SAFETY PRECAUTION

The following precautions should be observed when servicing.

- Since many parts in the unit have special safety related characteristics, always use genuine Hitachi's replacement parts. Especially critical parts in the power circuit block should not be replaced with other makers. Critical parts are marked with Δ in the schematic diagram and circuit board diagram.
- Before returning a repaired unit to the customer, the service technician must thoroughly test the unit to ascertain that it is completely safe to operate without danger of electrical shock.

STEREO CASSETTE TAPE DECK

July 1979

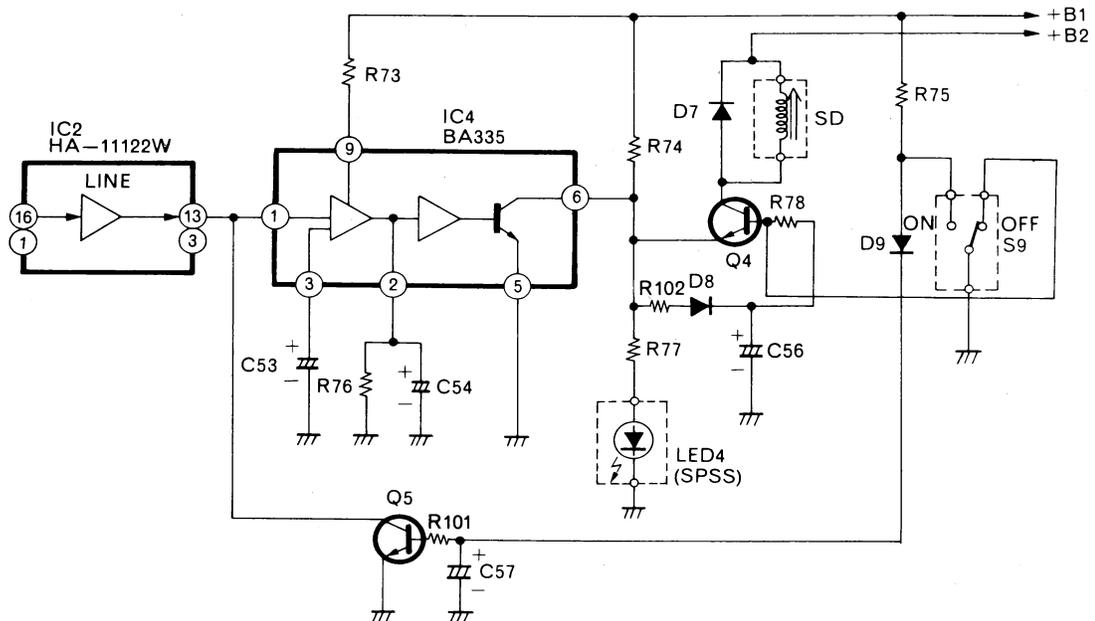

SPECIFICATIONS

Semi-conductors :	
IC's	6
Transistors	8 (For U, C) 9 (For W, BS, FS, AU)
Diodes	12 (For U, C) 14 (For W, BS, FS, AU)
Varistors	3
LED's	4
Track System :	4 track 2 channel
Tape :	Cassette tape (C-30, 60, 90)
Tape Speed :	4.75 cm/s
Recording System and Bias Frequency :	AC bias, 105 kHz
Erasing System :	AC erase
Erase Ratio :	65 dB or more (at 1 kHz)
Frequency Response :	
UD-ER (Normal)	25 Hz to 15 kHz 30 Hz to 14 kHz (± 3 dB) 30 Hz to 14 kHz*
UD-EX (CrO ₂)	25 Hz to 16 kHz 30 Hz to 15 kHz (± 3 dB) 30 Hz to 15 kHz*
FeCr	25 Hz to 15 kHz 30 Hz to 14 kHz (± 3 dB) 30 Hz to 14 kHz*
S/N (Signal to Noise Ratio) :	
Dolby NR OFF	56 dB (A weighted, Reference 3% T.H.D. UD-EX Tape) 56 dB*
Dolby NR ON	64 dB (A weighted, Reference 3% T.H.D. UD-EX Tape) 63 dB*
Wow and Flutter :	0.05% (WRMS) 0.16%*
Input Sensitivity and Impedance :	
Microphone	0.35mV, 300 ohms to 5 kohms
Line in	60mV, 50 kohms or more
DIN (Record/Playback)	0.35mV, 3 kohms (For W, BS, FS, AU) 500mV or more
Output Level :	
Output Load Impedance :	
Line out	50 kohms or more
DIN (Record/Playback)	50 kohms or more (For W, BS, FS, AU)
Headphone	8 ohms to 2 kohms
Distortion :	Less than 1.5% (1 kHz, -3 dB)
Cross Talk :	
Between tracks	60 dB or more (at 1 kHz)
Between channels	30 dB or more (at 1 kHz)
Power Supply :	AC 220V, 50 Hz (For FS) AC 120V, 60 Hz (For U, C) AC 240V, 50 Hz (For BS, AU) AC 100 to 110V/115 to 127V/200 to 220V/230 to 250V, 50/60 Hz (For W)
Power Consumption :	11W
Dimensions :	110(H)×435(W)×267(D)mm
Weight :	5.7 kg
Motor :	Electronically controled DC motor
Heads :	Record/Playback head×1 Erase head×1

* According to DIN 45 500

DESCRIPTION OF NEW CIRCUIT

SPSS (Self Program Search System) function

The SPSS function detects non-recorded sections between tunes recorded on the tape, starts again from the beginning of the tune being played back at present or play back any tune if the FF button or REW button is pressed together with the SPSS button.

The audio signal from terminal ⑬ of IC2 is supplied to terminal ① of IC5 for level detection. When terminal ① of IC5 is at more than -35 dB, the output terminal ⑥ is set to "Hi", and when it is less than -35 dB, the output terminal ⑥ is set to "Lo". C56 is charged during "Hi", D18 lights and Q4 remains in the OFF mode.

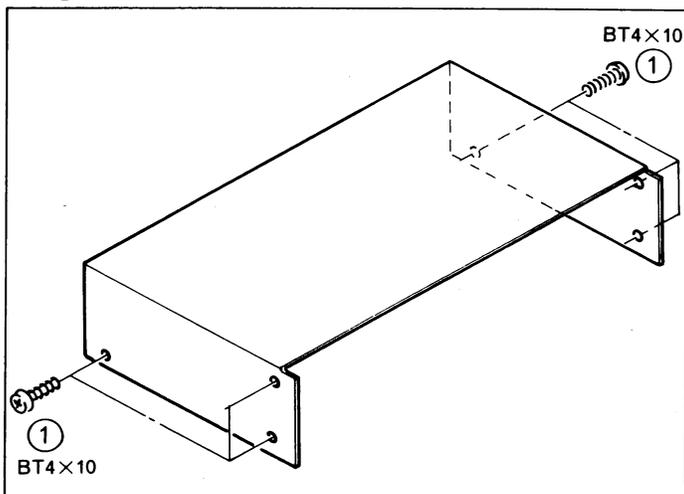

When terminal ⑥ of IC5 is set to "Lo", C56 rapidly

discharges, voltage is applied to the base of Q4, Q4 becomes conducting and the solenoid operates. Q5 mutes the audio signal to prevent solenoid from operating in the PLAY and REC modes. It also works to delay the timing of the output change when the input rapidly drops so that the unit does not stop operation at short low level (less than -35 dB) periods when searching for a tune. This delay time is set by R76 and C54, connected to terminal ② of IC5 with a min. of 0.11 sec and a max. of 0.3 sec. (This means that the low signal level time between tunes during PLAY is approx. 3 sec.)

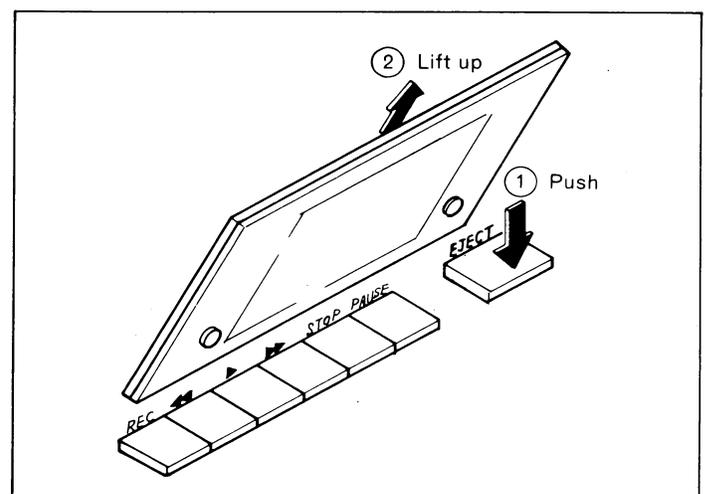

DISASSEMBLY

1. Top cover

- ① 6 screws

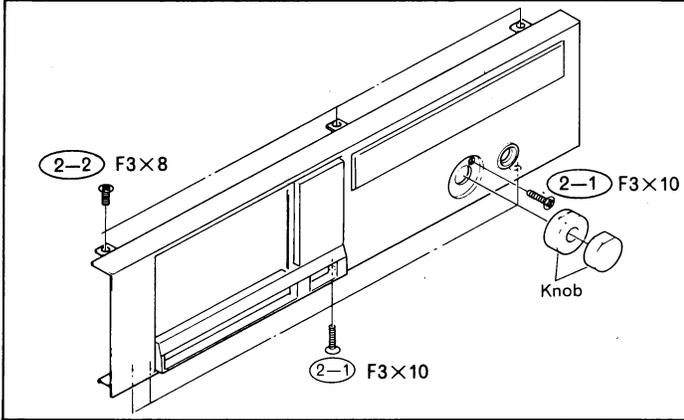

2. Cassette lid

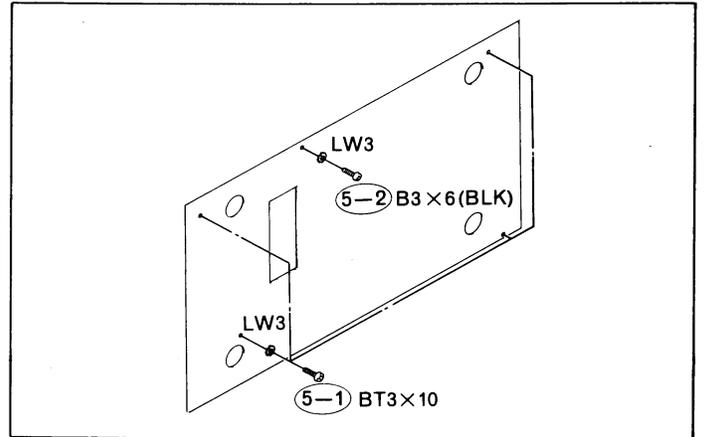

3. Front panel

- 1) Top cover (See item 1)
- 2) Cassette lid (See item 2)
- 3) (2-1) 5 screws
- 4) (2-2) 3 screws
- 5) 2 Knobs

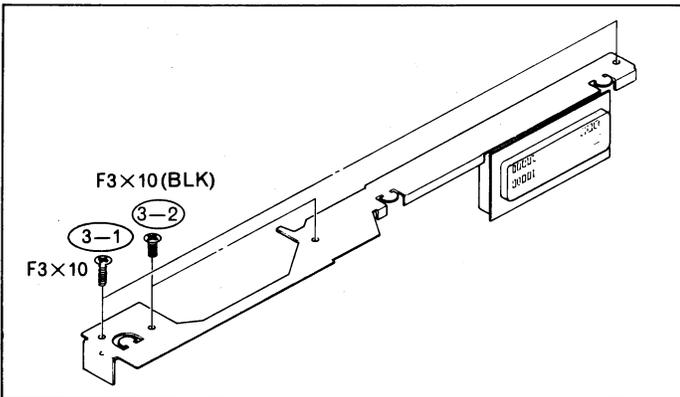

6. Bottom cover

- 1) (5-1) 4 screws

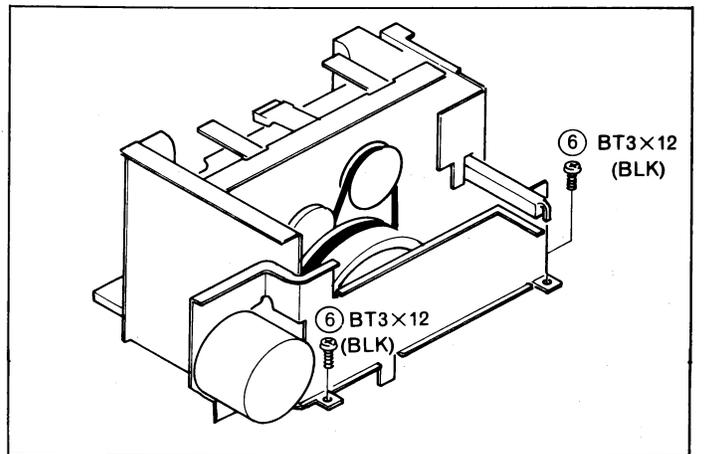

4. Chassis

- 1) Front panel (See item 3)
- 2) (3-1) 2 screws
- 3) (3-2) 2 screws

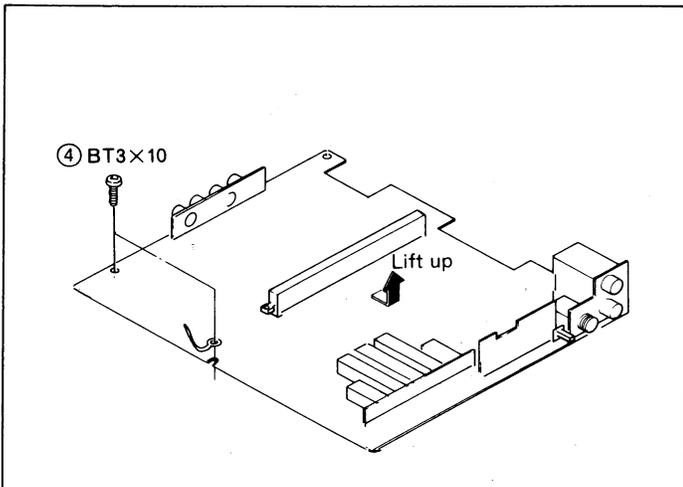

7. Cassette chassis

- 1) Chassis (See item 4)
- 2) (5-2) 1 screw (See item 6)
- 3) (6) 2 screws

5. Main PC board

- 1) Chassis (See item 4)
- 2) (4) 2 screws

ADJUSTMENT

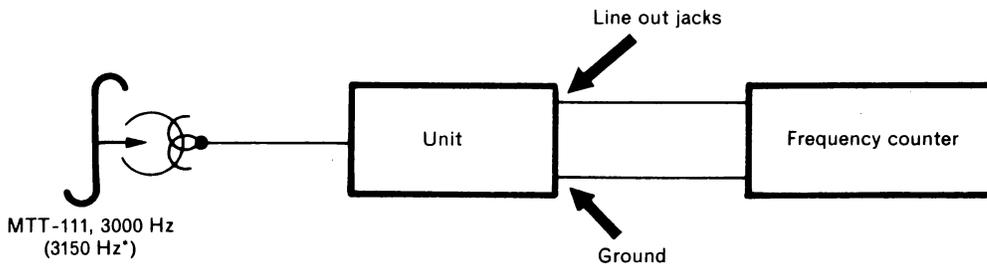

Perform the following adjustments in the sequence stated after cleaning the head, pressure roller, and capstan with a head cleaning stick moistened in alcohol. Also, unless specially indicated otherwise, set the switches and controls to the positions indicated in the table.

Symbol No.	Switches and Controls	Position	Symbol No.	Switches and Controls	Position
S2	Input select switch	LINE	S4	Dolby N R switch	OFF
S3-1~S3-3	Tape select switches	UD-ER (NOR)	RV1L, R	Record level controls	Maximum
S8	Rec mute switch	OFF			

1. Tape speed adjustment

Setting : Playback mode

Connection :

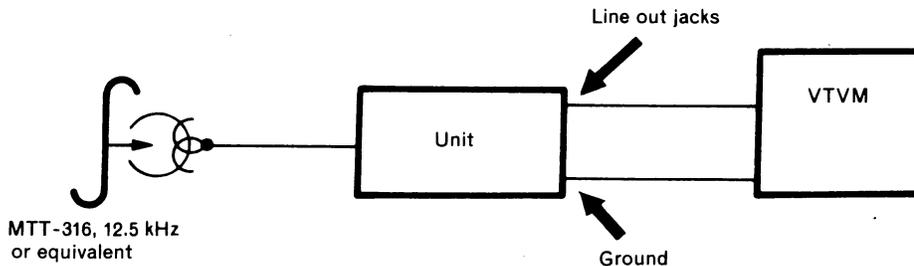

Adjustment : Warm up the unit for approximately 20 minutes ; then playback test tape MTT-111, 3000 Hz (3150 Hz*) and measure the speed deviation with a frequency counter. If required, adjust the semi-variable resistor on the motor for a reading of 3000 Hz $\begin{matrix} +30 \\ -10 \end{matrix}$ Hz (3150 Hz*). Carry out the measurement at the middle of the tape.

* According to DIN 45 500.

2. Head azimuth adjustment

Setting : Playback mode

Connection :

Adjustment : Playback a test tape (MTT-316, 12.5 kHz or equivalent) and adjust the azimuth adjustment screw for maximum output.

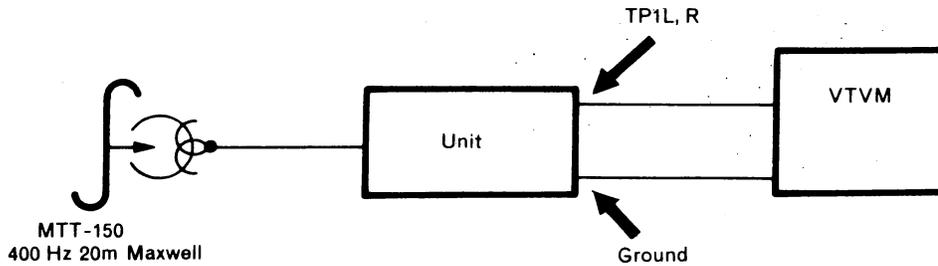

Note :

When the maximum values of both channels are different, tune to the maximum value of the L channel. In this case, the difference between the maximum values of both channels should be 2 dB or less.

3. Playback level (gain) and digital peak meter adjustment

Setting : Playback mode

Connection :

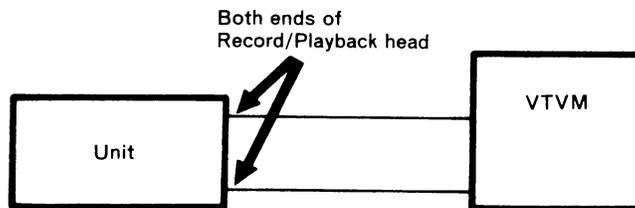

Adjustment : Playback a Dolby calibration tape (MTT-150, 400 Hz 20m Maxwell) and adjust RT1L, R so that the voltage of TP1L, R becomes 0.775V. Next, apply a 1 kHz signal to the LINE IN jacks and adjust the input so that the output at TP1L, R is 0 dBm (0.775V). Then, adjust RT3L, R so that the level indicator (0 dB) lamp lights.

4. Bias current adjustment

Setting : Recording mode

Connection :

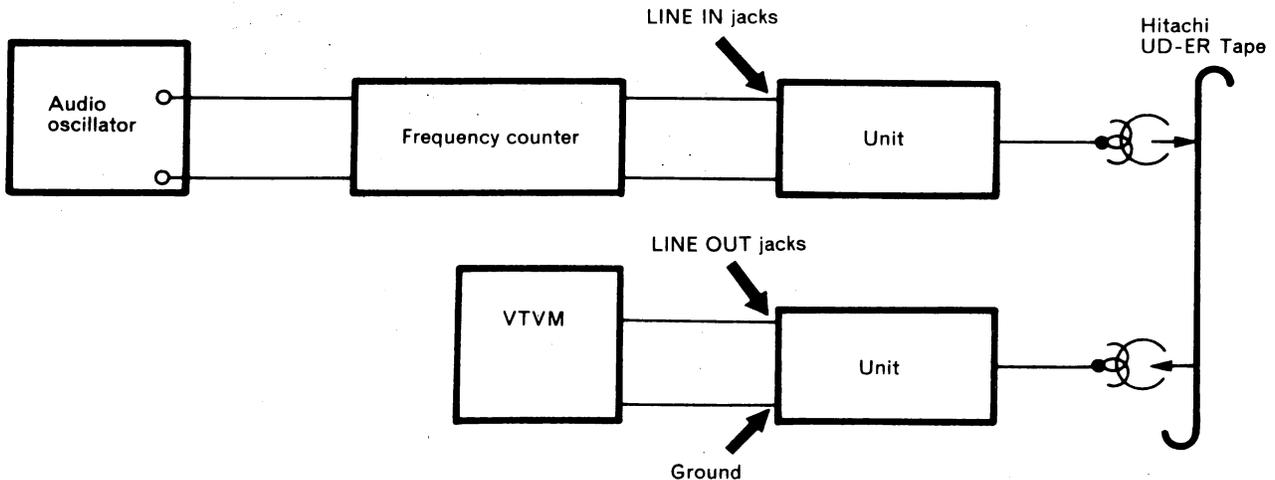

Adjustment : Set the record mode. Adjust RT4L, R so that the bias voltage of 12V is applied to the both ends of Record/Playback head.

5. Record/playback output level, frequency characteristics adjustment

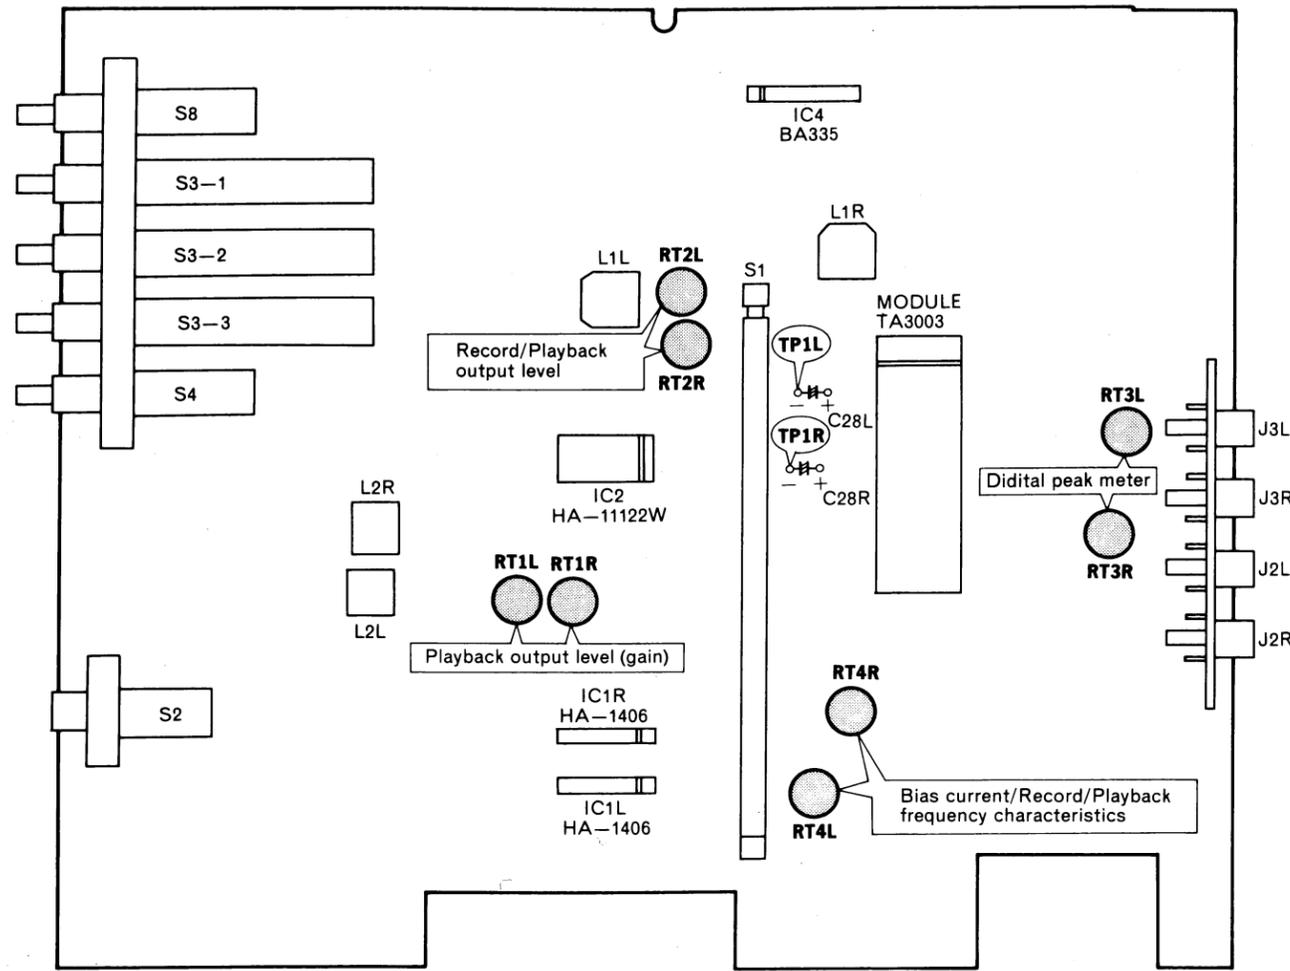

Setting : Recording/playback mode

Connection :

Adjustment : Record a signal of 1 kHz, -3 dB on a Hitachi UD-ER tape. Playback the tape and adjust RT2L, R for a playback output of -3 dB±1 dB. Next, record 1 kHz and 10 kHz signals at the level of 0 dB -20 dB. Playback the tape and adjust RT4L, R for an output difference within ±1 dB.

Adjustment Parts Location

Projection of REC/PLAY head during SPSS operation

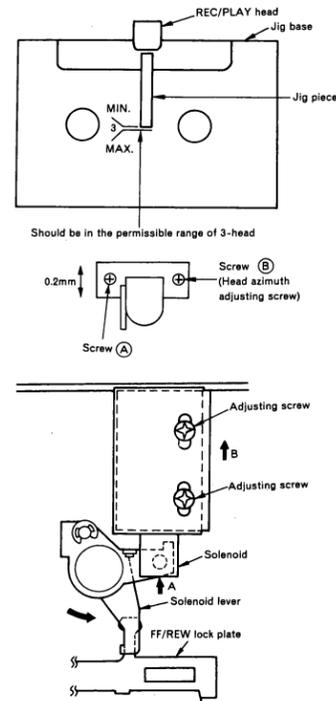

Mount the jig, press the FF/PLAY or REW/PLAY button simultaneously in the PLAY mode and check the projection of the REC/PLAY head by the same procedure as in the conventional REC/PLAY head projection check during PLAY. Use the jig, piece exclusively for D.R.P.S and the dimension of the marking-off line of the jig base, within the permissible range (within 0.4mm) for 3 heads.

Reference : REC/PLAY head projection within the permissible 3-head range using the exclusively jig piece is 1.7 to 2.1mm.

Adjust the adjusting screw (A), (B) when it is not in the above range. (Adjustment to maximum 0.2mm is possible by adjusting the forward and backward position of the head.)

Installation position of solenoid

Move the solenoid in the direction of the arrow while the PLAY/REW or PLAY/FF buttons are locked. Fix the solenoid in the position where the REW or FF button is released at that time.

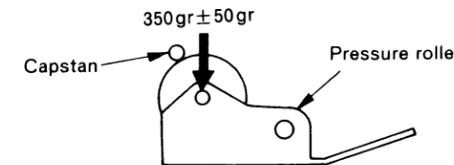

Inspection of mechanism

	Check item	Reference value	Remarks	
1.	Pressure of pressure roller	350gr ± 50gr	Note 1	
2.	Torque	Take-up	35 to 60gr-cm	Measure in playback mode
		FF	70 to 120gr-cm	Measure in FF mode
		Rewind	70 to 120gr-cm	Measure in REW mode
3.	Back-tension	Take-up side	Less than 6gr-cm	Values when installing the counter
		Supply side	1 to 3gr-cm	_____
4.	Flywheel thrust gap	0.05 to 0.5mm	_____	
5.	Pressure of take-up roller	120 to 180gr	Note 2	
6.	Brake torque	more than 15gr-cm	_____	

Note 1. Pressure of pressure roller

Set this unit in the playback mode and press the pressure roller in the direction of the arrow using a fan type tension gauge, and measure the pressure when the pressure roller is released from the capstan.

Note 2. Pressure of take-up roller

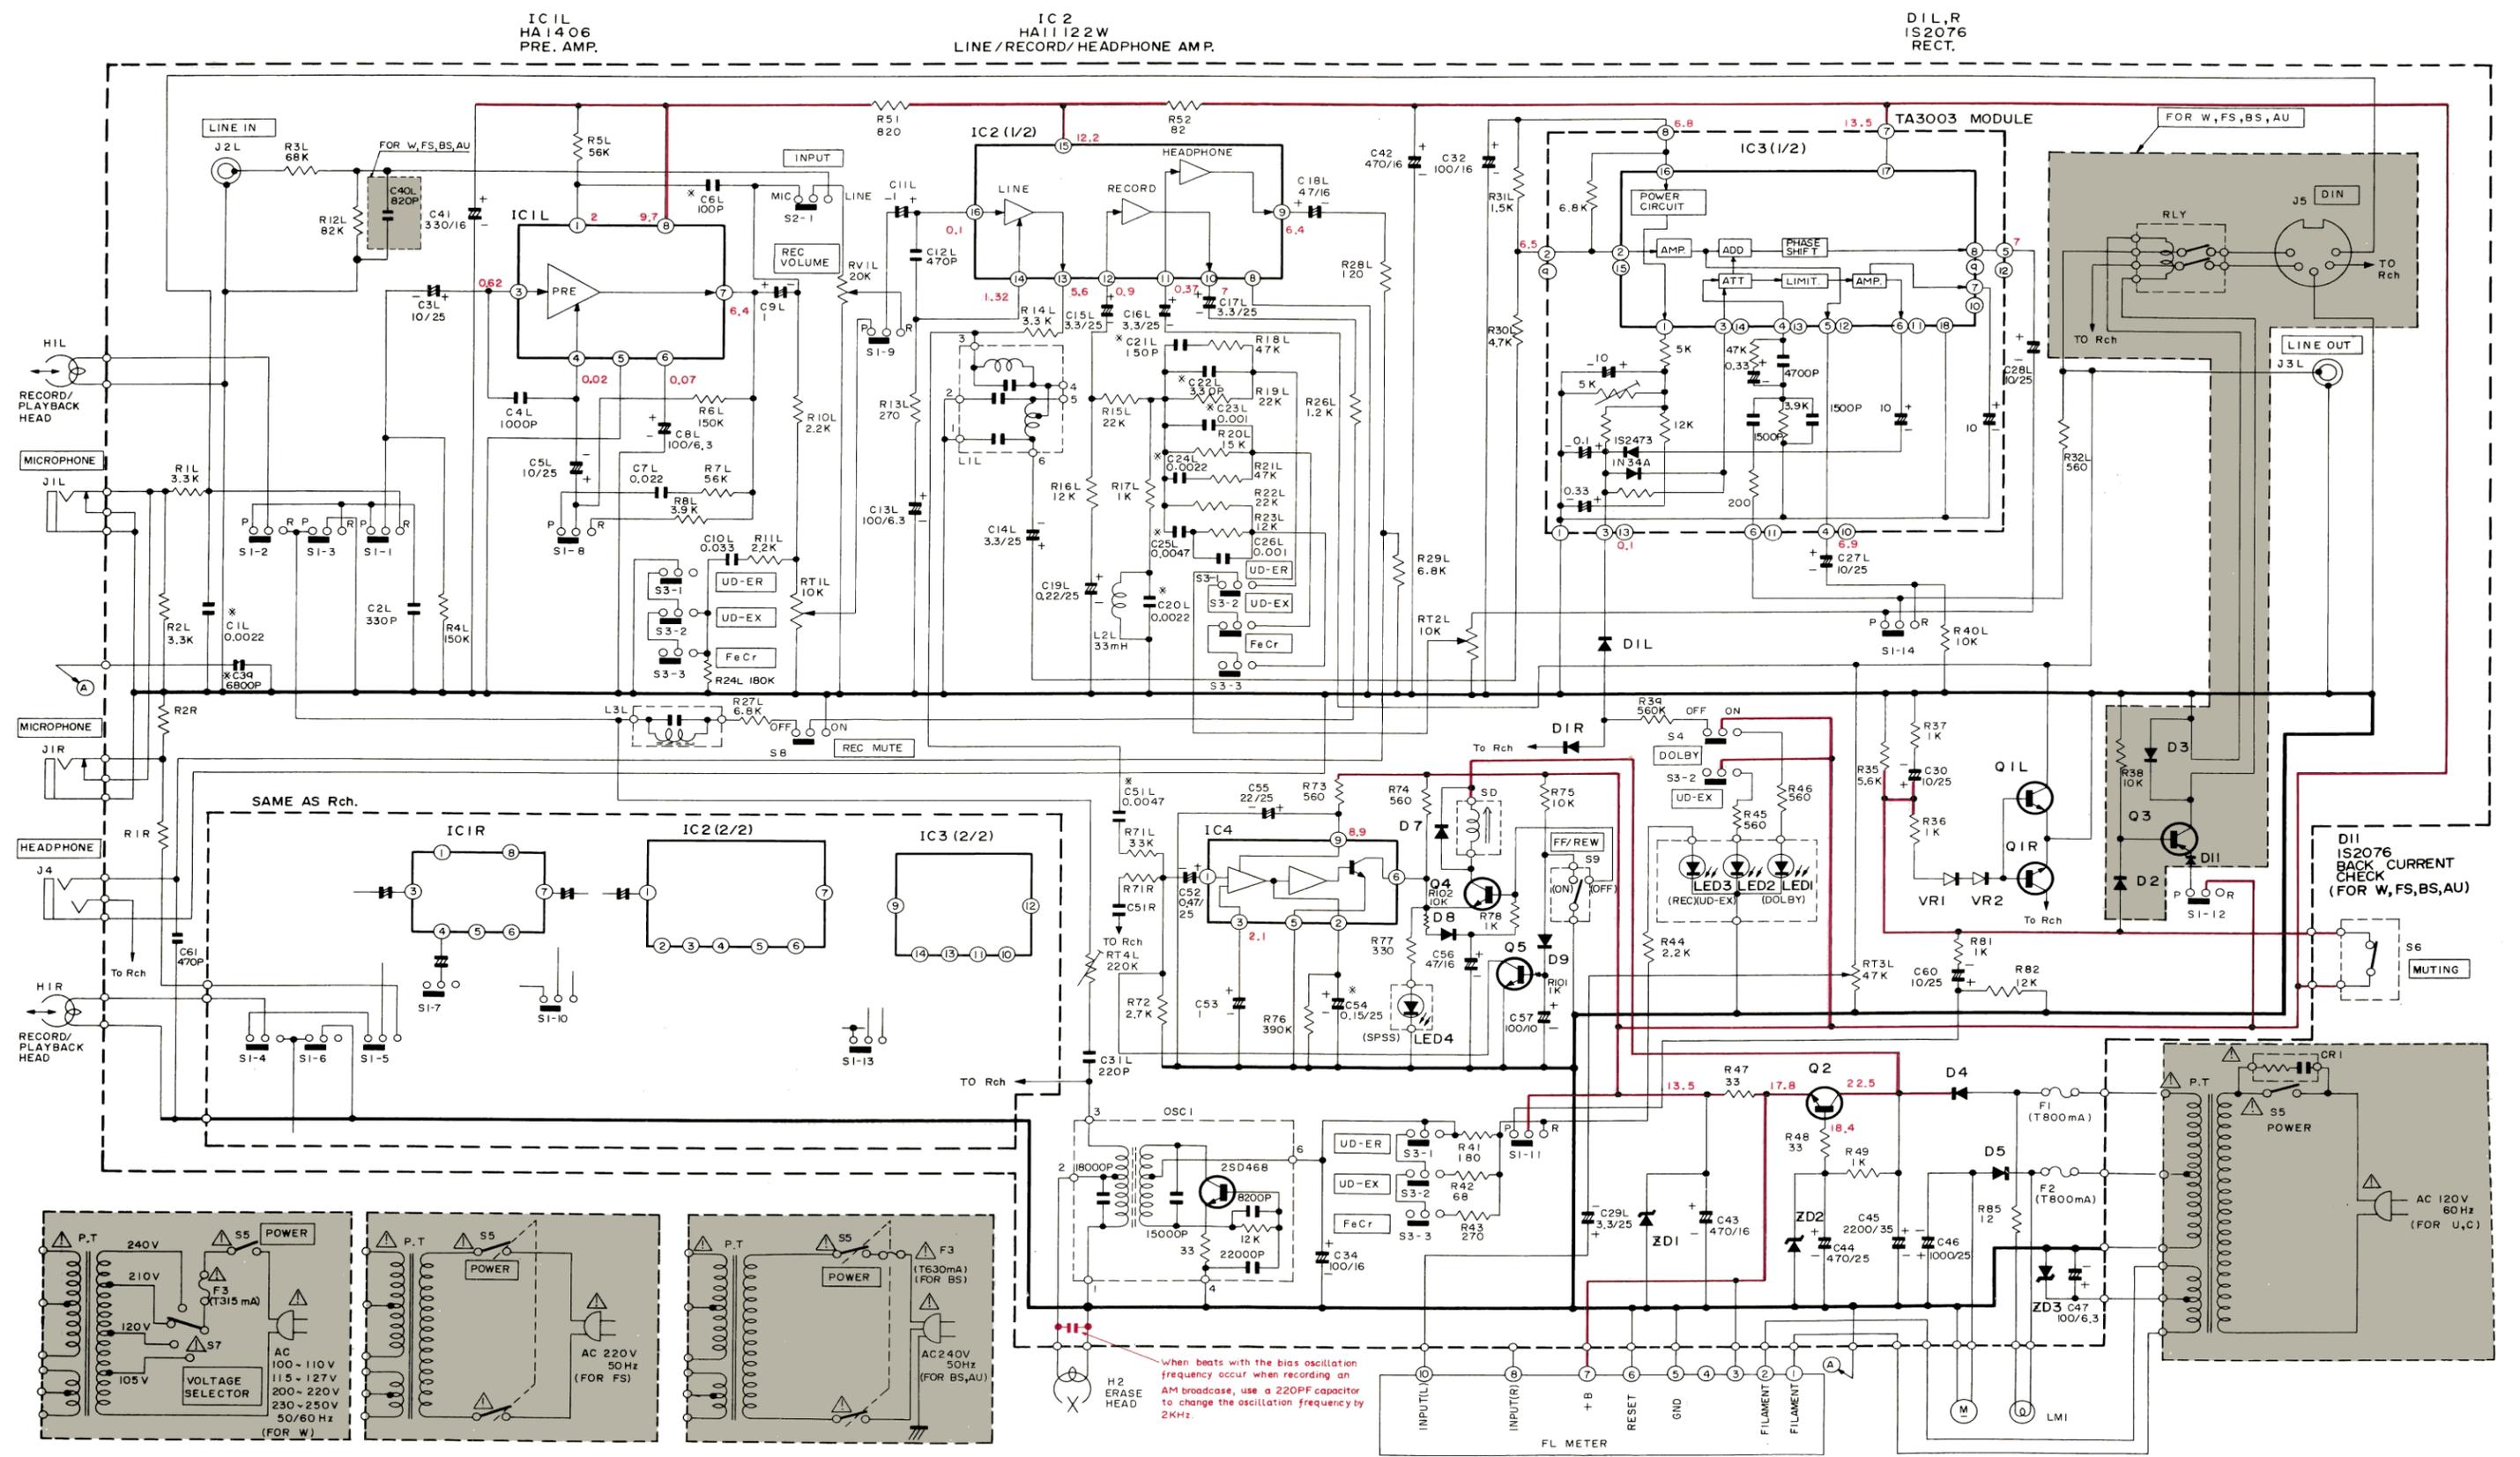

LUBRICATION

Lubricate one or two drops of machine oil to rotating point or lubricate grease to sliding point. Lubricate the respective parts listed below once every 1000 hours or once a year under normal conditions of use. Avoid oiling them excessively, or rotation may become irregular because of oil splashes.

Lubrication	
Motor shaft bearing	Oil
Capstan shaft bearing	
Pressure roller bearing
