Instruction Book .....	1-4	RX-S50BK .....	4-1
RX-S50BK .....	2-1	XT-S50BK .....	5-1

## Safety Precautions

1. The design of this product contains special hardware and many circuits and components specially for safety purposes. For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Services should be performed by qualified personnel only.
2. Alterations of the design or circuitry of the product should not be made. Any design alterations of the product should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacturer of responsibility for personal injury or property damage resulting therefrom.
3. Many electrical and mechanical parts in the products have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the Parts List of Service Manual. Electrical components having such features are identified by shading on the schematics and by ( $\Delta$ ) on the Parts List in the Service Manual. The use of a substitute replacement which does not have the same safety characteristics as the recommended replacement parts shown in the Parts List of Service Manual may create shock, fire, or other hazards.
4. The leads in the products are routed and dressed with ties, clamps, tubings, barriers and the like to be separated from live parts, high temperature parts, moving parts and/or sharp edges for the prevention of electric shock and fire hazard. When service is required, the original lead routing and dress should be observed, and it should be confirmed that they have been returned to normal, after re-assembling.
5. Leakage current check (Electrical shock hazard testing)

After re-assembling the product, always perform an isolation check on the exposed metal parts of the product (antenna terminals, knobs, metal cabinet, screw heads, headphone jack, control shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.

Do not use a line isolation transformer during this check.

- Plug the AC line cord directly into the AC outlet. Using a "Leakage Current Tester", measure the leakage current from each exposed metal parts of the cabinet, particularly any exposed metal part having a return path to the chassis, to a known good earth ground. Any leakage current must not exceed 0.5mA AC (r.m.s.).

- Alternate check method

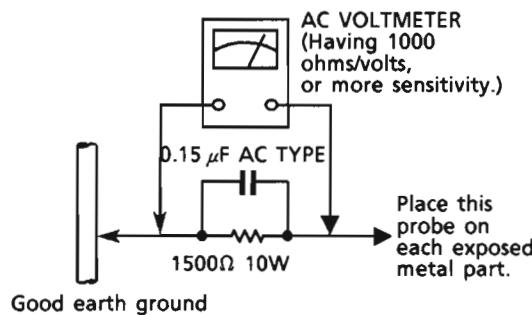

Plug the AC line cord directly into the AC outlet. Use an AC voltmeter having, 1,000 ohms per volt or more sensitivity in the following manner. Connect a  $1,500\Omega$  10 W resistor paralleled by a  $0.15 \mu\text{F}$  AC-type capacitor between an exposed metal part and a known good earth ground.

Measure the AC voltage across the resistor with the AC voltmeter.

Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and measure the AC voltage across the resistor.

Now, reverse the plug in the AC outlet and repeat each measurement. Any voltage measured must not exceed 0.75 V AC (r.m.s.).

This corresponds to 0.5 mA AC (r.m.s.).

## Warning

1. This equipment has been designed and manufactured to meet international safety standards.
2. It is the legal responsibility of the repairer to ensure that these safety standards are maintained.
3. Repairs must be made in accordance with the relevant safety standards.
4. It is essential that safety critical components are replaced by approved parts.
5. If mains voltage selector is provided, check setting for local voltage.

## Important for Laser Products

1. CLASS 1 LASER PRODUCT
2. DANGER : Invisible laser radiation when open and interlock failed or defeated. Avoid direct exposure to beam.
3. CAUTION : There are no serviceable parts inside the Laser Unit. Do not disassemble the Laser Unit. Replace the complete Laser Unit if it malfunctions.
4. CAUTION : The compact disc player uses invisible laser radiation and is equipped with safety switches which prevent emission of radiation when the drawer is open and the safety interlocks have failed or are defeated. It is dangerous to defeat the safety switches.
5. CAUTION : If safety switches malfunction, the laser is able to function.
6. CAUTION : Use of controls, adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.
7. CAUTION : The compact disc player provides a laser diode of wavelength 780-790nm and optical output power typical 3mW at the laser diode.

**VARNING :** Osynlig laserstrålning när denna del är öppnad och spärren är urkopplad. Betrakta ej strålen.

**VARO :** Avattaessa ja suojalukitus ohitettaessa olet altiina näkymättömälle lasersäteilylle. Älä katso sääteeseen.

**ADVARSEL :** Usynlig laserstråling ved åbning, når sikkerhedsafbrydere er ude af funktion. Undgå udsættelse for stråling.

**ADVARSEL :** Usynlig laserstråling ved åpning, når sikkerhetsbryteren er avslott. unngå utsettelse for stråling.

## Getting Started Right

### Unpacking

Check to be sure you have all of the following things, which are supplied with the CA-S50BK:

### 2. Connect the AM (MW/LW) and FM Antennas

#### FM Antenna Connections

##### For Germany

- Using the Supplied Wire Antenna

The FM wire antenna provided can be connected to a FM 75-ohm COAXIAL as a temporary measure.

- Using the Coaxial Type Connector (Not Supplied)

A 75-ohm antenna with coaxial type connector (DIN 43322) should be connected to the FM 75-ohm COAXIAL terminal.

##### For Other Countries

- Using the Supplied Feeder Antenna

Attach the feeder antenna to the Antenna Adaptor as shown in the figure.

- Connect the Antenna Adaptor to the FM 75-ohm COAXIAL terminal.

Using FM 75-ohm Antenna Cable (Not Supplied)

- Open the claws at both sides and remove the cover.

Move the conductor wire from [1] to [2] using tweezers or similar tool (only when using coaxial cable).

- Fix the coaxial cable and its core.

- Put on the cover.

- Connect the Antenna Adaptor on the FM 75-ohm COAXIAL terminal.

Note:

If the antenna conductors do not touch any other terminals, connecting cords and power cord on the system.

This could cause poor reception.

Note:

Make sure the antenna conductors do not touch any other terminals, connecting cords

and power cord on the system.

This could cause poor reception.

Note:

The FM wire antenna horizontally.

Using the supplied wire antenna horizontally.

Untie the loops of the supplied dipole FM

feeder antenna and extend them as shown.

Fasten them up in the position which gives you

the best FM reception.

Note:

Before untangling a 75-ohm coaxial lead (the kind of

lead wire going to an outside antenna), disconnect

the supplied dipole indoor antenna.

If reception is poor, connect the

outside antenna.

##### How to Strip the 75-ohm Coaxial Cable

- Strip back the outside covering of the 75 ohm coaxial cable to expose the braided metallic mesh.

- Twist the mesh back and twist into a single connector as shown.

- Strip the insulation about 10 mm back from the central wire.

- Attach to the supplied Antenna Adaptor, as shown in the diagram above.

**CAUTION:** To avoid noise, keep antennas away from metallic parts of the CA-S50BK, connecting cords and the AC power cord.

If reception is poor, connect the

outside antenna.

##### AM (MW/LW) Antenna Wire

Snip the tabs on the loop into the slots

of the base to assemble the AM (MW/LW) loop.

Turn the loop until you

have the best reception.

##### AM (MW/LW) Loop Antenna

Note: Even when connecting

an outside AM (MW/LW) antenna, keep the indoor AM (MW/LW) loop connected.

## Listening to the Radio

- LIVE SURROUND effect**  
You select a Live Surround effect by pressing LIVE SURROUND MODE to cycle through the following effects

**STADIUM** Adds clarity and spreads the sound, like the sound in an outdoor stadium.  
**D.CLUB** Increases resonance and bass.

**HALL** Adds depth and brilliance to the sound, like in a concert hall.

When you press OFF, the Live Surround mode will be cancelled, and at the same time the SEA effect will be cancelled.

### Sound Effect Demo Mode

Since there so many preset sound effects, you may be sometimes unable to decide which sound effect to select. In this case, you can use very useful function - Sound Effect Demo Mode.

- While playing a CD, a tape, etc., keep pressing DEMO for a few seconds. The Unit starts demonstrating 10 preset patterns of each sound effect (POPS, JAZZ, ROCK, CLASSIC, and MOVIE) for a few seconds. When you find the desired sound effect, press DEMO again to cancel the demo mode, and select the sound effect.

### Things to remember about using special effects:

- Experiment with and set your special effects before you start recording with Auto Edit or Programmed Edit, because once recording starts, the special effects cannot be changed without stopping recording, and often having to start over. If you need different sound effects for each selection, use the standard recording features described on page 13, rather than Auto Edit or Programmed Edit.

- Each of the special effects changes the sound in a different way by changing which parts of the sound are increased or reduced. To see how each part of the sound will be changed, watch the display just as you press an effect button when music is playing. You will see a graphical display showing the effect's pattern for just a short time before the effect starts.

### ACTIVE BASS EXTENSION

This feature is designed and incorporated to reinforce the bass sound, depending on the volume level to maintain the richness and fullness of the bass. You cannot control it manually.

### Using the Vocal Masking Function

Pressing VOCAL MASKING cancels the voice part of a song so you can broadcast your own voice through a microphone in place of the lead singer. Now it sounds as if you are singing directly with the band. See page 20 for a more complete discussion of this function.

### Memorizing the Sound Effect for Each Sound Source

Press MSEC so that the indicator lights.

- The learning function of the CA-S50BK memorizes one sound effect for each sound source, so once you set your desired sound effect for each sound source, you don't have to repeat the many setting procedures each time you play the sound source. While the indicator is lit, each time you change the sound source, the preset sound effect for that sound source will be recalled.

To cancel the MSEC function, press MSEC again so that the indicator goes off.

### Listening with Headphones

A standard pair of headphones can be connected at the PHONES jack on the front panel. No sound can be heard from the speakers. Be sure to turn down the volume before connecting or putting on headphones, as high volume can damage both the headphones and your hearing.

### The Display and the LEDs

- A few of the controls have a small light, called an LED, next to or even right on the function button or knob itself. The light comes on when the function is on, and goes out when it is not in use.
- In the stand-by mode, you can adjust the brightness of the clock display.

Pressing TUNING/TIMER DIMMER > makes the display brighter.

Pressing TUNING/TIMER DIMMER < makes the display dimmer.

The controls for the radio are located in the Tuner section, just above the large volume control. With these controls, you can browse through all the stations or use the preset function to go immediately to a particular station.

- To record from the radio, see "Recording any Sound Source to Tape," page 14.

### SOUND EFFECT DEMONSTRATION

In this case, you can use very useful function - Sound Effect Demo Mode.

- While playing a CD, a tape, etc., keep pressing DEMO for a few seconds. The Unit starts demonstrating 10 preset patterns of each sound effect (POPS, JAZZ, ROCK, CLASSIC, and MOVIE) for a few seconds. When you find the desired sound effect, press DEMO again to cancel the demo mode, and select the sound effect.

### VOCAL MASKING

### MSEC (Multi Source-Related Effect Control)

### The Display and the LEDs

### CA-S50BK Features

- The controls for the radio are located in the Tuner section, just above the large volume control. With these controls, you can browse through all the stations or use the preset function to go immediately to a particular station.
- To record from the radio, see "Recording any Sound Source to Tape," page 14.

### Scanning through Preset Stations

You can scan through your preset radio stations, stopping at any station you want to listen to.

1. Press PRESET SCAN.

- The Unit scans your preset stations, starting with the frequency being received, and moving upward.
- Each preset station is received for a few seconds with the channel number blinking.
- 2. If you want to listen to one of the preset stations, press PRESET SCAN again while the channel number is blinking.

If you do not stop at any station, the Unit will scan through the preset stations once, then return to the station tuned before scanning started.

### Receiving in Stereo or Mono

When an FM stereo broadcast is hard to receive or noisy:

- Press FM MODE/AUTO and reception will improve, although you will lose the stereo effect. In this state, you will hear some noise while tuning into a station.
- To restore stereo effect, press FM MODE/MUTE again so that AUTO appears in the display. In this state, when a program is broadcast in stereo, you will hear stereo sound; when in monaural, you will hear monaural sound. Furthermore, in this state, you won't hear noise while tuning into stations.

### Listening to a Compact Disc

#### Compact Disc Play

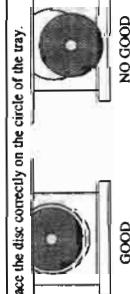

**How to use the CD player: from the most basic to advanced**

The quickest way to start a CD is with One Touch Operation:

- Press Play/Pause ▶/II on the CD CONTROL on the Remote.
- If a CD is already loaded, the Unit automatically turns on and starts to play it from track 1.
- If no CD is loaded, the CD tray opens, and you can put in a CD, printed side up, press Play/Pause ▶/II and the tray closes and the CD starts playing.
- If you press ▲ OPEN/CLOSE, the Unit automatically turns on and the CD tray comes out.

#### To Load, Play, and Stop a CD

1. Press ▲ OPEN/CLOSE.
2. Put a CD, printed side up, into the tray.
3. When using an 8 cm CD, place it on the inner circle of the tray.

**CAUTION: Place the disc correctly on the circle of the tray.**

GOOD

NO GOOD

#### PLAY/PAUSE

**How to Find a Track or a Particular Point You Want**

- Each time you press ▲ or ▼ the track changes by one.
- The CD tray closes automatically.
- The display shows the track being played and the length of time since it started.
- 4. To stop the CD, press ■ CLEAR. When you start again, the CD begins with track 1.
- 5. To pause the play, press Play/Pause ▶/II while the CD is playing so when you press ▶/II again the CD starts just where you left off.
- 6. To remove a CD, press ▲ OPEN/CLOSE, take the CD out, and press ▲ OPEN/CLOSE again to close the tray. Keep the tray closed except during loading and unloading to protect the mechanism from dust and damage.

**CD Find track**

- Each time you press briefly and release SEARCH/EDIT TIME ▲ or ▼ the track changes by one.
- Press and release SEARCH/EDIT TIME ▲ or ▼ to go ahead one track at a time.
- Press and release SEARCH/EDIT TIME ▲ or ▼ to go back one track at a time.
- Holding down SEARCH/EDIT TIME ▲ or ▼ will fast forward or fast reverse the CD so you can quickly find the particular part of a track you want to listen to.
- Holding down ▲ or ▼ on the CD CONTROL section of the Remote allows you to change tracks continuously.

### Using the Remote to find a track

**Locating a Track with the Remote Directly**

Using the [0] key pad on the Remote allows you to go directly to the beginning of any track.

1. Press CD 10 KEY.
2. Enter the number of the track you want using the [0] key pad.
  - Example, for track 5, press 5. For track 15, press 10 then 5. For track 20, press 10, then 10.
  - 3. As long as a CD is loaded and the Unit is on, as soon as you enter the number of the track you want, it will start to play.

**Programming the Playing Order of the Tracks**

In addition to the high quality sound which makes the CD such a good way to listen to music, you can change the order in which the tracks play.

#### Random Play

Before starting a CD, press RANDOM on the CD player.

- The tracks will play in no special order.
- When all of the tracks have been played, the CD shuts off.
- Press REPEAT before or during random play to instruct the CA-S50BK to continue with a different random track selection after the last selection is played.
- To cancel random play, press ■CLEAR.

**With programming, you can play back tracks in any order**

**Program with the Remote**

**How to program: just 5 easy steps**

To program the CD from the Remote, follow this procedure:

1. Press PROGRAM.
2. Press CD 10 KEY.
3. Press the number of the first track you want to hear, then the number of the second track, and so on until you have entered all the track numbers you want to play.
- Refer to the section "How to Use the Remote Control," on page 22 if you have questions about how to enter numbers above 10.
4. Your program can include up to 32 tracks, and you can repeat tracks if you wish.
5. Press Play/Pause ▶/II to start the program—the first track you programmed will start to play, followed by the next one you entered, until all the selected tracks are played.
6. To stop the CD during Programmed Play, press Stop ■. To cancel the program, press ■CLEAR on the Remote or ■CLEAR on the main Unit.

To program the CD track order from the Remote, follow this procedure:

1. Press PROGRAM.
2. Press CD 10 KEY.
3. Press the number of the first track you want to hear, then the number of the second track.
4. Repeat steps 2 and 3 until you have entered all the tracks you want to program.
5. Press Play/Pause ▶/II and the Unit will begin playing the tracks in the order you programmed them.
6. To stop the CD during Programmed Play, press Stop ■. To cancel the program, press ■CLEAR again.

**Programming Hints**

**A Few Hints to Make Programming Easier**

- If you want to change the entire program, press ■CLEAR on the main Unit, and then you can start over.
- To view the order of the tracks in your program, when it's playing, press Stop ■ on the Remote, then press ▲ or ▼ on the Remote to display the order of the tracks. Each time you press ▲ or ▼ the next selection in your program is displayed. (Press ▲ for the previous selections.)
- To add a track to your program, just press the number you want to add.

**Repeating a Selection or the Entire Disc**

**Repeat a selection or the whole CD**

- You can have either the program or the individual selection currently playing repeat as many times as you like by pressing REPEAT. Each time you press REPEAT, it cycles from OFF, which turns the REPEAT indication out on the display, to REPEAT, which will repeat all tracks in order or according to the program you have set, and REPEAT 1 which will repeat the currently playing track. To cancel Repeat, just press REPEAT until the REPEAT indication on the display goes off.

## Listening to a Tape

**Listen to a tape:**  
How to use your tape deck

- The tape deck allows you to play, record and dub audio tapes.
- To record or dub, see Recording page 13.
- With Automatic Tape Type Detection, you can listen to type I, II, or IV tapes without changing any settings.
- To play a tape and learn about the many easy to use features of the dual tape deck built into your CA-S50BK, read on here!

### Playing Back a Tape

You can play a tape from either deck A or deck B; but remember: only deck B can record.

### One Touch Play

By pressing either Play Forward ▶ or Play Reverse ▶◀ (or Play Forward ▶▶ or Play Reverse ▶◀◀) for deck A and B control on the Remote the power will come on, and if a tape is in the deck, it will start to play. If no tape is loaded, the Unit will come on and wait for further instructions.

### Regular Play

When power is already on, you can use this basic procedure:

1. Press EFFECT, which is located just to the right of the deck, for the deck you want to use.
2. When the cassette carrier opens, put the cassette in, with the exposed part of the tape down, toward the base of the CA-S50BK.
3. If the cassette carrier does not open, turn the Unit off, then back on again and press EJECT.
4. Turn the volume down.
5. Press Play Forward ▶ to play the front side, or Play Reverse ▶◀ to play the reverse side.
6. To stop playing, press Stop ■. To remove the tape, press EJECT.

### Fast Left and Fast Right

- While the tape is stopped, press Fast Left ▶◀ and the tape will wind rapidly onto the left side of the cassette without playing.
- While the tape is stopped, press Fast Right ▶▶ and the tape will wind rapidly onto the right side of the cassette without playing.

### Music Scan

To use the Scan function, you need to understand one basic idea, which might just make you a Master of Tape Control!

- Look at the Play Forward and Play Reverse Controls:

### Deck A

When the power is on, the glowing LED shows the direction the tape was last moving. When the LED is blinking slowly, the tape is playing in the direction of the arrow. Now comes the tricky part: when the LED is blinking rapidly, the tape can be moving either the direction the arrow points, or the opposite direction, depending on whether you pushed Fast Right ▶▶ or Fast Left ▶◀. The tape will be going at high speed in the direction of the arrows of the button you pushed. The direction of the arrow with the rapidly blinking LED shows which way the tape will start playing when the fast search is done. Put in a tape and try it out.

The Scan function works by detecting a 4 second blank at the beginning of each selection, so it won't work well if your tape has:

- No blank at the beginning of a track.
- Noise (often caused by much use or poor quality dubbing) which fills the blank with.
- Long very soft passages or pauses in a selection. The scan will detect these instead of the 4 second blanks. If this happens, just go ahead and scan again until you reach the selection you want.
- Music scan only works on one tape at a time.
- If you use Music Scan on deck A while recording on deck B, recording will stop.

## Scan Forward.....

### Scan Forward

With the tape playing, to find the beginning of the next selection, press Fast Right ▶▶ or Fast Left ▶◀ whichever one points in the same direction as the arrow with the slowly blinking LED.

- The tape will fast forward to the next selection and begin playing it.

## Scan Back

With the tape playing, to find the beginning of the selection now playing, press the Fast Right ▶▶ or Fast Left ▶◀ button pointing in the opposite direction from the arrow with the slowly blinking LED.

- The tape will fast reverse to the beginning of the piece and start playing it again.

### Useful hints and features to know about when using your tape deck

- Continuous Play: When a tape finishes playing with the REVERSE MODE indicator on, the Unit always checks to see if a tape is in the other deck. If one is there, it automatically starts playing it. This Continuous Play happens regardless of which deck starts first.
- Use Reverse Mode to make the tape automatically reverse at the end of a side and start playing the other side. Press REVERSE MODE to change from Reverse Mode (on the LED is lit) to Reverse Mode off, or from off, to on.
- If there is a tape in the other deck, it will start playing when both sides of the first tape have been played. As long as the Reverse Mode LED is lit, the tapes will continue to play in the above sequence.
- Press DOLBY B NR to switch Dolby Noise Reduction on (the LED lights up) or off (the LED goes off). If a tape is recorded with DOLBY B NR, playing it back with Dolby will reduce tape noise and improve the clarity of the sound.

Dolby noise reduction manufactured under license from Dolby Laboratories Licensing Corporation.  
"DOLBY" and the double-D symbol are trademarks of Dolby Laboratories Licensing Corporation.

## Listening to a VCR or Record Player through your CA-S50BK

### Advantages in Connecting a VCR or Record Player

By playing the sound from a VCR or Record Player through the CA-S50BK, you can often dramatically improve the quality, and gain control over how the music or program sounds. Once the connected equipment is playing through the CA-S50BK, you can apply the sound effects, make recordings, or listen with the headphones. Here are the steps to take:

1. Make a connection between the VCR or Record Player as shown on page 5.
- Since there are many different types of VCRs and Record Players, we can't tell you here just how to make the connections on the other equipment. However, the diagrams on page 5 will cover most cases, and you can also look in the instruction manual for the VCR or Record Player you have.
2. Press PHONO or AUX either on the Unit or Remote.
- The Unit is turned on and PHONO or AUX lights up on the display.
3. Switch on the connected equipment and start it playing.
4. Set the Unit's volume to its lowest setting. Use FADE/MUTING on the Remote, or turn the VOLUME control all the way counter-clockwise.
5. To cancel the PHONO/AUX setting, change the source by starting any one of the CA-S50BK's built-in sound sources, such as the radio or CD player.

## Recording

What can you record?  
 \*Tapes  
 \*CDs  
 \*Microphone  
 \*Connected Source

Recording onto cassette tape from any of the sound sources is easy and the CA-S50BK does most of the work. Just have a tape in deck B, have the source ready, make one or two settings, and you're ready to record.

For each source, the procedure is a little different and how we'll explain just what to do for each one. If you forget, just come back to the section which has the specific procedures you need. But first, here are a few things to make your recordings better.

### Things to Know before You Start Recording:

- It may be unlawful to record or playback copyrighted material without the consent of the copyright owner.

- Press DOLBY B NR (noise reduction)—the LED lights up—to reduce tape hiss. This Unit can use DOLBY B NR.

- The recording level, which is the volume at which the new tape is being made, is automatically set correctly, so it is not affected by the VOLUME control on the CA-S50BK. Thus, you can adjust the sound you are actually listening to without changing the recording. If you don't want to listen to the sound, you can turn the VOLUME control all the way down, or press FADE/MUTING on the Remote.

### Erasure Protection

- Cassettes have a special feature so you won't accidentally record over a tape you want to save. Two small tabs on the back, one for side A and one for side B, can be removed to prevent erasure or re-recording. To record on a cassette with the tabs removed, you must cover the holes with tape first. However, when a Type I tape is used, only cover part of the hole as shown below, since the other part of the hole is used to detect the tape type.

### Select Sound Effects

- When recording, you can select the sound effects with the preset sound effect buttons to condition the music as it is recorded. But when recording using Auto Edit or Programmed Edit, once recording has started, these settings cannot be changed. When recording from tape Deck A to Deck B, the sound effects cannot be used, because the signal doesn't go through the amplifier first. This method gives you the highest quality dubbed tapes.

- Type I and Type II tapes can be used for recording. While type IV tapes can be played, type IV tapes cannot be used for recording on the CA-S50BK.

### Standard Recording

**Standard Recording:  
Any Source to Tape**

This is the basic method for recording any source. The CA-S50BK also has special ways for recording CD to tape, and tape to tape, which save you time and effort, as well as give you some special effects. However, when you need to add a selection to a tape you have made, or are combining selections from several sources on one tape, use the method we describe here, just substitute the source you want, such as a tape in deck A, or CD, or radio in this procedure. You can also record from the microphone or an auxiliary source with this procedure.

### Source to Tape: Step by Step

#### Recording any Sound Source to Tape

Follow these steps to record from any sound source onto a tape in deck B.

- Press POWER so the LED on the VOLUME control glows.
- When you want to record on both sides of the tape, press REVERSE MODE to on and be sure to start recording from the front side (A). If you start recording from the reverse side (B), the deck stops after recording the reverse side (B) without going to the front side (A), even if the Reverse Mode is on.

- Load the tape you are making into Deck B.
- Press REC PAUSE. The LED lights up.

- Prepare the source, for example, tuning in a radio station, loading a CD, turning on a connected Record Player or VCR, etc.
- If the source is already playing, just press REC PAUSE, then press either Play Forward ▶ to record on the front side (A), or Play Reverse ◀ to record on the reverse side (B).

- When you want to start recording, press either Play Forward ▶ to record on the front side (A), or Play Reverse ◀ to record on the reverse side (B) of the tape.
- To pause recording any time during the process, press REC PAUSE again, then press Play Forward ▶ or Play Reverse ◀ to start recording again.

- To stop recording any time during the process, press Stop ■ on deck B.
- If the source is finished when the tape runs out.
- Programmed Edit—You can decide the selections to be recorded in your desired order.

### CD to Tape Recording

There are four ways to record from CD to tape:

- The standard method described above.
- CD Direct—Everything on the CD goes onto the tape in the order it is on the CD or according to an order you have set in a program.
- Auto Edit—Your CA-S50BK figures out which selections to put on which side of the tape, so a selection isn't cut off before it's finished when the tape runs out.
- Programmed Edit—You can decide the selections to be recorded in your desired order.

### CD Direct Recording, Step by Step

This is the easiest way of recording a CD. Everything on the CD goes onto the tape in the order it is on the CD or according to an order you have set in a program. To make a program, see page 10.

1. Put the cassette in deck B.

2. Load the CD into the CD Player.

3. Set the sound effects you want now, since the sound environment cannot be changed once recording starts.

4. Now press CD REC START on the tape deck. The FADE indicator lights up on the display.

- Deck B begins to record, and soon the CD begins to play. At the end of the tape, the CA-S50BK automatically goes back to the beginning of the last selection and re-records it, this time gently fading out at the end. If you selected Reverse Mode, the reverse side (B) starts with the last selection on the front side (A) and will be faded out at the end again. (A 10 second blank is created on the beginning of the reverse side (B)).
- To stop recording any time during the process, press either Stop ■ on deck B or ■CLEAR on the CD Player (when you press ■CLEAR you can make a 4 second blank at the end of the recording). Pressing ▲ OPEN/CLOSE will also stop recording.

- SEARCH/EDIT TIME ▶ or ▶ REPEAT and RANDOM will not work during CD Direct Recording.
- RECORDING

### Auto Edit, CD to Tape, Introduction

#### Recording a CD Using Auto Edit

Using Auto Edit, you can arrange the CD tracks to fit the tape, so a selection isn't cut off when the tape runs out first. Auto Edit is one of the best ways to copy all of a CD onto a tape. The selection of which tracks is based on the lengths of the tracks and the length of the tape. The CA-S50BK can figure out most of what it needs to know, but you will have to tell it the tape size you are using if your tape is a different size than the one picked by the program. Follow this procedure to record a CD using Auto Edit.

### Auto Edit, CD to Tape, Step by Step

1. Put the cassette in deck B.

2. Press REVERSE MODE if you want to record on both sides of the cassette.

- Load the CD into the CD Player.
- If the CD is already loaded, be sure the power is on and the source is CD. If the last selected source is tuner, the Unit will not recognize the loaded CD when turning on. Unit by pressing POWER.
- Set the sound effects you want now, since the sound environment cannot be changed once recording starts.
- Press ■CLEAR.
- This cancels the previous edit or program setting.

## How to Use the Timers and Set the Clock

- Five Timers:**
- \*Timer 1, Timer 2
  - Daily
  - Wake Up
  - Sleep
  - Auto Power Off

The timers let you control recording and playing functions automatically. With the CA-S50BK

they are particularly easy to set and use. Five types of timers are available:

- Timer 1, Timer 2—unattended recording of radio broadcasts.
- Daily—recording of a radio broadcast that occurs at the same time every day.
- Wake up Timer—Wake up to music from any source.
- Sleep Timer—Fall asleep and have your CA-S50BK turn off automatically after a certain length of time.
- Auto Power Off—Automatically turns off the Unit when the CD or tape finishes.

### IMPORTANT!

#### Set your clock!

CLOCK ALARM

#### Clock Setting

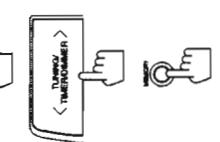

The timers depend on the clock. If the clock is right, the timers will work like you expect, but if the time is incorrect on the clock, then the timers will also be incorrect.

**Special Notice:** The clock must be set, or the timers cannot be set!

1. Press CLOCK ADJUST.
2. Set the hour by pressing TUNING/TIMER/DIMMER < or >. Pressing > increases the hour, and pressing < decreases it.
3. Press MEMORY.
4. Set the minutes by pressing TUNING/TIMER/DIMMER < or >. Pressing > increases the minute, and pressing < decreases it.
5. Press MEMORY again and the clock is set and starts from zero second.

If there is a power failure, the clock loses its setting, the display shows "0:00," and it must be reset.

- After setting the clock, the timer will start working.

### Recording when you're not there

#### Setting Timer 1, Timer 2, and the Daily Timers

With these timers you can make a tape of a radio broadcast (or other sound sources) automatically whether or not you are there to start the CA-S50BK. You can also play the sound source at the specified time without recording it. For the timer to work correctly, you need to make sure of two things in addition to setting the time for the sound source and tape recorder to come on:

- The tape you want to record onto must be in deck B when the last one played before timer comes on.
  - The radio station whose program you want to tape must be the last one played before timer comes on.
- Follow this procedure to set Timer 1, Timer 2, and the Daily Timer:
1. Press TIMER 1, TIMER 2, or DAILY to tell the Unit which timer you are going to set. The corresponding indication (TIMER 1, TIMER 2, or DAILY) flashes in the display. As long as it is flashing, you can continue with the setting process. If you wait too long, and it stops before you are done, just press the button twice and start over.
  2. Set the time you want the sound source to come on and the tape in deck B to start recording.
  3. Use TUNING/TIMER/DIMMER < or > just like setting the clock. See instructions above.
  4. Use TUNING/TIMER/DIMMER < or > just like setting the clock. See instructions above.
  5. Select the sound source with TUNING/TIMER/DIMMER < or >, and press MEMORY to store it.

Each time you press TUNING/TIMER/DIMMER < or >, the Unit gives you one of the following settings:

#### Display

#### SOURCE

Plays from whichever source was used just before turning off the Unit

SOURCE TUNER Plays an FM or AM broadcast

TIMER REC SOURCE TUNER Records an FM or AM broadcast

SOURCE CD Plays a CD

SOURCE TAPE Plays a tape

TIMER REC SOURCE Plots from whichever source was used just before turning off the Unit

SOURCE TAPE Plots from whichever source was used just before turning off the Unit

SOURCE CD Plays a CD

SOURCE TUNER Plays an FM or AM broadcast

SOURCE TAPE Plots from whichever source was used just before turning off the Unit

SOURCE CD Plays a CD

SOURCE TUNER Plays an FM or AM broadcast

SOURCE TAPE Plots from whichever source was used just before turning off the Unit

- Sleep Timer**  
Unit off automatically after a set time

Use the sleep timer to turn the Unit off after a certain number of minutes when it is playing. Using this timer, you can fall asleep to music and know your CA-S50BK will turn off by itself rather than play all night.

You can only set the Sleep Timer when the CA-S50BK is on and a source is playing.

To cancel the Sleep Timer, press POWER to turn off the Unit.

To set the Sleep Timer follow this procedure:

1. With the CA-S50BK on and a source playing, press WAKE UP/SLEEP. The SLEEP indicator on the display will start blinking.
2. Set the length of time you want the source to play before shutting off.
  - Each time you press WAKE UP/SLEEP while the SLEEP indication is blinking, it changes the number of minutes shown on the display in this sequence:

- The actual time when the CA-S50BK will shut off shows in the right hand corner of the display where the clock time is usually displayed.
- When the number of minutes you want shows on the display, just wait 5 seconds until the indicator stops blinking, but remains lit/green.

The Unit is now set to turn off after the number of minutes you set.

#### Timer Priority

Since each timer can be set independently, you may have wondered what happens if the settings overlap. Here are the priorities for each timer.

- The Wake Up Timer has priority over TIMER 1, TIMER 2, or DAILY timer. This means that if the start-time for one of the timers occurs before the wake-up time, the Unit will wait until the wake-up time to turn on.
- The Sleep Timer has priority over TIMER 1, TIMER 2, or DAILY timer. This means that if the stop-time for one of the timers occurs before the sleep time, the Unit will wait until the sleep time before turning itself off.

#### Checking the Remaining Time

After setting the Wake Up or Sleep Timer, you can check the time remaining until the Unit turns on (Wake Up Timer) or shuts off (Sleep Timer).

- Pressing WAKE UP/SLEEP shows you the remaining time on the display for 5 seconds. Then the display returns to the clock time display (Wake Up Timer) or the radio frequency display (Sleep Timer). Off:
- Press AUTO POWER OFF.
  - If the LED is on, Auto Power Off is on, and the source will automatically turn off when the tape or CD finishes.
  - If the LED is off, Auto Power Off is also off.
- Even if both tape decks are loaded, the Unit turns off when the currently playing deck finishes; however, in reverse play mode, the Unit plays the side currently playing, reverses and plays the other side, then shuts off.
- If you press AUTO POWER OFF while the tape is playing:
  - If Reverse Mode is off (the Reverse Mode LED is not lit), the Unit turns off when the currently playing side finishes.
  - If Reverse Mode is on (the Reverse Mode LED is lit), the Unit plays the side currently playing, reverses and plays the other side, then shuts off.
- If the Sleep Timer and Auto Power Off have been set within the same time range, the timer operation with the earlier ending time will have priority.
- If a timer operation begins during Auto Power Off, the timer operation will have priority.
- If Auto Power Off is used during a timer operation, Auto Power Off will have priority.

**Important Information on using Auto Power Off**

- CD repeat mode cannot be used with Auto Power Off. If you do, the repeat mode will be canceled so that Auto Power Off will be able to work.
- If you press AUTO POWER OFF while the tape is playing:
  - If Reverse Mode is off (the Reverse Mode LED is not lit), the Unit turns off when the currently playing side finishes.
  - If Reverse Mode is on (the Reverse Mode LED is lit), the Unit plays the side currently playing, reverses and plays the other side, then shuts off.
- If the Sleep Timer and Auto Power Off have been set within the same time range, the timer operation with the earlier ending time will have priority.
- If a timer operation begins during Auto Power Off, the timer operation will have priority.
- If Auto Power Off is used during a timer operation, Auto Power Off will have priority.

## Singing Along

### What Is Vocal Masking?

When you press VOCAL MASKING, the lead vocal is reduced, and you can replace it by singing into the microphone as the music plays. No microphone is supplied with the CA-S50BK, so you can select your own from the many kinds available.

### Singing-Along Procedure

#### How to Sing Along with Vocal Masking:

1. Turn the MIC LEVEL control all the way counterclockwise to the MIN position.
2. Attach the microphone (not supplied) by plugging it into the MIC Jack in the amplifier section.
3. Start the source—CD, Tape, connected VTR, Record Player.
4. Press VOCAL MASKING—the LED will light up.
5. Now adjust the volume of the source with the main VOLUME control, and the volume of your voice with the MIC LEVEL control as you sing into the microphone.

### Recording a Singing-Along Session

#### Recording Your Singing-Along

You can record a singing-along session under certain conditions.

Here's the procedure for recording your singing-along:

1. Put the cassette you want to record onto in deck B.
2. Press REC PAUSE—see Recording, page 13 if you need more information about tape recording.
3. Follow the above procedure "How to Sing Along with Vocal Masking."
4. Press Play Forward> (or Play Reverse <) on deck B, and deck B will start recording the source together with your voice in place of the lead vocal.

### Important Information about Vocal Masking

- Since the radio signal is not as reliable as signals coming from tape or CD, you may not always get satisfactory results using the radio as a source for Vocal Masking.
- Some tapes and CDs are better sources for singing along than others.
  - Monaural sources are not suitable for Vocal Masking.
  - On sources with drums, strong echoes, a chorus, or with only a few instruments, the singer's voice may not be completely reduced.
  - Poorly dubbed tapes may not work well for Vocal Masking.

## Recording from the Microphone

### Two ways of recording with the Microphone

- You can use the microphone for two kinds of recording:
  - Mixing—Sound going into the microphone is mixed with sound sent to the tape in deck B from some other source, such as the CD, or radio.
  - Regular recording—Only sound picked up by the microphone is recorded.

### Mixing

1. Put the cassette you want to record onto in deck B.
2. Connect the microphone to the MIC Jack.
3. Set deck B to recording pause mode by pressing REC PAUSE.
4. Start the source (Radio, CD, and PHONO/AUX) and set the VOLUME control.
5. Adjust the microphone volume with the MIC LEVEL control.
6. When you are ready to record, press Play Forward> (or Play Reverse <) on deck B, and both sound from the microphone and from the playing source will be recorded.

### Regular Microphone Recording

1. Put the cassette you want to record onto in deck B.
2. Connect the microphone to the MIC Jack.
3. Set deck B to recording pause mode by pressing REC PAUSE.
4. Adjust the volume of the microphone with the MIC LEVEL control.
5. Now when you press Play Forward> (or Play Reverse <) on deck B, whatever sounds the microphone picks up will be recorded.

### Important Information for using the microphone:

#### Special Techniques for using the microphone

- You may have to experiment some to see just where to set the MIC LEVEL control to get the best recorded sound.
- To prevent howling and squealing when using the microphone, adjust the MIC LEVEL control and the VOLUME control, and try not to point the microphone at the speakers.
  - When you are not using the microphone, keep the MIC LEVEL control set to MIN. It is best to disconnect the microphone when you will not be using it for a while.

How to Use the Remote Control

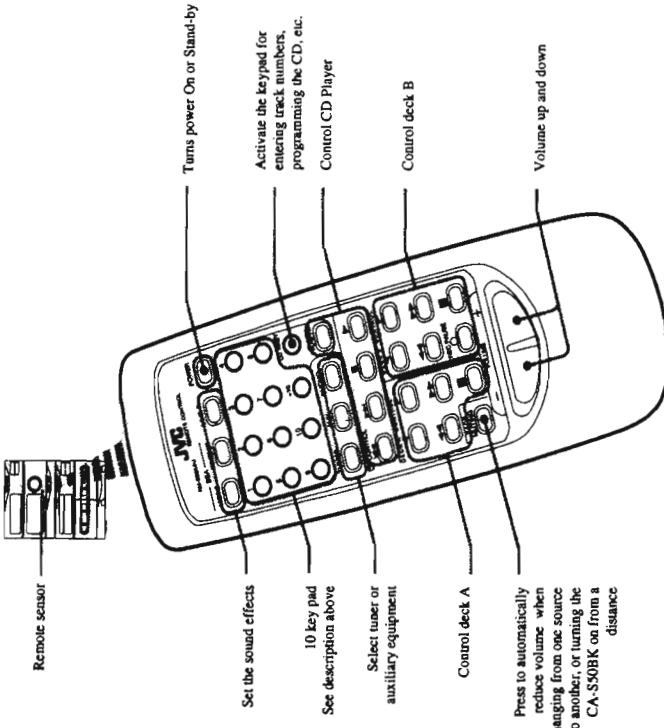

The Remote Control makes it easy to control many of the functions of the CA-S50BK from a distance of up to 7 meters away. You do not need to point the remote sensor at the CA-S50BK console. Most of the buttons on the Remote Control do just what the ones on the front of the CA-S50BK do, and they are explained in the manual. A few functions are available only by using the Remote Control, and those are described below.

## Troubleshooting

- Using the 10 Keypad**

The Keypad is used to specify a CD track or the number you have assigned to a preset radio station. To enter a number using the keypad follow these steps:

  - For numbers between 1 and 10, just press the button with the number you want.
  - For numbers from 11 to 20, first press the +10 key then the one's digit of the number you want—to get:
    - 15, first press +10, then 5. For 20, press +10 twice, then press the one's digit—10 to get 25, press +10 +10 and 5. For 30, press +10 +10 and 10.
    - For numbers from 31 and 40, follow the same procedure, only press the +10 key three times, then one's digit—to get 32, press +10 +10 +10 and 2.

## Specifications

Tuner/Amplifier Section		CD/Tape Deck Section	
<b>Amplifier</b>	<b>Tape deck</b>

## ■ LC7218 (IC102) : PLL Synthesizer

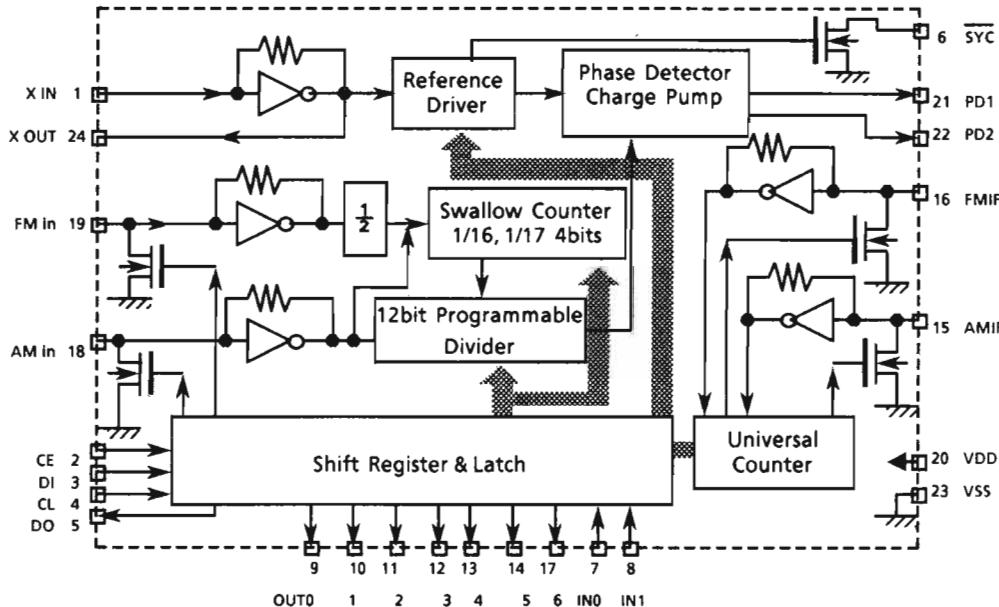

### 1. The main function descriptions

- (1) It makes the local oscillation frequency by the control data from IC201.
- (2) Decode the control signal and transmit the signal for receiving conditions.
- (3) For the best tuning, count the internal-frequency and transmit the data to IC201.

### 2. Terminal Layout

X IN	1	X Out	24
CE	2	VSS	23
DI	3	PD2	22
CL	4	PD1	21
DO	5	VDD	20
SYC	6	FM-OSC IN	19
TUNED	7	AM-OSC IN	18
STOP IN	8	IFreq	17
POWER	9	FMIF	16
QSC	10	AMIF	15
MONO	11	LW	14
FM	12	MW	13

### 3. Block Diagram

### 4. Terminal Description

Pin No.	Symbol	I/O	Functions and Operations
1,24	X in , Xout	I/O	Crystal oscillator (7.2MHz).
2	CE	I	Fix the chip enable to "H" when inputting (DI) and outputting (DO) the serial data.
3	DI	I	Receive the control data from the controller (IC201).
4	CL	I	This clock is used to synchronize data when transmitting the data of DI and DO.
5	DO	O	Transmit the data from LC7218 to the controller which is synchronized with CL.
6	SYC	-	Not used.
7	Tuned	I	Receive the tuned signal from IC104 (LA1266A).
8	Stop in	I	Not used.
9	POWER	O	Not used.
10	QSC	O	ON mode with " H " and OFF mode with " L ".
11	MONO	O	It is "H" on FM-monaural, "L" on FM-Stereo.
12	FM	O	It is "L" on FM mode.
13	MW	O	It is "L" on MW mode.
14	LW	-	It is "L" on LW mode.
15	AM-IF	I	Universal counter input for AM-IF from IC104 (LA1266A).
16	FM-IF	I	Universal counter input for FM-IF from IC104(LA1266A).
17	IF REQ	O	Output the "IF-signal request" to IC104 when the pin-7(tuned in) goes to "H".
18	AM OSC	I	Input the local oscillator signal of AM.
19	FM OSC	I	Input the local oscillator signal of FM.
20	V <sub>DD</sub>	-	This is a terminal of power supply.
21	PD1	O	PLL charge pump output: When the local oscillator signal frequency is higher than the reference frequency high level signals will output. When it is lower than the reference frequency, low level signals will output. When it is same as reference frequency signals, it will be floating.
22	PD2	O	Not used.
23	Vss	-	Power supply.

■ LA1266A (IC104) : FM AM IF AMP & detector

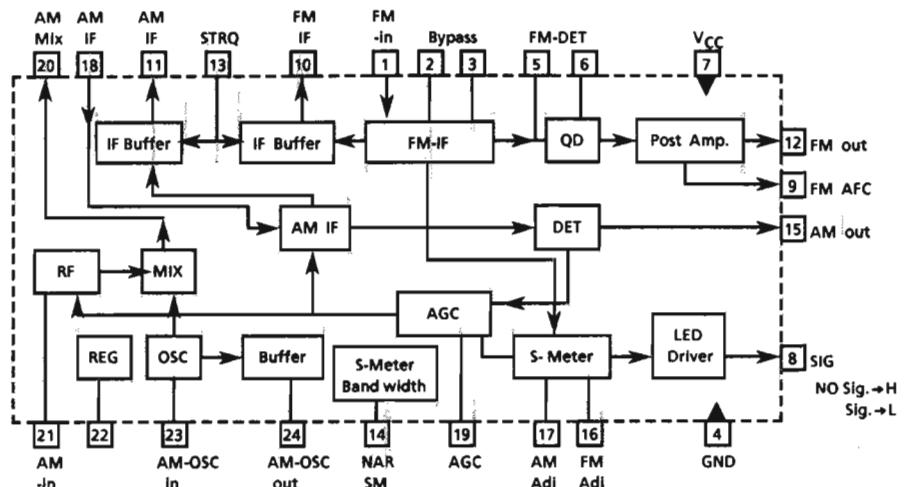

1. The main function descriptions

- (1) Amplify and detect of FM intermodulation frequencies.
- (2) It has local oscillator and mixer for AM, and amplify the AM-IF signal.

2. Terminal Layout

FM-in	1	24	AM-OSC out
Bypass	2	23	AM-OSC

3. Block Diagram

4. Terminal Description

Pin No.	Symbol	I/O	Functions and Operations
1	FM in	I	This is an input terminal of FM IF Signal.
2,3	Bypass	-	Bypass of FM IF Amp.
4	GND	-	This is the device ground terminal.
5,6	FM DET	--	FM detect transformer.
7	V <sub>CC</sub>	--	This is the power supply terminal.
8	SIG	O	When the machine is tuning ,this terminal becomes "L".
9	FM AFC	O	This is an output terminal of voltage for FM - AFC(Auto frequency control).
10	FM IF	O	When the signal of IF REQ of IC102(LC7218) appear, the signal of FM IF outputt.
11	AM IF	O	When the signal of IF REQ of IC102(LC7218) appear, the signal of AM IF output.
12	FM out	O	FM composite signal output.
13	STRQ	I	The IF-signals come out from pin10 (FM-IF) or pin11 (AM-IF) while this terminal going to "High".
14	NAR SM	--	Control the Band-width of signal meter.
15	AM out	O	AM detection output.
16	FM Adj	--	For adjust the stop level (or mute level) of FM.
17	AM Adj	--	For adjust the stop level (or mute level) of AM.
18	AM-IF	I	Input of AM IF Signal.
19	AM-AGC	I	This is an AGC voltage Input terminal for AM.
20	AM-MIX	O	This is an output terminal for AM mixer.
21	AM-IN	I	This is an input terminal for AM RF Signal.
22	V.REF	-	Register value between pin9 and pin22 desides the frequency width of the input signal.
23	AM-OSC	--	This is a terminal of AM Local oscillation circuit.
24	AM-OSC out	O	AM Local Oscillation Signal output.

### ■ LA3401 (IC105) : FM MPX Detector

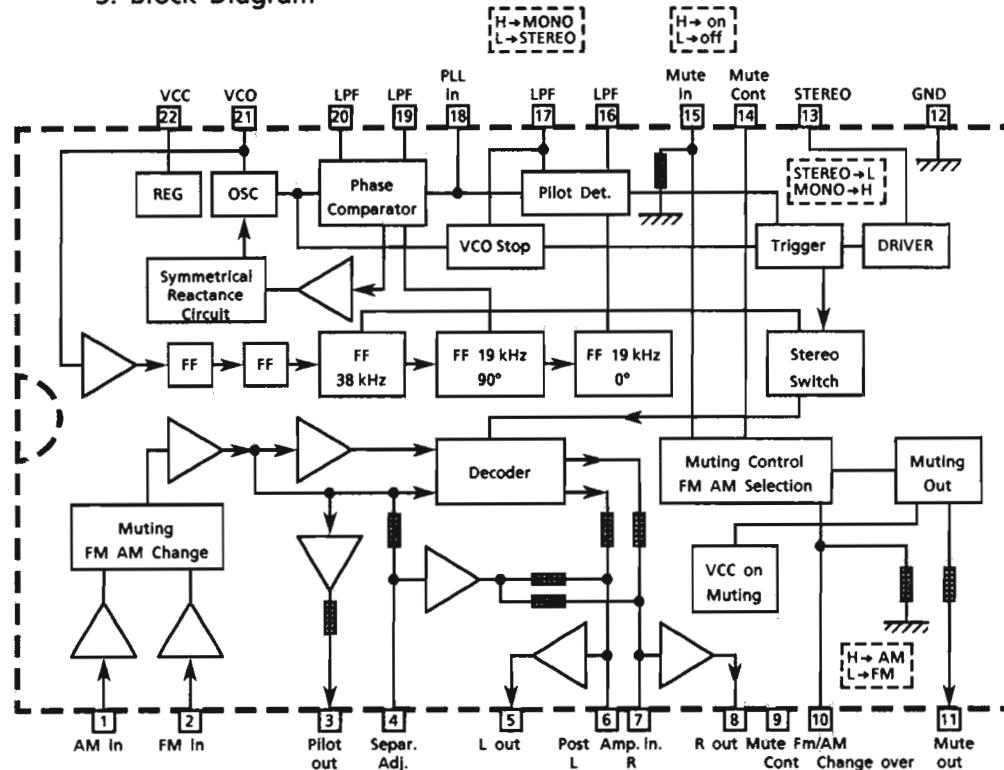

#### 1. The main function descriptions

- (1) Detect the FM multiplex signal (Stereo signal).
- (2) When receiving FM stereo signal, it outputs the signal for indication.
- (3) AM / FM audio amplifier.

#### 2. Terminal Layout

AM in	1
FM in	2
Pilot	3
Sepa.	4
L out	5
L in	6
R in	7
R out	8
mute	9
FM/AM	10
Mute out	11
VCC	22
VCO	21
LPF	20
LPF	19
PLLin	18
LPF	17
LPF	16
Mute In	15
Mute Cont	14
STEREO	13
GND	12

#### 3. Block Diagram

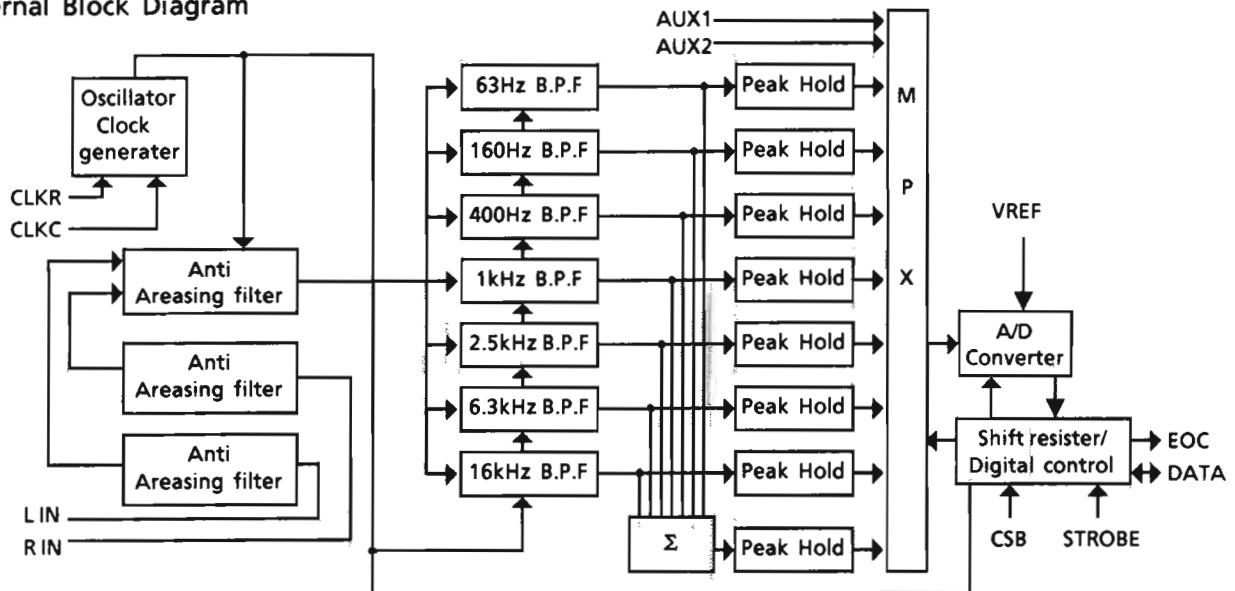

#### 4. Terminal Description

Pin No.	Symbol	I/O	Functions and Operations
1	AM in	I	This is an input terminal for AM detection signal.
2	FM in	I	This is an input terminal for FM detection signal.
3	Composite out	O	Output of the composite signal (Connect to Pin18).
4	Sepa. Adj.	-	Separation adjustment.
5	L. out	O	Left channel signal output.
6	L	I	Input terminal of the left channel post-amplifier
7	R	I	Input terminal of the right channel post-amplifier
8	R out	O	Right channel signal output
9	Mute Cont	-	The mute time is controlled by the connected capacitor when turning the power switch on.
10	FM / AM	I	Change over the FM / AM input. "H" : AM, "L" : FM
11	Mute out	--	Not used
12	GND	-	Ground terminal.
13	Stereo	O	Stereo indicator output. Stereo : "L", Mono : "H"
14	Mute Cont	-	The mute time is controlled by the connected capacitor when changing over the FM / AM .
15	Mute in	I	Mute signal input. "H" : Mute on, "L" : Mute off.
16	LPF	--	Low pass filter of pilot detector.
17	LPF	--	While this terminal goes to "H", the VCO stops.
18	PLL in	I	Composite signal input
19	LPF	--	Low-pass filter of PLL.
20	LPF	--	Low-pass filter of PLL.
21	VCO	I	Voltage controlled oscillator terminal.
22	V <sub>CC</sub>	--	Power supply.

■ XR1097CP(IC001) : 7-channel graphic equalizer filter with A/D converter

Pin No	Symbol	I/O	Function	Pin No	Symbol	I/O	Function
1	CSB	I	Chip select	8	VSS	-	-5V
2	STB	I	Strobe signal	9	RIN	I	Sound signal input
3	DATA	I/O	Data input / output	10	LIN	I	Connected to GND
4	EOC	-	Non connection	11	GND	-	GND
5	VREF	I	A/D converter reference voltage	12	CLKC	-	A capacitor is connected
6	AUX2	I	Non connection	13	CLKR	-	A resistor is connected
7	AUX1	I	Non connection	14	VDD	-	+5V

■ M5243P (IC511) : S.E.A. Graphic Equalizer

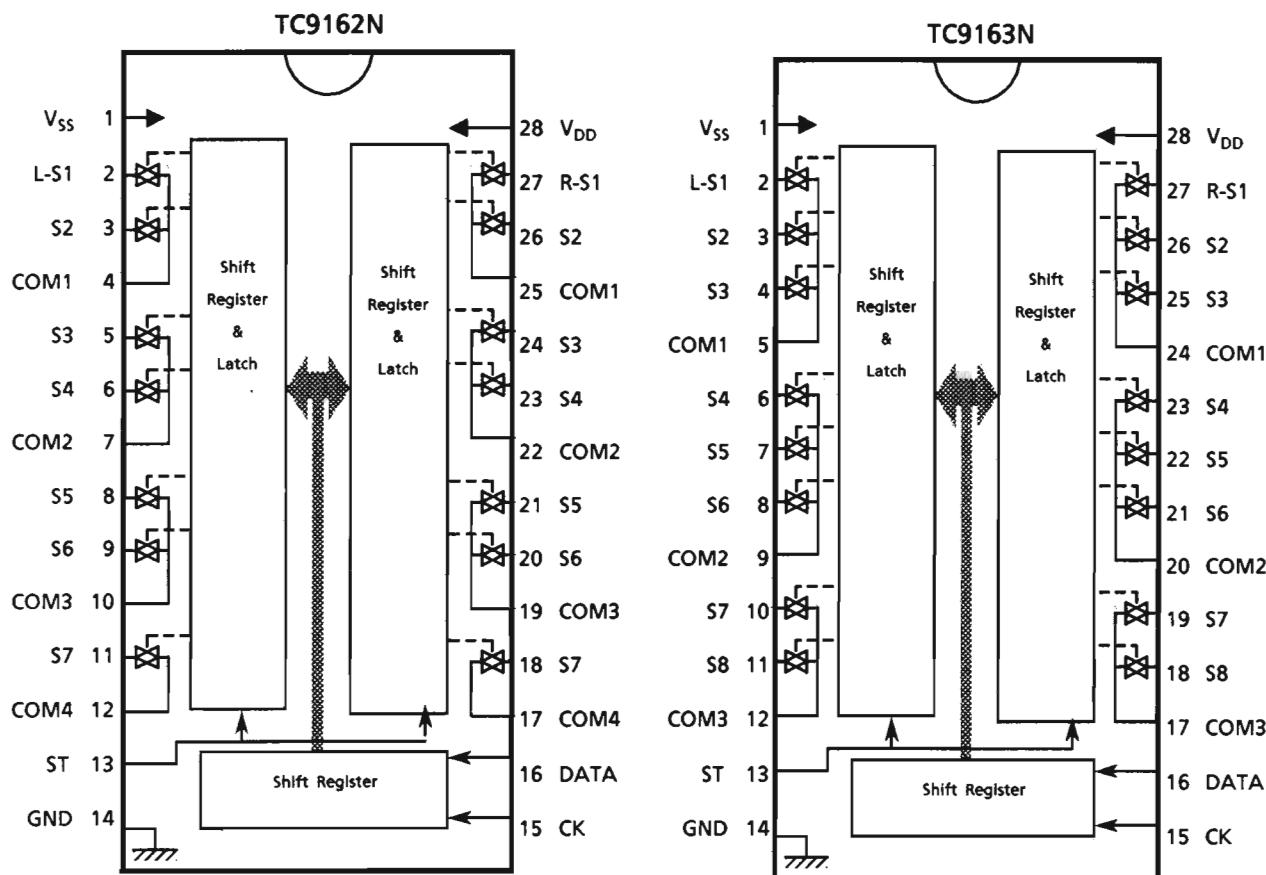

■ TC9162N (IC501),TC9163N (IC512) : Analog Switch

1. Functions

These analog switches are controlled by 14 bit serial date from computer for selecting the source.

2. Terminal Layout & Block Diagram

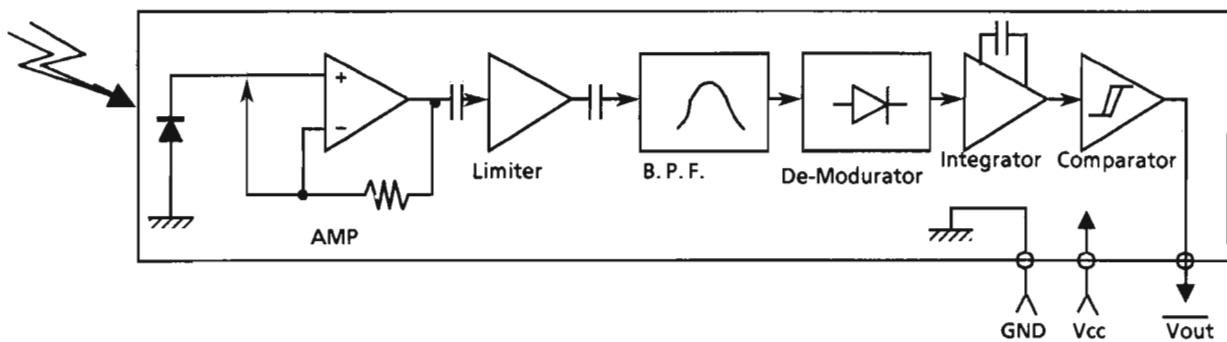

First 10bits are used to source select. Last 4bits are chip select. The switches (S1~S8) are connected to common terminals (COM1~COM3) according to the DATA from computer.

	Chip Select Bit			
	S11	S12	S13	S14
TC9162N	0	0	0	0
TC9163N	1	0	0	0

## Internal Block Diagram of Other ICs

15	MUTE	Connected to GND	39	LPF1 IN	Filter input

3. Internal Block Diagram

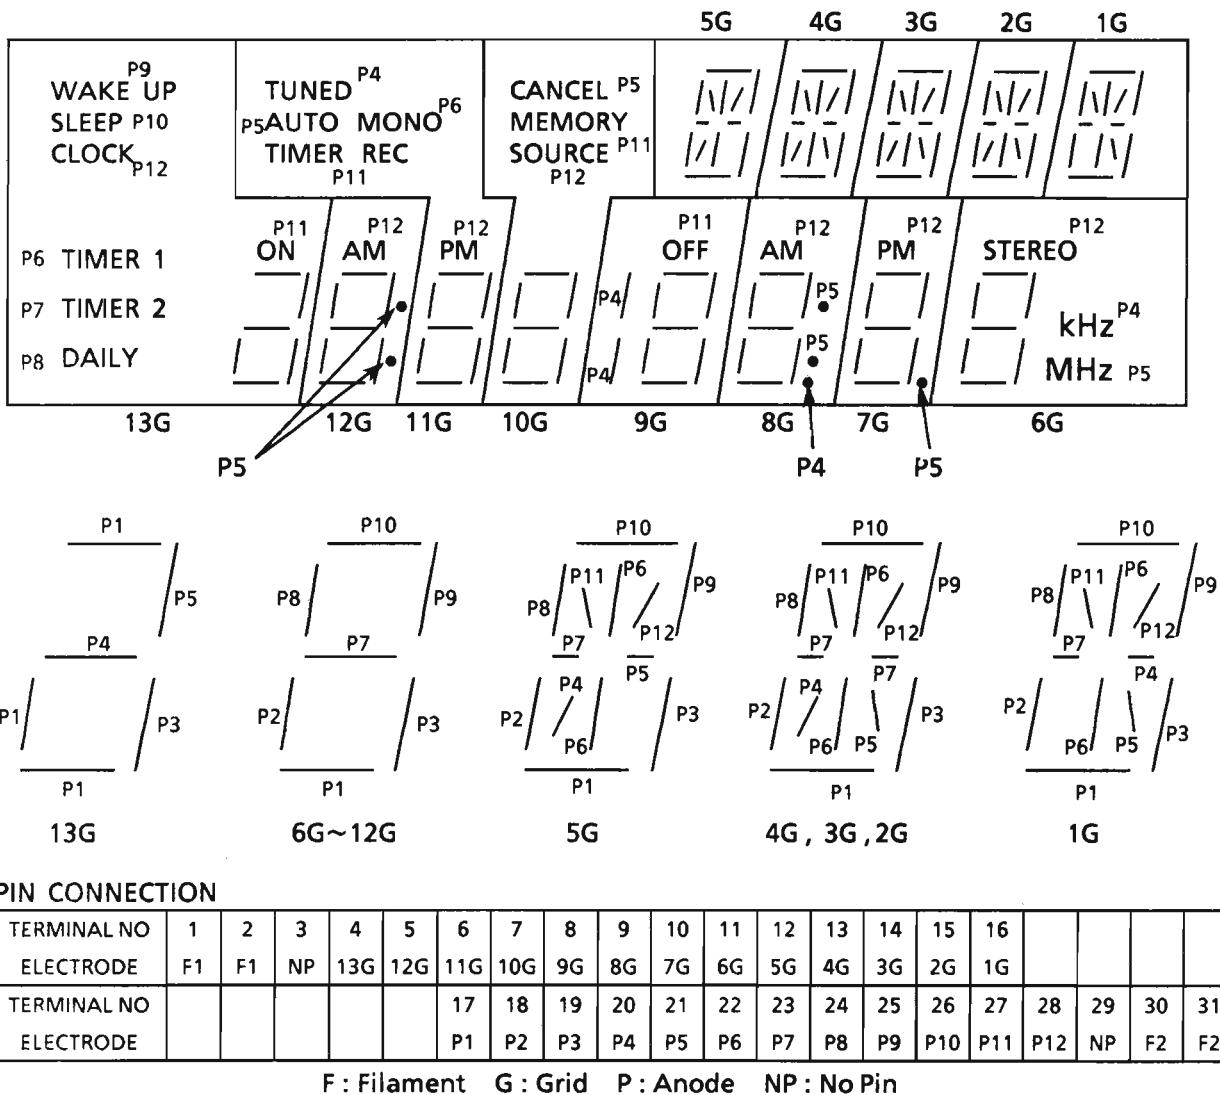

4. Operation

- This IC has 2 modes, one of which is echo mode and the other is surround mode. Following table shows the differences between the two modes.
- When EASY is 'H', DEL1, DEL2 and DEL3 are used as REQ, SECK and SEDATA. In this case, SEDATA which is used to set the mode and delay time previously mentioned, is read at the falling edge of SECK while REQ is 'L'.

DEL1 Pin12	DEL2 Pin13	DEL3 Pin14	Surround mode(Pin11 = L)		Echo mode (Pin11 = H)	
			Sampling frequency	Delay time (mSEC)	Sampling frequency	Delay time (mSEC)
L	L	L	500kHz	4.1	250kHz	20.5
H	H	L	500kHz	10.2	250kHz	41.0
H	L	L	500kHz	14.3	250kHz	61.4
L	H	L	500kHz	20.5	250kHz	81.9
H	L	H	500kHz	24.6	125kHz	98.3
L	L	H	500kHz	30.7	125kHz	122.9
L	H	H	500kHz	34.8	125kHz	139.3
H	H	H	500kHz	41.0	125kHz	163.8

## Disassembly Procedures

### ■ Removing the metal cover

1. Remove the 6 screws Ⓐ fastening the both sides and back of the metal cover to remove the cover.

### ■ Removing the front panel assembly

1. Remove the metal cover.
2. Disconnect the connectors J702, P701, JA901 and P671.
3. Remove the 2 screws Ⓑ.
4. Release the 3 hooks to remove the assembly.

### ■ Removing the rear panel

1. Remove the 2 screws Ⓒ in the broken line to remove the heat sink cover (Figure 3).
2. Remove the other screws Ⓓ.
3. Release the 2 hooks to remove the rear panel.

### ■ Removing the main circuit board

1. Remove the metal cover.
2. Remove the rear panel.
3. Remove the source selector & sea circuit board.
4. Remove the 3 screws Ⓔ fixing the main circuit board to remove the circuit board.  
(If necessary, remove the circuit boards on the main circuit board.)

### ■ Removing the display circuit board

1. Remove the front panel assembly.
2. Remove the mic mixing knob.
3. Remove the 1 screw Ⓑ fixing the mic mixing circuit board to remove the mic mixing circuit board.
4. Remove the other screws Ⓒ to remove the circuit board.

(Take care not to damage the pins of JA902 when disconnecting it.)

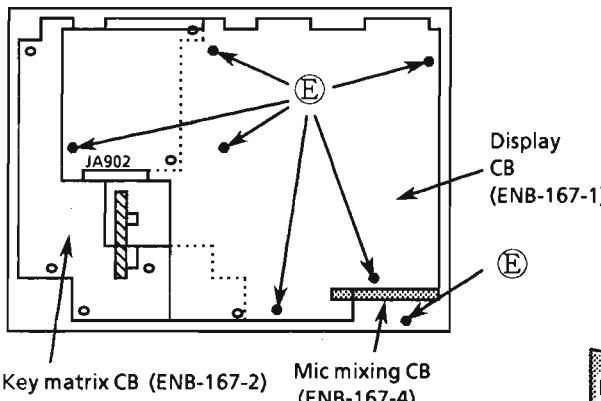

Figure 4 Behind the front panel assembly

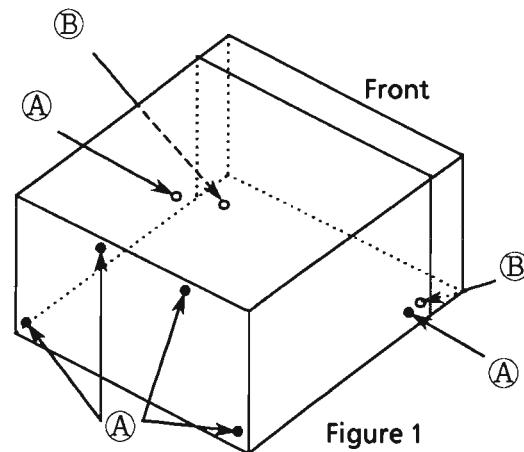

Figure 1

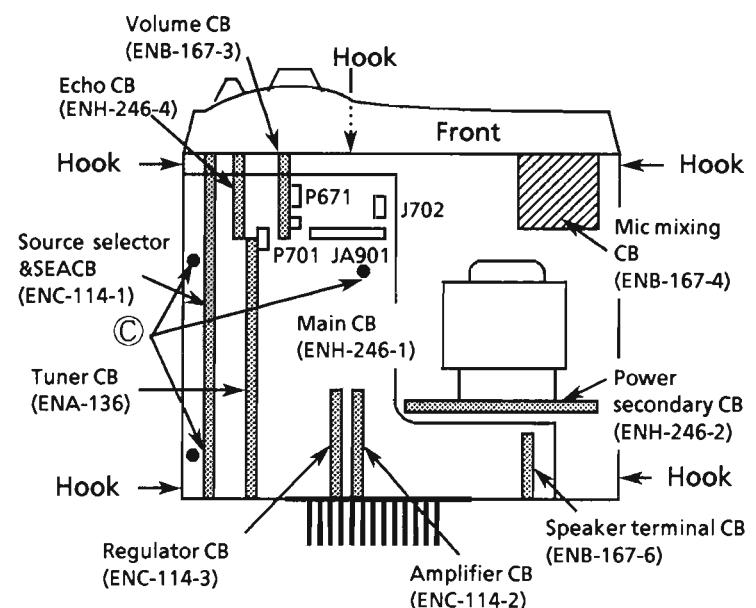

Figure 2 Top view

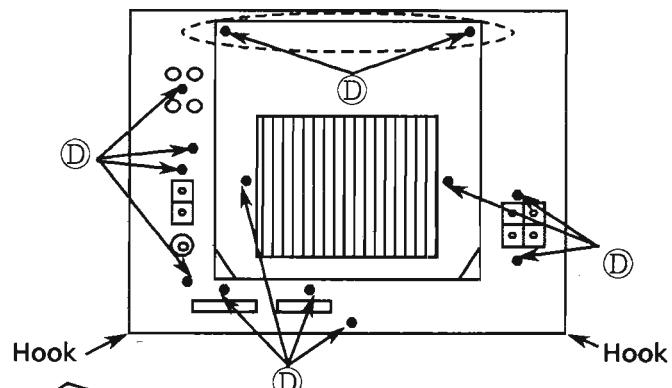

Figure 3 Rear view

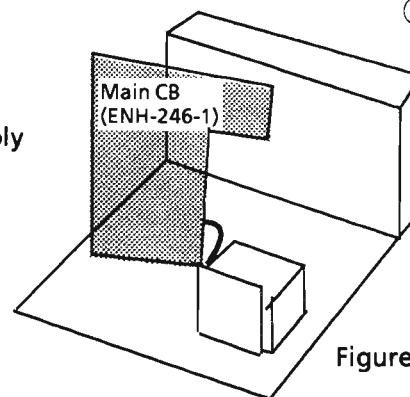

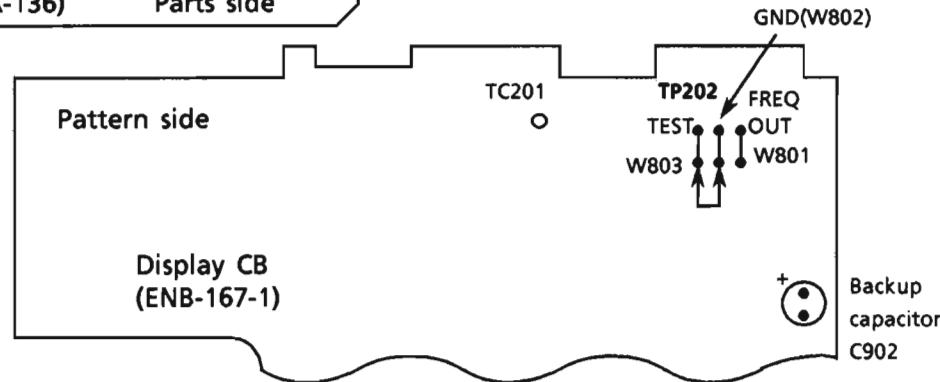

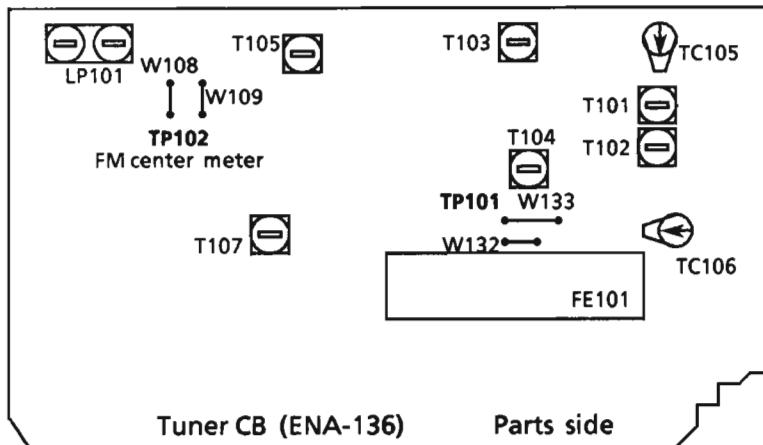

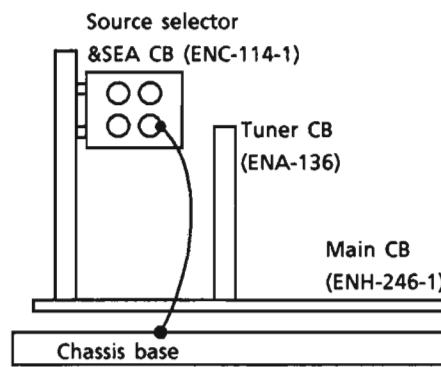

Figure 5 When checking

# Adjustment Procedures

**Note :**

The ground of the tuner circuit board is connected to the main circuit board through the chassis base and the rear panel.

When servicing the tuner circuit board without the rear panel, connect the chassis base and the ground of the AUX input terminal.

**(1) Tuning voltage**

Confirm the voltages at TP101 is within the standard values shown in the table below. If the voltages are not satisfied, replace FE101 for FM, adjust T103 for MW and adjust T104 for LW.

**FM Tuning voltage (Unit : V)**

Area	Frequency			
	64.0MHz	74.0MHz	87.5MHz	108MHz
East Europe	1.7 ± 0.7 (V)	—	—	10.0 ± 0.5 (V)
the U.K., Continental Europe, U.S.A., Canada, Australia, Universal	—	—	1.6 ± 1.0 (V)	8.0 ± 2.0 (V)

**AM Tuning voltage (Unit : V)**

Area	Frequency (MW)							Frequency (LW)		
	522KHz	530KHz	531KHz	1600KHz	1602KHz	1629KHz	1710KHz	144kHz	290kHz	353kHz
Italy	0.9±0.2	—	—	—	—	7.5±0.8	—	0.8±0.4	5.7±0.6	—
the U.K. , Continental Europe & East Europe	0.9±0.2	—	—	—	—	7.5±0.8	—	0.8±0.4	—	8.0±0.9
U.S.A. , Canada	—	0.9±0.2	—	—	—	—	8.0±0.8	—	—	—
Australia	0.9±0.2	—	—	—	—	7.5±0.8	—	—	—	—
Universal (Channel space9kHz)	—	—	1.0±0.2	—	7.2±0.7	—	—	—	—	—
Universal (Channel space10kHz)	—	0.9±0.2	—	7.2±0.7	—	—	—	—	—	—

**(2) FM center meter**

Receive a broadcast by using the function of 'AUTO STOP'.

Adjust T105 (detector coil) so that the voltage at TP102 becomes  $0\pm 1.5\text{mV}$ .

**(3) MW Tracking**

Adjust T101 (antenna coil) to obtain the best receiving sensitivity on 600kHz or 603kHz.

Adjust TC105 (antenna trimmer) to obtain the best receiving sensitivity on 1400kHz or 1404kHz.

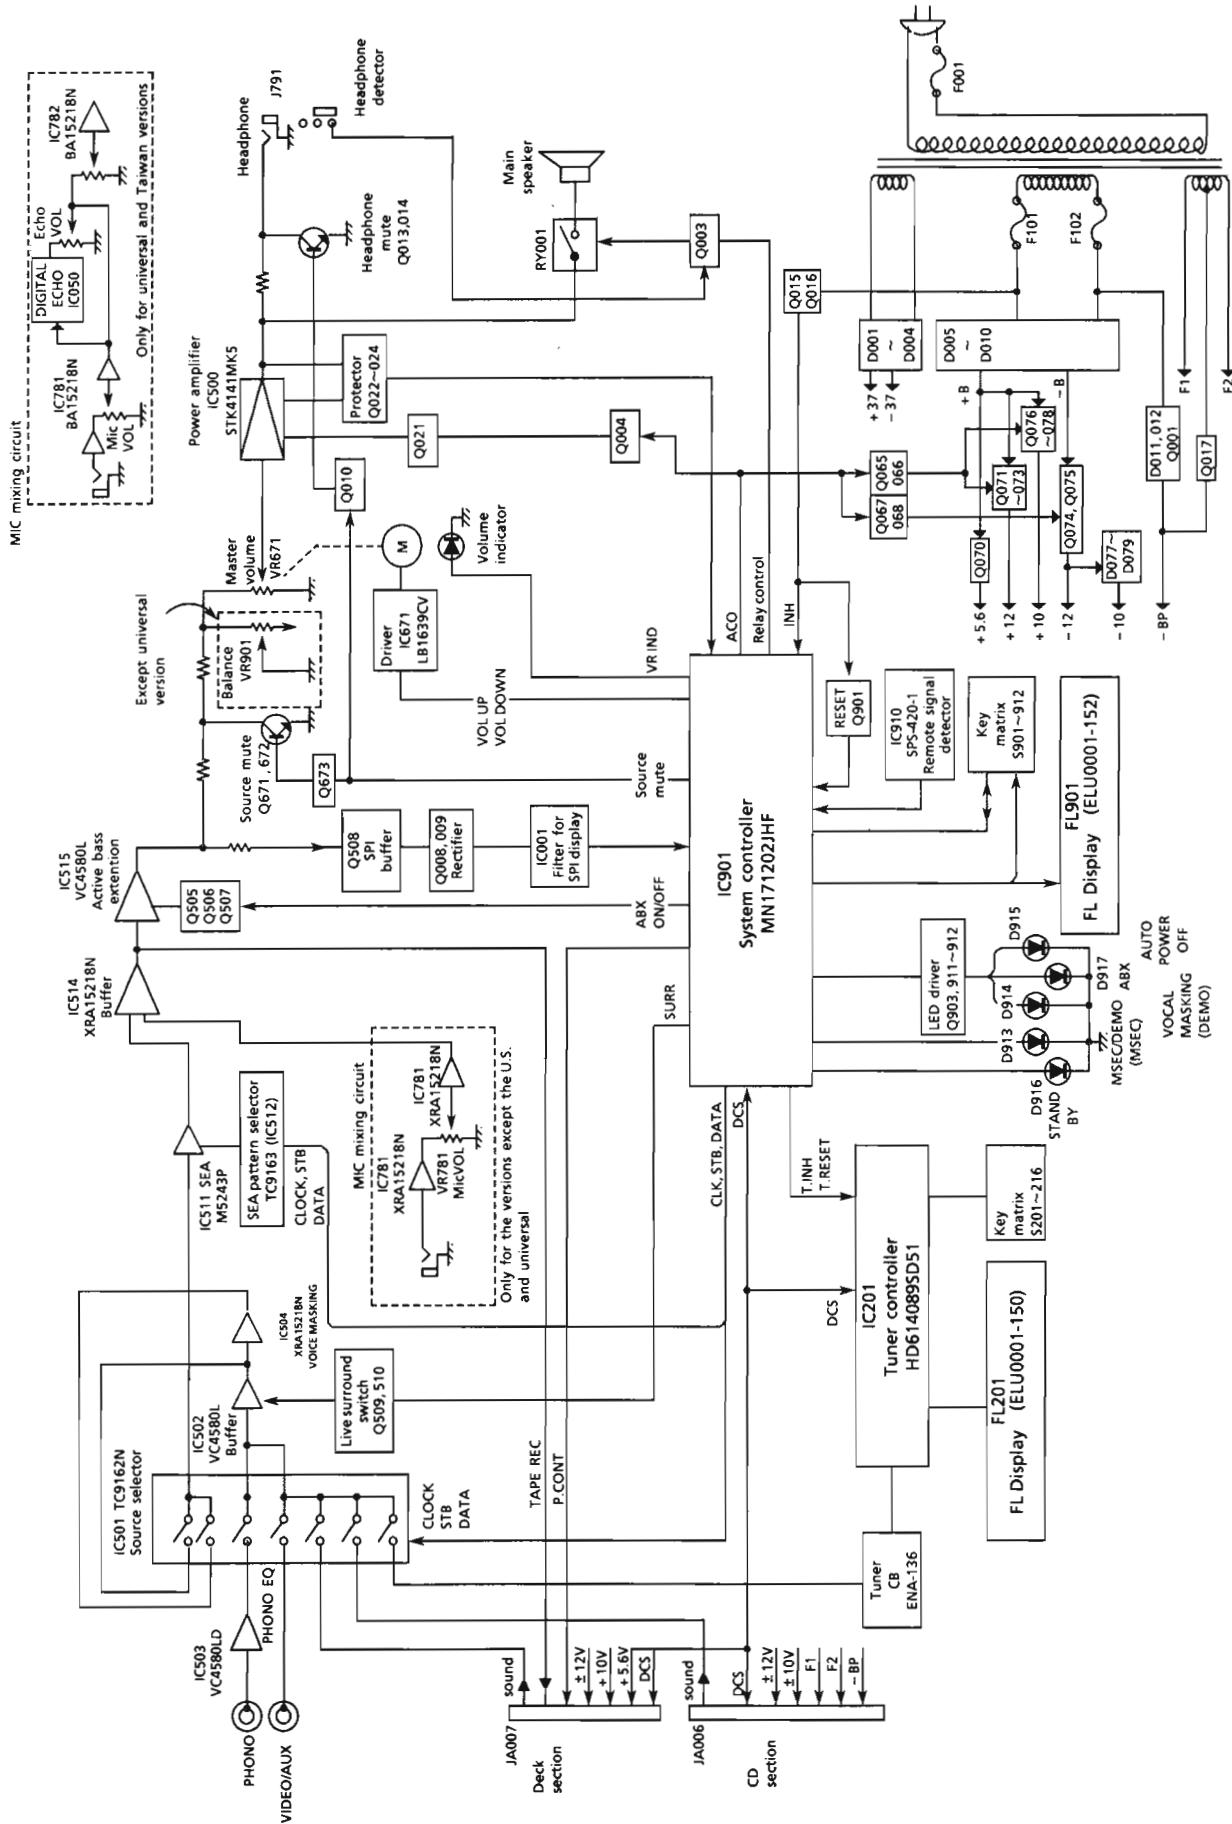

**(4) LW Tracking**

Adjust T102 (antenna coil) to obtain the best receiving sensitivity on 164kHz.

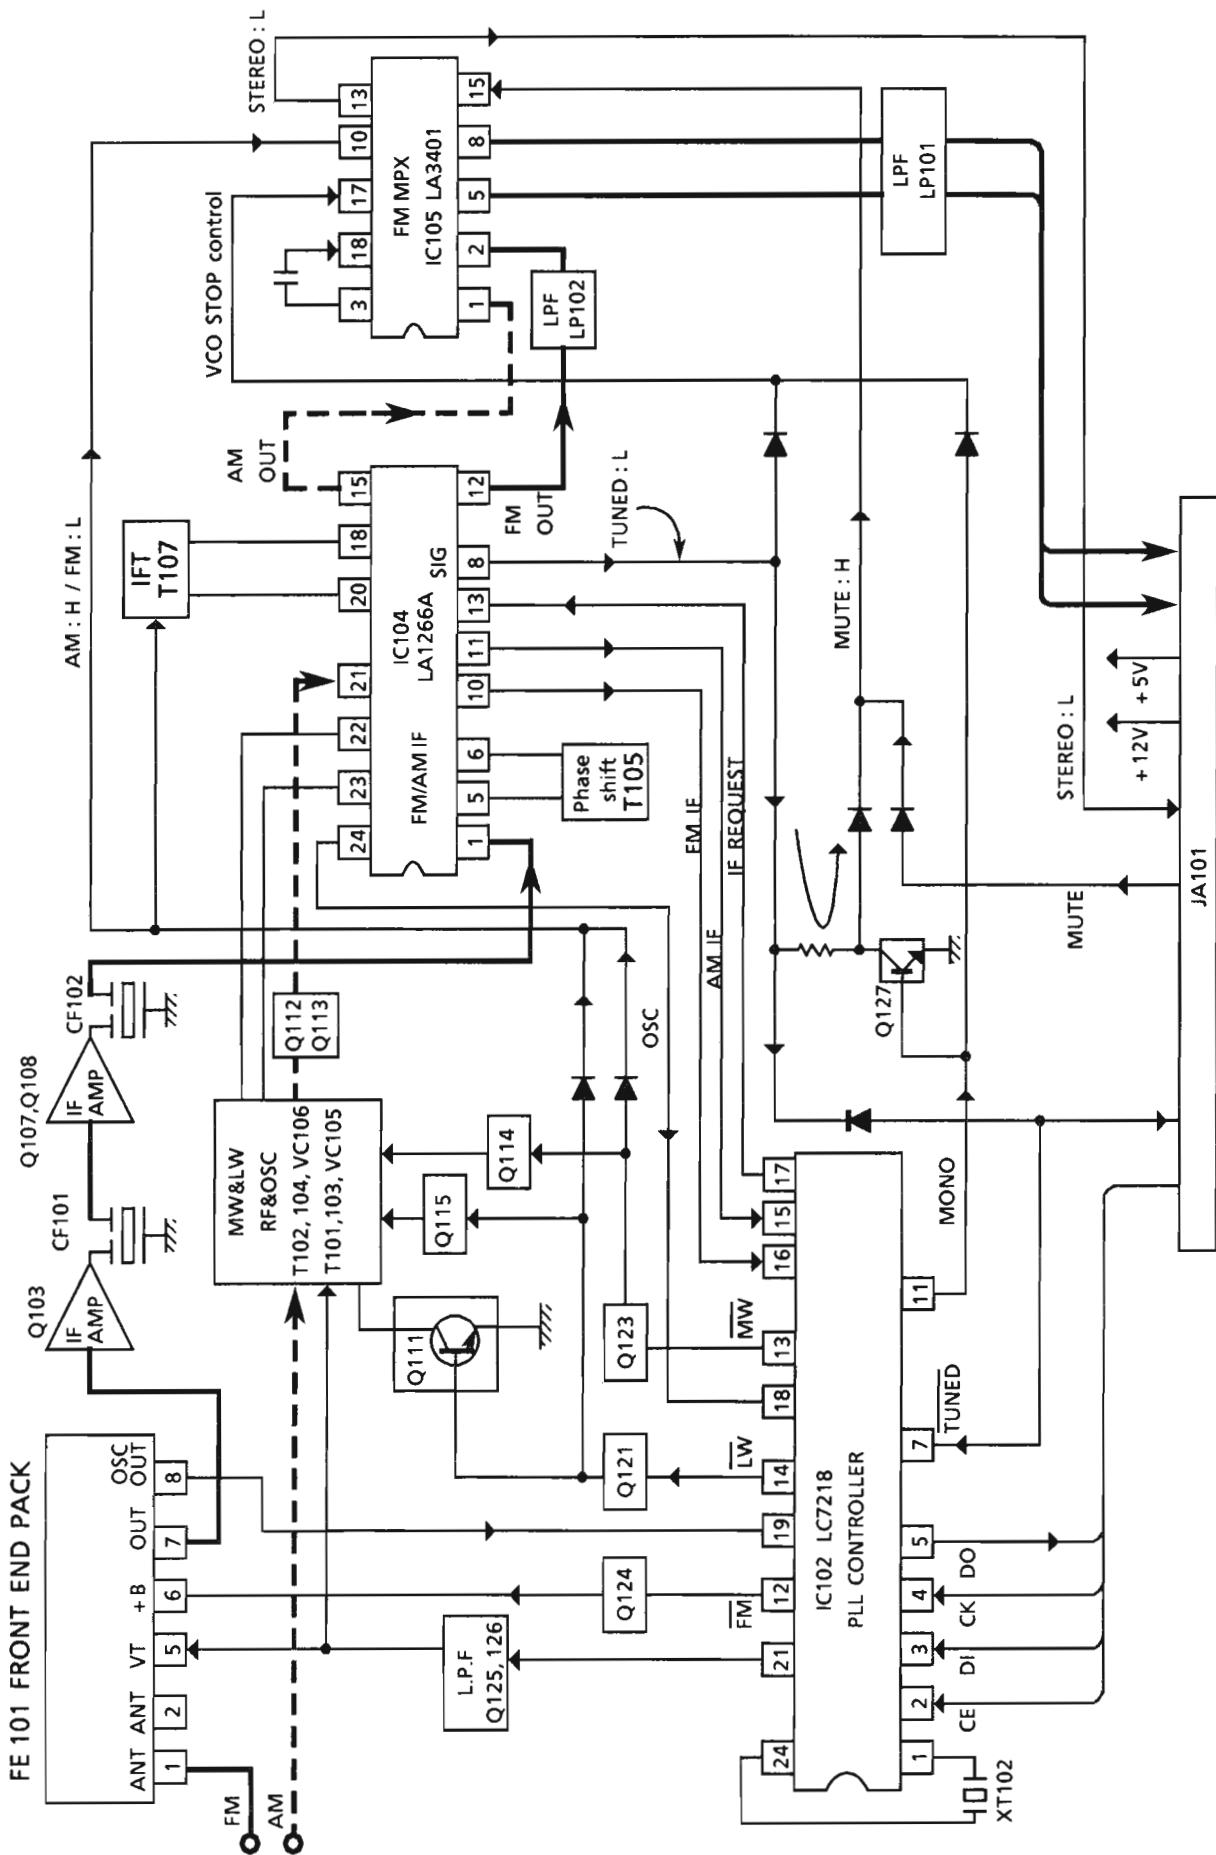

Adjust TC106 (antenna trimmer) to obtain the best receiving sensitivity on 353kHz or 245kHz

## ■ YM7121C (IC841) : Signal Processing and Servo Control

### 1. Outline

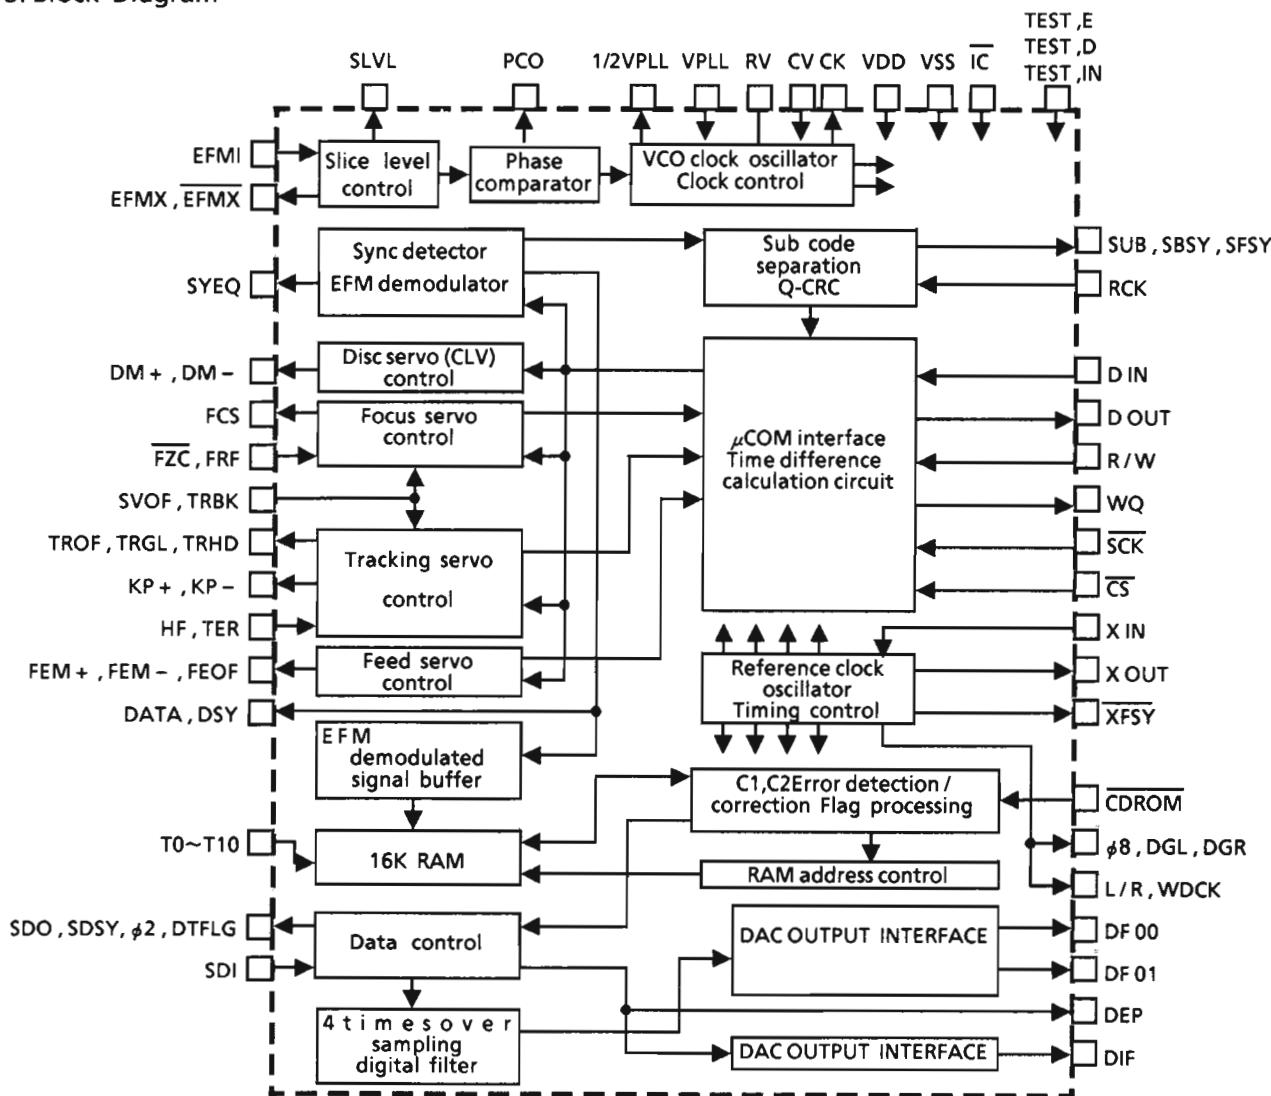

YM7121 is a C-MOS LSI for signal processing and servo control (SVC) in a CD player. It is used for the demodulation of the EFM signal from the laser pick up , detection / correction of the error signal , signal processing in digital filtering , etc. and for various servo controls (focusing , disc , tracking and feed servos).

And it contains digital interface which output the audio digital signals in S-RAM and CD-player. This digital interface matches EIAJ standards.

### 2. Top View

### 3. Block Diagram

## 4. Pin Functions

Pin No.	Symbol	I/O	Function and Operation
1	CV	I	Adequate time constant is added to this terminal and input the PCO output. This makes the structure of clock reproduce circuit by inner VCO circuit.
2	RV	-	RV terminal is standard voltage terminal of inner VCO. And capacity for stabilizing is added to this terminal.
3 32 72	VDD	-	These are +5V power supply terminals.
4 5 70	TEST. IN TEST. E TEST. D	I I I	These terminals are for test.
6	SYEQ	O	This is the check output terminal, it becomes high when flame synchronizing signal detected from EFM pattern coincides frame synchronizing signal from internal counter.
7 8	DSY DATA	O O	Not used.
9	CK	O	CK has 4.3218 MHz clock.
10~19	T0~T9	I	This terminal is internal RAM test terminal, and connected GND.
22	DEP	O	De-emphasis is necessary when this terminal is high.
23	DIF	O	DIF is digital audio interface format output matched EIAJ standards.
24	SDO	O	SDO is a serial signal output of $\mu$ 2 bit rate .(The MSB puts in at first.)
25	SDI	I	SDI is the input terminal of 4 times over sampling digital filter. It is usually connected with SDO.
26	SDSY	O	This terminal changes the Lch/Rch by LSB of the SDO.
27	DTFLG	O	Not used.
28	$\phi$ 2	O	$\phi$ 2 is 2.1168 MHz crystal clock.
29, 52, 77,66	VSS	-	GND
30	XOUT	O	Not used.
31	XIN	I	Input from crystal clock.
33	<u>XFSY</u>	O	Not used.
34 35 36 37	SUB SBSY RCK SFSY	O O I O	After detecting that SBSY changes from low to high by IC991, the sub-code(P~W) can be output from SUB output terminal by inputting 8 clocks to RCK terminal at every point where SFSY changes low to high.
38	<u>CDROM</u>	O	Not used.
39	$\phi$ 8	O	$\phi$ 8 is 8.4672MHz crystal clock.
40	WDCK	O	Not used.
41	L/R	O	This is synchronizing signal for data transfer and it connects with DAC.
42 43	DGL DGR	O O	Not used.
44 45	DF01 DF00	O O	Serial data output.(Right channel). Serial data output.(Left channel).
46	<u>SCK</u>	I	This terminal is connected to $\mu$ COM. It is an input terminal that carries the clock signal for data transfers.
47	R/W	I	This connects with microcomputer and it is an output terminal for switching data transmission mode. it enables to transmit data from SVC to microcomputer when R/M is "L" and from microcomputer to SVCwhen R/W is "H".
48	<u>CS</u>	I	This is a chip select terminal for YM7121.
49	DOUT	O	This terminal is the data output terminal connected to $\mu$ COM. When R/W is low, data is transferred from YM7121 to $\mu$ COM , according to theSCK clock input.

Pin No.	Symbol	I/O	Function and Operation
50	WQ	O	This terminal is connected to $\mu$ COM. It is a request signal which demands to $\mu$ COM inputting the data transfer (YM7121 to $\mu$ COM).
51	DIN	I	This is a data input terminal connected to $\mu$ COM. When R/W is high, the data is transferred from $\mu$ COM to YM7121 according to the SCK clock input.
53 54	DM + DM -	O O	These terminals output the PWM to control the speed of spindle motor. The speed of the motor goes up when DM + is high, and slows down when DM - is high: both terminals can not become high simultaneously.
55 56 60 61 62 63 64	HF TER TRHD TRGL TROF KP - KP +	I I O O O O O	When tracks are being crossed during serches, the amplitude variation of the generated HF signal is sampled at the zero – cross point of the tracking error signal TER and the TROF signal is output. The level variations of this signal turn the servo on and off, greatly faciliating track acquisition. KP + or KP - is output to conduct tracking, and TRHD is output during tracking to cause generation of the tracking error signal. The TRGL signal is for increasing the tracking gain after tracking is completed.
57 58 59	FEM + FEM - FEOF	O O O	The FEM + and FEM - are output as high speed feed signals, and FEOF signal is output for cutting the feed servo during high speed feed.
65	TRBK	I	TRBK is input to apply tracking brake from outside. TRGL becomes low with high input and inner control signal TBKE becomes high.
67 58 59	FZC FCS FRF	I O I	These terminals are used for controlling the focus servo. The FCS is for a leading signal of Focusing ; the signal, generated when the focus point is achieved, terminate the focusing operation ; and FCO flag is dropped internally by FRF signal generated when reflected light is detected.
71	IC	I	YM7121 needs initializing when power supply turn on. IC will be low more than 400 $\mu$ s since XIN is input clock with VDD standard.
73 74 75	SLVL EFMX $\bar{E}FMX$	O O O	Amplitude limited, mutually anti-phased signals are output from EFMX and $\bar{E}FMX$ . Slice level is controlled by these signals and external amplifier. SLVL is output amplitude alteration component of both terminals. When integral circuit is connected to external. YM7121 easily can control slice level.
76	EFMI	I	This terminal is input EFM signal. (1~2 Vpp)
78	PCO	O	This terminal outputs the phase difference when the polarity of the clock and the EFM pattern changes.
79	VPLL	I	This terminal is input D.C. voltage matched VCO free run frequency. (17.2872 MHz)
80	1/2 VPLL	O	This terminal outputs a half of VPLL input, and capacity for stabilizing is added to this terminal.

## Disassembly Procedures

### ■ Top cover removal

1. Remove the screws fastening both sides of the Top cover and rear side.
2. Remove the Top cover spreading both sides and lifting the rear up.

### ■ Front panel block removal

1. Remove the Top cover.
2. Remove the 2 screws ④.
3. Disconnect the connectors (P331,P333,P490,P491,P492,P493,P901,FW496).
4. Remove the 2 screws ⑤ fixing the front panel.
5. Remove the screw ⑥ on the bottom.
6. Release the 3 hooks ⑦ and remove the front panel block.
7. Disconnect the connectors FW495.

### ■ CD mechanism assembly removal

1. Remove the Top cover.
2. Remove the 3 screws of the rear side.
3. Remove the 2 screws ⑧ fixing the CD mechanism chassis.
4. Take out the CD mechanism assembly with CD PCB after unplugging the connectors (J701,J702,P901).
5. Remove the 3 screws ⑨ fixing the CD mechanism assembly.
6. Remove the connectors (P801,P802,P803) and the CD mechanism assembly.

### ■ Tray removal

1. Remove the CD mechanism assembly.
2. Switch on the power of RX-S50RBK.  
Press the OPEN/CLOSE switch to bring the tray forward and with the tray forward, switch off the power.
3. Remove the screw ⑩ on the tray.
4. Pull the tray toward the front to move it.

(Note)

If the power does not come on due to break down or the insert a Philips screw driver through the hole at the bottom of the CD mechanism assembly and turn it counter-clockwise to bring the tray forward ⑪.

### ■ Cassette mechanism assembly removal

1. Remove the front panel assembly.
2. Remove the 8 blue colored screws ⑫ ⑬ fixing the cassette mechanism.
3. Push the cassette button and remove the cassette mechanism assembly.

(Note)

The cassette mechanism is grounded through the bottom cover, so when checking the operations with the bottom cover removed (especially when checking the signal system), be sure to ground the chassis by using an alligator clip or other suitable gadget. Also, this mechanism is designed for pack sensing, remember that it can not be operated without any tape.

### ■ Cassette lid removal

1. Open the doors and slide them in the direction of the arrows.

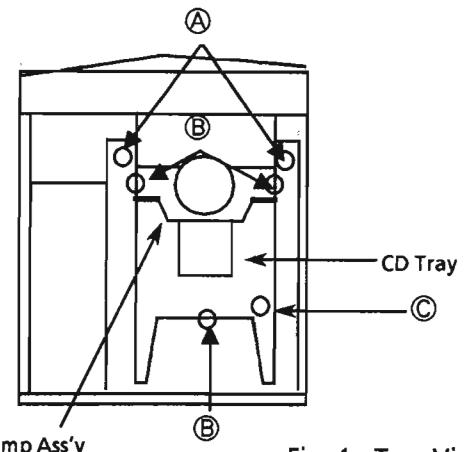

Fig. 1 : Top View

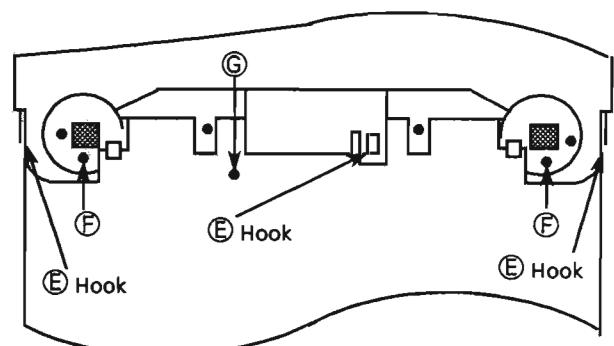

Fig. 2 : Bottom View

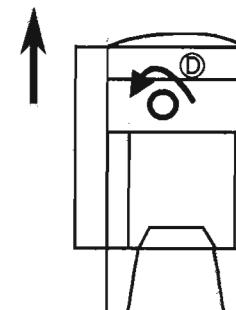

Fig. 3 : Bottom View of the CD mechanism

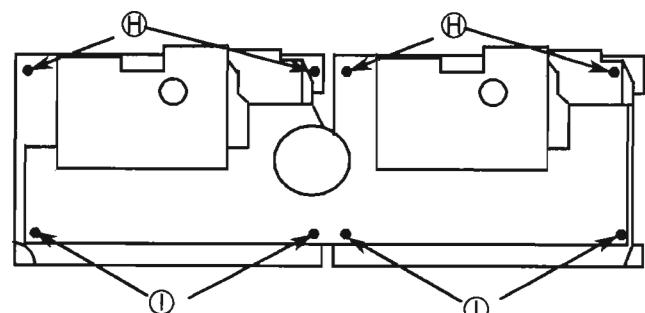

Fig. 4

Fig. 5

## Disassemble of the CD mechanism assembly

### ■ Pickup removal

1. Remove the cd mechanism assembly.
2. Release the shaft to remove the pickup (Fig 6).

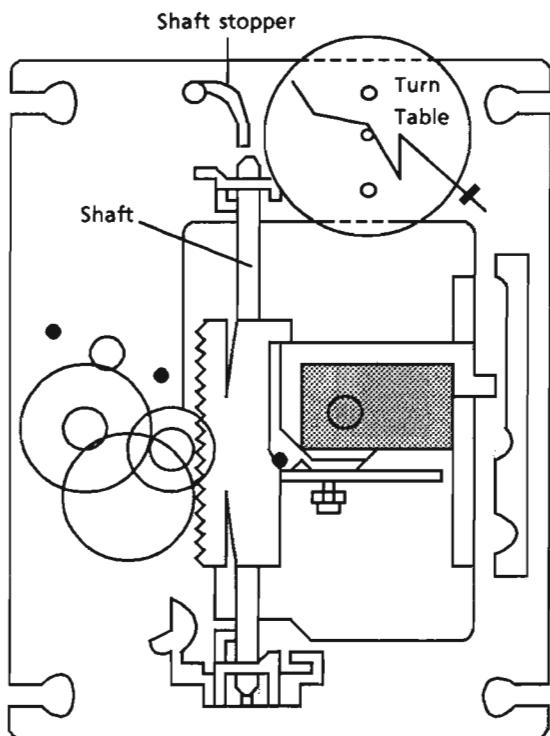

Fig. 6 : CD mechanism assembly

### ■ Spindle motor installation

1. Tighten the 2 screws to the same torque.
2. Fasten the spindle and feed motor P.C. board with the screw and solder.
3. Install the turntable . When installing , press straight down at the center of the turntable until the distance from the surface of the mechanism base to the turntable is exactly  $19.4 \pm 0.1\text{mm}$ .

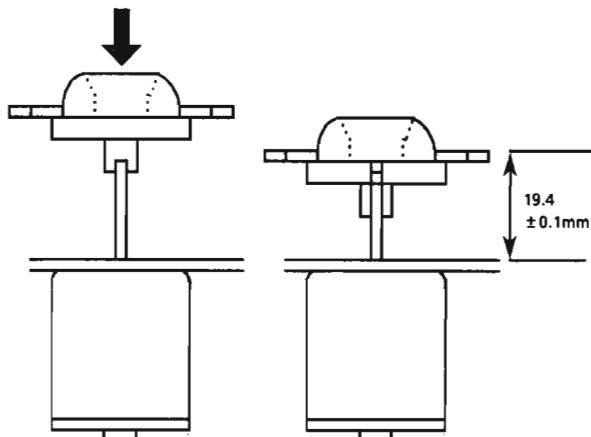

Fig. 8

4. After inserting the turntable , bond the motor shaft and turntable together (at the section marked by an arrow in fig.9 on the left below).

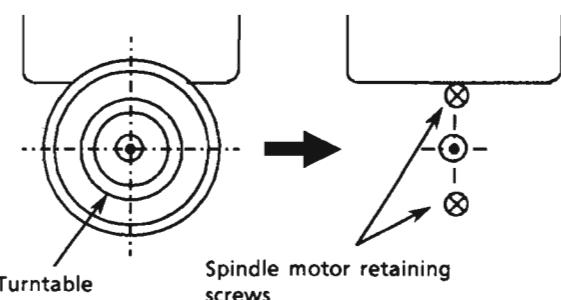

Fig. 7

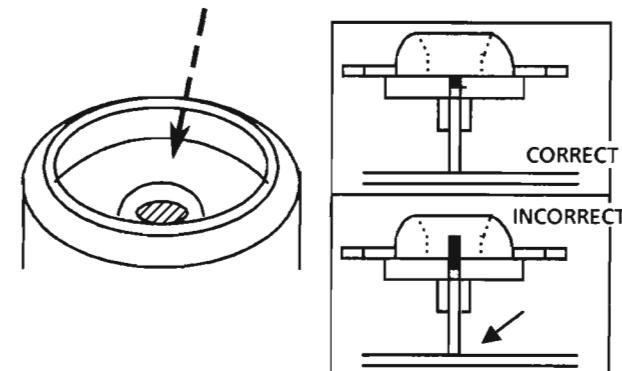

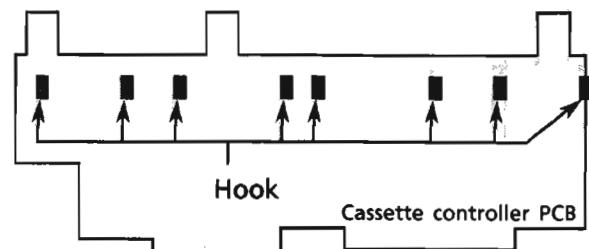

Fig. 9

5. Use "LOCKTITE" #460 bonding agent, and apply as little as possible . Take care not to allow any excess bonding agent to get onto the turntable . Be extremely careful not to allow bonding agent to adhere to the motor bearings (the section marked by an arrow in fig.9 on the right).

## Disassemble of the cassette mechanism

### ■ Cassette controller PCB (ENJ-074-2) removal

1. Remove the cassette mechanism assembly.
2. Release the 8 hooks to remove the controller PCB (Fig. 10).

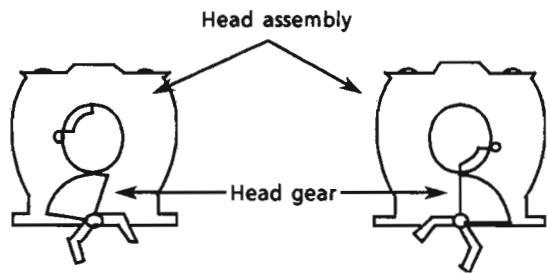

### ■ Head assembly removal

1. Remove the cassette mechanism assembly.
2. Unsolder the flexible wire (Fig. 12).
3. Remove the 2 screws  $\odot$  fixing the head assembly (Fig. 17).

※ Note

The direction of the head is changed with the head gear.  
When servicing , install the head gear according to the direction of the head. Refer to fig. 11.

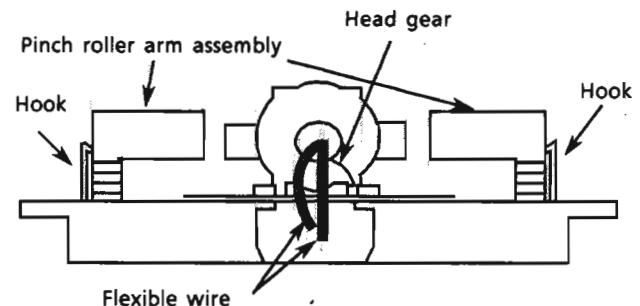

### ■ Pinch roller arm assembly removal

1. Release the return spring (Fig. 17).
2. Release the hook holding the pinch roller arm assembly to remove the assembly (Fig. 12).

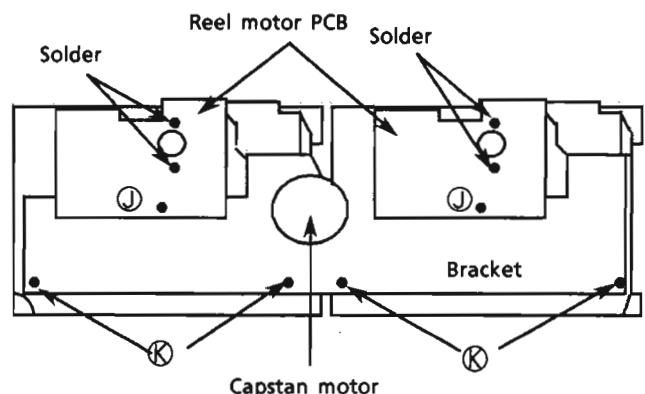

### ■ Reel motor PCB removal

1. Remove the cassette mechanism assembly.
2. Remove the cassette controller PCB.
3. Remove the screw  $\odot$  fixing the reel motor PCB.
4. Unsolder the reel motor PCB.
5. Remove the PCB.  
Be careful so that stress is not added to the terminals of the motor.

### ■ Capstan motor removal

1. Remove the cassette mechanism assembly.
2. Remove the reel motor PCBs.
3. Remove the 4 screws  $\odot$  fixing the bracket (Fig. 13).
4. Remove the motor with the bracket,
5. Remove the 2 screws fixing the motor and the bracket.

### ■ Reel motor removal

1. Remove the cassette mechanism assembly.
2. Remove the reel motor PCB.
3. Remove the FR arm assembly (Fig. 17).
4. Remove the screw  $\odot$  fixing the motor (Fig. 17).
5. Remove the hooks fixing the motor to remove the motor.

## ■ Fly wheel removal

1. Remove the cassette mechanism assembly.
2. Remove the reel motor PCB.
3. Remove the screws  $\otimes$  and the bracket (Fig. 13).

\* To install the bracket

1. Install the belt of mechanism A as shown in fig. 14.
2. Assemble the mechanism A and the bracket with the capstan motor.
3. Hang the belt of the mechanism A to the motor pulley using a tweezers and the like.
4. Hang the part  $\textcircled{L}$  to the Idler pulley.
5. Install the mechanism B installed the belt as shown in fig. 16 to the bracket which is assembled with the mechanism A.
6. Hang the part  $\textcircled{M}$  to the motor pulley using a tweezers and the like.

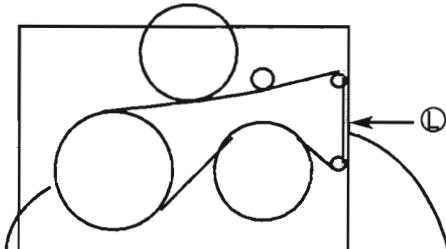

Fig. 14 Mechanism A

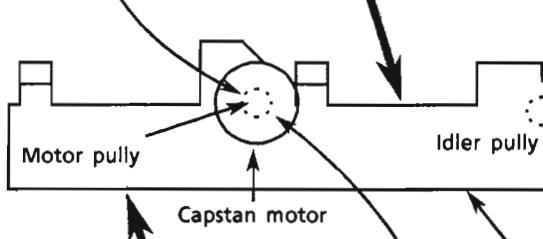

Fig. 15

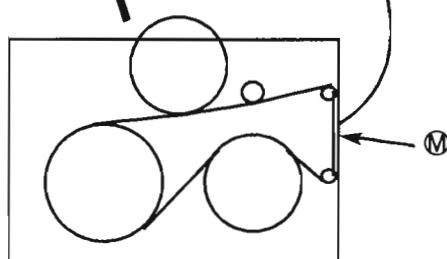

Fig. 16 Mechanism B

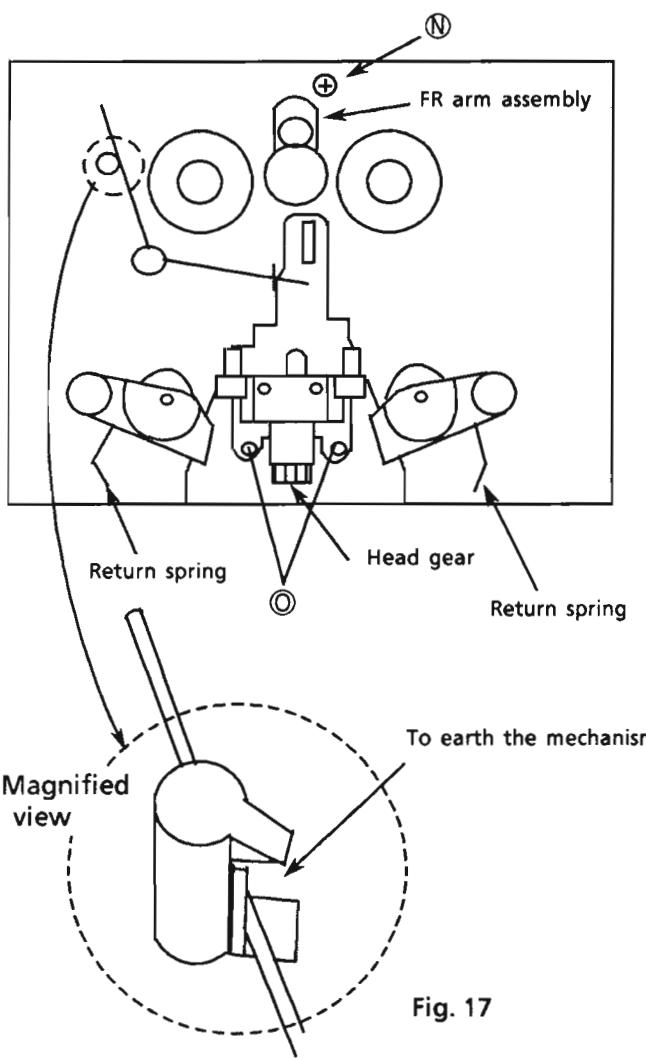

Fig. 17

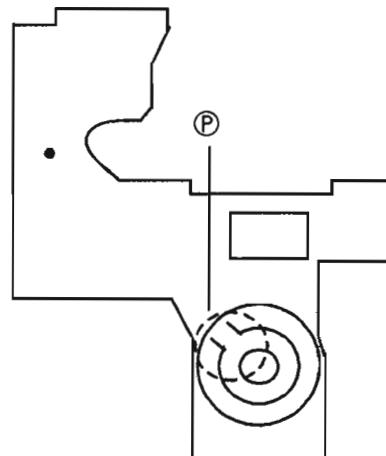

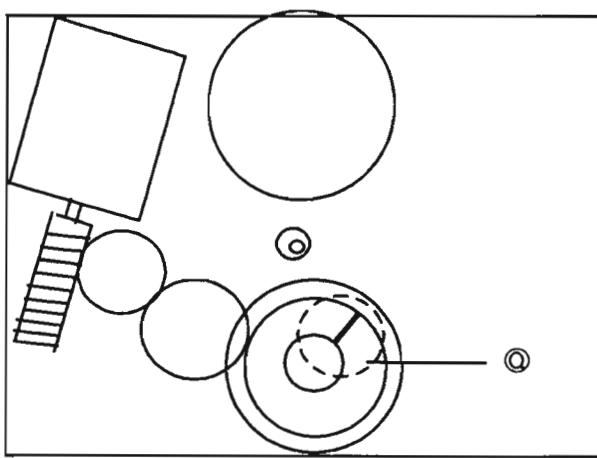

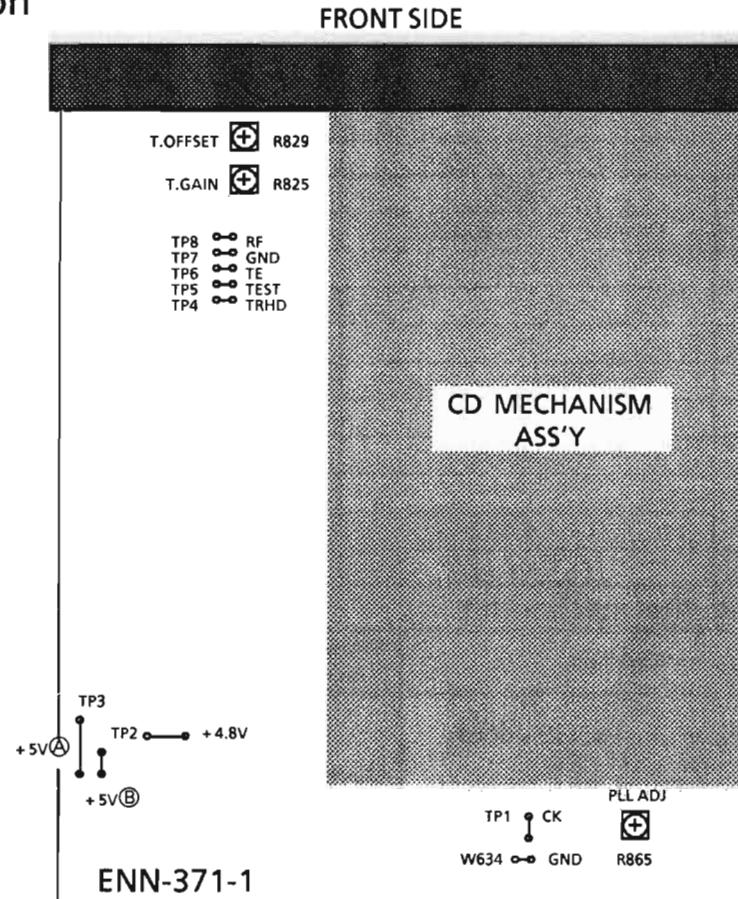

Fig. 18

## Adjustment Procedures

\* Use RX-S50RBK when adjusting .

### ■ CD section

#### 1. PLL free-running adjustment

- 1) Measuring instrument : Frequency counter
- 2) Adjusting procedure
  - (1) Connect a frequency counter with TP1 (CK) and W634 (GND) on the main PC board.
  - (2) Adjust R865 for setting the frequency counter's value becomes  $4.295 \pm 0.02\text{MHz}$ .

#### 2. Tracking gain adjustment

- 1) Measuring instruments : Oscilloscope, Normal disc
- 2) Adjusting procedure
  - (1) Connect an oscilloscope with TP6 (TE) and TP7 (GND) on the main PC board.
  - (2) Play a disc.
  - (3) Short circuit TP5 (TEST) to TP7 (GND).
  - (4) Adjust R825 for setting tracking error signal becomes  $2.0\text{ V}_{\text{p.p.}}$ .

#### 3. Tracking offset adjustment

- 1) Measuring instruments : Oscilloscope, Normal disc
  - 2) Adjusting procedure
    - (1) Connect an oscilloscope with TP6 (TE) and TP7 (GND) on the main PC board.
    - (2) Play a disc.
    - (3) Short circuit TP5 (TEST) to TP7 (GND).
    - (4) Adjust R829 for setting the DC level of the tracking error (offset) becomes 0.
- Note : Adjust R829 for setting the waveform becomes symmetrical around the 0 level.

## ■ Cassette Deck section

### 1. Measuring instruments

Audio frequency signal generator ( 0dBs output at the 600 ohm output terminal from 50Hz to 20KHz)  
 Electronic voltmeter  
 Frequency counter  
 Wow & Flutter meter  
 Distortion Meter with band pass filter  
 Attenuator (600 ohm impedance)  
 A resistor with 600Ω

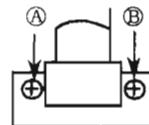

#### Standard Tape

0dBs = 0.775V

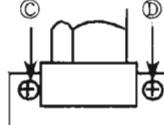

Tape No.	Frequency	Level (Wow & Fkutter)	Purpose
VTT-703L	10kHz	-10dBs	Head azimuth , Frequency Response
VTT-712	3000Hz	0dBs 0.025%WRMS	Tape Speed , Wow & Flutter
VTT-724	1kHz	-4dBs	Standard Level
TMT-6447	-	-	Blank Skip
TMT-6247 , TMT-6237	-	-	Music Scan
TMT-7088S	-	-	Recording standard Normal : UR
AC-712	-	-	Recording standard METAL :MA
AC-513	-	-	Recording standard CrO <sub>2</sub> : SA
TW-2111, TW-2121	-	-	Forward / reverse play torque measuring
TW-2231	-	-	Feed forward / rewind torque measuring
C-120 Tape	-	-	Comfirming the tape running

### 2. Adjustment and repairing the mechanism

Item	Adjustment method	Standard value	Remarks
Head azimuth	<p>Deck A</p> <ol style="list-style-type: none"> <li>Connect an electronic voltmeter to the DOLBY TP (figure 3) to playback VTT-703L.</li> <li>Adjust screw Ⓐ so that the indication of the voltmeter becomes maximum when PLAY (▶) is pressed.</li> <li>Adjust screw Ⓑ so that the indication of the voltmeter becomes maximum when PLAY (◀) is pressed.</li> </ol> <p>Deck B</p> <ol style="list-style-type: none"> <li>Adjust screw Ⓒ so that the indication of the voltmeter becomes maximum when PLAY (▶) is pressed.</li> <li>Adjust screw Ⓓ so that the indication of the voltmeter becomes maximum when PLAY (◀) is pressed.</li> <li>After making the adjustment, apply screw lock to prevent screws Ⓐ, Ⓑ, Ⓒ and Ⓓ coming loose.</li> </ol>	Maximum	<p>1. Refer to figure 1.</p> <p>2. When the specified characteristic cannot be obtained because of head wear, excessive magnetization, etc., replace the head assembly and adjust the head azimuth. Also, perform the electric adjustment.</p> <p>3. When there is the difference of more than 3 ~ 4 dB between left and right output levels, replace the head assembly to avoid complaints.</p>
Playback torque	1. Measure the torque in the playback mode by the torque meter.	26 ~ 62 g·cm	When the standard torque cannot be obtained, replace the FR arm assembly or motor.
Fast forward torque	1. Measure the torque in the fast forward mode by the torque meter.	80 ~ 200 g·cm	When the standard torque cannot be obtained, replace the FR arm assembly or motor.
Rewind torque	1. Measure the torque in the rewind mode by the torque meter.	80 ~ 200 g·cm	When the standard torque cannot be obtained, replace the FR arm assembly or motor.
Wow & flutter	<ol style="list-style-type: none"> <li>Connect the wow &amp; flutter meter to the DOLBY TP (figure 3) and play back VTT-712.</li> <li>Its reading should be within 0.2% (WTD).</li> </ol>	Less than 0.2%	As a complaint may occur if the wow & flutter fluctuates by 0.1% even though it is allowed in the standard, repairing is required.

Deck A

Deck B

Figure 1

### 3. Electrical Adjustments (Make the following adjustments after adjusting the head azimuth.)

In principle, the adjustments should be made in the following sequence.

Set the NR switch to OFF and the BEAT CUT switch to "1".

Adjustments marked with an asterisk (\*) should always be made after the head is replaced

0dBs = 0.775V.

Item	Adjustment Method	Adjustment Location	Standard Value	Remarks
Tape Speed	1. Connect a frequency counter to the DOLBY TP (figure 3) and play back VTT-712. 2. Adjust the semi-fixed resistor VR481 on ENJ-074-1.	VR481	3,000 Hz $\pm 10\text{Hz}$	Connect a wow & flutter meter with a built-in frequency counter to the speaker terminals.
Standard level (Playback Level)	1. Connect an electronic voltmeter to the DOLBY TP (figure 3). Play back VTT-724 (1 kHz : -4dBs) to adjust the semi-fixed resistors.	Deck A L: VR453 R: VR454  Deck B L: VR281 R: VR282	488mV (-4dBs)	1) The playback level varies when the head is replaced so should be adjusted. Use an electronic voltmeter with an impedance of 100 k $\Omega$ or more.
Playback Frequency Response	1. Connect an electronic voltmeter to the DOLBY TP (figure 3). 2. Play VTT-703L (10kHz : -10dBs) and adjust semi-fixed resistors to obtain the standard values.	Deck A L: VR451 R: VR452  Deck B L: VR283 R: VR284	245mV (-10dBs)	—
Recording Bias Frequency	1. Connect a frequency counter to the BIAS TP (figure 3), and perform a recording to adjust bias frequency.	L331	100 kHz $\pm 5\text{ kHz}$	Set the BEAT CUT SWITCH to "1".
Record / Play Frequency Response (Bias current)	1. Supply 1kHz and 12.5kHz with 30mV signals to AUX/VIDEO terminals respectively to record them. 2. Connect an electronic voltmeter to the DOLBY TP (figure 3) to confirm the recorded values. 3. If the values are not satisfied, adjust the semi-fixed resistors and record the signal again to confirm the recorded values.	L: VR331 R: VR332	0 $\pm 2\text{ dB}$ with 1 kHz as the standard.	<b>Refer to figure 2 below.</b> 1) The recording and playback frequency response of a cassette deck are adjusted by adjusting the bias. 2) Perform the adjustment with normal tape and confirm that the values are within the range for metal tape.

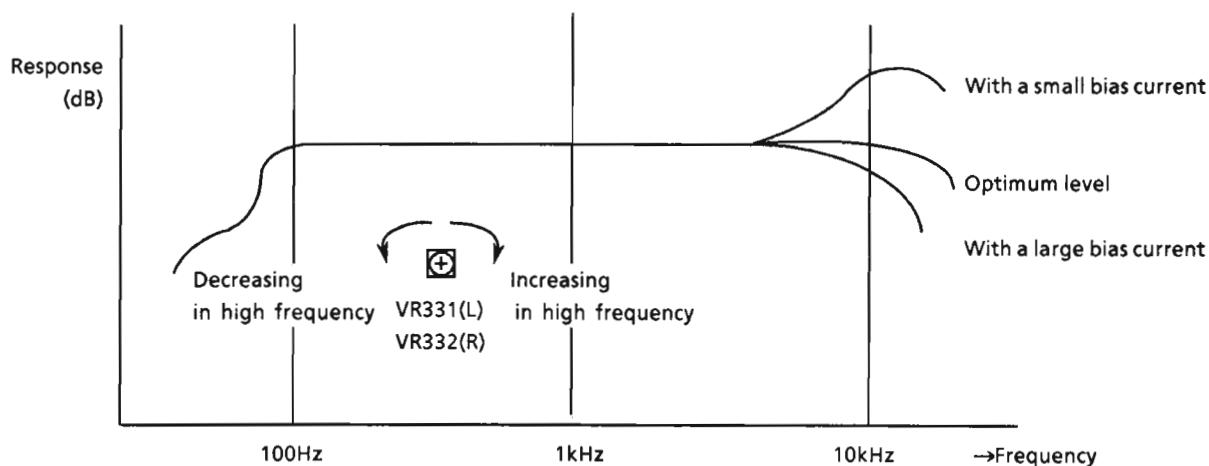

Figure 2

Item	Adjustment Method	Adjustment Location	Standard Value	Remarks
Record / Playback Sensitivity	1. Input a 1kHz (300mV) signal to AUX/VIDEO terminal and record it with a normal tape. 2. Connect an electronic voltmeter to the DOLBY TP(figure 3) to confirm the values. 3. If the values are not satisfied , adjust the semi-fixed resistors and record the signal again to confirm the values.	L : VR311 R : VR312	-5.5dBs (411mV)	Adjust with normal tape and make sure that the left/right level difference is 1.0dB or less
Recording / playback distortion	1) Input a 1 kHz (300mV) to AUX/VIDEO terminal and record it. 2) Play it back and check the speaker out with a distortion meter to make sure it is within the criterion.		less than 3% (Normal/ CrO <sub>2</sub> )	Perform after the record / play frequency response and recording/playback sensitivity adjustments.
Recording / playback S/N ratio	1) Input a 1 kHz (300mV) signal to AUX/VIDEO terminal and record it. While recording, remove the input and record without the signal. 2) Connect a electronic voltmeter to the speaker terminals to measure the output levels. 3) Confirm that the output level ratio between the signals with a 1kHz and no signal is more than 40dB.		more than 40 dB (Normal/ CrO <sub>2</sub> )	
Erase ratio check	1. Record a music source using the Metal tape. 2. Rewind and erase the recorded section. 3. Comfirm nothing can be heard.	—	—	—
Music Scan	1. Make sure not to work the music scanning operation at the start of tape wind. 2. Make sure to work the music scanning operation at the end of tape wind.	—	—	—

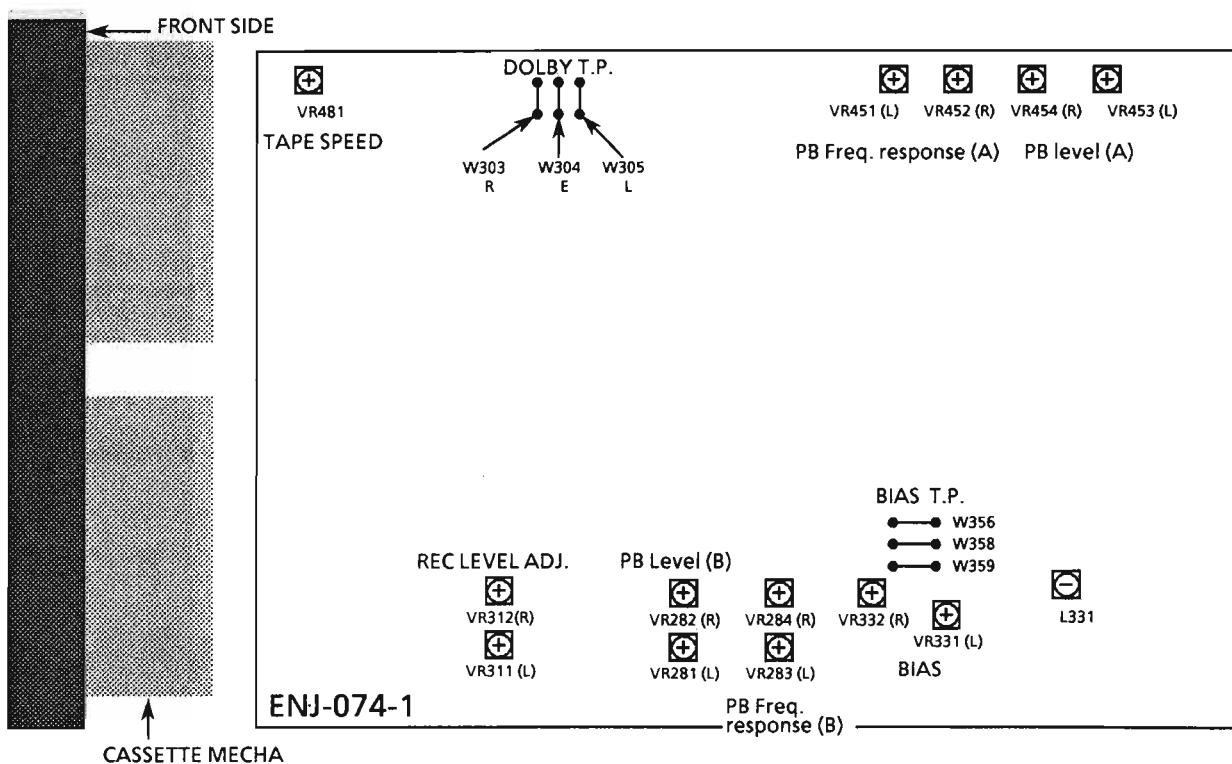

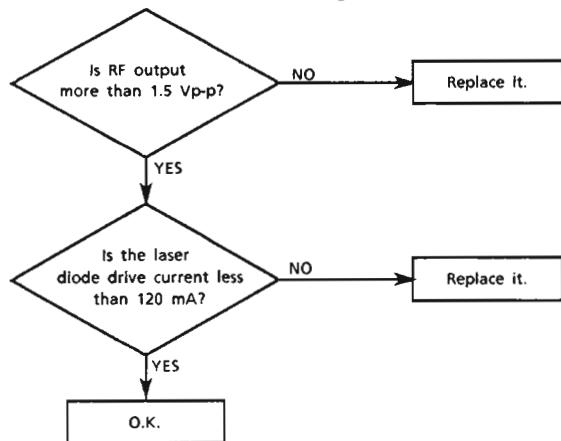

Figure 3

## Maintenance of Laser Pickup

### 1. Life of the laser diode

When the life of the laser diode has expired, the following symptoms will appear.

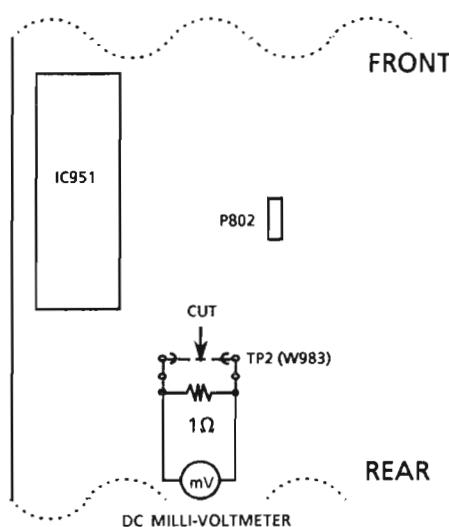

- (1) The level of RF output ( EFM output: amplitude of eye pattern) will be low.
- (2) The drive current required by the laser diode be increased. In such a case, check the life of the laser diode following the flowchart below

### 2. Measurement of laser diode drive current

Replace the jump wire TP2(W983) shown below with the resistor ( $1\Omega$ ).

Measure the voltage across the resistor with a millivoltmeter. When the voltage is more than 180mV, it shows that the life of the laser diode has expired.

### 3. Semi-fixed resistor on the APC PC board

The semi-fixed resistor on the APC printed circuit board which is attached to the pickup is used to adjust the laser power. Since this adjustment should be performed to match the characteristics of the whole optical block, do not touch the semi-fixed resistor.

If the laser power is lower than the specified value, the laser diode is almost worn out, and the laser pickup should be replaced.

If the semi-fixed resistor is adjusted while the pickup is functioning normally, the laser pickup may be damaged due to excessive current.

## Replacement of Laser Pickup

Turn off the power switch of RX-S50RBK and, disconnect the power cord from the AC outlet, then disconnect the system connector.

Replace the pickup with a normal one. (Refer to "pickup Removal" on the previous page.)

Plug in the system connector and the AC cord of RX-MXS60RBK, then turn the power switch on. At this time, check that the laser emits for about 3 seconds and the objective lens moves up and down.

Play a disc, and when it starts rotating, short circuit between TP5 (TEST) and TP7 (GND).

Adjust tracking gain.

Adjust tracking offset.

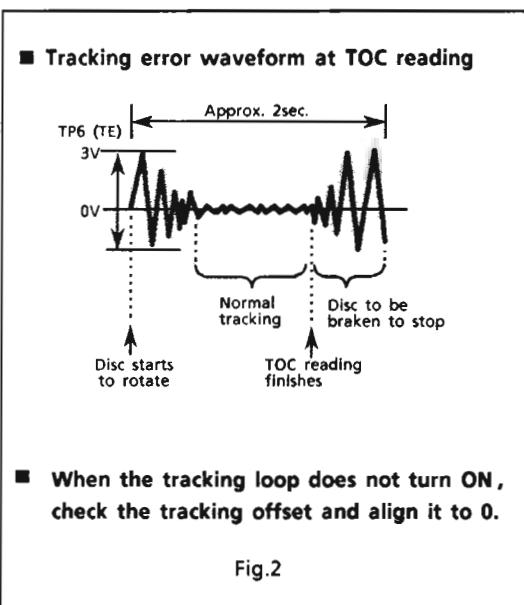

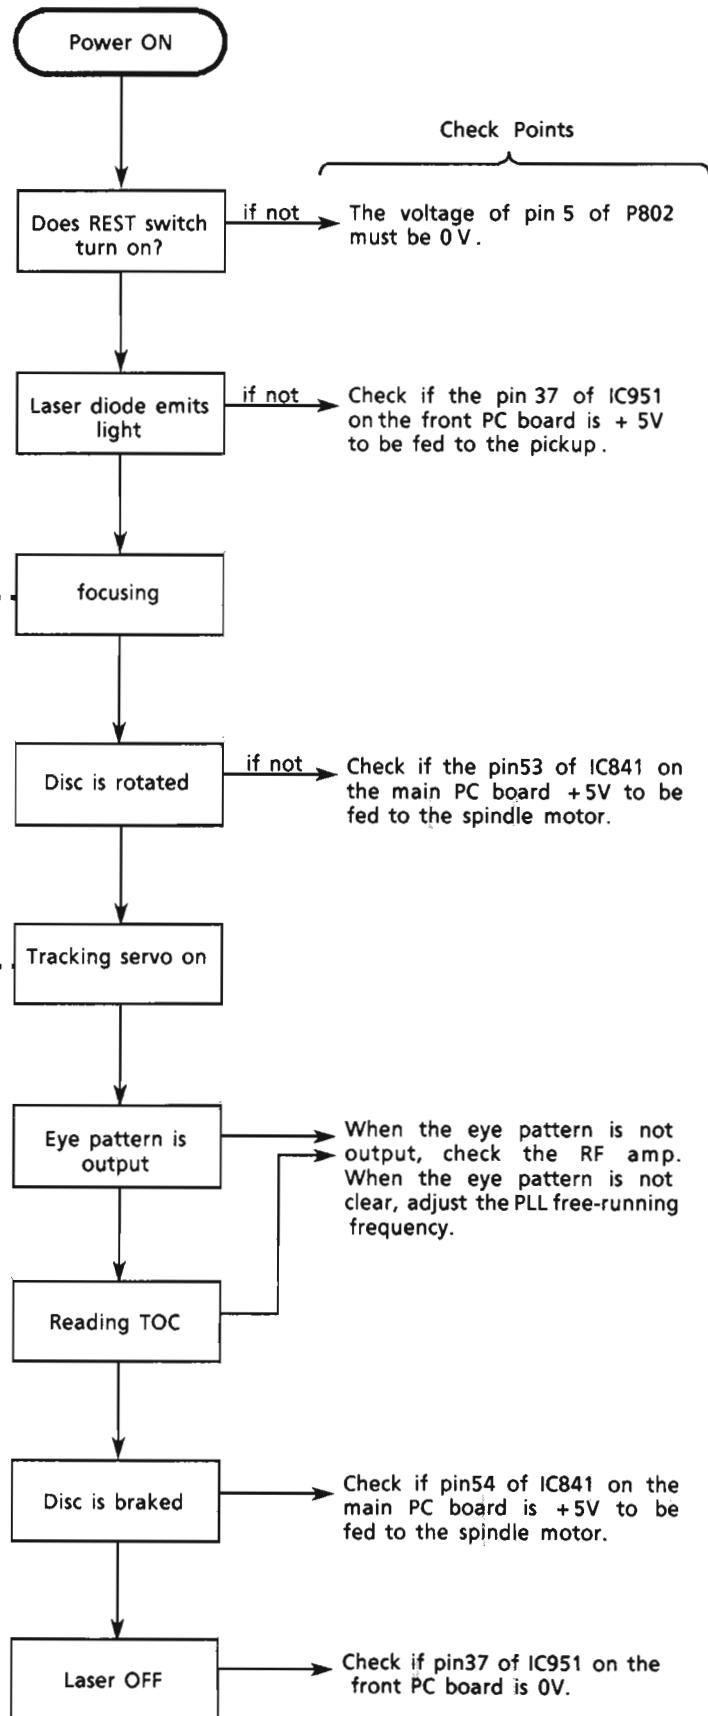

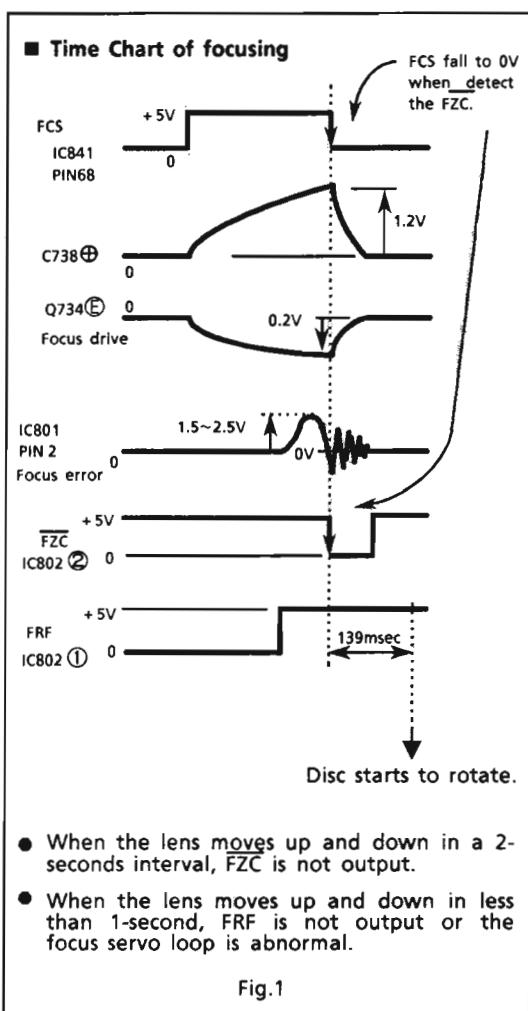

Disconnect TP5 (TEST) from TP7 (GND).

Check the eye-pattern at the TP8 (RF).

Finish.

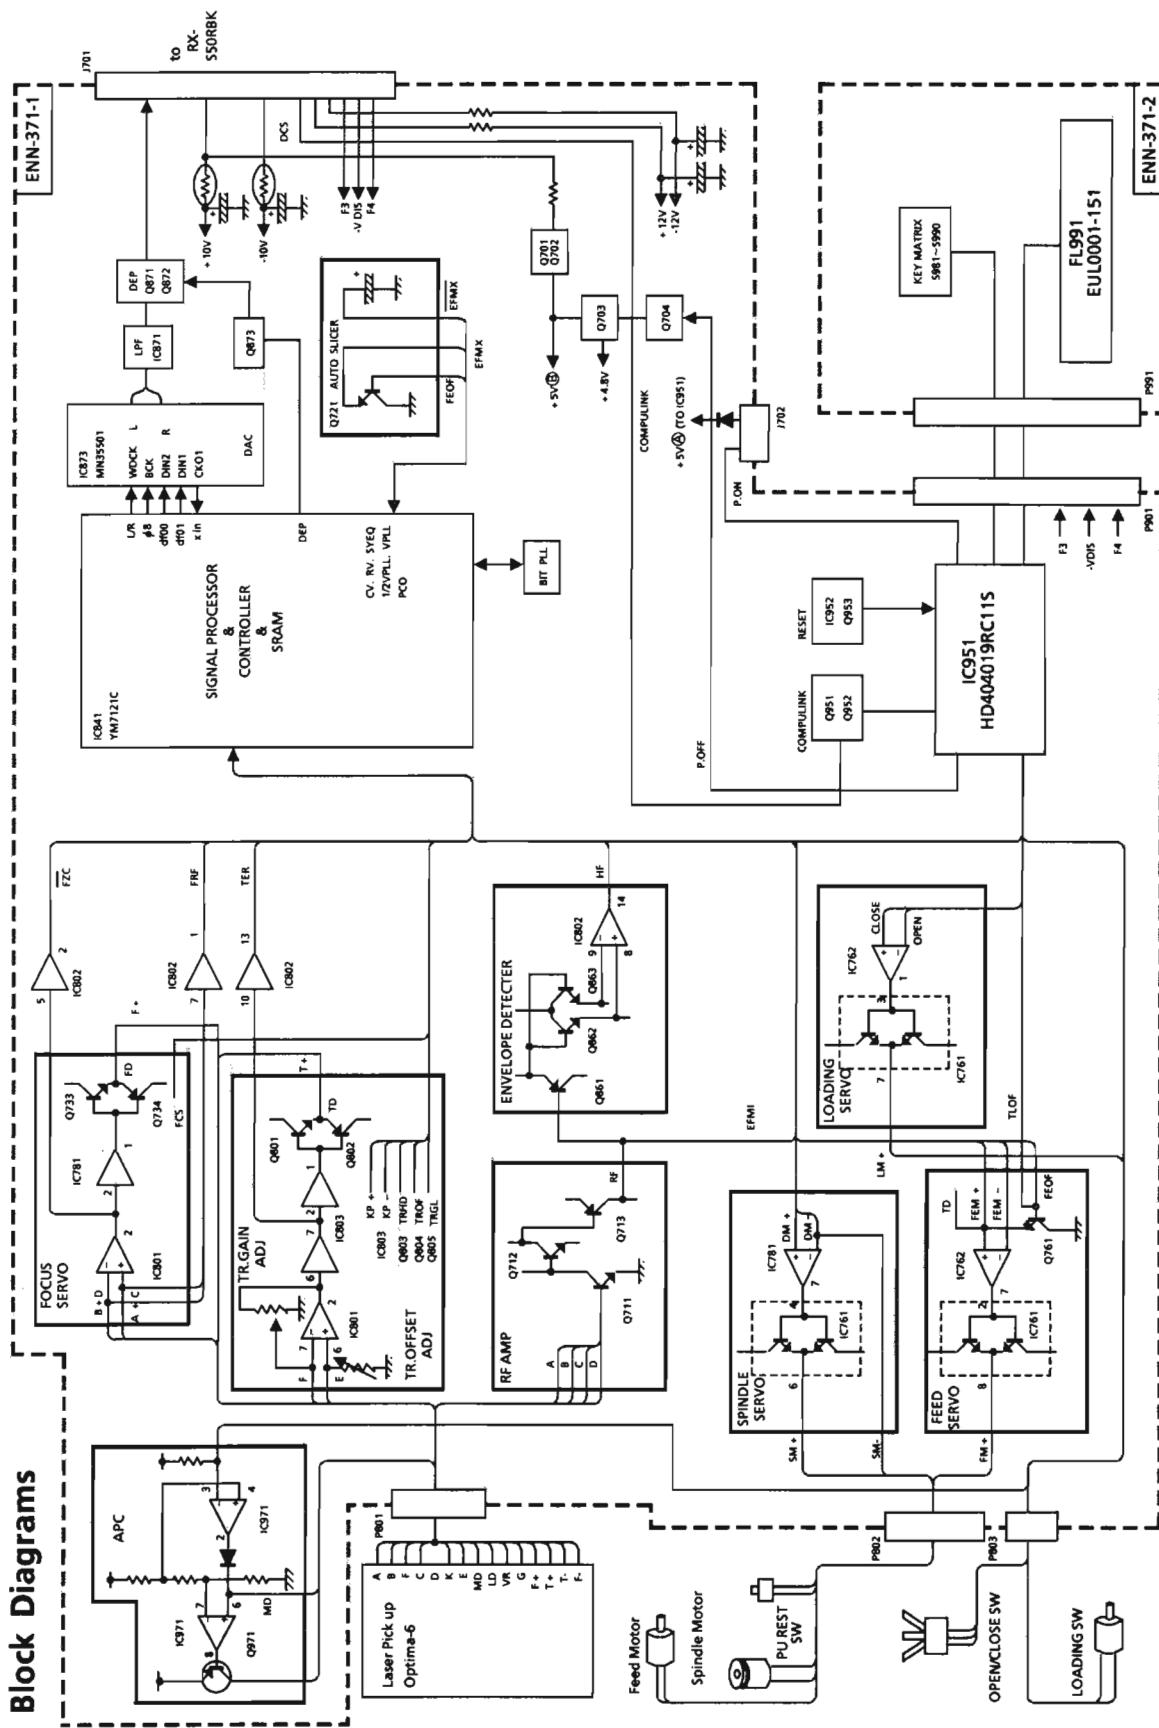

Note : Since one adjustment may affect other settings, repeat these adjustments a few times.
