Safety Precautions

1. The design of this product contains special hardware and many circuits and components specially for safety purposes. For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Services should be performed by qualified personnel only.
2. Alterations of the design or circuitry of the product should not be made. Any design alterations of the product should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacture of responsibility for personal injury or property damage resulting therefrom.
3. Many electrical and mechanical parts in the products have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the Parts List of Service Manual. Electrical components having such features are identified by shading on the schematics and by (Δ) on the Parts List in the Service Manual. The use of a substitute replacement which does not have the same safety characteristics as the recommended replacement parts shown in the Parts List of Service Manual may create shock, fire, or other hazards.
4. The leads in the products are routed and dressed with ties, clamps, tubings, barriers and the like to be separated from live parts, high temperature parts, moving parts and/or sharp edges for the prevention of electric shock and fire hazard. When service is required, the original lead routing and dress should be observed, and it should be confirmed that they have been returned to normal, after re-assembling.
5. Leakage current check (Electrical shock hazard testing)
After re-assembling the product, always perform an isolation check on the exposed metal parts of the product (antenna terminals, knobs, metal cabinet, screw heads, headphone jack, control shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.
Do not use a line isolation transformer during this check.

- Plug the AC line cord directly into the AC outlet. Using a "Leakage Current Tester", measure the leakage current from each exposed metal parts of the cabinet, particularly any exposed metal part having a return path to the chassis, to a known good earth ground. Any leakage current must not exceed 0.5mA AC (r.m.s.).
- Alternate check method
Plug the AC line cord directly into the AC outlet. Use an AC voltmeter having, 1,000 ohms per volt or more sensitivity in the following manner. Connect a 1,500 Ω 10 W resistor paralleled by a 0.15 μ F AC-type capacitor between an exposed metal part and a known good earth ground.
Measure the AC voltage across the resistor with the AC voltmeter.
Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and measure the AC voltage across the resistor. Now, reverse the plug in the AC outlet and repeat each measurement. Any voltage measured must not exceed 0.75 V AC (r.m.s.). This corresponds to 0.5 mA AC (r.m.s.).

Warning

1. This equipment has been designed and manufactured to meet international safety standards.
2. It is the legal responsibility of the repairer to ensure that these safety standards are maintained.
3. Repairs must be made in accordance with the relevant safety standards.
4. It is essential that safety critical components are replaced by approved parts.
5. If mains voltage selector is provided, check setting for local voltage.

COMPU LINK-3 Connections

COMPU LINK-1 SYNCHRO jacks on the back of the receiver connect the COMPU LINK remote control system. This system connects other JVC audio components with the receiver to make listening and recording more convenient. To use this system, attach the cables provided with your JVC components to the COMPU LINK-1 or 3 SYNCHRO jacks on the rear panel of each component. Then connect the cables to the receiver.

NOTES:

- COMPU LINK-3 is an upgraded version of COMPU LINK-1. If your equipment provides COMPU LINK-3 jacks, you can still connect your equipment, but slight imperfections may result.
- Refer to page 18 for details about the COMPU LINK remote control system.

CAUTION! Do not connect Tape Deck 2 to the COMPU LINK jacks. It may cause the COMPU LINK system to malfunction.

Other Audio Connections

Use the socket on the back of the receiver to connect the power supply of any audio components.

CAUTION! Do not connect any components that consume more power than the capacity of the AC outlet. This capacity is indicated near the socket on the back of the receiver.

NOTE:

- Provided except for European countries.

Connecting Stereo Equipment

Before connecting the receiver, read the following paragraphs carefully.

IMPORTANT! The left channel of any audio component must be connected to the left-channel jack of the receiver, and the right channel to the right-channel jack if they are reversed, the stereophonic image will not be correct.

NOTE: To ensure correct connections, insert the red plug into the right channel.

Connect stereo component to the amplifier using cables with RCA PIN plugs. Connect the output jacks on a tape deck to the jacks marked IN (PLAY) on the amplifier, and the input jacks to those marked OUT (REC).

NOTE: Any turntables incorporating a small-output cartridge such as an MC (moving-coil type) must be connected to this amplifier through a commercial head amplifier or step-up transformer. Direct connection may result in insufficient volume.

NOTE: If a ground cable is fitted to your turntable, connect the ground cable to the AM LOOP terminal marked GND. In this case, do not disconnect the AM LOOP wire from the GND terminal.

Before Starting

Basic Connections

Connecting Speakers

Up to four speakers (two sets) can be connected to the receiver. Connecting four speakers will allow you to use the built-in Surround feature.

Connect speakers to the SPEAKERS terminals on the back of the receiver. Use the wire supplied with the speakers.

To connect each speaker, follow these steps:

- Step 1 Open each terminal on the back of the receiver and insert the end of the speaker wire, as shown.
- Step 2 Close the terminals to clamp the speaker wires in place, as shown.

⚠ **CAUTION!** Use speakers which have an impedance within the range indicated near the terminal.

Before Starting

Basic Connections

One AM loop antenna is supplied with your receiver.

To connect the AM loop antenna to the AM LOOP terminals, follow these steps:

- Step 1 Open each terminal and insert one of the two ends of the AM antenna wire.
- Step 2 Close the terminals to clamp the antenna wires in place.
- Step 3 Stand the AM loop antenna on its own base, as shown. Set it on any flat surface.

AM Outdoor Antenna

If your AM broadcast reception is unsatisfactory, you should connect an AM outdoor antenna in addition to the loop antenna. The antenna wire should be 16 to 40 feet (5 to 13 meters) long.

Connect one end of the outdoor single vinyl-covered antenna wire to the AM LOOP terminal marked AM EXT.

IMPORTANT! The AM loop antenna must be installed to receive AM broadcasts. Do not disconnect the loop antenna when installing an outdoor antenna.

IMPORTANT! Except for the connection, make sure no uninsulated antenna wire touches the rear panel of the receiver. Otherwise, the receiver might not pick up AM broadcasts.

For Countries Outside Europe

For countries outside Europe, there are two connection types:

To connect a 300-ohm antenna, follow these steps:

- Step 1 Loosen the cap on the 300/75-ohm terminal on the back of the receiver.
- Step 2 Loosen the cap on the 300-ohm terminal on the back of the receiver.
- Step 3 Connect the antenna by inserting one wire behind each cap.
- Step 4 Tighten the caps on both terminals.

To connect a 75-ohm antenna, follow these steps:

- Step 1 Unscrew the cap and bracket screw on the 300/75-ohm terminal. Insert the round antenna cable from below.
- Step 2 Make sure the shield braid on the cable contacts the bracket, and the center conductor of the cable contacts the 300/75-ohm terminal.
- Step 3 Tighten the bracket screw and the cap on the 300/75-ohm terminal.

Connecting an FM Antenna

The type of terminal provided for connecting an FM antenna depends on your geographic area. Read the section below which corresponds to your area.

IMPORTANT! Make sure the antenna conductors do not touch any other terminals on the receiver. This could cause poor reception.

You have two options for connecting an FM antenna. Connect the included wire antenna as shown in option ①, or purchase antenna and cable with connector DIN 45332 and attach as shown in option ②.

Connect the antenna cable to the FM 75Ω COAXIAL terminal using the Antenna Adaptor. You have two options — a 300-ohm feeder cable, or a 75-ohm coaxial cable.

To attach the Antenna Adaptor to the 300-ohm feeder cable, secure the two conductors to the screws of the Antenna Adaptor, as shown at the left.

To attach the Antenna Adaptor to the 75-ohm coaxial cable, follow these steps:

- Step 1 Remove the cover of the Antenna Adaptor by lifting the tabs on both sides.
- Step 2 Remove the jumper wire in the Antenna Adaptor with a tweezers.
- Step 3 Insert the center conductor of the coaxial cable into the notch located in the center of the fitting at the end of the Antenna Adaptor.
- Step 4 Using a pair of pliers, secure the fitting in the center of the Antenna Adaptor so that the shield braid of the coaxial cable is held tightly in the fitting.
- Step 5 Snap the cover back onto the Antenna Adaptor.

Before Starting

For Germany

For Other European Countries

Operation Outline

Basic Operation Reference

Before Starting

In countries outside Europe, you will find voltage selector and AM channel spacing selector switches on the back of the receiver. If your receiver has these switches, follow the instructions below to set them before connecting the power.

Voltage Selector: Using a Phillips screwdriver, adjust the voltage selector to the correct supply voltage for your area.

AM Channel Spacing Selector: Using the tip of a ballpoint pen, adjust the AM channel spacing for your area.

Connecting the Power Supply

After checking all connections, insert the power cord plug into an outlet.

CAUTION!

- Do not handle the power cord with wet hands.
- Do not pull on the power cord to unplug the receiver. Always grasp the plug directly so as not to damage the cord.
- Do not plug the power cord into a socket until all components are connected correctly.

IMPORTANT! If the power cord is disconnected or a power failure occurs, the receiver settings in memory are retained for 2 or 3 days.

Inserting Batteries into the Remote Control

The remote control requires two batteries (supplied). To insert batteries, follow these steps:

- Step 1** On the back side of the remote control, press down on the battery cover and slide it out.
- Step 2** Insert batteries. Make sure to observe the proper polarity: (+) to (+) and (-) to (-).
- Step 3** Slide the cover in.

If the range or effectiveness of the remote control decreases, replace the batteries. Use two (2) dry-cell batteries of the AA/R6/UM-3 type.

CAUTION!

- Follow these precautions to avoid leaking or cracking cells:
- Place batteries in the remote control so they match the polarity indicated (+) to (+) and (-) to (-).
- Use the correct type of batteries. Batteries that look similar may differ in voltage.
- Always replace both batteries at the same time.
- Do not expose batteries to heat or flame.

1 Turn on the power. Push the POWER switch to turn on the receiver. The display lights.

NOTE:

Pushing the POWER switch again turns off the power. A small amount of power (7 watts) is consumed in the standby mode. To turn the power off completely, disconnect the power cord from the wall outlet.

2 Select speakers (See page 16)

Use the SPEAKERS switch to choose between the two sets of speakers. To use your headphones, insert the headphone plug into the PHONES jack on the receiver.

3 Choose an audio source (See page 12)

To choose an audio source, press one of the SOURCE SELECT buttons on the receiver or select one of the components on the remote control.

4 Operate the audio source (See pages 18-20)

Refer to the manual provided with each component. If your JVC components are connected to the COMPU LINK jack of the receiver, you can operate them using the remote control.

5 Adjust volume and tone (See pages 16-17)

Rotate the MASTER VOLUME control on the receiver or press the VOLUME button on the remote control to adjust volume. See page 16 for other ways to change the volume or tone.

Selecting the Audio Source

The receiver can receive input from compact discs, cassette tapes, turntables, or any audio source that you connect. You can select a source for either listening or recording.

Listening

Press one of the SOURCE SELECT buttons on the receiver or the remote control.

- CD* Listen to the CD player.
- PHONO* Listen to a record.
- TAPE 1* Listen to the tape deck connected to the TAPE 1 jacks.
- VIDEO SOUND/TAPE 2 Listen to the tape deck connected to the TAPE 2 jacks.
- FM* Listen to an FM broadcast.
- AM* Listen to an AM broadcast.

IMPORTANT! The VIDEO SOUND/TAPE 2 button has a different function from other source selector buttons, because it allows you to monitor the quality of the recording. For more details, see Monitoring below.

Recording

The source being played is automatically selected as the source to be recorded. While recording, you can listen to the selected source at any desired volume and tone settings.

NOTE: Volume and Tone adjustments and the surround sound effect do not affect recording.

IMPORTANT! When recording from TAPE 2 to TAPE 1, press the VIDEO SOUND/TAPE 2 button and another button other than TAPE 1.

Monitoring

Using the Monitor feature, you can compare the sound quality of the source to the sound quality of the recording being made.

To use the Monitor feature while recording onto a cassette deck connected to the TAPE 2 jacks, follow these steps:

Step 1 Press the VIDEO SOUND/TAPE 2 button.

The "TAPE 2 MONITOR" light appears and you can listen to the sound of the cassette deck connected to the TAPE 2 jacks. You are now hearing the quality of the recording, not the quality of the source.

Step 2 Press the VIDEO SOUND/TAPE 2 button again.

This turns off the "TAPE 2 MONITOR" light, and the speakers play the previously selected source.

NOTE: If the cassette deck has three heads, you can hear the sound of the recording at the same time as it records on the tape.

Receiving an AM/FM Broadcast

To receive an AM/FM broadcast, select either AM or FM using the AM button or FM button. Then tune to the precise frequency using the TUNING buttons.

Tuning

Tune to the frequency of a desired station using the TUNING buttons. Pressing the right button increases the frequency, and pressing the left button decreases the frequency. Tapping the TUNING button once changes the frequency in steps.

On the model that can receive LW (Long-Wave) broadcasts, AM tuning will skip to the lower limit of the MW (Middle-Wave) frequencies when it reaches the upper limit of the LW frequencies, and vice versa.

NOTE: LW is not provided for countries outside Europe.

There are two tuning modes: Manual and Automatic.

If you know the frequency of a desired station, hold down the TUNING button to start the frequency changing quickly. Release the TUNING button near the desired station and tap it repeatedly until you arrive at the correct frequency.

Manual Tuning

Automatic Tuning

If you want to scan frequencies for a desired station, hold down the TUNING button to start the frequency changing quickly. When you release the TUNING button, the frequency continues to change until it reaches a station.

When a station is correctly tuned, the "TUNED" light appears on the display window.

Once a tuned frequency is preset, it can be directly recalled using the TUNER buttons. For details, see page 14.

NOTE: When you use automatic tuning, weak stations are ignored. To pick up weak stations, use manual tuning.

IMPORTANT! If the receiver is tuned to a station but the "TUNED" light does not appear, try rotating the antenna for better reception.

Selecting an FM Reception Mode

Pressing the FM MODE/MUTE switch switches between these modes.

The "MUTE-AUTO" light appears in the display window. You hear either stereo sound or monaural sound, depending on the broadcast. If it is a stereo broadcast, the "STEREO" light appears. This mode is also useful for suppressing static "noise" between stations.

The "MUTE-AUTO" light disappears. You hear monaural sound even if a broadcast is in stereo. This mode is also useful when a stereo broadcast is noisy because of a weak signal.

NOTE: Using the Automatic Tuning mode, the sound of a broadcast with a weak signal may be muted. In this case, select the monaural mode.

Presetting Tuned Frequencies

You can preset up to total 40 FM/AM radio stations by assigning channel numbers (1 through 40) to them. Once a station is preset, you can listen to it by entering the preset number using the TUNER buttons on the receiver, or the PRESET buttons of the remote. There are two ways to preset: manual or automatic.

To choose numbers from 1 through 10, press the appropriate TUNER buttons. To choose numbers from 11 through 40, press the +10 key and one other button. For example:

- To choose 17 Press +10, then 7
- To choose 20 Press +10, then 10.
- To choose 25 Press +10 twice, then 5.
- To choose 40 Press +10 three times, then 10.

NOTE: You can also tune using the remote control. First press the AM or FM button on the remote, then enter the channel number using the numeric buttons on the remote.

Assigning Channel Numbers

Manual Presetting

To use manual presetting to assign channel numbers to your favorite stations, follow these steps:

- Step 1** Tune to a station. If necessary, follow the procedure on page 13.
- Step 2** Press the MEMORY button.
The "MEMORY" light appears in the display window.
- Step 3** Using the TUNER buttons, enter a number (1 through 40). This number is the channel number you are assigning to the station.

IMPORTANT! You must enter the channel number while the "MEMORY" light is on. You have about 5 seconds to do this. If the light disappears before you enter the channel number, press the MEMORY button again.

- Step 4** When the MEMORY light disappears and the channel number is displayed, presetting is completed.

Automatic Presetting

To use automatic presetting to preset up to 40 stations automatically, follow these steps:

- Step 1** Press the SOURCE selector button to select AM or FM.
- Step 2** Using the TUNING buttons, move to the lowest frequency on the dial.
- Step 3** Press the AUTO MEMORY button.
The "MEMORY" light flashes in the display window.
- Step 4** Using the TUNER buttons, enter a channel number (1 through 40) to the first tuned station. From that point, scanning starts and stations are assigned channel numbers in ascending order.

IMPORTANT! You must enter the channel number while the "MEMORY" light flashes. If this light disappears before you enter the channel number, press the AUTO MEMORY button again.

Excluding a Station From Automatic Presetting

Frequencies are scanned in ascending order. When a station is tuned in, scanning stops and the "TUNED" light appears. The station is preset about 4 seconds later and the "MEMORY" light flashes again. If you do not want to preset this station, press the AUTO MEMORY button within 4 seconds. Scanning restarts without presetting that station.

When the "MEMORY" light flashes again, scanning continues until one of the following occurs:

- Another station is tuned in
- The upper limit of the tuning range is reached
- All 40 channel numbers have been assigned

When Auto Presetting is completed, the last preset station is received.

NOTE: To stop scanning at any time, press either TUNING button once.

Adjusting the Volume and Tone

Adjusting the Volume

Using the MASTER VOLUME Control

Use the MASTER VOLUME control to adjust the volume from the left and right speakers. Rotating the dial to the right increases the volume. The volume from the speakers and the headphones increases simultaneously.

NOTE: Volume can also be adjusted using the remote control. Press the VOLUME button marked + to increase the volume, or the VOLUME button marked - to decrease the volume.

⚠ **CAUTION!** Listening to extremely loud sound may damage your hearing. Be especially careful when using headphones.

Muting the Sound

Press the FADE MUTE button on the remote control to decrease the volume easily when you receive a phone call or a visitor.

IMPORTANT! If you are listening at very high volume, you may need to press FADE MUTE a second or third time to reduce volume completely.

Selecting the Speakers

Pushing in SPEAKER button 1 or 2 activates that pair of speakers. Pressing either button again deactivates that pair of speakers. When the button is in, that pair is activated. You can listen to both pairs, pair 1, pair 2, or neither pair.

IMPORTANT! If only one set of speakers is connected, pressing "in" both speaker buttons will produce no sound.

Listening to Headphones

Insert the headphone plug into the PHONES jack. To limit sound to the headphones (no sound from the speakers), press SPEAKER buttons 1 and 2 to deactivate all speakers.

⚠ **CAUTION!** To avoid hearing damage, turn the volume down before plugging in the headphones, then gradually increase the volume.

Adjusting the Left-Right Balance

Use the BALANCE control to adjust the balance between the left and right channels. Rotating the dial to the right increases the right-channel volume, and rotating it to the left increases the left-channel volume. The BALANCE control affects both sets of speakers and the headphones.

Adjusting the Tone

Use the BASS control to adjust low pitches and the TREBLE control to adjust high pitches. Turn either control to the right for intensified pitch. Set both controls at the FLAT position for normal listening.

Adjusting Bass and Treble

Enjoying the Surround Sound Effect

When you are using four speakers, you can put them in different corners of the room and use the Surround feature. Press the SURROUND button to create this movie-theater effect. The SURROUND indicator lights on the display window. Press the SURROUND button again to deactivate the surround feature. The SURROUND indicator turns off.

IMPORTANT! The Surround feature has no effect on monaural (non-stereo) sources.
NOTE: Two sets of speakers are recommended to produce an ideal surround effect, but you can use the feature with only one set of speakers connected.

Operating Audio Components

COMPU LINK Remote Control System

The COMPU LINK remote control system lets you operate the receiver and JVC components from the remote supplied with this receiver. Control signals for JVC audio components are preset in the receiver's remote control.

Connecting the COMPU LINK-1 SYNCHRO jacks on the back of the receiver will allow you to use the four functions below.

Equipment Remote Control

You can control all equipment via the REMOTE SENSOR on the receiver using the receiver's remote control. For details, see page 19.

IMPORTANT! Point the remote control directly at the REMOTE SENSOR on the receiver.

Automatic Source Selection

When you press play on a component or the remote, the component begins playing immediately. On the other hand, if you select a new source on the receiver or the remote, the component begins playing immediately, but the previously selected source continues playing without sound for a few seconds.

Synchronized Recording

Synchronized recording means the tape deck starts recording as soon as a CD or record begins playing.

To use synchronized recording, follow these steps:

- Step 1** Put a tape in the deck, and a disc in the CD player or on the turntable.
- Step 2** Press the REC and PAUSE button on the tape deck at the same time. This puts the tape deck in the REC/PAUSE state.

IMPORTANT! If you do not press the REC button and PAUSE button together, the synchronized recording feature will not operate.

- Step 3** Press the PLAY button on the CD player or turntable.
- As soon as the disc starts playing, the tape deck starts recording. When the disc ends, the tape deck switches back to the REC/PAUSE mode, and stops 4 seconds later.

NOTES:

- During synchronized recording, the CD or PHONO button is activated. Other SOURCE buttons are disabled to prevent recording failure.
- If your CD player is operated in the PROGRAM mode, a 4-second mute is recorded between tracks to enable the music scan feature of your tape deck to work.
- If the power of any component is shut off during synchronized recording, the system will not operate properly. In this case, you must start again with step 1.

Using the Remote Control

By connecting the COMPU LINK jack to this receiver, you can operate the audio stereo component with this receiver's remote control. In addition, if your VCR is a JVC product, you can operate it with this receiver's remote control.

NOTE: The VCR does not work with the COMPU LINK remote control system. When you operate the VCR, you must aim the remote control at the VCR instead of the receiver.

Select a source with the SOURCE SELECT buttons on the remote control. Operate that source using the buttons below the SOURCE SELECT buttons.

IMPORTANT! If you choose a source on the receiver directly, the remote control will not operate that source. To operate a source with the remote control, the source must be selected using the remote control.

IMPORTANT! When you select CD or TAPE 1 on the remote control, the component will turn on and start playing automatically.

Operating the Component Already Selected

Turntable

CD Player

Cassette Deck

After pressing the PHONO button, you can perform the following operations on the remote:

- ▲ Starts playing
- Stops playing

After pressing the CD button, you can perform the following operations on the remote:

- ▲ Starts playing
- ◀ Skips to the beginning of the previous track
- ▶ Skips to the beginning of the next track
- Stops playing
- ▬ Stops playing temporarily. To release it, press ▶
- ◀ Moves backward quickly during play
- ▶ Moves forward quickly during play

After pressing the TAPE 1 button, you can perform the following operations on the remote:

- ▲ Starts playback
- Stops operation
- ▬ Stops playback or recording temporarily. To release it, press ▶
- ◀ Fast wind the tape from right to left
- ▶ Fast wind the tape from left to right
- Press to enter record-standby mode

Troubleshooting

Operating the Component Not Currently Selected

When you want to operate one component while listening to another component (e.g., recording from a CD), use the buttons in the CONTROL section of the remote control. The CONTROL buttons allow you to use the operation buttons for the new component without affecting the component already playing.

CD Player-Changer

After pressing the CD DISC button in the CONTROL section of the remote, you can perform the following operations on the remote:

1-6, P Select the number of the disk installed in the CD player-changer. Then continue to operate the CD player as shown on page 19.

Use this chart to help you solve everyday operational problems. If there is any problem you cannot solve, contact your JVC service center.

PROBLEM	POSSIBLE CAUSE	SOLUTION
Display window does not light up	Power cord not plugged in	Plug power cord into AC socket
No sound from speakers	Speaker wires not connected	Check speaker wiring and reconnect if necessary
	SPEAKERS buttons not set correctly	Push the SPEAKERS buttons in or out as desired
	Incorrect SOURCE SELECT button was pressed	Select the correct audio source
Sound from one speaker only	Speaker wires not connected properly	Check speaker wiring and reconnect if necessary
	Balance control is set to one extreme	Adjust BALANCE control so that both speakers have sound
Continuous hiss or buzzing during FM reception	Incoming signal is too weak	Adjust antenna
	Station is too far away	Select a new station
	Incorrect antenna used	Check with your dealer to be sure you have the correct antenna
	Antenna not connected properly	Check connections
Occasional cracking noise during FM reception	Ignition noise from automobiles	Move the antenna further from automobile traffic
Howling during record playing	Turntable too close to speaker	Move speakers away from turntable
Remote control does not work	There is an obstruction in front of the REMOTE SENSOR on the receiver	Remove the obstruction
	Batteries are weak	Replace batteries

3. Pin Function Description

Pin NO.	symbol	I/O	Function and Operations	Pin NO.	symbol	I/O	Function and Operations
1	VDD	--	Power supply	33	SURROUND	O	Surround indication output
2	KIN 0	I	Key matrix input	34	GND	--	Connected to GND
3	KIN 1	I	Key matrix input	35			
4	KIN 2	I	Key matrix input	36	CLK	O	Clock to the source selector(IC321)
5	KIN 3	I	Key matrix input	37	STB	O	Strobe signal for DATA
6	KOUT 0	O	Key matrix output	38	DATA	O	Selector control data output
7	KOUT 1	O	Key matrix output	39	CE	O	Chip select signal
8	KOUT 2	O	Key matrix output	40	CK	O	Clock to transmit data for PLL Synthesizer
9	KOUT 3	O	Key matrix output	41	DI	I	Data from PLL synthesizer
10	KOUT 4	O	Key matrix output	42	DO	O	Data to PLL synthesizer
11	KOUT 5	O	Key matrix output	43	RESET	I	Reset signal input
12	KOUT 6	O	Key matrix output	44	REM	I	Remote signal input
13	D1	O	FL grid control output	45	INH	I	Inhibit input
14	D2	O	FL grid control output	46	STEREO	I	Detect the signal for 'STEREO' indication
15	D3	O	FL grid control output	47	TUNED	I	Detect the signal for 'TUNED' indication
16	D4	O	FL grid control output	48	C.LINK IN	I	DCS signal input
17	D5	O	FL grid control output	49	C.LINK OUT	O	DCS signal output
18	VPP	--	Power supply for FL display	50	VOL.DOWN	O	Volume control signal
19	S1	O	FL segment output	51	VOL.UP	O	Volume control signal
20	S2	O	FL segment output	52	TEST	--	For TEST
21	S3	O	FL segment output	53	LW,9k/10k	--	9k/10k controller
22	S4	O	FL segment output	54	BAND 0	--	BAND 0
23	S5	O	FL segment output	55	BAND 1	--	BAND 1
24	S6	O	FL segment output	56	SURR.	O	Surround control signal
25	S7	O	FL segment output	57	AC	--	Non connection
26	S8	O	FL segment output	58	S.MUTE	O	Source mute control signal
27	S9	O	FL segment output	59	T.MUTE	O	Tuner muting signal
28	S10	O	FL segment output	60	GND	--	Connected to GND
29	S11	O	FL segment output	61	NC	--	Non connection
30	S12	O	FL segment output	62	GND	--	GND
31	VOL.IND	O	Volume indication signal output	63	OSC	--	Oscillation terminal
32	STA./RECEI.	O	STANDBY/RECEIVED indication output	64	OSC	--	Oscillation terminal

■ LC7210 (IC102) : PLL Synthesizer

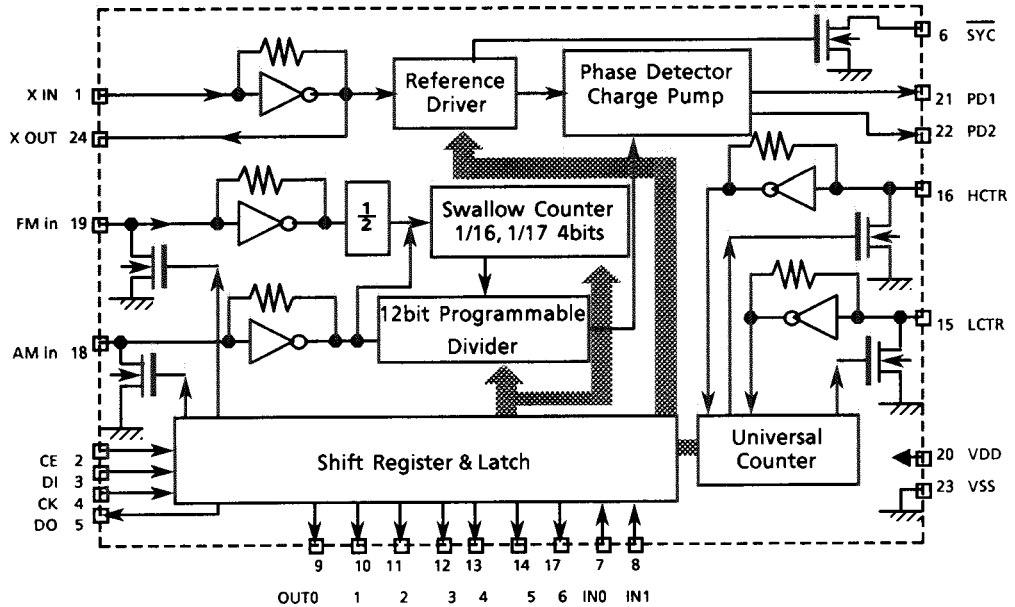

1. The main function descriptions

- (1) It makes the local oscillation frequency by the control data from IC401.
- (2) Decode the control signal and transmit the signal for receiving conditions.
- (3) For the best tuning, count the internal-frequency and transmit the data to IC401.

2. Terminal Layout

3. Block Diagram

4. Pin Function Description

Pin No.	Symbol	I/O	Functions and Operations
1,24	X in , X out	I/O	Crystal oscillator (7.2MHz).
2	CE	I	Fix the chip enable to "H" when inputting (DI) and outputting (DO) the serial data.
3	DI	I	Receive the control data from the controller (IC401).
4	CK	I	This clock is used to synchronize data when transmitting the data of DI and DO.
5	DO	O	Transmit the data from LC7218 to the controller which is synchronized with CL.
6	SYC	-	Not used.
7	Tuned	I	Receive the tuned signal from IC104 (LA1266A).
8	Stop in	-	Connect to GND.
9	POWER	-	Connect to GND.
10	QSC	-	Not used.
11	MONO	O	It is "H" on FM-monaural, "L" on FM-Stereo.
12	FM	O	It is "L" on FM mode.
13	MW	O	It is "L" on MW mode.
14	LW	O	It is "L" on LW mode.
15	AM-IF	I	Universal counter input for AM-IF from IC104 (LA1266A).
16	FM-IF	I	Universal counter input for FM-IF from IC104(LA1266A).
17	IF REQ	O	Output the "IF-signal request" to IC104 when the pin-7 (tuned in) goes to "H".
18	AM OSC	I	Input the local oscillator signal of AM.
19	FM OSC	I	Input the local oscillator signal of FM.
20	V _{DD}	-	This is a terminal of power supply.
21	PD1	O	PLL charge pump output: When the local oscillator signal frequency is higher than the reference frequency high level signals will output. When it is lower than the reference frequency, low level signals will output. When it is same as reference frequency signals, it will be floating.
22	PD2	-	Not used.
23	V _{SS}	-	Connect to GND.

■ LA1266A (IC104) : FM AM IF AMP & detector

1. The main function descriptions

- (1) Amplify and detect of FM intermodulation frequencies.
- (2) It has local oscillator and mixer for AM, and amplify the AM-IF signal.

2. Terminal Layout

FM-in	1	24	AM-OSC out
Bypass	2	23	AM-OSC
Bypass	3	22	V.ref
GND	4	21	AM-in
FM-DET	5	20	AM-Mix
FM-DET	6	19	AM-AGC
V _{CC}	7	18	AM-IF
SIG	8	17	AM Adj.
FM-AFC	9	16	FM Adj.
FM-IF	10	15	AM out
AM-IF	11	14	NAR SM
FM-out	12	13	STRQ

3. Block Diagram

4. Pin Function Description

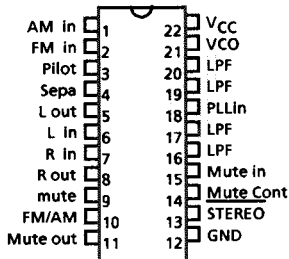

Pin No.	Symbol	I/O	Functions and Operations
1	FM in	I	This is an input terminal of FM IF Signal.
2,3	Bypass	--	Bypass of FM IF Amp.
4	GND	--	This is the device ground terminal.
5,6	FM DET	--	FM detect transformer.
7	V _{CC}	--	This is the power supply terminal.
8	SIG	O	When the set is tuning, this terminal becomes "L".
9	FM AFC	O	This is an output terminal of voltage for FM -AFC.
10	FM IF	O	When the signal of IF REQ of IC102(LC7218) appear, the signal of FM IF output.
11	AM IF	O	When the signal of IF REQ of IC102(LC7218) appear, the signal of AM IF output.
12	FM out	O	FM detection output.
13	STRQ	I	The IF-signals come out from pin10 (FM-IF) or pin11 (AM-IF) while this terminal going to "High".
14	NAR SM	--	Control the Band-width of signal meter.
15	AM out	O	AM detection output.
16	FM Adj	--	For adjust the stop level (or mute level) of FM.
17	AM Adj	--	For adjust the stop level (or mute level) of AM.
18	AM-IF	I	Input of AM IF Signal.
19	AM-AGC	I	This is an AGC voltage Input terminal for AM.
20	AM-MIX	O	This is an output terminal for AM mixer.
21	AM-IN	I	This is an input terminal for AM RF Signal.
22	V.REF	--	Register value between pin9 and pin22 desides the frequency width of the input signal.
23	AM-OSC	--	This is a terminal of AM Local oscillation circuit.
24	AM-OSC out	O	AM Local Oscillation Signal output.

■ LA3401 (IC105) : FM MPX Detector

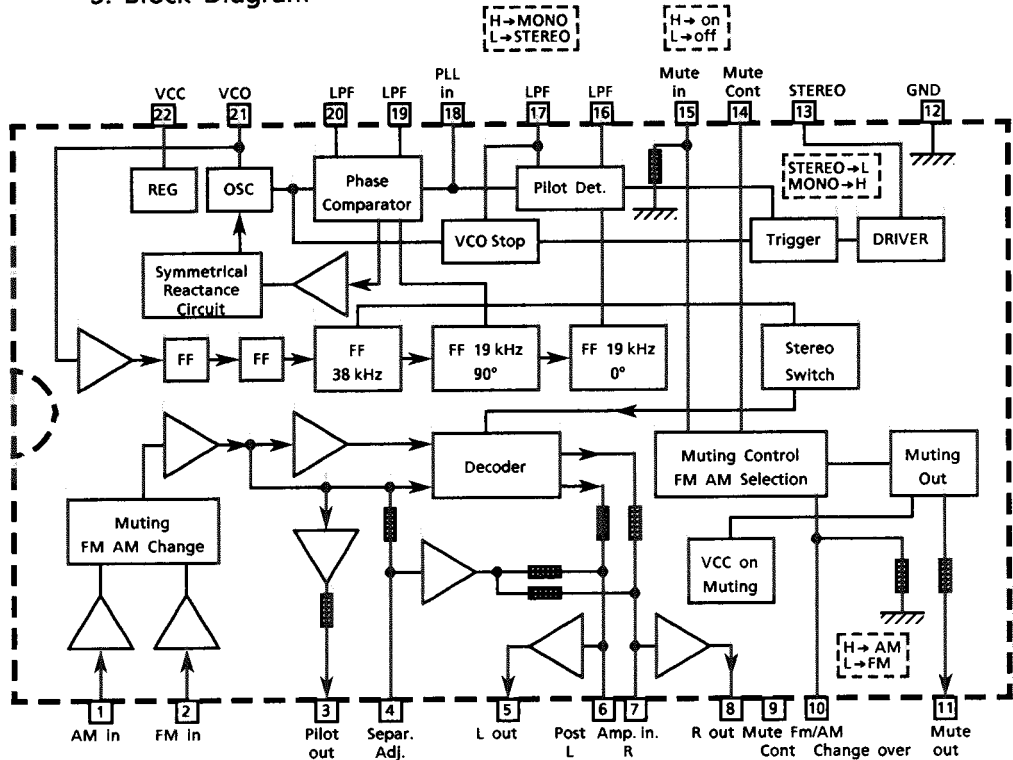

1. The main function descriptions

- (1) Detect the FM multiplex signal (Stereo signal).
- (2) When receiving FM stereo signal, it outputs the signal for indication.
- (3) AM/FM audio amplifier.

2. Terminal Layout

3. Block Diagram

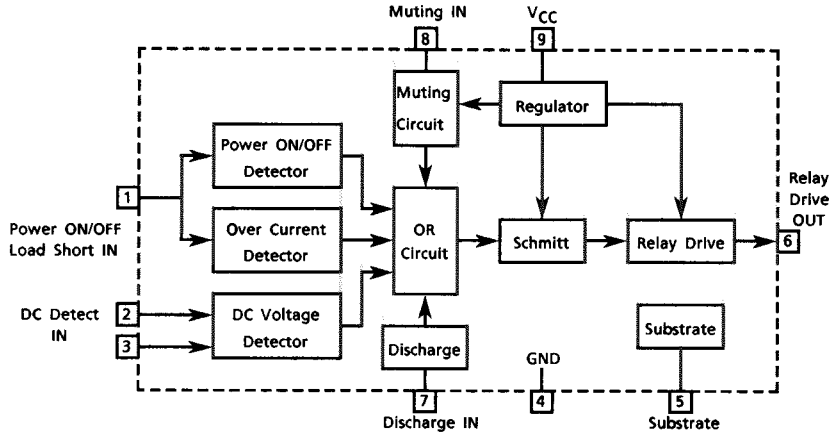

4. Pin Function Description

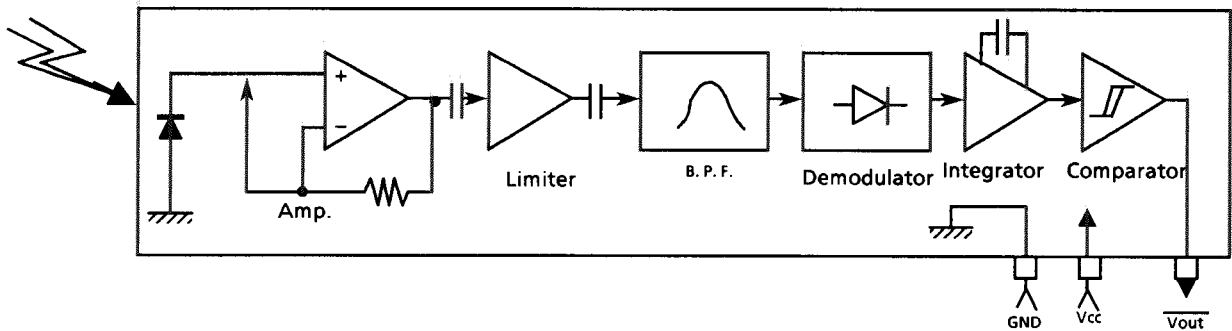

Pin No.	Symbol	I/O	Functions and Operations
1	AM in	I	This is an input terminal for AM detection signal.
2	FM in	I	This is an input terminal for FM detection signal.
3	Pilot out	O	Output of MPX pilot signal (Connect to Pin18).
4	Sepa. Adj.	--	Separation adjustment.
5	L. out	O	Left channel signal output.
6	L	I	Input terminal of the left channel post-amplifier
7	R	I	Input terminal of the right channel post-amplifier
8	R out	O	Right channel signal output
9	Mute Cont	--	The mute time is controlled by the connected capacitor when turning the power switch on.
10	FM /AM	I	Change over the FM /AM input. "H" : AM, "L" : FM
11	Mute out	--	Not used
12	GND	--	Ground terminal.
13	Stereo	O	Stereo indicator output. Stereo : "L", Mono : "H"
14	Mute Cont	--	The mute time is controlled by the connected capacitor when changing over the FM /AM .
15	Mute in	I	Mute signal input. "H" : Mute on, "L" : Mute off.
16	LPF	--	Low pass filter of pilot detector.
17	LPF	--	While this terminal goes to "H", the VCO stop.
18	Pilot in	I	Pilot signal input
19	LPF	--	Low-pass filter of PLL.
20	LPF	--	Low-pass filter of PLL.
21	VCO	I	Voltage controlled oscillator terminal.
22	V _{CC}	--	Power supply.

Internal Block Diagram of Other ICs

■ TA7317P (IC901) : Protector

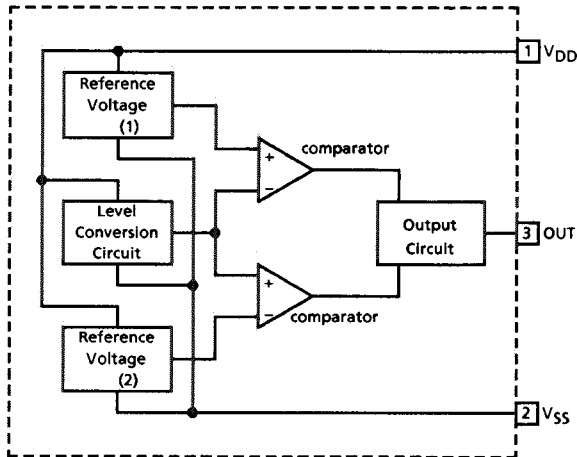

■ SPS-420-1 (IC402) : Receiver for remote controller

■ MN1280(P.Q) (IC491) : Reset IC

Block Diagram

Pin No.	Pin Name	Functions
1	V _{DD}	Power supply
2	V _{SS}	Ground
3	OUT	Reset signal output : Low level is output when resetting : High level is output when cancelling the reset.

■ NJM4560DD(IC701): Dual OP amp.

■ LB1639-CV (IC361) : Motor Driver

IN 1	IN 2	OUT 1	OUT 2	MOTOR
H	L	H	L	CLOCKWISE
L	H	L	H	COUNTER-CLOCKWISE
H	H	OFF	OFF	WAITING
L	L	OFF	OFF	WAITING

Internal Connections of the FL Display

■ ELU0001-143 : FL401

Disassembly Procedures

■ Removing the top cover

1. Remove the 4 screws fastening both sides of the top cover, and the 2 screws fastening the rear sides.
2. Remove the top cover.

■ Removing the bottom cover

1. Remove the 17 screws (F), (G).
2. Remove the bottom cover.

■ Removing the front panel assembly

1. Remove the top cover.
2. Remove the 6 screws (A), (H) fastening top and bottom of the front panel.
3. Disconnect the connectors P101, P702, P807, P806 and P805.
4. Remove the master volume knob and its connectors.
5. Remove the front panel assembly.

Fig 1. Top View

■ Removing the tuner p.c. board

1. Remove the top cover.
2. Disconnect the connectors P101 and P103.
3. Remove the 2 screws (B).
4. Remove the 4 screws (C) (Fig 2).

Fig 2. Rear View

■ Removing the power transistor

1. Remove the bottom cover.
2. Unsolder the broken transistor.
3. Remove the screw fastening it.
4. Remove it.

■ Removing the rear panel

1. Remove the top cover.
2. Remove the screws (G) (Fig 3).
3. Remove the screws (C), (D) and (E) (Fig 2).

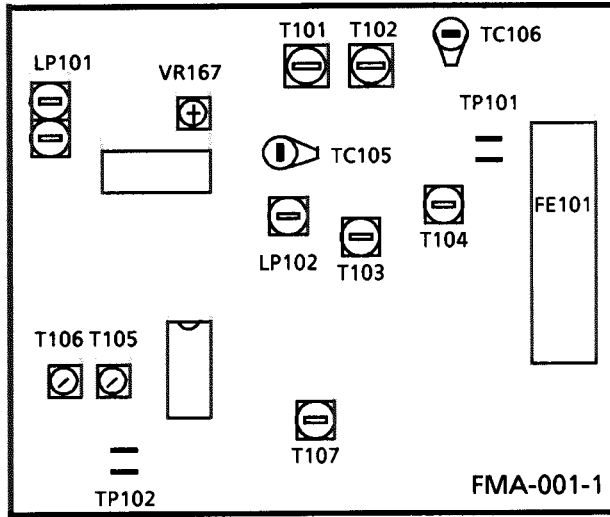

Fig 3. Bottom Cover

Adjustment Procedures

■ Tuner section

FRONT

Tuning range

Area	Range		
	LW (kHz)	MW (kHz)	FM (MHz)
East Europe	144~353	522~1629	87.5MHz~108MHz
Continental Europe, the U.K			
Australia	—	—	
Universal type (AM Channel space 9kHz)	—	531~1602	
Universal type (AM Channel space 10kHz)	—	530~1600	

(1) Tuning voltage

Confirm the voltages in the table below at TP101.

If the voltages are not satisfied, replace T103 for MW or T104 for LW or FE101 for FM.

FM Tuning voltage (Unit : V)

Area	Frequency			
	64.0MHz	74.0MHz	87.5MHz	108MHz
East Europe	—	—	—	—
the U.K. , Continental Europe, Australia, Universal	—	—	1.6 ± 1.0 (V)	8.0 ± 1.0 (V)

AM Tuning voltage (Unit : V)

Area	Frequency (MW)						Frequency (LW)		
	522KHz	530KHz	531KHz	1600KHz	1602KHz	1629KHz	144kHz	290kHz	353kHz
East Europe	—	—	—	—	—	—	—	—	—
the U.K. , Continental Europe	0.9 ± 0.2	—	—	—	—	7.5 ± 0.8	0.8 ± 0.2	—	7.7 ± 0.6
Australia	0.9 ± 0.2	—	—	—	—	7.5 ± 0.8	—	—	—
Universal (Chanel space 9kHz)	—	—	0.9 ± 0.2	—	7.2 ± 0.7	—	—	—	—
Universal (Chanel space 10kHz)	—	0.9 ± 0.2	—	7.2 ± 0.7	—	—	—	—	—

(2) FM center meter

Receive a broadcast by using the function of 'AUTO STOP'.
Adjust T105 (detector coil) so that the voltage at TP102 becomes $0 \pm 1.5\text{mV}$.
(T106 is used to minimize the distortion of output on the production line.)

(3) FM separation

Receive a stereo signal.
Adjust VR 167 so that channel separation becomes maximum.

(4) MW Tracking

Adjust T101 (antenna coil) to obtain the best receiving sensitivity on 603kHz.
Adjust TC105 (antenna trimmer) to obtain the best receiving sensitivity on 1404kHz.

(5) LW Tracking

Adjust T102 (antenna coil) to obtain the best receiving sensitivity on 164kHz.
Adjust TC106 (antenna trimmer) to obtain the best receiving sensitivity on 353kHz.

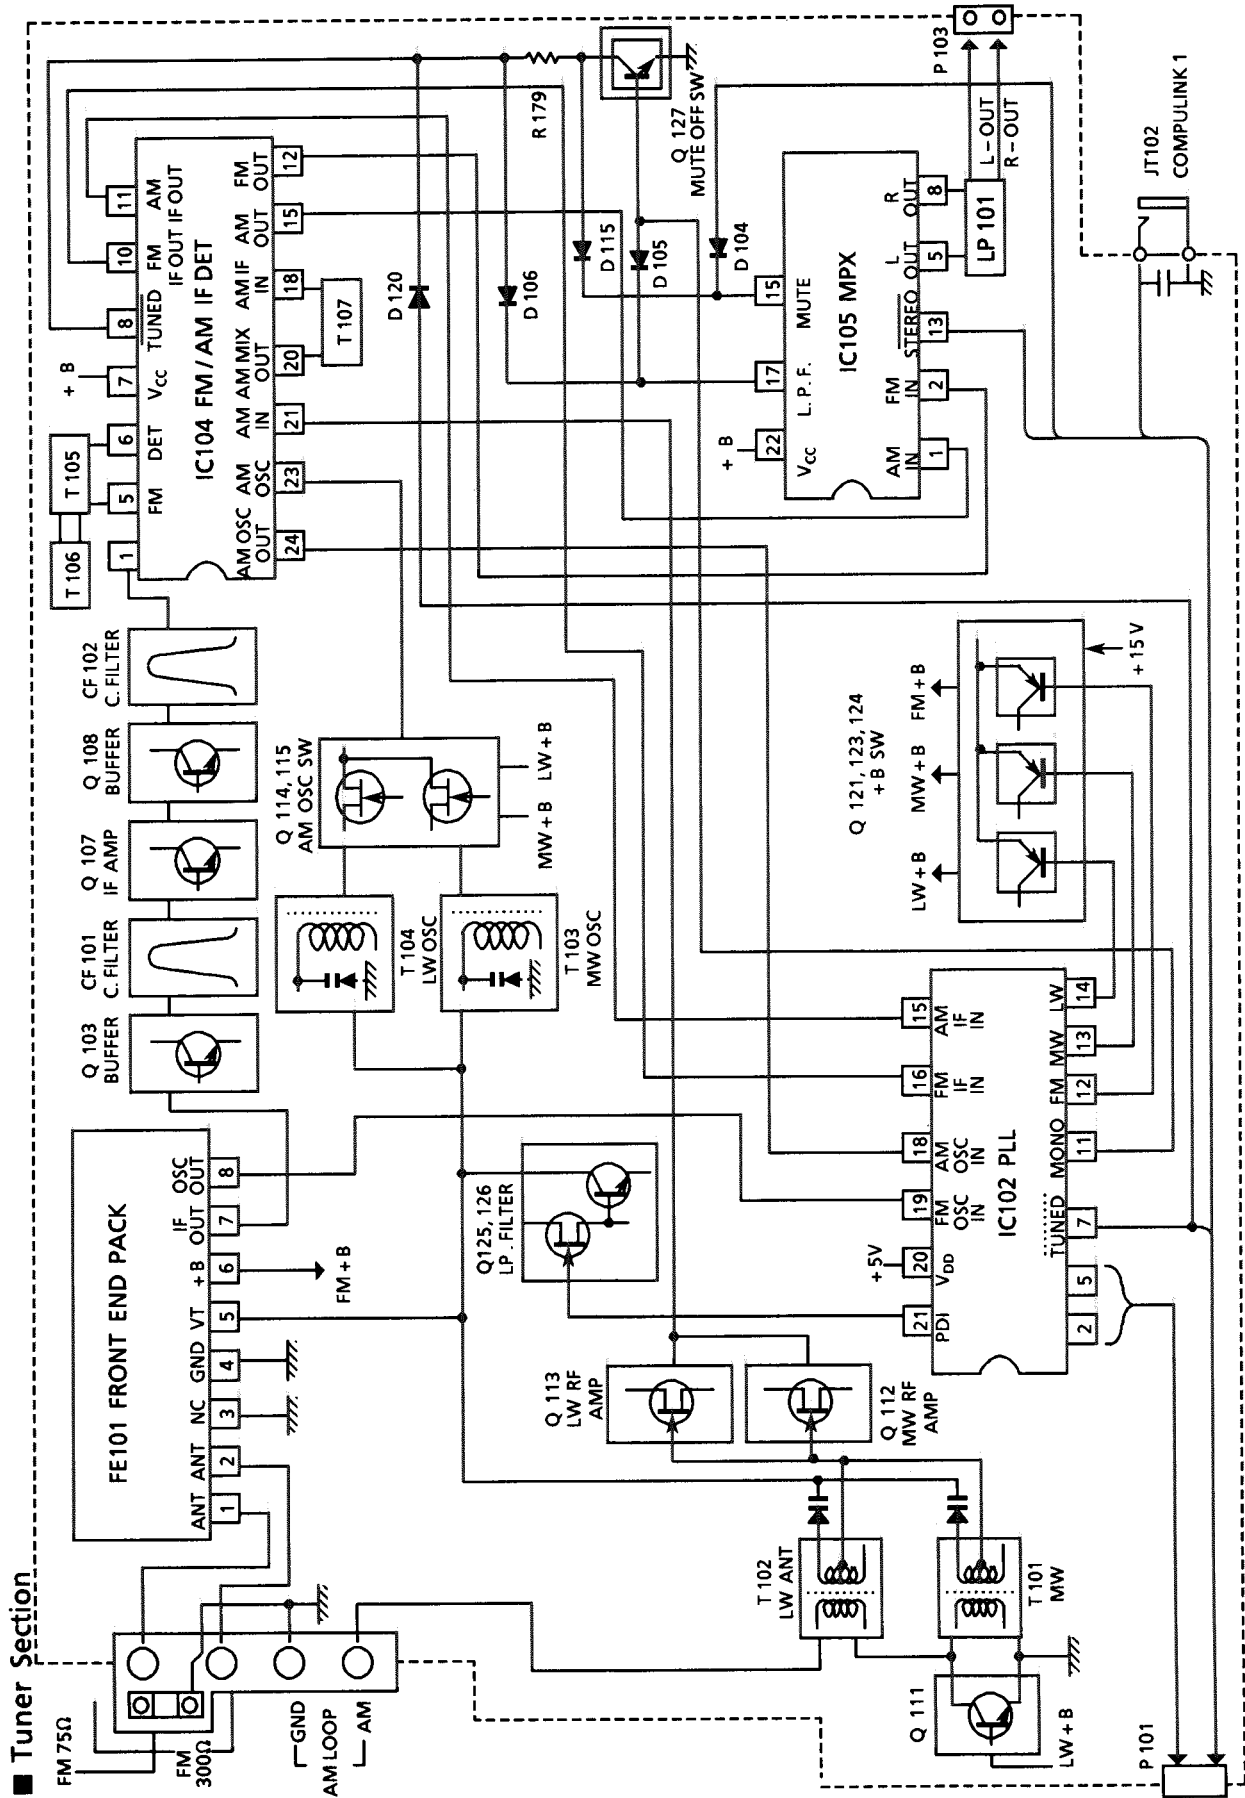

Power Amplifier Adjustment Procedures

■ Idling Current

- (1) Set the volume control to minimum during this adjustment.
- (2) Turn R751 and R752 fully counterclockwise before the power switch on.
- (3) Always start from cold, and allow 10 minutes to warm up before adjustment.
If the heatsink is already warm from previous use, the correct adjustment can not be made.
- (4) Connect a DC voltmeter to R787 resistor's leads for left channel,
or to R788 for right channel.
- (5) Adjust R751 for left channel, or R752 for right channel,
so that the DC voltmeter becomes $2\text{mV} \sim 7\text{mV}$.
