## Safety Precautions

1. The design of this product contains special hardware and many circuits and components specially for safety purposes. For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Services should be performed by qualified personnel only.
2. Alterations of the design or circuitry of the product should not be made. Any design alterations of the product should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacture of responsibility for personal injury or property damage resulting therefrom.
3. Many electrical and mechanical parts in the products have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the Parts List of Service Manual. Electrical components having such features are identified by shading on the schematics and by ( $\Delta$ ) on the Parts List in the Service Manual. The use of a substitute replacement which does not have the same safety characteristics as the recommended replacement parts shown in the Parts List of Service Manual may create shock, fire, or other hazards.
4. The leads in the products are routed and dressed with ties, clamps, tubings, barriers and the like to be separated from live parts, high temperature parts, moving parts and/or sharp edges for the prevention of electric shock and fire hazard. When service is required, the original lead routing and dress should be observed, and it should be confirmed that they have been returned to normal, after re-assembling.

### 5. Leakage current check (Electrical shock hazard testing)

After re-assembling the product, always perform an isolation check on the exposed metal parts of the product (antenna terminals, knobs, metal cabinet, screw heads, headphone jack, control shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.

Do not use a line isolation transformer during this check.

- Plug the AC line cord directly into the AC outlet. Using a "Leakage Current Tester", measure the leakage current from each exposed metal parts of the cabinet, particularly any exposed metal part having a return path to the chassis, to a known good earth ground. Any leakage current must not exceed 0.5mA AC (r.m.s.).

#### ● Alternate check method

Plug the AC line cord directly into the AC outlet. Use an AC voltmeter having, 1,000 ohms per volt or more sensitivity in the following manner. Connect a 1,500 $\Omega$  10 W resistor paralleled by a 0.15  $\mu$ F AC-type capacitor between an exposed metal part and a known good earth ground.

Measure the AC voltage across the resistor with the AC voltmeter.

Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and measure the AC voltage across the resistor.

Now, reverse the plug in the AC outlet and repeat each measurement. Any voltage measured must not exceed 0.75 V AC (r.m.s.).

This corresponds to 0.5 mA AC (r.m.s.).

## Warning

1. This equipment has been designed and manufactured to meet international safety standards.
2. It is the legal responsibility of the repairer to ensure that these safety standards are maintained.
3. Repairs must be made in accordance with the relevant safety standards.
4. It is essential that safety critical components are replaced by approved parts.
5. If mains voltage selector is provided, check setting for local voltage.

# Important for Laser Products

1. **CLASS 1 LASER PRODUCT**
2. **DANGER** : Invisible laser radiation when open and interlock failed or defeated. Avoid direct exposure to beam.
3. **CAUTION** : There are no serviceable parts inside the Laser Unit. Do not disassemble the Laser Unit. Replace the complete Laser Unit if it malfunctions.
4. **CAUTION** : The compact disc player uses invisible laser radiation and is equipped with safety switches which prevent emission of radiation when the drawer is open and the safety interlocks have failed or are defeated. It is dangerous to defeat the safety switches.
5. **CAUTION** : If safety switches malfunction, the laser is able to function.
6. **CAUTION** : Use of controls, adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

**WARNING** : Osynlig laserstrålning när denna del är öppnad och spärren är urkopplad. Betrakta ej strålen.

**VARO** : Avattaessa ja suojalukitus ohitettaessa olet alttiina näkymättömälle lasersäteilylle. Älä katso säteeseen.

**ADVARSEL** : Usynlig laserstrålning ved åbning, når sikkerhedsafbrydere er ude af funktion. Undgå udsættelse for stråling.

**ADVARSEL** : Usynlig laserstrålning ved åbning, når sikkerhedsbryteren er avslott. unngå utsettelse for stråling.

## REPRODUCTION AND POSITION OF LABELS

**CLASS 1  
LASER PRODUCT**

**DANGER**: invisible laser radiation when open and interlock failed or defeated. AVOID DIRECT EXPOSURE TO BEAM. (e)

**WARNING**: Osynlig laserstrålning när denna del är öppnad och spärren är urkopplad. Betrakta ej stålen. (s)

**ADVARSEL**: Usynlig laserstrålning ved åbning, når sikkerhedsafbrydere er ude af funktion. Undgå udsættelse for stråling. (d)

**VARO**: Avattaessa ja suojalukitus ohitettaessa olet alttiina näkymättömälle lasersäteilylle. Älä katso säteeseen. (f)

## TECHNICAL EXPLANATION

### 1. What is video CD ?

Video CD makes it possible to playback digital moving picture and sound for maximumly 74 minutes on 12cm disc and it is expected to use them widely in future for Karaoke, cinema, music, education and so on.

Its Standard is based on the International Standard of MPEG1.

MPEG1 is abbreviation of Moving Picture Image Coding Experts Group which extensively standardizes the digital high efficiency (compression) and multiple method for audio and video data by experts in Electronics, Computer, Communications, Broadcast and so on.

This video CD was established on Mar. '93 by Philips and JVC and standardized based on "Karaoke CD" worldwide licensed.

The Karaoke CD has been already used for business in Japan.

### 2. Main features

- ① Adopting the technique of high efficiency coding for moving picture and sound data, this 12cm video CD can playback video screen in high quality and audio for 74minutes like CD-DA.
- ② Picture software can be converted to video CD by compression and editing.
- ③ CD-I player with the digital video expansion cartridge can reproduce the video disc.
- ④ Video CD can adopt every broadcasting measures in the world (NTSC, PAL and SECAM).
- ⑤ Video CDs are durable and easy to be handled and manufactured as same as previous CDs.

### 3. Outline of specification

[Basic] · Based on CD Bridge Standard.

· Physical format : Based on CD-ROM Format (Yellow Book)

· Video data : Based on MPEG1 (1/100 compression)

· Audio data : Based on MPEG1 Layer II  
(approx. 1/6 compression, sampling frequency 44.1kHz)

[Option] · Still picture : Standard level and highly accurate level

· Playback control : Playback function with control recorded on CD.

### 4. High efficiency coding

#### (1) What is this technique ?

Previous 12cm disc can not record data for more than 40 seconds because of a large amount of data resulted from digitalizing pictures, though, audio sound had already been digitalized.

The high efficiency coding made it possible to record those data on a disc by compressing and restore them at playback.

The high efficiency coding made it possible to record those data on a disc by compressing and restore them at playback.

This newly developed technique is not only for audio visual but also for Communications such as TV telephone and the basic to realize multimedia by processing letters, audio sound and picture by computer. Its International Standard is the MPEG.

## (2) Theory

One screen is divided into several blocks and the amount of picture data is calculated for each blocks to compress effectively.

- On one screen, the simpler the original picture, the larger the compression can be done. For example, a lot of blocks become entirely blue when the sky is pictured. And, this time the data is largely reduced.
- When the screen is moving, the difference between actual screen and the screen which change is predicted from the former one is picked up and transmitted. For example, only transmitting movement of an airplane can picture the flying plane over a mountain.

## 5. Difference between DV and video CD.

JVC has developed DV, that is, Standard for CD Moving Picture Karaoke and established and standardized with Philips on Mar. '93 to license Standard for CD Karaoke.

Four companies added Panasonic and Sony have established Standard for video CD and asked its adoption to hardware and software industries to cooperate its popularizing and promotion.

The video CD Standard is the one which the functions for playback control and still picture playback are added to CD Karaoke Standard.

The purpose of video CD is to apply the CD moving picture widely not only for Karaoke but also cinema, music, education and products introduction.

## 6. Resolution

[Basic] · 30 frames / sec. Resolution : 352×240 dot

[Still picture mode]      Highly accurate level :      Approx. 2,000times of (704×480)dot  
can be got.

Standard level : 352×240 dot

## 7. Playback control

Selecting the number displayed on the screen allows video playback in the order previously set by the video CD manufacturer.

Video is reproduced according to the address and its contents which are stored in PLAY, SELECTION and END inside PSD file recorded on the disc.

\* PSD ..... Play Sequence Descriptor

The PSD file has maximumly 512K and can store 32K lists in maximum.

As same as PSD file, LOT file which describes each list's starting address inside PSD file is recorded in video CD information for track 1. (See Fig.-1.)

\* LOT ..... List ID Offset Table

### 7-1 PLAY list

#### 1. Basic operation

Plural sequences are reproduced in the order which is described on the list.  
Maximumly, 255 sequences can be described.

#### 2. Applied operation

- Skip (NEXT, PREVIOUS, RETURN)
- Setting playback time
- Setting time to transmit sequence
- Automatic stop

### 7-2 Selection list

#### 1. Basic operation

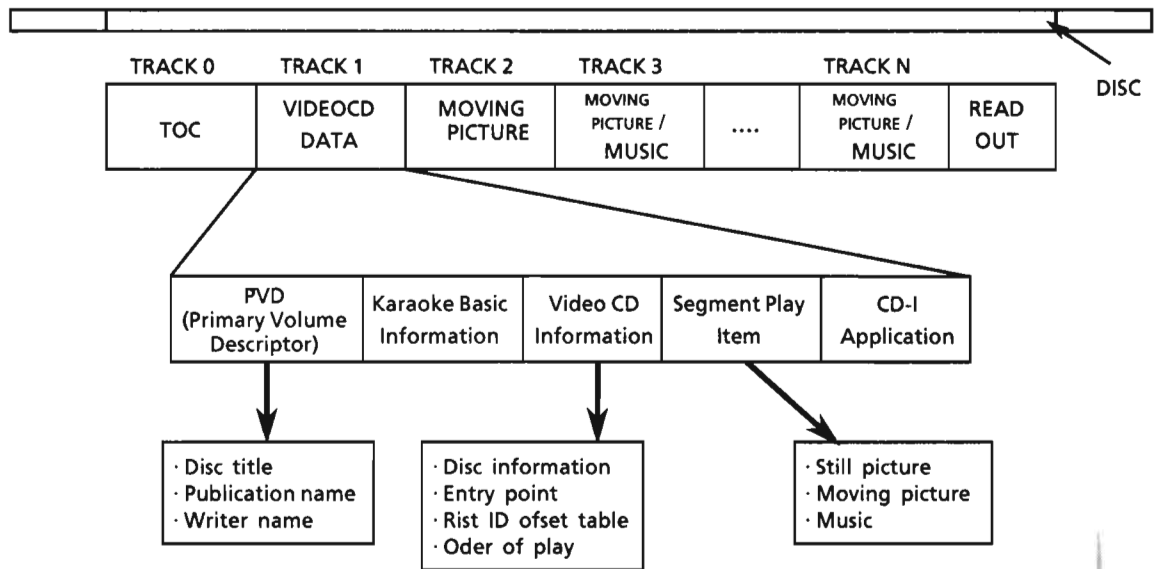

Corresponding address for PLAY list is described according to the selection number of still or moving picture's menu.

#### 2. Applied operation

- Switching menu (NEXT, PREVIOUS, RETURN, DEFAULT)
- Setting initial value for selecting item number
- Processing time out
- Repeated playback of sequence

### 7-3 End list

List to finish application's execution.

[ Figure1 ] Structure of video CD

- Data for still and moving pictures which are used for playback control function are solely recorded on track1.
  - For playback of storage media like video CD, trick mode is required such as fast forward, rewinding, intermediate playback, reversed playback since all data have been already prepared.
- GOP(Group of Pictures) structure was developed for video CD to realize those trick modes. 1 picture is not enough for completed information for video CD since coded picture data is based on its before and after data. Random access is possible by using GOP as a unit which data are gathered altogether for a few pictures. Sequence header is used for the random access's heading. That is, entry point in GOP units are prepared on some spots of MPEG bit stream. Generally, 1 GOP is pictures for approx. 0.5sec.(15pictures). It prevents malfunction such as stopped picture caused by pause of each initial tracks after dividing a track. Entry points can be set after track2. Each track can set maximumly 99points and 500points can be set on one disc(100~599points). Entry points has similar role as CD index. Therefore, they are adopted for moving pictures in cinema.

English

# Specifications

**General**  
 Power requirement  
 AC 110/127/220/230-240 V<sub>~</sub>, adjustable with the voltage selector, 50/60 Hz  
 Power consumption  
 140 watts (at operation)  
 13 watts (at standby)  
 Dimensions (approx.)  
 245 x 270 x 302.5 mm (W/H/D)  
 (9<sup>11</sup>/<sub>16</sub> x 10<sup>11</sup>/<sub>16</sub> x 11<sup>13</sup>/<sub>16</sub> in.)  
 Mass (approx.)  
 6.3 kg (13.9 lbs)

**Supplied accessories**  
 FM feeder antenna (1)  
 AM loop antenna (1)  
 Antenna adaptor (1)  
 Remote control unit (1)  
 Batteries R03(UM-4)/AAA(24F) (2)  
 Video cord (1)  
 AC plug adaptor (1)

Design and specifications are subject to change without notice.

**Amplifier**  
 Output Power (IEC 268-3/DIN)  
 30 watts per channel, min. RMS, both channels driven into 6 ohms at 1 kHz with no more than 0.9% total harmonic distortion.  
 Audio input sensitivity/impedance (at 1 kHz)  
 VCR IN 300 mV/50 kohms  
 AUX 300 mV/50 kohms  
 MIC 2.4 mV/10 kohms  
 Audio output level/impedance (at 1 kHz)  
 VCR OUT 150 mV/3 kohms  
 Video output level (at 1 Vp-p input)  
 VIDEO OUT 1 Vp-p  
 Speakers/Impedance  
 6 ohms

**Tuner**  
 FM tuning range  
 87.50 — 108.00 MHz  
 AM tuning range  
 531 — 1,602 kHz (at 9 kHz channel spacing)  
 530 — 1,600 kHz (at 10 kHz channel spacing)

**Cassette deck**  
 Frequency response  
 CxOs (type II): 30 — 16,000 Hz  
 Normal (type I): 30 — 15,000 Hz  
 Wow and flutter  
 0.09% (WRMS)/0.2% (DIN)

**CD player**  
 Wow and flutter  
 Unmeasurable  
 Available disc type  
 Audio CD, CD-G, video CD both with and without the PBC function

English

# Troubleshooting

If you are having a problem with your unit, check this list for a possible solution calling for service. If you cannot solve the problem from the hints given here, or the unit has been physically damaged, call a qualified person, such as your dealer, for service.

Symptom	Cause	Action
No sound is heard.	Connections are incorrect or loose.	Check all connections and make corrections. (See pages 5 to 10).
Hard to listen to broadcasts because of noise.	<ul style="list-style-type: none"> <li>Antennas are disconnected.</li> <li>The AM loop antenna is too close to the unit.</li> <li>The FM feeder antenna is not properly extended and positioned.</li> </ul>	<ul style="list-style-type: none"> <li>Reconnect the antennas correctly and securely.</li> <li>Change the position and direction of the AM loop antenna.</li> <li>Extend the FM feeder antenna at the best position.</li> </ul>
The disc sound is discontinuous.	The disc is scratched or dirty.	Clean or replace the disc. (See page 36.)
The disc sound loses stereo effect.	The CD L-MONO mode is activated.	Press CD L-MONO on the remote control unit to restore the stereo effect.
The pictures from the CD player is distorted.	When you pause or advance the pictures manually, the pictures are distorted. This is not a malfunction.	
The disc tray does not open or close.	The AC power cord is not plugged in.	Plug the AC power cord.
The disc does not play.	The disc is placed upside down.	Place the disc with the label side up.
The cassette holders cannot be opened.	Power supply from the AC power cord has been cut off while the tape was running.	Turn on the unit.
Impossible to record.	Small taps on the back of the cassette are removed.	Cover the holes with adhesive tape.
Operations are disabled.	The built-in microprocessor may malfunction due to external electrical interference.	Unplug the AC power cord and then plug it back in.
Unable to operate the unit from the remote control unit.	<ul style="list-style-type: none"> <li>The path between the remote control unit and the remote sensor on the unit is blocked.</li> <li>The batteries are exhausted.</li> </ul>	<ul style="list-style-type: none"> <li>Remove the obstruction.</li> <li>Replace the batteries.</li> </ul>

# Location of the Buttons and Controls

Become familiar with the buttons and controls on your CA-V800.

See pages in the parentheses for details.

## Front Panel

### Amplifier section

- 1 Display
- 2 Tuner operating buttons (13 - 14)
- 3 Timer operating buttons (33 - 35)
- 4 POWER button and ON/STANDBY indicator (11)
- 5 Sound adjusting buttons (11 - 12, 29)
- 6 Source selecting buttons (FM/AM, VCR, AUX) (11, 13)

### Cassette deck section

- 6 Cassette holder for deck A (15 - 16)
- 7 REVERSE MODE button and indicator (15)
- 8 DOLBY B NR button and indicator (15, 25)
- 9 Deck A operating buttons (15 - 16)
- 10 Cassette holder for deck B (15 - 16, 25 - 26)
- 11 DUBBING button (26)
- 12 REC PAUSE button and indicator (25)
- 13 Deck B operating buttons (15 - 16, 25 - 26)

### CD player section

- 14  $\Delta$  (open/close) button (17)
- 15 Disc tray (17)
- 16 Remote sensor
- 17 PHONES jack (11)
- 18 MIC jack and MIC LEVEL control (29 - 32)
- 19 CD-G CHANNEL button (30)
- 20 REPEAT button (24)
- 21 CD edit recording buttons (27 - 28)
- 22 ■ (stop/clear) button (17)
- 23 RETURN button (18)
- 24 >/II (play/pause) button (17)
- 25 SELECT button (18)
- 26  $\ll$  (skip left/skip right) buttons (19)
- 27 PROGRAM button (23)

## Remote Control Unit

- 1 SLEEP button (35)
- 2 AUX/VCR button (11)
- 3 Number buttons\* (14, 19)
- 4 INDEX — and — buttons (19)
- 5 MANUAL SEARCH  $\ll$  and  $\gg$  (left/right) buttons (19)
- 6 SLOW button (22)
- 7 PREV  $\ll$  /NEXT  $\gg$  buttons (20)
- 8 DECK A CONTROL section (15 - 16)
  - > (play rightward) button, < (play leftward) button,
  - $\square$  (stop) button,  $\ll$  (fast left/fast right) buttons
- 9 REC PAUSE button (25)
- 10 POWER button (11)
- 11 FM button (13)
- 12 AM button (13)
- 13 PROGRAM and CANCEL (program cancel) buttons (23, 24)
- 14 CD L-MONO button (29 - 31)
- 15 SOUND MODE button (12)
- 16 STILL II button (22)
- 17 CD CONTROL section (17 - 20)
  - > (play) button,  $\square$  (stop) button,  $\Delta$  (open/close) button,  $\ll$  (skip left/skip right) buttons
- 18 DECK B CONTROL section (15 - 16, 25 - 26)
  - > (play rightward) button, < (play leftward) button,
  - $\square$  (stop) button,  $\ll$  (fast left/fast right) buttons
- 19 ECHO button (29 - 31)
- 20 VOLUME button (11)

- To select preset channels using these buttons, press FM or AM first.
- To select disc tracks, press PROGRAM or the buttons on the CD CONTROL section first.

# Getting Started

English

## Unpacking

After unpacking, check to be sure that you have all the following items:

- AM loop antenna (1)
- FM feeder antenna (1)
- Antenna adaptor (1)
- Remote control unit (1)
- Batteries (2)
- Video cord (1)
- AC plug adaptor (1)

If any is missing, consult your dealer immediately.

## Adjusting the Voltage Selector Switch

Before plugging in the unit, set the correct voltage for your area with the voltage selector switch on the rear of the unit.

Use a screwdriver to rotate the voltage selector switch so the voltage number the arrow is pointing at is the same as the voltage where you are plugging in the unit.

- DO NOT plug in before setting the voltage selector switch on the rear of the unit and all connection procedures are complete.

## Putting the Batteries into the Remote Control Unit

Insert the batteries — R03(UM-4)/AAA(24F) — into the remote control unit, by matching the polarity (+ and -) on the batteries with the + and - markings on the battery compartment.

When the remote control unit can no longer operate the unit, replace all the batteries at the same time.

- DO NOT use an old battery together with a new one.
- DO NOT use different types of batteries together.
- DO NOT expose batteries to heat or flame.
- DO NOT leave the batteries in the battery compartment when you are not going to use the remote control unit for an extended period of time. Otherwise, it will be damaged from battery leakage.

Continued

## Connecting Antennas

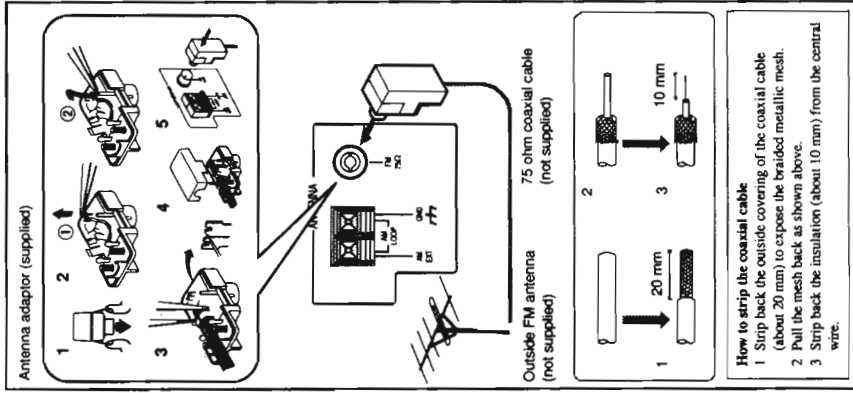

### FM antenna

- 1 Attach the FM feeder antenna to the antenna adaptor as illustrated above.
- 2 Connect the antenna adaptor to the FM 75 ohm terminal.
- 3 Unfold and extend the FM feeder antenna.
- 4 Fasten it up in the position which gives you the best reception.

### To connect an outside FM antenna

When reception is poor, you can connect an FM outside antenna (not supplied). Before connecting it, disconnect the FM feeder antenna.

### How to strip the coaxial cable

- 1 Strip back the outside covering of the coaxial cable (about 20 mm) to expose the braided metallic mesh.
- 2 Pull the mesh back as shown above.
- 3 Strip back the insulation (about 10 mm) from the central wire.

(Continued)

Continued

- 4 Close the speaker terminal on the rear of the unit or just release your finger from the terminal on the speaker.

Use only speakers with the same speaker impedance as indicated by the speaker terminals on the rear of the unit.

**Connecting Other Equipment**

You can connect the following equipment to this unit:

- TV with a video input jack — used as a monitor of VCR playback or video CD playback.
  - VCR — used as a sound playback and sound recording device.
  - Audio/video equipment such as a laser disc player — used only as a playback device.
  - Audio/video equipment with an optical digital input terminal — used only as a digital recording device.
- When you connect and use these equipment, refer also to the manuals supplied with them.

Be sure that the plugs of the audio/video cords and the jacks on the rear of the unit are color coded: White plugs are for left audio signals, and red ones for right audio signal, and yellow ones for video signals.

- DO NOT connect other equipment while power is on.
- DO NOT plug in all equipment until all connections are complete.

**Connecting Speakers**

You can connect the speakers using the speaker cords.

- 1 Remove the insulation at the end of each cord and twist the core of the cord.
- 2 Open the speaker terminal.
- 3 Insert the end of the speaker cord to the terminal. For each speaker, connect one end of the speaker cord to the speaker terminals on the rear of the unit and one end to the speaker. Match the polarity of the speaker terminals: Red (+) to red (+) and black (-) to black (-).

Continued

(Continued)

- 1 Connect the AM loop antenna to the AM LOOP terminals as illustrated.
  - 2 Turn the AM loop antenna until you have the best reception.
- To connect an outside AM antenna**  
When reception is poor, connect a single vinyl-covered wire to the AM EXT terminal. (The AM loop antenna must remain connected.)

- For better reception of both FM and AM terminals and connecting cords.
- Make sure the antenna conductors do not touch any other terminals and connecting cords.
- Keep the antennas away from metallic parts of the unit, connecting cords, and the AC power cord.

- 1 Open the claws of the antenna adaptor (at both sides) and remove the cover.
- 2 Move the conductor wire from ① to ② using the tweezers or similar tool.
- 3 Fix the coaxial cable and its core in place. See "How to strip the coaxial cable" within the illustration before fixing it.
- 4 Connect the antenna adaptor to the FM 75 ohm terminal.

**AM antenna**

English

Continued

**To connect a TV**

Connect the video input jack on the TV and the VIDEO OUT jack, using the supplied video cord. To view a video CD, you need to connect an NTSC-compatible TV.

**To connect a VCR**

By using the audio cords (not supplied), connect:

- Between the audio input jacks on the VCR and the VCR OUT (REC) jacks.
- Between the audio output jacks on the VCR and the VCR IN (PLAY) jacks.

**To connect audio/video equipment such as a laser disc player**

Connect the audio output jacks on the other equipment and the AUX jacks, using an audio cord (not supplied).

**To connect audio/video equipment with a digital optical input terminal**

Before connecting the other equipment, remove the protective plug from the terminal. Connect the digital optical terminal on the other equipment and the DIGITAL OUT OPTICAL terminal, using a digital optical cord (not supplied).

Protective plug

NOW, you can plug in the unit and other connected equipment FINALLY.

If the wall outlet does not match the AC plug, use the supplied AC plug adaptor.

**When recording onto the MD through this terminal**

- You can record only audio signals of conventional CDs and CD-Gs through this terminal.
- It is not recommended to use the automatic marking function of the MD player since marking signal cannot be recorded correctly between recorded tracks. It is preferable to use manual marking while recording.

# Basic and Common Operations

Here are the basic and common things that apply to all the functions of the CA-V800.

## Turning Power and Selecting the Sources

When you press the play button for a particular source, the unit automatically turns on and starts playing the source.

To select the auxiliary equipment as the source, press VCR or AUX so that the unit automatically turns on.

When using the remote control unit, press AUX/VCR. Each time you press the button, the source alternates between AUX and VCR. (Pressing AUX/VCR cannot turn on the unit automatically.)

To turn on the unit without playing, press POWER so that the ON/STANDBY indicator turns off.

To turn off the unit, press POWER again so that the ON/STANDBY indicator lights red. A little power (1.3 watts) is always consumed even while the unit is in standby mode.

To switch off the power supply completely, unplug the AC power cord from the AC outlet.

**Notes** When you unplug the AC power cord or power failure occurs

The clock is reset to 0:00 right away, while the tuner preset stations will be erased in a few days. See page 14 and 33.

## 2 Press SEA CONTROL HIGH/LOW.

Turn MUSIC JOG to select the level of the lower frequencies (out of 6 preset levels).

Press SEA CONTROL HIGH/LOW again.

Turn MUSIC JOG to select the level of the higher frequencies (out of 6 preset levels).

Press SEA CONTROL HIGH/LOW for the third time, or wait for about 10 seconds. The sound mode you have created are stored in memory.

To use your own sound mode Select MANUAL when using the sound modes. See "Selecting the Sound Modes" above.

When you unplug the AC power cord or power failure occurs Your own sound mode will be erased.

## Selecting the Sound Modes

You can use only one mode at a time selecting from the Live Surround or SEA (Sound Effect Amplifier) modes both for playback and for recording.

To select the sound modes, turn MUSIC JOG until the sound mode you want appears in the display. The SOUND MODE indicator lights up. (When selecting one of the Live Surround modes, the LIVE SURROUND indicator also lights up.)

### Live Surround modes

**D.CLUB:** Increase resonance and bass.  
**HALL:** Enhance the mid-frequency range which human voice is mostly made up of, like in a concert hall.  
**STADIUM:** Adds clarity and spreads the sound, like in an outdoor stadium.

### SEA effects

**ROCK:** Gives a feeling of a live atmosphere. Good for acoustic music.  
**CLASSIC:** Adds depth and brilliance to the sound.  
**MANUAL:** Your individual mode stored in memory. See "Creating Your Own Sound Mode — MANUAL Mode" below.

To cancel the effect, press SOUND EFFECT ON/OFF. Each time you press the button the selected mode turns on and off alternately.

### When using the remote control unit

Press SOUND MODE repeatedly until the sound mode you want appears in the display. Each time you press the button, the modes change as follows:

— OFF ← MANUAL ← CLASSIC ← POPS —  
 — D.CLUB → HALL → STADIUM → ROCK —

## Creating Your Own Sound Mode — MANUAL Mode

You can create and store your own sound mode.

1 Turn MUSIC JOG until the sound mode you want to modify appears in the display.

## Adjusting the Volume

Turn VOLUME clockwise to increase the volume or counterclockwise to decrease it.

When using the remote control unit, press VOLUME ▲ to increase the volume or press VOLUME ▼ to decrease it.

For private listening Connect a pair of headphones to the PHONES jack. No sound comes out of the speakers. Be sure to turn down the volume before connecting or pulling headphones

**Do NOT** turn on the unit and/or start playing any source without setting VOLUME to MIN; otherwise, the sudden blast of sound can damage your hearing, speakers and/or headphones.

## Reinforcing the Bass Sound

The richness and fullness of the bass sound is maintained regardless of how low you set the volume. You can use this effect only for playback.

To get the effect, press A. BASS EX. (Active Bass Extension) so that the A. BASS EX. indicator lights up in the display.

To cancel the effect, press the button again so that the indicator goes off.

# Listening to FM and AM Broadcasts

Before listening to FM and AM broadcasts, check the following:

- Both the FM and AM antennas are firmly connected.
- Check the AM tuner interval spacing (9 kHz or 10 kHz) for your area (see below).

## Setting the AM Tuner Interval Spacing

Some countries space AM stations 9 kHz apart, and some countries use 10 kHz spacing. When shipped, the built-in AM tuner is set to 9 kHz spacing.

To set the AM tuner to the 10 kHz spacing, be sure that the unit is turned off, but is plugged into a wall outlet. Hold down PRESET > and then press POWER. "10KHz-SP" appears in the display.

To set it back to the 9 kHz spacing, be sure that the unit is turned off, but is plugged into a wall outlet. Hold down PRESET < and then press POWER. "9KHz-SP" appears in the display.

## Tuning in a Station

**1 Press FM/AM.**  
The unit automatically turns on and tunes in the most recent station (either FM or AM). Each time you press the button, the band alternates between FM and AM.

**2 Press and hold TUNING < or >.**  
The unit starts searching stations and stops when a station of sufficient signal strength is tuned in. The TUNED indicator lights up in the display. If a program is broadcast in stereo, the STEREO indicator also lights up.

To stop during searching, press TUNING < or >.

## Presetting Stations

You can preset 10 stations each for FM and AM.

**1 Press FM/AM and TUNING < or > to tune in the station you want to preset.**  
See "Tuning in a Station" on the previous page.

**2 Press MEMORY.**  
The MEMORY indicator blinks for about 5 seconds.

**3 Press PRESET < or > to select a channel number while the MEMORY indicator is blinking in the display.**

**4 Press MEMORY again.**  
The MEMORY indicator goes off in the display.

**To erase the preset stations**  
Storing a new station on a used number erases the previously stored one.

When you unplug the AC power cord or power failure occurs  
The preset stations will be erased in a few days. If this happens, preset the stations again.

## Tuning in a Preset Station

**1 Press FM/AM.**  
The unit automatically turns on and tunes in the most recent station (either FM or AM). Each time you press the button, the band alternates between FM and AM.

**2 Press and hold PRESET < or > until the channel number you want appears in the display.**

When you press PRESET < or > briefly and repeatedly  
The preset station changes one by one.

## When using the remote control unit

You can select a preset station directly by specifying its channel number.

**1 Press FM or AM.**  
The unit automatically turns on and then:

- When you press FM, the most recent FM station is tuned in.
- When you press AM, the most recent AM station is tuned in.

**2 Press the number button (1 — 10) to select the channel number you want.**

When you use the number buttons on the remote control unit  
Be sure that you have selected either FM or AM using the FM or AM button on the remote control unit. If you have selected it using the FM/AM button on the unit, you cannot specify the preset channel numbers by using the number buttons.

# Playing Back a Tape

English

You can play back type I, type II, and type IV tapes without changing any settings. However, before you start play, you need to check the type of the Dolby NR\* system used for the tape you play. Only the Dolby B NR is incorporated into this unit.

## Playing Back a Tape in Deck A or B

By pressing either ▷ or ◁ on either deck A or B, you can turn on the unit, and start playing back a tape if a tape is in the deck.

- 1 Press EJECT for the deck you want to use.
- 2 Put the cassette in, with the exposed part of the tape down.
- 3 Close the cassette holder gently.
- 4 Press ▷ or ◁.
  - ▷ : plays the front side.
  - ◁ : plays the reverse side.
 The direction indicator on the pressed button starts blinking and tape play starts. When the tape plays to the end, the deck automatically stops if the Reverse Mode is not on. (See "To play both sides repeatedly — Reverse Mode.")

To stop during play, press ■. To fast wind to the left or to the right, press ◀◀ or ▶▶ while the tape is not running. To remove the cassette, press EJECT.

## To play a tape recorded with the Dolby NR system

Press DOLBY B NR to activate the Dolby B NR system. The DOLBY B NR indicator lights red. The system works for both decks at the same time.

To cancel the Dolby NR system, press the button again so that the indicator turns off.

## To play both sides repeatedly — Reverse Mode

Press REVERSE MODE so that the REVERSE MODE indicator lights red. Reverse Mode works for both decks at the same time.

The tape automatically reverses at the end of a side and start playing the other side, and repeats the same process. To cancel Reverse Mode, press the button again so that the indicator turns off.

The use of the C-120 or thinner tape is not recommended, since characteristic deterioration may occur and this tape easily jams in the punch-rollers and the capstans.

\* Dolby noise reduction manufactured under license from Dolby Laboratories Licensing Corporation. "DOLBY" and the double-D symbol are trademarks of Dolby Laboratories Licensing Corporation.

English

## Playing Back Tapes in Deck A and B Continuously — Continuous Play

You can play tapes in deck A and B continuously.

- 1 Press EJECT for both decks.
- 2 Put the cassettes into both decks, with the exposed part of the tape down.
- 3 Close the cassette holders gently.
- 4 Press ▷ or ◁ on the deck you want to play first.
  - ▷ : plays the front side.
  - ◁ : play the reverse side.
 The direction indicator on the pressed button starts blinking and tape play starts. When a tape finishes playing, the unit checks to see if a tape is in the other deck. If one is there, it automatically starts playing it.

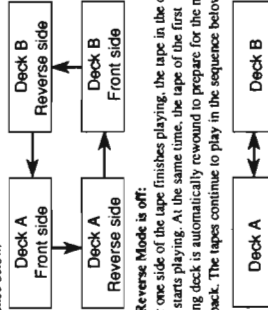

To stop during play, press ■ on the currently playing deck.

### How Continuous Play actually works

When Reverse Mode is on:

- After the reverse side of the tape finishes playing, the tape in the other deck starts playing. The tapes continue to play in the sequence below.

When Reverse Mode is off:

- After one side of the tape finishes playing, the tape in the other deck starts playing. At the same time, the tape of the first playing deck is automatically rewound to prepare for the next playback. The tapes continue to play in the sequence below.

# Playing Back a CD or a Video CD

You can play back video CDs, CD-Gs (both of the NTSC system) as well as conventional audio CDs. When you play back video CDs or CD-Gs, make sure that the color system of your TV is set to NTSC position or that you are using the NTSC TV.

Using the built-in CD player, you can play back the following discs.

<b>Video CD</b> 	Audio signals and video signals are recorded. You can play this disc as the same as you are playing a conventional audio CD. (Version 1.1)
<b>PlayBack Control</b>	If a video CD has the "PlayBack Control" mark (hereafter, called PBC), you can enjoy the playback of the disc using the menu display — you can select the scene you want to view on the menu display — and super fine still pictures. (Version 2.0)
<b>Conventional audio CD</b> 	Only audio signals are recorded.
<b>CD-G (CD Graphics)</b> 	Graphics are recorded in the area called sub-code area of the conventional audio CD. You can enjoy graphics as well as music recorded. However, the quality of the graphics is limited.

## Playing Back an Audio CD

You can play audio CDs using the CD player.

- 1 Press  $\blacktriangle$ .**  
The unit automatically turns on and disc tray comes out.
- 2 Place a disc correctly on the circle of the disc tray, with its label side up.**
- 3 Press  $\triangleright/II$  (or  $\triangleright$ ) on the CD CONTROL section on the remote control unit.**  
The disc tray closes.  
To stop during play, press  $\blacksquare/CLEAR$ .  
To stop play and remove the disc, press  $\blacktriangle$ .

When you use an 8 cm (3-inch) CD Place it on the inner circle of the disc tray.

When you press  $\triangleright/II$  (or  $\triangleright$ ) on the remote control unit with no disc on the disc tray, "NO DISC" appears and the disc tray comes out.

## Playing Back a Video CD or CD-G

You can play video CDs either with or without the PBC function as well as CD-Gs.

### To play the Entire Disc — Continuous Play

You can use the following procedures to play a video CD without the PBC function and a CD-G.

- 1 Turn on the TV and select the video input so that you can view the pictures from the CD player.**  
Refer also to the manual supplied for your TV.
  - 2 Press  $\blacktriangle$ .**  
The unit automatically turns on and disc tray comes out.
  - 3 Place a disc correctly on the circle of the disc tray, with its label side up.**
  - 4 Press  $\triangleright/II$  (or  $\triangleright$ ) on the CD CONTROL section on the remote control unit.**  
The disc tray closes.  
• When you play a video CD, "VIDEO CD" appears in the display.  
• When you play a CD-G, "GRAPHICS" appears in the display.
- To stop during play, press  $\blacksquare/CLEAR$ .  
The blue screen appears on the TV screen.  
To stop play and remove the disc, press  $\blacktriangle$ .

## To play a video CD with the PBC function — Menu Play

With the PBC function of the disc, you can enjoy interactive playback of the disc using the menu displayed on the TV screen. Refer also to the instructions for the disc.

- 1 Turn on the TV and select the video input so that you can view the pictures from the CD player.**  
Refer also to the manual supplied for your TV.
  - 2 Press  $\blacktriangle$ .**  
The unit automatically turns on and disc tray comes out.
  - 3 Place a disc correctly on the circle of the disc tray, with its label side up.**
  - 4 Press SELECT.**  
The disc tray closes.  
"VIDEO CD" and then "PBC" appears in the display. (For some discs, "PBC" will not appear soon after "VIDEO CD.")
  - 5 When the menu appears on the TV screen, select the item you want by using the number buttons on the remote control unit.**  
When you want to use the number buttons on the remote control unit, make sure that you start playing a disc using the buttons on the remote control unit. Repeat this step, following the instructions displayed in the menu on the TV screen.  
See "Basic Operations for Menu Play" on page 20 for more details.
- To stop Menu Play, select the item in the menu (such as "End" or "Quit") which can quit playback. If there is not such a selection, press and hold RETURN for more than 2 seconds.
- To stop play and remove the disc, press  $\blacktriangle$ .

If you change the source from the CD player to others while TV is turned on  
• When you select the cassette deck or other connected source, the CD player remains turned on. So, the blue screen will appear on the TV screen.  
• When you select FM or AM, the CD player is turned off. So, the blue screen will not appear on the TV screen.

If you do not advance from the menu for about 10 minutes  
The CD player automatically stops, the menu disappears and the blue screen appears on the TV screen.

Continued

Continued

**Basic Operations for Menu Play**

While playing a video CD with the PBC function using Menu Play, you can use the following operations. If you want to know more about the PBC function and Menu Play, see "Basic Concept of the PBC Function" on the next page.

**To select item numbers on the menu**

When you want to use the number buttons on the remote control unit, make sure that you start playing a disc using the buttons on the remote control unit. Press the number buttons on the remote control unit to select the menu item number you want. For example:

- To select the number 5, press 5.
- To select the number 15, press +10 then 5.
- To select the number 20, press +10, then 10.
- To select the number 32, press +10 three times, then 2.

**To view the unshown portion (continuation) of the menu**

If the menu has more items than it can show on the TV screen at one time, press NEXT (▶) on the remote control unit, so the remaining items are shown on the TV screen.

To view the previously shown portion of the menu, press PREV (◀) on the remote control unit.

**To go back to the previous menu**

Press RETURN.

**To locate a particular point in a track while viewing moving pictures**

Press and hold MANUAL SEARCH (◀◀) or (▶▶) on the remote control unit. When you do these operations, the picture on the TV screen may be distorted. MANUAL SEARCH (◀◀) : fast reverses the pictures. MANUAL SEARCH (▶▶) : fast forwards the pictures.

**To play a video CD with the PBC function in Continuous Play**

Even if a video CD has the PBC function, you can cancel the PBC function and play the disc in Continuous Play.

- 1 Turn on the TV and select the video input so that you can view the pictures from the CD player.**  
Refer also to the manual supplied for your TV.
- 2 Press ▲.**  
The unit automatically turns on and disc tray comes out.
- 3 Place a disc correctly on the circle of the disc tray, with its label side up.**
- 4 Press SELECT.**  
The disc tray closes. "VIDEO CD" and then "PBC" appears in the display. (For some discs, "PBC" will not appear soon after "VIDEO CD.")
- 5 Press and hold RETURN for more than 2 seconds until the blue screen appears on the TV screen.**
- 6 Press the number button of the track you want to start playing with.**  
For example, to start from the beginning, press 1.

**To stop during play and restore Menu Play, press and hold RETURN for more than 2 seconds until the blue screen appears on the TV screen.**

If you try to start playing again, the video CD plays in Menu Play this time.

When you play back a video CD with the PBC function in Continuous Play the pictures you can view in Continuous Play are different from those you can view in Menu Play.

**Basic Operations for Continuous Play**

While playing a CD, CD-G, and video CD without the PBC function, you can do the following operations. When you do these operations while playing a CD-G or video CD, the picture on the TV screen may be distorted.

**To stop play for a moment**

Press ▷/II once or STILL II on the remote control unit. When playing a CD-G or a video CD, you can view a still picture on the TV screen.

If you pause a CD-G or a video CD for about 5 minutes, the CD player automatically stops, the still picture disappears, and the blue screen appears on the TV screen.

To resume play, press ▷/II again or ▷ on the CD CONTROL section on the remote control unit.

**To go to another track**

Press ◀◀ or ▶▶ repeatedly.  
◀◀ : goes back to the current or previous tracks.  
▶▶ : skips to the next or succeeding tracks.  
You can use these buttons to select the first playing track before you start playing.

You can change the tracks continuously. Press and hold ◀◀ or ▶▶ on the remote control unit.

**To locate a particular point in a track**

Press and hold MANUAL SEARCH (◀◀) or (▶▶) on the remote control unit. MANUAL SEARCH (◀◀) : fast reverses the disc. MANUAL SEARCH (▶▶) : fast forwards the disc.

You can press INDEX (—) or (—) to locate a particular point if the disc has indexes recorded. An index is a pre-recorded mark to locate a particular point in a disc. If a disc has indexes recorded, it is mentioned on the printed surface of the disc or the disc's package.

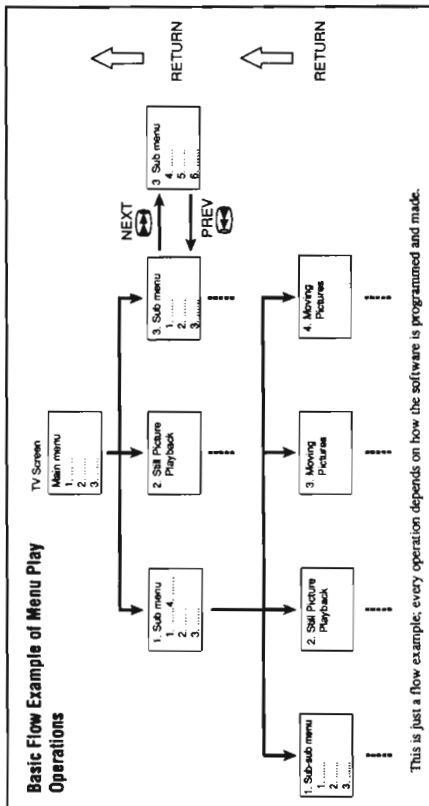

**To go to another track directly using the remote control unit**

When you want to use the number buttons on the remote control unit, make sure that you start playing a disc using the buttons on the remote control unit.

Press the number buttons on the remote control unit to select the track number you want.

- For example:
- To select the track number 5, press 5.
  - To select the track number 15, press +10 then 5.
  - To select the track number 20, press +10, then 10.
  - To select the track number 32, press +10 three times, then 2.

Continued

This is just a flow example; every operation depends on how the software is programmed and made.

### Basic Concept of the PBC Function

What is the PBC (PlayBack Control) function?

The PBC function, opening a new video CD age, allows you to enjoy the interactive playback of the disc as you want to play it back by using the menu, and to enjoy super fine still pictures having four times better quality than the moving pictures.  
So, **Menu Play** and **super fine still pictures** feature the PBC function.

### Basic flow of Menu Play operations

When you start playing a video CD with the PBC function, the menu appears on the TV screen.  
This menu will be a still picture (a list of items you can select), moving pictures, or a divided screen. **It depends on how the software is programmed and made.**

- When a list of items appears on the TV screen, you can select a number of the item you want to play back. (If the list of items cannot be displayed on the TV screen at one time, pressing NEXT will show its continuation.)
- When moving pictures appear on the TV screen, you can select a moving picture by pressing SELECT while the moving picture you want to view is being played back.

### Special Plays for a Video CD

You can use the following special play modes for video CDs both with and without the PBC function only by using the remote control unit.

#### To use slow motion playback

During playback, press SLOW. Each time you press the button, the slow motion speed decreases in 3 levels. During slow motion playback, no sound comes out.

To resume normal playback, press ▷ on the CD CONTROL section.

#### To use frame-by-frame playback

During playback, press STILL II. When you press the button first, play pauses and you see a still picture on the TV screen. Then each time you press the button, still pictures advance by one frame. During frame-by-frame playback, no sound comes out.

To resume normal playback, press ▷ on the CD CONTROL section.

**notes** If you do not advance the still picture for about 5 minutes The CD player automatically stops, the still picture disappears and the blue screen appears on the TV screen.

**notes** If you cannot restore normal playback after using the slow motion or frame-by-frame playback  
• Press PREV and then restart play.  
• Press RETURN to go back to the menu and then restart play.

# Playing a Disc in Other Play Modes

English

You can also use the other play modes such as Program Play and Repeat Play.

## Programming the Playing Order of the Tracks — Program Play

You can arrange the order in which the tracks play before you start playing. You can program up to 32 tracks. By using the remote control unit, you can easily program tracks.

When using the remote control unit:

- 1 Press PROGRAM so that "PROGRAM" appears in the display.
- 2 Press the number buttons of the tracks in the order you want to play.
- 3 Press  $\triangleright$  on the CD CONTROL section.

The tracks are played in the order you have designated.

**To stop during play,** press  $\square$  on the CD CONTROL section.

**To cancel Program Play and erase the program,** press PROGRAM on the remote control unit when the player is not playing.

English

## Repeating Play — Repeat Play

You can repeat the whole disc or a track in any play modes (except when playing a video CD with the PBC function).

**To repeat play,** press REPEAT during play. Each time you press the button, the display changes to show the following:

**When REPEAT lights up in the display:**  
 In Continuous Play — all tracks in the disc are played repeatedly.  
 In Program Play — all programmed tracks are played repeatedly.  
**When REPEAT 1 lights up in the display:**  
 In Continuous Play and Program Play, the current track is repeated.

**To cancel Repeat Play,** press REPEAT repeatedly until neither REPEAT nor REPEAT 1 is lit in the display.

When using the buttons on the main unit:

- 1 Press PROGRAM so that "PROGRAM" appears in the display.
- 2 Press  $\leftarrow$  or  $\rightarrow$  to select the track number.
- 3 Press PROGRAM again to store the selected track.
- 4 Repeat Steps 2 and 3 to program other tracks you want.
- 5 Press  $\triangleright$  /  $\square$ .

The tracks are played in the order you have designated.

**To stop during play,** press  $\square$ /CLEAR.

**To cancel Program Play and erase the program,** press  $\square$ /CLEAR again (when the player is not playing).

### To check the program contents

(Possible only on the remote control unit.)  
 Before playing, you can check the program contents by pressing  $\leftarrow$  or  $\rightarrow$  on the remote control unit.  
 $\leftarrow$ : shows the programmed tracks in the programmed order.  
 $\rightarrow$ : shows them in the reverse order.

### To modify the program

(Possible only on the remote control unit.)  
 Before playing, you can erase the last programmed track by pressing CANCEL on the remote control unit. Each time you press the button, the last programmed track is erased from the program.  
 To add a track in the program before or during play, press the number buttons of tracks you want to add.

# Recording

You can record using deck B, connected VCR and connected digital recording equipment.

## Recording Tapes on Deck B

You can use type I and II tapes for recording.

- 1 Press EJECT for the deck B.
- 2 Put in the cassette to record onto, with the exposed part of the tape down.
- 3 Close the cassette holder gently.
- 4 Press REC PAUSE so that the REC PAUSE indicator lights up.
- 5 Start playing the source — FM, AM, CD player, deck A, or auxiliary equipment connected to VCR and AUX jacks. When the source is deck A, you can also use the dubbing method. (See "Dubbing Tapes.")

- 6 Press ▷ or ◁ for the deck B.
    - ▷ : records on the front side.
    - ◁ : records on the reverse side.
 The direction indicator on the pressed button starts blinking and recording starts. When recording ends, the deck B automatically stops.
- To stop during recording, press ■ for deck B.  
 To stop recording temporarily, press REC PAUSE again.  
 To resume recording, press ▷ or ◁ (the same button you have pressed in Step 6) for deck B.  
 To remove the cassette, press EJECT.

## Dubbing Tapes

You cannot dub tapes with any sound mode. It is preferable that the tape type (type I or II) you record from be the same as the tape type you record onto when dubbing tapes.

- 1 Put the source cassette in deck A, and the cassette to record onto in deck B.
- 2 Press ▷ (or ◁) and then ■ both for deck A and deck B to designate the side of the tape to play and to record onto.
  - ▷ : plays or records from the front side.
  - ◁ : plays or records from the reverse side.
- 3 Press DUBBING. Dubbing starts.

To stop during dubbing, press ■ for deck B.  
 To remove the cassette, press EJECT.

**To dub both sides — Reverse Mode**  
 Press REVERSE MODE so that the REVERSE MODE indicator lights red, and start from the front sides for both deck A and B.  
 To cancel Reverse Mode, press the button again so that the indicator turns off.

The Dolby NR system is inactive during dubbing the source tape. The DOLBY B NR indicator automatically turns off.

## Recording on the Connected Equipment

You can record sounds on a video tape on the VCR connected to the VCR jacks on the rear, and also record digital sounds through the DIGITAL OUT OPTICAL terminal.

Before you start recording, refer also to the manuals supplied for the connected equipment.

- 1 Prepare the VCR, or digital equipment connected to the DIGITAL OUT OPTICAL.
- 2 Start playing the source and recording. For recording on VCR: You can select the sources — FM, AM, deck A and B, CD player, and the equipment connected to the AUX jacks. For recording on the digital equipment: You can play only the conventional audio CD and the CD-G as the source.

You cannot adjust the recording level manually. Recording level is fixed.

### To protect your recording

Cassettes have two small tabs on the back to protect unexpected erasure or re-recording.  
 To protect your recording, remove these tabs.  
 To re-record on a protected tape, cover the holes with adhesive tape.  
 When using type II tape, be careful not to cover the holes used to detect the tape type.

- It may be unlawful to record or play back copyrighted material without the consent of the copyrighted owner.
- If recording you make have excessive noise or static, the unit may be too close to a TV. Increase the distance between the TV and the unit.

# CD Edit Recording

You have 2 ways, except the standard method described on page 25, to record from disc (conventional audio CD, CD-G, and video CD without the PBC function) to tape.  
**CD Direct Recording** --- Everything on the disc onto the tape in the order it is on the disc.  
**Auto Edit Recording** --- The unit arranges which tracks to be recorded on which side of the tape, so a track isn't cut off at the end of the tape.

## CD Direct Recording

This is the easiest way of recording a disc.

### How CD Direct Recording Actually works

Deck B records tracks in the order on the disc. If the tape ends while recording a track, deck B rewinds the tape to the beginning of the track and re-records it so that it fades out naturally at the end of the tape.  
 If recording is continued to the reverse side, a 10 second blank is created at the beginning of the reverse side. Then the reverse side starts with the last track recorded on the front side and will fade out at the end of the tape again.

- 1 Put the cassette to record onto in deck B.
- 2 Place a disc correctly on the circle of the disc tray, with its label side up.
- 3 Press CD REC START.  
 "CD REC" appears in the display.  
 Deck B starts recording and the CD player starts playing.

**To stop during CD Direct Recording,** press **DECK B** or **CLEAR** on the CD player.  
 When you press **CLEAR**, you can make a 4-second blank at the end of recording.

**You can record a program you have made using CD Direct Recording.**  
 Before you press CD REC START, make a program as you want. To make a program, see page 23.

**You can use Repeat Play during CD Direct Recording.**  
 To repeat a disc or a track, see page 24.

## Auto Edit Recording

The unit automatically arranges the tracks on a disc to fit the tape. The selection of which tracks go on which side of the tape is based on the lengths of the tracks and the length of the tape.

### How Auto Edit Recording actually works

The unit selects which tracks go on which side of the tape so that the total playing time of the selected tracks is within the tape length and that no track is not cut off while recording.  
 Before recording starts, the deck B automatically rewinds the tape to the beginning of the front side and creates a 10 second blank.  
 If recording is continued to the reverse side, a 10 second blank is also created at the beginning of the reverse side.

- 1 Put the cassette to record onto in deck B.
- 2 Place a disc correctly on the circle of the disc tray, with its label side up.
- 3 Press REVERSE MODE so that the REVERSE MODE indicator lights red.  
 If you want to record on only the front side, do not light the REVERSE MODE indicator.
- 4 Press AUTO EDIT.  
 "EDIT" appears in the display, and then the tape length best to use appears.

To change the tape length, press **REVERSE** or **REVERSE**. The tape length shown in the display cycles as follows so you can select a different tape length.

- 5 Press SIDE A/B.  
 The display shows which tracks go on the front side (A) and which on the reverse side (B).  
 Each time you press the button, the display alternates to show the tracks for the front side (A) and those for the reverse side (B).

- 6 Press CD REC START.  
 "CD REC" appears in the display.  
 Deck B rewinds the tape and starts recording. CD player starts playing about 10 seconds later.
- 7 When recording is complete, press **CLEAR** on the CD player.  
 This cancels the Auto Edit setting.

**To stop during Auto Edit Recording,** press **DECK B** or **CLEAR** on the CD player.  
 When you press **CLEAR**, you can make a 4-second blank at the end of recording.

**To record a tape with the Dolby NR system**  
 Press DOLBY B NR to activate the Dolby B NR system.  
 The DOLBY B NR indicator lights red.  
**To cancel the Dolby NR system,** press the button again so that the indicator turns off.

**To record a tape with the sound modes**  
 Before you start recording, select the sound mode you want. You can record with any one of the preset SEA modes.

**You can program up to 16 tracks for each side of the tape**  
 However, you cannot program a track the number of which on the disc is greater than 31.

**If you use a tape shorter than the total playing time of selected tracks**  
 The last recorded tracks will be fading out at the ends of both sides.

# Singing Along — Karaoke

English

You can enjoy singing along using conventional audio CDs (or tapes), CD-Gs and video CDs.

## Singing Along with Conventional Audio CDs or Tapes — Vocal Masking

When playing a stereo recorded source such as conventional audio CDs or tapes, you can reduce the lead vocal and replace it by singing into the microphone. Usually stereo recorded CDs are best source for Vocal Masking.

### What Vocal Masking actually does

Vocal Masking reduces the lead vocal (but never erases it). The following sources are not good for enjoying Vocal Masking.

- Monaural sources
- Multiplex karaoke tapes and discs
- Poorly dubbed tapes
- Stereo recorded source, but with only few instruments, with duets, or with strong echo

- 1 Turn down MIC LEVEL fully.
- 2 Connect the microphone (not supplied) into the MIC jack on the front panel.
- 3 Play the source — a CD, a tape, and others. When the source is CD, make sure that the CD L-MONO mode is not activated. If it is activated, press CD L-MONO until "STEREO" appears in the display.

For preventing howling and squealing when using the microphone Adjust MIC LEVEL and VOLUME, and try not to point the microphone at the speakers.

When you are not going to use the microphone Keep MIC LEVEL set to MIN, and disconnect the microphone.

Continued

English

## Singing Along with Multiplex Karaoke Video CDs without the PBC Function or Multiplex Karaoke CD-Gs

If the disc you are going to play is a multiplex karaoke disc, the instrumental parts are recorded on the left channel and the vocal parts are recorded on the right channel. So, you can select the output sounds — whether the instrumental parts only or both of the instrumental parts and vocal parts. Before playing a disc, turn on the TV and select the video input so that you can view the pictures from the CD player.

- 1 Turn down MIC LEVEL fully.
- 2 Connect the microphone (not supplied) into the MIC jack on the front panel.
- 3 Press ▲ The unit automatically turns on and disc tray comes out.
- 4 Place a disc correctly on the circle of the disc tray, with its label side up.
- 5 Press >||| (or > on the CD CONTROL section on the remote control unit). The disc tray closes.

- When you play a video CD, "VIDEO CD" appears in the display and play starts from the first track.
- When you play a CD-G, "GRAPHICS" appears in the display and play starts from the first track.

- 6 Press CD L-MONO on the remote control unit to select the output sound — whether the instrumental parts only or both of the instrumental parts and the vocal parts.

Each time you press the button, sounds change and the display shows as follows:

→ STEREO → Lch MONO

STEREO: Both the instrumental parts and vocal parts

Lch MONO: Only the instrumental parts.

- 7 Turn MIC LEVEL and VOLUME to adjust the microphone level and the sound output level.

- 8 Singing into the microphone.

To stop during play, press ■/CLEAR. The blue screen appears on the TV screen. To stop play and remove the disc, press ▲. After singing along, restore the stereo effect by pressing CD L-MONO. So, you will not lose the stereo effect when you play a stereo disc next time.

## To select the CD graphic channel

If the CD-G has several patterns (up to 15) of graphics (they are called "graphic channels"), you can select the one you want. You can find out whether or not the CD-G has graphic channels by looking at its package or the printed surface of the disc.

To change the graphic channel, press CD-G CHANNEL repeatedly until the graphic channel you want appears on the TV screen.

## To apply echo to your voice

Press ECHO on the remote control unit. Each time you press the button, the amount of echo applied changes and the display shows as follows:

→ ECHO 1 → ECHO 2 → ECHO 3 → OFF

ECHO 1: A little echo is applied.  
ECHO 2: More amount of echo than ECHO 1 is applied.  
ECHO 3: Strong echo is applied.  
OFF: No echo is applied.

## To select a particular track or to use other basic operations

See "Basic Operations for Continuous Play" on page 19.

## To use slow motion or frame-by-frame playback for video CDs

See "Special Plays for a Video CD" on page 22.

## To record your singing along

See "Microphone Mixing" on page 32.

You cannot use Vocal Masking on a multiplex karaoke disc.

For preventing howling and squealing when using the microphone Adjust MIC LEVEL and VOLUME, and try not to point the microphone at the speakers.

When you are not going to use the microphone Keep MIC LEVEL set to MIN, and disconnect the microphone.

Continued

### Singing Along with Multiplex Karaoke Video CDs with the PBC Function

Before playing a disc, turn on the TV and select the video input so that you can view the pictures from the CD player.

- 1 Turn down MIC LEVEL fully.
- 2 Connect the microphone (not supplied) into the MIC jack on the front panel.
- 3 Press **▲**. The unit automatically turns on and disc tray comes out.
- 4 Place a disc correctly on the circle of the disc tray, with its label side up.

5 Press **SELECT**. The disc tray closes. "VIDEO CD" and then "PBC" appears in the display. (For some discs, "PBC" will not appear soon after "VIDEO CD.")

6 When the menu appears on the TV screen, select the song you want by using the number buttons on the remote control unit.

7 Press **CD L-MONO** on the remote control unit to select the output sound — whether the instrumental parts only or both of the instrumental parts and the vocal parts. Each time you press the button, sound changes and the display shows as follows:  
 → STEREO → Lch MONO →

STEREO: Both the instrumental parts and vocal parts  
 Lch MONO: Only the instrumental parts.

8 Turn **MIC LEVEL** and **VOLUME** to adjust the microphone level and the sound output level.

9 Singing into the microphone. To stop Menu Play, select the item in the menu (such as "End" or "Quit") which can quit playback. If there is not such a selection, press and hold **RETURN** for more than 2 seconds.

To stop play and remove the disc, press **▲**. After singing along, restore the stereo effect by pressing **CD L-MONO**. So, you will not lose the stereo effect when you play a stereo disc next time.

## Using the Microphone

You can use the microphone (not supplied) for two kinds of recording.

### Microphone Mixing

You can record sound through the microphone by mixing sound from other sources. When recording on deck B, you cannot use deck A as the playing source. (But you can use deck A as the playing source when recording on the connected VCR.)

- 1 Turn down MIC LEVEL fully.
- 2 Connect the microphone (not supplied) into the MIC jack on the front panel.
- 3 Play the source — a CD, a tape, and others.
- 4 Turn MIC LEVEL and VOLUME to adjust the microphone level and the sound output level.
- 5 Singing into the microphone.
- 6 Start recording. You can record using both deck B and the connected VCR. When recording on deck B, see "Recording Tapes on Deck B" on page 25. When recording on the VCR, refer to the manual supplied for it.

### Recording Only Though the Microphone

You can record sound picked up by the microphone only.

- 1 Turn down MIC LEVEL fully.
- 2 Connect the microphone (not supplied) into the MIC jack on the front panel.
- 3 Press >/II and then press **■/CLEAR** on the CD player.
- 4 Turn MIC LEVEL and VOLUME to adjust the microphone level and the sound output level.
- 5 Singing into the microphone or pick up sound using the microphone.
- 6 Start recording. You can record using both deck B and the connected VCR.

**notes** For preventing howling and squealing when using the microphone Adjust MIC LEVEL and VOLUME, and try not to point the microphone at the speakers.

**notes** When you are not going to use the microphone Keep MIC LEVEL set to MIN, and disconnect the microphone.

# Using the Timers

There are three timers available — Recording Timer, Daily Timer, and Sleep Timer. Before using the timers, you need to set the clock built in the unit.

## Setting the Clock

- 1 Press **CLOCK ADJ.** (adjust).
- 2 Press **HOUR** repeatedly. Each time you press the button, the hour increases by one. Holding it down advances the hour continuously.
- 3 Press **MINUTE** repeatedly. Each time you press the button, the minute increases by one. Holding it down advances the minute in 10 minute increments continuously.
- 4 Press **CLOCK ADJ.** again. "CLOCK OK" appears in the display. The clock is set and starts from zero seconds.

**If there is a power failure**

The clock loses the setting and the display shows "0:00." You need to reset the clock.

## Using Recording Timer

With Recording Timer, you can make a tape of a radio broadcast automatically. You can set Recording Timer whether the unit is turned on or off.

### How Recording Timer actually works

The unit automatically turns on, tunes into the most recent station, and starts recording on deck B when the timer-on time comes. Then, when the timer-off time comes, the unit automatically turns off. The timer-on time and timer-off time remain stored in memory until you reset them or disconnect the AC power cord.

- 1 Press **REC TIMER**. The REC TIMER indicator starts blinking in the display.
- 2 Set the timer-on time while the REC TIMER is blinking. Press HOUR to set the hour, and MINUTE to set the minute.
- 3 Press **SOURCE/REC TIME** to set the recording time length. Each time you press the button, the recording time length increases by one. Holding it down advances the minute in 10 minute increments continuously. You can change the recording time length up to 120 minutes. If you select "--" as the recording time length, the unit will not turn off though it turns on automatically.

Continued

## Using Daily Timer

With Daily Timer, you can wake up to music or favorite radio program. You can set Daily Timer whether the unit is turned on or off.

### How Daily Timer actually works

The unit automatically turns on, and starts playing (or tunes into the most recent station) when the timer-on time comes. Then, after about 60 minutes the unit automatically turns off. The timer settings remain stored in memory until you reset them or disconnect the AC power cord.

- 1 Press **DAILY TIMER**. The DAILY TIMER indicator starts blinking in the display.
- 2 Set the timer-on time while the DAILY TIMER is blinking. Press HOUR to set the hour, and MINUTE to set the minute.
- 3 Press **SOURCE/REC TIME** to set the source. Each time you press the button, the source changes as follows:  
CD → TAPE → FM → AM

CD: play a disc from the beginning or according to the program you have prepared. To make a program, see page 23.  
TAPE: plays a tape in deck A or B. If tapes are in both decks, the unit plays a tape in deck B first.  
FM: tunes into the most recent FM station.  
AM: tunes into the most recent AM station.

- 4 Press **DAILY TIMER** again or wait for about 8 seconds. "TIMER OK" appears in the display. The DAILY TIMER indicator stops blinking and remains lit in the display.
- 5 Turn **VOLUME** to the appropriate position. So, you will not be surprised and can wake up to music when the timer-on time comes.

To cancel the setting, press DAILY TIMER again so that the DAILY TIMER indicator goes off in the display.

**If you press any button during Daily Timer is operating**  
The unit will not turn off automatically.

## Using Sleep Timer

With Sleep Timer, you can fall asleep to music. You can set Sleep Timer when the unit is turned on.

### How Sleep Timer actually works

The unit automatically turns off after the specified time length passes.

- 1 Press **SLEEP** on the remote control unit. The SLEEP indicator starts blinking in the display. Each time you press the button, the time length changes as follows:  
 →  →  →  →  →  →
- 2 Wait for about 6 seconds after specifying the time length. "TIMER OK" appears in the display. The SLEEP indicator stops blinking, and remains lit.

To check the remaining time until the shut-off time, press SLEEP once so that the remaining time until the shut-off time appears for about 5 seconds.

To change the shut-off time, press SLEEP repeatedly until the desired time length appears in the display.

To cancel the setting, press SLEEP repeatedly so that the SLEEP indicator goes off in the display or turn off the unit.

## Timer Priority

Since each timer can be set separately, you may wonder what happens if the setting for these timers overlaps. Here are the priorities for each timer.

- **Recording Timer has priority over Daily Timer and Sleep Timer.**

If Daily Timer is set to come on while Recording Timer is operating, Daily Timer will not come on at all.

does not work.

If Recording Timer is set to come on while Sleep Timer is operating, Sleep Timer will be canceled several seconds before Recording Timer comes on.

canceled.

- **Sleep Timer has priority over Daily Timer.**

If Daily Timer is set to come on while Sleep Timer is operating, Daily Timer will not come on at all.

does not work.

Therefore, the equation is like this —

**Recording Timer > Sleep Timer > Daily Timer**

# Maintenance

To get the best performance of the unit, keep your discs, tapes, and mechanism clean.

## Handling discs

- Remove the disc from its case by holding it at the edge while pressing the center hole lightly.
- Do not touch the shiny surface of the disc, or bend the disc.
- Put the disc back in its case after use to prevent warping.

- Be careful not to scratch the surface of the disc when placing it back in its case.
- Avoid exposure to direct sunlight, temperature extremes, and moisture.

### To clean the disc

Wipe the disc with a soft cloth in a straight line from center to edge.

DO NOT use any solvent — such as conventional record cleaner, spray, thinner, or benzine — to clean the disc.

## Handling cassette tapes

- If the tape is loose in its cassette, take up the slack by inserting a pencil in one of the reels and rotating.
- If the tape is loose, it may get stretched, cut, or caught in the cassette.

- Be careful not to touch the tape surface.

- Avoid the following places to store the tape:
  - In dusty places
  - In direct sunlight or heat
  - In moist areas
  - Near a magnet

## Cassette decks

If the heads, capstans, and pinch-rollers of the cassette decks become dirty, the following will occur:

- Impaired sound quality
- Discontinuous sound
- Fading
- Incomplete erasure
- Difficulty in recording

### To clean the heads, capstans, and pinch-rollers

Use a cotton swab moistened with alcohol.

### To demagnetize the heads

Turn off the unit, and use a head demagnetizer (available at electronics and record shops).

■ TLC2932IPW (IC112) : PLL Block IC

1. Out line

TLC2932 is a CMOS IC for PLL block and it is composed of VCO which can oscillate up to 60MHz and PFD(Phase Frequency Detector) of edge detecting type.

Using one bias resistor decides VCO lock range which is set when PLL block is composed.

Frequency of inhibition makes it possible to reduce power consumption. Output frequency can be divided into two by switching VCO output select pin from external.

PFD with built-in charge pump detects starting point of waveform which is input from reference frequency and external counter.

It enables output pin to be fixed in high impedance from external.

## 3. Description

Pin No.	symbol	I/O	Description	Pin No.	symbol	I/O	Description
1	BCLK	O	Bit clock output pin for SRDATA	41	TES	—	Not used
2	LRCK	O	L/R distinction signal output	42	PLAY	—	"
3	SRDATA	O	Serial data output	43	WVEL	—	"
4	DVDD1	—	Power supply(Digital)	44	ARF	I	RF signal input
5	DVSS1	—	Connected to GND(Digital)	45	IREF	I	Reference current input pin
6	TX	O	Digital audio interface signal output	46	DRF	I	Bias pin for DSL
7	MCLK	I	μ-com command clock signal input (Data is latched at signal's rising point)	47	DSLIF	I/O	Loop filter pin for DSL
8	MDATA	I	μ-com command data input	48	PLLIF	I/O	Loop filter pin for PLL
9	MLD	I	μ-com command load signal input L: Load	49	VCOF	—	Not used
10	SENSE	O	Sense signal output (OFT,FESL,NACEND,NAJEND,POSAD,SFG)	50	AVDD2	—	Power supply (Analog)
11	/FLOCK	O	Lock signal for Focus L: pull	51	AVSS2	—	Connected to GND(Analog)
12	/TLOCK	O	Lock signal for Tracking L: pull	52	EFM	—	Not used
13	BLKCK	O	Subcode · block · clock signal output	53	PCK	—	"
14	SQCK	I	Outside lock for sub-code Q resister input	54	PDO	—	"
15	SUBQ	O	Sub-code Q-code output	55	SUBC	O	Subcode serial output data output
16	DMUTE	I	Muting input (H: MUTE)	56	SBCK	—	Clock input for subcode serial output
17	STATUS	O	Status signal (CRC,CUE,CLVS,TTSTOP,ECLV,SQOK)	57	VSS	—	Connected to GND(for X'tal oscillation circuit)
18	/RST	I	Reset signal input (L:Reset)	58	X1	I	Input of 16.9344MHz X'tal oscillation circuit
19	SMCK	—	Not used	59	X2	—	Not used
20	PMCK	—	Not used	60	VDD	—	Power supply(for X'tal oscillation circuit)
21	TRV	O	Traverse enforced output	61	BYTCK	—	Not used
22	TVD	O	Traverse drive output	62	/CLDCK	O	Subcode · Frame · Clock signal output
23	PC	—	Not used	63	FCLK	O	X'tal frame clock output
24	ECM	O	Spindle motor drive signal (Enforced mode output) 3-State	64	IPPLAG	O	Interpolation flag output H: Interpolation
25	ECS	O	Spindle motor drive signal (Servo error signal output)	65	FLAG	—	Flag output
26	KICK	O	Kick pulse output	66	CLVS	—	Not used
27	TRD	O	Tracking drive output	67	CRC	—	"
28	FOD	O	Focus drive output	68	DEMPH	O	De-emphasis ON signal (H: ON)
29	VREF	I	Reference voltage input pin for D/A output block(TVD,FOD,FBAL,TBAL)	69	RESY	—	Not used
30	FBAL	O	Focus Balance adjust signal output	70	NC1	—	"
31	TBAL	O	Tracking Balance adjust signal output	71	/TEST	—	Pull up (+5V)
32	FE	I	Focus error signal input(Analog input)	72	AVDD1	—	Power supply (Digital)
33	TE	I	Tracking error signal input(Analog input)	73	NC2	—	Not used
34	RF ENV	I	RF envelope signal input(Analog input)	74	AVSS1	—	Connected to GND
35	VDET	I	Vibration detect signal input(H: detect)	75	NC3	—	Not used
36	OFT	I	Off track signal input(H: off track)	76	RSEL	I	Rf signal polarity appointed pin Light level "H" → RSEL = H Light level "L" → RSEL = L
37	TRCRS	I	Track cross signal input	77	CSEL	I	X'tal oscillation frequency appointed pin L: 16.9344MHZ H: 33.8688MHZ
38	/RFDET	I	RF detect signal input (L: detect)	78	PSEL	I	Terminal of Test
39	BDO	I	BDO input pin (H: drop out)	79	MSEL	I	SMCK pin output of frequency select terminal L: SMCK+4.2336MHZ H: SMCK+8.4672MHZ
40	LDON	O	Laser ON signal output (H: on)	80	SSEL	—	SUBQ terminal output mode select pin H: Mode for Q code buffer

28	RECCAL	I	Recording gain calibration	56	GND	--	GND

■ LC7218JM (IC121) : PLL Synthesizer

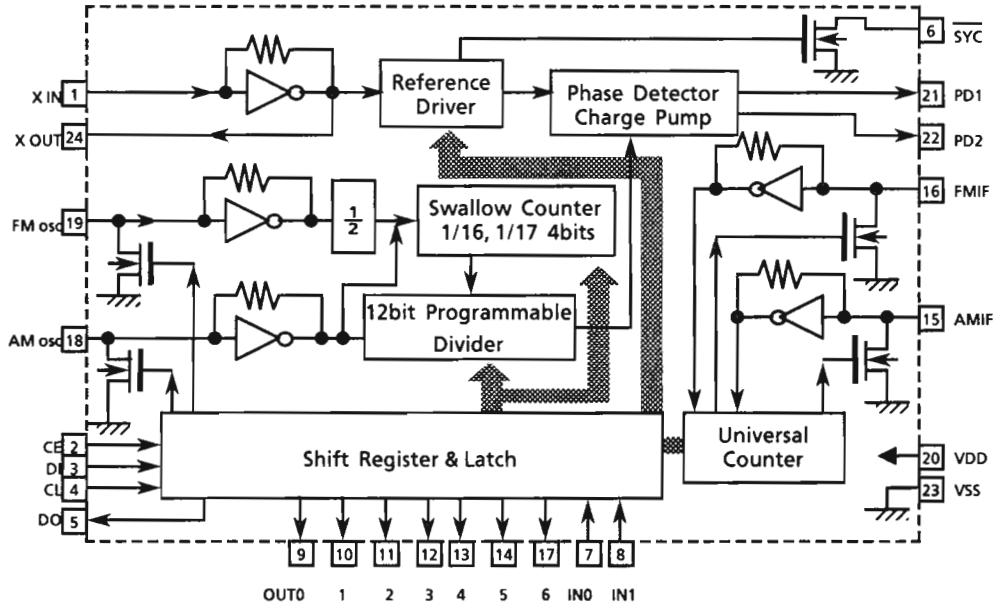

1. The main function descriptions

- (1) It makes the local oscillation frequency by the control data from IC801.
- (2) Decode the control signal and transmit the signal for receiving conditions.
- (3) For the best tuning, count the internal-frequency and transmit the data to IC801.

2. Terminal Layout

3. Block Diagram

4. Pin Functions

Pin No.	Symbol	I/O	Functions
1,24	X in , X out	I/O	Crystal oscillator (7.2MHz).
2	CE	I	Fix the chip enable to "H" when inputting (DATA) and outputting (DO) the serial data.
3	DATA	I	Receive the control data from the controller (IC801).
4	CK	I	This clock is used to synchronize data when transmitting the data of DATA and DO.
5	DO	O	Transmit the data from LC7218 to the controller which is synchronized with CLK.
6	SYNC	—	Not used.
7	TUNED	I	Receive the tuned signal from IC102 (LA1836) LOW : active.
8	STOP IN	—	Connected to GND
9	POWER	—	Not used.
10	QSC	—	Not used.
11	MONO	O	MONO control output to IC102 . "H" on FM-monaural, "L" on FM-Stereo.
12	FM	O	It is "L" on FM mode.
13	MW	O	It is "L" on MW mode.
14	LW	--	Not used.
15	AM-IF	I	Universal counter input for AM-IF from IC102 (LA1836).
16	FM-IF	I	Universal counter input for FM-IF from IC102(LA1836).
17	IF REQ	O	Output the "IF-signal request" to IC102 when the pin-7 (tuned in) goes to "H".
18	AM OSC	I	Input the local oscillator signal of AM.
19	FM OSC	I	Input the local oscillator signal of FM.
20	V <sub>DD</sub>	—	Power supply.
21	PD1	O	PLL charge pump output : When the local oscillator signal frequency is higher than the reference frequency, high level signals will output. When it is lower than the reference frequency, low level signals will output. When it is same as reference frequency signals, it will be floating.
22	PD2	—	Not used.
23	V <sub>SS</sub>	—	Connected to GND

■ LA1836M (IC102) : FM AM IF AMP & detector

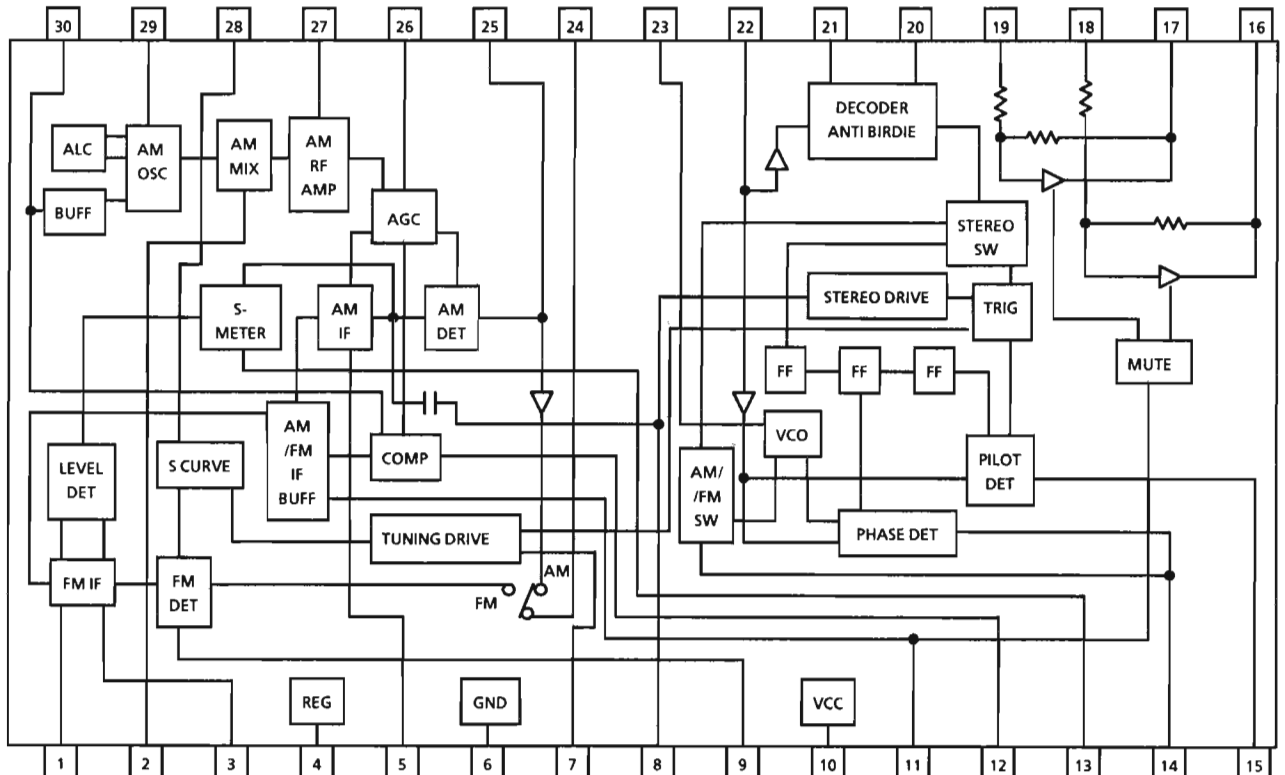

1. Terminal Layout

3. Pin Function

Pin No.	Symbol	I/O	Function
1	FM IN	I	This is an input terminal of FM IF Signal.
2	AM MIX	O	This is an output terminal for AM mixer.
3	FM IF	I	Bypass of FM IF
4	REG	O	Control of FM frequency width
5	AM IF	I	Input of AM IF Signal.
6	GND	—	This is the device ground terminal.
7	SIG	O	When the set is tuning, this terminal becomes "L".
8	ST/AM IF	O	Stereo indicator output. Stereo : "L", Mono : "H"
9	FM DET	—	FM detect transformer.
10	VCC	—	This is the power supply terminal.
11	FM/AM IF	O	When the signal of IF REQ of IC121(LC7218) appear, the signal of FM/AM IF output.
12	VSM	O	S Meter output and adjust AM SD sensitivity.
13	AM C.F.	I	This is a terminal of AM ceramic filter.
14	FM/AM	I	Change over the FM / AM input. "H" : FM, "L" : AM
15	MONO/ST	O	Stereo : "H", Mono : "L"
16	L OUT	O	Left channel signal output.
17	R OUT	O	Right channel signal output
18	L IN	I	Input terminal of the Left channel post AMP.
19	R IN	I	Input terminal of the Right channel post AMP.
20	MPX L OUT	O	Mpx Left channel signal output.
21	MPX R OUT	O	Mpx Right channel signal output.
22	MPX IN	I	Mpx input terminal.
23	VCO	I	Voltage controlled oscillator terminal.
24	DET OUT	O	AM/FM detection output.
25	AM DET	—	AM low cut adjustment.
26	AM AGC	I	This is an AGC voltage input terminal for AM.
27	AM RF	I	This is an input terminal for AM RF signal.
28	AFC	—	This is an output terminal of voltage for FM-AFC.
29	AM OSC	—	This is a terminal of AM Local oscillation circuit.
30	OSC BUFFER	O	AM Local oscillation Signal output.

# Disassembly Procedures

**(1) Top cover removal**

1. Remove 6 screws **(B)** on the rear side and 2 screws **(A)** on both sides of the cover.
2. Remove the cover.

**(2) Rear panel removal**

1. Remove the top cover.
2. Remove the 2 screws **(C)** holding the heatsink cover. Remove the 2 screws **(C)** inside the heat sink
3. Remove the 10 screws **(C)** and 4 screws **(D)** (Fig 3)
4. Disconnect the P701, J607. Remove the Video CD PCB.
5. Remove the rear panel.

Fig1

Fig2 Rear view

**(3) Tuner PCB (ENA-159-1) removal**

1. Remove the (1) and (2).
2. Remove J102.
3. Remove JB101.
4. Remove the tuner PCB.

**(4) Main VR and Source select PCB (ENB-195-3) removal**

1. Remove the main volume knob.
2. Remove the NUT for the volume shaft.
3. Remove the P401 and P402 and J401.
5. Remove the Main VR and Source select PCB.

Fig 3 Top view

- (5) Main PCB(ENH-265A) /AMP PCB (ENH-265-2,3) removal
1. Remove the (1)(2)(3)(4).
  2. Remove the 4 screws (E).
  3. Remove the J501 J852 and ,JA801,J801,JA601.
  4. Remove the Main PCB and AMP PCB.

- (6) AMP PCB(ENH-265-2) removal
1. Remove the (5).
  2. Disconnect the JA511,JA521.
  2. Remove the AMP PCB

Fig 5 Top view

Fig 6 AMP PCB view

- (7) Front panel assembly removal.
1. Remove the (1)(2)and(4) (5).
  2. Remove the 2 screws (F).
  3. Remove the Fook of the bottom side and both side..
  4. Remove the Front panel assembly.

- (8) Front PCB(ENH-265-2) removal
1. Remove the (1)(2)and (4)(5).
  2. Remove the Front panel ass'y.
  3. Remove the 7 screws (G) .
  4. Remove the Front PCB.

Fig 7 Bottom view

Fig 8 Front panel rear view

(E) .. SPST2604Z      (F) ... GBSG3006CC      (G) ... SDSF2608Z

- (9) Cassette mechanism with the PCB (ENJ-083A) removal
1. Remove the (1),(2)and (3)(4).
  2. Remove the screw ① holding the shield plate.
  3. Remove the 4screws ② and 4screws ③.
  4. Remove the Cassette mechanism.

Fig 9 Front panel Rear view

(13) Damper removal

1. Remove the cassette mechanism.
2. Remove the spring holding the cassette holder.
3. Press the tab which secures the damper to remove the damper. (See the arrow shown in the figure below)

Fig 13 Door damper view

(14) Cassette holder removal

1. Remove the Cassette mechanism assembly.
2. Remove the spring holding the cassette holder.
3. Remove Cassette holder.

Fig 14 Side view

(15) Capstan motor removal.

1. Remove the cassette mechanism.
2. Remove the cassette deck control PCB.
3. Remove the 7 screws (G) holding the bracket.
4. Remove the capstan motor with the bracket.
5. Remove the 2 screws fixing the motor and the bracket.

Fig 15 Cassette mechanism bottom view

**(16) Head assembly**

The direction of the head is changed with the head gear. When servicing, install the head gear according to the direction of the head.

Fig16 Head ass'y side view

**(17) Pinch roller arm assembly removal**

1. Release the hook holding the pinch roller arm assembly to remove the assembly .

Fig17 Cassette mechanism side view

**(18) Fly wheel removal**

1. Remove the cassette mechanism assembly.
2. Remove the cassette controller PCB.
3. Remove the 7 screws (G) and the bracket

\* The oil on the capstan must be wiped out after re-assembling.

Fig 18 Cassette mechanism bottom view

**(19) Fly wheel assembly**

1. Install the beltB of bossA ,next install the beltA as shown in fig 19 up side.
2. Assemble the bracket with the capstan motor.
3. Hang the beltB of the motor pulley using a tweezers and the like as shown in fig 19 down side .

Fig 19 Fly wheel view

(20) Reel and cam motor removal

1. Remove the cassette mechanism assembly.
2. Remove the cassette controller PCB.
3. Remove the (15).
4. Remove the 2screws① and 2screws②.
5. Unsolder the reel and cam motor PCB .
6. Remove thr motor .

Fig 20 Cassette mecha Top view

(21) Cam SW PCB removal

1. Remove the (18).
2. Remove the reel and cam motor PCB.
3. Remove the screw(SDST2612) and hooks fixing the PCB to remove the cam switch .  
When assembling the cam switch ,install it so that the part ④ meets the part ⑤.

Fig 21 AMP PCB view

(22) Cassette controll PCB(ENJ-083)removal.

1. Remove the (1)(2)and (5).
2. Disconnect the J303,J304.
3. Remove the 3screws ③holding the Cassette controll PCB and shield plate.
4. Remove the Cassette controll PCB.

Fig 22 Cassette mechanism Bottom view

(23) Head assembly removal

1. Remove the cassette mechanism assembly.
2. Remove the FPC wire to the Cassette controll PCB.
3. Remove the 3 screws ④ holding the Cassette controll PCB.

- (24) CD mechanism removal
1. Remove the (1),(2)and (5).
  2. Remove the screw (H) .
  3. Tune the screw located under the mechanism to remove the tray out of the loading mecha.
  4. Remove the tray.

Fig 24 CD mechanism

- (25) CD mecha Ass'y removal
1. Remove the (1),(2),(5).
  2. Disconnect the P601.
  3. Remove the 2 screws (F)to remove the clamp assembly .
  4. Remove the 4 screws (D) to remove the CD mecha Ass'y.

Fig 25 CD mechanism

- (26) CD servo PCB removal
1. Remove the (1),(2),(5),(7),(24),(25).
  2. Disconect the P602 and P603.
  2. Remove the 3screws (G)holding the CD servo PCB.
  3. Remove the CD servo PCB .

Fig 10 CD mechanism botom view

- (10) Installing CD mech. tray
1. Insert the CDmech.tray after checking that the traverse mecha.is positioned slantingly.
  2. If it is set horizontally,press the cam plate until it stops so that the traverse mech.slants.(See an arrow in the following figure.)

Fig 27

(G) .. SDSF2608Z

(H) ... SBSF3008Z

(D) ... SBST3006Z

(28) Pickup removal

1. Remove the cd mechanism assembly.
2. Release the shaft to remove the pickup (Fig 28).

Fig 28 CD mechanism assembly

(29) Spindle motor removal

1. Remove the cd mechanism assembly.
2. Remove the turntable, and remove the two screws retaining the spindle motor.
3. Remove the screws retaining the spindle and feed motor P.C. Board and unsolder it.

Fig 29

- (31) After inserting the turntable, bond the motor shaft and turntable together (at the section marked by an arrow in fig 31 on the left below).

Fig 31

(30) Spindle motor installation

1. Tighten the 2 screws to the same torque.
2. Fasten the spindle and feed motor P.C. board with the screw and solder.
3. Install the turntable. When installing, press straight down at the center of the turntable until the distance from the surface of the mechanism base to the turntable is exactly  $19.4 \pm 0.1\text{mm}$ .

Fig 30

- (32) Use "LOKTTITE" #460 bonding agent, and apply as little as possible. Take care not to allow any excess bonding agent to get onto the turntable. Be extremely careful not to allow bonding agent to adhere to the motor bearings (the section marked by an allow in fig 31 on the right).

# Adjustment Procedures

## ■ Tuner section

Figure 1

### (1) Clock Adjustment

1. After connecting W814(TEST) and W813(GND) with some wire, connect ac power cord into ac outlet.
2. Confirm that the display is off and remove the wire.
3. Connect a frequency counter to W812(F OUT) and W813.
4. Adjust TC801 so that the frequency becomes  $50000 \pm 0.29\text{Hz}$ .

### (2) Tuning voltage

Confirm the voltages in the table below at TP101. If the voltages are not satisfied, replace T101 for AM or FE101 for FM.

FM Tuning voltage (Unit : V)

Frequency	FM		AM	
	87.5MHz	108MHz	522kHz	1629KHz
Tuning voltage	$1.6 \pm 1.0$	$8.0 \pm 2.0$	$1.0 \pm 0.2$	$7.5 \pm 0.8$

### (3) FM center meter

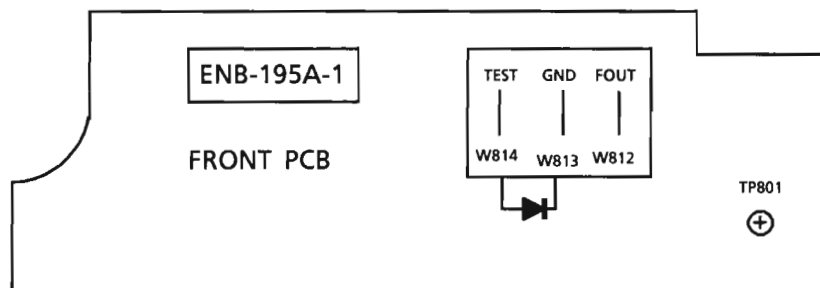

Figure 2

■ Deck section

■ Deck adjustment point

Figure 3

Figure 4

## 1. Measuring instruments

- Audio frequency signal generator ( 0dbs output at the 600 ohm output terminal from 50Hz to 20KHz)
- Electronic voltmeter
- Frequency counter
- Wow & Flutter meter
- Distortion Meter with band pass filter
- Attenuator (600 ohm impedance)
- A resistor with 600Ω

### Standard Tape

0dBs = 0.775V

Tape No.	Frequency	Level (Wow & Flutter)	Purpose
VTT-703L	10kHz	-10dBs	Head azimuth , Frequency Response
VTT-712	3000Hz	0dBs 0.025%WRMS	Tape Speed , Wow & Flutter
VTT-724	1kHz	-4dBs	Standard Level
TMT-6447	—	—	Blunk Skip
TMT-6247 , TMT-6237	—	—	Music Scan
TS-8	—	—	Recording standard Normal : UR
TS-11	—	—	Recording standard METAL :MA
TS-10	—	—	Recording standard CrO <sub>2</sub> :SA
GTG-N (CT-100M)	—	—	Forward / reverse play torque measuring
TW-2231	—	—	Feed forward / rewind torque measuring
C-120 Tape	—	—	Comfirming the tape running

## 2. Adjustment and repairing the mechanism

Item	Adjustment method	Standard value	Remarks
Head azimuth	Deck A 1. Connect an electronic voltmeter to the DOLBY TP (figure 1) to playback VTT-703L. 2. Adjust screw ① so that the indication of the voltmeter becomes maximum when PLAY (▶) is pressed. 3. Adjust screw ② so that the indication of the voltmeter becomes maximum when PLAY (◀) is pressed. Deck B 4. Adjust screw ③ so that the indication of the voltmeter becomes maximum when PLAY (▶) is pressed. 5. Adjust screw ④ so that the indication of the voltmeter becomes maximum when PLAY (◀) is pressed. 6. After making the adjustment, apply screw lock to prevent screws ①, ②, ③ and ④ coming loose.	Maximum	1. <b>Refer to figure 5.</b> 2. When the specified characteristic cannot be obtained because of head wear, excessive magnetization, etc., replace the head assembly and adjust the head azimuth. Also, perform the electric adjustment. 3. When there is the difference of more than 3 ~ 4 dB between left and right output levels, replace the head assembly to avoid complaints.
Playback torque	1. Measure the torque in the playback mode by the torqu meter.	26 ~ 62 g-cm	When the standard torque cannot be obtained, replace the FR arm assembly or motor.
Fast forward torque	1. Measure the torque in the fast forward mode by the torqu meter.	80 ~ 170 g-cm	When the standard torque cannot be obtained, replace the FR arm assembly or motor.
Wow & flutter	1. Connect the wow & flutter meter to the DOLBY TP (figure 1) and play back VTT-712. 2. Its reading should be within 0.2% (WRMS).	Less than 0.2%	As a complaint may occur if the wow & flutter fluctuates by 0.1% even though it is allowed in the standard, repairing is required.
Auto stop			

Deck A

Deck B

Figure 5

## 3. Electrical Adjustments (Make the following adjustments after adjusting the head azimuth.)

In principle, the adjustments should be made in the following sequence.

Set the NR switch to OFF and the BEAT CUT switch to "1".

Adjustments marked with an asterisk (\*) should always be made after the head is replaced

**0dBs = 0.775V**

Item	Adjustment Method	Adjustment Location	Standard Value	Remarks
1 Tape Speed	1. Connect a frequency counter to the DOLBY TP (figure 1) and play back VTT-712. 2. Normal speed Adjustment 1) Mechanism B Play back deck B to adjust the semi-fixed resistor R948. 2) Mechanism A Play back deck A to confirm that the difference between deck A and deck B is within $\pm 51\text{Hz}$ .	R948	3,000 Hz $\pm 10\text{Hz}$	1) Adjust the normal speed first, and perform the high speed adjustment.

Item	Adjustment Method	Adjustment Location	Standard Value	Remarks
* 2	Standard level (Playback Level) 1. Connect an electronic voltmeter to the DOLBY TP (figure 1). Play back VTT-724 (1 kHz : -4dBs) to adjust the semi-fixed resistors.	Deck A L: R311 R: R312  Deck B L: R333 R: R334	-5.5dBs (411mV)  ± 1dB	1) The playback level varies when the head is replaced so should be adjusted. Use an electronic voltmeter with an impedance of 100 kΩ or more.
* 3	Playback Frequency Response 1. Connect an electronic voltmeter to the DOLBY TP (figure 1). 2. Play VTT-703L (10kHz : -10dBs) and adjust semi-fixed resistors to obtain the standard values.	Deck A L: R303 R: R304  Deck B L: R323 R: R324	-11.5dBs (206mV)  ± 3dB	—
* 4	Recording Bias Frequency 1. Connect a frequency counter to the BIAS TP (figure 1), and perform a recording to adjust bias frequency.	L331	100 kHz +10kHz -5kHz	—
* 5	Record / Play Frequency Response (Bias current) 1. Supply 1kHz and 12.5kHz with 30mV signals to PHONO/AUX terminals respectively to record them. 2. Connect an electronic voltmeter to the DOLBY TP (figure 1) to confirm the recorded values. 3. If the values are not satisfied, adjust the semi-fixed resistors and record the signal again to confirm the recorded values.	L: R355 R: R356	0±2 dB with 1 kHz as the standard.	<b>Refer to figure 6 below.</b> 1) The recording and playback frequency response of a cassette deck are adjusted by adjusting the bias. 2) Perform the adjustment with normal tape and confirm that the values are within the range for metal tape.
* 6	Record / Playback Sensitivity 1. Input a 1 kHz (-8.2dBs: 300mV) signal to PHONO / AUX terminals and record it on the left and right channels. 2. Connect an electronic voltmeter to the DOLBY TP (figure 1) to confirm the recorded values. 3. If the values are not satisfied, adjust the semi-fixed resistors and record the signal again to confirm the recorded values.	L: R205 R: R206	-5.5dBs (411mV)  ± 1dB	Adjust with normal tape and make sure that the left / right level difference is 1.0dB or less
* 7	Erase ratio check 1. Record a music source using the Metal tape. 2. Rewind and erase the recorded section. 3. Confirm nothing can be heard.	—	—	—
* 8	Music Scan 1. Make sure not to work the music scanning operation at the start of tape wind using TMT-6237. 2. Make sure to work the music scanning operation at the end of tape wind using TMT-6247.	—	—	—

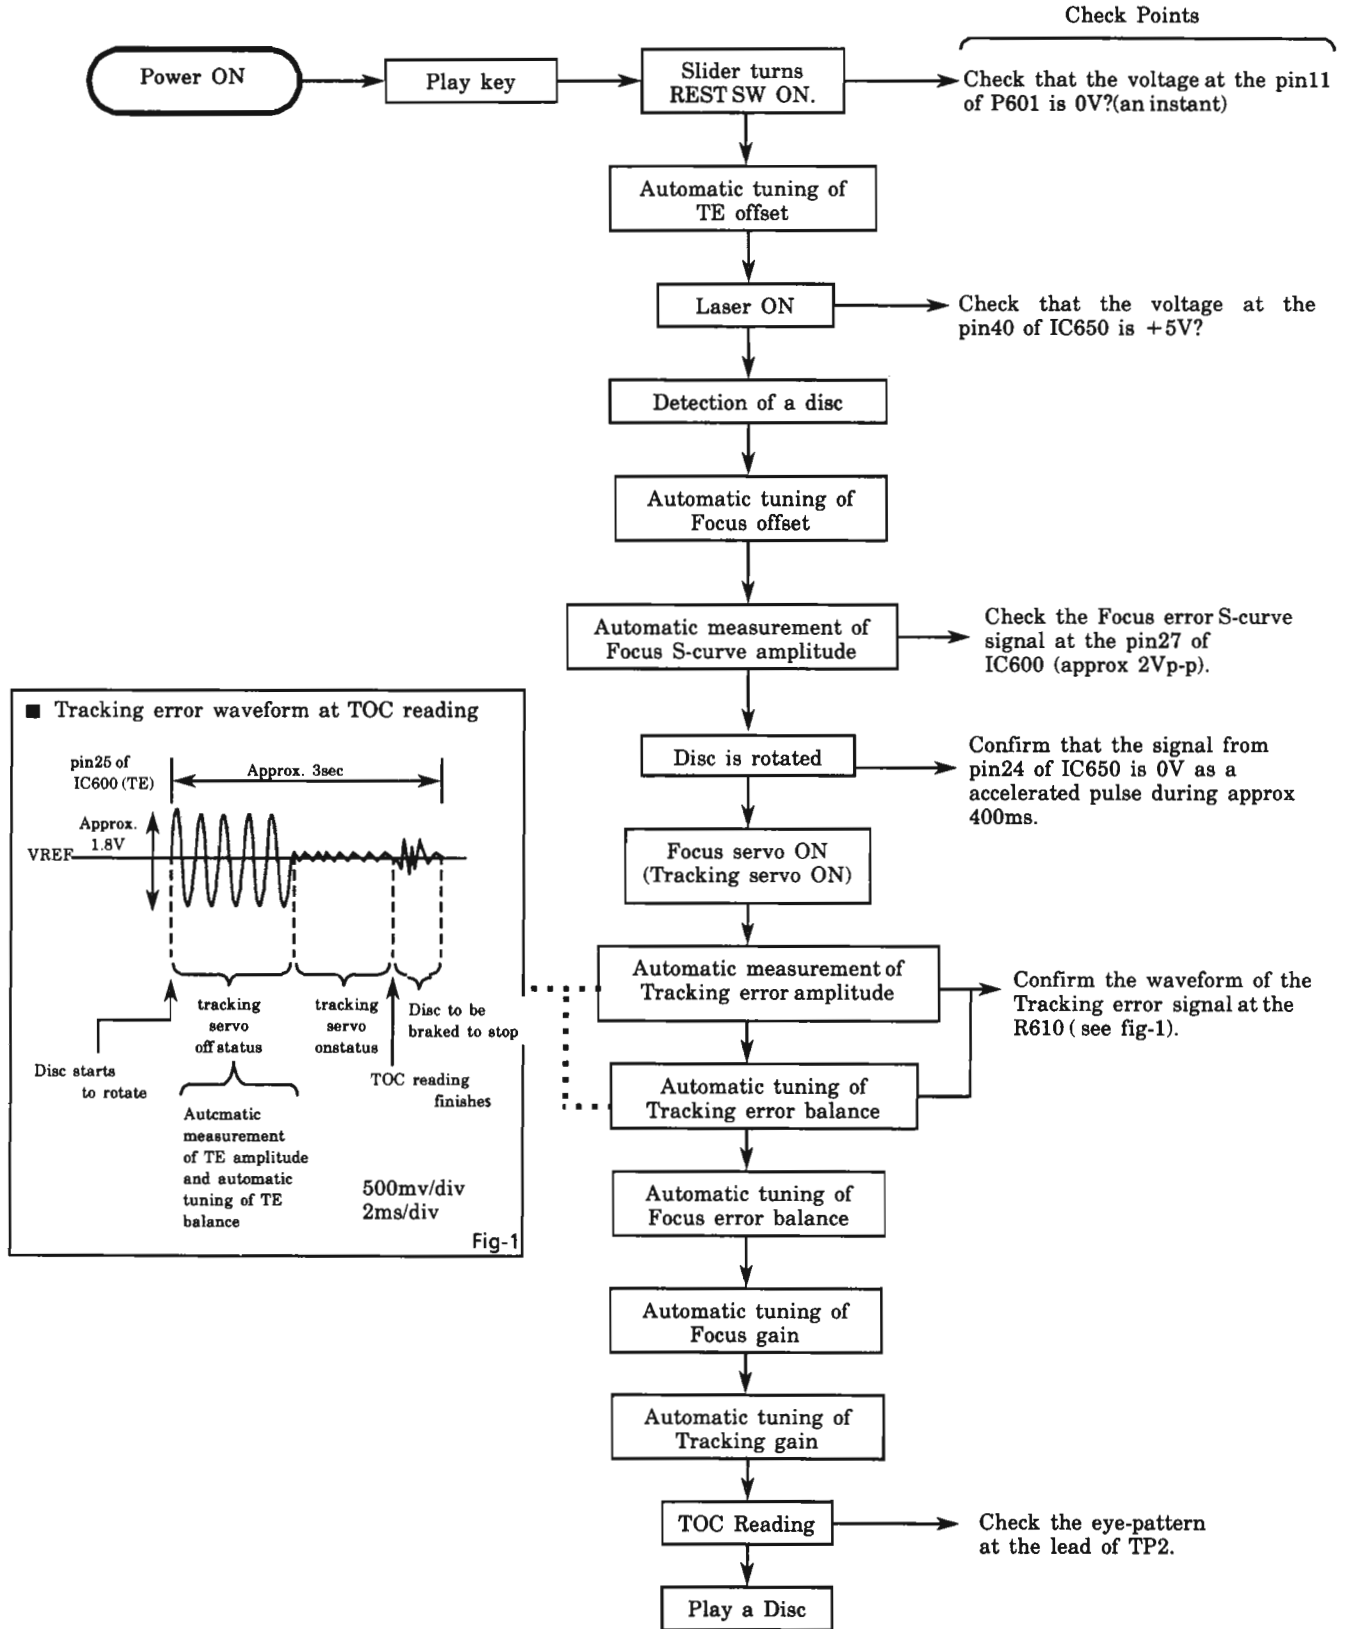

Figure 6

# Flow of Functional Operation Until TOC is Read

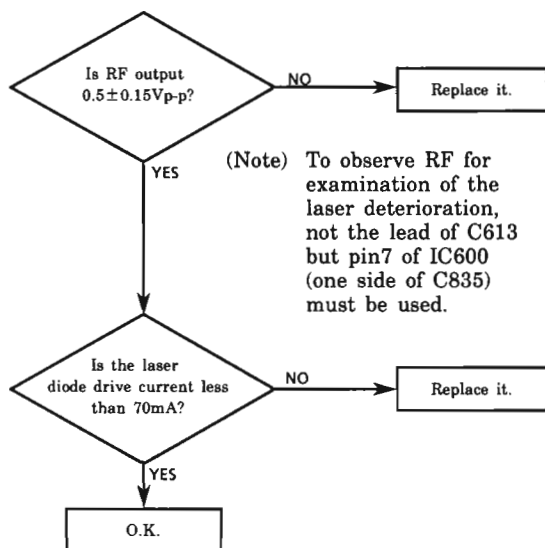

## Maintenance of Laser Pickup

### (1) Life of the laser diode

When the life of the laser diode has expired, the following symptoms will appear.

1. The level of RF output (EFM output: amplitude of eye pattern) will be low.
2. The drive current required by the laser diode will be increased. In such a case, check the life of the laser diode following the flowchart below.

### (2) Measurement of laser diode drive current

Replace the jump wire (W101) shown below with the resistor (1Ω). Measure the voltage across the resistor (1Ω) with a milli-voltmeter. When the voltage is more than 70mV, it shows that the life of the laser diode has expired.

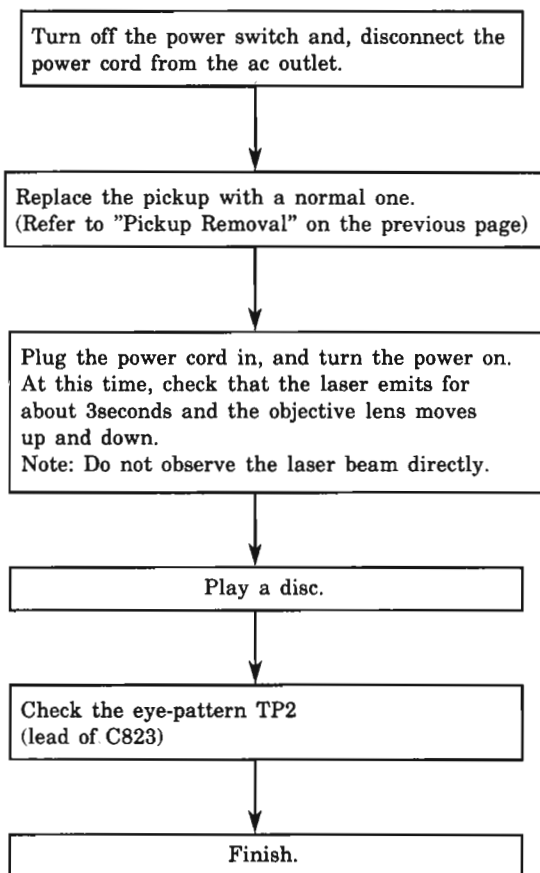

### (3) Semi-fixed resistor on the APC PC board

The semi-fixed resistor on the APC printed circuit board which is attached to the pickup is used to adjust the laser power. Since this adjustment should be performed to match the characteristics of the whole optical block, do not touch the semi-fixed resistor.

If the laser power is lower than the specified value, the laser diode is almost worn out, and the laser pickup should be replaced.

If the semi-fixed resistor is adjusted while the pickup is functioning normally, the laser pickup may be damaged due to excessive current.

## Replacement of Laser Pickup

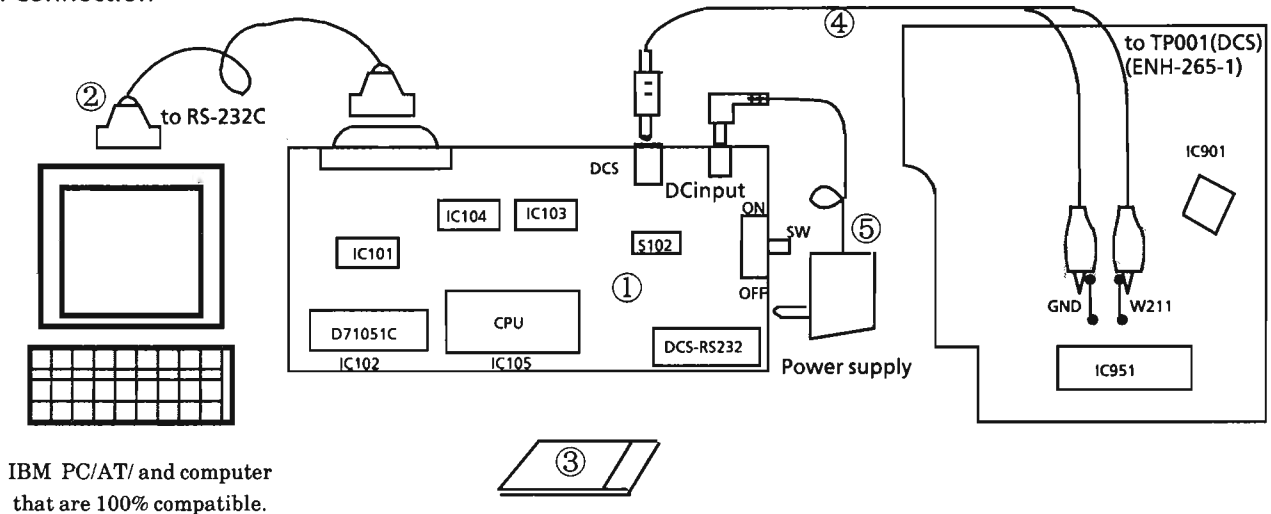

## Self-diagnosis for pickup

From DCS output, this model reads automatically adjusted data for CD so that the pickup can be judged defective or not. Following shows its details.

### 1. Necessary items

- ① DCS → 232C Converting board(No.EBSJ1019)
- ② 232C cord (straight)
- ③ Floppy disc for self-diagnosis (No.EBSJ1021)
- ④ DCS cord
- ⑤ Power supply DC 6.3V (AA-SV11U)
- ⑥ CD (without scratches or damage)

### 2. Connection

For this diagnosis, a device driver for RS232C cord (straight type) is necessary.

(Ex.) C:\DOS MODE COM 1 : 9600, N 8 1

↙      ↘      ↙      ↘      ↙      ↘  
 adapter number(1or2)   band rate   parity   data bit   stop bit

### 3. Procedure

- ① Turn the converting board's switch on after connecting between CA-S200 and the above necessary items  
Set S102(switching DCS positive from/to negative logic) so that LED can emit red(positive logic).
- ② Put a disc on the tray and close it to read TOC.  
Do not press the play button.
- ③ Input "AUTO 01" on personal computer's keyboard and the CD's automatic adjustment value and judgment for the pickup are displayed on the screen.

## 4. Judgment

To judge whether pickup is defective or not, firstly process of automatic adjustment is checked by automatic adjustment flag. And, the value(automatic adjustment value for focus gain) displayed on the screen is used for its final judgment.

It is supposed that the pickup is defective or the signal path is faulty if the Flag1 or Flag0 indicates not "F" but a figure.

(See the following example.)

Flag1	Flag0	Details	Supposed cause
0	0	Automatic adjustment for tracking offset is failed.	The automatic adjustment is not completed. (Trouble in circuit.)
0	1	Automatic adjustment for focus offset is failed. (Disc does not rotate.)	The lens does not move. (Power supply is not turned on. Wire is cut.)
0	3	Automatic rough adjustment for focus gain is failed.	
0	7	Automatic rough adjustment for tracking gain is failed. (The focus and tracking gain are not locked though the disc rotates.)	Laser deterioration (low RF signal output). Offset beam.
0	F	Disc rotates, focus and tracking gain are locked and automatic rough adjustment for tracking gain is also completed though automatic adjustment for tracking balance is failed.	Laser deterioration (low RF signal output). Offset beam.
1	F	Automatic adjustment for focus balance is failed. (TOC is not read though the disc rotates.)	RF signal output is low. Tracking loop is not turned on. RF jitter is too much.
3	F	Automatic rough adjustment for focus gain is failed.	
7	F	Automatic rough adjustment for tracking gain is failed.	
F	F	All automatic adjustments are completed.	

The pickup is judged defective though the Flag0 and Flag1 indicate "F" and those adjustments are completed if the adjustment value exceeds 19dB.

[NOTE] This value is only for CA-S200. It can not be used for other models.

## ■ Video CD section

### ■ Sub Caria frequency for coror Adjustment

#### 1. Measuring instruments

- ① Frequency counter
- ② Driver for adjustment

#### 2. Adjustment procedure

- 1) Connect an frequency counter to the 73 pin (IC121) and gnd.
- 2) Adjust TC101 so that the frequency becomes  $3.579545\text{MHz} \pm 5\text{ Hz}$

## ■ Checking Video CD PCB.

Signal for video CD is composed of video CD signal and clock signal which are output from CD section. Those signals are controlled by five kinds of signal which are between system microprocessor and video CD PCB..

### · Video CD signal

This signal is output from CD signal processor LSI to be input to video CD PCB..

CDDAT(pin7)	Signal for music and video CD data	Photo①
CDLRC(pin6)	Word clock signal for L and R channels	Photo②
CDBCK(pin8)	Bit clock signal	Photo③

### · Control signal

This signal is used for communication between system microprocessor and video CD unit CPU.

SRCLK(pin23)	Synchronizing signal for serial data with system controller (5V at power on)	
SRDAT(pin24)	Command in/output data with system controller (5V in play mode / 0V in stop mode)	
HREQ(pin26)	Data transfer timing signal	Photo④
HRDY(pin28)	Timing signal	Photo⑤
MREQ(pin29)	System controller for data transfer demand signal→Video CD unit	Photo⑥

### 1. Finding defective PCB.

- ① At first, check that video CD signal is output from CD PCB.. And, check that the control signal starts to up when the power is on.
- ② If the above ① can not find a defective PCB., plug the jig(video CD short pin EBSJ-1018) into the socket to play a music software after detaching video CD PCB..  
The PCB. is not defective if sound signal is output from output pin.

Short-circuit point means that input pin of video CD signal is short-circuited with the output pin as follows.

pin6 - pin10   pin7 - pin11   pin8 - pin102

### 2. Checking Video CD PCB..

Check which block has such fault by a digital scope(Model NO. DS-B525U) if it is clarified something faulty on video CD PCB..

MPEG decode output of video CD signal, pre-stage video SW output and NTSC encode output can be confirmed with video CD PCB. attached.

#### [Service hint]

- Pre-stage of the video SW will be defective if video CD or CD-G is faulty. If both of them are faulty, its after-stage will be something faulty.
- CD-G is normal if the blue back ground appears. If not, MPEG decoder or CPU has fault.

■ Main Waveform at the Video CD PCB.
