### TECH TIPS

Troubleshooting tips and solutions to common service problems

TIP# HKTT2004-03

## Isolating audio problems in an AVR receiver Using 6/8 Direct In

The following charts are used to help the tech quickly isolate audio problems in an AVR receiver. Use the following procedures to help find what is working, then to quickly locate the problem area.

Models	covered:
AVR210	AVR310
AVR220	AVR320
AVR520	AVR225
AVR125	AVR525
AVR130	AVR230
AVR330	AVR430
AVR630	

#### **Equipment needed:**

- √ 1 set of (RCA) Y adaptors.
- ✓ Function/signal generator.
- ✓ Oscilloscope.

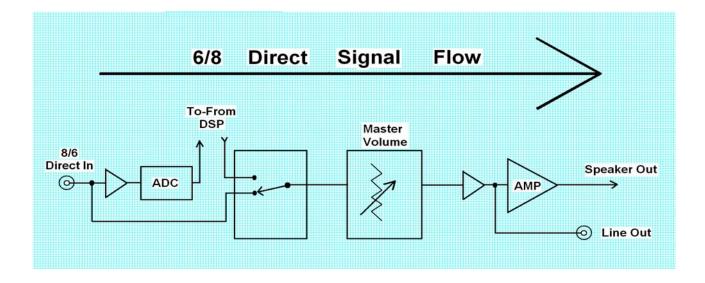

#### **Procedure:**

- Do a factory reset of the receiver. (This will eliminate any common micro processor problems.) Reset List can be found near the last page or check the service website; www.harmanservice.com for the latest info.
- 2) Print the block diagram from the service manual.
- 3) With no inputs or speakers attached to the AVR turn on the receiver and turn the volume all the way down.
- 4) Turn unit off.
- 5) Hook up an oscillator to the 6/8 Direct in jacks using the Y adaptors. Adjust the oscillator to about 0db (.775Volts RMS).
- 6) Hook up an oscilloscope to monitor the line out jacks. Or, if there are no line out (preamp out) jacks monitor the input to the power amps or the speaker outs. (AVR125, 225, 130 do not have preamp out jacks)
- 7) Turn the AVR on. Select 6 or 8 direct in, depending on the receiver.
- 8) Slowly turn the volume control up until you can easily measure the voltage at the line out jacks. ( -40 to -25db )

### Isolating audio problems in an AVR receiver Using 6/8 Direct In

- 9) At this point you will be able to check and assure all output levels are the same.
- 10) IF THE OUTPUT LEVELS ARE NOT THE SAME <u>STOP!</u> Go no further. At this point you will need to use the charts to see where you are losing your signal. The chart shows the analog signal flow from the input jacks to the output jacks.
- 11) If the output levels are the same check the power out stage at the speaker out jacks.
- 12) If you find the levels at the speaker out jacks are OK, your problem will be in the DSP part of the receiver.

Congratulations! You have now eliminated 90% of the electronics in the AVR and confirmed that the problem is in the DSP section.

### Quick Guide to h/k and JBL Microprocessor resets

In the rare case where the unit's operation or the displays seem abnormal, the cause may involve the erratic operation of the system's memory or microprocessor.

**NOTE**: Resetting the processor will erase any configuration settings you or the customer have made for the product, e.g. speakers, output levels, surround modes, digital input assignments as well as the tuner presets. After a reset the unit will be returned to the factory presets, and any special settings for these items must be reentered.

	harman/kardon	
Model	Instructions	Comment
AVR5	To reset the system, first turn the AVR5 off by pressing the Main Power Switch and then releasing it so that it extends out beyond the front panel and the word "OFF" is visible in red lettering at the top of the switch. Next, press and hold the T•Mon and CD Input Selector buttons on the front panel ONLY. While holding these buttons in, press the Main Power Switch in until it latches so that the button is flush with the front panel. The Information Display will briefly show the word RESET, and then return to normal operation.	
AVR35	To clear the AVR35's entire system memory, first turn the unit off by pressing and releasing the <b>Master Power Switch</b> so that it pops out from its normal recessed position. Next, press and hold the <b>Sleep</b> and the <b>Dolby Pro Logic</b> buttons while pushing the <b>Master Power Switch</b> in to turn the unit back on.	
AVR45	To correct this problem, first unplug the unit from the AC wall outlet and wait at least three minutes. After the pause, reconnect the AC power cord and check the unit's operation. If the system still malfunctions, a system reset may clear the problem. To clear the AVR45's entire system memory, first turn the unit off by pressing and releasing the <b>Master Power Switch</b> so that it pops out from its normal recessed position. Next, press and hold the <b>AM/FM</b> and the <b>Dolby Pro Logic</b> buttons while pushing the <b>Master Power Switch</b> in to turn the unit back on.	
AVR65	To correct this problem, first unplug the unit from the AC wall outlet and wait at least three minutes. After the pause, reconnect the AC power cord and check the unit's operation. If the system still malfunctions, a system reset may clear the problem. To clear the AVR65's entire system memory, first turn the unit off by pressing and releasing the <b>Master Power Switch</b> so that it pops out from its normal recessed position. Next, press and hold the <b>AM/FM</b> and the <b>Dolby Pro Logic</b> buttons while pushing the <b>Master Power Switch</b> in to turn the unit back on.	
AVR70/70II	To correct this problem, first unplug the unit from the AC wall outlet and wait at least three minutes. After the pause, reconnect the AC power cord and check the unit's operation. If the system still malfunctions, a system reset may clear the problem. To clear the system's memory, press and hold the <b>MEMO</b> and <b>CLEAR</b> buttons at the same time for a few seconds.	
AVR80/80II	To correct this problem, first unplug the unit from the AC wall outlet and wait at least three minutes. After the pause, reconnect the AC power cord and check the unit's operation. If the system still malfunctions, a system reset may clear the problem. To clear the system's memory, press and hold the <b>MEMO</b> and <b>CLEAR</b> buttons at the same time for a few seconds.	
AVR85	To correct this problem, first unplug the unit from the AC wall outlet and wait at least three minutes. After the pause, reconnect the AC power cord and check the unit's operation. If the system still malfunctions, a system reset may clear the problem. To clear the entire system memory of the unit, press and hold the <b>MEMO</b> and <b>CLEAR</b> buttons until <b>CLEAR MEMO</b> appears in the front panel display. Release the buttons and note that the unit will turn off and then on.	

	To correct this problem, first unplug the unit from the AC wall outlet and	
	wait at least three minutes. After the pause, reconnect the AC power	
	cord and check the unit's operation. If the system still malfunctions, a	
A\/D400	system reset may clear the problem. To clear the AVR 100's entire	
AVR100	system, first turn the unit off by pressing and releasing the Main Power	
	<b>Switch</b> so that it pops out from its normal recessed position. Next, press	
	and hold the CD and Vid 2 buttons while pushing in the Main Power	
	Switch to turn the unit back on.	
	To correct this problem, first unplug the unit from the AC wall outlet and	
	wait at least three minutes. After the pause, reconnect the AC power

HK3470	To correct this problem, first unplug the unit from the AC wall outlet and wait at least three minutes. After the pause, reconnect the AC power cord and check the unit's operation. If the system still malfunctions, first turn the HK3470 off by pressing the <b>Main Power Switch</b> and then releasing it so that it extends out beyond the front panel and the word "OFF" is visible in red lettering at the top of the switch. Next, press and hold the <b>T-Mon</b> and <b>CD Input Selector</b> buttons on the front panel ONLY. While holding these buttons in, press the <b>Main Power Switch</b> in until it latches so that the button is flush with the front panel. The Information Display will briefly show the word <b>RESET</b> , and then return to normal operation.	
HK3375	To correct this problem, first unplug the unit from the AC wall outlet and wait at least three minutes. After the pause, reconnect the AC power cord and check the unit's operation. If the system still malfunctions, first turn the HK3375 off by pressing the Main Power Switch and then releasing it so that it extends out beyond the front panel and the word "OFF" is visible in red lettering at the top of the switch. Next, press and hold the T•Mon and CD Input Selector buttons on the front panel ONLY. While holding these buttons in, press the Main Power Switch in until it latches so that the button is flush with the front panel. The Information Display will briefly show the word RESET, and then return to normal operation.	
HK3475	To correct this problem, first unplug the unit from the AC wall outlet and wait at least three minutes. After the pause, reconnect the AC power cord and check the unit's operation. If the system still malfunctions, first turn the HK3270 off by pressing the Main Power Switch and then releasing it so that it extends out beyond the front panel and the word "OFF" is visible in red lettering at the top of the switch. Next, press and hold the T•Mon and CD Input Selector buttons on the front panel ONLY. While holding these buttons in, press the Main Power Switch in until it latches so that the button is flush with the front panel. The Information Display will briefly show the word RESET, and then return to normal operation.	
HK3380	To correct this problem, first unplug the unit from the AC wall outlet and wait at least thirty minutes. After the pause, reconnect the AC power cord and check the unit's operation. If the system still malfunctions, a system reset may clear the problem. To reset the system, first turn the HK 3380 off by pressing the <b>System Power Control</b> . Next, press and hold the front-panel <b>Mute</b> Button for at least 4 seconds. The Main Information Display will briefly show the word <b>RESET</b> , and then return to normal operation.	
HK3480	To correct this problem, first unplug the unit from the AC wall outlet and wait at least thirty minutes. After the pause, reconnect the AC power cord and check the unit's operation. If the system still malfunctions, a system reset may clear the problem. To reset the system, first turn the HK 3480 off by pressing the <b>System Power Control</b> . Next, press and hold the front-panel <b>Mute</b> Button for at least 4 seconds. The Main Information Display will briefly show the word <b>RESET</b> , and then return to normal operation.	
PA4000	To return the Turn-On Volume Level limit for any channel pair to the factory preset of –12dB, follow these steps individually for each channel pair to be adjusted: Place the <b>Power Control Mode Switch</b> to the far right, in the "ON/KEYPAD" position. Move the <b>Power Control Mode Switch</b> to the middle "MUSIC SENSE" position. Leave the <b>Power Control Mode Switch</b> in the MUSIC SENSE position for at least 4 seconds, to no more than 10 seconds. Return the <b>Power Control Mode Switch</b> to the "ON/KEYPAD" position.	Resets Volume Level limit Only; not true system reset

Signature 2.0	The first step to correct this problem is to turn the 2.0 off using the Master Power Switch and unplug the unit from the AC wall outlet and wait at least three minutes. After the pause, reconnect the AC power cord and turn the unit on again. If the system still malfunctions, a system reset may clear the problem. To reset the system, press the Menu button to view the Setup Menu. Press the Menu Control button until Advanced Setup is highlighted. Press the Menu Control button to go to the next screen. At the Advanced Settings menu, press the Menu Control button twice until SYSTEM RESET is highlighted. Press the Menu Control button again. This will bring up the System Reset Menu. If you wish to exit at this point, press the Menu button. To proceed with the reset, press the Menu Control button to move the highlighted area to the Yes line, and then press the Menu Control button. The next screen instructs you to proceed by pressing and HOLDING the Store button until the reset is complete. Follow that instruction by holding the Store button until the Reset Completed message appears briefly on screen and the front panel Information Display. This is your indication that the reset has been accomplished, and you may release the Store button. The system will automatically return to the Advanced Settings menu. After a reset the system is returned to the original factory default settings, the microprocessor system is re-initialized. Press the Menu button twice to return to normal operation.
