Reference 1300a Basic Specifications

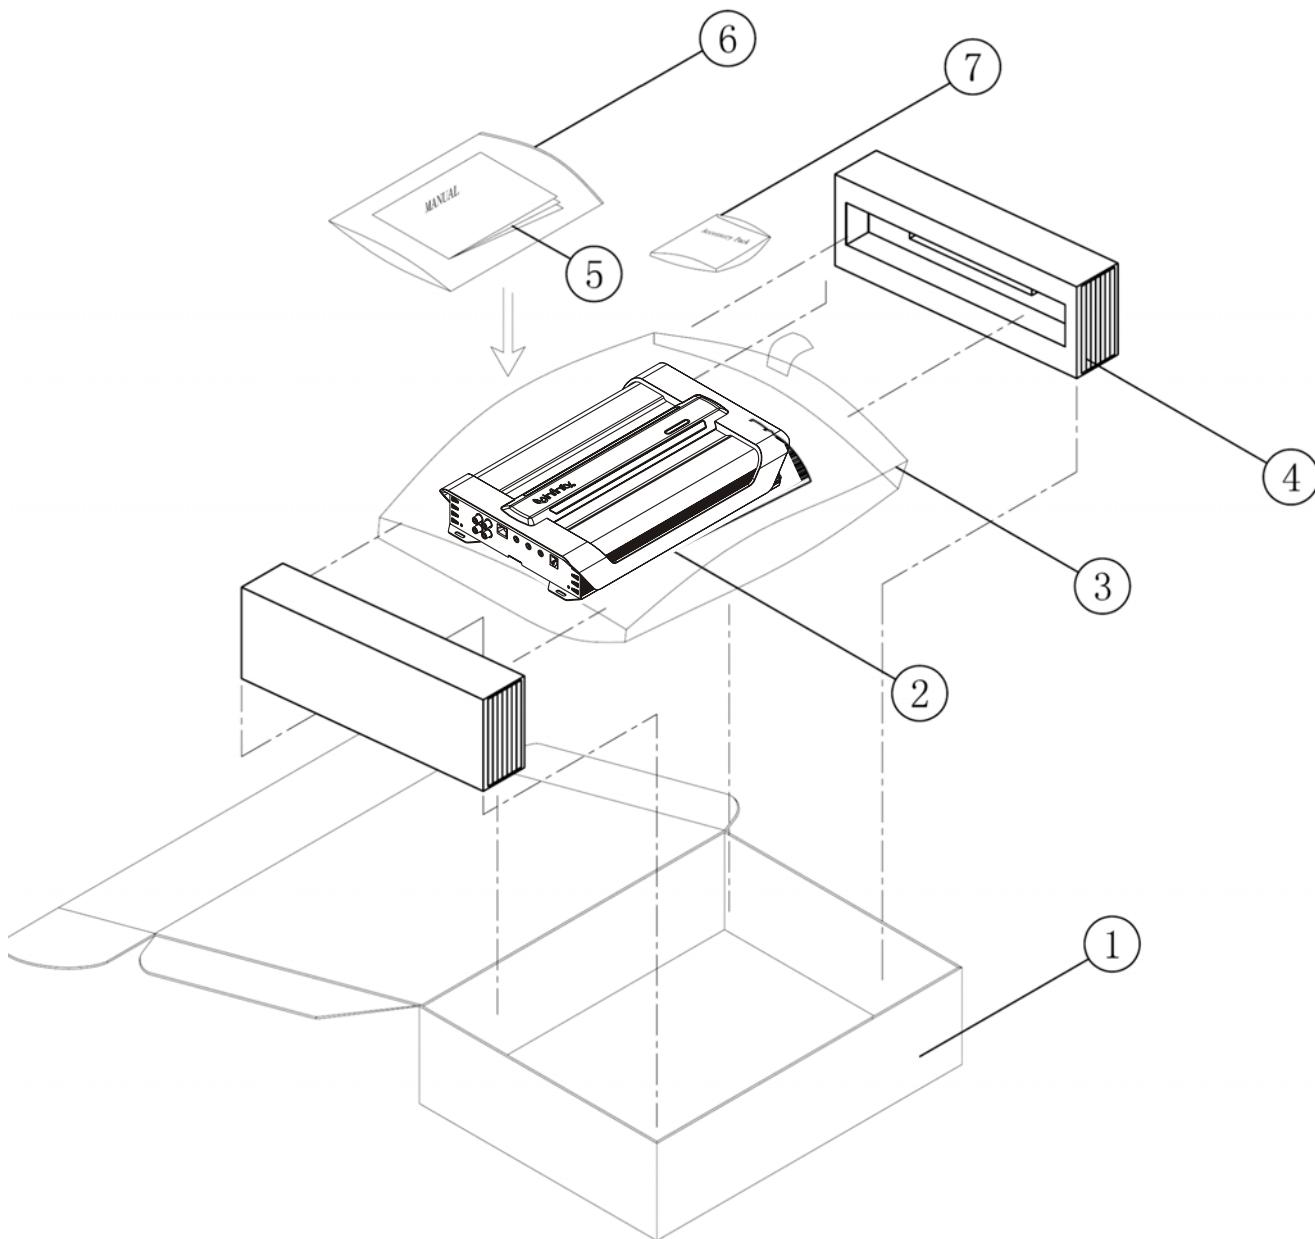

Output Power:	200W RMS x 1 @ 4 ohms; ≤1% THD + N
(14.4 VDC)	300W RMS x 1 @ 2 ohms; ≤1% THD + N
Signal-to-noise ratio:	85dBA (reference 1W into 4 ohms)
Dynamic power:	342W channels @ 2 ohms
Effective damping factor:	6.364 @ 4 ohms
Frequency response:	11Hz – 330Hz (-3dB)
Maximum input signal:	6.0V
Maximum sensitivity:	100mV
Output regulation:	.11dB @ 4 ohms
Dimensions (L x W x D):	14-3/16" x 9" x 2-11/16" (361mm x 229mm x 69mm)
Fuse:	3 x 20A

Infinity continually strives to update and improve existing products, as well as create new ones. The specifications and details in this and related Infinity publications are therefore subject to change without notice.

INFINITY REFERENCE 1300a AMPLIFIER SPECIFICATIONS

TEST VOLTAGE	14.4 +0.1V		
Specification	Rating	Unit	Remarks
Power Output 4ohm loads @50Hz (stereo mode)for each . ch @<1.0%THD (Unit:W)(LPF=22K)	≥200W x 1	Watts

APPLICATIONS – 1300a AND 1600a

The Reference subwoofer amplifiers are single-channel amplifiers. There are two sets of terminals to make it easy to connect multiple woofers. Either set of (+/-) terminals may be used when connecting woofers.

To the right are four application diagrams to help plan your subwoofer system installation.

NOTE: For simplicity, Figures 3 and 4 do not show power, remote and input connections.

Subwoofers or voice coils connected in series.

Subwoofers or voice coils connected in parallel.

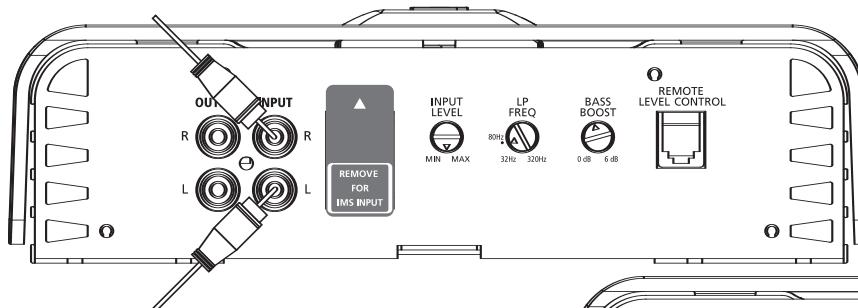

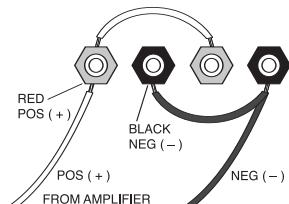

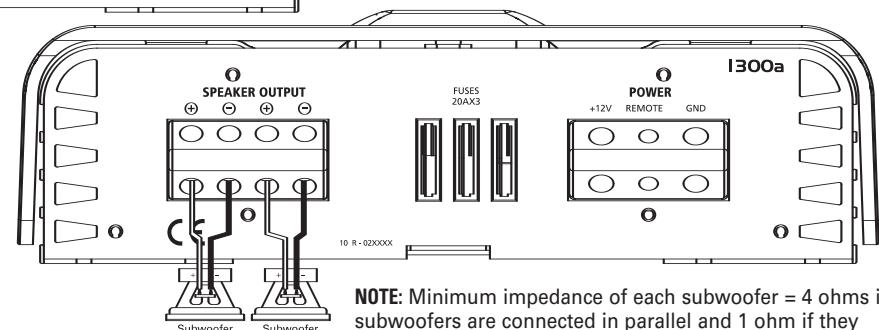

Figure 3. Reference 1300a or 1600a amplifier with two woofer connections.

NOTE: Minimum impedance of each subwoofer = 4 ohms if subwoofers are connected in parallel and 1 ohm if they are connected in series.

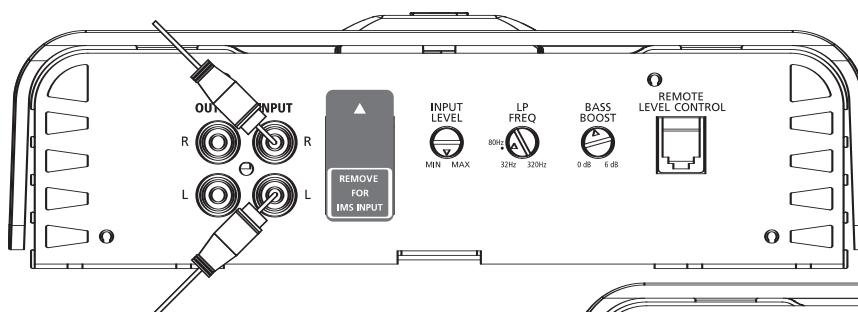

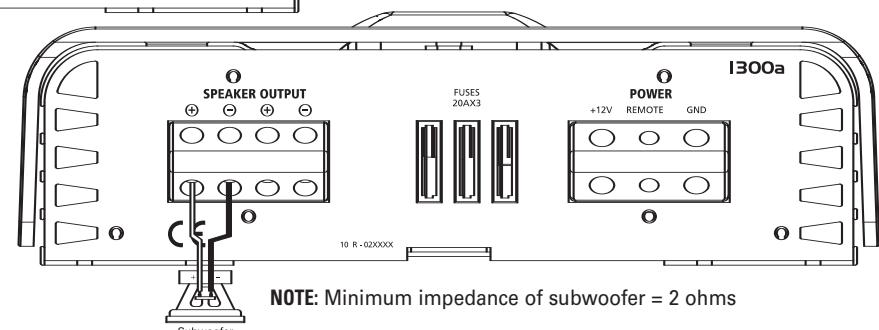

Figure 4. Reference 1300a or 1600a amplifier with one woofer connection.

NOTE: Minimum impedance of subwoofer = 2 ohms

INSTALLATION AND SETUP

Refer to the illustrations on the previous pages for control location.

Reconnect the (–) negative lead to the vehicle's battery. Apply power to the audio system and play a dynamic music track.

SETTING THE CROSSOVER(S)

Determine your system plans and set the crossover-mode switch accordingly. If your system design does not include a subwoofer, set the crossover mode to FULL and skip to "Setting Input Sensitivity."

If your system includes a subwoofer, set the crossover mode to HP (high-pass) for your full-range speakers. Adjust the crossover frequency to limit bass, and provide increased system volume with less distortion.

Mode Switch:

Full: Allows a full-range signal through to the speakers; can be used with larger full-range speakers such as 6" x 9".

HP: Allows a high-pass signal through to the speakers; should be used with most loudspeakers (can protect your full-range speakers from being overdriven with low frequencies, one cause of speaker damage).

LP: Allows only bass to pass through to the speakers; should be selected when powering subwoofers.

High-Pass Filters: Initially set the crossover-frequency control midway. While listening to music, adjust the crossover for the least perceived distortion from the speakers, allowing them to reproduce as much bass as possible.

Low-Pass Filters: For subwoofers, choose the highest frequency that removes vocal information from the sound of the subwoofer.

If using the 475a to drive a subwoofer(s), set the crossover mode to LP (low-pass) on the channels connected to the subwoofer.

NOTE: The 1300a, 1600a and the subwoofer output of the 5350a are low-pass only and do not have a crossover-mode switch.

SETTING INPUT SENSITIVITY

- Initially turn the INPUT LEVEL control(s) to the minimum (counterclockwise) position.
- On the source unit, increase the volume control to 3/4 volume. Slowly increase the INPUT LEVEL control(s) toward three o'clock until you hear slight distortion in the music. Then reduce the INPUT LEVEL slightly until distortion is no longer heard.

NOTE: After the source unit is on, blue LEDs (on the top panel) will light, indicating the amplifier is on. If not, check the wiring, especially the remote connection from the source unit. Also refer to "Troubleshooting."

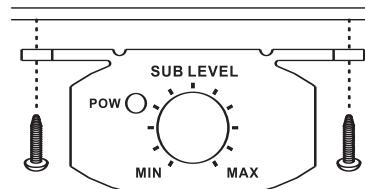

REMOTE LEVEL CONTROL

The 1300a, 1600a and 5350a include a remote level control. This will allow the subwoofer level to be adjusted from the listening position. Connect the remote level control using the RJ11 jack on the side of the amplifier. Install the control module in the front of the vehicle within easy reach of the driver. Both the underside of the dash and the center console are suitable locations.

UNDER-DASH MOUNTING

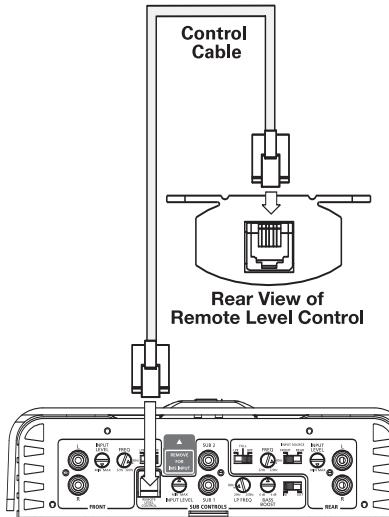

Select a mounting location that allows easy access to the control while driving. Using the REMOTE LEVEL control as a template, mark and drill holes in the mounting surface. Attach the REMOTE LEVEL control using the mounting screws provided (Figure 11).

Figure 11. Under-dash mounting of the REMOTE LEVEL control.

Route the cable behind the dash or other interior panels and under the carpet. Do not route the cable outside the vehicle. Connect the RJ11 cable between the RJ11 receptacle on the amp and the receptacle on the REMOTE LEVEL control (Figure 12).

Figure 12. REMOTE LEVEL control electrical connection.

SETTING THE BASS BOOST

The Bass Boost control will allow you to enhance the bass output of your system at 50Hz up to 6dB.

AUX OUTPUT

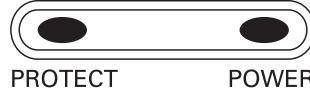

Reference amplifiers (except 5350a) are equipped with full-range outputs that can be used to connect additional amplifiers.

STATUS LEDs

Power: Indicates the amplifier is on.

Protection: Refer to "Troubleshooting" for specific indications.

Figure 13. LED status.

TROUBLESHOOTING

- PROBLEM:** No audio (POWER LED is off).

CAUSE and SOLUTION: No voltage at BATT+ and/or REM terminals, or bad or no ground connection. Check voltages at amplifier terminals with VOM.

- PROBLEM:** No audio (PROTECT LED glows red).

CAUSE and SOLUTION: DC voltage on amplifier output. Amplifier may need service; see enclosed warranty card for service information.

- PROBLEM:** No audio (PROTECT LED glows red).

CAUSE and SOLUTION: Amplifier is overheated. Make sure amplifier cooling is not blocked at mounting location; verify that speaker-system impedance is within specified limits.

- PROBLEM:**

No audio (PROTECT LED glows red).

CAUSE and SOLUTION: Voltage less than 9V on BATT+ connection. Check vehicle charging system.

- PROBLEM:** No audio (PROTECT LED glows red).

CAUSE and SOLUTION: Voltage greater than 16V or less than 8.5V on BATT+ connection. Check vehicle charging system.

- PROBLEM:** Distorted audio.

CAUSE and SOLUTION: Input sensitivity is not set properly, or amplifier or source unit is defective. Check INPUT LEVEL setting, or check speaker wires for shorts or grounds.

- PROBLEM:** Distorted audio (PROTECT LED glows intermittently).

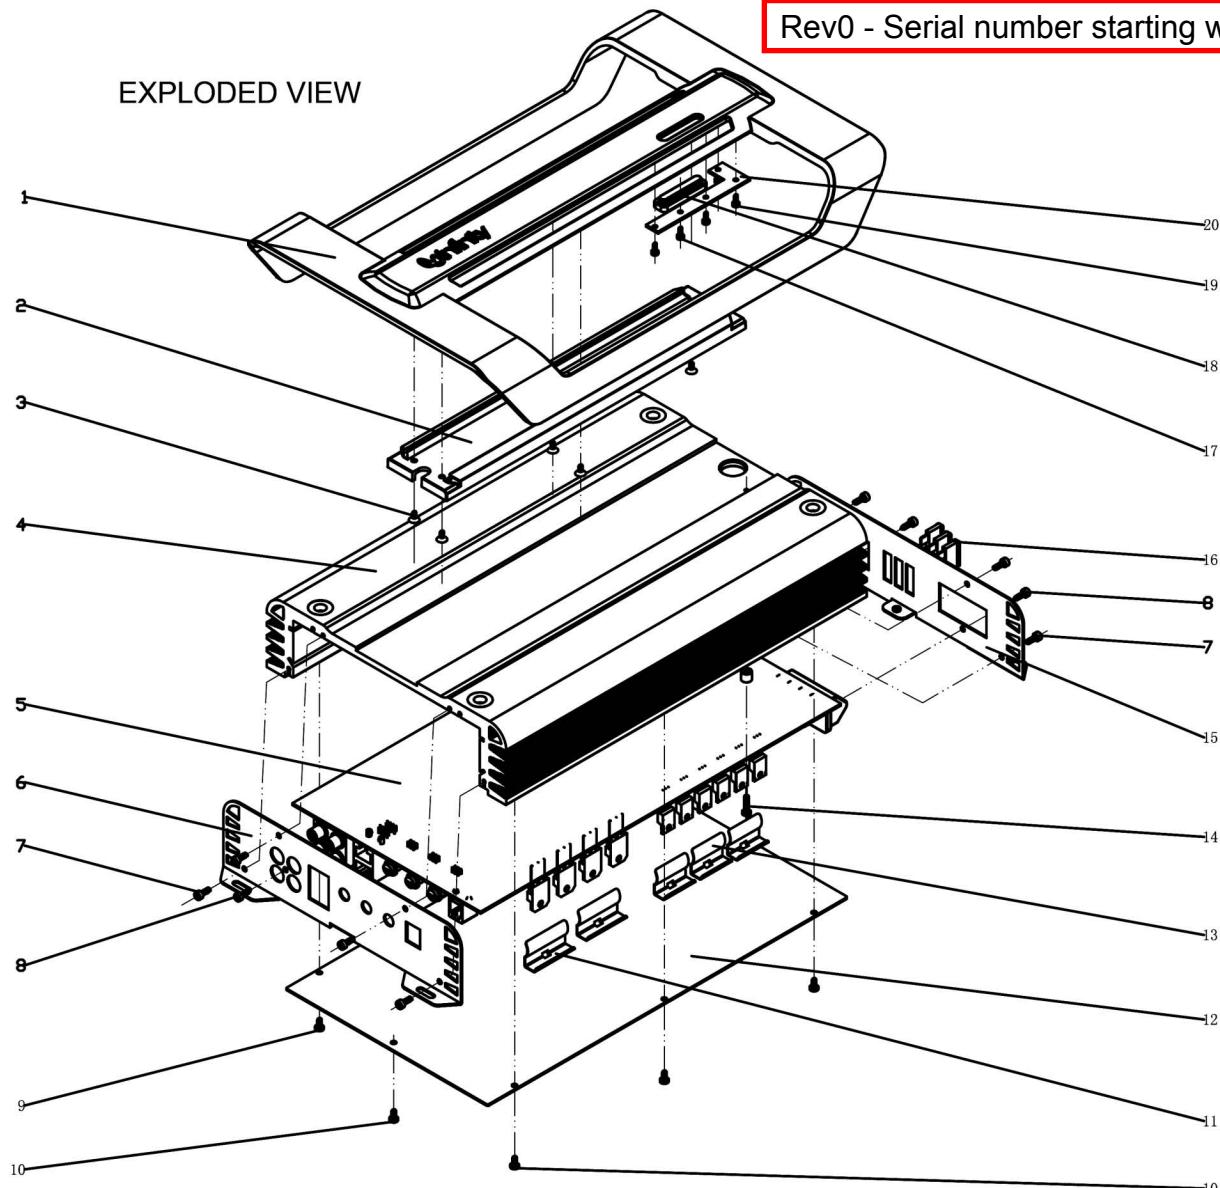

CAUSE and SOLUTION: Short circuit in speaker or wire. Remove speaker leads one at a time to locate shorted speaker or wire, then repair.

- PROBLEM:** Music lacks "punch."

CAUSE and SOLUTION: Speakers are not connected properly. Check speaker connections for proper polarity.

Service Bulletin

Service bulletin # INF2008-02 April 2008

Warranty labor rate: MAJOR repair

To: All Infinity Service Centers

Model: Reference 1300A

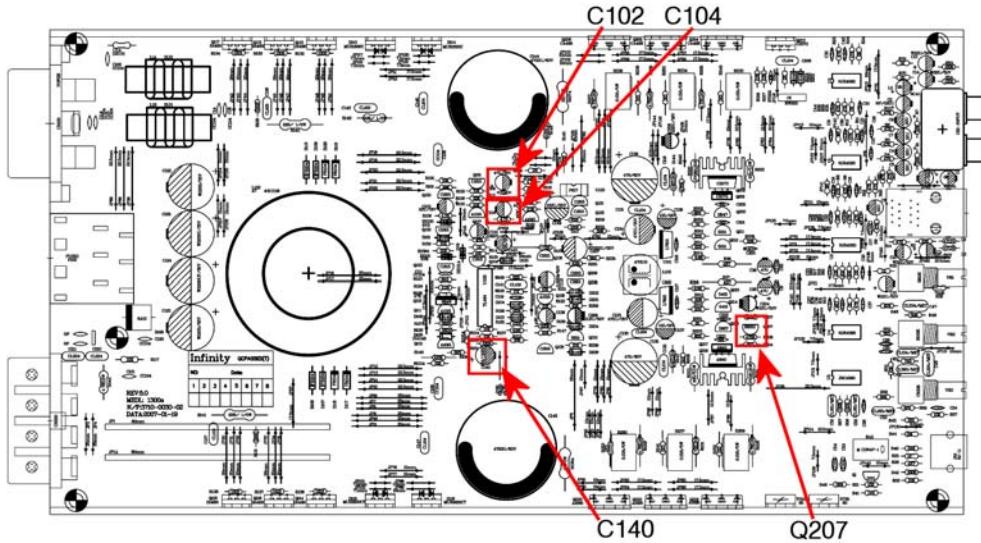

Subject: Turn On/Off Popping Sound

In the event you receive a Reference 1300A auto amplifier with the complaint: "There is a popping sound in the speakers when the unit turns on or off", perform the following modification.

Synopsis: Change three components with new component values, and one Transistor with another type.

Note: RoHS-rated* de-soldering and soldering equipment will be required.

- 1) Remove the silver trim panel (see the owner's manual page 2); unplug the five-pin Molex connector.
- 2) Remove the bottom cover, (8) Phillips screws.
- 3) Remove the front & rear side panels, 2.5mm Allen (hex key) screws.
- 4) Remove all nine steel transistor clamps. The technique is detailed in Infinity Tech Tip #INFTT2008-01.
- 5) Slide the main PCB out of the heatsink. Locate and replace the following components.
- 6) Order kit # REF1300Akit2008, which should contain the following components:
C102, 47 μ F/16V Electrolytic cap; replace with new 100 μ F/25V cap
C104, 100/16V Electrolytic cap; replace with new 220 μ F/25V cap
C140, 220 μ F/16V Electrolytic caps; replace with new 470u/16V cap
Q207 Transistor 2SC8050 NPN TO-92, replace with new 2SK30A JFET TO-92
When replacing capacitors, observe polarity.
(New transistor should be inserted exactly the same way as former one.)
- 7) Replace main PCB, clamps, Molex connectors, front & rear panels, and bottom cover.
- 8) Test unit to assure the complaint has been resolved.

Model	Serial Number	STATUS	ACTION
Reference 1300A	EV0003-01001 to EV0003-09654	May need component replacement due to popping noise	Replace four components
Reference 1300A	EV0003-09655 and above	Modified by Factory	NONE REQUIRED

* RoHS = Restriction Of Hazardous Substances. Recommended lead free solder 96.5/3.0/0.5 LICK HERE

TECH TIPS

Troubleshooting tips and solutions to common service problems

For models: Reference Series 475a,1300a,1600a,5350a

TIP# INF TT2008-01

Subject:

How do you remove the heatsink clips on the Reference Series amplifiers to service the main PCB or replace an output device ?

Solution:

The heatsink clips on the Reference Series may be extracted from the heatsink channel by the use of a hardened steel tool such as a 9/64" allen (hex key) wrench, and inserting it into the square hole in the middle of the clip. Enter the hole and press the tool downwards, concentrating on first one side of the clip; then switch to the other side. The clip should creep out of the slot in the heatsink. Sometimes a substantial amount of force may be required before it comes out with a "pop". To replace, the clip must be hammered back into place, back into the groove, with a hammer and extension bar, if needed.
