<CP-900S>

SPECIFICATIONS AND PARTS ARE SUBJECT TO CHANGE FOR IMPROVEMENT

RADIO CASSETTE TAPE RECORDER

March 1983

TOKAI WORKS

SAFETY PRECAUTIONS

The following precautions should be observed when servicing.

1. Since many parts in the unit have special safety-related characteristics, always use genuine Hitachi's replacement parts. Especially critical parts in the power circuit block should not be replaced with other makes. Critical parts are marked with  in the schematic diagram and circuit board diagram.
2. Before returning a repaired unit to the customer, the service technician must thoroughly test the unit to ascertain that it is completely safe to operate without danger of electrical shock.
3. Before returning a repaired unit to the customer, the service technician must measure the leakage-current or resistance to determine that the exposed parts are acceptably insulated from the power circuit.

DIFFERENCES BETWEEN CP-90S AND CP-900S

- The cassette player (CP-91DEX) is not provided in the CP-90S.
- The position where the tuner is assembled in the rack is different.
- The function select buttons to be pressed are different as shown below.

Details of operation		Function select button to be pressed						
		CP-90S		CP-900S				
<ul style="list-style-type: none"> • When listening to radio or when recording while listening to radio • When recording from the wireless microphone • When mixing playback or mixing recording of radio and wire microphone 		LINE IN /PHONO <input type="checkbox"/>	TUNER <input checked="" type="checkbox"/>	TAPE <input type="checkbox"/>	TUNER/ LINE IN /PHONO <input checked="" type="checkbox"/>	TAPE 2 <input type="checkbox"/>	TAPE 1 <input type="checkbox"/>	
	<ul style="list-style-type: none"> • When recording from the wire microphone 		<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
	<ul style="list-style-type: none"> • When playing the tape or when mixing playback of the tape and wire microphone 	Cassette recorder	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

<ul style="list-style-type: none"> • When recording while mixing tape and wire microphone 		/		<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>		

shows the button to be pressed.

SYSTEM CONNECTION AND CIRCUIT OPERATION

1. CP-90S

(1) When the Tuner (CP-90T) is operating

The TUNER switch (S403) is set to ON, so the +3V power is derived from JK403 pin ⑧ of CP-90S and input to 8P pin connector pin ④ of CP-90T via CP-90REX.

The radio signal is derived from 8P pin connector pin ① (right) and pin ② (left) and input to JK403 pin ④ (left) and pin ⑤ (right) of CP-90S via CP-90REX. The LINE IN/PHONO switch (S404) and the TAPE switch (S402) have

been switched over to OFF, so the radio signal is amplified by Q401 and IC402, derived from JK404 pin ② (right) and pin ⑤ (left) and sent to the Dolby/Graphic Equalizer (CP-91EQ). The radio signal with its tone controlled by the graphic equalizer amplifier (IC803) is sent to CP-90S from DIN802 pin ① (right) and pin ③ (left) and is derived via the volume control/amplifier circuits.

(2) When the stereo cassette recorder (CP-90DEX) is operating

1) During play

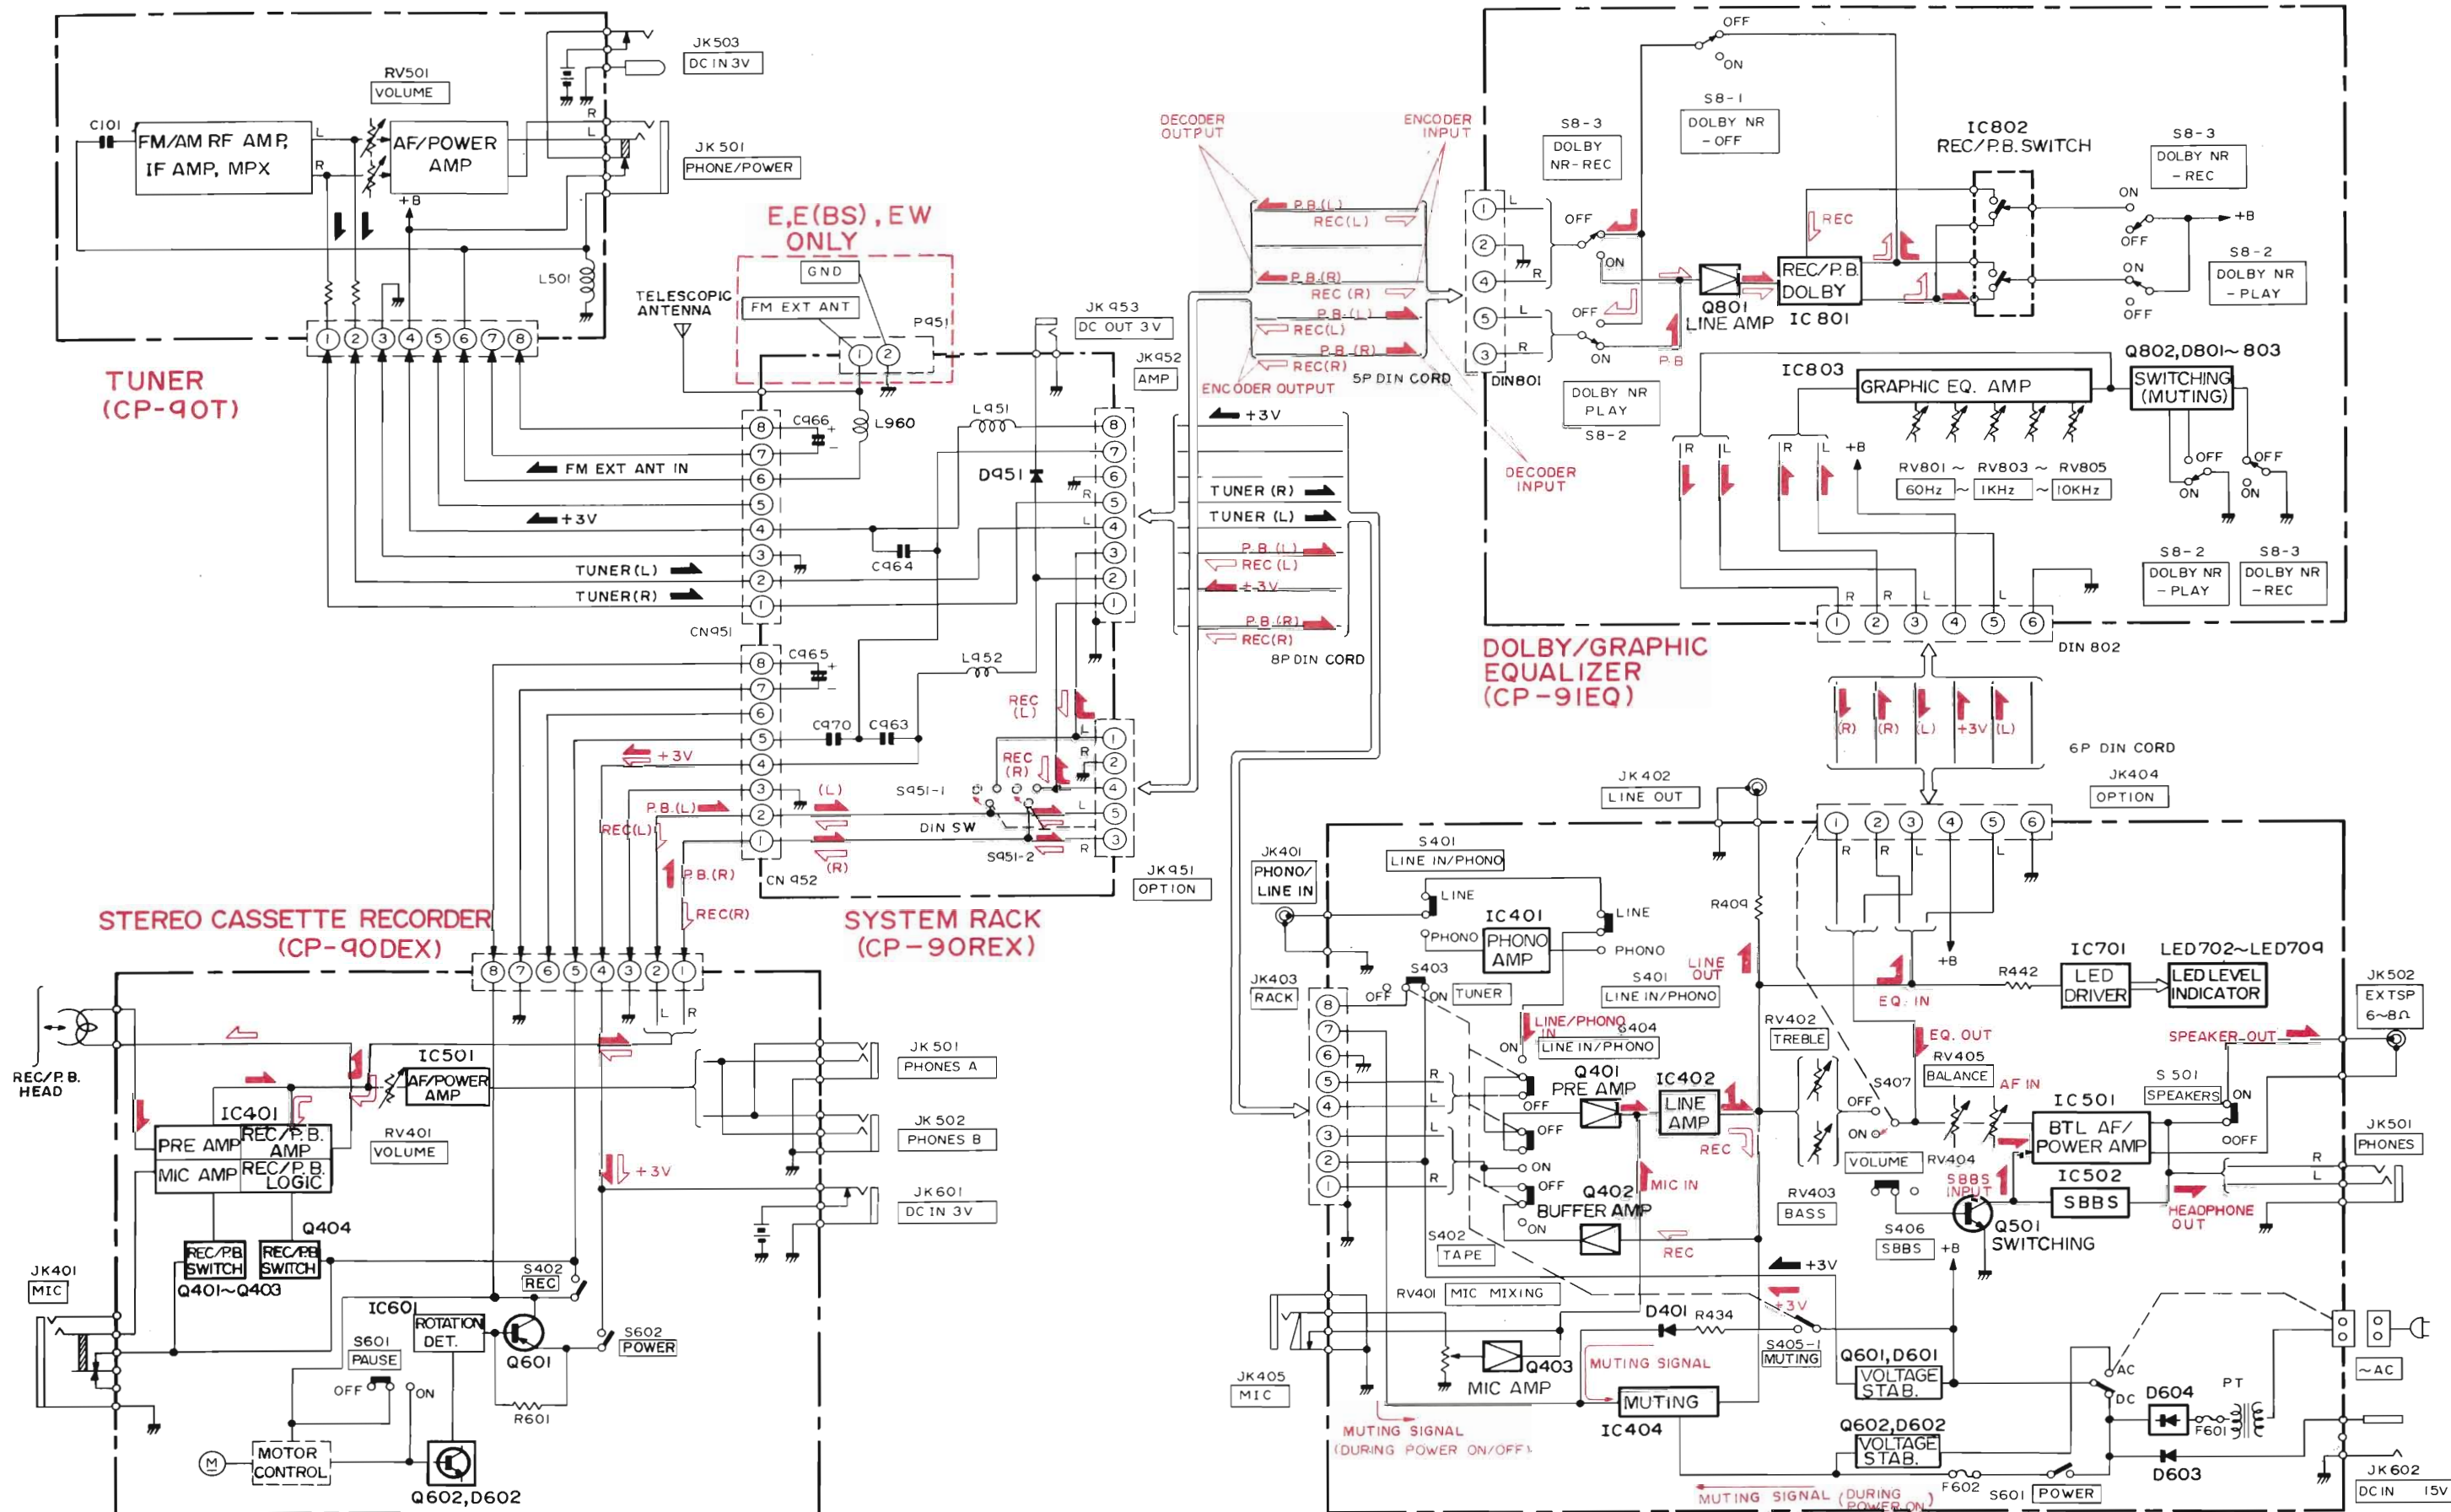

The TAPE switch (S402) is set to ON, so the TUNER switch (S403) and the LINE IN/PHONO switch (S404) are switched over to OFF. The +3V power is supplied to 8P pin connector pin ④ from JK403 pin ② via CP-90REX.

The play signal is amplified by the preamplifier (IC401), output from 8P pin connector pin ① (right) and pin ② (left) and sent to CP-90REX. The DIN switch (S951) has been switched over to ON, so the play signal is sent to DIN 801 of CP-91EQ from JK951 pin ③ (right) and pin ⑤ (left) and decoded via the play Dolby NR circuit, then it is sent to JK951 of CP-90REX from DIN801 pin ① (left) and pin ④ (right). This play signal is applied to CP-90S from JK952 pin ① (right) and pin ③ (left), and is output via the graphic equalizer circuit the same as during CP-90T operation.

2) During recording

The TUNER switch (S403) is set to ON during recording of the tuner signal and the LINE IN/PHONO switch (S404) is set to ON during recording of line input (or phono input) signal, so the TAPE switch (S402) is changed over to OFF.

The record signal is amplified by Q401 and IC402, and derived from JK403 pin ① (right) and pin ③ (left) via Q402 and S402, then it is sent to CP-90REX. This record signal is applied to DIN801 of CP-91EQ from JK951 pin ① (left) and pin ④ (right), and encoded via the record Dolby NR circuit, then it is derived from DIN801 pin ③ (right) and pin ⑤ (left). This output is sent to 8P pin connector pin ① (right) and pin ② (left) of CP-90DEX via CP-90REX and recorded via the record amplifier (IC401).

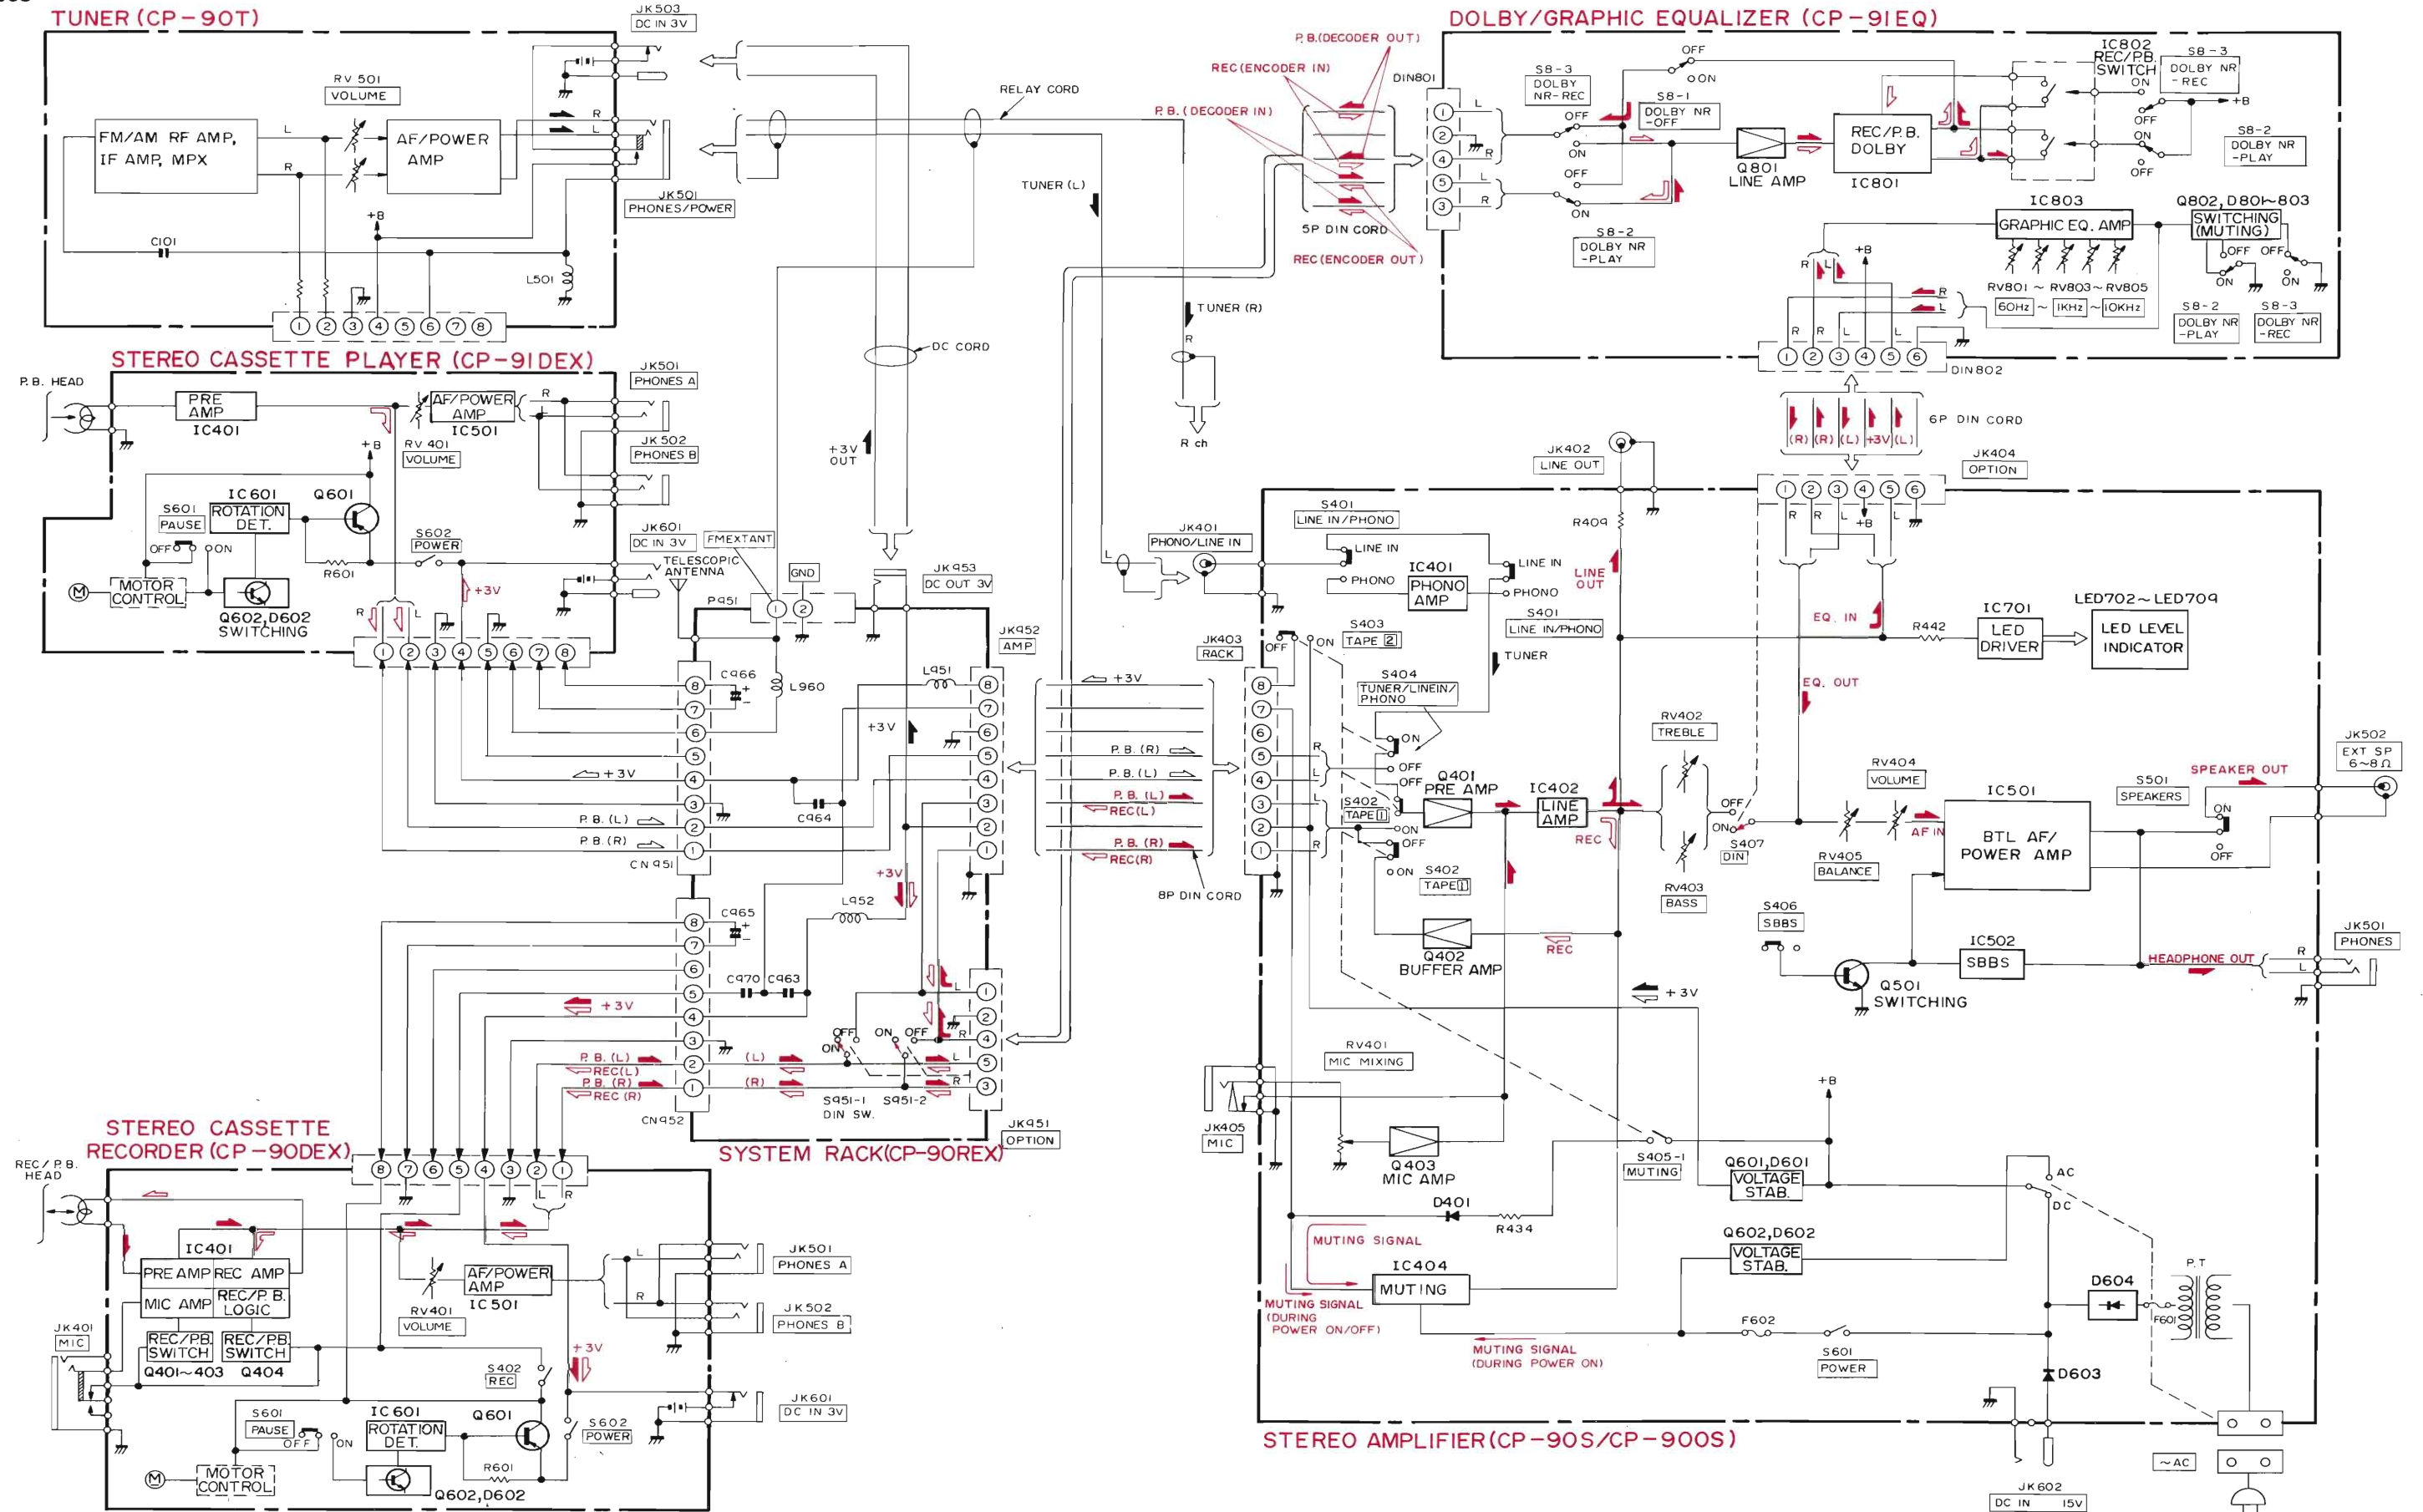

TUNER (CP-90T)

STEREO CASSETTE RECORDER (CP-90DEX)

DOLBY/GRAPHIC EQUALIZER (CP-91EQ)

STEREO AMPLIFIER (CP-90S)

2. CP-900S

(1) When the Tuner (CP-90T) is operating

The +3V power is input to the DC IN3V jack (JK503) from JK403 pin ② of CP-900S/CP-90S via the DC OUT 3V jack (JK953) of CP-90REX. The relay cord plug is inserted into the headphone jack (JK501), so this +3V power input is supplied to the circuit via JK501.

The radio signal is output from JK501 and sent to the PHONO/LINE IN jack (JK401). The LINE IN/PHONO select switch (S401) is switched to LINE IN and the TUNER/LINE IN/PHONO switch (S404) to ON, so the signal is fed to the amplifier circuit via S401 and S404. S407 is a DIN switch with OPTION jack (JK404) built-in and switched over to ON when the 6P DIN cord is connected to JK404, so the signal amplified via the line amplifier (IC402) is sent to the Dolby NR/Graphic Equalizer circuit (CP-91EQ) from JK404 pin ⑤ (left) and pin ② (right) without passing through the tone control circuit, then it is input to JK404 pin ③ (left) and pin ① (right) again after adjusting its tone via the graphic equalizer amplifier (IC803), and is output via the volume control circuit and amplifier circuit.

The tuner output is changed according to the volume, so fix the volume to "6".

(2) When the stereo cassette player (CP-91DEX) is operating

When the TAPE ② switch (S403) is switched over to ON, the +3V power is supplied to 8P pin connector pin ④ from CP-900S/CP-90S via CP-90REX and the stereo cassette player is operated when the power switch (S602) is set to ON by button operation.

The play signal is amplified by the preamplifier (IC401) and derived from 8P pin connector pin ① (right) and pin ② (left), then sent to rack input jack (JK403) pin ④ (left)

and pin ⑤ (right) of CP-900S/CP-90S via CP-90REX. This signal is output via the graphic equalizer as in operation of the CP-90T.

(3) When the stereo cassette recorder (CP-90DEX) is operating

The +3V power is supplied to 8P pin connector pin ④ from JK403 pin ② of CP-900S/CP-90S via CP-90REX and the stereo cassette recorder is operated when the power switch (S602) is set to ON by button operation.

1) During play

The play signal is amplified by the preamplifier (IC401) and derived from 8P pin connector pin ① (right) and pin ② (left), then sent to CP-90REX.

The DIN switch (S951) has been switched over to ON, so the play signal is sent to DIN801 of the Dolby NR/Graphic Equalizer (CP-91EQ) from JK951 pin ③ (right) and pin ⑤ (left) without passing through the switch, decoded by the play Dolby NR circuit, derived from DIN801 pin ① (left) and pin ④ (right) again and sent to JK951 of CP-90REX.

This play signal is further sent to CP-900S/CP-90S from JK952 pin ① (right) and pin ③ (left).

2) During recording

The TUNER/LINE IN/PHONO switch (S404) is set to ON during recording of the tuner signal and the TAPE ② switch (S403) is set to ON during recording (dubbing) of the signal from the stereo cassette player, so the TAPE ① switch (S402) is switched to OFF. The record signal is amplified by Q401 and IC402, and derived from JK403 pin ① (right) and pin ③ (left) via Q402 and S402, then it is sent to CP-90REX. This record signal is

supplied to DIN801 of CP-91EQ from JK951 pin ① (left) and pin ④ (right), and encoded via the record Dolby NR circuit, then it is output from DIN801 pin ③ (right) and pin ⑤ (left). This output is sent to 8P pin

connector pin ① (right) and pin ② (left) of CP-90DEX via CP-90REX and recorded via the record amplifier (IC401).

DESCRIPTION OF NEW CIRCUIT

1. SBBS (Super Bass Boost System) Circuit (CP-90S/CP-900S)

This circuit combines a BTL amplifier and low-pass filter, boosts the super bass frequency band at the minimum resonance frequency f_0 (approx. 140 Hz) or less of the mini-speaker (caliber: 9 cm) and compensates for lack of low frequencies. When the SBBS switch (S406) is set to OFF, the SBBS signal (inversion signal) is applied to GND via Q501L by the activation of the switching transistor (Q501L), so the inversion signal circuit of IC501L (BTL amp) amplifies and outputs the inverted input signal resulting from the feedback resistor (R503L).

When S406 is set to ON, the SBBS indicator (LED401) is lit and at the same time Q501L is set to OFF, so the SBBS signal is fed to the inversion signal circuit of IC501L via C501L. The active low-pass filter composed of R512L, R513L, C514L, C515L and IC502 (1/2) passes frequencies less than the minimum resonance frequency (f_0) of the mini-speaker.

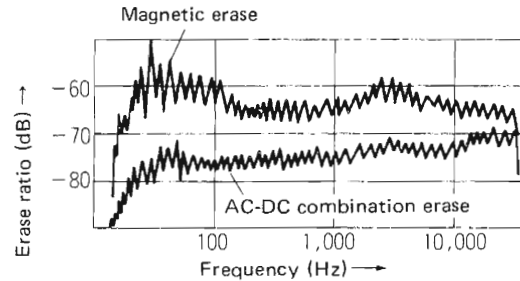

The free-edge speaker with the edge made from special rubber is used to improve the effect further and the speaker box which uses a high density compound resin combined with a special inorganic filler to enhance its acoustic characteristics.

2. AC-DC combination erase head (CP-90DEX)

A higher erase ratio is required to record and playback sound with less noise and distortion, so AC erasing with high erase ratio is ideal, but it requires large power, so the DC erase (magnetic erase) is used for the mini-tape recorder. The AC-DC combination erase head used in CP-90DEX is an erase head with combined AC erase and

DC erase (magnetic erase); DC erase is applied by the magnet first and then AC erase is applied. Power is reduced by approx. 60% compared with an AC erase head and at the same time, the erase ratio equivalent to that using an AC erase head can be obtained.

CAUTIONS ON REPAIRING PRINTED RESISTOR

1. Cautions during soldering

Do not heat the resistor and conductor directly. The resistor and conductor may be broken by heat or the resistance may be changed when the resistor or conductor is heated directly by a soldering iron or when the heat from the soldering iron is conducted via the parts lead.

2. Cautions on checking

Be careful not to scratch the printed resistor and printed pattern using tweezers, tester lead or screw-driver, etc. with a sharp edge during checking. When the resistor is scratched, it can cause trouble such as resistance change, disconnections, etc. It is recommended to bend up the tip of the tweezers, etc. as shown in the diagram or use tweezers made of bamboo or plastic.

3. Checking printed resistor

Tester check

Cut the copper pattern to check the capacitance of the printed resistor.

Solder the cut section of the copper pattern to connect it after checking.

4. How to repair

(1) Printed resistor

Check printed resistors and perform the following when they are faulty.

- ① Cut the resistor completely as shown in the diagram. When it is not cut completely, it causes unstable operation or trouble.
- ② Solder a resistor with a resistance equal to that of the printed resistor to the copper pattern to which the printed resistor has been connected as shown in the diagram.

(2) Printed pattern

Check the pattern in the way same as the printed resistor. When the printed pattern is disconnected, solder 0.65 ϕ plated wire or 7/0.2 solder-plated UL wire to the copper pattern connected to the printed pattern.

DISASSEMBLY

1. Escutcheon and Upper Case

1) Remove two* knobs (Band, Stereo/Mono).

* three knobs for CP-90TE/TW.

2) Remove (A) (three) screws.

2. Main PC Board

Remove (B) (two) screws.

3. Connector PC Board

Remove (C) (two) screws and unsolder the soldering part.

ADJUSTMENT

1. CP-90TH

Step	Adjustment Item	Measuring Instrument and Connection			Genescope or Signal Generator Frequency	Dial Pointer Position	Adjust	Reading

					11.0 MHz	11.0 MHz	CT151	
					Repeat steps (1) and (2)			

Note:

1. Feed in a weak signal to TP3 from the genescope. Adjust T201 for maximum gain and the waveform shown in Figure 1. If the center of the waveform cannot be lined up on the marker, adjust the right/left balance.

Fig. 1

2. Use the T203 core to form the S-curve shown in Figure 2. Adjust the symmetry of A and B about point C for linearity.

Fig. 2

3. FM dummy antenna shows Figure 3.

Fig. 3

4. Connect the frequency counter to TP5, via a resistor of 220 kΩ.
5. Connect AM signal generator to loop antenna, bring near to ferrite antenna.
6. Feed in a weak signal from the genescope. Adjust T202 and T204 for maximum gain and the waveform of Figure 4.

Fig. 4

SCHMATIC DIAGRAM (CP-90TH)

Note

1. Voltage measured at base of chassis with minimum volume control and no signal.
2. Nomenclature of Resistors and Capacitors.

Circuit No.	
Value	No indicated Ω(Ohm) M : 1000 kΩ
Tolerance	No indicated ±5% K : ±10% M : ±20%
Wattage	No indicated ¼W
Sort	No indicated Carbon film RC : Composition RW : Wire wound RS : Oxide metal film RN : Fixed metal film

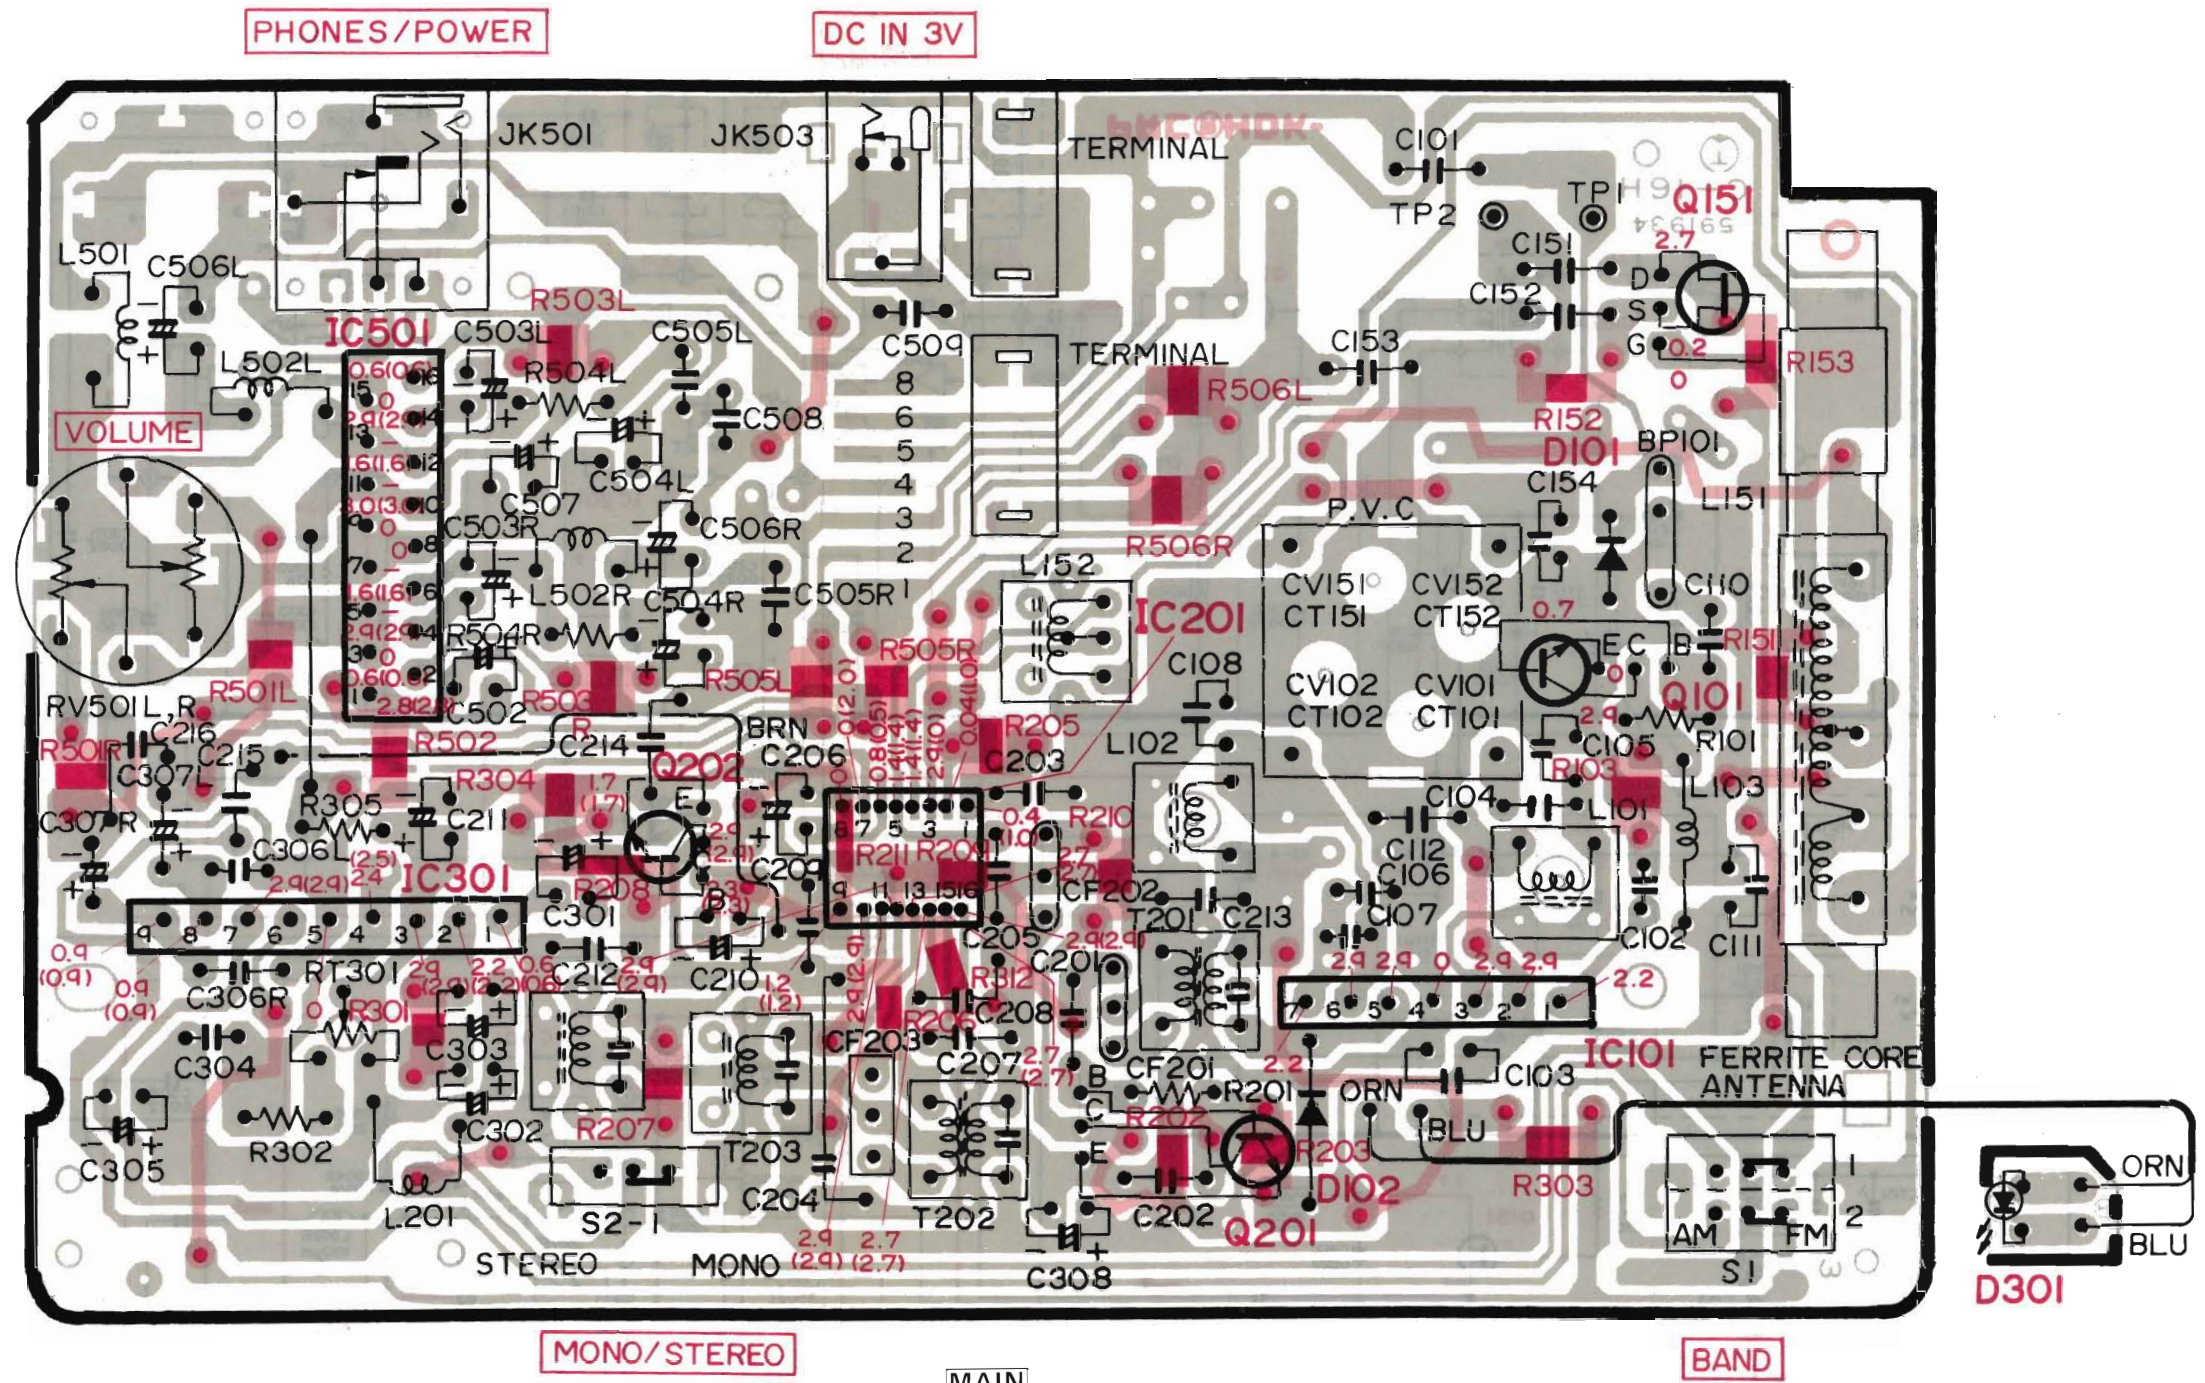

Circuit No.	
Value	No indicated μF P : PF
Tolerance	No indicated ±10% J : ±5% M : ±20% Z : +80%, -20% D : ±0.5pF C : ±0.25pF
Sort	Ceramic Electrolytic Mylar Polyester Styrol
Voltage	No indicated 50WV

3. Be sure to make your orders of resistors and capacitors with value, voltage, tolerance and sort.
4. When replacing capacitors marked with *, use specified ones stated on parts list since required temperature characteristics.

SPECIFICATIONS

Semiconductors:	ICs: 8 Transistors: 10 Diodes: 7 LEDs: 2	AC: 220V, 50Hz, (For E, EZ) 240V, 50Hz [For E(BS), AU] DC: 15V (Use car battery adaptor)
Input Sensitivity and Impedance:	Mix. Mic.: 0.3 mV, 3.3K ohms Line in: 450 mV, 50K ohms Phono in: 6 mV, 50K ohms	Power Consumption: 35W (For H, HC) 54W [For E, EZ, E(BS)] 38W (For W, EW, AU)
Output Level and Load Impedance:	Line out: 775 mV, 1K ohms Headphone: 8 to 300 ohms Ext. Speaker: 6 to 8 ohms	Dimensions: Amplifier: 276(W) x 83(H) x 201(D) mm System Rack: 276(W) x 88(H) x 168(D) mm Speaker: 112(W) x 163(H) x 164(D) mm
Power Output: Speakers:	12W/CH (T.H.D. 10%) 9 cm, 6 ohms x 2 2 cm ceramic tweeter x 2	Weight: Amplifier: 2.8 kg System Rack: 1.2 kg Speaker: 1.5 kg x 2
Power Supply:	AC: 110-127V/200-220V/ 230-250V, 50/60 Hz [For H, HC, W, EW]

DISASSEMBLY

1. Stereo Amplifier (CP-90S/CP-900S)

1. Back cover

After removing the (A) (eight) joint holder fixing screws, remove the (B) (six) screws.

2. Front panel

- 1) Remove the five knobs (Mic mixing, Bass, Treble, Balance, Volume).
- 2) Remove the (C) (two) screws.

3. Switch/Jack PC board

After removing the (D) (five) screws, remove the (E) (two) connectors.

4. Power PC board

- 1) Remove the (F) (two) power PC board bracket fixing screws.
- 2) Lift up the power PC board bracket and remove the (G) (two) connectors.
- 3) Remove the (H) (two) screws.

5. Indicator PC board

Remove the (I) (two) tabs and lift up the PC board.

2. Rack PC board

- 1) Remove the (L) (six) PC board cover fixing screws.
- 2) Push the 8P connectors in the direction of the arrow and remove the PC board.

6. Audio PC board

Remove the (J) (three) screws.

2. System Rack (CP-90REX)

1. Bottom cover

Remove the (K) (seven) screws.

3. Release button

Remove the (M) (two) screws.

3. Speaker (CP-90SP)

1. Baffle plate assembly

Remove the (N) (four) screws.

2. Woofer/Tweeter

Remove the (O) (six) screws.

SPECIFICATIONS

Tape: Cassette tape (C-30, 60, 90)
 Track System: 4 track 2 channel
 Tape Speed: 4.75 cm/s
 Recording System: AC Bias, 57 kHz
 Erasing System: AC erase
 Frequency Response: Metal: 50 to 14,000 Hz
 Normal: 50 to 12,000 Hz
 S/N (Signal to Noise Ratio): 50 dB
 Distortion: 2%
 Motor: DC micromotor
 Cross Talk: 50 dB (Between tracks)
 30 dB (Between channels)
 Erase Ratio: 50 dB

Input Sensitivity and Impedance: Microphone: 0.3 mV, 3.3k ohms
 Headphone: 8 ohms to 300 ohms
 Output Impedance: 0.2% (WRMS)
 Wow and Flutter: 0.2% (WRMS)
 Fast Forward or Rewinding Time: 120 sec. (Using C-60)
 Semiconductors: ICs: 4
 Transistors: 9
 Diode: 2
 LED: 1
 Power Output: 30 mW + 30 mW (T.H.D. 10%)
 Power Supply: DC 3V ("AA" cell x 2 or IEC R6 x 2)
 Power Consumption: 160 mA (with no signal)
 Dimensions: 120(W) x 33.5(H) x 80(D) mm
 Weight: 320 g (with batteries)

CONNECTORS

System CP-90S/CP-900S		
Connector	Terminal	Input/Output
8P pin Connector	1	R signal input/output
	2	L signal input/output

BLOCK DIAGRAM

DISASSEMBLY

1. Cassette lid
Remove (A) (three) screws.

4. Main PC board
Remove (D) (three) screws.

2. Escutcheon
Remove (B) (five) screws.

5. Decoration metal
Remove (E) (two) screws.

3. Rear case
1) Remove (C) (four) screws.
2) Lift the record button side of the chassis a little and take out the chassis carefully.

6. Eject/counter holder
Remove (F) (two) screws.

ADJUSTMENT

Perform the following adjustments in the sequence stated after cleaning the head, pressure roller, and capstan with a head cleaning stick moisted in alcohol.

Step	Adjustment Item	Measuring Instrument and connection			Check Tape	Mode	Adjusted Position	Adjusted Value	Remarks
		Measuring Instrument	Input Terminal	Output Terminal					
1	Tape speed	• Frequency counter	—	Headphone socket	Tape speed adjustment tape (3,000 Hz)	Playback	Semivariable resistor in the motor PC board	3,005Hz ±10 Hz	Note 1
2	Head azimuth	• VTVM	—	Headphone socket	Head azimuth adjustment tape (10 kHz)	Playback	Azimuth adjusting screw	Output Max.	Note 2
3	Record bias	• VTVM	—	Both ends of R430R (10 Ω)	—	Record	RT401	3.7 mV	Note 3

Note:

- Adjust within 30 sec. after heat-running for more than 20 minutes.
- When the maximum values of both channels are different, adjust to the maximum value of the L channel. In this case, the difference between the maximum values of both channels should be within 2 dB.
- 1) Set the RIF switch to the "B" position in the recording mode.
2) Connect the VTVM to both ends of R430R (10Ω) and adjust RT401 so that the bias current is 3.7 mV.

INSPECTION OF MECHANISM

Item	Checking item	Reference value	Remarks	
1	Pressure of pressure roller	200 g ± 40 g	Note 1	
2	Take-up torque	30 ~ 65 g.cm	Measure in cassette torque meter	
3	Fast forward torque	55 g. cm or more		
4	Rewind torque	55 g. cm or more		
5	Back tension torque	Take-up	2 g. cm or less	Measure without tape counter
		Supply	4.5 g. cm or less	
6	Button operation force	Play button	0.3 kg or less	Measure without leaf switches (REC, Power)
		Fast forward button	0.8 kg or less	
		Rewind button	0.5 kg or less	
		Stop button	0.5 kg or less	
		Record button	0.3 kg or less	
7	Flywheel thrust gap	0.1 ~ 0.2 mm		

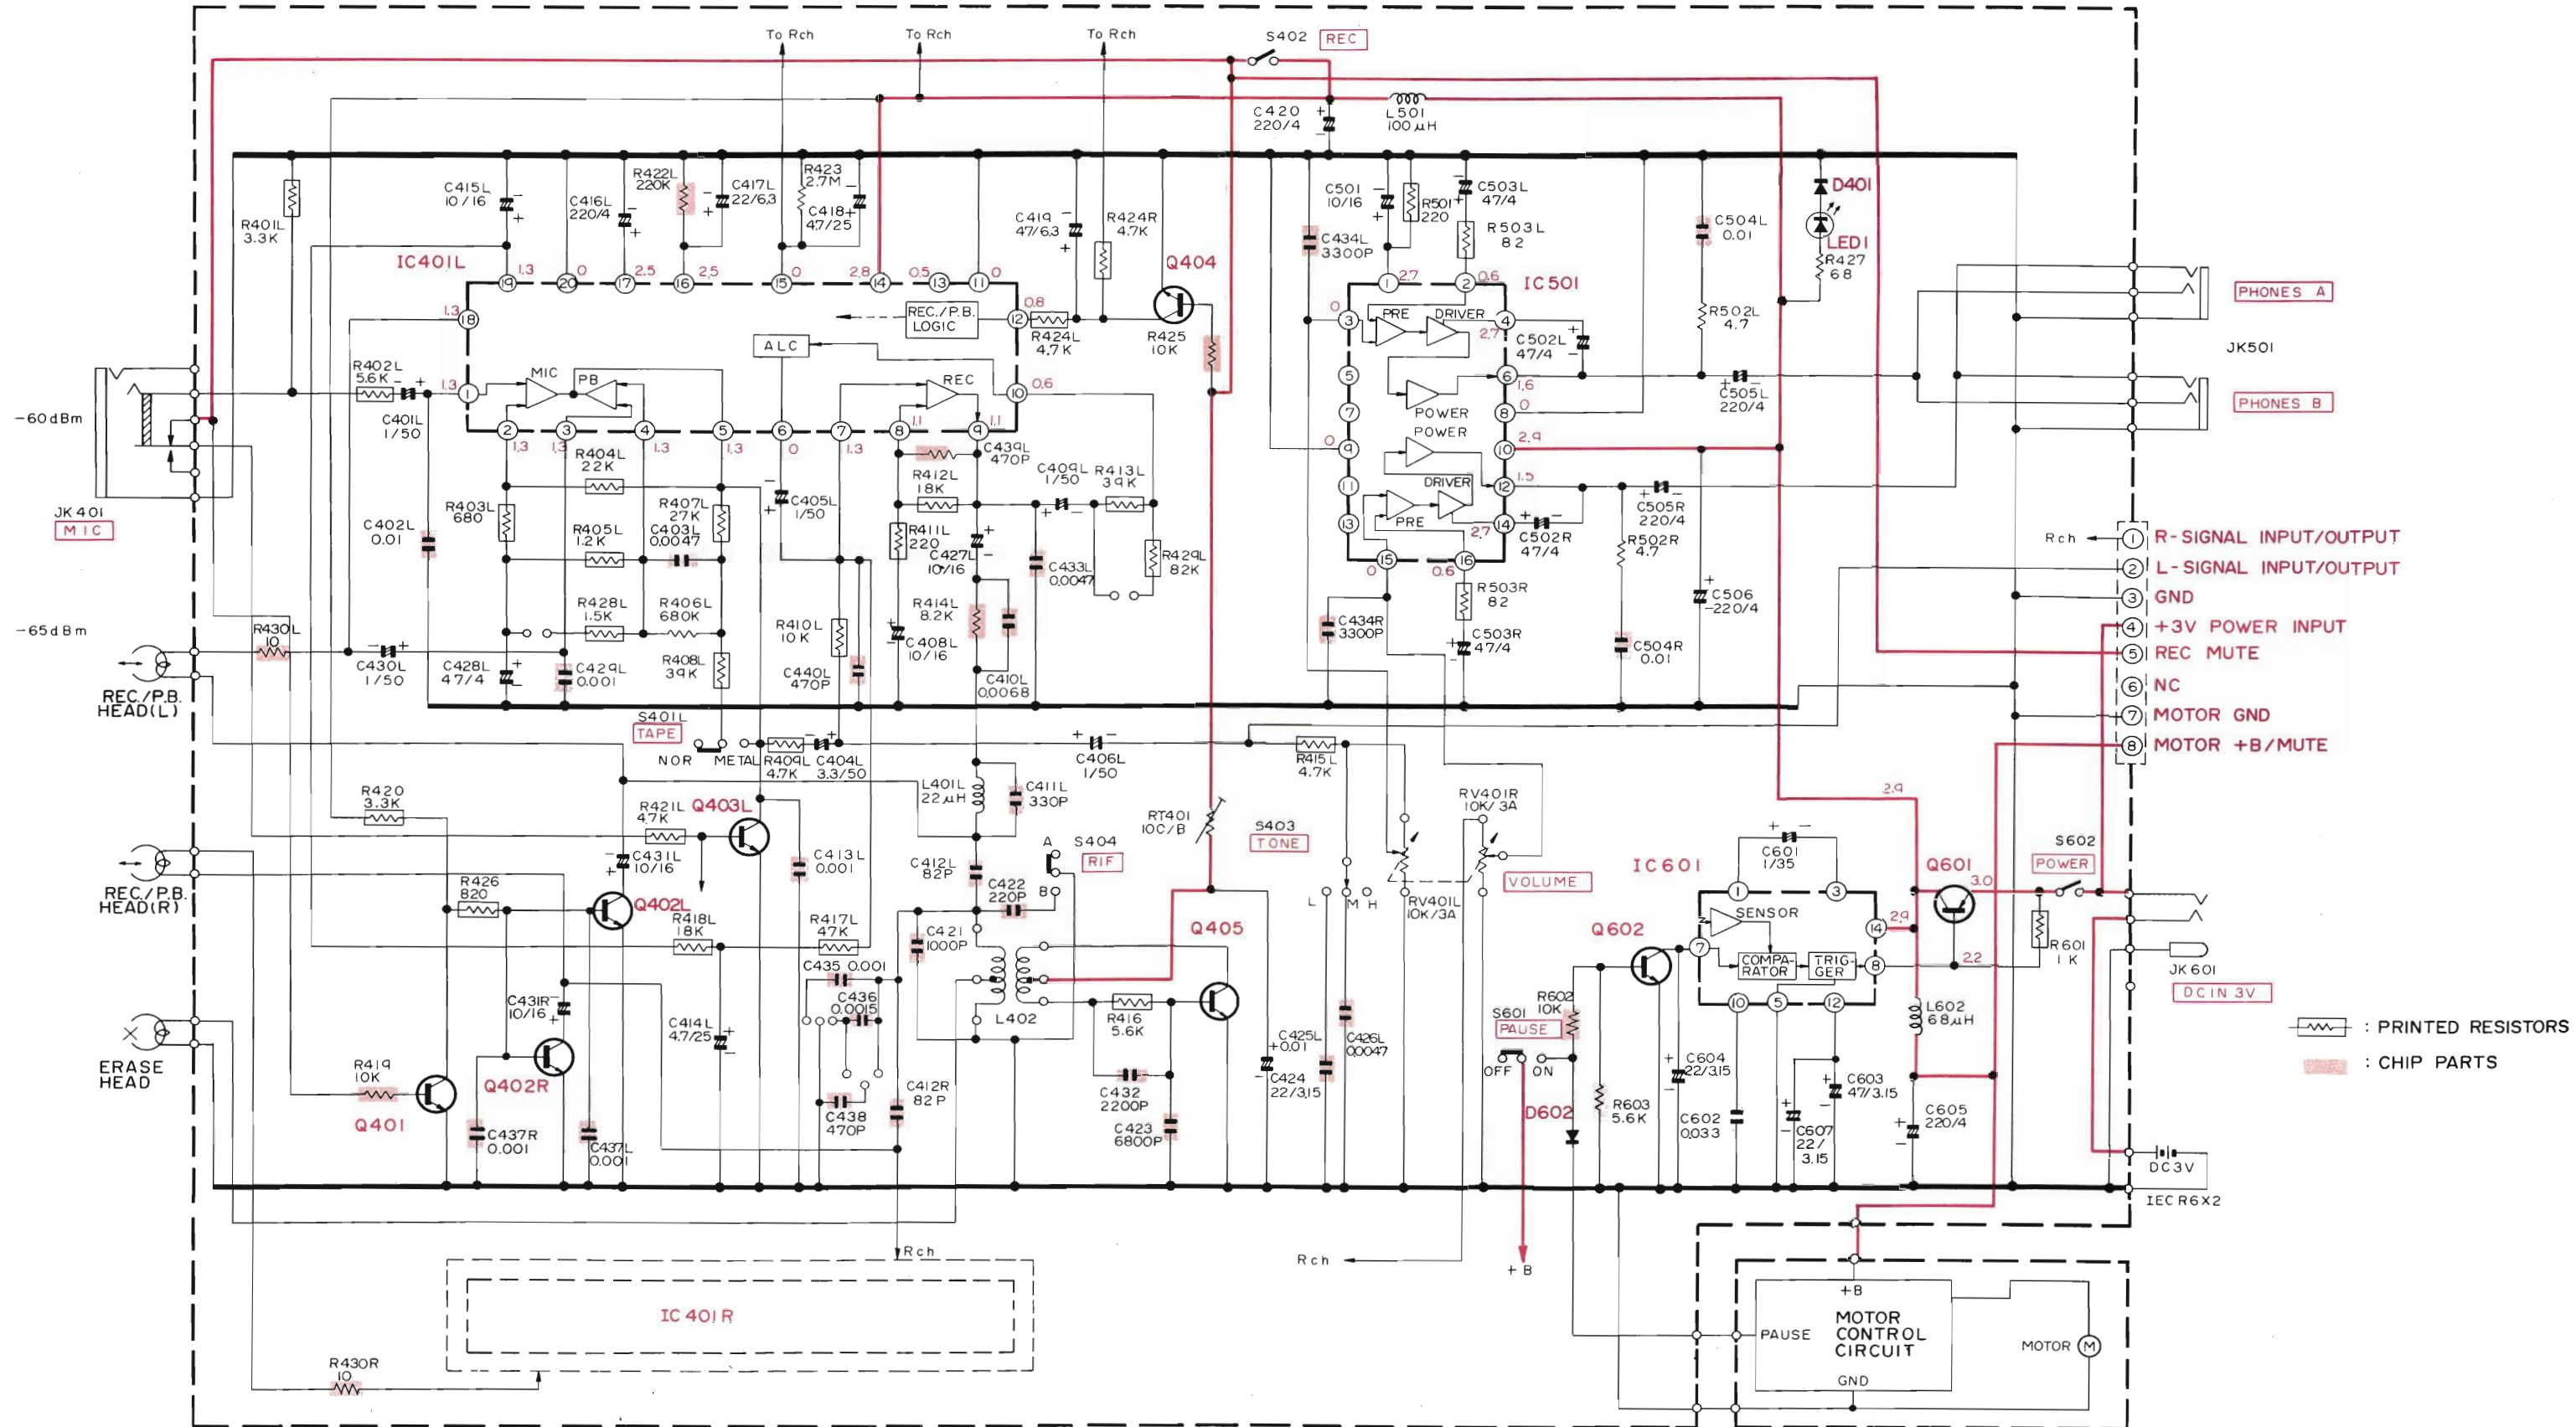

Note:

- Set this unit in the playback mode and press the pressure roller in the direction of the arrow using a fan type tension gauge, and measure the pressure when the pressure roller is released from the capstan.

EXPLODED VIEW (Mechanism - SR - 1A)

LUBRICATION

Lubricate one or two drops of oil to rotating point or lubricate grease to sliding point. Lubricate the respective parts listed once every 1000 hours or once a year under normal conditions of use. Avoid oiling them excessively, or rotation may become irregular because of oil splashes.

Lubrication point		Oil or Grease
Rotary section	Metal and metal	Pan motor oil (10W-40)
	Mold and metal	Sonic slider oil (#1600)
Sliding section	Metal and metal	Hitasol (MO-138)
	Mold and mold Mold and metal	Floil (GB-TS-1)
Spring resonance prevention		Floil (GB-TS-1)

Note: Components marked without numbers in this drawing are not specified as replacement parts.

ERASE HEAD REPLACEMENT

Replace the erase head according to the procedure shown below.

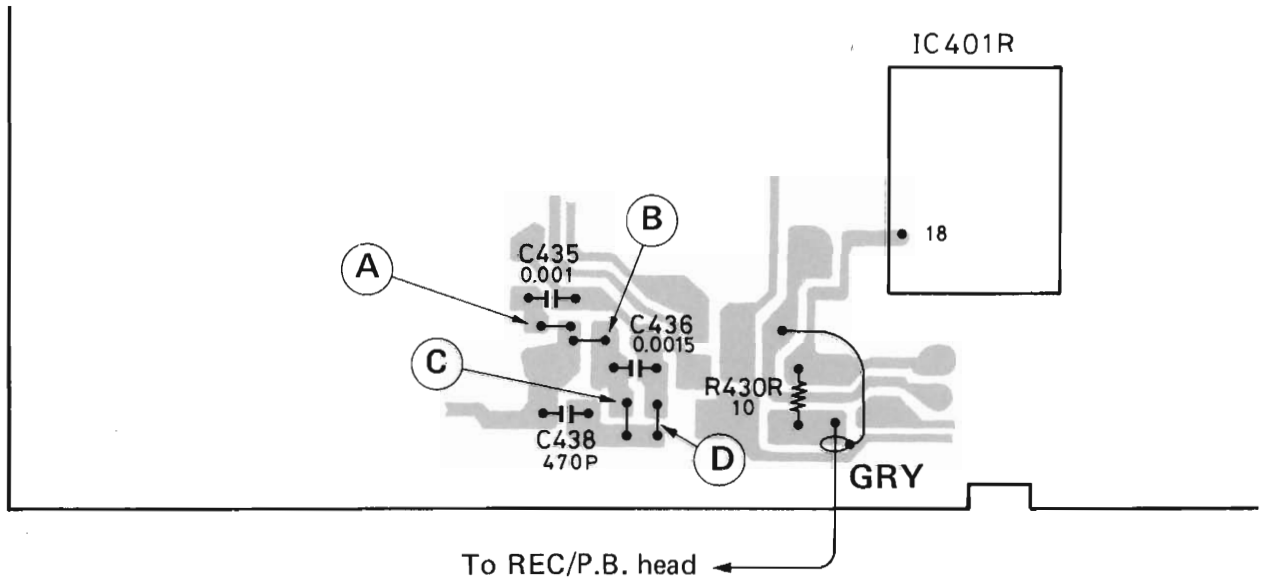

1. Replace the erase head with the new one specified as replacement parts.

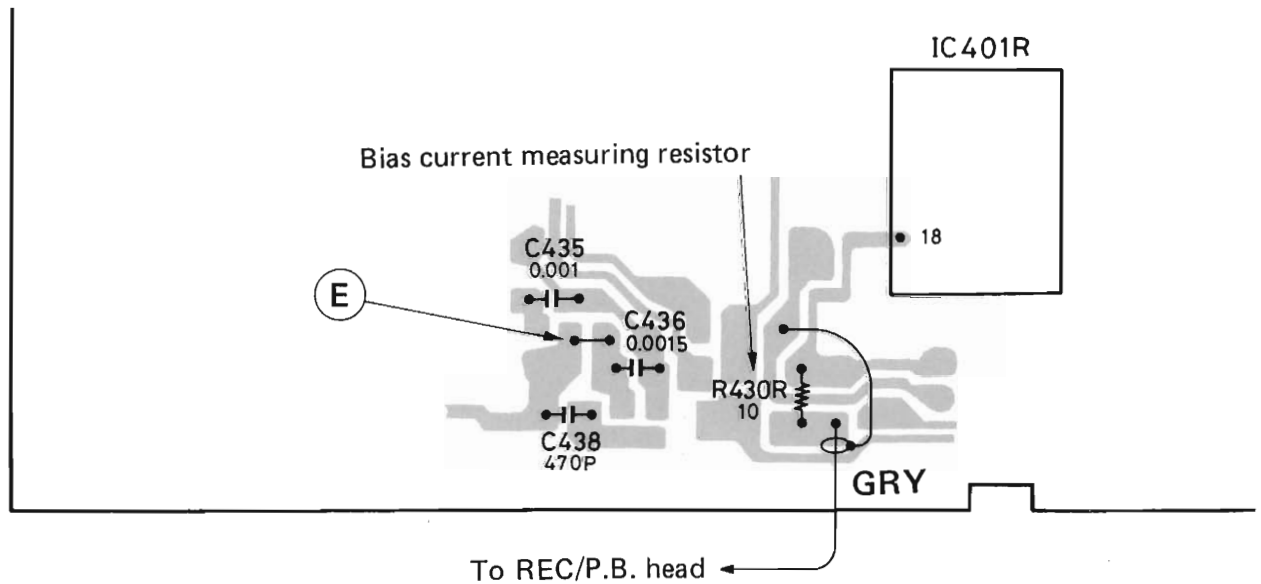

Erase heads in mass production products: Red, Blue or Black marking

Erase heads as replacement parts: No marking

2. Unsolder sections (A), (B), (C) and (D) shown below.

3. Solder section (E) shown below.

4. Re-adjust the record bias current according to Step 3 in page 58 "ADJUSTMENT".

DOLBY /GRAPHIC EQUALIZER CP-91EQ

DOLBY NR SWITCHES

GRAPHIC EQUALIZER CONTROLS

SPECIFICATIONS

7. PAUSE SWITCH
8. TAPE SELECT SWITCH
9. OPERATION/BATTERY INDICATOR

SPECIFICATIONS

Tape: Cassette tape (C-30, 60, 90)
 Track System: 4 track 2 channel stereo
 Tape Speed: 4.75 cm/s
 Frequency Response: Normal: 50 to 12,000 Hz
 Metal: 50 to 14,000 Hz
 S/N (Signal to Noise Ratio): 50 dB
 Cross Talk: 50 dB (Between tracks)
 30 dB (Between channels)
 Distortion: 2%

Wow and Flutter: 0.2% (WRMS)
 Output Impedance: Headphones: 8 ~ 300 ohms
 Power Output: 30 mW + 30 mW (T.H.D. 10%)
 Power Supply: DC 3V ("AA" cell or IEC R6x2)
 Current Consumption: 160 mA (with no signal)
 Semiconductors: 4 ICs, 2 transistors, 2 diode, 1 LED
 Motor: DC micromotor
 Dimensions: 120(W) x 33.5(H) x 80(D) mm
 Weight: 320 g (with batteries)

BLOCK DIAGRAM

DISASSEMBLY

1. Cassette lid

Remove (A) (three) screws.

4. Main PC board

Remove (D) (three) screws.

2. Escutcheon

Remove (B) (five) screws.

5. Decoration metal

Remove (E) (two) screws.

3. Rear case

Open the battery lid and remove (C) (four) screws. Then take out the chassis from the rear case by carefully lifting the tape selector side of the chassis.

6. Eject/counter holder

Remove (F) (two) screws.

ADJUSTMENT

Perform the following adjustments in the sequence stated after cleaning the head, pressure roller, and capstan with a head cleaning stick moistened in alcohol.

Step	Adjustment Item	Measuring Instrument and Connection			Check Tape	Mode	Adjusted Position	Adjusted Value	Remarks
		Measuring Instrument	Input Terminal	Output Terminal					
1	Tape speed	• Frequency counter	—	Head-phone socket	Tape speed test tape (3,000Hz)	Playback	Semivariable resistor in the motor PC board	3,005Hz ±10Hz	Note 1
2	Head azimuth	• VTVM	—	Head-phone socket	Head azimuth test tape (10kHz)	Playback	Azimuth adjusting screw	Output Max.	Note 2

Note:

- Adjust within 30 sec. after heat-running for more than 20 minutes.
- When the maximum values of both channels are different, adjust to the maximum value of the L channel. In this case, the difference between the maximum values of both channels should be within 2 dB.

INSPECTION OF MECHANISM

Item	Checking item	Reference value	Remarks	
1	Pressure of pressure roller	200 g ± 40 g	Note 1	
2	Take-up torque	30 ~ 65 g.cm	Measure in cassette torque meter	
3	Fast forward torque	55 g.cm or more		
4	Rewind torque	55 g.cm or more	Measure without tape counter	
5	Back tension torque	Take-up		2 g. cm or less
		Supply	4.5 g.cm or less	
6	Button operation force	Play button	0.3 kg or less	Measure without leaf switch (Power)
		Fast forward button	0.8 kg or less	
		Rewind button	0.5 kg or less	
		Stop button	0.5 kg or less	
7	Flywheel thrust gap	0.1 ~ 0.2 mm		

Note:

- Set this unit in the playback mode and press the pressure roller in the direction of the arrow using a fan type tension gauge, and measure the pressure when the pressure roller is released from the capstan.

LUBRICATION: Refer to CP-90DEX
