Safety Precautions	1-2	Block Diagrams	Insertion
Description of ICs	1-3	Schematic Diagrams	Insertion
Internal Connection		Printed Circuit Boards	Insertion
for the FL Display Tube	1-9	Parts List	Separate-volume Insertion
Disassembly Procedures	1-10		
Adjustment Procedures(Deck)	1-14		

Safety Precautions

1. The design of this product contains special hardware and many circuits and components specially for safety purposes. For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Services should be performed by qualified personnel only.
2. Alterations of the design or circuitry of the product should not be made. Any design alterations of the product should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacture of responsibility for personal injury or property damage resulting therefrom.
3. Many electrical and mechanical parts in the products have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the Parts List of Service Manual. Electrical components having such features are identified by shading on the schematics and by (Δ) on the Parts List in the Service Manual. The use of a substitute replacement which does not have the same safety characteristics as the recommended replacement parts shown in the Parts List of Service Manual may create shock, fire, or other hazards.
4. The leads in the products are routed and dressed with ties, clamps, tubings, barriers and the like to be separated from live parts, high temperature parts, moving parts and/or sharp edges for the prevention of electric shock and fire hazard. When service is required, the original lead routing and dress should be observed, and it should be confirmed that they have been returned to normal, after re-assembling.
5. Leakage current check (Electrical shock hazard testing)
After re-assembling the product, always perform an isolation check on the exposed metal parts of the product (antenna terminals, knobs, metal cabinet, screw heads, headphone jack, control shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.
Do not use a line isolation transformer during this check.

- Plug the AC line cord directly into the AC outlet. Using a "Leakage Current Tester", measure the leakage current from each exposed metal parts of the cabinet, particularly any exposed metal part having a return path to the chassis, to a known good earth ground. Any leakage current must not exceed 0.5mA AC (r.m.s.).
- Alternate check method
Plug the AC line cord directly into the AC outlet. Use an AC voltmeter having, 1,000 ohms per volt or more sensitivity in the following manner. Connect a 1,500 Ω 10 W resistor paralleled by a 0.15 μ F AC-type capacitor between an exposed metal part and a known good earth ground.
Measure the AC voltage across the resistor with the AC voltmeter.
Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and measure the AC voltage across the resistor.
Now, reverse the plug in the AC outlet and repeat each measurement. Any voltage measured must not exceed 0.75 V AC (r.m.s.). This corresponds to 0.5 mA AC (r.m.s.).

Warning

1. This equipment has been designed and manufactured to meet international safety standards.
2. It is the legal responsibility of the repairer to ensure that these safety standards are maintained.
3. Repairs must be made in accordance with the relevant safety standards.
4. It is essential that safety critical components are replaced by approved parts.
5. If mains voltage selector is provided, check setting for local voltage.

Description of ICs

■ HD614081SC34 (IC491) : Deck controller

Disassembly Procedures

1. Removing the metal Cover

- (1) Remove the 2 screws fastening both sides of the metal cover and the 2 screws fastening the rear side.
- (2) Remove the metal cover.

2. Removing the Front Panel assembly

- (1) Remove the metal cover.
- (2) Remove the volume knob and the nut fastening the volume and disconnect the P929.
- (3) Remove the screw (A).
- (4) Cut the Tie Band (C).
- (5) Disconnect the P331, P332, P333, P334 (on ENB-157-6), P321, P972 and the flat wire JB901.
- (6) Release the 3 hooks (B) and remove the front panel assembly from the chassis.

3. Removing the Heat sink cover

- (1) Remove the 2 screws (D). (Fig. 5)
- (2) Remove the cover.

4. Removing the Rear panel

- (1) Remove the Front Panel assembly.
- (2) Remove the heat sink cover.
- (3) Remove the 12 screws (E). (Fig. 5)

5. Removing the Power IC

- (1) Remove the metal cover.
- (2) Remove the rear panel.
- (3) Remove the 3 PC boards (ENJ-063-2, ENJ-063-3, ENJ-063-4) with slow lifting.
- (4) Remove the defective IC.

Fig. 1 Bottom view

Fig. 2 Top view

Fig. 3 Side view

Tie band (C)

Fig. 4 Side view

Fig. 5 Rear view

6. Removing the Front PC Board assembly (ENB-157-1,ENB-157-2)

- (1) Remove the metal cover.
- (2) Remove the front panel assembly .
- (3) Remove the BALANCE and TWIN BASS knobs.
- (4) Remove the screw ⑥ fastening the headphone PC Board(ENB-157-6) .
- (5) Remove the 7 screws fixing the assembly (Fig. 6).
The fasteners can release.

7. Removing the mechanism assembly

- (1) Remove the metal cover.
- (2) Remove the front panel assembly .
- (3) Disconnect the P492 and P493.
- (4) Remove the 8 blue coloured screws ⑧, ⑨ fixing the mechanism assembly.
- (5) Open the cassette doors and remove the cassette mechanism assembly .

Note : The cassette mechanism is grounded through the bottom plate .
Therefore, use a jumper between the chassis and the mechanism assembly when operating .
This mechanism is also designed for pack sensing, then use a cassette tape for checking .

8. Removing the Cassette holder

- (1) Remove the cassette mechanism assembly .
- (2) Remove the dampers.
- (3) Remove the holder spring from the holder bracket.
- (4) Remove the cassette holder from the holder bracket.

9. Removing the Cassette lid

- (1) Open the doors and lift the cassette lids up in the arrow direction .

10. Removing the Cassette operation PC Board (ENB-157-4)

- (1) Remove the cassette mechanism assembly .
- (2) Remove the cassette holder
- (3) Remove the 4 screws ⑩ (Fig. 1) and remove the holder brackets .
- (4) Remove the screw fastening the EJECT knob holder .
- (5) Remove the 4 screws fastening the PC Board .

11. Removing the Mechanism controller PCBoard (ENB-157-3)

- (1) Remove the front panel assembly.
- (2) Remove the screw ⑪ and release the hook ⑫ .
- (3) Disconnect the flat wires and connectors .

Fig. 9 Rear view of the cassette mechanism

Fig. 10 How to put the belts

12. Removing the Reel motor PC Board

- (1) Remove the mechanism assembly.
- (2) Remove the mechanism controller PC Board.
- (3) Remove the screws (M) fixing the reel motor PC Boards (Fig.9).
- (4) Unsolder the reel motor terminals.
- (5) Remove the PC Board.

13. Removing the Flywheel

- (1) Remove the mechanism assembly.
- (2) Remove the mechanism controller PC Board.
- (3) Remove the reel motor PC Boards.
- (4) Remove the 4 screws (L) fixing the bracket on which the capstan motor is installed (Fig. 9).
- (5) Remove the bracket and the belts.
- (6) Remove the flywheel .

Installing

Install the flywheel and the belts to the mechanism as shown in fig. 10. (When putting the belts, put the belt (N) first.)

At last, install the bracket with the capstan motor and put the belts on the pulleys.

14. Removing the CAM switch PC Board

- (1) Remove the flywheels.
- (2) Release the hook fixing the cam switch PC Board and remove the PC Board.

- * When installing the cam switch PC Board, assemble the PC Board so that the part (P) meets part (Q). Fig. 11

Fig. 11 Gear position

15. Removing the Head assembly

- (1) Remove the cassette mechanism assembly.
- (2) Unsolder the flexible wire on the relay PC Board and remove the 2 screws \textcircled{S} fixing the head assembly (Fig. 13,14).

* Refer to the Fig.12 when installing .

16. Removing the Pinch roller arm assembly

- (1) Release the return springs from the hooks (Fig.14) .
- (2) Remove the hooks fixing the pinch roller arm assembly and remove the pinch roller assembly (Fig. 13).

17. Removing the Reel motor

- (1) Remove the mechanism assembly.
- (2) Remove the reel motor PC Board.
- (3) Remove the FR arm assembly (Fig. 14) .
- (4) Remove the screws \textcircled{R} fixing the motor.
- (5) Release the hooks fixing the motor and remove the motor.

18. Removing the Capstan motor

- (1) Remove the mechanism assembly.
- (2) Remove the mechanism controller PC Board.
- (3) Remove the reel motor PC Board.
- (4) Remove the 4 screws \textcircled{L} fixing the bracket (Fig. 9).
- (5) Release the hooks fixing the bracket and remove the capstan motor with the bracket.
- (6) Remove the 2 screws fixing the motor on the bracket and remove the motor from the bracket.

Fig. 12 Bottom view of the head assembly

Fig. 13 Bottom view of the cassette mechanism

Fig. 14 Front view of the cassette mechanism

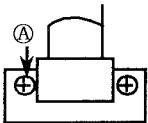

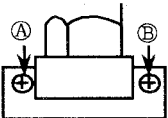

Adjustment Procedures (Cassette Deck)

1. Measuring instruments for Adjustment

- | | |
|---|---|
| (1) Audio frequency signal generator (0dbs output at the 600 ohm output terminal from 50Hz to 20KHz) | (5) Recording standard tapes
AC-513 (CrO ₂), TMT-7046 (Normal) or equivalent. (Use JVC standard tape) |
| (2) Attenuator (600 ohm impedance) | (6) 600-ohm resistor for attenuator matching |
| (3) Electronic voltmeter | (7) WOW & FLUTTER meter with frequency counter |
| (4) STANDARD TAPES
VTT-704(head azimuth adjustment)
VTT-712 (tape speed , wow & flutter)
VTT-724 (Reference level)
VTT-703L(Frequency response) | (8) Distortion meter with band-pass filter
(9) Torque gauge : TW-2131,TW-2231
(10) C-120 tape (for checking the tape running) |

2. Adjustment and repairing the mechanism

(Adjust and inspect the mechanism before adjusting the electronic circuit)

Item	Adjustment method	Standard value	Remarks
Adjusting azimuth of rec/play head	1. Connect an electronic voltmeter to the SPK OUT terminal. (about 1 volt output) 2. Play back VTT-704.		1) When the specified characteristic cannot be obtained because of head wear, cut wire, excessive magnetization, etc., replace the head assembly and adjust the head azimuth. Also, perform the adjustment of the playback level, recording bias current, recording level, etc. 2) When there is the difference of more than 3 ~ 4 dB between left and right output levels, replace the head assembly to avoid complaints.
A mechanism	3. Adjust screw ① so that the indication of the voltmeter becomes maximum when PLAY (▶) is pressed.	Maximum	
	4. After making the adjustment, apply screw lock to prevent screw ① coming loose.		
B mechanism	5. Adjust screw ② so that the indication of the voltmeter becomes maximum when PLAY (▶) is pressed.	Maximum	
	6. Adjust screw ② so that the indication of the voltmeter becomes maximum when PLAY (◀) is pressed.	Maximum	
	7. After making the adjustment, apply screw lock to prevent screws ① and ② coming loose.		
Playback torque	Measure the torque in the playback mode using the torque measurement cassette TW-2131.	26 ~ 62 g-cm	
Fast forward torque	Measure the torque in the fast forward mode by the TW-2231.	80 ~ 200 g-cm	When the standard torque cannot be obtained, replace the FR arm assembly or motor.
Rewind torque	Measure the torque in the rewind mode by the TW-2231.	80 ~ 200 g-cm	When the standard torque cannot be obtained, replace the FR arm assembly or motor.
Wow & flutter	Play back VTT-712 and connect the wow & flutter meter to the SPK OUT terminals, its reading should be within 0.2% (WTD).		As a complaint may occur if the wow & flutter fluctuates by 0.1% even though it is allowed in the standard, repairing is required.

3. Electrical Circuit Adjustments

Make the following adjustments after adjusting the head azimuth.

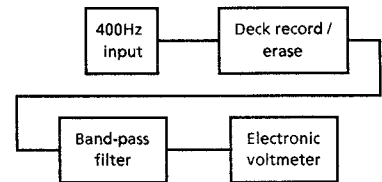

In principle, the adjustments should be made in the following sequence.

Set the NR switch to OFF and the BEAT CUT switch to "1".

Adjustments marked with an asterisk (*) should always be made after the head is replaced.

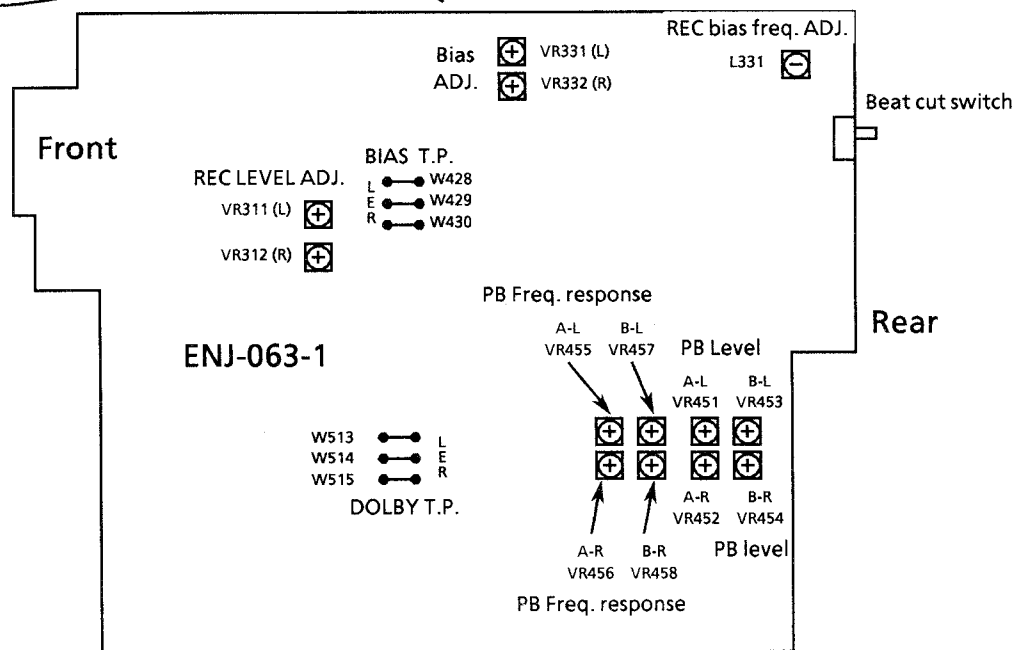

Item	Adjustment Method	Adjustment Location	Standard Value	Remarks
Motor speed	1. Play back VTT-712 and connect a frequency counter to the speaker terminals.	Semi-fixed resistor on the main PC Board		Connect a wow & flutter meter with a built-in frequency counter to the speaker terminals.
	2. Normal speed Adjustment 1) Mechanism B Play back deck B and adjust the semi-fixed resistor VR481 on ENB - 157 - 3. 2) Mechanism A Play back deck A and confirm that the value of deck B $\pm 51\text{Hz}$.	VR481 VR265	3,000 Hz $\pm 10\text{Hz}$	Adjust the normal speed first, and perform the high speed adjustment.
	3. High-speed adjustment 1) Mechanism B Play back deck B and adjust the semi-fixed resistor VR482 on ENB - 157 - 3.	VR482	6,000Hz $\pm 20\text{Hz}$	
* 1 Playback level	Play back VTT-724 (1 kHz) and connect an electronic voltmeter between W513 and E(W514) of DOLBY TP for left, or W515 and E(W514) for right. And then, adjust the semi - fixed resistors. Play back VTT-703L (10 kHz) and connect an electronic voltmeter between W513 and E(W514) of DOLBY TP for left, or W515 and E(W514) for right. And then, adjust the semi - fixed resistors.	A Deck (1KHz) L: VR451 R: VR452 (10KHz) L: VR455 R: VR456 B Deck (1KHz) L: VR453 R: VR454 (10KHz) L: VR457 R: VR458	400mV 130mV 400mV 130mV	
* 2 Recording bias frequency	Connect a frequency counter between W428(or W430) and W429 of BIAS TP, and perform a recording.	L331	100 kHz $\pm 5\text{ kHz}$	Set the BEAT CUT SWITCH to "1" when using a metal tape.
* 3 Recording frequency Response	Record 1 kHz/12.5 kHz with the NR switch off and input 30mV to VCR/ DAT. While playing back these recorded signals, adjust the variation of the 12.5 kHz outputs from the 1kHz output to the standard value using VR331 and VR332. (Basically, adjust so that the 1 kHz and 12.5kHz outputs are flat.)	(L)VR331 (R)VR332	0 \pm 3 dB for 12.5 kHz with 1 kHz as the standard.	1) The recording and playback frequencies of a cassette deck are adjusted by adjusting the bias. This is because the frequency response depends more on the bias current than with an open-reel deck. 2) Perform the adjustment with normal tape and confirm that the values are within the range for metal tape.

Note: After completing the recording level adjustment in item 3, check the recording and play back frequencies with the NR switch on. Fine adjust again if the value is $0 \pm 5\text{ dB}$ or more at 1 kHz and 12.5 kHz.

Item	Adjustment Method	Adjustment Location	Standard Value	Remarks
* 4 Recording Level	1) Input a 1 kHz (300mV) to VCR / DAT terminals and record on the left and right channels . 2) Connect an electronic voltmeter between W513 and W514 of DOLBY TP for left, or W515 and W514 for right. And then, adjust the semi;fixed resistors when playing back.	(L) VR311 (R) VR312	400mV	Adjust with normal tape and make sure that the left / right level difference is 1.0dB or less
* 5 Recording/playback distortion	1) Input a 1 kHz (300mV) to VCR / DAT terminals and record it. 2) Play it back and check the speaker output with a distortion meter to make sure it is the rated value.		3% or less	Perform after the bias current and recording level adjustments.
6 Recording/playback S/N ratio	1) Input a 1 kHz (300mV) to VCR / DAT terminals and record it. While recording, remove the input and record without a signal. 2) Play back and use an electronic voltmeter to compare the 0 dB recording output and the out-put of the recording without a signal to make sure this is the rated value.		45 dB or more	
7 Erase ratio check	1) Input a 400 Hz (950mV) to VIDEO / AUX terminals and record it using TMT-7040. 2) Rewind and erase part of the recorded section. 3) Compare the outputs of the recorded and erased sections using an electronic voltmeter.		55 dB or more	Connect a 400 Hz band-pass filter between the deck and electronic Voltmeter . 
8 Auto-stop check	When playing back and recording, make sure to operate AUTO STOP.
