10. Exploded view	52
11. Electrical parts list	54

System

Power output	65 watts per channel, 20Hz – 20kHz, THD <0.07%, into 6 ohms, both channels driven
Bandwidth	20Hz – 35kHz, –3dB
System frequency response	20Hz – 20kHz, ±0.5dB
Signal-to-noise ratio, A-weighted	90dB (Analog inputs), 96dB (Digital inputs)
Channel separation	≥65dB
Crosstalk between sources	≥70dB
Line-level input sensitivity at 1kHz	250mV RMS, ±1dB
Phono MM input sensitivity at 1kHz	7.5mV

Loudspeakers

Low-frequency transducers	Two 130mm honeycomb composite drivers, ported
High-frequency transducers	Two 25mm MMD® domes, shielded
Nominal impedance	8 ohms
Sensitivity (2.83V/1m)	85dB
Frequency response	60Hz – 25kHz (–3dB)
Crossover frequency	2200Hz

FM Tuner Section

Frequency range	87 – 108.0MHz
Usable sensitivity	IHF 1.3µV/13.2dBf
Frequency response	10Hz to 15.3kHz
Signal-to-noise ratio	mono/stereo 68/65dB
Distortion	mono/stereo 0.15/0.3%
Stereo separation	35dB @ 1kHz, 100% deviation @ 65dBf
Selectivity	±300kHz; 65dBf
Image rejection	80dB
IF rejection	90dB
Tuner output level	1kHz, ±50kHz, Dev 500mV
Number of presets	30
RDS capability	PS (program service), RT (dynamic radio text)

CD Section

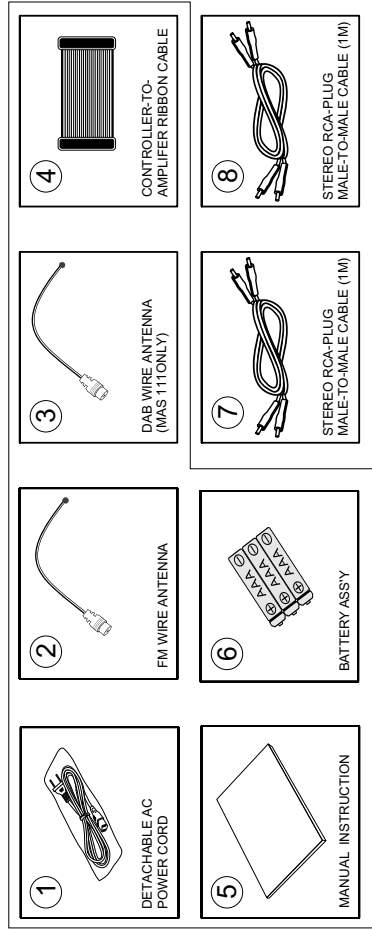

Disc compatibility	CD, CD-R, CD-RW, MP3, WMA
THD+N (20Hz – 20kHz)	<0.025%
Frequency response	20Hz to 20kHz, 0dB \pm 0.5
Channel separation	\geq 65dB
Signal-to-noise ratio	"A" WTG >96dB; 22kHz filter > 94dB

General

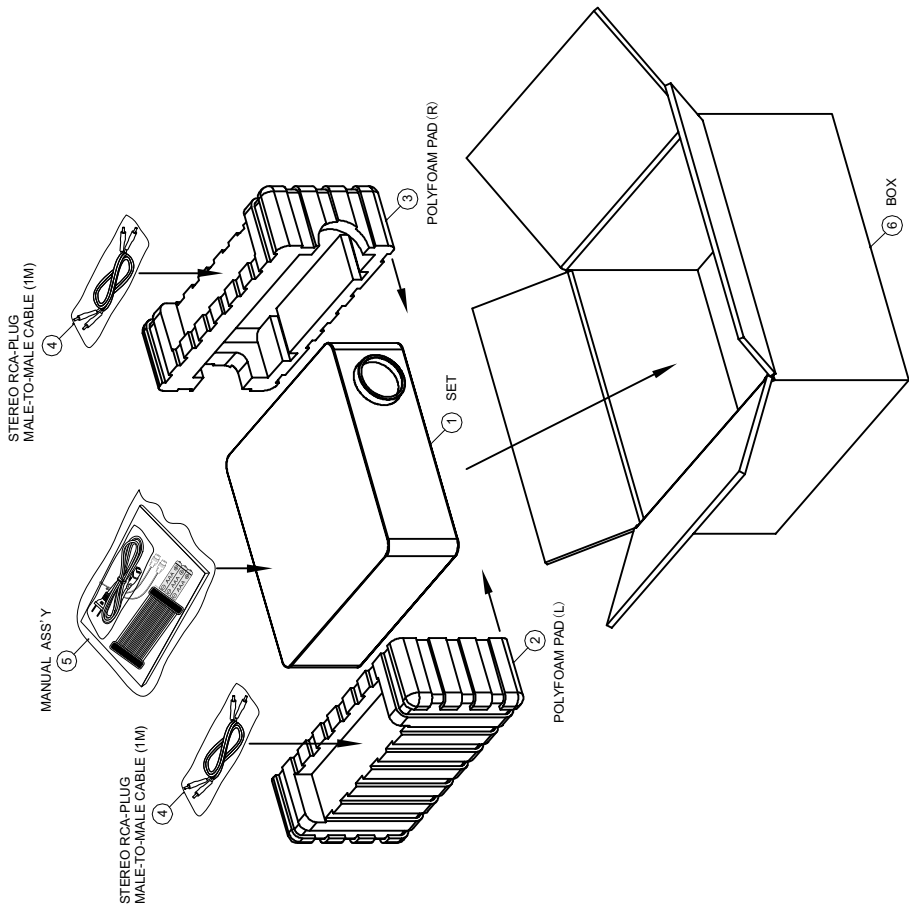

Power requirement	AC 230V/50Hz (MAS 101/MAS 111); AC 120V/60Hz (MAS 102)
Power consumption	<1W full standby (clock not activated); <2W standby (clock activated); 150W maximum (both channels driven)
Operating temperature	0°C to 40°C
Dimensions (H x W x D)	Controller: 90mm x 240mm x 240mm (3-9/16" x 9-7/16" x 9-7/16") Amplifier: 90mm x 240mm x 240mm (3-9/16" x 9-7/16" x 9-7/16") Loudspeakers (each, with grille): 272mm x 181mm x 196mm (10-23/32" x 7-1/8" x 7-3/4")
Weight	System 13.9kg (30,5lb) Controller 2.0kg (4,4lb) Amplifier 2.8kg (6,3lb) Loudspeakers (each): 4.4kg (9,8lb)

The MAS systems use touch-sensitive controls. To use a control, tap gently on its lit icon.

NOTE: Controls are the same for all models.

- 1 Power:** Turns the MAS system on or places it in Standby mode. To completely power off the unit, unplug the power supply.
- 2 Message Display:** The time and messages are displayed in this two-line text display.
- 3 CD Slot:** Load compatible discs here.
- 4 Skip/Scan Forward/Reverse:** These buttons function differently, depending on the current source:
 - **iPod, CD or USB:** Press and release to skip to the next track. Press the Reverse button twice to skip to the previous track. Press and hold a button to scan forward or reverse within a track.
 - **Radio:** Press and release a button to select the next higher or lower programmed preset station. Press and hold a button to scan to the next available higher or lower station. When you release the button, the tuner continues to scan until it finds a station of acceptably strong signal quality, and then it stops. To stop the scan before a station is found, press the button while the tuner is scanning.
- 5 Play/Pause:** Each tap toggles between the Play and Pause functions.
- 6 Stop:** Fully stops playback.
- 7 Eject:** When a CD is loaded, tap here to eject it.

- 8 USB Port A:** Connect a compatible USB device here to enjoy playback of audio MP3 or WMA files. Although most USB flash and hard-disk drives in the FAT32 file format, as well as many MP3 players, are compatible with the MAS system, due to the wide variety of manufacturers, playback cannot be guaranteed. Do not connect an iPod or iPhone to this port. Do not connect a personal computer or any peripherals to this port.
- 9 Line-In Jack (Line Input):** Connect a stereo 3.5mm male-to-male cable (not included) to the headphone or line-level output on a portable player or other device.
- 10 Headphone Jack:** Outputs a stereo signal for private listening through most headphones that are equipped with a stereo 3.5mm plug.
- 11 Volume Control:** Increases or decreases the volume.

- 1 Right and Left Speaker Output Terminals:** Use two-conductor speaker wire to connect each set of terminals to the correct speaker. Remember to observe the correct polarity (positive and negative connections).
- 2 Input From Controller:** Connect the included ribbon cable to this connector and to the corresponding connector on the MAS controller. This cable passes audio signals from the controller to the amplifier, and it transfers DC power from the amplifier to the controller. If this cable is ever damaged, do not use it, and contact Harman Kardon for a replacement.
- 3 AC Power Input:** After you have made all other connections, plug the AC power cord into this receptacle and into an unswitched wall outlet.

NOTE: MAS 101/111 systems require 230V, 50/60Hz AC current. MAS 102 systems require 120V, 60HZ AC current.

Power: Turns the MAS system on or off. To completely power off the unit, unplug the power supply.

Sleep: Each press increases the time until turn-off, from 10 to 90 minutes, in increments of 10 minutes. The next press after the 90 minutes setting turns off the Sleep function.

Source Selectors: Selects a source input. Each press of the Line In or Digital In button toggles among the available analog (Line Input on right-side panel; TV, AUX or Phono Input on rear panel) or digital audio inputs (Coaxial 1 or 2, Optical 1 or 2), respectively. Press the iPod button to select an iPod docked in The Bridge III.

Display: Adjusts the brightness of the message display. Each time the button is pressed and held for one second, the message display brightness will cycle between full, half and off. When the display is off while the system is turned on, the LEDs inside the Volume knob and behind the front-panel function buttons will remain lit to remind you that the system is still on.

Settings: Accesses menus for Speaker Setup (tone controls), Time Setup (clock), Alarm Setup, System Version and System Reset. See the Operation section for more information.

Back: Returns to previous menu level.

Info: Displays the status of the current source:

- **Radio:** When FM band is in use, each press of the button toggles between the PS (Program Service) and RT (Radio Text) RDS information, if available. When a DAB radio station is playing (MAS 111 only), press this button to access the menu system for the DAB tuner. See pages 13 and 14 for more information.

- **Audio CD:** Displays CD Text information, if available. Each press of the button displays the following items: Song, Artist, Album.

- **USB or Data CD:** Scrolls all ID3 tag information for current source, if available. Each press of the button displays the individual items Song, Artist, Album, File type and Folder, and then goes back to scrolling. If ID3 tags are not available, the file name will appear.

Time: Displays elapsed track time for the current Audio CD (no effect on data CDs or other sources). Each additional press changes the display as follows: remaining track time, elapsed disc time, remaining disc time then back to elapsed track time.

▲/▼◀▶ Navigation buttons: Use the ◀ and ▶ buttons to scroll forward and reverse through the Settings Menus, or through lists of content, and press the Enter button to make selections. Press the Back button to return to the previous menu or content level.

Enter: Selects a menu item, or saves setting changes and returns to the previous menu level.

Clear: Clears the current preset station or a playlist entry.

- **Radio:** To delete the current preset station, press the Clear button while it is playing.
- **Playlist:** While programming a playlist, press the Clear button to delete the track just entered. After the playlist has been saved by pressing the Stop button, press the Clear button to delete the entire playlist. To delete a single track, stop play, press the Check button repeatedly until the desired track appears and press the Clear button. Press the Play or Stop button to exit the Check mode.

Program/Memory: Used to program playlists and radio presets.

- **Radio:** If the current station has not been programmed into a preset, press Program/Memory and press the Enter button to store the station at the current preset number, or use the numeric keys to enter a different preset number. The new preset will overwrite the existing one.
- **USB or CD (Audio or Data):** Press the Program button to begin Program Mode. Add tracks to the playlist by using the Skip/Scan Transport Controls or the numeric keys to select the track, then press the Program button to enter the selection. Add up to 30 files. Press Play to play the playlist, or Stop to save the playlist without playing it. During playback, the order of the track in the playlist will appear on the left, with the disc's track number to the right. See page 14 and 15.

Check: After a playlist has been programmed and play has been stopped, each press of the Check button displays the tracks in the playlist.

Eject: When a CD is loaded, press this button to eject it.

FM Mode: Used with FM radio, each press toggles between Stereo and Monaural playback.

Auto Store: Scans through all frequencies, searching for stations with acceptably strong signal quality, and stores them as presets.

Random: Each press turns Random playback mode (shuffle) on or off. This mode plays the tracks of the current disc or drive in random order.

Transport Controls

Track Skip Up/Down (iPod, CD or USB): Press and release the Next/Previous skip buttons to skip to the next track, or the beginning of the current track. Press the Previous Skip button twice to skip to the previous track.

Scan Forward/Reverse: These buttons function differently, depending on which source has been selected:

- **iPod, CD or USB:** Press and hold a button to scan forward or reverse within a track.
- **Radio:** Press and release a button to tune to the next higher or lower frequency by one increment/decrement. Press and hold a button to scan quickly through the frequencies for next available station. Press the same button again to stop scanning.

Play/Pause: Each tap toggles between the Play and Pause functions.

Stop: Fully stops playback.

Preset/Folder +/-: Selects a preset station or folder on a USB or data CD.

- **Radio:** Each press changes to the next or previous preset station, if any have been programmed.
- **USB or Data CD:** Press once to open the current folder. Each additional press changes to the next or previous folder. After 3 seconds, the first track in the new folder will begin playing.

Mute: Press to temporarily silence the speakers. Press again to restore audio. Muting is also canceled if the MAS system is turned off.

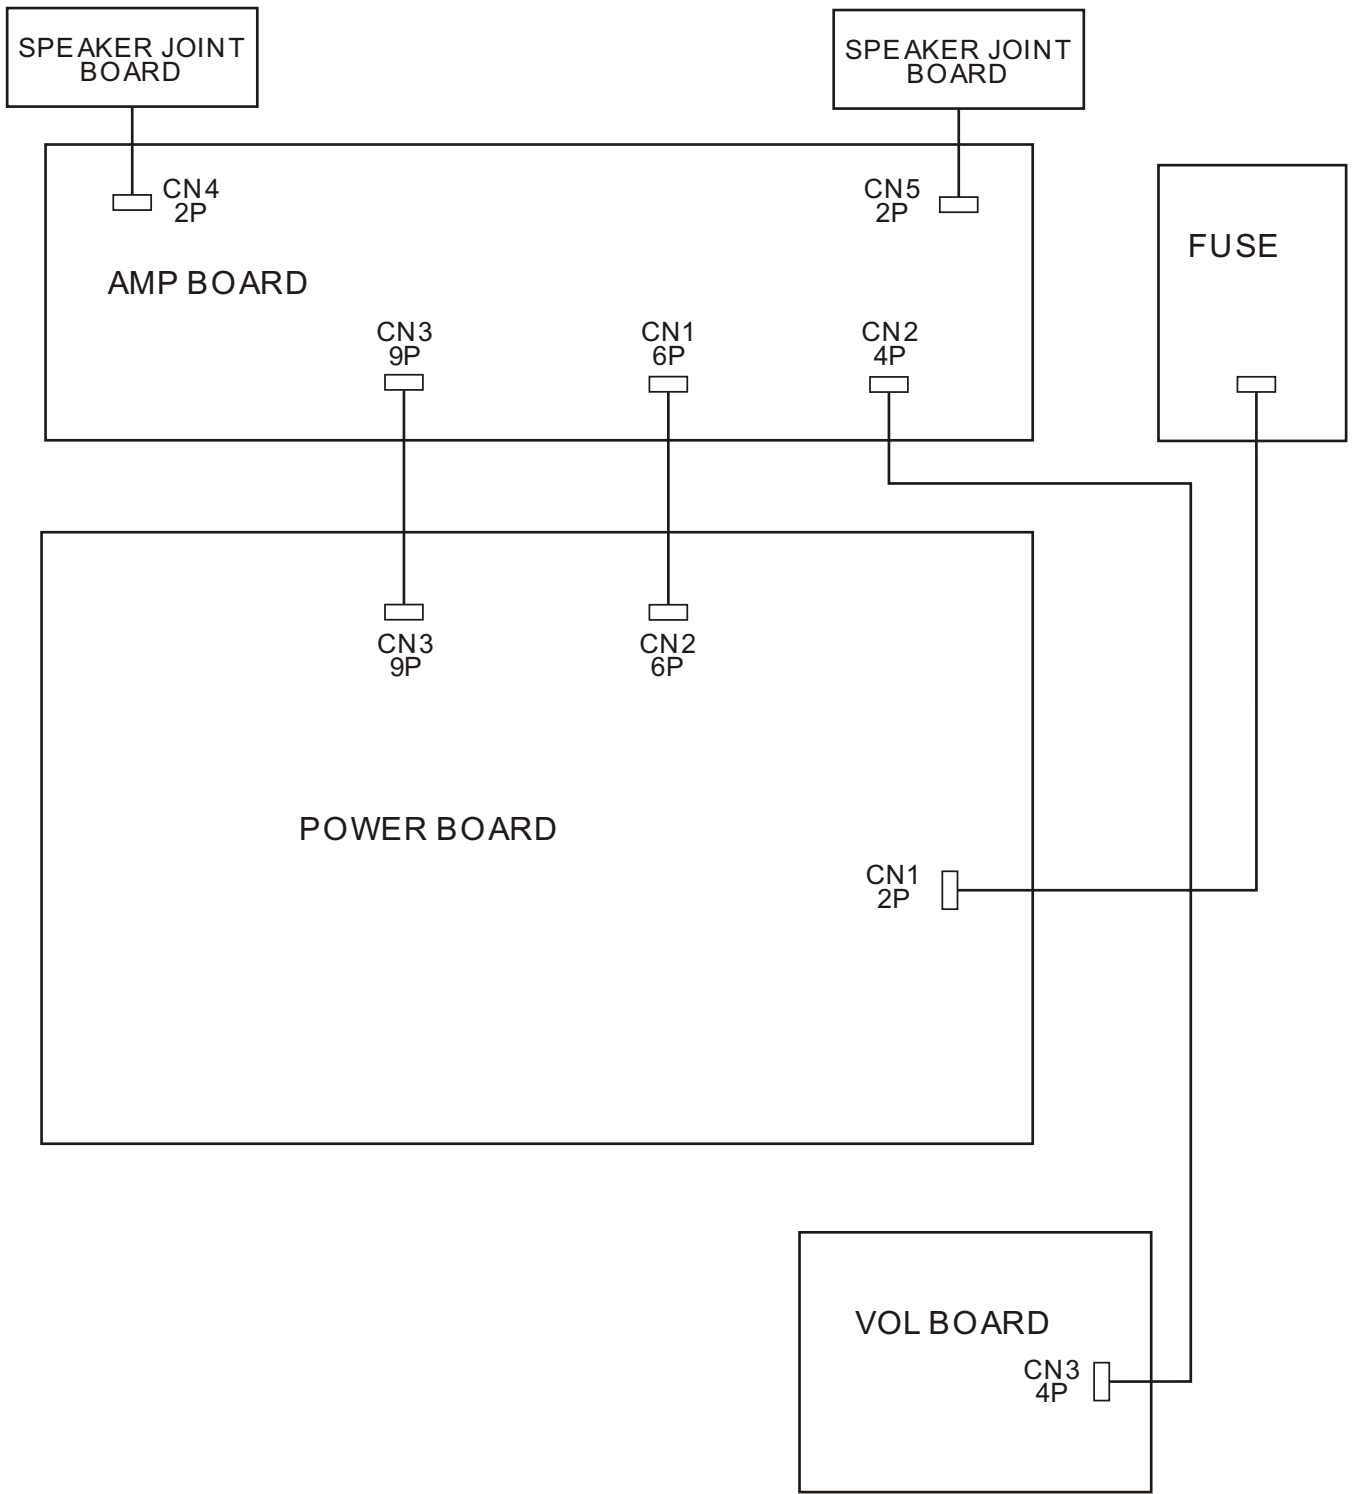

NOTE: Pressing the Mute button also mutes the Analog Audio Outputs. See page 6.

Volume +/-: Increases or decreases the volume. Press and hold to change the volume more quickly.

Numeric keys: Used to enter track numbers, radio stations or preset numbers, or while adjusting the clock and alarm times.

-10 and +10 numeric Key: Used with a USB device or CD to quickly advance through a large number of tracks. Each press of these keys changes to the next or previous track in increments of 10.

WIRING DIAGRAM

Features

- Low On-Resistance
 - 14mΩ @ V_{GS} = -10V
 - 25mΩ @ V_{GS} = -4.5V
- Low Gate Threshold Voltage
- Low Input Capacitance
- Fast Switching Speed
- Low Input/Output Leakage
- **Lead Free By Design/RoHS Compliant (Note 2)**
- **"Green" Device (Note 4)**
- **Qualified to AEC-Q101 Standards for High Reliability**

SOP-8L

Mechanical Data

- Case: SOP-8L
- Case Material: Molded Plastic, "Green" Molding Compound. UL Flammability Classification Rating 94V-0
- Moisture Sensitivity: Level 1 per J-STD-020D
- Terminals Connections: See Diagram
- Terminals: Finish - Matte Tin annealed over Copper lead frame. Solderable per MIL-STD-202, Method 208
- Marking Information: See Page 3
- Ordering Information: See Page 3
- Weight: 0.072g (approximate)

FAN7602

Green Current Mode PWM Controller

Features

- Green Current Mode PWM Control
- Fixed 65kHz Operation with Frequency Modulation
- Internal High-Voltage Start-up Switch
- Burst Mode Operation
- Line Voltage Feed Forward to Limit Maximum Power
- Line Under-Voltage Protection
- Latch Protection & Internal Soft-Start (10ms) Function
- Overload Protection
- Over Voltage Protection
- Low Operation Current: Typ. 1mA
- 8-pin DIP

Applications

- Adapter
- LCD Monitor Power
- Auxiliary Power Supply

Related Application Notes

- **AN6014** - Green Current Mode PWM Controller FAN7602

Description

The FAN7602 is a green current mode PWM controller. It is specially designed for off-line adapter application, DVDP, VCR, LCD monitor application, and auxiliary power supplies.

The internal high-voltage start-up switch and the burst mode operation reduce the power loss in standby mode. Because of the internal start-up switch and the burst mode, it is possible to supply 0.5W load limiting the input power under 1W when the input line voltage is 265Vac. On no-load condition, the input power is under 0.3W.

The maximum power can be limited constantly, regardless of the line voltage change using the power limit function.

The switching frequency is internally fixed to be 65kHz and the frequency modulation technique reduces EMI.

The FAN7602 includes various protections for the system reliability and the internal soft start prevents the output voltage over-shoot at start-up.

Pin Assignments

Figure 3. Pin Configuration (Top View)

Pin Definitions

Pin Number	Pin Name	Pin Function Description
1	LUVP	Line Under Voltage Protection Pin. This pin is used to protect the set when the input voltage is lower than the rated input voltage range.
2	Latch/Plimit	Latch Protection and Power Limit Pin. When the pin voltage exceeds 4V, the latch protection works and the latch protection is reset when the Vcc voltage is lower than 5V. For the power limit function, the OCP level decreases as the pin voltage increases.
3	CS/FB	Current Sense and Feedback Pin. This pin is used to sense the MOSFET current for the current mode PWM and OCP. The output voltage feedback information and the current sense information are added using external RC filter.
4	GND	Ground Pin. This pin is used for the ground potential of all the pins. For proper operation, the signal ground and the power ground should be separated.
5	OUT	Gate Drive Output Pin. This pin is an output pin to drive an external MOSFET. The peak sourcing current is 450mA and the peak sinking current is 600mA. For proper operation, the stray inductance in the gate driving path must be minimized.
6	Vcc	Supply Voltage Pin. IC operating current and MOSFET driving current are supplied using this pin.
7	NC	No Connection.
8	Vstr	Start-up Pin. This pin is used to supply IC operating current during IC start-up. After start-up, the internal JFET is turned off to reduce power loss.

FSFR-Series — Fairchild Power Switch (FPS™) for Half-Bridge Resonant Converters

Features

- Variable Frequency Control with 50% Duty Cycle for Half-Bridge Resonant Converter Topology
- High Efficiency through Zero Voltage Switching (ZVS)
- Internal SuperFET™s with Fast-Recovery Type Body Diode ($t_{rr}=120\text{ns}$) for FSFR2100 and UniFETs with Fast-Recovery Type Body Diode ($t_{rr}<160\text{ns}$) for FSFR2100U/2000/1900/1800/1700.
- Fixed Dead Time (350ns) Optimized for MOSFETs
- Up to 300kHz Operating Frequency
- Pulse Skipping for Frequency Limit (Programmable) at Light-Load Condition
- Remote On/Off Control Using Control Pin
- Protection Functions: Over-Voltage Protection (OVP), Over-Load Protection (OLP), Over-Current Protection (OCP), Abnormal Over-Current Protection (AOCP), Internal Thermal Shutdown (TSD)

Applications

- PDP and LCD TVs
- Desktop PCs and Servers
- Adapters
- Telecom Power Supplies
- Audio Power Supplies

Description

The FSFR-series are a highly integrated power switches designed for high-efficiency half-bridge resonant converters. Offering everything necessary to build a reliable and robust resonant converter, the FSFR-series simplifies designs and improves productivity, while improving performance. The FSFR-series combines power MOSFETs with fast-recovery type body diodes, a high-side gate-drive circuit, an accurate current controlled oscillator, frequency limit circuit, soft-start, and built-in protection functions. The high-side gate-drive circuit has a common-mode noise cancellation capability, which guarantees stable operation with excellent noise immunity. The fast-recovery body diode of the MOSFETs improves reliability against abnormal operation conditions, while minimizing the effect of the reverse recovery. Using the zero-voltage-switching (ZVS) technique dramatically reduces the switching losses and efficiency is significantly improved. The ZVS also reduces the switching noise noticeably, which allows a small-sized Electromagnetic Interference (EMI) filter.

The FSFR-series can be applied to various resonant converter topologies such as series resonant, parallel resonant, and LLC resonant converters.

Pin Configuration

Figure 3. Package Diagram

Pin Definitions

Pin #	Name	Description
1	V _{DL}	This is the drain of the high-side MOSFET, typically connected to the input DC link voltage.
2	CON	This pin is for enable/disable and protection. When the voltage of this pin is above 0.6V, the IC operation is enabled. When the voltage of this pin drops below 0.4V, gate drive signals for both MOSFETs are disabled. When the voltage of this pin increases above 5V, protection is triggered.
3	R _T	This pin programs the switching frequency. Typically, an opto-coupler is connected to control the switching frequency for the output voltage regulation.
4	CS	This pin senses the current flowing through the low-side MOSFET. Typically, negative voltage is applied on this pin.
5	SG	This pin is the control ground.
6	PG	This pin is the power ground. This pin is connected to the source of the low-side MOSFET.
7	LV _{CC}	This pin is the supply voltage of the control IC.
8	NC	No connection.
9	HV _{CC}	This is the supply voltage of the high-side gate-drive circuit IC.
10	V _{CTR}	This is the drain of the low-side MOSFET. Typically, a transformer is connected to this pin.

Features

- Integrated analog input Class D audio amplifier driver in a small 16 pin package
- Floating inputs enable easy half bridge implementation
- Programmable bidirectional over-current protection with self-reset function
- Programmable preset deadtime for improved THD performances
- Start and stop click noise reduction
- High noise immunity
- ± 100 V ratings deliver up to 500 W in output power
- Operates up to 800 kHz
- RoHS compliant

Product Summary

V_{OFFSET} (max)		± 100 V
Gate driver	lo+	1.0 A
	lo -	1.2 A
Selectable Deadtime		25/40/65/105 ns
OC protection delay (max)		500 ns
DC offset		<20 mV
PWM frequency		~800 kHz
Error amplifier open loop gain		>60 dB
THD+N* (1kHz, 50W, 4 Ω)		0.01 %
Residual Noise* (AES-17 Filter)		200 μ Vrms

PRODUCT SPECIFICATION

COSMO ELECTRONICS CO., LTD.	Photocoupler : K1010	SHEET 1 OF 5
---------------------------------------	--------------------------------	--------------

High Reliability Photocoupler

● Features

1. Current transfer ratio
(CTR : MIN. 60% at $I_F=5\text{mA}$ $V_{ce}=5\text{V}$)
2. High isolation voltage between input and output (Viso : 5000Vrms).
3. Compact dual-in-line package.

● Applications

1. Registers, copiers, automatic vending machines.
2. System appliances, measuring instruments.
3. Computer terminals, programmable controllers.
4. Communications, telephone, etc.
5. Electric home appliances, such as oil fan heaters, Microwave oven, Washer, Refrigerator, Air conditioner, etc.
6. Medical instruments, physical and chemical equipment.
7. Signal transmission between circuits of different potentials and impedances.
8. Facsimile equipment, Audio, Video.
9. Switching power supply, Laser beam printer.

Power Factor Controller

SG6961

FEATURES

- Boundary Mode PFC Controller
- Low Input Current THD
- Controlled On-Time PWM
- Zero-Current Detection
- Cycle-by-Cycle Current Limiting
- Leading-Edge Blanking Instead of RC Filtering
- Low Start-up Current (10µA Typical)
- Low Operating Current (4.5mA Typical)
- Feedback Open-Loop Protection
- Programmable Maximum On-Time (MOT)
- Output Over-Voltage Clamping Protection
- Clamped Gate Output Voltage 16.5V

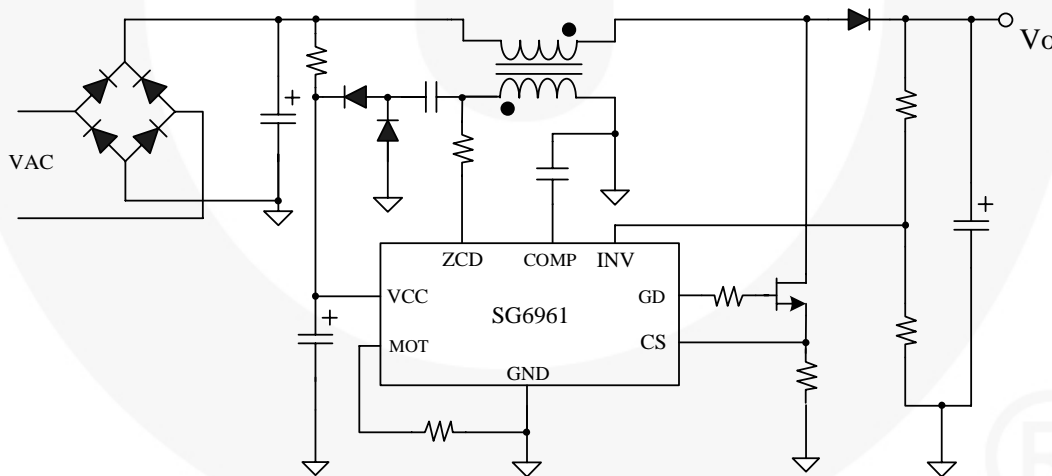

DESCRIPTION

The SG6961 is an 8-pin boundary mode PFC controller IC intended for controlling PFC pre-regulators. The SG6961 provides a controlled on-time to regulate the output DC voltage and achieve natural power factor correction. The maximum on-time of the external switch is programmable to ensure safe operation during AC brownouts. An innovative multi-vector error amplifier is built in to provide rapid transient response and precise output voltage clamping. A built-in circuit disables the controller if the output feedback loop is opened. The start-up current is lower than 20µA and the operating current is under 4.5mA. The supply voltage can be up to 20V, maximizing application flexibility.

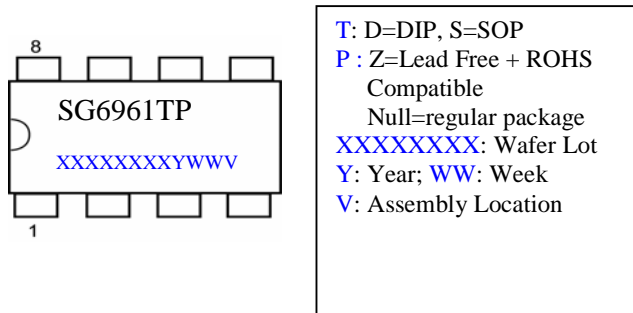

APPLICATIONS

- Electric Lamp Ballasts
- AC-DC Switching Mode Power Converter
- Open-Frame Power Supplies and Power Adapters
- Flyback Power Converters with ZCS/ZVS

TYPICAL APPLICATION

MARKING DIAGRAMS

PIN CONFIGURATION

ORDERING INFORMATION

Part Number	Pb-Free	Package
SG6961SZ		8-Pin SOP
SG6961DZ		8-Pin DIP

PIN DESCRIPTIONS

Pin No.	Symbol	Description
1	INV	Inverting input of the error amplifier. INV is connected to the converter output via a resistive divider. This pin is also used for over-voltage clamping and open-loop feedback protection.
2	COMP	The output of the error amplifier. To create a precise clamping protection, a compensation network between this pin and GND is suggested.
3	MOT	A resistor from MOT to GND is used to determine the maximum on-time of the external power MOSFET. The maximum output power of the converter is a function of the maximum on-time.
4	CS	Input to the over-current protection comparator. When the sensed voltage across the sense resistor reaches the internal threshold (0.82V), the switch is turned off to activate cycle-by-cycle current limiting.
5	ZCD	Zero Current Detection. This pin is connected to an auxiliary winding via a resistor to detect the zero crossing of the switch current. When the zero crossing is detected, a new switching cycle is started. If it is connected to GND, the device is disabled.
6	GND	The power ground and signal ground. Placing a 0.1µF decoupling capacitor between the VCC and GND pins is recommended.
7	GD	Totem-pole driver output to drive the external power MOSFET. The clamped gate output voltage is 16.5V.
8	VCC	Driver and control circuit supply voltage.

**ADJUSTABLE PRECISION SHUNT REGULATORS****AZ431-A****Description**

The AZ431-A series ICs are three-terminal adjustable shunt regulators with guaranteed thermal stability over a full operation range. These ICs feature sharp turn-on characteristics, low temperature coefficient and low output impedance, which make them ideal substitutes for Zener diodes in applications such as switching power supply, charger and other adjustable regulators.

The AZ431-A series ICs are of 40V voltage type. Its output voltage can be set to any value between $V_{REF}(2.5V)$ and 36V.

The AZ431-A precision reference is offered in two band-gap tolerance: 0.4% and 0.8%.

Features

- Programmable Precise Output Voltage from 2.5V to 36V
- Very Accurate Reference Voltage: 0.15% Typical
- High Stability under Capacitive Load
- Low Temperature Deviation: 4.5mV Typical
- Low Equivalent Full-range Temperature Coefficient with 20PPM/°C Typical
- Low Dynamic Output Resistance: 0.2Ω Typical
- Sink Current Capacity from 1mA to 100 mA
- Low Output Noise
- Wide Operating Range of -40 to 125°C

Applications

- Charger
- Voltage Adapter
- Switching Power Supply
- Graphic Card
- Precision Voltage Reference

Pin Configuration**Parametric Table**

	AZ431A-A	AZ431B-A
I_{KA} (Max) (mA)	100	100
I_{KA} (Min) (mA)	0.4	0.4
V_{OUT} / V_{REF} Initial Tol. (%)	0.4	0.8
V_{OUT} (Max) (V)	36	36
V_{OUT} (Min) (V)	2.5	2.5
Z_{KA} (Typ) (Ω)	0.15	0.15
Temp Coeff. (Typ) (PPM/°C)	20	20
Operating Temperature (Min) (°C)	-40	-40
Operating Temperature (Max) (°C)	+125	+125

Benefits

- Easier to Stabilize
- Ultra Low Temperature Coefficient
- Higher V_{REF} Accuracy
- Wider Operating Temperature Range
- Very Competitive Price

TL071, TL071A, TL071B, TL072 TL072A, TL072B, TL074, TL074A, TL074B LOW-NOISE JFET-INPUT OPERATIONAL AMPLIFIERS

SLOS080D – SEPTEMBER 1978 – REVISED AUGUST 1996

- Low Power Consumption
- Wide Common-Mode and Differential Voltage Ranges
- Low Input Bias and Offset Currents
- Output Short-Circuit Protection
- Low Total Harmonic Distortion
0.003% Typ
- Low Noise
 $V_n = 18 \text{ nV}/\sqrt{\text{Hz}}$ Typ at $f = 1 \text{ kHz}$
- High Input Impedance . . . JFET Input Stage
- Internal Frequency Compensation
- Latch-Up-Free Operation
- High Slew Rate . . . 13 V/ μs Typ
- Common-Mode Input Voltage Range
Includes V_{CC+}

description

The JFET-input operational amplifiers in the TL07_ series are designed as low-noise versions of the TL08_ series amplifiers with low input bias and offset currents and fast slew rate. The low harmonic distortion and low noise make the TL07_ series ideally suited for high-fidelity and audio preamplifier applications. Each amplifier features JFET inputs (for high input impedance) coupled with bipolar output stages integrated on a single monolithic chip.

The C-suffix devices are characterized for operation from 0°C to 70°C. The I-suffix devices are characterized for operation from –40°C to 85°C. The M-suffix devices are characterized for operation over the full military temperature range of –55°C to 125°C.

FDP20N50 / FDPF20N50

500V N-Channel MOSFET

Features

- 20A, 500V, $R_{DS(on)} = 0.23\Omega @V_{GS} = 10V$
- Low gate charge (typical 45.6 nC)
- Low C_{iss} (typical 27 pF)
- Fast switching
- 100% avalanche tested
- Improved dv/dt capability

Description

These N- Channel enhancement mode power field effect transistors are produced using Fairchild's proprietary, planar stripe, DMOS technology.

This advanced technology has been especially tailored to minimize on-state resistance, provide superior switching performance, and withstand high energy pulse in the avalanche and commutation mode. These devices are well suited for high efficient switched mode power supplies and active power factor correction.

Gate	Drain	Source

Description

This Digital Audio MosFET Half-Bridge is specifically designed for Class D audio amplifier applications. It consists of two power MosFET switches connected in half-bridge configuration. The latest process is used to achieve low on-resistance per silicon area. Furthermore, Gate charge, body-diode reverse recovery, and internal Gate resistance are optimized to improve key Class D audio amplifier performance factors such as efficiency, THD and EMI. These combine to make this Half-Bridge a highly efficient, robust and reliable device for Class D audio amplifier applications.

ISL9R1560PF2

15A, 600V Stealth™ Diode

General Description

The ISL9R1560PF2 is a Stealth™ diode optimized for low loss performance in high frequency hard switched applications. The Stealth™ family exhibits low reverse recovery current ($I_{RM(REC)}$) and exceptionally soft recovery under typical operating conditions.

This device is intended for use as a free wheeling or boost diode in power supplies and other power switching applications. The low $I_{RM(REC)}$ and short t_a phase reduce loss in switching transistors. The soft recovery minimizes ringing, expanding the range of conditions under which the diode may be operated without the use of additional snubber circuitry. Consider using the Stealth™ diode with an SMPS IGBT to provide the most efficient and highest power density design at lower cost.

Formerly developmental type TA49410.

Features

- Soft Recovery $t_b / t_a > 1.2$
- Fast Recovery $t_{rr} < 30ns$
- Operating Temperature 150°C
- Reverse Voltage 600V
- Internally Isolated 1kV
- Avalanche Energy Rated

Applications

- Switch Mode Power Supplies
- Hard Switched PFC Boost Diode
- UPS Free Wheeling Diode
- Motor Drive FWD
- SMPS FWD
- Snubber Diode

Symbol	Parameter	Value	Units
V_{CEO}	Collector-Emitter Voltage	-150	V
V_{CBO}	Collector-Base Voltage	-160	V
V_{EBO}	Emitter-Base Voltage	-5.0	V
I_C	Collector Current - Continuous	-600	mA
T_J, T_{STG}	Operating and Storage Junction Temperature Range	-55 ~ 150	$^\circ\text{C}$

* These ratings are limiting values above which the serviceability of any semiconductor device may be impaired.

Notes:

- These ratings are based on a maximum junction temperature of 150 degrees C.
- These are steady state limits. The factory should be consulted on applications involving pulsed or low duty cycle operations.

Electrical Characteristics $T_a=25^\circ\text{C}$ unless otherwise noted

2N5551 / MMBT5551

NPN General Purpose Amplifier

Features

- This device is designed for general purpose high voltage amplifiers and gas discharge display drivers.
- Suffix “-C” means Center Collector in 2N5551 (1. Emitter 2. Collector 3. Base)
- Suffix “-Y” means h_{FE} 180~240 in 2N5551 (Test condition : $I_C = 10\text{mA}$, $V_{CE} = 5.0\text{V}$)

Absolute Maximum Ratings * $T_A = 25^\circ\text{C}$ unless otherwise noted

Symbol	Parameter	Value	Units
V_{CEO}	Collector-Emitter Voltage	160	V
V_{CBO}	Collector-Base Voltage	180	V
V_{EBO}	Emitter-Base Voltage	6.0	V
I_C	Collector current - Continuous	600	mA
T_J, T_{stg}	Junction and Storage Temperature	-55 to +150	$^\circ\text{C}$

* These ratings are limiting values above which the serviceability of any semiconductor device may be impaired.

NOTES:

1. These ratings are based on a maximum junction temperature of 150 degrees C.
2. These are steady state limits. The factory should be consulted on applications involving pulsed or low duty cycle operations.

Thermal Characteristics $T_A=25^\circ\text{C}$ unless otherwise noted

MUR1610CT, MUR1615CT, MUR1620CT, MUR1640CT, MUR1660CT

SWITCHMODE™ Power Rectifiers

... designed for use in switching power supplies, inverters and as free wheeling diodes, these state-of-the-art devices have the following features:

- Ultrafast 35 and 60 Nanosecond Recovery Times
- 175°C Operating Junction Temperature
- Popular TO-220 Package
- Epoxy Meets UL94, V_O @ 1/8"
- High Temperature Glass Passivated Junction
- High Voltage Capability to 600 Volts
- Low Leakage Specified @ 150°C Case Temperature
- Current Derating @ Both Case and Ambient Temperatures

Mechanical Characteristics:

- Case: Epoxy, Molded
- Weight: 1.9 grams (approximately)
- Finish: All External Surfaces Corrosion Resistant and Terminal Leads are Readily Solderable
- Lead Temperature for Soldering Purposes: 260°C Max. for 10 Seconds
- Shipped 50 units per plastic tube
- Marking: U1610, U1615, U1620, U1640, U1660

Preferred Device

SWITCHMODE™ Power Rectifier

These state-of-the-art devices are designed for use in negative switching power supplies, inverters and as free wheeling diodes. Also, used in conjunction with common cathode dual Ultrafast Rectifiers, makes a single phase full-wave bridge.

Features

- Common Anode Dual Rectifier (8.0 A per Leg or 16 A per Package)
- Ultrafast 35 Nanosecond Reverse Recovery Times
- Exhibits Soft Recovery Characteristics
- High Temperature Glass Passivated Junction
- Low Leakage Specified @ 150°C Case Temperature
- Current Derating @ Both Case and Ambient Temperatures
- Epoxy Meets UL 94 V-0 @ 0.125 in
- Complement to MUR1620CT and MURB1620CT Common Cathode Device
- Pb-Free Packages are Available

Mechanical Characteristics:

- Case: Epoxy, Molded
- Weight: MUR1620CTR: 1.9 Grams (Approximately)
MURB1620CTR: 1.7 Grams (Approximately)
- Finish: All External Surfaces Corrosion Resistant and Terminal Leads are Readily Solderable
- Lead Temperature for Soldering Purposes:
260°C Max. for 10 Seconds

MAXIMUM RATINGS (Per Leg)

Rating	Symbol	Value	Unit
Peak Repetitive Reverse Voltage Working Peak Reverse Voltage DC Blocking Voltage	V_{RRM} V_{RWM} V_R	200	V
Average Rectified Forward Voltage (Rated V_R , $T_C = 160^\circ\text{C}$) Per Leg Per Total Device	$I_{F(AV)}$	8.0 16	A
Peak Repetitive Surge Current (Rated V_R , Square Wave, 20 kHz, $T_C = 140^\circ\text{C}$) Per Diode	I_{FM}	16	A
Non-Repetitive Peak Surge Current (Surge Applied at Rated Load Conditions Halfwave, Single Phase, 60 Hz)	I_{FSM}	100	A
Operating Junction and Storage Temperature Range	T_J, T_{stg}	-65 to +175	°C

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.
