Safety Precautions

1. The design of this product contains special hardware. Many circuits and components specially for safety purposes.
For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Service should be performed by qualified personnel only.
2. Alterations of the design or circuitry of the product should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacturer of responsibility for personal injury or property damage resulting therefrom.
3. Many electrical and mechanical parts in the product have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the parts list of Service manual. Electrical components having such features are identified by (Δ) on the schematics and parts list in Service manual. The use of a substitute replacement which does not have the same safety characteristics as the recommended replacement part shown in the parts list in Service manual may create shock, fire, or other hazards.
4. The leads in the products are routed and dressed with ties, clamps, tubings, barriers and/or the like to be separated from live parts, high temperature part, moving parts and/or sharp edges for the prevention of electric shock and fire hazard.
When service is required, the original lead routing and dress should be observed, and they should be confirmed to be returned to normal, after re-assembling.

5. Leakage current check

(Safety for electrical shock hazard)

After re-assembling the product, always perform an isolation check on the exposed metal parts of the Products (antenna terminals, knobs, metal cabinet, screw heads, earphone jack, control shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.

Do not use a line isolation transformer during this check.

- Plug the AC line cord directly into the AC outlet. Using a "Leakage Current Tester", measure the leakage current from each exposed metal part of the cabinet, particularly any exposed metal part having a return path to the chassis, to a known good earth ground (water pipe, etc.). Any leakage current must not exceed 0.5 mA AC (r.m.s.).

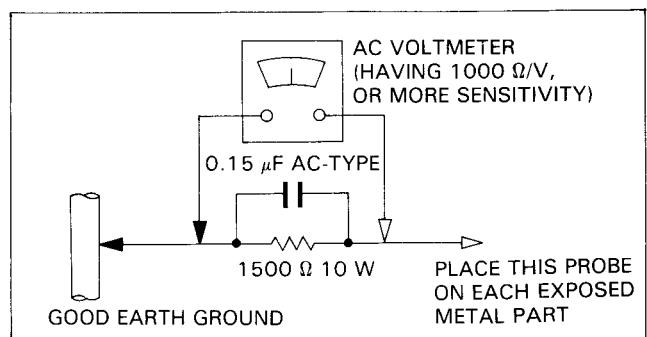

• Alternate check method.

Plug the AC line cord directly into the AC outlet. Use an AC voltmeter having 1,000 ohms per volt or more sensitivity in the following manner. Connect a 1500 Ω 10 W resistor paralleled by a 0.15 μF AC-type capacitor between an exposed metal part and a known good earth ground (water pipe, etc.).

Measure the AC voltage across the resistor with the AC voltmeter.

Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and measure the AC voltage across the resistor. Now, reverse the plug in the AC outlet and repeat each measurement. Any voltage measured must not exceed 0.75 V AC (r.m.s.).

This corresponds to 0.5 mA AC (r.m.s.).

Features

1. Complete double-cassette, auto-reverse component stereo deck.
 - Consisting of 3 units with attachable/detachable speakers.
 2. Total output of 30 W (15 W + 15 W) max. (6 ohms).
 - Music power of 70 W (35 W + 35 W) (6 ohms).
 - "U-Turn" Auto-reverse deck with soft-touch mechanism. (Deck A for playback, Deck B for recording and playback.)
 - Pressing the signal SYNCHRO START button permits double-speed dubbing of both sides of cassette.
 - During double-speed dubbing, it is possible to enjoy other sources.
 - Relay play facility from deck A to B.
 - One-touch recording facility for deck B.
 - Auto-tape select mechanism for deck A.
 - Single music scan facility in both directions for deck A.
- "Under license of Staar S.A., Brussels, Belgium".

- Timer start mechanisms (deck A for playback, deck B for recording and playback).
- Microphone mixing facility with volume control during recording/playback.
- 3-position tape select switch for deck B.
- Can be connected to a turntable.
- 5-LED peak level indicators.
- Built-in ANRS/DOLBY* B NR (Noise Reduction).
- 4-way power supply (AC, batteries, rechargeable battery pack and car battery).

3. 2-way bass-reflex type speaker systems — 12 cm (5") woofers and 5 cm (2") tweeters.

- Using high ceramic cone paper for both the woofers and tweeters.

*Noise reduction system manufactured under license from Dolby Laboratories Licensing Corporation.

*"Dolby" and the double-D symbol are trademarks of Dolby Laboratories Licensing Corporation.

Specifications

Speakers	: 12 cm (5")×2, 5 cm (2")×2	Output jacks	: TAPE REC×2 (300 mV/4.7 kΩ), SPEAKER×2 (matching impedance 6–8 Ω), PHONES×1 (Output level: 0~3 mW/8 Ω, Matching impedance: (8 Ω—1 kΩ)
Frequency ranges	: FM 88–108 MHz AM 540–1600 kHz SW 6–18 MHz LW 150–350 kHz	Power output	: Max. 30 W (15 W + 15 W) (6 Ω) Music power 70 W (35 W + 35 W)(6 Ω)
Antennas	: Telescopic antenna for FM & SW Ferrite core antenna for AM & LW	Power sources	: AC 240/220/110 V, 50/60 Hz DC 12 V ("R20"×8 or optional BP-12K), Ext. DC (car battery via optional CN-332 car adapter)
Track system	: 4-track 2-channel stereo	Power consumption	: 65 watts (with power switch on) 0.7 watt (with power switch off)
Motors	: Electronic governor DC motor for capstan × 2 (for Deck A & B)	Dimensions	: 663(W)×312(H)×224(D) mm (23-1/2"×10-3/8"×7-5/8") including speakers connected with joint fixtures, pads, knobs and handle
Heads	: Deck A; METAPERM head for playback Deck B; METAPERM head for recording/playback, 2-gap ferrite head for erasure	Weight	: Approx. 11.2 kg (24.6 lbs) with batteries
Tape speed	: At normal speed; 4.8 cm/sec (1-7/8 inch/sec) At double speed; 9.5 cm/sec (3-3/4 inch/sec)	Accessories provided	: 2 speaker cords (50 cm/1.64 ft) Carrying handle AC power cord
Frequency response	: 30–17,000 Hz (with metal tape) 30–16,000 Hz (with chrome tape) 30–15,000 Hz (with normal tape)	Design and specifications are subject to change without notice.	
Signal-to-noise ratio	: 54 dB (weighted, at 1 kHz, 3% THD with metal tape) Improved by 5 dB at 1 kHz and by 10 dB at 5 kHz or more with ANRS/DOLBY B NR ON		
Wow and flutter	: 0.09% (WRMS)		
Fast forward time	: Approx. 110 sec. (C-60 cassette)		
Rewind time	: Approx. 110 sec. (C-60 cassette)		
Input terminals	: MIC×2 (Min. input level: 0.7 mV (-63 dBV) Matching impedance: (200Ω—2 kΩ) PHONO×2 (2.5 mV/47 kΩ) AUX×2 (300 mV/47 kΩ)		

Names of Control and Connection Terminals

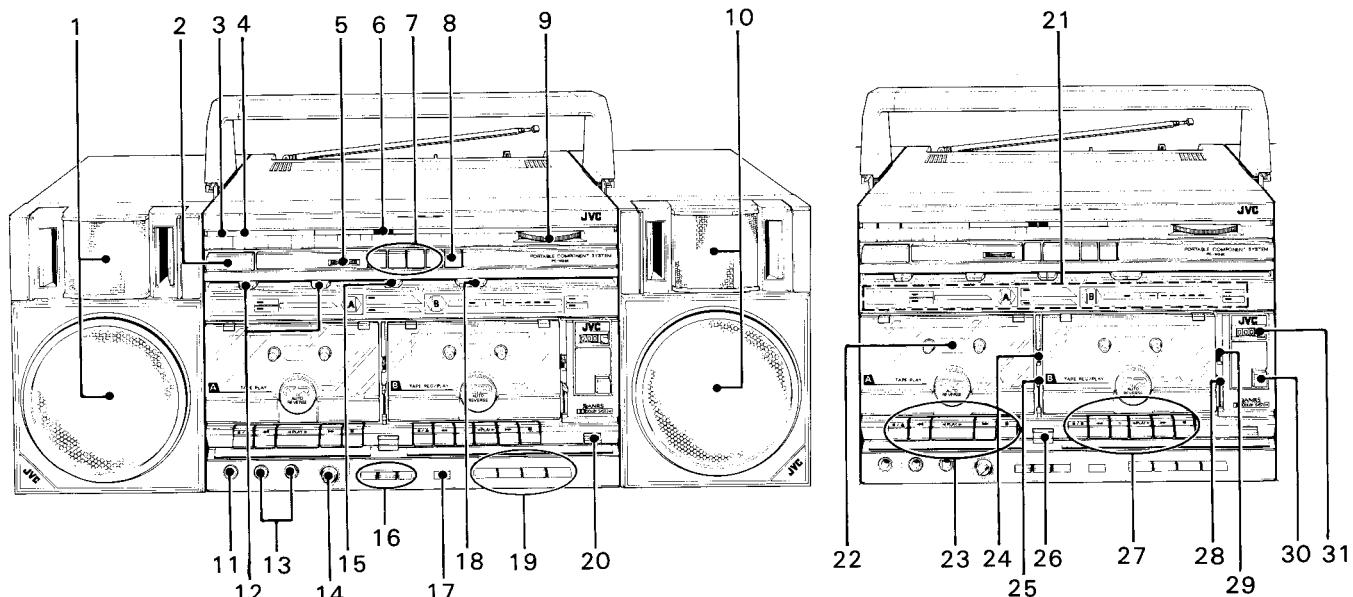

Fig. 1

1. Left speaker
2. POWER switch
3. TUNING indicator
4. FM STEREO indicator
5. FINE TUNING knob for SW reception
6. Dial scale
7. BAND switches (FM/AM/SW/LW)
8. FM MODE/MUTING switch
9. TUNING knob
10. Right speaker
11. PHONES (Headphones) jack
12. BASS/TREBLE controls
To adjust the output level of speakers or headphones.
The center click position is the standard position. Slide in the MAX direction to boost the output level and in the MIN direction to lower it.

BASS:
To control the lower frequencies.
TREBLE:
To control the higher frequencies.
13. MIC (microphone) jacks
14. Microphone/mixing microphone volume control (MIC/MIX MIC VOL)
15. BALANCE control
16. Tape select switch (Deck B)
17. NR SYSTEM switch
18. VOLUME control
19. FUNCTION switch
TAPE. TUNER. AUX. PHONO.
20. REC MUTE button
21. Indicators (from left to right)
MUSIC SCAN **[MS]**, TAPE. (NORM, METAL/CrO₂)
DIRECTION **[A]**, MODE. (SYNCHRO REV./High speed)
DIRECTION **[B]**, REC. BATTERY. LEVEL INDICATOR. NR SYSTEM
22. Cassette holder (Deck A)

23. Cassette operation buttons (Deck A)
 - /▲ STOP/EJECT button
 - ◀ (Rewind) button
 - ◀ PLAY ▶ button
 - ▶ (Fast forward) button
 - PAUSE button
24. REVERSE MODE switch (Deck A)
 - [■]**: Single playback.
 - [□]**: Full playback.
 - [◎]**: Continuous play.
25. DIRECTION switch (Deck A)
26. SYNCHRO START button
When double-speed dubbing is performed, pressing this button allows deck A play and deck B record to start simultaneously.
27. Cassette operation buttons (Deck B)
 - /▲ STOP/EJECT button
 - ◀ (Rewind) button
 - REC button
 - ◀ PLAY ▶ button
 - ▶ (Fast Forward) button
 - PAUSE button
28. DIRECTION switch (Deck B)
29. REVERSE MODE switch (Deck B)
 - [■]**: Single recording or playback.
 - [□]**: Full recording or playback.
 - [◎]**: Continuous playback.
30. SYNCHRO REVERSE/A ▶ B RELAY switch
 - (—) ON:
Set to this position so the tapes of deck A and deck B reverse simultaneously or to operate relay play from deck A to deck B. In this case, set the REVERSE MODE switch of deck A to the **[■]** or **[□]** position.
 - (■) OFF:
Set to this position when you don't want synchro reverse or relay play.
31. COUNTER/reset button (Deck B)

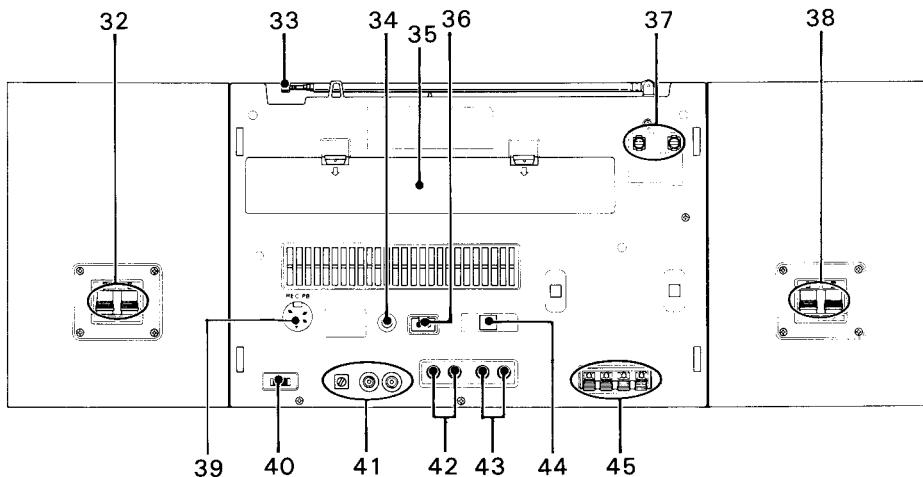

Fig. 2

32. SPEAKER (R) terminals
 33. Telescopic antenna for FM or SW reception
 34. 12 V DC IN jack (3.15 A)
 When using a car battery (DC 12 V), connect this optional exclusive car adapter (CN-332) to this jack.
 35. Battery cover
 Insert 8 "R20" batteries or the optional rechargeable battery (BP-12K).
 36. AC IN (AC input) terminal
 37. FM EXT ANT terminals for FM & SW reception (L/LB Version)

38. SPEAKER (L) terminals
 39. DIN Jack (Rec/PB)
 40. BEAT CUT switch
 41. PHONO jacks and GND terminal
 42. AUX jacks
 43. TAPE (REC) jacks
 44. VOLTAGE SELECTOR
 45. SPEAKER terminals

Various Usages

Mounting the Speaker

- As illustrated, fix **(A)** to **(B)** firmly and slide down the speaker box securely.
- Join the other speaker in the same manner as above.

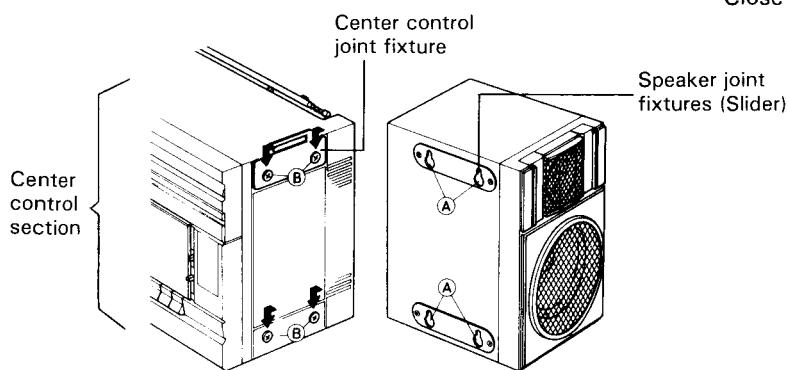

Fig. 3

Mounting the Handle

- Push the handle grip lock up, in the direction of arrow **(1)**.
- Pressing mark **Δ** in the direction of arrow **(2)**, secure the handle grip to the slot indicated by arrow **(3)**.
- Push the hand grip lock down to close it.
 Close the other hand grip lock in the same manner.

1. Rec. safety lever (Left)
2. Reel feather (Left)
3. Reel feather (Right)
4. Rec. safety lever (Right)
5. Selector unit assembly
6. Mode select lever
7. Direction lever
8. Capstan shaft (Reverse)
9. Pinch roller arm assembly (Reverse)
10. Head mount base assembly
11. Capstan shaft (Forward)
12. Pinch roller arm assembly (Forward)

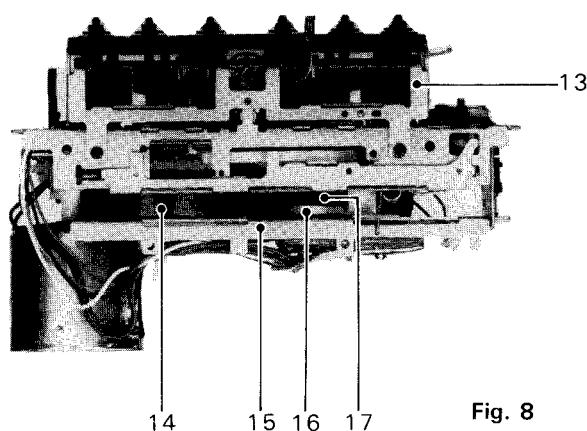

Fig. 8

13. Button frame assembly
14. Flywheel (Left)
15. FM bracket
16. Flywheel (Right)
17. Capstan belt

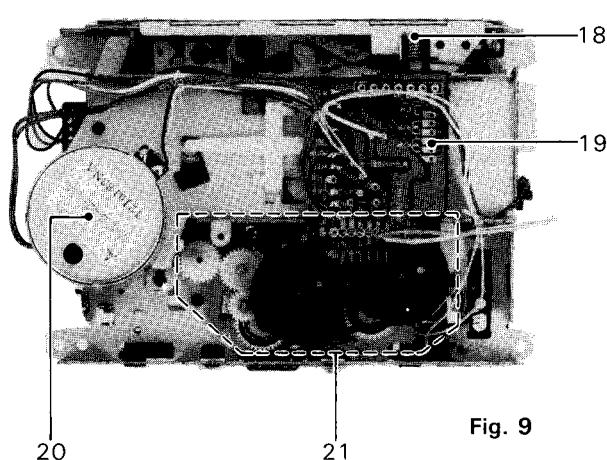

Fig. 9

18. Rec. spring
19. Hook-up board
20. DC motor
21. Reel assembly unit.

Operating principle of mechanical-logic auto-reverse mechanism is the same as these of the service manual KD-V33 A/B/C/E/E(D)/J/U (No. 4222B).

Removal of Main Parts

Receiver section

* Telescopic antenna replacement can be performed by removing the antenna screw in back.

1. Top cover Ass'y

- 1) Remove the six screws ① and ② on both sides.
- 2) Remove the five screws ③ and ④ from behind.
- 3) Remove the antenna and power cord connector.

* Fuse replacement

Remove the top cover for fuse replacement.

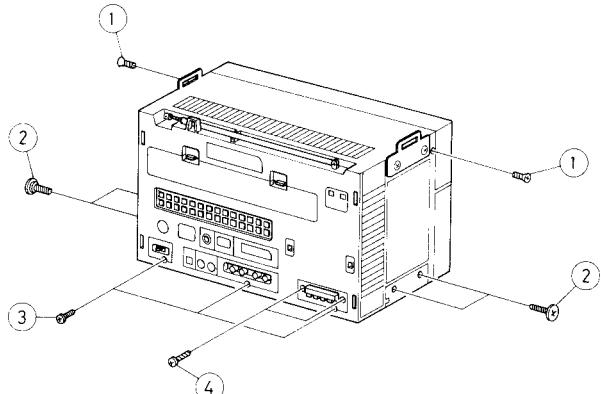

Fig. 10

2. Power board Ass'y and DIN Jack board Ass'y

Remove the three screws ⑤.

3. Power transformer

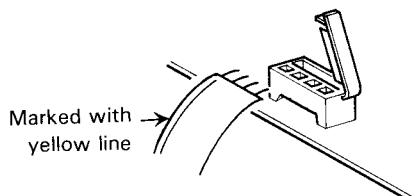

Remove the two screws ⑥.

4. Power switch Ass'y

Remove the two screws ⑦.

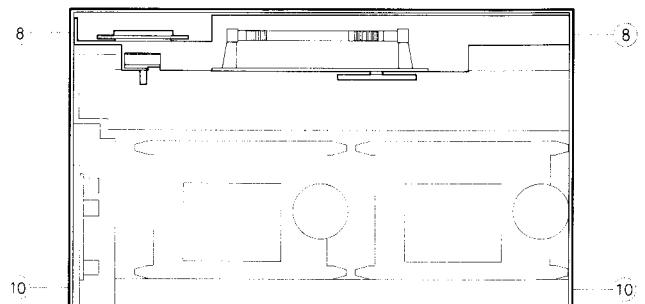

5. Tuner Ass'y

1) Remove the paralleled wire of connector CN2.

Front side view

Fig. 11

Rear side view

Fig. 12

6. LED & volume board Ass'y

Remove the six screws ⑨ holding the board.

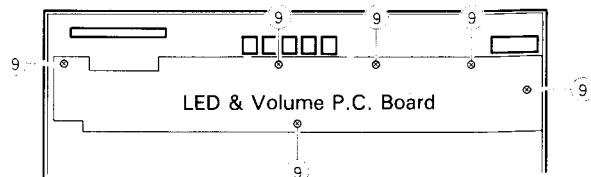

Fig. 13

7. Amplifier Ass'y and Mechanism Ass'y

- 1) Pull off the mixing knob.
- 2) Remove the six screws ⑬ holding the mechanism Ass'y to front cover.

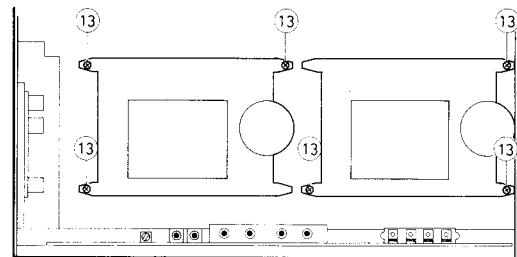

Fig. 14

- 3) Remove the three screws ⑯ from the bottom.
- 4) Hang the counter belt to the FM bracket.
- 5) Open the door and pull out the mechanism Ass'y.

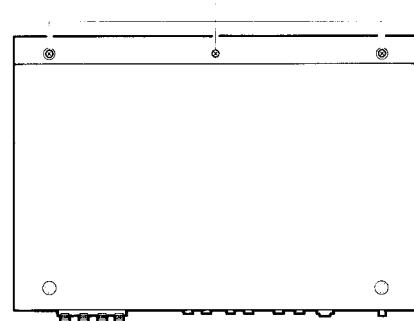

Fig. 15

8. Counter and switch board Ass'y.

- 1) Remove the direction switch knob.
- 2) Remove the screw ⑫ holding the bracket.

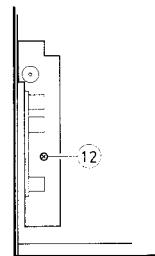

Fig. 16

9. Bottom cover

Remove the six screws ⑪ and ⑮ holding the bottom cover and board.

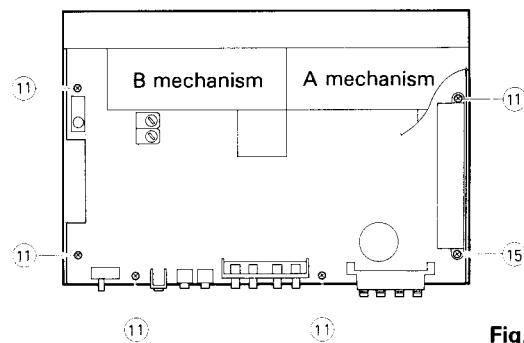

Fig. 17

10. Amplifier Board

Remove the three screws ⑭ from the bottom of the amplifier board.

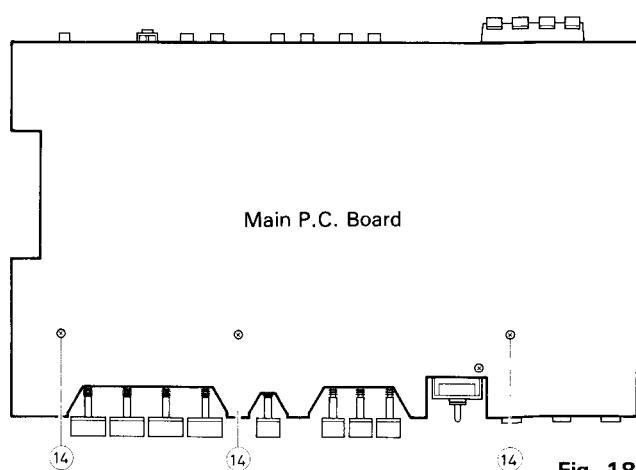

Fig. 18

11. A and B mechanisms

Remove the three screws ⑯ and ⑰.

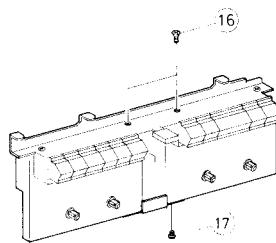

Fig. 19

Mechanism Parts**1. Flywheel and belt**

- 1) Remove two screws ⑮ fastening the F.R. bracket, and remove the main belt.
- 2) Pull out the flywheel with the reel drive belt.

2. Reel assembly unit

- Remove 4 screws ⑯ fastening the reel ass'y unit.

3. Motor

- 1) Remove two screws fastening the motor from the F.R. bracket.
- 2) Pull out the motor pulley from the motor shaft.

4. Reel feather

- Pull out the reel feather from the shaft.

5. Rec/PB head and Erase head

- 1) Remove two screws ⑯ fastening the button frame ass'y.
- 2) Remove two screws ⑰ fastening the head ass'y with the head block.

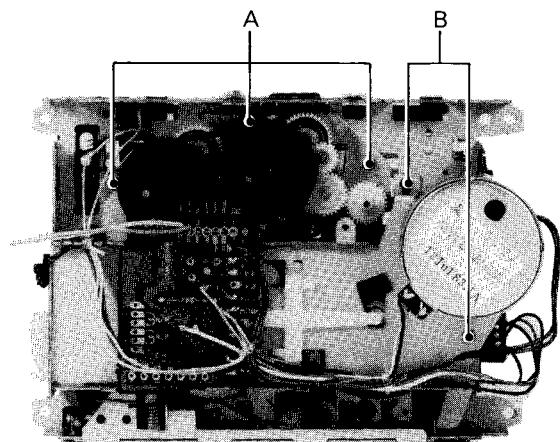

Fig. 20

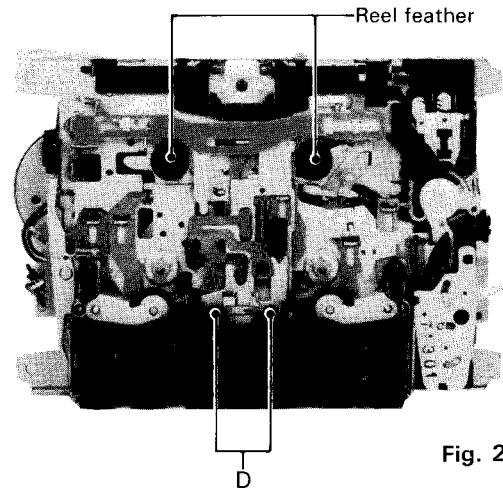

Fig. 21

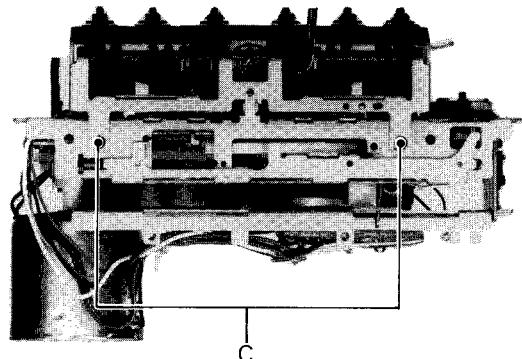

Fig. 22

Main Adjustments

[I] Equipment and measuring instruments used for adjustment

1. Electrical adjustment

- 1) Electronic voltmeter
- 2) Audio frequency oscillator
(range: 50—20 kHz and output 0 dB with impedance 600 Ω)
- 3) Attenuator
- 4) Standard tapes for REC/PB
Maxell UD — Normal tape (TS-5) or equivalent
- 5) Reference tapes for playback (JVC Test Tape)
TMT702 (for head azimuth adj.) (14 kHz)
VTT712 (for motor speed, wow flutter adj.)

VTT664 (for reference level 1 kHz)

VTT739 (for playback frequency response)

TMT6447 (for music scanning)

TMT6448 (for music scanning)

6) Resistors

600 Ω (for attenuator matching)

2. Mechanical adjustment

Torque testing cassette gauge

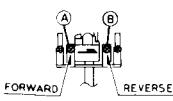

3. Tuner section adjustment

SSG (sweep signal generator)

[II] Mechanical adjustment

Adjustment procedure of cassette mechanism

(Adjust the mechanism or confirm that it is in normal operating condition prior to the adjustment of the electrical circuit.)

Item	Adjustment	Adjusting point	Standard value	Remarks
Motor speed adjustment	Connect the counter to LINE OUT and play back VTT712 (3000 Hz) and adjust to the semi-fixed VR of mechanism relay P.C.B.	Normal speed semi-fixed VR High speed semi-fixed VR	A: 3010 Hz B: 3000 Hz A: 6020 Hz B: 6000 Hz	* Adjust the tape speed so that mechanism A is faster than B. * When the semi-fixed VR adjustment is not possible, use the semi-fixed VR in the motor.
Wow & Flutter check	Wow and flutter shall be less than 0.16% (RMS) using VTT712.		0.16% (RMS)	
Checking play-back torque	Employ a torque testing cassette tape CTG-N for the checking, or remove the cassette cover and use a torque gauge.		40—70 gr-cm	If the standard torque is not obtained, replace the take-up disc assembly.
Checking fast forward torque	Measure the torque in the fast forward mode in the same manner as in the above.		More than 80 gr-cm	If the standard torque is not obtained, perform the following. 1. Clean the capstan belt, the idler circumference, the motor pulley, the take-up reel disc circumference, the flywheel circumference, etc. 2. Replace the belt and idler.
Checking rewind torque	Measure the torque in the rewind mode in the same manner as in the above.		More than 80 gr-cm	If the standard torque is not obtained, clean the capstan belt, idler, motor pulley, flywheel circumference, rewinding idler circumference, left reel disc circumference, etc.
Adjusting record/play-back head position 	1. Connect an electronic voltmeter to the LINE OUT terminals. 2. Play back the VTT702 test tape. 3. Adjust the head angle with the screw A or B until the reading of the electronic voltmeter becomes maximum for both directions. 4. After adjusting, set the screw with screw bond.	Screw A and B	Maximum	See Refer No. 12, 13 of page 13

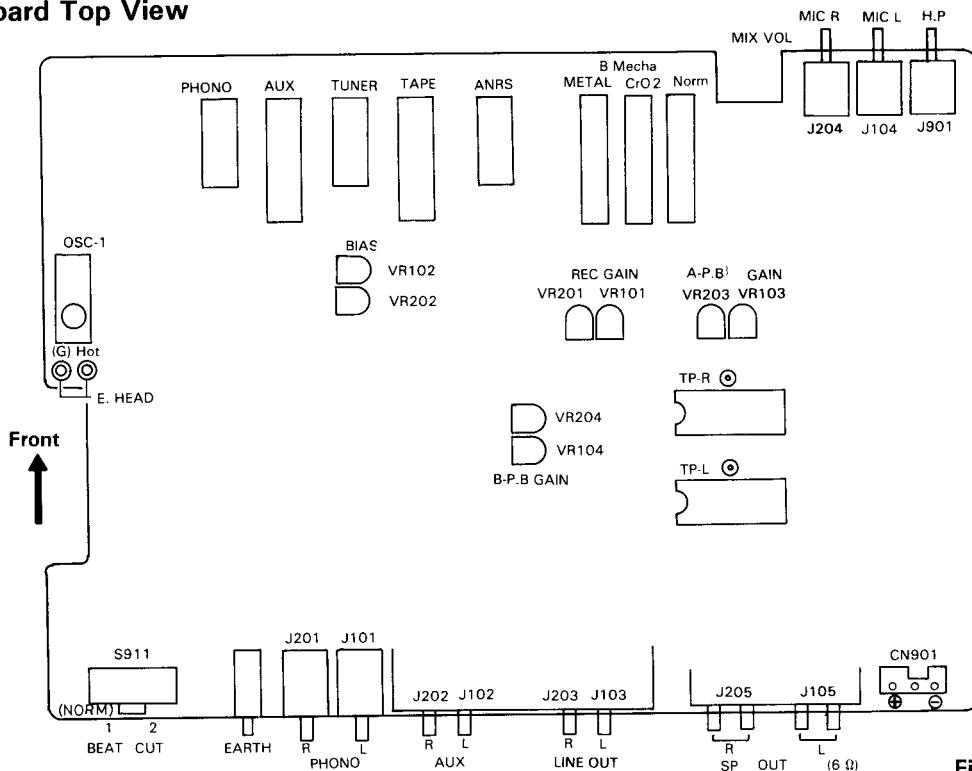

Amp P.C. Board Top View

Fig. 23

Basic conditions

Power supply : DC 12V

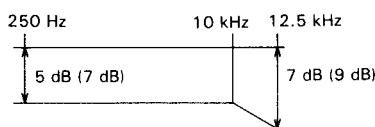

Output measuring point : LINE OUT

Installation : Horizontal

(When not specified, this unit is set to LINE IN, ANRS OFF, MIC and VR MAX.)

(A ... Mechanism A, B ... Mechanism B)

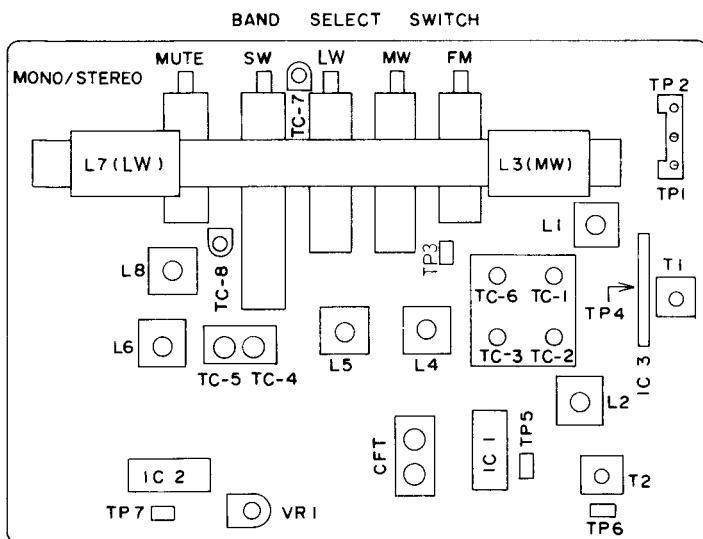

Item	Description
1. PB level adjustment	DOLBY OFF Play back VTT664 (1 kHz) and adjust VR 103 and VR203 of mechanism A and VR104 and VR204 of mechanism B so that output level at TP-L and TP-R is -5.5 dBs. After adjustment, with tape switch selected to CrO ₂ , it shall be within 0 to ~ 2 dB in mechanism B. Mechanism A shall be checked by variations of noise. (Adj. after check = -7 ± 2 dB/Line out)
2. PB frequency response check	Play back VTT739 and check that deviation in output level of 10 kHz to 1 kHz within $+0.5 \pm 2$ dB.
3. LED indicator check	In REC/PB mode, check that LED indicator "0 dB" lights with TEST POINT of within -5.5 dBs ± 2 dB. (At L, R separate or simultaneous input).
4. OSC frequency adjustment	Adjust OSC 1 so that bias leak at LINE OUT is minimized while balancing L and R. In this case, check that OSC frequency at erase head post pin is measured within 66 kHz ± 3 kHz.
5. REC/PB frequency response adjustment (Mechanism B)	DOLBY OFF NORM: Record and play back 1.25 kHz and 12.5 kHz (reference level -20 dB) using MAXELL UD tape and adjust VR102 and VR202 so that difference in output level is $+1$ to ± 0.5 dB at TP-L and TP-R. CrO ₂ : Check after NORM adjustment that difference in output level is within 12.5 kHz ± 2 dB. METAL and CrO ₂ : When ANRS is set to ON, response with each tape shall be within the following values. () indicates at REV.

	Item	Description
6.	REC/PB sensitivity adjustment	Using MAXELL UD tape, record 1 kHz (reference level – 20 dB) setting to LINE IN and NR OFF and adjust VR101 and VR201 so that playback output is at the same values at the recording at TP-L and TP-R.
7.	Bias leak	After each adjustment, bias leak shall be as follows in any mode. LINE OUT less than – 38 dBs LED indicator not lit TP-L, TP-R (ANRS) less than – 45 dBs
8.	ANRS check	To cut bias current In REC mode, adjust INPUT level control so that output level at TP-L and TP-R is – 2.5 dB with input of 1 kHz. In addition, turn down input level by 40 dB with ATT, and output level at TP shall be + 5.7 ± 2 dB with ANRS OFF → ON. Turn up input level by 20 dB with ATT changing input from 1 kHz to 5 kHz, and output level at TP shall be + 3.5 dB ± 2 dB with ANRS OFF → ON.
9.	REC MUTE check	Perform recording at an arbitrary reference input level with REC MUTE SW kept ON, check that no input signal is recorded when playing it back. Also check that no appreciable noise occurs when switching the REC MUTE button.
10.	MIC dummy check	In REC mode, check that no oscillation occurs with 10 kohm microphone dummy.
11.	Mixing check	Check that mixing level is adjusted by microphone VR. With mic connected Lch only – Monaural (localized at center) Rch only – Rch mixing Both channels – Stereo mixing
12.	Deck A/B azimuth difference check	Mechanism B: Record 10 kHz (reference level – 20 dB) and make azimuth tape. The azimuth difference in mechanism A shall be within – 4 dB.
13.	Deck A/B playback level difference check	Mechanism B: Record 1 kHz (reference level – 20 dB) and the difference in playback level between mechanism B and A shall be within 3 dB.

Tuner Section

Parts Arrangement for Alignment

Dummy Antenna

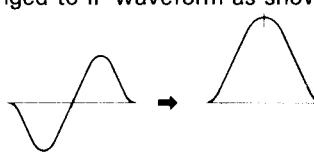

$R1 + R2 = 80 \Omega$
 $C = 10 \text{ pF}$
 R1: Output impedance of S.S.G.

Fig. 25

Fig. 24

Tuner Alignment**BASIC CONDITIONS**

POWER SOURCE OF THE RECEIVER	DC 12 V, AC240/220/110 V, 50/60 Hz								
LOAD RESISTANCE OF THE RECEIVER	50 mW (0.55 V)/6 Ω								
MODULATION OF SSG	400 Hz. 30%								
Item	Description								
1. AM IF ALIGNMENT									
1-1 Conditions of the receiver.									
(1) Power source:	DC 12 V (When the power is supplied directly to the tuner in the receiver, the voltage should be adjusted to the proper level which shall be required by the tuner.)								
(2) Function switch position:	RADIO								
(3) Band select switch:	MW								
(4) Volume control:	Minimum gain position								
(5) Tone control:	Center (Bass, Treble) position								
(6) Variable capacitor:	Near the minimum capacity position where no signal come in.								
1-2 Connection of Sweeper and the receiver									
(1) Tuner input:	Positive side to TP3								
(2) Tuner output:	Positive side to TP5 Negative side to TP6]								
1-3 Aligning position:	CFT								
1-4 Alignment (Waveform):	Adjust AM I.F.T. (above mentioned aligning position) so that maximum and symmetrical wave form can be obtained. In this case, the wavehead should be appeared at the center marker (455 kHz) on the scope of Sweeper.								
2. FM IF ALIGNMENT									
2-1 Conditions of the receiver	Same as mentioned in item 1-1								
(1) Power source:	RADIO								
(2) Function switch position:	FM								
(3) Band select switch:	Minimum gain position								
(4) Volume control:	Center (Bass, Treble) position								
(5) Tone control:	Near the minimum capacity position where no signal come in.								
2-2 Connection of Sweeper and the receiver									
(1) Tuner input:	Positive side to TP4								
(2) Tuner output:	Positive side to TP5 Negative side to TP6								
NOTE									
a) Attach a capacitor (30 pF) and a resistor (30 kΩ) to the positive side cable which shall be led from Sweeper input.									
b) Attach a resistor (100 kΩ) in series to the positive side cable which shall be led from Sweeper output.									
2-3 Aligning position:	a) IF Waveform: T1 b) Discriminate Waveform: T2 ("S" curve waveform)								
2-4 Alignment (Waveform):	Adjust the discriminate coil (T2) so that "S" curve waveform may be changed to IF waveform as shown in following figure.								
b) Discriminate Waveform:									
Note	<table border="1"> <thead> <tr> <th>Color of Ceramic Filter</th><th>IF Frequency</th></tr> </thead> <tbody> <tr> <td>Blue</td><td>10.67 MHz</td></tr> <tr> <td>Red</td><td>10.7 MHz</td></tr> <tr> <td>Orange</td><td>10.73 MHz</td></tr> </tbody> </table>	Color of Ceramic Filter	IF Frequency	Blue	10.67 MHz	Red	10.7 MHz	Orange	10.73 MHz
Color of Ceramic Filter	IF Frequency								
Blue	10.67 MHz								
Red	10.7 MHz								
Orange	10.73 MHz								

Item		Description			
3. AM RF ALIGNMENT					
3-1 Conditions of the receiver.		Same as mentioned in item 1-1. RADIO 50 mW Center (Bass, Treble) position Refer the following list shown in item 3-4.			
(1) Power source: (2) Function switch position: (3) Volume control: (4) Tone control: (5) Variable capacitor:					
3-2 Conditions of SSG.		Refer the basic condition Refer the following list shown in item 3-4. Approx. 50 mW Speaker terminals			
3-3 Power output measuring position:					
3-4 Alignment:					
	Band Select Switch Position	Sort of Antenna to be attached to SSG	Frequency of SSG	Variable Capacitor Position	
1	MW	Loop Antenna	520 kHz	Max. capacity	
2			1,650 kHz	Min. capacity	
3			Ajust the above aligning position (L4 & TC-3) repeatedly so that the tuner can be received above frequency range (band width).		
4			620 kHz	to be received 620 kHz	
5			1,400 kHz	to be received 1,400 kHz	
6			Adjust the above aligning position (L3 & TC-6) repeatedly so that the tuner can be obtained the best sensitivity.		
7	LW	Loop Antenna	145 kHz	Max. capacity	
8			360 kHz	Min. capacity	
9			Adjust the above aligning position (L5 & TC-4) repeatedly so that the tuner can be received above frequency range (band width)		
10			160 kHz	to be received 160 kHz	
11			350 kHz	to be received 350 kHz	
12			Adjust the above aligning position (L7 & TC-7) repeatedly so that the tuner can be obtained the best sensitivity.		
13	SW	Dummy Antenna	5.8 MHz	Max. capacity	
14			18.6 MHz	Min. capacity	
15			Adjust the above aligning position (L6 & TC-5) repeatedly so that the tuner can be received above frequency range (band width).		
16			6.0 MHz	to be received 6.0 MHz	
17			18.0 MHz	to be received 18.0 MHz	
18			Adjust the above aligning position (L8 & TC-8) repeatedly so that the tuner can be obtained the best sensitivity.		

Item		Description		
4. FM RF ALIGNMENT				
4-1 Conditions of the receiver.		Same as mentioned in item 1-1. RADIO FM 50 mW Center (Bass, Treble) position Refer the following list shown in item 4-3.		
4-2 Condition of FM SSG.		Refer the basic condition Refer the following list shown in item 4-3.		
4-3 Alignment:		The level shall be decided by the load resistance of the receiver mentioned in the basic conditions.		
	Band Select Switch Position	Sort of Antenna to be attached to SSG	Frequency of SSG	Variable Capacitor Position Aligning Position
1	FM	Dummy Antenna	87.5 MHz	Max. capacity L2
2			109.0 MHz PC-W300L/LB 108.3 MHz PC-W300LD	Min. capacity TC-2
3			Adjust the above aligning position (L2 & TC-2) repeatedly so that the tuner can be received above frequency range (band width).	
4			90 MHz	to be received 90 MHz L1
5			106 MHz	to be received 106 MHz TC-1
6			Adjust the above aligning position (L1 & TC-1) repeatedly so that the tuner can be obtained the best sensitivity.	

FM MPX Alignment

A. 19 kHz Alignment (Regular Method)

1. Connect a frequency counter to the test point TP7 (earth = TP6).
2. Supply the monaural signal (98 MHz, 60 dB) across the test points TP1 and TP2.
3. Adjust the variable resistor VR1 so that the frequency becomes $19 \text{ kHz} \pm 100 \text{ Hz}$.

B. 19 kHz Alignment (Simplified Method)

1. Tune to an FM stereo broadcast.
2. Set the variable resistor VR1 to the ST indicator ON.

How to Engage Dial Cord

1. Turn the dial drum fully clockwise (to the highest frequency).

2. Use kevlar cord (1120 mm long and 0.5 mm in diameter).

3. Install the string in the sequence of the numbers.
