Basic Specifications PS210 Powered Subwoofer

Frequency Response:	27Hz – 150Hz (± 3 dB)
Maximum Amplifier Output:	300 Watts RMS; 500 Watts Peak (20Hz – 150Hz with no more than 0.1% THD)
Crossover Frequencies:	50Hz – 150Hz, 24dB/octave, continuously variable
Driver:	10" (254mm) MMD®
Dimensions (H x W x D): (with grille)	15-3/4" x 12-1/2" x 16-1/2" (400mm x 318mm x 419mm)
Weight:	38.6 lb (17.6kg)

Infinity continually strives to update and improve existing products, as well as create new ones. The specifications and construction details in this and related Infinity publications are therefore subject to change without notice.

Primus PS210		150W Powered Sub Amp				
LINE VOLTAGE						
	Yes/No	Hi/Lo Line	Nom.	Unit	Notes

SNR-A-Weighted	90	dBA	85	relative to rated power	A-Weighting filter	
SNR-unweighted	80	dBr	75	relative to rated power	22K filter	
SNR rel. 1W-unweighted	-57	dBr	-55	relative to 1W Output	22K filter	
Residual Noise Floor	1.5	mVrms(max)	2.5	Volume @max, w/ A/P Swept Bandpass Measurement (Line freq.+ harmonics) (BW=20 KHz)	Line level inputs must be terminated using 1KOHM	
Input Impedance						
Line Input (L, R,LFE)	10K	ohms	n/a	Nominal		
Filters						
LP filter Variable	50-150	Hz	± 10		2nd order variable + 2nd order fix-24 db/Octave	
Subsonic filter (HPF) 2rd Order	Fixed				12dB/Octave F=31Hz, Q=2	
Friend circuit	Fixed				60Hz, Q=2, Av=-3.9dB	
LFE Low pass	200>LP<500	Hz		LFE input driven only		
Limiter						
THD at Max. Output Power	N/A	N/A	functional	Maximum Output Power	Maximum THD as a result of limiting.	
Features						
Volume pot Taper (lin/log)	LOG	--	functional		A Taper	
Phase switch	0-180	deg	functional			
LP Filter defeat switch	YES		functional		Disables LP filter, intended for LFE	
Input Configuration						
Line In (L,R) & LFE	YES	--	functional		Dual RCA jack	
Signal Sensing (ATO)						
Auto-Turn-On (yes/no)	YES		functional			
ATO Input test frequency	50	Hz	functional			
ATO Level LFE Input	2.5	mV	functional		Maximum acceptable level.	
ATO Turn-on time	5	ms	functional	Amp connected and AC on, then input signal applied		
Auto Mute/ Turn-OFF Time	5-15	minutes	5-15	T before muting, after signal is removed	Auto turn of time (T) must be 5 > T < 15 Minutes	
Power on Delay time						
	3	sec.	4	AC Power Applied		
Transients/Pops						
ATO Transient	0.5	V-peak	0.5V	@ Sub amp output	Amplifier activated by signal presence at the Line input	
Turn-on Transient	0.5	V-peak	0.8V	@ Sub amp output	AC Line cycled from OFF to ON	

Parameter	Specification	Unit	QA Test Limits	Conditions	Notes
Turn-off Transient	0.5	V-peak	0.8V	@ Sub amp output	AC Line cycled from ON to OFF
Efficiency					
Efficiency	60	%	58	Test conducted at rated power 150V	Nominal Line voltage
Efficiency at 1/8 of rated power	38	%	37	Test conducted at 18.75 WRMS	Nominal Line voltage-Rated impedance 4 Ohms
Off state input power	16	Watts	18		Nominal Line voltage RED LED
Stand-by Input Power	24	Watts	26	@ nom. line voltage	Maximum allowable input power under nominal Input voltage and frequency, HOT or COLD operation.LED GREEN no signal applied
Power Cons. @ rated power	250	Watts	260	@ nom. line voltage	150 Watts @ 4 Ohms nominal line voltage
Protections					
Short Circuit Protection	YES		functional	Direct short at output	Amplifier should resume operation after short circuit condition removal
Thermal Protection	YES		functional	@1/8 max unclipped Power at 1.06 times the input voltage	Temperature rise in accessible metal parts should not exceed 35K rise for domestic version or 30K rise for European versions (refer to requirements sheet).
DC Offset Protection	YES		-	DC present at Speaker Out leads	Design must insure no Offset at the speaker output under any operating condition including abnormal operation
Line Fuse Rating					
USA-Domestic	2	Amps	2	Type-T or Slo Blo-250 V	Internal fuse with UL/SEMKO rated holder
EU	1.25	Amps	1.25	Type-T or Slo Blo-250 V, Low Breaking capacity	Internal fuse with UL/SEMKO rated holder

CONTROLS AND CONNECTIONS

Rear Panel

- 1 Subwoofer-Level Control
- 2 LFE/Normal Selector
- 3 Phase Switch
- 4 Crossover Adjustment
- 5 Line-Level/LFE Input
- 6 Power Switch
- 7 Status LED

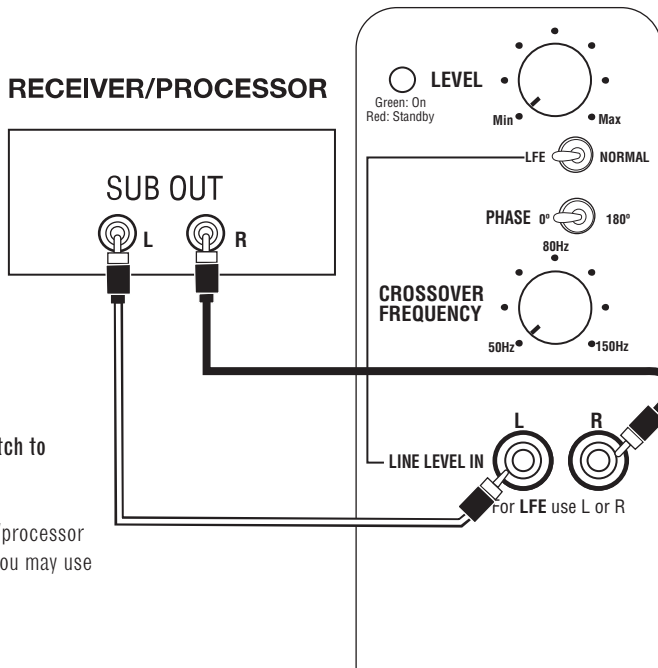

SYSTEM CONNECTIONS

If you have a Dolby® Digital or DTS® receiver/processor with a low-frequency effects (LFE) or subwoofer output:

Set LFE/Normal switch to "LFE."

If your receiver/processor does not contain a Dolby Digital or DTS processor but has subwoofer outputs:

Set line-level/LFE switch to "Normal."

NOTE: If your receiver/processor has only one sub out, you may use either the L or R input.

OPERATION

Power On

Plug your subwoofer's AC cord into a wall outlet. Do not use the outlets on the back of the receiver.

Initially set the Subwoofer-Level Control **1** to the "min" position.

Turn on your sub by pressing the Power Switch **6** on the rear panel. Turn on your entire audio system and start a CD or movie soundtrack at a moderate level.

Auto On/Standby

With the Power Switch **6** in the ON position, the Status LED **7** on the back panel will remain lit in red or green to indicate the On/Standby mode of the subwoofer.

RED = STANDBY (No signal detected, Amp Off)

GREEN = ON (Signal detected, Amp On)

The subwoofer will automatically enter the Standby mode after approximately 10 minutes when no signal is detected from your system. The subwoofer will then power ON instantly when a signal is detected. During periods of normal use, the Power Switch **6** can be left on. You may turn off the Power Switch **6** for extended periods of nonoperation, e.g., when you are away on vacation.

Adjust Gain

Turn your Subwoofer-Level Control **1** up to the halfway position. If no sound emanates from the subwoofer, check the AC-line cord and input cables. Are the connectors on the cables making proper contact? Is the AC plug connected to a "live" receptacle? Has the Power Switch **6** been pressed to the "On" position? Once you have confirmed that the subwoofer is active, proceed by playing a CD, record or cassette. Use a selection that has ample bass information.

Set the overall volume control of the preamplifier or stereo to a comfortable level. Adjust the Subwoofer-Level Control **1** until you obtain a pleasing blend of bass. Bass response should not overpower the room but rather be adjusted so there is a harmonious blend across the entire musical range. Many users have a tendency to set the subwoofer volume too loud, adhering to the belief that a subwoofer is there to produce lots of bass. This is not entirely true. A subwoofer is there to enhance bass, extending the response of the entire system so the bass can be felt as well as heard. However, overall balance must be maintained or the music will not sound natural. An experienced listener will set the volume of the subwoofer so its impact on bass response is always there but is never obtrusive.

Phase Control

The Phase Switch **3** determines whether the subwoofer speaker's piston-like action moves in and out with the main speakers, 0°, or opposite the main speakers, 180°. Proper phase adjustment depends on several variables such as room size, subwoofer placement and listener position. Adjust the phase switch to maximize bass output at the listening position.

Crossover Adjustment

The Crossover Adjustment Control **4** determines the highest frequency at which the subwoofer reproduces sounds. If your main speakers can comfortably reproduce some low-frequency sounds, set this control to a lower frequency setting, between 50Hz and 100Hz. This will concentrate the subwoofer's efforts on the ultradeep bass sounds required by today's films and music. If you are using smaller bookshelf speakers that do not extend to the lower bass frequencies, set the Crossover Adjustment control to a higher setting, between 120Hz and 150Hz.

NOTE: This control will have no effect if the LFE/Normal Selector **2** is set to LFE. If you have a Do by Digital or DTS processor/receiver, the Low-Pass Frequency is set by the processor/receiver. Consult your owner's manual to learn how to view or change this setting.

Item	Part Number	Description	Qty

PS210 sub Test Set Up and Procedure

SYSTEM AURAL SWEEP TEST

Equipment needed:

- Function/signal generator/sweep generator
- Integrated Amplifier
- Multimeter
- Speaker cables

General Unit Function (UUT = Unit Under Test)

Switches/knobs on the amplifier faceplate:

Crossover Frequency Adjust full CW (Max)

Phase switch – either position

Normal/LFE switch - Normal

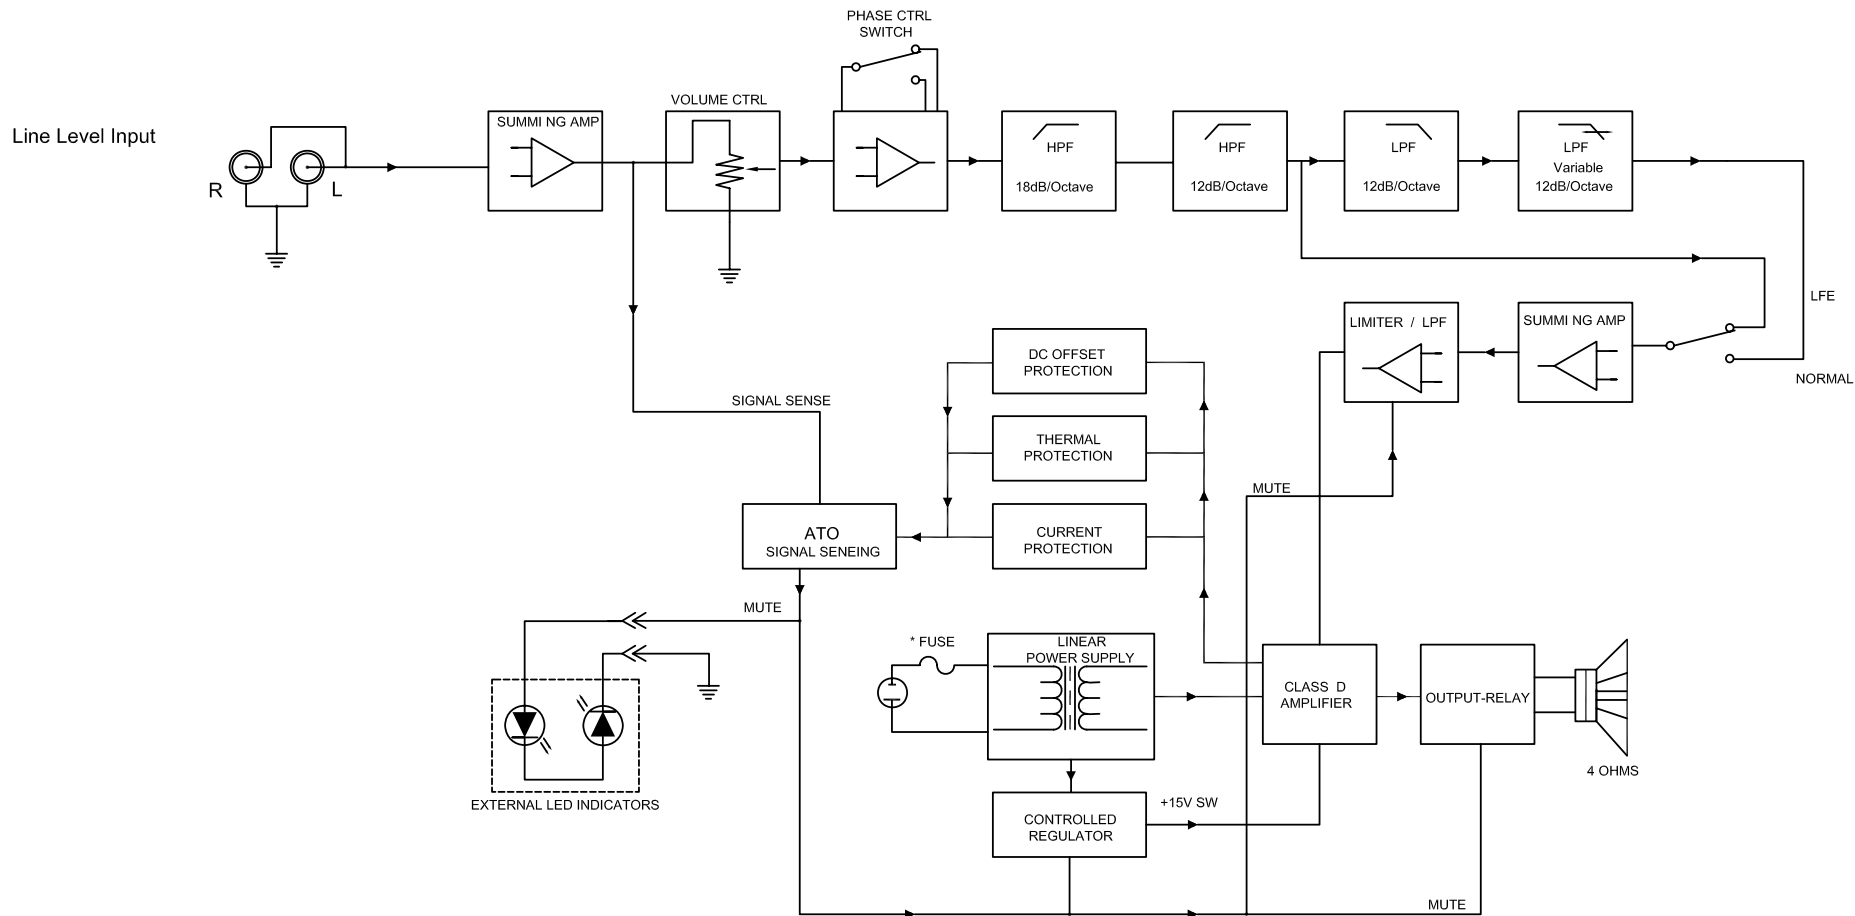

1. From the signal generator, Connect both right and left line level inputs (RCA jacks) – to signal generator and UUT. Use Y-cable if necessary from mono source.
2. On the amplifier, turn the LEVEL control full Counterclockwise (Min).
3. Turn on generator, adjust to **75mV, 50 Hz**.
4. Plug in UUT; turn the power switch ON. Turn LEVEL control full Clockwise (Max).
5. LED (on amp panel) should now be Green; immediate bass response should be heard and felt from rear port tube opening.

Sweep Function

1. Follow steps 1-5 above, using a sweep generator as a signal source.
2. Sweep generator from 20Hz to 1kHz. Listen to the cabinet and drivers for any rattles, clicks, buzzes or any other noises. If any unusual noises are heard, remove woofer and test.

Driver Function (Woofer)

1. Remove woofer from cabinet; detach + and - wire clips.
2. Check DC resistance of woofer; it should be **3.4 ohms \pm 10%**.
3. Connect a pair of speaker cables to driver terminals. Cables should be connected to an integrated amplifier fed by a signal generator. Turn on generator and adjust so that speaker level output is **5.0V**.
4. Sweep generator from 20Hz to 1kHz. Listen to driver for any rubbing, buzzing, or other unusual noises.

NOTE :
 120 VAC T1.25A-250V
 230 VAC T0.8A-250V

PS series PS210 subwoofer

ELYTONE (LIGHTION)

CAUTION: FOR CONTINUED PROTECTION
AGAINST RISK OF FIRE, REPLACE
WITH SAME TYPE OF FUSE.
ATTENTION: UTILISER UN
FUSIBLE DE RECHANGE
DE MEME TYPE.
T1: 25A FOR 230V
T2: 2A FOR 120V/100V
