SERVICING PRECAUTIONS

NOTES REGARDING HANDLING OF THE PICK-UP

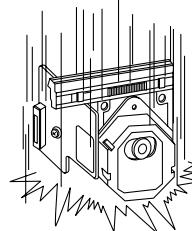

1. Notes for transport and storage

- 1) The pick-up should always be left in its conductive bag until immediately prior to use.
- 2) The pick-up should never be subjected to external pressure or impact.

Storage in conductive bag

Drop impact

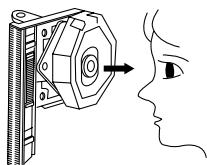

2. Repair notes

- 1) The pick-up incorporates a strong magnet, and so should never be brought close to magnetic materials.
- 2) The pick-up should always be handled correctly and carefully, taking care to avoid external pressure and impact. If it is subjected to strong pressure or impact, the result may be an operational malfunction and/or damage to the printed-circuit board.
- 3) Each and every pick-up is already individually adjusted to a high degree of precision, and for that reason the adjustment point and installation screws should absolutely never be touched.
- 4) Laser beams may damage the eyes!

Absolutely never permit laser beams to enter the eyes!

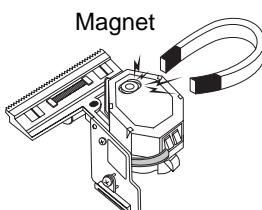

Also NEVER switch ON the power to the laser output part (lens, etc.) of the pick-up if it is damaged.

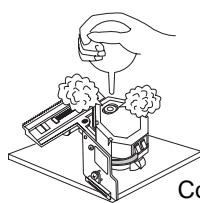

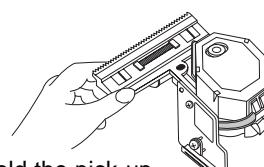

NEVER look directly at the laser beam, and don't let contact fingers or other exposed skin.

5) Cleaning the lens surface

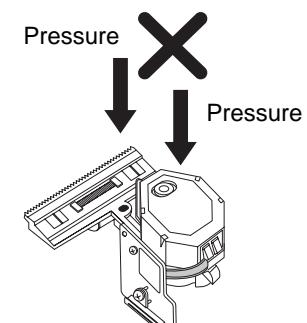

If there is dust on the lens surface, the dust should be cleaned away by using an air bush (such as used for camera lens). The lens is held by a delicate spring. When cleaning the lens surface, therefore, a cotton swab should be used, taking care not to distort this.

How to hold the pick-up

Cotton swab

6) Never attempt to disassemble the pick-up.

Spring by excess pressure. If the lens is extremely dirty, apply isopropyl alcohol to the cotton swab. (Do not use any other liquid cleaners, because they will damage the lens.) Take care not to use too much of this alcohol on the swab, and do not allow the alcohol to get inside the pick-up.

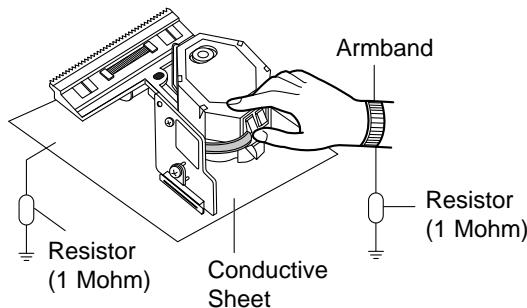

NOTES REGARDING COMPACT DISC PLAYER REPAIRS

1. Preparations

- 1) Compact disc players incorporate a great many ICs as well as the pick-up (laser diode). These components are sensitive to, and easily affected by, static electricity. If such static electricity is high voltage, components can be damaged, and for that reason components should be handled with care.
- 2) The pick-up is composed of many optical components and other high-precision components. Care must be taken, therefore, to avoid repair or storage where the temperature or humidity is high, where strong magnetism is present, or where there is excessive dust.

2. Notes for repair

- 1) Before replacing a component part, first disconnect the power supply lead wire from the unit
- 2) All equipment, measuring instruments and tools must be grounded.
- 3) The workbench should be covered with a conductive sheet and grounded.
When removing the laser pick-up from its conductive bag, do not place the pick-up on the bag. (This is because there is the possibility of damage by static electricity.)
- 4) To prevent AC leakage, the metal part of the soldering iron should be grounded.
- 5) Workers should be grounded by an armband ($1M\Omega$)
- 6) Care should be taken not to permit the laser pick-up to come in contact with clothing, in order to prevent static electricity changes in the clothing to escape from the armband.
- 7) The laser beam from the pick-up should NEVER be directly facing the eyes or bare skin.

ESD PRECAUTIONS

Electrostatically Sensitive Devices (ESD)

Some semiconductor (solid state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive Devices (ESD). Examples of typical ESD devices are integrated circuits and some field-effect transistors and semiconductor chip components. The following techniques should be used to help reduce the incidence of component damage caused by static electricity.

1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any electrostatic charge on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed for potential shock reasons prior to applying power to the unit under test.
2. After removing an electrical assembly equipped with ESD devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
3. Use only a grounded-tip soldering iron to solder or unsolder ESD devices.
4. Use only an anti-static solder removal device. Some solder removal devices not classified as "anti-static" can generate electrical charges sufficient to damage ESD devices.
5. Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ESD devices.
6. Do not remove a replacement ESD device from its protective package until immediately before you are ready to install it. (Most replacement ESD devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive materials).
7. Immediately before removing the protective material from the leads of a replacement ESD device, touch the protective material to the chassis or circuit assembly into which the device will be installed.

CAUTION : BE SURE NO POWER IS APPLIED TO THE CHASSIS OR CIRCUIT, AND OBSERVE ALL OTHER SAFETY PRECAUTIONS.

8. Minimize bodily motions when handling unpackaged replacement ESD devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity sufficient to damage an ESD device).

CDR20 SPECIFICATIONS

Playback Sampling Frequency	44.1 kHz
D/A Conversion	96kHz, Multi-Bit Delta-Sigma Conversion
Oversampling	128 Times

Playback Specifications

Frequency Response	2Hz – 20,050Hz
Playback S/N	105dB
Playback Dynamic Range	105dB
Playback THD	0.005% / -88dB
Analog Audio Output	2V RMS, ± 2dB
Digital-Coaxial Output	0.5 Vpp/75Ω
Headphone Output	1V RMS/32ΩLoad

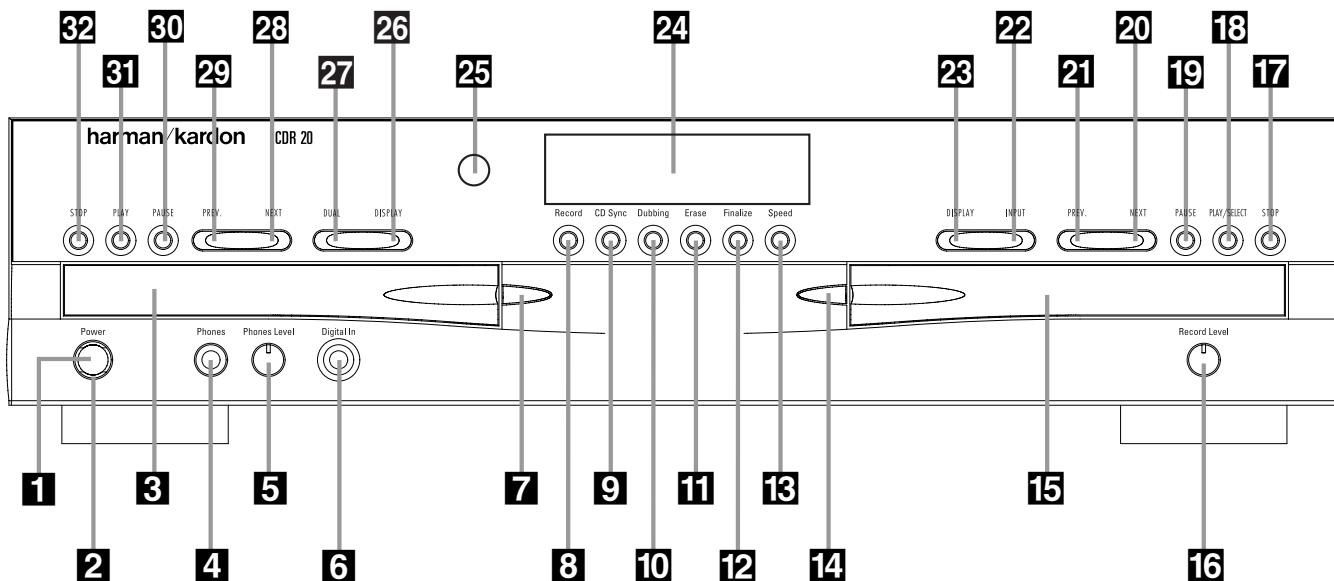

Record Specifications

Digital Dubbing Mode(X1/X2/X4)	Equal to source
Digital Input Sample Rate	32kHz ~ 96kHz
Signal/Noise Ratio - Analog	91dB
Signal/Noise Ratio - External(Source)	source-10dB
Dynamic Range	91dB
THD	0.005%/-85dB
Analog Input Sensitivity	330 mV RMS 47kΩ= 0dB
Digital Inputs (Direct Recording)	44.1kHz, ± 100 ppm/min.

General

Power Requirement	100~240V AC, 50/60Hz
Power Consumption	28 Watts
Dimensions	
Height	4.4"/112mm
Width	17.3"/440mm
Depth	14.2"/363mm
Weight	10.5 lb/4.7 kg

Front-Panel Controls

- 1** Power Switch
- 2** Status-Mode Indicator
- 3** Play Deck
- 4** Headphone Jack
- 5** Headphone Level Control
- 6** Digital Input
- 7** Play-Deck Open
- 8** Record Button
- 9** CD Sync
- 10** Dubbing
- 11** Erase

- 12** Finalize
- 13** Speed
- 14** Record-Deck Open
- 15** Record Deck
- 16** Analog-Record Level Control
- 17** Record-Deck Stop
- 18** Record-Deck Play>Select
- 19** Record-Deck Pause
- 20** Record-Deck Next
- 21** Record-Deck Previous
- 22** Input Select

- 23** Record-Deck Display Select
- 24** Information Display
- 25** Remote Sensor
- 26** Play-Deck Display Select
- 27** Dual-Play Selector
- 28** Play-Deck Next
- 29** Play-Deck Previous
- 30** Play-Deck Pause
- 31** Play-Deck Play
- 32** Play-Deck Stop

1 Power Switch: Press this switch to apply power to the CDR 20. When the unit is first turned on, the **Status-Mode Indicator** **2** surrounding the switch will turn green. Once the unit has been turned on with this switch, it may be operated from either the front panel or remote control. Press the switch again to turn the unit completely off.

2 Status-Mode Indicator: When the CDR 20 is in the ON mode, this indicator will glow green. When the unit has been placed in the Standby mode by pressing the **Power-Off** button **32** on the remote, the indicator will glow amber, indicating that the unit is still connected to the AC main supply and is ready to be turned on from the remote control.

3 Play Deck: This disc deck is used to play back conventional CD discs and CD-R or CD-RW discs that have been finalized.

4 Headphone Jack: Connect standard headphones to this jack for private listening.

5 Headphone Level Control: Turn this control to adjust the volume level to the headphones. Note that the use of this control will not change the analog output levels at the rear-panel audio outputs **12**.

6 Digital Input: This coaxial digital input may be used to connect a portable digital audio player to the CDR 20 for digital recording. When an active digital signal is connected to both the front- and rear-panel coaxial inputs, the source connected to the front-panel input will be selected for recording.

7 Play-Deck Open: Press this button to open the Play Deck **3**.

8 Record Button: Press this button to begin the recording process. See pages 20-22 for more information on CD recording.

9 CD Sync: Press this button once to begin an automated recording of a single track from an external CD player when a digital connection is used. Press it twice to begin automated recording of an entire disc. See page 21 for more information on CD Sync recording.

10 Dubbing: Press this button to begin the process of making a complete copy of the disc in the Play Deck **3** to a CD-R or CD-RW disc in the Record Deck **15**. See page 20 for more information on dubbing.

11 Erase: Press this button to erase one or more tracks or the entire contents of an unfinalized CD-RW disc. When a CD-RW disc has already been finalized you may erase the entire disc or you may "unfinalize" the disc by erasing the **TOC** data. See page 22 for more information on erasing CD-RW discs.

Front-Panel Controls

12 Finalize: Press this button when a recording is complete to initiate the finalization process. The Play>Select Button **18|10** must be pressed within three seconds to activate finalization. Until this button is pressed and the finalization process is complete, CD-R discs may not be played on conventional CD machines. See page 22 for more information on finalization.

13 Speed: Press this button to select the recording speed for internal dubs. See page 20 for more information on selecting the proper speed.

14 Record-Deck Open: Press this button to open the Record Deck **15**.

15 Record Deck: This Disc Deck is used to record or play back CD, CD-R and CD-RW discs.

16 Analog-Record Level Control: The control is used to adjust the input level when making recordings from analog sources such as cassettes, or when CDs are recorded in an analog mode. See page 22 for more information on record levels.

17 Record-Deck Stop: Press this button to stop the CD in the Record Deck.

18 Record-Deck Play>Select: This button has two functions. It may be pressed when a standard CD is in the Record Deck to put the machine in play, or it may be used to enter a selection or start certain record functions.

19 Record-Deck Pause: When the Record Deck is in the Play mode, pressing this button will pause the disc. If the disc has previously been paused, pressing this button will restart the playback.

20 Record-Deck Next: When a disc is playing in the Record Deck **15**, press and hold this button to play the disc in a fast-forward mode to quickly locate a desired passage. At any time, tapping the button and quickly releasing it will move to the next track on a disc in play.

21 Record Deck Previous: This button has two functions. When a disc is playing in the Record Deck **15**, press and hold this button to play the disc in a fast reverse mode to quickly locate a desired passage. At any time, tapping the button and quickly releasing it will move to the beginning of the current track, and the next press will move to the previous track. When a disc is stopped, each press will move back one for programming or play when the disc is stopped. Once a track is entered, it may be played by simply pressing the Play button **18|10**.

22 Input Select: Press this button to select the input source (analog or digital coax) for recording. See page 22 for more information on input selection.

23 Record-Deck Display Select: Press this button to cycle through the time display options for the Record Deck. See page 17 for more information on the time display.

24 Information Display: The indicators in the Information Display provide status reports on the operation of the CDR 20. See page 7 for complete explanations of each indicator.

25 Remote Sensor: The IR sensor that receives the commands from the remote control is behind this area. Do not cover or obscure this part of the front panel to avoid any malfunction with the remote.

26 Play-Deck Display Select: Press this button to cycle through the time display options for the Play Deck. See page 17 for more information on the time display.

27 Dual-Play Selector: Press this button to enable both CD decks to play at the same time and function as separate, independent CD units. In this mode it is also possible to record from an external source while the Play Deck is functioning as a standard CD player. See page 17 for more information on dual-play capability.

28 Play-Deck Next: When a disc is playing in the Play Deck **3**, press and hold this button to play the disc in a fast-forward mode to quickly locate a desired passage. At any time, tapping the button and quickly releasing it will move to the next track on a disc in play.

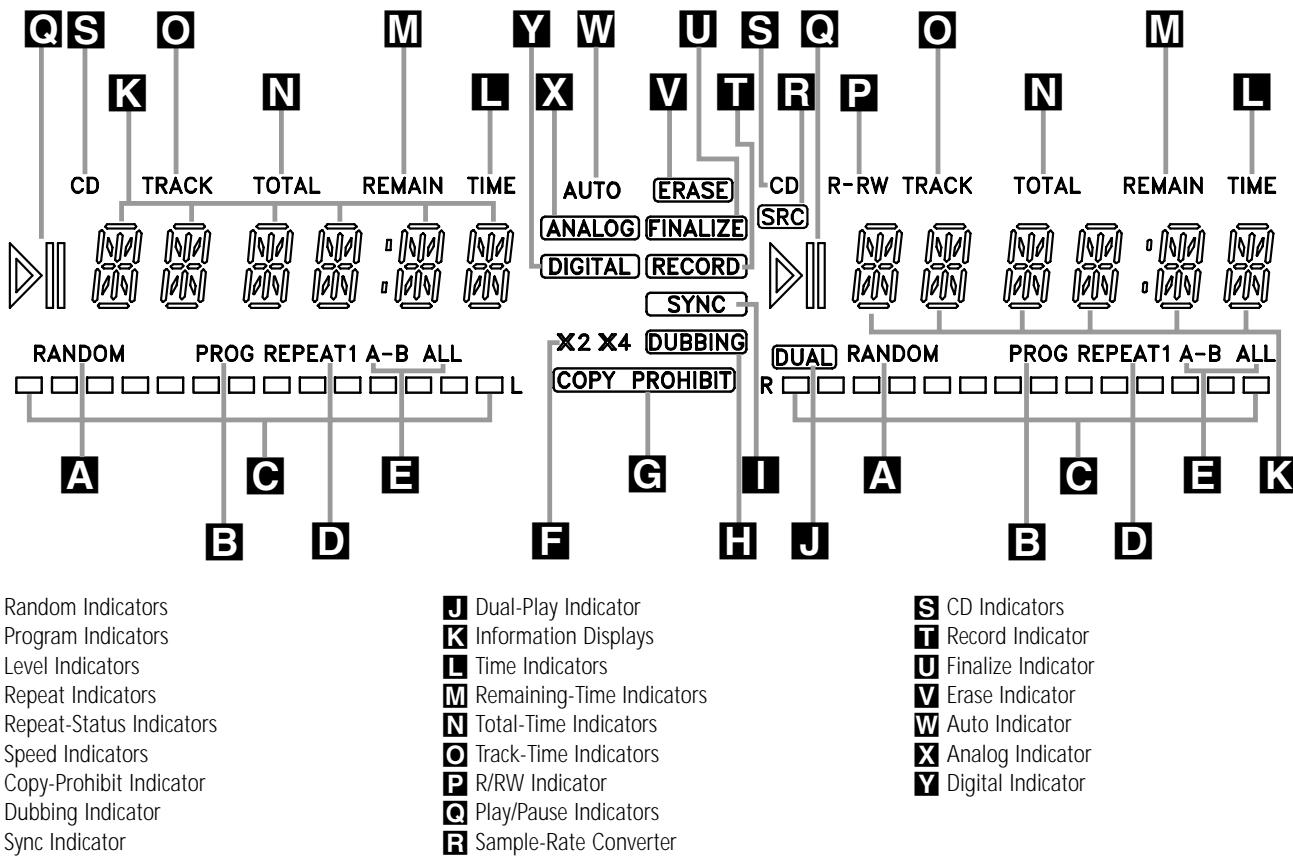

29 Play-Deck Previous: This button has two functions. When a disc is playing in the Play Deck **3**, press and hold this button to play the disc in a fast-reverse mode to quickly locate a desired passage. At any time, tapping the button and quickly releasing it will move to the beginning of the current track, and the next press will move to the previous track. When a disc is stopped, each press will move back one track for programming or play when the disc is stopped. Once a track is entered, it may be played by simply pressing the Play button **3|10**.

30 Play-Deck Pause: When the Play Deck is running, pressing this button will pause the disc. If the disc has previously been paused, pressing this button will restart the playback.

31 Play-Deck Play: Press this button to begin playback of a CD in the Play Deck or the dubbing process.

32 Play-Deck Stop: Press this button to stop the CD in the Play Deck.

Front-Panel Information Display

Important Note: Since the CDR 20 is a dual-deck player/recorder, there are two separate sets of indicators for the Random, Program, Repeat, Repeat Status, Time, Total Time and Track Time. In addition, there is a separate Information Display, Play/Pause Indicator and CD Indicator for each deck. As the function of these indicators is identical for both decks, they are described in this manual with a common letter. When the CDR 20 is playing or recording a disc, any indicators that light on the left side of the display describe the status of the Play Deck, while those that light on the right side of the display describe the status of the Record Deck. Depending on the activity of the unit and the settings you select, different indicators may light on the two sides at the same time.

A Random Indicators: These indicators light when random playback has been programmed for one of the CD decks. See page 16 for more information on random play.

B Program Indicators: These indicators light when one of the CD decks is being programmed for playback options. See page 18 for more information on programmed play.

C Level Indicators: These LEDs display the input level during an analog recording, and the output level during playback. See page 22 for more information on record levels.

D Repeat Indicators: These indicators light when a repeat function is being used. See page 18 for more information on repeat play.

E Repeat-Status Indicators: These indicators display the type of repeat function being used. See page 18 for more information on repeat status.

F Speed Indicators: These indicators show which record speed has been selected for dub recordings. See page 20 for more information on record-speed selection.

G Copy-Prohibit Indicator: This indicator lights when a recording is not possible due to the intervention of the Serial Copy Management System (SCMS). See page 20 for more information on SCMS.

H Dubbing Indicator: This indicator lights when a dub is in progress between the two CD

Decks. See page 20 for more information on CD dubbing.

I Sync Indicator: This indicator lights when the unit has been programmed for a CD Sync recording. See page 21 for more information on CD Sync recordings.

J Dual-Play Indicator: This indicator lights when the unit is playing in the Dual mode, which allows both CD decks to act as playback decks at the same time. See page 17 for more information on the dual-play mode.

K Information Displays: These displays serve two functions, showing the time displays for discs playing, and displaying messages about discs or recordings.

Front-Panel Information Display

L Time Indicators: These indicators light in conjunction with one of the time indicators **MNO** to show which of the time status modes is active.

M Remaining-Time Indicators: These indicators light when the Information Display **K** shows the time remaining on a disc.

N Total Time: These indicators light when the Information Display **K** shows the total time of all tracks on a disc.

O Track Time: These indicators light when the Information Display **K** shows the running time of the individual track being played.

P R/RW Indicator: This indicator shows which type of recordable disc is present in the Record Deck **15**. When a CD-R disc is present, only the R is lit. The RW lights when an erasable CD-RW disc is in use.

Q Play/Pause Indicators: These indicators show the status of the individual CD decks. The **▶** lights when the CD is playing, and the **▶||** lights when the unit is in a Pause mode.

R Sample-Rate Converter: This indicator lights when the Sample-Rate Converter is in use to change the digital sample rate when the incoming signal is not the standard 44.1kHz used by standard CDs. This is an automatic function and does not require any user intervention.

S CD Indicators: These indicators light when a standard CD is playing in either deck **3** or **15**.

T Record Indicator: This indicator lights when the unit is making a recording and flashes during the preparations for recording.

U Finalize Indicator: This indicator lights when the unit is in the Finalization process, which is required before a CD-R disc may be played on a standard CD machine. See page 22 for more information on Finalization.

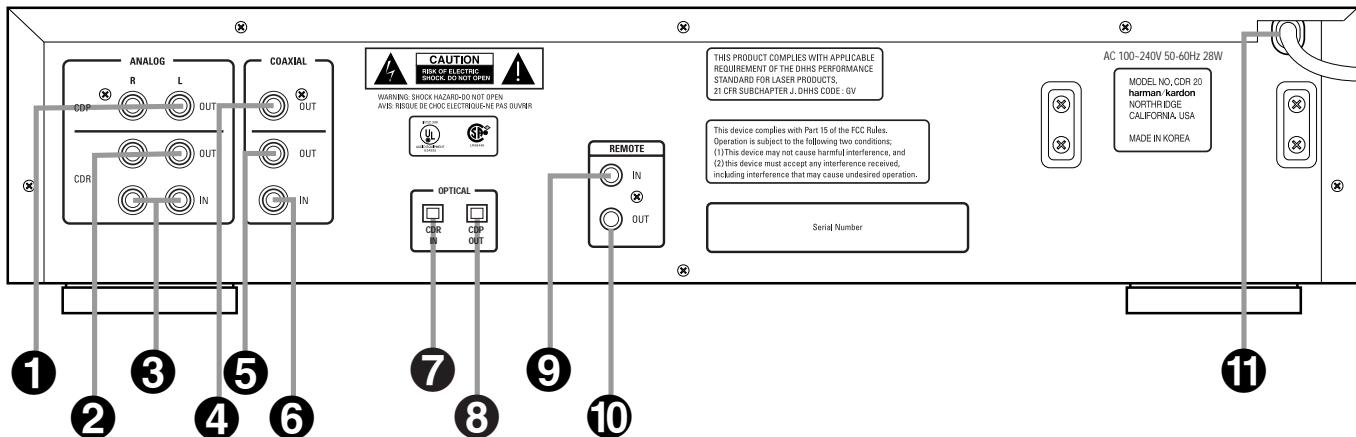

V Erase Indicator: This indicator lights when a CD-RW disc is being erased. Note that only CD-RW discs may be erased; it is not possible to erase a CD-R disc. See page 22 for more information on erasing discs.

W Auto Indicator: This indicator lights when the automatic method of incrementing tracks is selected for a recording session. See page 21 for more information on track increments.

X Analog Indicator: This indicator lights when an analog source is being recorded. See page 21 for more information on source selection.

Y Digital Indicator: This indicator lights when a digital source is being recorded. See page 21 for more information on source selection.

Rear-Panel Connections

① Play Deck (CDP) Analog Output: These jacks carry the analog audio output signal from the **Play Deck** ③. Connect them to the CD input jacks on a receiver, preamp or processor.

② Record Deck (CDR) Analog Output: These jacks carry the output signal from the **Record Deck** ⑮. Connect them to the Tape Play/In input jacks on a receiver, preamp or processor.

③ Record Deck (CDR) Analog Input: These jacks accept the analog signals that are used for CD recordings. Connect them to the Tape Rec/Play outputs on a receiver, preamp or processor.

④ Play Deck (CDP) Coaxial-Digital Output: This jack carries the digital-audio output signal from the **Play Deck** ③. Connect it to a coaxial-digital input on a receiver, processor or digital decoder.

⑤ Record Deck (CDR) Coaxial-Digital Output: This jack carries the digital audio output signal from the **Record Deck** ⑮. Connect it to a coaxial-digital input on a receiver, processor or digital decoder.

⑥ Record Deck (CDR) Coaxial-Digital Input: This jack accepts the digital-audio input signal from a compatible digital audio product and should be connected directly to a digital player or to a coaxial-digital output on a CD or DVD player or an A/V receiver or processor.

⑤ Record Deck (CDR) Coaxial-Digital Output

⑥ Record Deck (CDR) Coaxial-Digital Input

⑦ Record Deck (CDR) Optical-Digital Input

⑧ Play Deck (CDP) Optical-Digital Output

⑨ Remote IR Input

⑩ Remote IR Output

⑪ AC Power Cord

IMPORTANT NOTE: The coaxial digital inputs should only be connected to **digital** input or output jacks. Even though they use the same RCA type connector as standard analog audio connections, DO NOT connect them to conventional analog input or output jacks.

⑦ Record Deck (CDR) Optical-Digital Input: This jack accepts the digital-audio input signal from a compatible digital audio product, and should be connected to the optical-digital output on a CD or DVD player or an A/V receiver or processor.

⑧ Play Deck (CDP) Optical-Digital Output: This jack carries the optical digital output signal from the **Play Deck** ③. Connect it to an optical digital input on a receiver, processor or digital recorder. This will typically be connected to the "CD" input.

⑨ Remote IR Input: Connect the output of a remote infrared sensor or the remote control output of another compatible Harman Kardon product to this jack. This will enable the remote control to operate even when the front-panel **Remote Sensor** ⑯ is blocked. This jack may also be used with compatible IR remote control based automation systems.

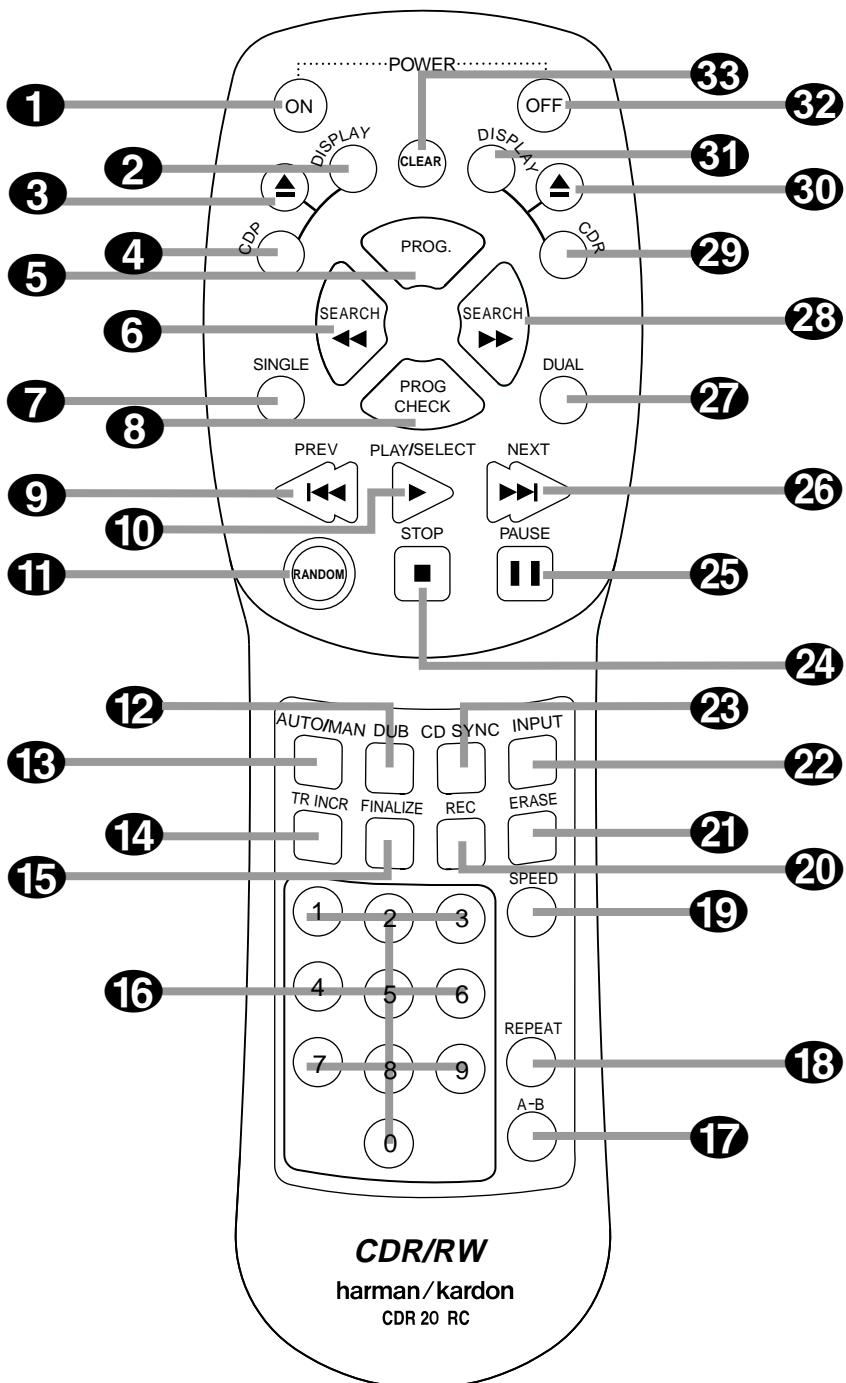

⑩ Remote IR Output: Connect this jack to the IR input jack of another compatible Harman Kardon remote controlled product to have the built-in remote sensor ⑯ on the

CDR 20 provide IR signals to other compatible products.

⑪ AC Power Cord: Connect this plug to an AC outlet. If the outlet is switch controlled, make certain that it is in the **ON** position.

Remote Control Functions

- 1 Power-On Button
- 2 Play Deck (CDP) Display Control
- 3 Play Deck (CDP) Open
- 4 Play Deck (CDP) Select
- 5 Program
- 6 Reverse Search
- 7 Single
- 8 Program Check
- 9 Previous-Track Skip
- 10 Play>Select
- 11 Random Play
- 12 Dub
- 13 Automatic/Manual Track Increment Selector
- 14 Track Increment
- 15 Finalize
- 16 Numeric Keys
- 17 A-B Repeat
- 18 Repeat
- 19 Speed Select
- 20 Record Button
- 21 Erase Button
- 22 Input Select
- 23 CD Sync
- 24 Stop
- 25 Pause
- 26 Next Track/Skip
- 27 Dual-Deck Playback
- 28 Forward Search
- 29 Record Deck (CDR) Select
- 30 Record Deck (CDR) Open
- 31 Record Deck (CDR) Display Control
- 32 Power Off
- 33 Clear

IMPORTANT NOTE: Some of the remote's functions, including Play, Pause, Stop, Search, Next and Previous Track, are shared between the two decks. Always remember to press the CDP Select button ④ to use the remote to control the Play Deck, or press the CDR Select button ② to control the Record Deck. When you press one of these buttons, an indication of CDP or CDR will appear in the appropriate Information Display K.

Remote Control Functions

① Power-On Button: Press this button to turn the CDR 20 on. Note that in order for this control to function, the **Front-Panel Power Switch** **1** must first be pressed so that the unit is in the Standby mode.

② Play Deck (CDP) Display Control: Press this button to cycle through the various time display options for the disc in the **Play Deck** **3**. See page 17 for more information on time-display options.

③ Play Deck (CDP) Open: Press this button to open the **Play Deck** **3**.

④ Play Deck (CDP) Select: Press this button to control or program the functions of the disc in the **Play Deck** **3**.

⑤ Program: Press this button to begin the programming sequence for one of the CD decks. See page 18 for more information on programming the CDR 20.

⑥ Reverse Search: Press this button to play the selected disc in reverse to locate a desired passage.

⑦ Single: When this button is pressed, the CDR 20 will function as a two-disc CD player/changer. In the Single mode, the audio output will be routed to all output jacks **1** **2** **4** **5** regardless of which CD deck is actually playing. See page 17 for more information on the Single-Play mode.

⑧ Program Check: Press this button to check or edit a programmed playback sequence. See page 18 for more information on programmed playback.

⑨ Previous-Track Skip: Press this button to skip backwards to the beginning of the track currently being played. Press it a second time to move back to the beginning of each previous track.

⑩ Play>Select: This button has two functions. It will most often be used as a standard play button, but when setting up certain record functions, it is also used as an Enter or Select button.

⑪ Random Play: When the CD deck is stopped, press this button to begin random play of all tracks on a disc.

⑫ Dub: Press this button to begin a dub. See page 20 for more information on dubbing.

⑬ Automatic/Manual Track Increment Selector: Press this button to select between automatic and manual track increments during a recording session. See page 21 for more information on track increments.

⑭ Track Increment: When the Manual mode for track increments is selected during recording, press this button to increase the track number. **NOTE:** This function does not operate during CD Sync or dub recording.

⑮ Finalize: Press this button when a recording is complete to initiate the finalization process. The **Play>Select** button **18** **10** must be pressed within three seconds to activate finalization. Until this button is pressed and the finalization process is complete, CD-R or CD-RW discs may not be played on conventional CD machines. See page 22 for more information on Finalization.

⑯ Numeric Keys: Press these buttons to access a specific track for playback or during the programming process. See page 18 for more information on programmed playback.

⑰ A-B Repeat: Press this button to specify a segment of a disc for repeat play. See page 18 for more information on repeat play.

⑱ Repeat: Press this button once to repeat the current track. To repeat an entire disc, press the button twice.

⑲ Speed Select: Press this button to select the recording speed for internal dubs. See page 20 for more information on selecting the proper speed.

⑳ Record Button: Press this button to begin a manual recording.

㉑ Erase Button: Press this button to initiate the erasure of a track or of an entire CD-RW disc or to Unfinalize a disc. Note that erasure is only possible on CD-RW discs. See page 22 for more information on erasing discs.

㉒ Input Select: Press this button to select the input source (analog or digital-coax) for recording. See page 21 for more information on input selection.

㉓ CD Sync: Press this button once to begin an automated recording of a single track from an external CD player when a digital connection is used. Press it twice to begin automated recording of an entire disc. See page 21 for more information on CD Sync recording.

㉔ Stop: Press this button to stop playback or recording.

㉕ Pause: Press this button to momentarily pause playback. Press it again to resume playback.

㉖ Next Track/Skip: Press this button to skip forward to the next track on a disc.

㉗ Dual Deck Playback: Press this button to enable both CD decks to play back at the same time and function as separate, independent CD units. In this mode it is also possible to record from an external source while the Play Deck is functioning as a standard CD player. See page 17 for more information on dual-play capability.

㉘ Forward Search: Press this button to play a disc in a fast-forward mode.

㉙ Record Deck (CDR) Select: Press this button to control or program the functions of the disc in the Record Deck **15**.

㉚ Record Deck (CDR) Open: Press this button to open the Record Deck **15**.

㉛ Record Deck (CDR) Display Control: Press this button to cycle through the various time-display options for the disc in the **Record Deck** **15**. See page 17 for more information on time-display options.

㉜ Power-Off: Press this button to place the unit in a Standby mode.

㉝ Clear: Press this button to clear an item in a program sequence. See page 18 for more information.

Installation and Connections

Important Note: To prevent possible damage to your speakers or other components in your audio system, we strongly recommend that ALL system components, including the CDR 20, be turned off and unplugged from their AC power source when any connections are made or a new component is installed.

Locating the CDR 20

Since the CD transports in the CDR 20 are precision instruments, they are subject to interference from vibration. To minimize the possibility of skipping during playback or recording, it is recommended that the unit be placed on a level, solid, vibration-free surface.

When installing the CDR 20 in a cabinet or tight space, always make certain that there is enough room in front of the unit for the disc drawers to open fully, and that there is enough space above the unit so that discs may easily be inserted in the disc drawers.

In addition to the safety considerations outlined on page 4, it is also recommended that the CDR 20 not be placed in a location that is subject to direct sunlight or extreme heat or cold, as these conditions may damage the discs used in the player, or the player itself. Note that audio amplifiers or high-power receivers, as well as certain other electronic products, may generate significant heat. For that reason, do not place the CDR 20 directly on top of an amplifier, receiver, or other heat source. Always allow at least one inch of free space on all sides of the CDR 20, as well as other electronic products, to allow for proper ventilation.

The unit should also be kept away from sources of water or damp conditions.

Connections to Your Audio System

When connecting the CDR 20, think of the process as if you were connecting a standard CD player and a tape or cassette recorder, with the addition of the digital connections.

Play-Deck Connections

The rear-panel connections labeled "CDP" refer to the outputs of the **Play Deck** **3**, which functions as a standard CD player. Connect the analog left/right CDP outputs **1** to the CD inputs on your receiver, preamp or surround processor. For best playback results, a digital connection is recommended, using the coaxial or optical **4**/**8** outputs. Connect them to the matching digital inputs of your receiver, preamp, processor or external digital decoder. Note that you may have to change a setting on the receiver or processor to link the digital input to the "CD" button or input selector. Consult the owner's manual on that device for details, as this configuration may vary from unit to unit.

Record-Deck Connections

The rear-panel connections labeled "CDR" refer to the inputs and outputs for the **Record Deck** **15**. Depending on the capabilities of your receiver, preamp or processor, you may find it convenient to connect the analog inputs and outputs to the jacks marked for a tape recorder. As the CDR 20's functions resemble those of a standard tape recorder, this might make it easier to select it as an input on your receiver or preamp. Connect the analog CDR-Out jacks **2** to the Play/In jacks of a Tape or Aux input on your receiver or preamp. Connect the CDR-In jacks **3** to the Tape Rec/Out jacks on your receiver or preamp.

To play the output of the Record Deck through the digital decoder in your receiver or an external processor, connect the **CDR Coax-Out** **5** jacks to the matching digital-input jacks on your receiver or processor. Note that you may have to change a setting on the receiver or processor to link the digital input to the "Tape" button or the specific input selector associated with the digital inputs. Consult the owner's manual on your receiver or processor for details, as this configuration may vary from unit to unit.

To make recordings from external digital sources, such as a CD, DVD or MD player, connect the **CDR Coax-In** jacks **6**/**6** or **CDR Optical In Jack** **7** on the CDR to the digital output jacks on your receiver or processor. If your receiver does not have digital-output jacks, you may connect the **CDR Coax In** jacks **6**/**6** or **CDR Optical In Jack** **7** on the CDR 20 directly to the digital outputs on your CD player or other digital device.

Connections to a portable digital CD or MD player may also be made by connecting the Coax Digital Output of the player to the Front-Panel Digital Input **6** on the CDR 20.

Note that when both the front and rear panel digital inputs are connected to external sources, the CDR 20 will give priority to the front-panel input **6**. If it is impractical to disconnect the front-panel input when you need to use the rear-panel jack, simply turn off the device connected to the front-panel input. This will stop the digital signal, and permit the rear-panel jack to be used.

IMPORTANT NOTES ON DIGITAL CONNECTIONS:

Although digital-coax connections use the same type of "RCA" phono jack as standard analog signals, please take special care to connect digital signals only to digital jacks. In many cases, the digital jacks may be identified by an orange-colored insert ring around the center of the jack. When making digital connections, be sure to use coax-interconnect cables, such as the one supplied with the CDR 20 or cables intended for video applications. Even though they have the correct type of RCA connector, do not use audio-interconnect cables that have twisted-pair construction, as they are not appropriate for digital signal use. If you have any questions about the type of cables to use with the CDR 20, consult your dealer.

Troubleshooting Guide and Error Messages

TROUBLESHOOTING GUIDE

SYMPTOM	POSSIBLE CAUSE	SOLUTION

Notice - Important information regarding the use of the harman/kardon CDR 20.

1) Complaint: "I cannot record at x2 or x4 speed. Unit switched back to 1x speed"

Possible explanations:

- a) Programmed play only records at x1 speed. *You cannot record at x2 or x4 speeds when programmed dub is attempted (to record only certain tracks on a CD)*
- b) Some brands of CDR do not allow recording at x2 or x4 speed. *Try another major brand – Maxell, Memorex, Sony, TDK. See list below.*
- c) Disc might be a copy - even a counterfeit disc – this will prevent recording at speeds greater than 1X. *Try recording off a new store-bought CD you know is not a copy.*

2) Due to slight variations in the manufacture of blank CD-R/RW audio discs, and for optimum performance of your CD recorder, harman/kardon recommends that you use blank recording discs manufactured by the following companies:

Products from these brands have been tested and certified for use with the CDR 20. While discs from other brands may also work, we cannot guarantee proper operation of the unit when they are used.

Recommended CD-R Audio Disc Manufacturers:

TDK Electronics Corporation	Maxell Corporation of America
LG Electronics, Inc.	Mitsubishi Electric & Electronics USA, Inc.
Ricoh Company, Ltd.	Philips Electronics North America
Memorex	Axia

Recommended CD-RW Audio Disc Manufacturers:

TDK Electronics Corporation	Fuji Photo Film, U.S.A., Inc.
LG Electronics, Inc.	Memorex
Philips Electronics North America	Samsung Electronics Co., Ltd.
Ricoh Company, Ltd.	Axia
SANYO-Verbatim CD Company	SKC America, Inc.
ZeroOne	Mitsubishi Electric & Electronics USA, Inc
Maxell Corporation of America	

NOTE: The names shown above are the primary manufacturers, who may also produce discs for other brand names. When in doubt as to the origin of a disc, check with the brand shown on the package.

- 3) **When a CD Audio disc is recorded on a computer, it is often possible to record a set of tracks, finalize the disc, and then add additional tracks and finalize the disc again in a second recording session.** This produces what is called a “multi-session” disc. Please note that these discs will work properly when played back on a computer, or on the CDR 20’s Record (CDR) deck. However, due to differences in the way CDs are played back on computers, as opposed to consumer CD Audio players, multi-session discs will NOT play back properly on the CDR 20’s Play (CDP) deck, or on most consumer CD players. When a multi-session disc is played in the CDP deck, only the tracks in the first session will play. This is not a defect or problem with the CDR 20, but is due to differences in the formats between computer recordings and CD Audio products or commercially recorded CDs.
- 4) **The CDR 20 prohibits the track incrementing function during the first six seconds for each track during recording.** Thus, if a source track is less than six seconds long, it will be recorded, but it will not be assigned a track number. The track with less than six seconds will be combined into the next track number that is recorded on the disc. This feature prevents the recording of empty tracks when the source signal was not cued up to start playing at the same time a recording session begins.

harman/kardon

Service Bulletin

Service bulletin # H/K2001-04 October 2001

Warranty labor rate: MINOR repair

To: All harman/kardon Service Centers

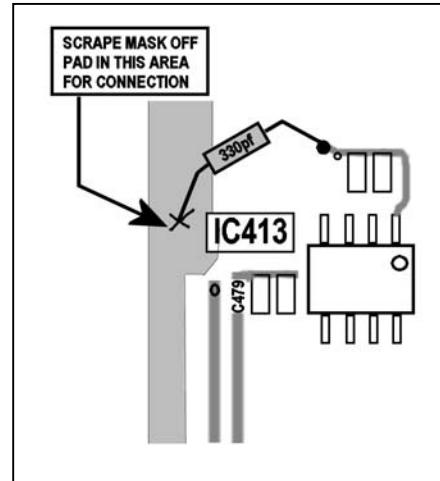

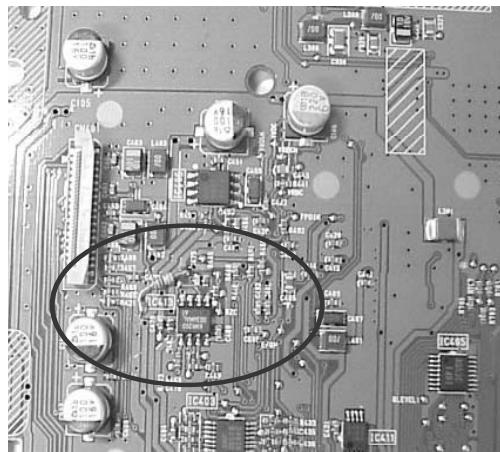

Model: CDR20

Subject: Delay in Reading Blank Disc

In the event you receive a CDR20 CD Player/Recorder with the complaint: "The unit has an excessive delay (over 45 seconds) when initially reading a blank CDR disc in the Record drawer, after it's inserted", perform the modification below:

Synopsis: Add a 330 pf ceramic capacitor from pin #1 on IC413 Op-amp to Ground.

- 1) With the unit plugged in, turn it ON. Press the eject button on the Record side to open the drawer.
- 2) With the drawer fully extended, carefully lift up on the front trim to separate it, and off the main part of the drawer. Press the eject button again to close the drawer. Turn the unit OFF and unplug it.
- 3) Remove the (7) Phillips screws holding the top cover on; remove the top cover.
- 4) Unplug the three connectors at the rear of the Record PCB.
- 5) Unscrew the (4) black Phillips screws that are deep in the slotted wells in each corner of the Record mechanism. Lift the entire Record assembly up and out of the unit.
- 6) Remove the gray metal shield from the assembly. Lay the assembly upside-down on a table, PCB facing upwards.
- 7) The PCB can be disengaged from the assembly by depressing the two black plastic tabs on opposite sides of the PCB and lifting, in sequence.
- 8) CAREFULLY lift the PCB off the assembly, noting the (4) connectors that are attached to the PCB. Unplug the three ribbon connectors. (NOTE: the largest female connector on the PCB has a locking collar which must be lifted to disengage the cable); the mustard-colored molex connector can remain in place, "hinge" the PCB open enough to lay it flat on the table.
- 9) Locate the area of concern with the aid of the illustrations. Solder a 330pf ceramic capacitor, (h/k part# 147-75-331) from electrical equivalent pin #1 on IC413 Op-amp to Ground.
- 10) Reassemble and replace the record mechanism in reverse order; test the unit by inserting a blank CDR disc in the Record drawer and note the time delay.

Model	Serial number 120V	Serial number 230V	Status	Action
CDR20	LG0003-01001 to LG0003-27200	LG0004-01001 to LG0004-07630	May have long time delay when reading a blank CDR disc	Add 330 pf capacitor from pin #1 on IC413 Op-amp to Ground
CDR20	LG0003-27201	LG0004-07631	Factory Installed	NONE REQUIRED

Model: CDR20

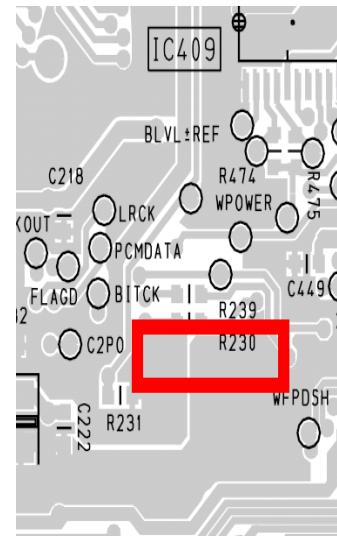

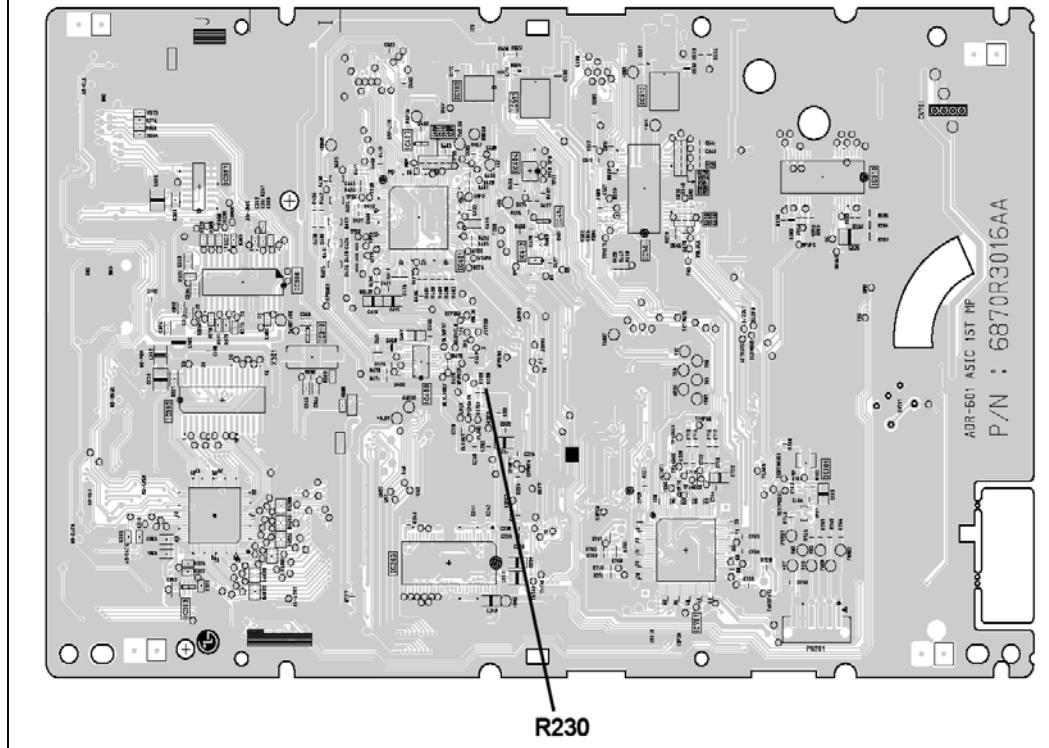

Subject: Noise when dubbing at x4 speed

In the event you receive a CDR20 CD Player/Recorder with the complaint: "There is noise being generated on a recorded CDR at x4 speed", perform the modification below:

Synopsis: Change resistor R230 from 100 ohms to 22 ohms.

- 1) With the unit plugged in, turn it ON. Press the eject button on the Record side to open the drawer.
- 2) With the drawer fully extended, carefully lift up on the front trim to separate it, and off the main part of the drawer. Press the eject button again to close the drawer. Turn the unit OFF and unplug it.
- 3) Remove the (7) Phillips screws holding the top cover on; remove the top cover.
- 4) Unplug the three connectors at the rear of the Record PCB.
- 5) Unscrew the (4) black Phillips screws that are deep in the slotted wells in each corner of the Record mechanism. Lift the entire Record assembly up and out of the unit.
- 6) Remove the gray metal shield from the assembly. Lay the assembly upside-down on a table, PCB facing upwards.
- 7) Locate the area of concern with the aid of the illustrations. Change SMD resistor R230 from 100 ohms to 22 ohms, h/k part# 301-22.
- 8) Reassemble and replace the record mechanism in reverse order; test the unit by inserting a blank CDR disc and making a recording at x4 speed to assure the noise problem is gone.
