Surround Mode Group Selector 2** to select a category such as Dolby or Logic 7, and then press this button to see the specific mode choices that are available. For more information on mode selection, see pages 40 – 42.

FRONT - PANEL CONTROLS

4 Tuning Selector: Press the left side of the button to tune lower-frequency stations and the right side of the button to tune higher-frequency stations. When the tuner is in the **MANUAL / MONO** mode, each tap of the Selector will increase or decrease the frequency by one increment. When the tuner receives a signal strong enough for adequate reception, **MANUAL TUNED** will appear in the **Lower Display Line 14** and in the on-screen display. When the tuner is in the **AUTO / STEREO** mode, press the button once, and the tuner will scan for a station with acceptable signal strength. When the next higher- or lower-frequency station is tuned, the frequency scan will stop and the **Lower Display Line 14** and the on-screen display will indicate **AUTO TUNED**. When an FM stereo station is tuned, the display will read **AUTO ST TUNED**. See page 45 for more information on using the tuner. When an XM-Ready module is connected and activated, and when there is sufficient signal strength for the XM system to operate, pressing this button will change the XM Radio channel.

5 Tuner Band Selector: Pressing this button will automatically switch the AVR 745 to the Tuner mode. Pressing it again will select the AM or FM frequency band, or XM Radio. (See page 45 for more information on the tuner.)

6 Preset Station Selector: Press this button to scroll up or down through the list of stations that have been entered into the preset memory. (See page 46 for more information on tuner programming.)

7 Input Source Selector: Press this button to change the input by scrolling up or down through the list of input sources.

8 Tuning Mode Selector: Press this button to select Auto or Manual tuning. When the button is pressed so that **AUTO / STEREO** appears in the **Upper Display Line 13**, the tuner will search for the next station with an acceptable signal when the **Tuning Selector 4 E** is pressed. When the button is pressed so that **MANUAL / MONO** appears in the **Upper Display Line 13**, each press of the **Tuning Selector 4 E** will increase the frequency. (See pages 45–46 for more information on using the tuner.)

This button may also be used to switch between Stereo and Mono modes for FM radio reception. When weak reception is encountered, select the Manual/Mono tuning mode. Press and hold again to switch back to Stereo mode. (See pages 45–46 for more information on using the tuner.)

When an XM Connect & Play module is connected and activated, and when there is sufficient signal strength for the XM system to operate, this button has a different set of functions than when traditional AM or FM radio is in use. See page 46 for more information on XM Radio operation.

9 Front-Panel Door: To open the door so that the front-panel jacks and controls behind this door may be accessed, gently pull the door down and toward you, using either upper corner of the door.

10 Volume Control: Turn this knob clockwise to increase the volume, counterclockwise to decrease the volume. If the AVR 745 is muted, adjusting the volume control will automatically release the unit from the silenced condition.

11 Input Indicators: One of these indicators will light to identify the currently selected input. Note that the entire list will light briefly each time the unit is turned on as a test.

12 Speaker/Channel Input Indicators: These indicators are multipurpose, indicating both the speaker type selected for each channel and the incoming data-signal configuration. The left, center, right, right surround and left surround speaker indicators are composed of three boxes, while the subwoofer is indicated by one or two boxes. The center box lights when a "small" speaker is selected, and the two outer boxes light when "large" speakers are selected. When none of the boxes are lit for the center, surround or subwoofer channels, no speaker has been assigned that position. The letters inside each box display the active input channels. For standard analog inputs, only the L and R will light, indicating a stereo input. For a digital source, the indicators will light to display the channels being received at the digital input. When the letters flash, the digital input has been interrupted. (See page 44 for more information on the Channel Indicators.)

13 Upper Display Line: Depending on the unit's status, a variety of messages will appear here. In normal operation, this line will show the current input source and identify whether an analog or digital input is in use. When the tuner is selected as the input, this line will identify the station as AM or FM and show the frequency and preset number, if any.

When an XM Connect & Play module is connected and activated, and when there is sufficient signal strength for the XM system to operate, the XM channel number and signal strength will appear here.

14 Lower Display Line: Depending on the unit's status, a variety of messages will appear here. In normal operation, the current surround mode will appear on this line. When an XM-Ready module is connected and activated, and when there is sufficient signal strength for the XM system to operate, a variety of messages and information, including the XM channel title name, the current artist and track title, the XM Radio channel category and, when available, local traffic and weather information, will appear here.

15 Surround Mode Indicators: One of these indicators will light to show the surround mode in use. Depending on the specific combination of input sources and surround mode selected, more than one indicator may light. (See page 43 for more information.)

16 Remote Sensor Window: The sensor behind this window receives infrared signals from the remote control. Aim the remote at this area and do not block or cover it unless an external remote sensor is installed.

FRONT-PANEL CONTROLS

The following controls and jacks are located behind the front-panel door. To open the door, place the edge of a finger on the left or right edge of the panel and gently swing the door down toward you.

A Main Power Switch: Press this switch to apply power to the AVR 745. When the switch is pressed in, the unit is placed in a Standby mode, as indicated by the amber illumination surrounding the **Standby/On Switch** **I**. This button **MUST** be pressed in to operate the unit. To turn the unit off and prevent the use of the remote control, this switch should be pressed until it pops out from the front panel so that the word "OFF" may be read at the top of the switch.

NOTE: This switch is normally left in the "ON" position.

B Headphone Jack: This jack may be used to listen to the AVR 745's output through a pair of headphones. Be certain that the headphones have a standard 1/4" stereo phone plug, or that you use an adapter, as needed, to convert the plug on your headphones to the 1/4" jack used on the AVR. When the headphone jack is in use, the main room speakers will automatically be turned off and the unit will output a standard stereo signal. You may also use the Dolby Headphone mode for an enhanced listening experience.

C Tone Mode Button: This button controls the tone mode settings, enabling adjustment of the bass and treble boost/cut. You may also use it to take the tone controls out of the signal path completely for "flat" response. The first press of the button displays a **TONE MODE** message in the **Lower Display Line** **14** and in the on-screen display. To take the controls out of the signal path, press either of the **◀▶ Buttons** **H** until the display reads **TONE OUT**. To change the bass or treble settings, press the button again until the desired option appears in the **Lower Display Line** **14** and in the on-screen display and then press either of the **◀▶ Buttons** **H** to enter the desired boost or cut setting. See page 40 for more information on the tone controls.

D Speaker Selector Button: Press this button to begin the process of configuring the AVR 745 for the type of speakers it is being used with. For complete information on configuring the speaker settings, see page 33.

E Channel Adjust Selector: Press the button to begin the process of manually adjusting the channel level outputs using the source currently playing through your AVR. For complete information on adjusting the channel output level, see page 48.

F Digital Input Selector: Press this button to begin the process of selecting a digital source for use with the currently selected input. Once the button has been pressed, use the **◀▶ Buttons** **H** to choose the desired input and then press the **Set Button** **I** to enter the setting into the unit's memory. See page 42 for more information on digital audio.

G Delay Adjust Selector: Press this button to begin the process of adjusting the delay settings for Dolby surround modes. See page 35 for more information on delay adjustments.

H ◀▶ Buttons: When making system configuration changes using the front-panel controls, press these buttons to scroll through the available choices for the option being adjusted.

These buttons are also used to scroll through the various video processing options. Press either **◀▶** button to activate Faroudja scaling and processing, or video format conversion without scaling or bypass.

I Set Button: When making system configuration changes using the front-panel controls, press this button to enter a setting into the unit's memory.

J EzSet/EQII Microphone Jack: Before starting the EzSet/EQII automated setup process, plug the microphone into this jack. The microphone does not need to be plugged in at other times.

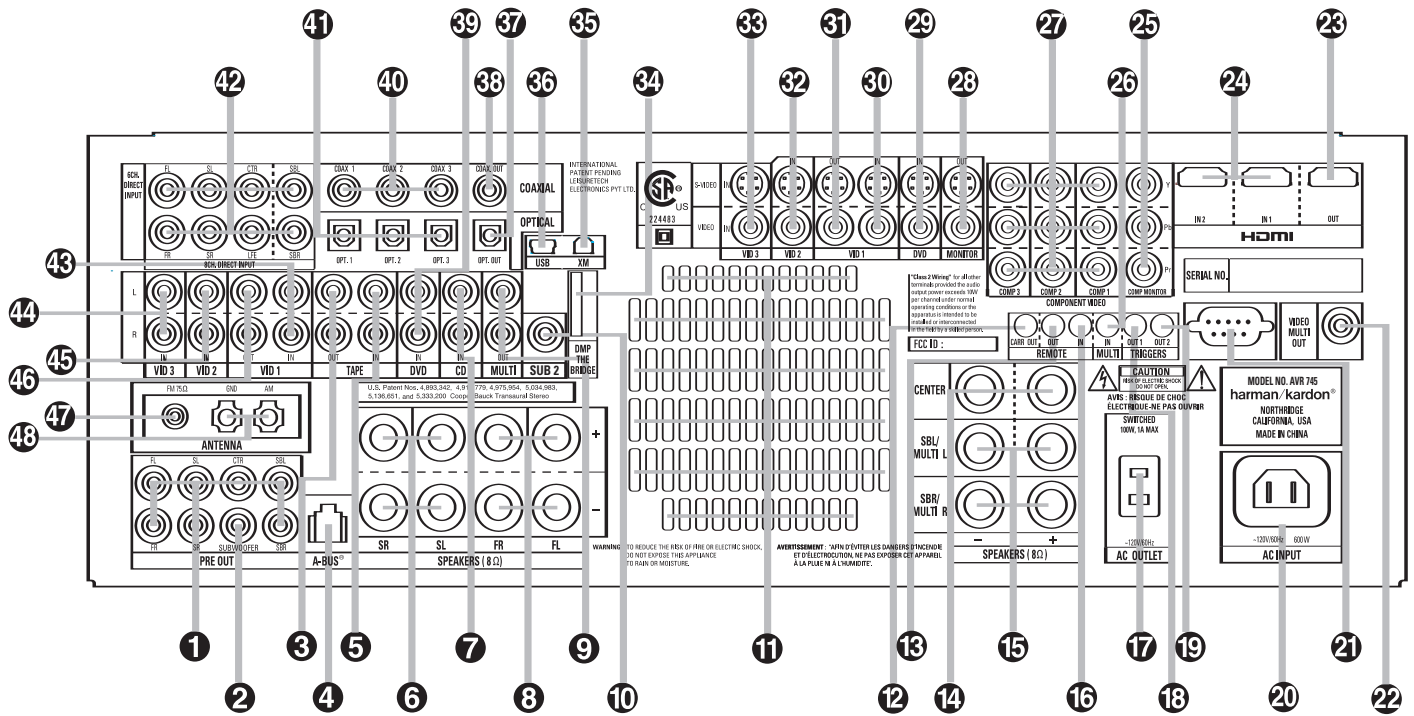

K Optical 4 Digital Input: Connect the optical digital output of an audio or video product to this jack.

L Input/Output Status Indicators: These LED indicators will normally light green to show that the front-panel **Coaxial 4 Digital Jack** **M** and **Video 4 Input/Output Jacks** **N** are operating as inputs. When these jacks are configured for use as outputs, the appropriate indicator will turn red to show that the jack may be used as an output for recording. (See page 47 for more information on configuring the front-panel jacks as outputs, rather than inputs.)

M Coaxial 4 Digital Jack: Connect the coaxial digital input or output for a digital audio product such as a portable audio player or video game to this jack. The jack is normally an input, but may be switched to an output for recording, using the menu system. See page 47 for more information.

N Video 4 Input/Output Jacks: These audio/video jacks may be used as either inputs or outputs for temporary connection to video games or portable audio/video products such as camcorders and portable audio players. (See page 47 for more information on switching one of these jacks between an input and output.)

REAR-PANEL CONNECTIONS

| Optical Digital In: | Black |
| Optical Digital Out: | Gray |

REAR-PANEL CONNECTIONS

- 1 Preamp Outputs:** Connect these jacks to an optional, external power amplifier for applications where higher power is desired.
- 2 Main Subwoofer Output:** Connect this jack to the line-level input of a powered subwoofer. If an external subwoofer amplifier is used, connect this jack to the subwoofer amplifier input. If only one subwoofer is used in your system, connect it here.
- 3 Tape Outputs:** Connect these jacks to the Record/Input jacks of an audio recorder.
- 4 A-BUS Connector:** Connect this jack to optional A-BUS®-certified products to extend the multiroom capabilities of your AVR 745. See page 17 for more information on A-BUS.
- 5 Tape Inputs:** Connect these jacks to the Play/Out jacks of an audio recorder.
- 6 Surround Speaker Outputs:** Connect these outputs to the matching + and – terminals on your surround channel speakers. In conformance with the CEA color-code specification, the blue terminal is the positive (+) terminal that should be connected to the red (+) terminal on the Surround Left speaker with older color-coding, while the gray terminal should be connected to the red (+) terminal on the Surround Right speaker with the older color-coding. Connect the black (–) terminal on the AVR to the matching black negative (–) terminals for each surround speaker. (See page 15 for more information on speaker polarity.)
- 7 CD Audio Inputs:** Connect these jacks to the left/right analog audio output of a compact disc player or CD changer or other audio source.
- 8 Front Speaker Outputs:** Connect these outputs to the matching + or – terminals on your left and right speakers. When making speaker connections, always make certain to maintain correct polarity by connecting the color-coded (white for front left and red for front right) (+) terminals on the AVR 745 to the red (+) terminals on the speakers and the black (–) terminals on the AVR 745 to the black (–) terminals on the speakers. See page 15 for more information on speaker polarity.
- 9 Multiroom Audio Outputs:** Connect these jacks to the optional external audio power amplifier and video distribution system that delivers the source selected for multizone distribution.
- 10 Subwoofer 2 Output:** If your system has two subwoofers, connect one to **Main Subwoofer Output 2**, and connect the line level input of a second subwoofer to this jack.
- 11 Fan Vents:** These ventilation holes are the output of the AVR 745's airflow system. To ensure proper operation of the unit and to avoid possible damage to delicate surfaces, make certain that these holes are not blocked and that there is at least 3 inches of open space between the vent holes and any wooden or fabric surface. It is normal for the fan to remain off at most normal volume levels. An automatic temperature sensor turns the fan on only when it is needed.
- 12 Full Carrier IR Output:** The output of this jack is the full signal received at the **Remote Sensor Window 16** or input through the **IR Input 16** including the carrier frequency that is removed from signals at the **IR Output 13**. Use this output to extend IR remote signals to the input of compatible products by direct connection or through the use of optional, external IR "blasters". If you are in doubt as to which of the two IR Output jacks to use, we recommend that you consult with your dealer or installer, or check with the manufacturer of the external equipment you wish to control.
- 13 IR Output:** This connection permits the IR sensor in the receiver to serve other remote controlled devices. Connect this jack to the "IR IN" jack on compatible Harman Kardon equipment.
- 14 Center Channel Speaker Outputs:** Connect these outputs to the matching + and – terminals on your center channel speaker. In conformance with the CEA color-code specification, the green terminal is the positive (+) terminal that should be connected to the red (+) terminal on speakers with the older color-coding. Connect the black (–) terminal on the AVR to the black negative (–) terminal on your speaker. (See page 15 for more information on speaker polarity.)
- 15 Surround Back/Multiroom Speaker Outputs:** These speaker terminals are normally used to power the surround back left/surround back right speakers in a 7.1-channel system. However, they may also be used to power the speakers in a second zone, which will receive the output selected for a multiroom system. To change the output fed to these terminals from the default of the Surround Back speakers to the Multiroom Output, you must change a setting in the Advanced Menu of the OSD system. See page 51 for more information on configuring this speaker output.
- In normal surround system use, the brown and black terminals are the surround back left channel positive (+) and negative (–) connections and the tan and black terminals are the surround back right positive (+) and negative (–) terminals. For multiroom use, connect the brown and black SBL terminals to the red and black connections on the left remote zone speaker and connect the tan and black SBR terminals to the red and black terminals on the right remote zone speaker.
- 16 IR Input:** If the AVR 745's front-panel IR sensor is blocked due to cabinet doors or other obstructions, an external IR sensor may be used. Connect the output of the sensor to this jack.
- 17 Switched AC Accessory Outlet:** This outlet may be used to power any device you wish to have turned on when the AVR 745 is turned on with the **Standby/On Switch 1**.
- IMPORTANT NOTE:** The power consumption of any device connected to the accessory outlet should not exceed 100 watts. Never connect high-power devices such as amplifiers or video displays to the accessory outlet.
- 18 Trigger 1 Output:** Connect this jack to the "Trigger In" jack of an optional external component such as an audio power amplifier that you want to be controlled to mirror the power state of the AVR 745. When this connection is used, the AVR 745 will automatically send a low-voltage signal to the connected device that turns it on when the AVR 745 is on and off when the AVR 745 is placed in the Standby Mode. The connected component must respond to 6-volt presence as the control signal.
- 19 Trigger 2 Output:** Connect this jack to the "Trigger In" jack of an optional, external component such as a projection screen or motorized blinds that you want to turn on or off in response to the power state of the AVR 745, but only when certain inputs are selected. (For example, lower a screen when a Video related mode is selected, but not for the tuner or a CD player.) For the 5-volt control signal to be sent to the jack for device control, you must activate the appropriate setting in **PAGE 2** of the **IN/OUT SETUP** menu. See page 23 for more information.
- 20 AC Power Cord Socket:** Connect the AC power cord here when the installation is complete. To ensure safe operation, use only the power cord supplied with the unit. If a replacement is required, it must be of the same type and capacity.
- 21 RS-232 Port:** This jack may be used to control the AVR 745 over a bi-directional RS-232 serial control link to a compatible computer or programmable remote control system. Due to the complexity of programming RS-232 commands, we strongly recommend that connections to this port for control purposes be made by a trained and qualified technician or installer.
- 22 Multiroom Video Output:** Connect this jack to the cable and/or optional, external video distribution system that delivers the video source selected for multizone distribution to remote rooms. Only composite video is available.

REAR-PANEL CONNECTIONS

23 HDMI Output: Connect this jack to the HDMI input on a compatible HDMI-equipped video display.

24 HDMI Inputs: Connect the HDMI output of video sources such as a DVD player, set-top box or HDTV tuner to either of these jacks.

25 Component Video Monitor Outputs: Connect these outputs to the component video inputs of a video display.

26 Multiroom IR Input: Connect the output of an IR sensor in a remote room to this jack to operate the AVR 745's multiroom control system.

27 Component Video Inputs: These inputs may be used with any source device that is equipped with analog Y/Pr/Pb or RGB component video outputs, as assigned through the **IN / OUT SETUP** menu. See page 22 for more information on configuring the component video inputs.

28 Video Monitor Outputs: Connect these jacks to the composite or S-video input of a TV monitor or video projector to view the on-screen menus and the output of any standard video source selected by the receiver's video switcher.

29 DVD Video Inputs: Connect the composite or S-video outputs of a DVD player or other video source to these jacks.

30 Video 1 Video Inputs: Connect the composite or S-video PLAY/OUT jacks of a VCR or other video source to these jacks.

31 Video 1 Video Outputs: Connect the composite or S-video REC/IN jacks of a VCR or other video recording device such as a DVD recorder or PVR to these jacks.

32 Video 2 Video Inputs: Connect the composite or S-video PLAY/OUT jacks of a VCR or other video source to these jacks.

33 Video 3 Video Inputs: Connect the composite or S-video PLAY/OUT jacks of a VCR or other video source to these jacks.

34 The Bridge™ Digital Media Player (DMP) Input: With the AVR 745 turned off, connect the optional Harman Kardon The Bridge™ to this connector. Once this is done and with a compatible iPod® (optional) docked in The Bridge, selecting the DMP/The Bridge input allows you to play audio programming from the iPod and view navigation menus on the AVR's front panel and any video display connected to the AVR. You may control the iPod's functions and select tracks using the ▲/▼/◀▶ **G**, **Set** **C** and **Transport** **P** buttons on the ZR 10 remote or with the "Listen to The Bridge" activity, which activates buttons on the TC 30 for direct control of your iPod through The Bridge. See page 45 for more information.

35 XM-Ready Module Input: When an optional XM Connect & Play module is connected to this jack, and the XM service activated, you will be able to enjoy the XM Radio through your AVR 745. See page 46 for more information.

36 USB Connector: Connect a cable with a USB "Mini B" connector to the AVR and the other end to a compatible computer running Windows® 2000, Windows® XP or higher with the latest service packs installed, to use this port to listen to audio from the computer through the AVR 745. This connection is also used to connect a compatible computer to the AVR for firmware upgrades, when available. See page 43 for more information on playback of computer audio with the AVR. Instructions for upgrades will accompany the upgrade file download package.

37 Optical Digital Audio Output: Connect this jack to the optical digital input connector on a CD-R/RW, MiniDisc or other compatible digital recorder.

38 Coaxial Digital Audio Output: Connect this jack to the coaxial digital input of a CD-R/RW, MiniDisc or other compatible digital recorder.

39 DVD Audio Inputs: Connect the left/right analog outputs of a DVD player or other audio source to these jacks.

40 Coaxial Digital Audio Inputs: Connect the coax digital output from a DVD player, HDTV receiver, LD player or CD player to these jacks. The signal may be a Dolby Digital signal, DTS signal or a standard PCM digital source. Do not connect the RF digital output of an LD player to these jacks.

41 Optical Digital Audio Inputs: Connect the optical digital output from a DVD player, HDTV receiver, LD player or CD player to these jacks. The signal may be a Dolby Digital signal, a DTS signal or a standard PCM digital source.

42 8-Channel Direct Inputs: These jacks are used for connection to source devices such as high-resolution DVD players, DVD-Audio or SACD players with discrete analog audio outputs. Depending on the source device in use, all eight jacks may be used, though in many cases only connections to the front left/right, center, surround left/right and LFE (sub-woofer input) jacks will be used for 5.1 audio signals.

43 Video 1 Audio Inputs: Connect the left/right PLAY/OUT audio output jacks on a VCR or other video source to these jacks.

44 Video 3 Audio Inputs: Connect the left/right PLAY/OUT audio output jacks on a VCR, PVR, cable set-top, satellite receiver, HDTV receiver or other video source to these jacks.

45 Video 2 Audio Inputs: Connect the left/right PLAY/OUT audio output jacks on a VCR or other video source to these jacks.

46 Video 1 Audio Outputs: Connect the left/right REC/IN audio input jacks on a VCR or other video source to these jacks.

47 FM Antenna Jack: Connect the supplied indoor or an optional external FM antenna to this terminal.

48 AM Antenna Connections: Connect the AM loop antenna supplied with the receiver to these terminals. If an external AM antenna is used, make connections to the **AM** and **GND** terminals in accordance with the instructions supplied with the antenna.

TC 30 REMOTE CONTROL FUNCTIONS

- 1 USB Connector
- 2 IR Emitter Window
- 3 Power Button
- 4 Activities Button
- 5 Devices Button
- 6 Help Button
- 7 Screen Buttons
- 8 LCD Screen
- 9 Page Left/Right Buttons
- 10 Transport Control Buttons
- 11 Device Control Buttons
- 12 Mute Button
- 13 Volume Controls
- 14 Navigation Buttons
- 15 OK/Enter Button
- 16 Glow Button
- 17 Channel Up/Down
- 18 Numeric Keys
- 19 Infrared Learning Port

NOTES:

- The function names shown here are each button's feature when used with the AVR 745. Most buttons have additional functions when used with other devices.
- To make it easier to follow the instructions that refer to this illustration, a larger copy may be downloaded from the Product Support section for this product at www.harmankardon.com.

TC 30 REMOTE CONTROL FUNCTIONS

1 USB Connector: Push down on the rubber cover to access the USB connector. To program the TC 30 from our Web site, connect the supplied USB cable here, and then to your computer.

2 IR Emitter Window: Point this end of the remote toward the devices being controlled.

3 Power Button: Press this button to turn the AVR off. Depending on the particular device being controlled, it may turn other devices on or off. When an Activity is in use, pressing this button will turn off all devices associated with the Activity.

4 Activities Button: Press this button to view the list of Activities programmed into your TC 30. Press the **Screen Button 7** next to an Activity to select it and turn on the Devices in that Activity.

5 Devices Button: Press this button to display a list of all the Devices programmed in your TC 30. To control the Device, press the **Screen Button 7** next to the desired Device's name.

6 Help Button: If you are having problems with an Activity, press this button for interactive help screens that will resolve issues with synchronizing the status of the components in your system.

7 Screen Buttons: Press the buttons at either side of the LCD screen to select the Activity, Device or command shown next to the button.

8 LCD Screen: The LCD screen displays system messages, help screens and the functions assigned to the **Screen Buttons 7**, depending on the remote's current status.

9 Page Left/Right Buttons: Press these buttons to show additional screen display pages for a Device, Activity or setup function.

10 Transport Control Buttons: Press these buttons to control the transport functions / /  for devices such as DVD or CD players, digital recorders and VCRs when they are active.

11 Device Control Buttons: These buttons directly control functions of the currently active device. The names on the individual button names are the typical function, but the actual function will vary with the device. When using the TC 30 to setup and configure the AVR 745, press the "Menu" button to activate the on-screen menus.

12 Mute Button: Press this button to activate the MUTE function of the device being controlled.

13 Volume Controls: Press these buttons to change the volume of the device being controlled.

14 Navigation Buttons: The function of the  buttons varies according to the device being controlled.

15 OK/Enter Button: This button is normally the "Set," "Enter" or "Select" function for the device being controlled, but its function will vary, according to the device being controlled.

16 Glow Button: Press this button to illuminate the LCD screen and the button backlighting. The backlighting will also come on when any button is pushed. You may change the setting for the length of time the lighting is on through the settings available when your TC 30 is connected to the Internet. The backlighting will also turn on automatically any time you move the remote, thanks to a built-in "tilt sensor." You may disable the "tilt-on" function in the Remote Options section of the TC 30 Web site.

17 Channel Up/Down: Press these buttons to change the device's channel or station. When controlling the AVR 745's tuner function, these buttons are used to step up or down through the list of stations in the preset memories.

18 Numeric Keys: These buttons enter numeric values for the device being controlled.

19 Infrared Learning Port: When "learning" commands from a device's remote into the TC 30, point the IR transmitter on the remote being "learned" here.

ZR 10 REMOTE CONTROL FUNCTIONS

- A** Power Off Button
- B** OSD Button
- C** AVR Selector Button
- D** Input Selectors
- E** Tuner Selector
- F** XM Radio Selector
- G** Navigation Controls
- H** Volume Up/Down Buttons
- I** Disc Skip Buttons
- J** Numeric Keys
- K** Blank Buttons
- L** Clear Button
- M** Direct Button
- N** Memory Button
- O** Tuner Mode Button
- P** Transport Controls
- Q** Set Button
- R** TMBridge- /DMP Selector
- S** Mute Button
- T** IR Transmitter Lens

NOTES:

- The ZR 10 remote may be used either in the same room where the AVR 745 is located or in a separate room with an optional infrared sensor or A-BUS product that is connected to the AVR 745's **Multiroom IR Input Jack 26**. When it is used in the same room as the AVR 745, it will control the functions of the AVR 745 or any compatible Harman Kardon products in that room. When it is used in a separate room via a sensor connected to the **Multiroom IR Input Jack 26**, the buttons for Power, Input Source, Volume and Mute will control the source and volume for the second zone, as connected to the **Multiroom Audio Output Jacks 9**. (See page 51 for complete information on using the Multiroom system.)
- We strongly recommend that the ZR 10 remote be used for the initial configuration and setup process for the AVR 745.
- To make it easier to follow the instructions that refer to the controls and connectors in this illustration, a larger copy may be downloaded from the Product Support section for this product at www.harmankardon.com.

ZR 10 REMOTE CONTROL FUNCTIONS

- A Power Off Button:** When used in the room where the AVR 745 is located, press this button to place the unit in Standby. When it is used in a remote room with a sensor that is connected to the **Multiroom IR Input Jack 26**, this button turns the Multiroom system on and off.
- B OSD Button:** Press this button to activate or turn off the On-Screen Display (OSD) menu system used to set up or adjust the AVR 745's configuration settings.
- C AVR Selector Button:** Press this button to turn on the AVR 745. The input in use when the unit was last on will be selected.
- D Input Selectors:** When the AVR 745 is off, press one of these buttons to select a specific input and turn the unit on. When the unit is already in use, pressing one of these buttons will change the input.
- E Tuner Selector:** Press this button to select the Tuner as the input source and listen to the tuner band last used. Press the button again to change between AM, FM and, if an XM Connect & Play module is connected and activated, XM Radio.
- F XM Radio Selector:** Press this button to select XM Radio as the input source when an XM Connect & Play module is connected and activated.
- G Navigation Controls:** Depending on the menu or function in use, pressing these buttons will navigate through menus, scroll through option lists or configuration choices, or move the cursor position. Press the left, right, up or down button, as appropriate to the adjustment being made.
- H Volume Up/Down Buttons:** When the ZR 10 remote is used in the room where the AVR 745 is located, press this button to raise or lower the volume in that room. When it is used in a remote room with a sensor that is connected to the **Multiroom IR Input Jack 26**, this button will raise or lower the volume in the remote room.
- I Disc Skip Buttons:** Press these buttons to change discs on compatible Harman Kardon CD or DVD changers or players.
- J Numeric Keys:** Press these buttons to enter a station's frequency or an XM Radio channel number after the **Direct Button M** is pressed, or when programming the tuner memories. These buttons may also be used for numeric entries when appropriate with other compatible sources.
- K Blank Buttons:** These buttons are not active. Pressing them will not change or control any function on the AVR 745 or other IR devices.
- L Clear Button:** When programming the tuner memory, press this button to clear the current entry.
- M Direct Button:** Press this button when the tuner is in use to start the entry of a station's frequency or an XM channel number for direct access to that station or channel. After pressing this button, press the appropriate **Numeric Keys J**.
- N Memory Button:** Press this button to enter a station or XM channel number into the AVR 745's memory. First, tune to, or select, the desired station or channel, and then press this button. Within five seconds, while you see the station or channel flash in the **Upper Display Line 13** and in the on-screen display, press the **Numeric Keys J** for the preset number between 01 and 30 that you wish to assign to the station or channel. (See page 46 for more information.)
- O Tuner Mode Button:** When listening to AM or FM stations, press this button to change the tuner mode between manual and automatic. When the button is pressed so that **AUTO/STEREO** appears in the **Upper Display Line 13** and in the on-screen display, only stations with acceptable signal quality will be tuned, and the tuner will play FM stations in stereo, when available. In the **AUTO** mode, when the **Tuning Up/Down Buttons 4 P** are pressed, the unit will automatically search for the next available station with good signal strength. When this button is pressed so that **MANUAL/MONO** appears in the **Upper Display Line 13** and in the on-screen display, each press of the **Tuning Up/Down Buttons 4 P** will move the frequency up or down in single-step increments. When the FM band is in use, pressing the button so that the **MANUAL** mode is activated will enable you to tune stations with weak signals by changing to monaural reception. (See pages 45–46 for more information on AM/FM tuner operation.) When listening to XM Radio, press this button to scroll through the following display options for the **Lower Display Line 14**: Channel Name → Channel Category → Artist → Title. (See pages 46–47 for more information on XM Radio operation.)
- P Transport Controls:** Press these buttons to control the operation of a compatible Harman Kardon DVD or CD player when the AVR 745 is connected to the source unit via the **IR Input Jack 16**. When the AVR's tuner or XM Radio is in use, the **◀▶▶▶ Prev/Next Buttons P** are used to tune up or down through the list of preset stations, the station frequencies or channel numbers.
- Q Set Button:** When using the configuration menus, press this button to enter a setting to the AVR's memory.
- R TheBridge™ Digital Media Player Selector:** When Harman Kardon's **TheBridge™** (optional) is connected to **TheBridge™ Digital Media Player (DMP) Input 34** and a compatible iPod is docked in **TheBridge™**, pressing this selector will select the iPod as the audio source input device for the AVR 745. In addition, if a video display is connected to one of the **Video Monitor Outputs 25/28**, the iPod's messages will appear on screen, and in the **Upper and Lower Display Lines 13/14**. The **▲/▼/◀▶ Buttons G**, the **Set Button Q** and the **Transport Controls P** may be used to navigate the iPod and to operate many functions. See page 45, and the manuals for The Bridge and your iPod for more information.
- S Mute Button:** When the ZR 10 remote is used in the room where the AVR 745 is located, press this button to temporarily silence the unit. When it is used in a remote room with a sensor that is connected to the **Multiroom IR Input Jack 26**, this button will temporarily silence the feed to the remote room only. Press the button again to return to the previous volume level.
- T IR Transmitter Lens:** The infrared code commands from the remote are sent to the AVR from the components behind this lens. To ensure proper operation, do not block this area when holding the remote.

INSTALLATION AND CONNECTIONS

System Installation

After unpacking the unit, locating it in a place with adequate ventilation and placing it on a solid surface capable of supporting its weight, you will need to make the connections to your audio and video equipment.

Before starting to connect your AVR 745 to the source devices, display device, speakers and other components in your system, you should also unpack the TC 30 remote, which is found in the separate box inside the AVR 745 carton. So that the TC 30 is ready when you begin the system configuration process, install the battery, connect the charger and place the remote in the charging cradle, as it takes approximately twelve hours for the battery to fully charge.

IMPORTANT NOTE: For your personal safety and to avoid possible damage to your equipment and speakers, it is always good practice to turn off and unplug the AVR and ALL source equipment from the AC output before making any audio or video system connections.

Audio Equipment Connections

We recommend that you use high-quality interconnect cables when making connections to source equipment and recorders to preserve the integrity of the signals.

1. Connect the analog output of a CD player to the **CD Audio Inputs 7**.

NOTE: If your CD player has both fixed and variable audio outputs, it is best to use the fixed output unless you find that the input to the receiver is so low that the sound is noisy, or so high that it is distorted.

2. Connect the analog Play/Out jacks of a cassette deck, MD, CD-R or other audio recorder to the **Tape Inputs 5**. Connect the analog Record/In jacks on the recorder to the **Tape Outputs 3** on the AVR 745.

3. Connect the output of a digital source such as a CD or DVD changer or player, a video game, a digital satellite receiver, an HDTV tuner or digital cable set-top box or the output of a compatible computer sound card to the **Optical and Coaxial Digital Audio Inputs 40/41 K/M**.

4. Connect the coaxial or optical **Digital Audio Outputs 37/38** on the rear panel of the AVR 745 to the matching digital input connections on a CD-R, MiniDisc or other digital recorder.

5. Assemble the AM loop antenna supplied with the unit so that the tabs at the bottom of the antenna loop snap into the holes in the base. Connect it to the **AM Antenna Connections 48**.

6. Connect the supplied FM antenna to the **FM Antenna Jack 47**. The FM antenna may be an external roof antenna, an inside powered or wire-lead antenna or a connection from a cable TV system. If the antenna or connection uses 300-ohm twin-lead cable, you must use an optional 300-ohm-to-75-ohm adapter to make the connection.

7. Connect the front, center, surround and surround back speaker outputs **6 8 14 15** to the respective speakers.

To ensure that all the audio signals are carried to your speakers without loss of clarity or resolution, we suggest that you use high-quality speaker cable. Many brands of cable are available and the choice of cable may be influenced by the distance between your speakers and the receiver, the type of speakers you use, personal preferences and other factors. Your dealer or installer is a valuable resource to consult in selecting the proper cable.

Regardless of the brand of cable selected, we recommend that you use cable with a gauge of 14 or smaller. Remember that when specifying cable, the lower the number, the thicker the cable.

Cable with a gauge of 16 may be used for short runs of less than 10 feet. We do not recommend that you use cables with an AWG equivalent of 18 or higher, due to the power loss and degradation in performance that will occur.

Cables that are run inside walls should have the appropriate markings to indicate listing with UL, CSA or other appropriate testing agency standards. Questions about running cables inside walls should be referred to your installer or a licensed electrician who is familiar with the NEC and/or the applicable building codes in your area.

When connecting wires to the speakers, be certain to observe proper polarity. Note that the positive (+) terminal of each speaker connection has a specific color code, as noted on page 8. However, most speakers still use a red terminal for the positive (+) connection. Connect the "negative" or "black" wire to the same terminal on both the receiver and the speaker.

NOTE: While most speaker manufacturers adhere to an industry convention of using black terminals for negative and red ones for positive, some may vary from this configuration. To ensure proper phase and optimal performance, consult the identification label on your speaker or the speaker's manual to verify polarity. If you do not know the polarity of your speaker, ask your dealer for advice before proceeding, or consult the speaker's manufacturer.

We also recommend that the length of cable used to connect speaker pairs be identical. For example, use the same length piece of cable to connect the

front-left and front-right or surround-left and surround-right speakers, even if the speakers are a different distance from the AVR 745.

8. Connections to a single subwoofer are normally made via a line-level audio connection from the **Main Subwoofer Output 2** to the line-level input of a subwoofer with a built-in amplifier. When a passive subwoofer is used, the connection first goes to a power amplifier, which will be connected to one or more subwoofer speakers. If you are using a powered subwoofer that does not have line-level input connections, follow the instructions furnished with the speaker for connection information. If your system uses two subwoofers, connect the **Subwoofer 2 Output 10** jack on the AVR to the Line Input of the second subwoofer.
9. If an external audio source such as a DVD-Audio, SACD or high definition optical disc player with 5.1 or 7.1 analog audio outputs is part of your system, connect the outputs of the source to the **8-Channel Direct Inputs 42**.

Analog Video Equipment Connections

Analog video components are connected in the same manner as audio components. Again, the use of high-quality interconnect cables is recommended to preserve signal quality.

1. Connect the Video Play/Out jacks of a standard (composite) video or S-Video outputs of a digital video recorder or conventional VCR to the **Video 1 Video Inputs 30** on the AVR. Connect the Record/In jacks from that device to the **Video 1 Video Outputs 31** on the AVR.
2. Connect analog Audio Left/Right Play/Out jacks of the device connected to the Video 1 Inputs to the **Video 1 Audio Inputs 43** on the AVR. Connect the analog Audio Left/Right Record/In jacks from that device to the **Video 1 Audio Outputs 46** on the AVR. If the device has a digital audio output, connect it to one of the **Coaxial 40** or **Optical 41** digital audio inputs.
3. Connect the Play/Out jacks of a standard (composite) video or S-Video outputs of a video playback source such as a set-top box or video game console to the **Video 2 Video Inputs 32** or **Video 3 Video Inputs 33**. If the device has analog component video (Y/Pr/Pb) outputs, connect them to one of the **Component Video Inputs 27**.
4. Connect the analog audio outputs from the source to the matching **Video 2 Audio Inputs 45** or **Video 3 Audio Inputs 44**. If the device has a digital audio output, connect it to one of the **Coaxial 40** or **Optical 41** digital audio inputs.
5. If any of the video source devices has analog component video (Y/Pr/Pb) outputs, but not HDMI, connect them to **Component Video Inputs 27**. The chart on page 55 has the default settings for

INSTALLATION AND CONNECTIONS

various source devices, but you may make any connection and change the configuration setting using the **IN/OUT SETUP** menu, as described on page 22.

6. The default video connection for a DVD player is to use the **Component Video Input 3 Jacks 27** on the AVR, but you may change this assignment in the **IN/OUT SETUP** menu (see page 22). A DVD player's composite and S-video outputs may also be connected to the **DVD Video Inputs 29**. Only one connection type is required, although a composite or S-video connection is required if the AVR 745 is to be used in a multiroom video system.
7. The default audio connection for a DVD player is to link the coaxial digital audio output on the DVD player to the **Coaxial 1 Digital Audio Input 40**, but you may also make a connection to either the **Coaxial 40** or **Optical 41** digital inputs, or the **Analog DVD Audio Inputs 39**. You may change the assignment in the **IN/OUT SETUP** menu as described on page 22, or by using the front-panel **Digital Input Selector F**.
8. If you wish to use a portable audio/video product such as a camcorder, portable media player or digital still camera with the AVR, or make a connection to a video game console or other source that may not always be connected to the AVR, connect the video outputs of the source to the **Video 4 Input/Output Jacks N** that are behind the **Front-Panel Door 9**. If the source has digital audio outputs, connect them to the **Optical 4 Digital Input K** or the **Coaxial 4 Digital Jack M**.

CONNECTION NOTES:

- When making connections to the **Component Video Inputs 27** or the **Coaxial 40** or **Optical 41** digital audio inputs, it is a good idea to make note of which jacks are connected to which source, using the Worksheet in the Appendix. This will help simplify the configuration process.
 - When connecting a source device such as a cable set-top box where the audio streams may change between digital and analog as you change channels, we recommend that you make both analog and digital connections. The AVR's Auto Poll feature will automatically sense when the digital stream is replaced by an analog output and switch the input accordingly. (See page 22 for more information on the Auto-Poll feature.) This dual connection is not required for sources (such as DVD players or video games) that always output a digital stream.
9. Connect the AVR to your video display using one of the following connections:
 - If you have a video display with an HDMI or DVI input, make the connection using the **HDMI Output 23**, as described in the next section.
 - If your video display has component video inputs (Y/Pr/Pb), connect the **Component Video Outputs 25**.
 - If your display does not have digital or component video inputs, connect the **Video Monitor Output 23** on the AVR to the matching input on your display. Only one connection is needed, and S-video is the higher quality signal.

HDMI Connections

HDMI™ is the abbreviation for High-Definition Multimedia Interface, which is quickly becoming the standard connection point between advanced video/audio source products and displays, particularly for high-definition video signals. HDMI is a digital connection, eliminating the need to convert signals back and forth from digital to analog to deliver a higher quality signal when used with digital sources. The signals carried on HDMI may, but do not always, include audio, offering the possibility of a complete one-wire connection from a source to the AVR. However, it is important to note that there are a number of different versions of the HDMI standard in use. Before connecting any HDMI products to your AVR, it is helpful to find out in advance their level of HDMI connectivity.

Some source or display components in your system may use DVI (Digital Video Interface) for digital video connections. DVI carries the same digital video signals as HDMI but uses a larger connector and does not transport audio or control signals. In most cases, you may mix and match DVI and HDMI digital video connections by using optional connector adapters. Note, however, that some DVI-equipped video displays are not compatible with the HDCP copy protection coding that is increasingly carried with signals connected via HDMI. If you have an HDMI source and a DVI-equipped display, you may occasionally be unable to view a program if the display does not include HDCP. This is not the fault of the AVR or your source; it simply indicates that the video display is not compatible.

HDMI Input Connections

The different "Version" levels of HDMI define which type of audio signals it is compatible with. Based on the lowest level of HDMI among your sources, the connections to the AVR should be made as follows:

- **HDMI 1.0** sources carry digital video and multi-channel or 2-channel PCM audio signals only. Connect the HDMI output of a 1.0 source to either of the **HDMI Inputs 24** on the AVR. If the product is a DVD-Audio player or other source that has multichannel analog audio outputs, connect them to the **8-Channel Direct Inputs 42**. With an HDMI 1.0 source, particularly a DVD player, make certain that the menus in the source device are set to "Bitstream Out" or "Original" so that 5.1 digital audio is available. If you find that 5.1 Dolby Digital or DTS audio is not available on the HDMI connection, it will be necessary to make an additional connection

between the source and the AVR 745 to either the **Coaxial 40M** or **Optical 41K Digital Inputs**.

- **HDMI 1.1** sources carry the multichannel digital audio output from DVD-Audio players in addition to the digital video. If you have an HDMI 1.1-equipped product, the only connection needed for listening in the main room is from the HDMI output of the source to either of the **HDMI Inputs 24** on the AVR. If the player has SACD capability, you will need to connect the analog outputs of the source to the **8-Channel Direct Inputs 42**.
- **HDMI 1.2** (and higher) sources should be connected as shown above for HDMI 1.1, except that a separate analog connection is not needed for SACD players.
- It is not possible to feed an analog composite or S-video signal to a recorder or the AVR's multizone system when an HDMI input is in use. If an HDMI-equipped source also has analog audio and video outputs, connect them to the **Video 2** or **Video 3 Video 32/33** and **Audio 44/45** on the AVR.
- In some instances, HDMI-equipped sources will not permit more than one video output at a time, and thus you cannot use the same source in the main listening room and with the recorder or remote zone at the same time. This is not a fault of the AVR, but rather a function of the content protection systems that are part of the HDMI standard.

HDMI Output Connections

Connect the **HDMI Output 23** to an HDMI input on your video display. Thanks to the AVR 745's video processing system, all video input signals are converted to an HDMI output, so only one connection is required between the AVR and your display.

System and Power Connections

The AVR 745 is designed for flexible use with multi-room systems, external control components and power amplifiers.

Main Room Remote Control Extension

If the receiver is placed behind a solid or smoked-glass cabinet door, the obstruction may prevent the remote sensor from receiving commands. In this event, an optional remote sensor may be used.

Connect the output of the remote sensor to the **IR Input 16**.

If other components are also prevented from receiving remote commands, only one sensor is needed. Simply use this unit's sensor or a remote eye by running a connection from the **IR Output 13** to the Remote IR Input jack on Harman Kardon or other compatible equipment.

If other Harman Kardon-compatible source equipment is part of the main room installation, the **IR Output Jack 13** on the rear panel should be connected to the **IR IN** jack on source equipment. This will enable the

INSTALLATION AND CONNECTIONS

remote room location to control source equipment functions.

When a remote IR sensor is used to control non-Harman Kardon source equipment, we recommend that you make a hard wire connection or use an optional, external IR "blaster" connected to the **Full Carrier IR Output 1**. If you are in doubt as to which IR Output jack to use for the equipment in your system, contact your dealer or installer, or the manufacturer's support site and ask whether the unit to be controlled uses "full carrier" IR commands. When "full carrier" commands are used, make the connection to the **Full Carrier IR Output 1**. Otherwise, make the connection to the **IR Output 13**.

NOTE: All remotely controlled components must be linked together in a "daisy chain." Connect the **IR OUT** jack of one unit to the **IR IN** of the next to establish this chain.

Multiroom Audio Connections

The AVR 745 is equipped with multizone capabilities that allow it to send a separate audio and video source to the remote zone from the one selected for use in the main room.

Depending on your system's requirements, three options are available for audio connection:

Option 1: Use high-quality, shielded audio interconnect cable from the AVR 745's location to the remote room. In the remote room, connect the interconnect cable to a stereo power amplifier. The amplifier will be connected to the room's speakers. At the AVR 745, plug the audio interconnect cables into the **Multiroom Audio Outputs 31** on the AVR 745's rear panel.

Option 2: Connect the **Multiroom Audio Outputs 31** on the AVR 745 to the inputs of an optional stereo power amplifier. Run high-quality speaker wire from the amplifier to the speakers in the remote room.

Option 3: Taking advantage of the AVR 745's built-in seven-channel amplifier, it is possible to use two of the amplifier channels to power speakers in the remote room. When using this option, you will not be able to use the full 7.1-channel capabilities of the AVR 745 in the main listening room, but you will be able to add another listening room without external power amplifiers. To use the internal amplifiers to power a remote zone, connect the speakers for the remote room location to the **Surround Back/Multiroom Speaker Outputs 15**. Before using the remote room, you will need to configure the amplifiers for surround operation by changing a setting in the **MULTIROOM** menu, following the instructions shown on page 51.

NOTE: For all options, you may connect an optional IR sensor in the remote room to the AVR 745 via an appropriate cable. Connect the sensor's cable to the **Multiroom IR Input 25** on the AVR 745 and use the ZR 10 remote to control the room volume. You may

install an optional volume control between the output of the amplifiers and the speakers in options 1 and 2.

Multiroom Video Connections

The AVR 745's multiroom system is designed to send both video and audio signals to a remote room location. This may be the same source that is in use in the main room, or you may select a separate input source through the Multiroom menu or remote, as explained on page 52.

The only additional connection required to add video capabilities to your multiroom system is to connect the **Multiroom Video Output 22** either directly to the video display in the remote room or to any optional video distribution amplifiers that may be required when the length of the connection cable is such that additional amplification is required.

The following items may be of additional assistance when using video as part of a multiroom system with the AVR 745.

- Component or HDMI video sources may not be routed through the multiroom system. When using a component video device, you should also make a composite connection for the multiroom system.
- As with all cable installations, when running any wiring inside a wall be certain that the cable carries the proper NEC rating for the application. The use of improperly rated cables may present a safety hazard. Consult a qualified installer or licensed electrician should you have any questions about the use of in-wall cables for video or audio.
- When connecting the AVR 745 to the remote room video display, be aware of the distance limitations that may exist for both composite and S-video connections. Although the use of low-loss coax for composite video and higher-grade S-video cables may reduce signal loss, optional distribution amplifiers may occasionally be required when long cable runs are used.

A-BUS® Installation Connections

The AVR 745 is among the few receivers available that offer built-in A-BUS/READY operation. When used with an optional A-BUS product, you have all the benefits of remote zone operation without the need for an external power amplifier.

To use the AVR 745 with an approved A-BUS product, simply connect it to the AVR 745 using standard Category 5 wiring that is properly rated for the specific in-wall installation. Terminate the wiring at the receiver end to a standard RJ-45 connector in compliance with the instructions furnished with the A-BUS product.

No further installation or adjustment is needed, as the A-BUS jack on the AVR 745 routes the signals to their proper destination for power, signal source and control. The output fed to the A-BUS jack is determined by the AVR 745's multiroom system and menus.

RS-232 Connections

The AVR 745 is equipped with an **RS-232 Serial Connection Port 21** that may be connected to a compatible, optional, external computer, keypad or control system for bidirectional communications that enable the external system to control the AVR, and for the AVR to report status and handshake data back to the controller. Use of the RS-232 port for this type of control requires specific technical knowledge, and we recommend that any connection and programming for control be made by a trained installer or technician familiar with the equipment being used.

The physical connection to the AVR 745's RS-232 port is a standard D-SUB 9 connection, but to ensure compatible and proper operation, specific software commands and pin wiring schemes may be required.

USB Connections

The AVR 745 is one of the few A/V receivers to offer a USB connection that may be used for both playback of compatible audio content from a computer and for loading of system updates (when available).

The physical connection between a computer and the AVR is a simple one, requiring only a cable with a USB "A" type connector on one side and a USB "Mini B" on the other. If you do not need the USB cable provided with the AVR 745 for programming the TC 30 remote, it may be used for this purpose.

Connect the larger, "A" connector on the cable to your computer or a USB hub and the end with the "Mini" USB connector to the **USB Jack 35** on the AVR's rear panel.

NOTES ON USB:

- The USB jack on the AVR 745 is for connection to a computer, or to a hub connected to a computer, only. DO NOT connect it directly to other devices such as card readers, USB memory storage devices, external hard drives, USB accessories, digital cameras or cellular phones. Connection to these devices may cause damage to the device and/or the AVR that is not covered by the AVR's warranty.
- The AVR 745's USB connection may only be used for audio playback and system upgrades. It may not be used for other purposes, such as system control, video or still-image playback.

Trigger Connections

The AVR 745 is equipped with two low-voltage triggers that may be used to control a wide variety of compatible, optional devices that respond to voltage actuation commands. This includes external audio power amplifiers, video screens, motorized blinds and other compatible products in a home theater or automation system. **Due to the complexity of interfacing with power-controlled devices, we strongly recommend that they be installed by a qualified professional.**

INSTALLATION AND CONNECTIONS

Both trigger jacks deliver 5 volts DC when activated, and remove the voltage when they are off. The connection is a 3.5mm mono mini plug with the signal on the center pin ("tip") and the outer shaft ("ring") acting as the negative or ground connection.

The **Trigger 1 Output 18** is for use with devices such as power amplifiers that you wish to activate with whenever the AVR is turned on, regardless of the input selected.

The **Trigger 2 Output 19** is for use with devices such as video screens or motorized blinds that you only wish to activate when specific inputs, such as HDMI, DVD or one of the Video Inputs, are selected. When a device is connected to the Trigger 2 Output, the **TRIGGER 2** setting on **PAGE 2** of the **INPUT/OUTPUT** menu must be set to **ON**. See page 23 for more information.

After checking for voltage, current and polarity compatibility between the device being controlled and the AVR, simply connect one end of the trigger cable to the device being controlled and the other end to the desired Trigger Output on the AVR.

IMPORTANT NOTE ON TRIGGER CONNECTIONS:

The current draw from any one Trigger Jack cannot exceed 0.5mA. The combined total current draw for all devices connected when both jacks are in use may not exceed 1.0mA.

XM Radio Connections

XM Radio is a satellite-delivered, subscription-based, programming service that provides a wide range of music, sports, news and information programming with digital audio quality. The AVR 745 is XM Connect & Play-ready, which means that you can easily add the XM service to your home audio system by purchasing an XM antenna module or Passport system, activating an account with XM and then making a simple, single-cable connection to your AVR.

To purchase an XM antenna module or Passport system, consult your dealer, or contact XM Radio at www.xmradio.com. After following the instructions packed with the module, place the XM antenna near a south-facing window and run the cable to the AVR. Connect the plug at the end of the cable to the **XM Module Input 45**. If you are using an XM Passport system, remember that the Passport card must be inserted for the system to operate. Once the connection is made, follow the instructions on page 46 for more information on listening to XM Radio.

NOTES on XM Radio:

- XM Radio requires the purchase of additional, optional hardware and a separate subscription to the XM service.
- XM Radio is available only in the Continental United States and Canada. It is not available in Alaska or Hawaii.
- XM reception requires that the antenna be able to "see" the XM satellites or receive a signal from one of the XM ground-based repeaters. Depending on your installation and location, XM service may not be available in some areas.

AC Power Connections

This unit is equipped with an accessory AC outlet that may be used to power accessory devices, but it should not be used with high-current draw equipment such as power amplifiers. The total power draw to each outlet may not exceed 100 watts.

This **Switched AC Accessory Outlet 17** is powered only when the unit is on. This is recommended only for devices that have a mechanical power switch that may be left in the "ON" position.

NOTE: Many audio and video products go into a Standby mode when they are used with switched outlets. This type of product may not operate properly when used with the switched outlet.

The AVR 745 features a removable power cord that allows wires to be run in advance to a complex installation so that the unit itself need not be installed until it is ready for connection. When all needed connections have been made, connect the AC power cord to the **AC Power Cord Jack 20**.

The AVR 745 draws significantly more current than other household devices, such as computers, that use removable power cords. For that reason, it is important that only the cord supplied with the unit (or a direct replacement of identical capacity) be used.

Once the power cord is connected, you are almost ready to enjoy the AVR 745's incredible power and fidelity!

Basic Operation

Once you have completed the initial setup and configuration, the AVR 745 is simple to operate and enjoy. The following instructions will help you maximize the enjoyment of your new receiver:

Before using the AVR 745, we strongly recommend that you program the TC 30 remote, following the instructions provided in both the separate TC 30 Installation Guide and the wizards available when the TC 30 is connected to the Internet through your computer. While the TC 30 is preprogrammed to operate the AVR 745 and Harman Kardon DVD players right out of the box, programming the TC 30 for all the components in your system and setting it up for the activities that best match the way you use your home entertainment system will greatly add to the enjoyment of your total home entertainment system.

Turning the AVR 745 On or Off

- When using the AVR 745 for the first time, you must press the **Main Power Switch A** to turn the unit on. This places the unit in a Standby mode, as indicated by the amber illumination surrounding the **Standby/On Switch 1**.
- To turn the AVR 745 on or off from the front panel, press the **Standby/On Switch 1**.
- To turn the AVR 745 on using the TC 30 remote:
 - Press the **Screen Button 7** next to one of the Activities shown on the LCD screen. The preprogrammed Activities include the remote control codes that not only turn on the AVR 745, but also switch it to the input associated with the Activity and turn on a compatible Harman Kardon DVD player when it is part of the Activity. If you have programmed the TC 30 for your own Activities, other devices will turn on and operate as specified in the Activity design.
 - Press the **Devices Button 5** and then press the **Screen Button 7** to the left of **AVR**. When the options on the LCD screen change, press the **Screen Button 7** to the right of **ON** to turn the unit on or the one next to **OFF** to place it in the Standby mode.
- When using the ZR 10 remote, press the **AVR Selector G** to turn the unit on and select the last source that was used. Press any of the **Input Selectors D**, or source-specific buttons such as the **Tuner Selector E**, **XM Radio Selector Button F**, or **The Bridge/DMP Selector Button R** to both turn the AVR 745 on and select that specific source.

Whenever the AVR is turned on, you will see all of the front-panel indicators light up for a few seconds. This is normal, and it is part of the unit's power-on self-test procedure.

NOTE: When an Input Selector or source-specific button on the ZR 10 remote **DEFR** is used to turn the AVR 745 on, press the **AVR Selector G** to use the remote for control of the AVR 745.

To turn the unit off at the end of a listening session, simply press the **Standby/On Switch 1** on the front panel or the **Power Off Button 3 A** on the remote. Power will be shut off to any equipment plugged into the rear-panel **Switched AC Accessory Outlet 17** and the illumination around the **Standby/On Switch 1** will turn amber.

When the remote is used to turn the unit "off," it is actually placing the system in a Standby mode, as indicated by the amber lighting around the **Standby/On Switch 1**.

- To set the AVR 745 to turn off after a predetermined time period, press the **Devices Button 5**, followed by the **Screen Button 7** at the top of the row of buttons on the left side of the TC 30, to the left of the A/V receiver image on the LCD screen. Next, press the **Page Left/Right Buttons 9** to view **PAGE 2** of the AVR functions.
- To put the AVR in the Sleep mode, press the **Screen Button 7** to the right of the word **SLEEP** in the LCD. Each press of the button will decrease the time before the AVR shuts down in the following sequence.

Once you have set the desired Sleep Time, the front-panel display will automatically dim to half-brightness. The display will return to full-brightness when any button on the front panel or a remote is pressed, and then return again to half-brightness. To check on the time remaining until the unit shuts down, follow the instructions shown above to access the **Screen Button 7** for Sleep and press it once.

To cancel the Sleep function, follow the instructions shown above to access the **Screen Button 7** for Sleep and press it first until the information display returns to normal brightness and then again as many times as needed until the words **SLEEP OFF** appear in the **Lower Display Line 14**.

When you will be away from home for an extended period of time, it is always a good idea to completely turn the unit off with the front-panel **Main Power Switch A**.

NOTE: All preset memories are lost if the unit is left turned off by using the **Main Power Switch A** for more than four weeks.

Source Selection

- To select an input source from the front panel, press the **Input Source Selector Button 7**. Each press of the button will move the input selection through the list of available choices. If the button is pressed when the AVR is in the Standby mode, the first press of the button will turn the unit on and select the last used input.
- When the AVR is already turned on, you may select the tuner directly by pressing the **Tuner Band Selector 4**. The first press will select the last tuned frequency band and station. Each subsequent press will change the band to the last tuned station or XM preset.
- Two options are available for selecting an input source using the TC 30 remote.
 - Pressing the **Activities Button 4** will display the list of preprogrammed activities. Press the **Screen Button 7** next to any activity to turn the unit on, select the input source shown, and perform any other steps that have been programmed into the activity.
 - To directly select a source, first press the **Devices Button 5** and then press the **Screen Button 7** to the left of **AV Receiver** at the top of the list of options on the **LCD Screen 8**. To select an audio-only input source (Tuner, CD, 6/8-Channel Direct, DMP/The Bridge or Tape), press the **Screen Button 7** to the left of **Audio Inputs**. When the screen display changes, press the **Screen Button 7** next to the desired input. To select an audio/video input source (Video 1/2/3/4, DVD or HDMI 1/2) press **Screen Button 7** to the right of **A/V Inputs**. When the screen display changes, press the **Screen Button 7** next to the desired input.
- To select an input using the ZR 10 remote, press one of the **Input Selectors D**, or the source-specific buttons for **Tuner E**, **XM Radio F** or **The Bridge R**.
- When a new input is selected, the AVR will automatically switch to the digital input (if selected), surround mode, component video input, A/V sync delay and Night mode configurations that were in effect the last time that input was used.
- The front-panel **Video 4 Inputs N**, **Optical Digital 3 Input K** or the **Coaxial Digital 3 Input M** may be used to connect a device such as a video game or camcorder to your home entertainment system on a temporary basis.
- As the input source is changed, the new input name will appear momentarily as an on-screen display in the lower third of the video display (except when 720p or 1080i sources are in use). The input name

OPERATION

will also appear in the **Upper Display Line 13** and in the front-panel **Input Indicators 11**.

- When an audio only source is selected, the last video input used remains routed to the **Video 1/Video 2 Video Outputs 31** and **Video Monitor Outputs 28**. This permits simultaneous viewing and listening to different sources.
- When a composite or S-video source is selected, the video signal for that input will be routed to the **Video Monitor Output 28** and will be viewable on a TV monitor connected to the AVR 745.

6-Channel/8-Channel Direct Input

There are four input choices available for use with sources such as DVD-Audio SACD player or HD-DVD or Blu-ray disc player that are connected to the **8-Channel Direct Inputs 42**. Select the appropriate input according to the way your system and source equipment is configured:

- The **6 CH DIRECT** input should be used when the SBR and SBL inputs are NOT in use and the input source device has its own internal bass management system. This input passes the input from the source directly through to the volume control without any analog-to-digital conversion, and it mutes the unused input jacks to prevent unwanted noise from interfering with system performance.
 - The **6 CH DVD AUDIO** input should be used when the SBR and SBL inputs are NOT in use and when the input source does NOT have its own internal bass-management system. When this input is in use, the analog source is converted to digital so that you may use the same bass-management options for the direct input as are used for all other inputs. This input also mutes the unused input jacks to prevent unwanted noise from interfering with system performance.
 - The **8 CH DIRECT** input should be used when an input is connected to all eight **8-Channel Direct Inputs 42** and when the input source device has its own internal bass-management system. This input passes the input from the source directly through to the volume control without any analog-to-digital conversion.
 - The **8 CH DVD AUDIO** input should be used when an input is connected to all eight **8-Channel Direct Inputs 42** and when the input source does not have its own internal bass-management system. When this input is in use, the analog source is converted to digital so that you may use the same bass-management options for the direct input as are used for all other inputs.
- Volume and Tone Control**
- Adjust the volume to a comfortable level using the front-panel **Volume Control 10** or remote **Volume Up/Down Buttons 13 H**.
 - To temporarily silence all speaker outputs, press the **Mute Button 12 5**. This will interrupt the output to all speakers and the headphone jack, but it will not affect any recording or dubbing that may be in progress. When the system is muted, the word **MUTE** will flash in the on-screen display (except when 720p or 1080i sources are in use) and **Upper Display Line 13**; press the **Mute Buttons 12 5** again to return to normal operation.
 - The unit's tone controls may be taken out of the signal path by pressing the **Tone Mode Button** on the front panel **C** or by pressing the **Devices Button 5** on the TC 30 remote and then pressing the **Screen Button 7** to the left of **Tone Mode** at the bottom of the list of options on the bottom left side of the **LCD Screen 8**. The first press of either button will show a message in the on-screen display (except when 720p or 1080i sources are in use) and **Lower Display Line 14** with the current status of the tone controls. The system default is **TONE IN**, which indicates that the bass and treble controls are active. Press the **▲/▼ Navigation Buttons 14** on the TC30 remote or the **◀▶ Buttons H** on the front panel to change the setting to **TONE OUT**, which is "flat" response without the tone controls being active.
 - When the tone controls are active, the amount of bass and treble boost/cut may be adjusted up to 12dB in 2dB steps by first pressing the **Tone Mode Button** on the front panel **C** or by first pressing the **Devices Button 5** on the TC 30 remote and then pressing the **Screen Button 7** to the left of **Tone Mode** at the bottom of the list of options on the bottom left side of the **LCD Screen 8** two or three times until the desired setting (**BASS MODE** or **TREBLE MODE**) appears in the on-screen display and the **Lower Display Line 14**. Next, use the **◀▶ Navigation Buttons 14** on the remote or the **◀▶ Navigation Buttons** on the front panel **H** to change the setting as desired. The unit will return to normal operation within five seconds after the setting is changed.
 - For private listening, simply place a standard 1/4" stereo headphone plug or adapter into the **Headphone Jack B** behind the door **9** on the front panel. The speakers will automatically mute and a two-channel stereo signal will be sent to the headphones. The **Lower Display Line 14** will read **DOLBY H: BP**, indicating that the headphone output is in the Bypass mode, and to confirm that

no processing is being used. To listen through the headphones using the Dolby Headphone mode, simply press the buttons on the remote or front panel as shown below for changing a Dolby mode. **DOLBY H: DH** will appear in the Lower Display Line when the Dolby Headphone mode is in use.

Surround Mode Selection

One of the most important features of the AVR 745 is its ability to reproduce a full multichannel surround sound field from digital sources, analog matrix surround-encoded programs and standard stereo programs.

Selection of a surround mode is based on personal taste, as well as the type of program source material being used. For example, motion pictures or TV programs bearing the logo of one of the major surround-encoding processes, such as Dolby Surround or DTS Stereo may be played in either the Dolby Digital, Dolby Pro Logic II Cinema, DTS Neo:6 Cinema, or Logic 7 Cinema surround modes, depending on the source material.

NOTE: Once a program has been encoded with matrix surround information, it retains the surround information as long as the program is broadcast in stereo. Thus, movies with surround sound may be decoded via any of the analog surround modes such as Pro Logic II Cinema, Logic 7 Cinema or DTS Neo:6 Cinema, when they are broadcast via conventional TV stations, cable, pay-TV and satellite transmission. In addition, a growing number of made-for-television programs, sports broadcasts, radio dramas and music CDs are also produced in surround sound. You may view a list of these programs at the Dolby Laboratories Web site at www.dolby.com.

Even when a program is not listed as carrying intentional surround information, you may find that the Dolby Pro Logic II, Dolby Pro Logic IIx, Logic 7 or DTS Neo:6, and the Hall or Theater modes often deliver enveloping surround presentations through the use of the natural information present in all stereo recordings.

Surround modes may be changed at any time by using either the front panel or remote control. To select a new surround mode from the front panel, first press the **Surround Mode Group Selector Button 2** until the desired major surround mode group such as Dolby, DTS or Logic 7 is selected. Next, press the **Surround Mode Selector Button 3** to choose the specific individual surround mode.

To select a surround mode using the TC 30 remote, first press the **Devices Button 5**, followed by the **Screen Button 7** at the top of the row of buttons on the left side of the TC 30, to the left of the A/V receiver image on the LCD screen. After the list of options displayed on the **LCD Screen 8** changes,

Continued on page 42

AVR745

OPERATION

press the **Screen Button** **7** to the right of **Surr Menu**. The options list will change again, this time showing the major display category modes. The first press of a button will show the current mode from that group if it is already in use, or the first available mode if you are currently using another mode. To cycle through the available modes in that group, press the button again until the desired mode appears in the **Lower Display Line** **14**, the on-screen display and the front-panel **Surround Mode Indicators** **15**.

The Dolby Digital, Dolby Digital EX, DTS 5.1, DTS-ES Matrix and DTS-ES Discrete modes may only be selected when a digital input is in use. In addition, when a digital source is present, the AVR 745 will automatically select and switch to the correct mode, regardless of the mode that has been previously selected. For more information on selecting digital sources, see the Digital Audio Playback section below.

When the 6-channel/8-channel direct inputs are in use, there is no surround processing, as these inputs take the analog output signals from an external source device and carry them straight through to the volume control without any further digital processing.

To listen to a program in traditional two-channel stereo, using the front left and front right speakers only (plus the subwoofers, if installed and configured), first follow the instructions shown above so that the **AVR: Surround Menu** page of the TC 30 remote is on the **LCD Screen** **8**, and then press the **Screen Button** **7** to the right of the Stereo option until **SURROUND OFF** appears in the **Lower Display Line** **14**. From the front panel, press the **Surround Mode Group Selector** **2** until the **Stereo** modes appear in the on-screen display and **Lower Display Line** **14**. Next, press the **Surround Mode Selector Button** **3** until **SURROUND OFF** appears in the on-screen display and **Lower Display Line** **14**.

Digital Audio Playback

Digital audio is a major advancement over older analog surround processing systems. It delivers up to six discrete channels, and each channel reproduces a full-frequency range (20Hz to 20kHz) and offers dramatically improved dynamic range and significant improvements to signal-to-noise ratios. In addition, digital systems have the capability to deliver an additional channel that is specifically devoted to low-frequency information. This is the ".1" channel referred to when you see these systems described as "5.1," "6.1" or "7.1." The bass channel is separate from the other channels, but since it is intentionally bandwidth-limited, sound designers have given it that unique designation. When a digital soundtrack is playing, the number of channels available will vary according to the way in which the program was recorded. Although most movies recorded with digital

sound have 5.1 soundtracks, some have 6.1 or 7.1 sound, while others retain the original two-channel or even monaural sound. When the program source is a broadcast, cable or satellite delivered digital program, only one type of soundtrack may be delivered at a time, while optical sources such as DVD may provide more than one audio option. In either case, the decision of what type of sound track and how many channels to offer is up to the program's producer. With the AVR 745 you are able to not only play back the original compatible digital format, but using the processing power of the Texas Instruments DSP processor, it is possible to decode the basic digital track for 2.0 or 5.1 sound and then select an additional "post-processing" mode to deliver additional channels.

Dolby Digital

Dolby Digital is the default format for DVD discs and for the (ATSC) high-definition system used in the United States and Canada. It is also used by the digital satellite program services and is available on most digital cable set-top boxes. When the AVR 745 is connected to a blue-laser-based high-definition optical disc player via an HDMI, coaxial or optical digital connection, the soundtrack from the player is also available in the standard Dolby Digital format so that it may be decoded by the AVR.

An optional, external RF demodulator is required to use the AVR 745 to listen to the Dolby Digital soundtracks available on laser discs. Connect the RF output of the LD player to the demodulator and then connect the digital output of the demodulator to the **Optical** or **Coaxial Inputs** **KM4041** of the AVR 745. A demodulator is not required for use with high-definition optical disc or DVD players, or with DTS-encoded laser discs.

In order to provide maximum playback compatibility with DVDs, the AVR 745 receiver will always default first to the playback mode embedded in a disc's digital "flag" information. For Dolby Digital discs, the following playback modes are initially selected after the AVR locks to the incoming digital audio data stream to identify the selected:

- When a Dolby Digital 5.1 data stream is detected, the choice of which surround mode is activated is determined by the setting on the **DEFAULT SURR** line of the **SURROUND CONFIG** menu (Figure 19), as shown on page 28.
- When a disc with the Dolby Digital EX format flag is played, your system will automatically switch to the EX mode when seven main-channel speakers are available.
- When a disc with 2.0 Dolby Digital data is detected, the default mode is Dolby Digital with Pro Logic II postprocessing when you have a 5.1 speaker system,

or Dolby Digital with Pro Logic IIx postprocessing when you have a 7.1 speaker system.

- Depending on the number of speaker channels available in your system, once the AVR locks to the digital signal, you may select any surround mode or postprocessing option that is available, based on the incoming data stream's possible restrictions and the number of speakers in your system. For example, when a 5.1 or 2.0 audio stream is in use, you may select alternate postprocessing such as Logic 7/7-channel Movie Mode postprocessing to create the rear surrounds in 7.1 speaker systems.

DTS

DTS is another digital audio system that is capable of delivering 5.1 or 6.1 discrete or matrix sound field reproduction. Although both DTS and Dolby Digital are digital, they use different methods of encoding the signals, and thus they require different decoding circuits to convert the digital signals back to analog.

DTS-encoded soundtracks are available on select DVD and LD discs, as well as on special audio-only DTS discs. You may use any LD or CD player equipped with a digital output to play DTS-encoded discs with the AVR 745. All that is required is to connect the player's output to either an **Optical** or **Coaxial Input** on the rear panel **4041** or front panel **KM**.

In order to listen to DVDs encoded with DTS soundtracks, the DVD player must be compatible with the DTS signal, which is indicated by a DTS logo on the player's front panel. Early DVD players may not be able to play DTS-encoded DVDs. If you are in doubt as to the capability of your DVD player to handle DTS discs, consult the player's owner's manual.

When the AVR 745 is connected to a blue-laser-based high-definition optical disc player via an HDMI, coaxial or optical digital connection, the soundtrack from the player is also available in the standard DTS format so that it may be decoded by the AVR.

NOTE:

- Some DVD players have a default setting that does not pass through the DTS signal. Before playing DVDs with a DTS soundtrack, make certain that the settings in your DVD player have been properly adjusted so that DTS audio is passed through. Consult the owner's manual for your DVD player for more information on making these settings.
- When selecting surround modes, any mode where the setting in its mode group (Dolby, DTS, Logic 7, PCM, etc.) has been set to **OFF** in one of the **SURROUND CONFIG** menus will not appear. You may change the settings in this list at any time by following the instructions on page 28.

Selecting a Digital Source

To utilize either digital mode, you must have properly connected a digital source to the AVR 745. Connect the digital outputs from DVD players, HDTV receivers, satellite systems or CD players to the **Optical** or **Coaxial Inputs** **KIM4041**. In order to provide a backup signal and a source for analog stereo recording, the analog outputs provided on digital source equipment should also be connected to their appropriate inputs on the AVR 745 rear panel (e.g., connect the analog stereo audio output from a DVD to the **DVD Audio Inputs** **65** on the rear panel when you connect the source's digital outputs).

If you have not already configured an input for a digital source using the on-screen menus, as shown on page 22, first select the input using the remote or front-panel controls, as outlined in this manual. Next, press the **Devices Button** **5**, followed by the **Screen Button** **7** at the top of the row of buttons on the left side of the TC 30, to the left of the AV receiver image on the LCD screen. After the list of options displayed in the **LCD Screen** **8** changes, press the **Screen Button** **7** to the left of **Setup Menu**. After the options change, press the **Screen Button** **7** to the right of **Digital Input** and then press the **Navigation Buttons** **14** on the TC 30 remote or the **Navigation Button** **H** on the front panel to choose any of the **OPTICAL** or **COAXIAL** inputs, as they appear in the **Upper Display Line** **13** or on-screen display. When the digital source is playing, the AVR 745 will automatically detect which type of digital data stream is being decoded and display that information in the **Upper Display Line** **13**.

When both a digital and an analog connection are made between a source device and the AVR, the digital input is the default. If the digital stream is not present or is interrupted, the unit will automatically switch over to the analog inputs for the selected source.

If you wish to disable the auto-polling feature, you may do so by following the instructions shown for the **IN/OUT SETUP** menu (Figure 2), as shown on page 22.

Digital Bitstream and Surround Mode Indications

When a digital source is playing, the AVR 745 senses the type of bitstream data that is present, and automatically selects the proper surround mode. For example, DTS bitstreams will cause the unit to switch to DTS decoding, and Dolby Digital bitstreams will enable Dolby Digital decoding. When the unit senses PCM data from CDs or LDs, you may select any of the standard Dolby or DTS surround modes or Logic 7. Since the range of available surround modes is dependent on the type of digital data that is present, the AVR 745 shows you what type of signal is present to help you understand the choice of modes.

When a digital source is first detected, the AVR 745 will display a message to indicate the type of bitstream being received. It will remain in the **Lower Display Line** **14** for about 5 seconds before that portion of the display returns to the normal surround mode indication.

For Dolby Digital and DTS sources, a numerical indication (such as **3/2/2.1**) will appear, showing the number of channels present in the data.

The first number in the display message indicates how many discrete front-channel signals are present.

- A "3" tells you that separate front left, center and front right signals are available. This will be displayed for Dolby Digital 5.1, Dolby Digital EX and DTS 5.1 or DTS-EX programs.
- A "2" tells you that separate front left and right signals are available, but there is no discrete center channel signal. This will be displayed for Dolby Digital bitstreams that have stereo program material.
- A "1" tells you that there is only a mono channel available in the Dolby Digital bitstream.

The middle number in the display message indicates how many discrete surround channel signals are present.

- A "3" tells you that separate, discrete left surround, center surround and right surround signals are present. This is available only on discs with DTS-ES digital audio.
- A "2" tells you that separate surround left and right signals are available. This will be displayed for Dolby Digital 5.1 and DTS 5.1 programs.
- A "1" tells you that there is only a single, surround-encoded surround channel. This will appear for Dolby Digital bitstreams that have matrix encoding.
- A "0" indicates that there is no surround channel information. This will be displayed for two-channel stereo programs.

The last number indicates whether there is a discrete low-frequency effects (LFE) channel. This is the ".1" in the common abbreviation of "5.1" sound and it is a special channel that contains only bass frequencies.

- A ".1" tells you that an LFE channel is present. This will be displayed for Dolby Digital 5.1 and DTS 5.1 programs, as available.
- A "0" indicates that there is no LFE channel information available. However, even when there is no dedicated LFE channel, low-frequency sound will be present at the subwoofer output when the speaker configuration is set to show the presence of a subwoofer.
- The information on the right side of the display will tell you whether the digital audio data contains a special flag signal that will automatically activate the

appropriate 6.1 or 7.1 mode. This will be shown as EX-ON or EX-OFF for Dolby Digital bitstreams and ES-ON or ES-OFF for DTS bitstreams.

When a 2.0 or 5.1 digital source is playing on a system configured for 5.1 operation, you may use Dolby Digital EX, DTS-ES, Logic 7/7 or Dolby Pro Logic IIx to add rear channels for full 7.1 sound fields. Note, however, that the availability of specific modes for postprocessing is dependent on the format of the incoming source material. While some combinations (e.g., a Dolby Digital or DTS 5.1 source with Logic 7/7 or Dolby Pro Logic IIx postprocessing) are allowable, others (e.g., a Dolby Digital 5.1 source with DTS Neo:6) are not. If you wish to add surround back channels to a 2.0 or 5.1 source, we recommend that you experiment with the various options to see which may be available and which are best suited to your taste and listening environment.

It is always a good idea to check the readout for the channel data to make certain that it matches the audio logo information shown on the back of a DVD package. In some cases, you will see an indication for "2/0/0" even when the disc contains a full 5.1, or 3/2/1, signal. When this happens, check the audio output settings for your DVD player or the audio menu selections for the specific disc being played to make certain that the player is sending the correct signal to the AVR.

PCM Playback

PCM is the abbreviation for Pulse Code Modulation, the digital signal format used for standard CD playback, and other non-Dolby Digital and non-DTS digital sources such as MiniDisc. When a **PCM** signal is detected, the **Lower Display Line** **14** will briefly show a message with the letters PCM, in addition to a readout of the sampling frequency of the digital signal.

In most cases, this will be **PCM 44.1kHz** or **PCM 48kHz**, though in the case of specially mastered, high-resolution audio discs, you will see a **PCM 96kHz** indication. Note that the sampling rate displayed is that of the incoming digital signal, and not the upsampled rate that may be applied to PCM sources when Dolby Pro Logic or Pro Logic II processing is applied, as shown on page 27.

During PCM playback, you may select any surround mode except Dolby Digital or DTS/DTS-ES mode.

USB Playback

The AVR 745 is among the very few A/V receivers capable of direct connection to a computer for audio playback. Once the AVR is connected, audio streams and playback are possible through your AVR, with all the power and performance of the high-current amplifier, your own speakers, and the enhanced multichannel playback made possible through the use of Logic 7, Dolby Pro Logic II/IIx or DTS Neo:6 processing.

OPERATION

The AVR 745's USB connectivity may be used with PC-compatible computers running either Microsoft® Windows® 2000 with Service Pack 4 or higher installed, or Windows XP® or Windows XP Media Center Edition with Service Pack 1 or higher installed. Connect one of the available USB jacks on your computer or a USB hub to the **USB Jack 36** on the AVR using a cable with a standard USB plug on one side and a USB "Mini B" plug on the other side. You may use an optional cable available at most electronics and computer stores for this purpose, or you may use the cable supplied for use with the TC 30 remote, if it is not being used to program the remote.

In addition, you will need to have a media player installed on the computer. The AVR 745 has been tested for operation with Windows Media Player® Version 8.0 and above, but it is also compatible with many other popular players such as iTunes®, WinAmp® and Real Player®. In most cases, it is best to always make certain that you have the latest version of the player installed to ensure the best compatibility.

When the connection between a computer and the AVR is made for the first time, or if the USB connection is plugged into a different USB jack on a computer or hub that has not been previously connected to the AVR, you will see a series of pop-up messages from Windows to indicate that the computer is configuring itself for the new device. Since the AVR provides a number of different functions, you may see the "Found New Hardware" message up to four times, one each for "AV Receiver," "Compatible Device," "Audio Receiver" and "Human Interface Device." When all messages have appeared and then cleared the screen, you are almost ready to begin.

Before selecting the USB input, first make certain that one of the media players listed above has been opened on the computer. Then you may select the USB input in any of the following ways:

- To select USB as a source from the front panel, press the **Input Source Selector Button 7** until USB appears as the input name in the **Upper Display Line 13** and in the semi-OSD display, if available. The **USB Input Source Indicator 11** will also light up on the front panel.
- Two options are available for selecting an input source using the TC 30 remote.
 - Press the **Activities Button 4** to display the list of preprogrammed activities and then press the **Screen Button 7** to the left of **Listen to USB**. This will both select the USB input and change the remote codes so that the buttons will control the media player on your computer.
 - To directly select the USB input as a source, first press the **Devices Button 5** and then

press the **Screen Button 7** to the left of **AV Receiver**. When the next page of options appears in the **LCD Screen 8**, press the **Screen Button 7** to the left of USB.

- To select USB as an input using the ZR 10 remote, press the **USB Input Selector 10**.

When the USB input is selected and the AVR 745 is connected to a compatible computer with one of the media players mentioned above open, you may then use the TC 30 to start and stop playback, as well as move to the next track using either the commands that appear in the **LCD Screen 8** in conjunction with presses of the **Screen Buttons 7**, or the **Transport Controls 11**. Activity of the Transport buttons may vary from one media player to another, but at the very least you will be able to use the Play and Stop buttons. You may also control the media player on a connected computer using the **Transport Controls 10** on the ZR 10 remote.

Once playback is started, the audio from a USB source is treated the same as any other two-channel audio source, and you may apply any of the appropriate surround processing modes. When playing back audio from a computer via the USB connection, the internal speakers in a laptop computer are often muted.

Speaker/Channel Indicators

In addition to the bitstream indicators, the AVR 745 features a set of unique channel-input indicators that tell you how many channels of digital information are being received and/or whether the digital signal is interrupted (Figure 31).

Figure 31

The letters inside the boxes tell you which channels are receiving an input signal. Since conventional analog audio is only two channels, the "L" and "R" letters will light with any analog source. When a digital source is in use, you will see letters displayed that correspond to the number of channels in the incoming data stream, which may be just the L and R for two-channel PCM or 2.0 Dolby Digital material. When a 5.1 signal is being received, the L/C/R/SL/SR indicators will light, with the LFE indication also being shown when an LFE signal is present. All seven indicators, including the SBL/SBR letters, will light for a 7.1 signal, and a horizontal line is shown to connect the SBL/SBR indicators when a 6.1 source is in use.

It is important to note that although Dolby Digital, for example, is referred to as a "5.1" system, not all Dolby Digital DVDs or programs are encoded for 5.1. Thus, it is sometimes normal for a DVD with a Dolby Digital soundtrack to trigger only the "L" and "R" indicators.

NOTE: Many DVD discs are recorded with both "5.1" and "2.0" versions of the same soundtrack. When playing a DVD, always be certain to check the type of material on the disc. Most discs show this information in the form of a listing or icon on the back of the disc jacket. When a disc does offer multiple soundtrack choices, you may have to make some adjustments to your DVD player (usually with the "Audio Select" button or in a menu screen on the disc) to send a full 5.1 feed to the AVR 745. It is also possible for the type of signal feed to change during the course of a DVD's playback. In some cases, the previews of special material will only be recorded in 2.0 audio, while the main feature is available in 5.1 audio. The AVR 745 will automatically sense changes to the bitstream and channel count and reflect them in these indicators.

The letters used by the **Speaker/Channel Input Indicators 12** will flash to indicate when a bitstream has been interrupted. This will happen when a digital input source is selected before the playback starts, or when a digital source such as a DVD is paused. The flashing indicators remind you that the playback has stopped due to the absence of a digital signal and not through any fault of the AVR 745. This is normal, and the digital playback will resume once the playback is started again.

The boxes around the channel indication letters are used to show which speakers are configured in your system. A small box around the letter indicates that a "Small" speaker has been assigned to that position, while a larger, double box indicates a "Large" speaker assignment.

Note that in some cases, such as an analog stereo or 2.0 digital sources you will see empty speaker position boxes, which indicates that the speaker is active and will receive sound, but that there is no discrete signal for that channel. In other cases you may see letters with no speaker boxes. This indicates that there is a discrete signal for that channel, but due to the mode in use (e.g., Dolby VS with a 5.1 source) there is no signal being sent to the channel.

Night Mode

A special feature of Dolby Digital is the Night mode, which enables specially encoded Dolby Digital input sources to be played back with full digital intelligibility while reducing the minimum peak level by 1/4 to 1/3. This prevents abruptly loud transitions from disturbing others, without reducing the impact of the digital source. The Night mode is available only when Dolby Digital signals with special data are being played.

The Night mode may be engaged at any time when a Dolby Digital source is playing by pressing the **Devices Button 5** on the TC 30, followed by the **Screen Button 7** at the top of the row of buttons on the left side of the TC 30, to the left of the **AV Receiver** image on the LCD screen. After the list of options displayed on the **LCD Screen 8** changes, press the **Page Left/Right Button 9** to display the next page of options, and press the **Screen Button 7** to the left of the word **Night**. Each press of the button will change the Night mode setting, as shown in the lower third of the on-screen display (except when 720p or 1080i sources are in use). To turn the Night mode off, press the button as described until **D-RANGE OFF** is shown.

The Night mode may also be selected to always be on at either level of compression using the options in the **DOLBY SURROUND** menu. See page 29 for information on using the menus to set this option.

IMPORTANT NOTES ON DIGITAL PLAYBACK:

- When playing DVDs, please note that even when you have selected a specific digital audio format for playback, an individual disc may change formats or the number of available channels during playback. For example, even if you select a DTS mode for the movie, you may see Dolby Digital in use when the trailers, menus or copyright warnings are playing. This is not a fault with either the AVR or your DVD player, as both are responding to the way the disc was created.
- When viewing digital television signals, note that the number of audio channels available may vary during the course of a program, depending on the content. For example, while a sports event may have 5.1 sound, the commercials or local station content may be in 2.0. In addition, not all local stations are currently equipped for carrying the 5.1 digital audio signals. This may mean that even though the actual program is produced with 5.1, it may be transmitted in a 2.0 configuration in some areas. Your AVR will automatically change to react to the proper type of audio stream if it is changed by the broadcast station.
- Although the AVR 745 will decode virtually all current DVD movies, CDs and HDTV sources, it is possible that some future digital sources may not be compatible with the AVR 745.
- Not all digitally encoded programs contain full 5.1- or 6.1-channel audio. Consult the program guide that accompanies the DVD or laser disc to determine which type of audio has been recorded on the disc. The AVR 745 will automatically sense the type of digital surround encoding used and adjust to accommodate it.

- When a digital source is playing, you may not be able to select some of the analog surround modes such as Dolby Pro Logic II, Dolby Pro Logic IIx, Stereo, Hall, Theater or Logic 7.
- When a Dolby Digital or DTS source is playing, it is not possible to make an analog recording using the **Tape Outputs 37** and **Video 1 Audio Outputs 43**. However, the digital signals will be passed through to the **Digital Audio Outputs 37/38/M**.

Using The Bridge

The AVR 745 is equipped for use with Harman Kardon's optional **The Bridge** iPod docking station.

When The Bridge is connected to the AVR and an iPod properly docked, you may use the TC 30 or ZR 10 remote to control the iPod for audio playback using either the TC 30 or ZR 10 remote, while using the front-panel display and on-screen semi-OSD messages to help you locate tracks or view information about the track being played. In addition, connecting an iPod to the AVR 745 through The Bridge also charges the iPod's battery. Using the **DMP AUTO POWER** menu option, as described on page xx, you may even have the AVR 745 automatically turn on with your iPod as a playback source whenever the iPod is turned on.

You may select The Bridge as an input by pressing the **Devices Button 5** on the TC 30 and then pressing the **Screen Button 7** next to **Listen to the Bridge**. The **LCD Screen 8** will change to display options that allow you to control the iPod by pressing the **Screen Button 7** next to the function you would like to use. You may also use the ZR 10 to control the iPod using the controls outlined in the instructions that are furnished with **The Bridge**.

When The Bridge is connected and a compatible iPod properly docked, the iPod's menu will be replaced with "harman/kardon" at the top of the iPod's screen and the front panel display and semi-OSD message will show messages that will guide you through the menu and content selection. If the **Lower Display Line 14** shows an **UNPLUGGED**... message, please check to see that the correct iPod adapter is used in The Bridge and that the iPod is properly seated.

The AVR's front-panel controls may also be used to access a limited number of iPod functions. Press the **Tuner Mode Button 17** to play or pause the current track. The **Tuning Selector 9** may be used to search in reverse (left side of button) or forward (right side of button) through the tracks. Press the **Tuner Band Selector 11** to call up the iPod's menu. Press the **Preset Station Selectors 14** to scroll and the **Set Button 12** to select. For complete information on using the remote or front-panel controls to operate an iPod, see the instructions that are included with The Bridge.

Video Adjustments and Operation

The AVR 745's video system uses the power of DCDi by Faroudja processing in combination with HDMI 1.1 connectivity to allow for connection to virtually any video display with the best possible picture. If the Faroudja processing has not been activated for any source in the **IN/OUT SETUP** menu (Figure 2), you may return to that menu and make the changes shown on page 23 to set a new choice for **VIDEO PROCESSING**, or you may turn the processing on or off using one of these two options:

- From the front panel, press the **Navigation Buttons H** and observe the choices shown in the **Lower Display Line 14** or in the semi-OSD message until the desired option appears.
- To change the setting with the TC 30 remote, first press the **Devices Button 5** and then press the **Screen Button 7** to the left of **AV Receiver**. When the next page of options appears in the **LCD Screen 8**, press the **Screen Button 7** to the right of **Video On/Off** to change the setting until the desired processing mode name is shown in the **Lower Display Line 14** or in the Semi-OSD message.

It is important to note that in some cases you may choose a combination of video processing mode and output settings that is not compatible with the circuitry of your video display. When this happens, an error message will appear in the video display. Follow the on-screen instructions to move back to one of the video menus, and as needed, navigate to the **IN/OUT SETUP** menu (Figure 2) to make the setting change.

Once you're familiar with the operation of the AVR 745, you may wish to experiment with the various source, output, aspect ratio, picture control and display-type settings available in the **IN/OUT SETUP** (Figure 2), **VIDEO MONITOR** (Figure 4) and **VIDEO SETUP** (Figures 5–7) menus, as described on pages 24–27. This will allow you to customize the appearance of your system to the unique characteristics of your specific combination of sources and video display.

AM/FM Tuner Operation

The AVR 745's AM/FM tuner is capable of tuning AM, FM and FM Stereo broadcast stations. Stations may be tuned manually, or they may be stored as favorite station presets and recalled from a 30-position memory.

Tuner and Station Selection

The AVR 745's AM/FM tuner may be selected as the unit's source, and stations changed, by following one of these steps:

- From the front panel, press the **Input Source Selector 7** until the desired tuner frequency band

AVR745

OPERATION

(AM, FM or XM) appears. To change stations within a frequency band, press the **Tuning Selection 4**.

- You may also press the front panel's **Tuner Band Selector 5** to select the tuner. The first press will select the last used frequency band and station. Subsequent presses will change the frequency bands, selecting the last used station or XM program used. Press the **Tuning Selection 4** to change stations within a frequency band.
- From the TC 30 remote, press the **Devices Button 5** and then press the **Screen Button 7** to the left of **Audio Inputs**. When the next page of options appears on the **LCD Screen 8**, press the **Screen Button 7** to the left of **Tuner**. The tuner will become the active input and the options on the LCD screen will become those needed for tuner operation. Press the **Screen Button 7** next to any option to use it. For example, press the **Screen Button 7** next to **FM-AM-XM** to change the frequency band. To tune up or down through the current frequency band, press the **Screen Button 7** next to **Tuning Up** or **Tuning Down**. When the tuner is the active device on the TC 30, the Channel Up/Down buttons are used to change station presets.
- To directly access the commands used for listening to FM radio, press the **Activities Button 4** and then press the **Screen Button 7** to the right of **Listen to FM Radio**.
- To select the tuner from the ZR 10 remote, press the **Tuner Selector E**, or for XM Radio press the **XM Radio Selector Button F** (when an optional XM Connect & Play or Passport module is connected and the programming service has been activated).
- To change the tuning mode, press the **Tuning Mode Selector 3** or the TC 30 **Screen Button 7** next to **Tune M**.

When the button is pressed so that **AUTO / STEREO** appears in the **Upper Display Line 13**, each press will put the tuner in a scan mode that seeks the next higher or lower frequency station with acceptable signal strength. An **AUTO ST TUNED** indication will momentarily appear when the station stops at a stereo FM station, and an **AUTO TUNED** indication will momentarily appear when an AM or monaural FM station is tuned. Press the Tuning buttons again to scan to the next receivable station.

When the button is pressed so that **MANUAL / MONO** appears in the **Upper Display Line 13**, each tap of the Selector will increase or decrease the frequency by one increment. When the tuner receives a strong-enough signal for adequate reception, **MANUAL TUNED** will appear in the **Lower Display Line 14**.

- Stations may also be tuned directly in either the automatic or manual mode. To enter a station's frequency directly, first select the AM or FM band as shown above. Next, press the **Direct Button M** or the **Screen Button 7** next to **Direct**. Within 5 seconds of when **DIRECT IN** scrolls in the **Upper Display Line 13**, enter the station frequency by pressing the **Numeric Keys 11**. If you press an incorrect button while entering a direct frequency, press the **Clear Button L** to start over.

NOTE: When FM reception of a station is weak, audio quality will be increased by switching to Mono mode by switching to the **MANUAL / MONO** mode.

Preset Tuning

Using the remote, up to 30 stations may be stored in the AVR 745's memory for easy recall, using the front-panel controls or the remote.

To enter a station into the memory, first tune the station using the steps outlined above. Then:

- Press the **Memory Button O** on the ZR 10 remote; the station's frequency will flash or press the **Screen Button 7** next to **Memory**.
- Within 5 seconds, press the **Numeric Keys 11** **18** corresponding to the location where you wish to store this station's frequency. Once entered, the preset number will appear in the **Upper Display Line 13**.
- Repeat the process after tuning any additional stations to be preset.

Recalling Preset Stations

- To manually select a station previously entered in the preset memory, press the **Numeric Keys 11** **18** that correspond to the desired station's memory location.
- To manually tune through the list of stored preset stations one by one, press the **Preset Stations Selector Buttons 6 22** on the front panel or the remote, the **Prev/Next Transport Controls P** on the ZR 10 remote, or the **Channel Up/Down Buttons 17** on the TC 30 remote control when the tuner is the active input device.

XM Radio Operation

XM Radio is a satellite-delivered service that offers hundreds of program channels, as well as local traffic and weather information for select cities. The AVR 745 is "XM Ready," which means that the unit is able to receive the XM service when an optional XM Connect and Play or Passport module is connected and the service activated. You may purchase the antenna module needed for XM Radio from many electronics

or online retailers, or directly from XM Radio through the "Home Receivers" section of the XM Radio Store at www.xmradio.com.

Once you have purchased the XM module, follow the instructions accompanying it to activate the XM Service. Connect the plug on the XM module to the **XM Ready Module Input 35** on the rear panel of the AVR 745. For best results, point the antenna module out a window, again, following the instructions packed with the XM product. If a window view is not available for the antenna, XM Radio operates a series of terrestrial repeater stations that may be able to provide reception, though this service is not available everywhere.

IMPORTANT NOTE: XM Radio requires both the optional, external antenna module and a subscription to the XM Radio service. Antenna and service sold separately; XM Radio is not available in Alaska or Hawaii.

If you need to view the antenna module's number, connect it to the AVR and then follow one of the steps shown below to select XM Radio as the input source. Tune to "000" to get a readout of the number.

Once you have an activated module connected, follow one of these steps to select XM Radio as your system's audio source:

- From the front panel, press the **Input Source Selector 7**. If XM was the last used tuner source, it will appear; or press the button again until XM Radio is heard. Press the **Tuning Selection 4** to change stations within a frequency band. Press the **Tuning Selection 4** to select a different XM channel.
- From the TC 30 remote, press the **Devices Button 5** and then press the **Screen Button 7** to the left of **Audio Inputs**. When the next page of options appears on the **LCD Screen 8**, press the **Screen Button 7** to the left of **Tuner**. The tuner will become the active input and the options on the LCD screen will become those needed for tuner operation. Press the **Screen Button 7** next to any option to use it. For example, to tune up or down through the current frequency band, press the **Screen Button 7** next to **Tuning Up** or **Tuning Down**. When the tuner is the active device on the TC 30, the Channel Up/Down buttons may be used to change station presets.
- The easiest way to select XM Radio as a source with the TC 30 remote is to invoke the XM Activity. First press the **Activities Button 4** and then press the **Screen Button 7** to the right of **Listen to XM Radio**. This will both select XM Radio as the unit's input and change the options shown on the **LCD Screen 8** to those appropriate for XM Radio. To tune through the list of

available XM channels, press the **Screen Button 7** next to **Tuning Up** or **Tuning Down**.

- To select the tuner from the ZR 10 remote control, press the **XM Radio Selector Button F**. Channels are selected using the **Prev/Next Transport Controls P**.

While using XM Radio is similar in many ways to AM/FM terrestrial radio, the wide range of program choices available, as well as the ability of the XM service to add special data and information tags into the digital audio data stream, means that some of the front-panel and remote controls traditionally used for tuner operation have different functions with XM Radio.

- When XM Radio is the AVR's source, the channel number will appear in the **Upper Display Line 13**, along with an indication of the Preset number, if any, and a series of bars at the far right end of the display. These bars (not shown in the semi-OSD message), show the current signal strength similar to the signal strength displays on a cellular phone.
- The current channel's name will normally appear in the **Lower Display Line 14**. For local traffic information, the name of a city will be shown in place of the channel name. You may change this display to show the current artist and track title information by pressing the **Tuning Mode Selector 8** or the **Screen Button 7** that is next to **Tune M-XM Display** when you are using the TC 30's Tuner pages to operate the AVR. When you are listening to a channel with local traffic information in the "200" series of channel numbers, these buttons change the display to show the temperature and current weather for the selected city.
- To tune a channel number directly, simply press the **Numeric Keys 18 J**. Unlike standard AM/FM tuner operation, it is not necessary to press the Direct Button first.
- The AVR 745 has five banks of preset memories for XM Radio, each with eight memory positions and designated by a letter ("A" through "E"). To store a channel into a memory group, first press the **OK/Enter Button 15** when using the TC 30 remote control to operate the AVR's XM Radio function, or the **Set Button C** on the ZR 10 remote until **PRESET SEARCH** appears in the **Upper Display Line 13** and on the top line of the semi-OSD display. Next, press the **Navigation Buttons 14 G** until the desired preset memory bank letter appears in the **Lower Display Line 14** and in the bottom line of the semi-OSD display. Next, press the **Memory Button N** or the **Screen Button 7** next to the word **Memory** on the LCD screen and note that a dash will start to flash next to the preset memory bank letter. Within

five seconds, press the **Numeric Button 18 J** from 1 to 8 for the memory slot you wish to use.

- To tune up or down through a list of channels stored in the currently active preset memory, press the **Channel Up/Down Buttons 17** on the TC 30 or the **Screen Button 7** next to **Next Preset** or **Prev Preset** when the "Listen to XM Radio Activity" is in use. You may also use the **Preset Station Selector 6** on the front panel. To change to another preset bank, press the **Set Button 1 C** on the front panel or the ZR 10 remote, or the **OK/Enter Button 15** when using the TC 30 remote, and then press the **Navigation Buttons 14 G** until the desired preset memory bank letter appears in the **Lower Display Line 14** and in the bottom line of the semi-OSD display.
- Each XM Radio channel is assigned a category, which may be viewed by pressing the **Tuning Mode Selector 8** or the **Screen Button 7** that is next to **Tune M-XM Display** when you are using the TC 30's Tuner pages to operate the AVR. You may search for an XM channel in any of the categories by first pressing the **Set Button 1 C** on the front panel or ZR 10 remote, or the **OK/Enter Button 15** when using the TC 30 remote, and then pressing the **Navigation Buttons 14 G** until the desired category name appears in the **Lower Display Line 14** and in the bottom line of the semi-OSD display. Press the **Set Button 1 C** or **OK/Enter Button 15** again to start the search for the next channel in that category.
- Note that you may see a **LOADING** message, indicating that the XM tuner is downloading content and may not be able to operate. If the message continues to appear, check to see whether the XM antenna is properly positioned toward a south-facing window, experiment with the antenna position, or change to another input and then reselect XM Radio.

Recording

In normal operation, the audio or video source selected for listening through the AVR 745 is sent to the record outputs. This means that any program you are watching or listening to may be recorded simply by placing machines connected to the outputs for **Tape Outputs 37** or **Video 1/Video 2 Audio and Video Outputs 17 19 40 42** in the record mode.

When a digital audio recorder is connected to the **Digital Audio Outputs 30 34 M**, you are able to record the digital signal using a CD-R, MiniDisc or other digital recording system.

NOTES:

- The digital outputs are active only when a digital signal is present, and they do not convert an analog input to a digital signal, or change the format of the digital signal. In addition, the digital recorder must be compatible with the output signal. For example, the PCM digital input from a CD player may be recorded on a CD-R or MiniDisc, but Dolby Digital or DTS signals may not.
- The **Front-Panel Video 4 N** and **Coaxial 4 M** jacks may be configured for use as outputs, allowing connection to a recorder, when the steps shown in the section below are followed.
- Please make certain that you are aware of any copyright restrictions on any material you copy. Unauthorized duplication of copyrighted materials is prohibited by federal law.

Front-Panel Connections

In addition to the rear-panel digital and analog outputs, the AVR 745 offers Harman Kardon's exclusive configurable front-panel output-jack feature. For easy connection of portable devices, you may switch the front-panel **Video 4 Jacks N** or the **Coaxial Digital 4 Jack M** from an input to an output by following these steps:

- Press the **Devices Button 5** on the TC 30 remote and then press the **Screen Button 7** next to **AV Receiver** and then press the **Menu Button 11** or press the **OSD Button 3** to view the **MASTER MENU** (Figure 1).
- Press the **OK/Enter Button 15** or the **Set Button C** to enter the **IN/OUT SETUP** menu (Figure 2).
- Press the **Navigation Button 14 G** so that the on-screen cursor is next to **VIDEO 4** or **COAXIAL 4**.
- Press the **OK/Enter Button 15** or the **Set Button C** and then press the **Navigation Buttons 14 G** so that the word **OUT** is highlighted.
- Press the **OK/Enter Button 15** or the **Set Button C** to enter the change.
- Press the **Menu Button 11** or press the **OSD Button 3** to exit the menus and return to normal operation.

Once the setting is made, the **Input/Output Status Indicator L** will turn red, indicating that the jacks are now outputs, instead of in the default setting as inputs. Once changed to an output, the setting will remain as

OPERATION

long as the AVR 745 is turned on, unless the setting is changed in the OSD menu system, as described above. However, once the AVR 745 is turned off, the setting is canceled. When the unit is turned on again, the front-panel jacks will return to their normal default setting as inputs. If you wish to use the jacks as outputs at a future time, the setting must be changed again using the OSD menu system, as described above.

Output Level Trim Adjustment

Normal output level adjustment for the AVR 745 is established using EzSet/EQII, as outlined on pages 29–33. In some cases, however, it may be desirable to trim the output levels using program material such as a test disc, or a selection you are familiar with. Additionally, the output level for the subwoofer can only be adjusted using this procedure.

To adjust the output levels using program material, first set the reference volume for the front left and front right channels using the **Volume Control** **10** **B** **H**.

Press the **Devices Button** **5** on the TC 30 remote and then press the **Screen Button** **7** next to **AV Receiver**. Next, press the **Screen Button** **7** next to **Setup Menu** and after the choices in the **LCD Screen** **8** change, press the **Screen Button** **7** next to **Channel** and **FRONT L LEVEL** will appear in the **Lower Display Line** **14**. To change the level, first press the **OK/Enter Button** **15** or the **Set Button** **9**, and then use the **▲/▼ Navigation Buttons** **14** **G** to raise or lower the level. DO NOT use the volume control, as this will alter the reference setting.

Once the change has been made, press the **OK/Enter Button** **15** or the **Set Button** **9** and then press the **▲/▼ Navigation Buttons** **14** **G** to select the next output-channel location that you wish to adjust. To adjust the subwoofer level, press the **▲/▼ Navigation Button** **15** until **W O O F E R LEVEL** appears in the **Lower Display Line** **14** or on-screen display.

Repeat the procedure as needed until all channels requiring adjustment have been set. When all adjustments have been made and no further adjustments are made for 5 seconds, the AVR 745 will return to normal operation.

The output levels may also be adjusted using the on-screen menu system to either the internal test tone or an external test disc by following the instructions shown on page 37

EzSet/EQII Operation

A major advantage of EzSet/EQII over competitive systems is its ability to store up to three different EQ Designs. This allows you to preset different combinations of speakers or manually set adjustments, or perhaps create different EQ Designs with the microphone in different locations to optimize the system for either your favorite listening position, or for a different setting when more people are in the listening room. You may also turn off the EzSet/EQII system entirely so that you may compare the sound of your system with the system in a particular EQ Design, or with it out of the system.

To access the settings for selecting an EQ Design preset, press the **Devices Button** **5** on the TC 30 followed by the **Screen Button** **7** at the top of the row of buttons on the left side of the TC 30, to the left of **AV Receiver** on the LCD screen. After the list of options displayed in the **LCD Screen** **8** changes, press the **Page Left/Right Button** **9** to go to the second page of **AV Receiver** settings. When that page of settings appears, you may do the following:

- Press the **Screen Button** **7** to the left of **E Q On/Off** to bring the EQ settings into the signal path, or to put the system in the Bypass mode, which removes the equalization filters.
- Press the **Screen Button** **7** to the left of **E Q Presets** to cycle through the EQ Designs stored in each of the three memory positions, as shown in the instructions on page 38.

Subwoofer Control

If you have a 7.2 system with two subwoofers present, you may occasionally wish to turn one of the subwoofers off to accommodate your preferences with a particular movie or musical program, or to demonstrate the change made by using one subwoofer or two. To do this, press the **Devices Button** **5** on the TC 30 followed by the **Screen Button** **7** at the top of the row of buttons on the left side of the TC 30, to the left of **AV Receiver** on the LCD screen. After the list of options displayed on the **LCD Screen** **8** changes, press the **LCD Screen** **8** to go to the second page of **AV Receiver** settings. When that page of settings appears, press the **Screen Button** **7** to the left of **Sub 2 On/Off** to turn the feed to the second subwoofer on or off.

Dim Function

Since the AVR 745 will often be used when movies or other kinds of video programming are viewed under low-light conditions, you may wish to lower the brightness of the front-panel displays and indicators so that they do not distract from the video presentation. You

may dim the displays using the menu system, as shown on page 49, or you may control the brightness directly from the remote.

Press the **Devices Button** **5** on the TC 30 remote and then press the **Screen Button** **7** next to **AV Receiver**. Next, press the **LCD Screen** **8** and after the choices in the **LCD Screen** **8** change, press the **Screen Button** **7** next to **Dim**. Note that when the displays are dimmed or turned off, the blue lighting around the **Standby/On Switch** **1** will continue to stay lit as a reminder that the AVR is still turned on. The accent lighting for the **Volume Control** **10** will remain at its normal level, rather than dim when the panel displays are at half-brightness.

Note that all changes to the front-panel brightness level are temporary; the displays will return to full-brightness after the AVR is turned off and then on again. To return the displays to full-brightness without turning the unit off, return the TC 30 to the **AVR Device screen**, and press the **Screen Button** **7** next to **Dim** as needed until the displays are on.

In addition to lowering the brightness of the displays or turning them off completely, you may wish to have them appear whenever a button on the remote or front panel is pushed, and then gradually fade out after a set time period. You may do this by making the appropriate settings in the **VFD FADE TIME OUT** line of the **ADVANCED SELECT** menu, as shown on page 49.

Memory Backup

This product is equipped with a memory backup system that preserves the system configuration information and tuner presets if the unit is accidentally unplugged or subjected to a power outage. This memory will last for at least four weeks, after which time all information must be reentered.

TROUBLESHOOTING GUIDE

SYMPTOM	CAUSE	SOLUTION
Unit does not function when Main Power Switch is pushed	<ul style="list-style-type: none"> No AC Power 	<ul style="list-style-type: none"> Make certain AC power cord is plugged into a live outlet Check to see whether outlet is switch-controlled
Display lights, but there is no sound or picture	<ul style="list-style-type: none"> Intermittent input connections Mute is on Volume control is down 	<ul style="list-style-type: none"> Make certain that all input and speaker connections are secure Press Mute Button   Turn up volume control
Unit turns on, but front-panel display does not light up	<ul style="list-style-type: none"> Display brightness is turned off 	<ul style="list-style-type: none"> Follow the instructions in the Display Brightness section on pages 48–49 so that the display is set to VFD FULL
No sound from any speaker; light around power switch is red	<ul style="list-style-type: none"> Amplifier is in protection mode due to possible short Amplifier is in protection mode due to internal problems 	<ul style="list-style-type: none"> Check speaker wire connections for shorts at receiver and speaker ends Contact your local Harman Kardon service center
No sound from surround or center speakers	<ul style="list-style-type: none"> Incorrect surround mode Input is monaural Incorrect configuration Stereo or Mono program material 	<ul style="list-style-type: none"> Select a mode other than Stereo There is no surround information from mono sources Check speaker mode configuration The surround decoder may not create center- or rear-channel information from nonencoded programs
Unit does not respond to remote commands	<ul style="list-style-type: none"> Weak batteries in remote Wrong device selected Remote sensor is obscured 	<ul style="list-style-type: none"> Change remote batteries Press the AVR selector Make certain front-panel sensor is visible to remote or connect remote sensor
Intermittent buzzing in tuner	<ul style="list-style-type: none"> Local interference 	<ul style="list-style-type: none"> Move unit or antenna away from computers, fluorescent lights, motors or other electrical appliances
Letters flash in the channel indicator display and digital audio stops	<ul style="list-style-type: none"> Digital audio feed paused 	<ul style="list-style-type: none"> Resume play for DVD Check that Digital Input is selected
Fan does not appear to operate	<ul style="list-style-type: none"> Additional cooling may not be required 	<ul style="list-style-type: none"> The fan is activated only when additional cooling is required due to high internal temperature, it is normal for the fan to be inactive at normal volume levels

In addition to the items shown above, additional information on troubleshooting possible problems with your AVR 745, or installation-related issues, may be found in the list of "Frequently Asked Questions" which is located in the Product Support section of our Web site at www.harmankardon.com.

Processor Reset

In the rare case where the unit's operation or the displays seem abnormal, the cause may involve the erratic operation of the system's memory or microprocessor.

To correct this problem, first unplug the unit from the AC wall outlet and wait at least 3 minutes. After the pause, reconnect the AC power cord and check the unit's operation. If the system still malfunctions, a system reset may clear the problem.

To clear the AVR 745's entire system memory including tuner presets, output level settings, delay times and speaker configuration data, first put the unit in Standby

by pressing the **Standby/On Switch** . Next, press and hold the **Surround Mode Group Selector**  and the **Tuning Mode Selector**  buttons for 3 seconds.

The unit will turn on automatically and display the **RESET** message in the **Upper Display Line** .

NOTE: Resetting the processor will erase any configuration settings you have made for speakers, output levels, surround modes, and digital input assignments, as well as the tuner presets. After a reset, the unit will be returned to the factory presets, and all settings for these items must be reentered.

If the system is still operating incorrectly, there may have been an electronic discharge or severe AC line interference that has corrupted the memory or microprocessor.

If these steps do not solve the problem, consult an authorized Harman Kardon service center.

 NO Signal/No Load
 AC Line Voltage:120V/60Hz.230V/50Hz
- 2) After turning on the unit keep it over than 25min (keep the power/Driver TR as normal temperature)
- 3) Adjust the voltage value of primary&secondary of wafer to be 25mV by rotating the semi volume of each channel to the right

CHANNEL	ADJUSTMENT	MEASUREMENT	VOLTAGE
FRONT-L CH	VR71	P817	23+/-2mV
FRONT-R CH	VR72	P805	23+/-2mV
SURROUND-L CH	VR73	P818	23+/-2mV
SURROUND-R CH	VR74	P806	23+/-2mV

- 4) CAUTION
 In case that power TR or DRIVER TR is needed to be replace for repairing the corresponding channel should be adjusted again

 FRONT AMP:Q437.Q433.Q435.Q439.Q438.Q434.Q436.Q440
 SURROUND AMP:Q333.Q329.Q331.Q335.Q334.Q330.Q332.Q336

2.SURROUND BACK AMP idling Adjustment

SET CONDITION

- 1) SEMI VOLUME POSITION at CENTER/SURROUND BACK AMP Board
 CENTER:VR501
 SURROUND BACK:VR201.VR301

 NO Signal/No Load
 AC Line Voltage:120V/60Hz.230V/50Hz
- 2) After turning on the unit keep it over than 25min (keep the power/Driver TR as normal temperature)
- 3) Adjust the voltage value of primary&secondary of wafer to be 25mV by rotating the semi volume of each channel to the right

CHANNEL	ADJUSTMENT	MEASUREMENT	VOLTAGE
CENTER	VR501	P501	23+/-2mV
SURR BACK-L CH	VR201	P201	23+/-2mV
SURR BACK-R CH	VR301	P301	23+/-2mV

- 4) CAUTION
 In case that power TR or DVIER TR is needed to be replace for repairing the corresponding channel should be adjusted again

 CENTER AMP:Q519,Q517.Q516,Q518
 SUR BACK AMP:Q319.Q317.Q316.Q318.Q219.Q217.Q216.Q218

3.Cautions for main adjustment

- 1) At MAIN/SUPPLY BOARD.use the below capacitor after discharging for sufficient time for preventing possible damage from electrical spark

MAIN BOARD	C571.C572	AVR745/645 15000/63V
	C571.C572	AVR445 12000/63V
SUPPLY BOARD	C201,C202	AVR745/645 10000/63V
	C201,C202	AVR445 8200/63V

- 2)The checking for MAIN/SUPPLY BOARD should have the discharging circuit discharge over 30sec.through(4R70hm 10W)resistor after push power sw off

FUNCTIONAL BLOCK DIAGRAM

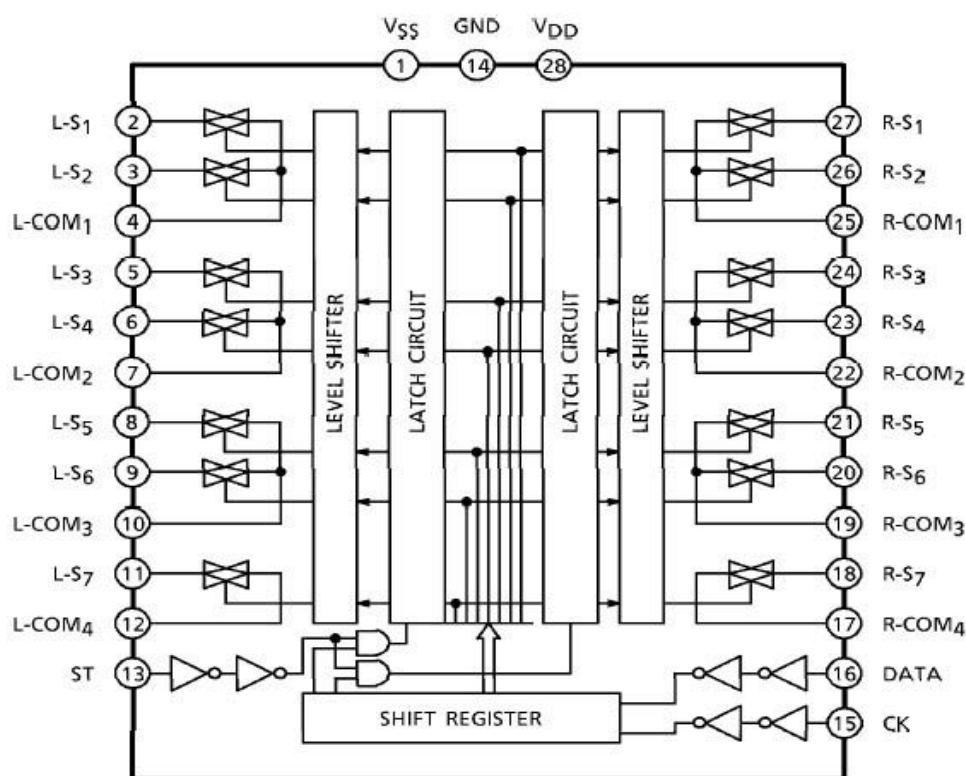

PIN FUNCTION DESCRIPTION

Pin	Name	Input Function
CLK	<i>System Clock</i>	Active on the positive going edge to sample all inputs.
$\overline{\text{CS}}$	<i>Chip Select</i>	Disables or enables device operation by masking or enabling all inputs except CLK, CKE and L(U)DQM
CKE	<i>Clock Enable</i>	Masks system clock to freeze operation from the next clock cycle. CKE should be enabled at least one cycle prior to new command. Disable input buffers for power down in standby.
A0 ~ A10/AP	<i>Address</i>	Row / column addresses are multiplexed on the same pins. Row address : RA0 ~ RA10, column address : CA0 ~ CA7
BA	<i>Bank Select Address</i>	Selects bank to be activated during row address latch time. Selects bank for read/write during column address latch time.
$\overline{\text{RAS}}$	<i>Row Address Strobe</i>	Latches row addresses on the positive going edge of the CLK with $\overline{\text{RAS}}$ low. Enables row access & precharge.
$\overline{\text{CAS}}$	<i>Column Address Strobe</i>	Latches column addresses on the positive going edge of the CLK with $\overline{\text{CAS}}$ low. Enables column access.
$\overline{\text{WE}}$	<i>Write Enable</i>	Enables write operation and row precharge. Latches data in starting from CAS, WE active.
L(U)DQM	<i>Data Input/Output Mask</i>	Makes data output Hi-Z, tSHZ after the clock and masks the output. Blocks data input when L(U)DQM active.
DQ0 ~ 15	<i>Data Input/Output</i>	Data inputs/outputs are multiplexed on the same pins.
VDD/VSS	<i>Power Supply/Ground</i>	Power and ground for the input buffers and the core logic.
VDDQ/VSSQ	<i>Data Output Power/Ground</i>	Isolated power supply and ground for the output buffers to provide improved noise immunity.
N.C/RFU	<i>No Connection/ Reserved for Future Use</i>	This pin is recommended to be left No Connection on the device.
