<i>Description of Major ICs</i>	1-14	<i>Schematic Diagrams</i>	1-31
<i>Internal Connection of FL Display</i>	1-23	<i>Printed Circuit Boards</i>	1-34
<i>Disassembly Procedures</i>	1-24	<i>Parts List</i>	2-1

Safety Precautions

1. The design of this product contains special hardware and many circuits and components specially for safety purposes. For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Services should be performed by qualified personnel only.
2. Alterations of the design or circuitry of the product should not be made. Any design alterations of the product should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacture of responsibility for personal injury or property damage resulting therefrom.
3. Many electrical and mechanical parts in the products have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the Parts List of Service Manual. Electrical components having such features are identified by shading on the schematics and by (Δ) on the Parts List in the Service Manual. The use of a substitute replacement which does not have the same safety characteristics as the recommended replacement parts shown in the Parts List of Service Manual may create shock, fire, or other hazards.
4. The leads in the products are routed and dressed with ties, clamps, tubings, barriers and the like to be separated from live parts, high temperature parts, moving parts and/or sharp edges for the prevention of electric shock and fire hazard. When service is required, the original lead routing and dress should be observed, and it should be confirmed that they have been returned to normal, after re-assembling.

5. Leakage current check (Electrical shock hazard testing)

After re-assembling the product, always perform an isolation check on the exposed metal parts of the product (antenna terminals, knobs, metal cabinet, screw heads, headphone jack, control shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.

Do not use a line isolation transformer during this check.

- Plug the AC line cord directly into the AC outlet. Using a "Leakage Current Tester", measure the leakage current from each exposed metal parts of the cabinet, particularly any exposed metal part having a return path to the chassis, to a known good earth ground. Any leakage current must not exceed 0.5mA AC (r.m.s.).

● Alternate check method

Plug the AC line cord directly into the AC outlet. Use an AC voltmeter having, 1,000 ohms per volt or more sensitivity in the following manner. Connect a 1,500 Ω 10 W resistor paralleled by a 0.15 μ F AC-type capacitor between an exposed metal part and a known good earth ground.

Measure the AC voltage across the resistor with the AC voltmeter.

Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and measure the AC voltage across the resistor.

Now, reverse the plug in the AC outlet and repeat each measurement. Any voltage measured must not exceed 0.75 V AC (r.m.s.). This corresponds to 0.5 mA AC (r.m.s.).

Warning

1. This equipment has been designed and manufactured to meet international safety standards.
2. It is the legal responsibility of the repairer to ensure that these safety standards are maintained.
3. Repairs must be made in accordance with the relevant safety standards.
4. It is essential that safety critical components are replaced by approved parts.
5. If mains voltage selector is provided, check setting for local voltage.

Instruction Book

Introduction

Become familiar with the buttons and controls on the receiver before use.

Switches, Buttons and Controls

Refer to the pages in parentheses for details.

Front Panel

- 1 Remote sensor
- 2 3CH LOGIC indicator (16, 17)
- 3 PRO LOGIC indicator (16, 17)
- 4 HALL indicator (14)
- 5 PRESET buttons (<->) (12)
- 6 TUNING buttons (<->) (12)
- 7 Display (9)
- 8 FM MODE/MUTE button (13)
- 9 FM/AM button (12)
- 10 MEMORY button (12)
- 11 MASTER VOLUME control (10)
- 12 LOUDNESS button (11)
- 13 Source selecting buttons (TUNER, TAPE, PHONO, CD, VIDEO, VCR) (9)
- 14 POWER button and STANDBY indicator (9)
- 15 PHONES jack (11)
- 16 SPEAKERS 1/2 buttons (10)
- 17 BASS control (10)
- 18 TREBLE control (10)
- 19 BALANCE control (10)
- 20 SURROUND ON/OFF button (14, 16, 17)
- 21 SURROUND MODE button (14, 16, 17)
- 22 CENTER LEVEL/REAR LEVEL buttons (+/-) (17)
- 23 CENTER MODE button (16)
- 24 DELAY button (16)

Remote Control

- 1 TV button (18)
- 2 Source selecting buttons (PHONO, VIDEO, FM/AM, CD, TAPE, VCR) (9, 18)
- 3 TV/VCR CH buttons (+/-) (18)
- 4 FADE MUTE button (11)
- 5 POWER buttons (TV, VCR, AUDIO) (9, 18)
- 6 10 keys (12, 18)
- 7 CD-DISC button (18)
- 8 Operating buttons for JVC audio/video components (18)
- 9 Surround adjustment buttons (14, 16, 17)
- 10 VOLUME buttons (+/-) (10)

Getting Started

This section explains how to connect stereo components and speakers to the receiver, and how to connect the power supply.

Before Installation

General

- Be sure your hands are dry.
- Turn the power off to all components.
- Read the manuals supplied with the components you are going to connect.

Locations

- Install the receiver in a location that is level and protected from moisture.
- The temperature around the receiver must be between 23° and 104° F (-5° and 40° C).
- Make sure there is good ventilation around the receiver. Poor ventilation could cause overheating and damage the receiver.

Handling the receiver

- Do not insert any metal object into the receiver.
- Do not disassemble the receiver or remove screws, covers, or cabinet.
- Do not expose the receiver to rain or moisture.

Checking the Supplied Accessories

Check to be sure you have all of the following items, which are supplied with the receiver. The number in the parentheses indicates quantity of the pieces supplied.

- Remote Control (1)
- Batteries (2)
- AM Loop Antenna (1)
- FM Wire Antenna (1)

If anything is missing, contact your dealer immediately.

Connecting the FM and AM Antennas

FM Antenna Connections

How to strip the 75-ohm coaxial cable and connect it to the FM terminals

1. Strip back the outside covering of the 75-ohm coaxial cable to expose the braided metallic mesh.
2. Pull the mesh back and twist into a single conductor as shown in the illustration above.
3. Strip the insulation about 7/16 inches (10 mm) back from the central wire.
4. Insert the twisted mesh and the central wire to the FM terminals, as shown in the illustration above.

AM Antenna Connections

Note:
Make sure the antenna conductors do not touch any other terminals, connecting cords and power cord. This could cause poor reception.

Connecting the Speakers

You can connect the following speakers:

- Two sets of front speakers to produce normal stereo sound
- One set of rear speakers to enjoy the surround effect
- One center speaker to produce more effective surround effect (to make human voices outstanding)

For each speaker, connect one end of the speaker signal cable (not supplied) to the speaker terminal on the rear panel and the other end to the speaker.

1. Open each terminal.
2. Insert the end of the speaker signal cable as shown (be sure to remove the insulation at the end of each wire first).
3. Close the terminals to clamp the speaker signal cables firmly in place.
4. Connect the black (-) and red (+) terminals on the rear panel to the black (-) and red (+) terminals marked on the speakers.

CAUTION:
Use speakers with the same impedance as marked near the terminals on the rear panel.

Connecting the front speakers

Connect the front speakers to the FRONT SPEAKERS terminals.

Connecting the rear and center speakers

Connect rear speakers to the REAR SPEAKERS terminals and a center speaker to the CENTER SPEAKER terminals.

Note:
When you connect rear speakers, make sure that both left and right speakers are connected; otherwise, no sound will come out of the rear speakers.

Connecting Audio/Video Components

You can connect the following components to the receiver using cables with RCA pin plugs.

Audio Components	Video Components
• Turntable	• VCR
• CD player	• Video disc player
• Cassette deck	• TV

Notes:

- Both plugs and jacks are color-coded; the red ones are for right audio signals, the white ones for left audio signals, and yellow ones for video signals.
- Any turntable incorporating a small-output cartridge such as an MC (moving-coil type) must be connected to this receiver through a commercial head amplifier or step-up transformer. Direct connection may result in insufficient volume.

Audio component connections

If an earth cable is provided for your turntable, connect the cable to the GND terminal of the AM LOOP terminals on the rear panel.

Video component connections

CAUTION:
If you connect a sound-increasing device such as a graphic equalizer between the source components and this receiver, the sound output through this receiver may be distorted.

Connecting the Power Cord

Before plugging the receiver into an AC outlet, make sure that all connections have been made. When the power cord is connected, the STANDBY indicator above the POWER button lights up.

Keep the power cord away from the connecting cables for the TV, VCR, and antenna. The power cord may cause noise or screen interferences. We recommend that you use a coaxial cable to connect the antenna, since it is well-shielded against interference.

Notes:

- A small amount of power is always consumed even in standby mode. To switch off the power completely, unplug the power cord from the AC outlet.
- If the power cord is unplugged or a power failure occurs, preset settings will be erased in a few days.

CAUTIONS:

- Do not touch the power cord with wet hands.
- Do not pull on the power cord to unplug the receiver. When unplugging the receiver, always grasp the plug itself so as not to damage the cord.

Putting Batteries in the Remote Control

Before using the remote control, put two supplied batteries first. When using the remote control, aim the remote control directly at the remote sensor on the receiver.

1. On the back of the remote control, press down on the battery cover and slide it out.
2. Insert batteries. Make sure to observe the proper polarity: (+) to (+) and (-) to (-).
3. Slide the cover in.

If the range or effectiveness of the remote control decreases, replace the batteries. Use two R6P (SUM-3)/AA (15F) type dry-cell batteries.

CAUTIONS:

- Follow these precautions to avoid leaking or cracking cells:
- Place batteries in the remote control so they match the polarity indicated: (+) to (+) and (-) to (-).
 - Use the correct type of batteries. Batteries that look similar may differ in voltage.
 - Always replace both batteries at the same time.
 - Do not expose batteries to heat or flame.

Connecting Audio Components for the COMPU LINK-3 Remote Control System

The COMPU LINK-3 remote control system allows you to control other JVC audio components from the receiver or vice versa. To use this system, connect your JVC audio components and the receiver with the cable (monoaural mini-plug) supplied with those components.

If your audio component has two COMPU LINK-3 SYNCHRO jacks, you can use either one. If it has only one COMPU LINK-3 SYNCHRO jack, connect it so that it is the last item in the series of components. (for example, the turntable in the diagram below)

Notes:

- The COMPU LINK-3 remote control system is the upgraded version of the COMPU LINK-1 and COMPU LINK-2. Even if your component has the COMPU LINK-1 or COMPU LINK-2 jacks, you can still connect it in the COMPU LINK-3 remote control system, but some functions may not work correctly.
- For more information about the COMPU LINK-3 (-1 and -2) remote control system, see page 19.

Power Supply through the Receiver to a Connected Component

You can use the AC outlet on the rear of the receiver to supply power to an audio component. This AC outlet is a "switched" outlet. So when the receiver is off (that is, in standby mode), power is not supplied through this outlet. By turning the receiver on and off, you can turn the connected component on and off at the same time.

Note:

Do not use the AC outlet on the rear of the receiver to supply power to the component in the COMPU LINK remote control system; otherwise, the COMPU LINK remote control system may not work correctly.

CAUTION:

Do not plug the component to the AC outlet on the rear if the maximum consumption is greater than indicated by the AC outlet.

Basic Operations

The following operations are commonly used when you play any sound source.

Turning the Power On and Off

To turn on the power, press the **POWER** button on the front panel or the **AUDIO** button on the remote control. The **STANDBY** indicator goes off.

To turn off the power, press the **POWER** button or **AUDIO** button on the remote control again. The **STANDBY** indicator lights up.

From the panel

Selecting the Source to Play

You need to select the source to listen before you start playing any source.

Press one of the source selecting buttons so that the source name appears on the display.

Selected source name appears

On the front panel

From the remote control

On the front panel:

- TUNER** Listen to an FM or AM broadcast. You can also change the source to the tuner by pressing the **FM/AM** button.
- TAPE** Listen to the cassette deck connected to the **TAPE** jacks.
- PHONO** Listen to a record.
- CD** Listen to the CD player.
- VIDEO** View the video component connected to the **VIDEO** jacks.
- VCR** View the video component connected to the **VCR** jacks.

From the remote control:

- PHONO*** Listen to a record.
- VIDEO** View the video component connected to the **VIDEO** jacks.
- FM/AM*** Listen to an FM or AM broadcast. Each time you press the button, the band alternates between **FM** and **AM**.
- CD*** Listen to the CD player.
- TAPE*** Listen to the cassette deck connected to the **TAPE** jacks.
- VCR** View the video component connected to the **VCR** jacks.

Note:

* When you press one of the source selecting buttons on the remote control marked above with an asterisk, the receiver automatically turns on.

Selecting the Front Speakers

When you have connected two sets of front speakers, you can select which to use. Pressing in the **SPEAKERS 1** or **SPEAKERS 2** button activates the respective set of speakers.

To use the set of speakers connected to the **FRONT SPEAKERS 1** terminals, press in the **SPEAKERS 1** button (ON), and press out the **SPEAKERS 2** button (OFF).

To use the set of speakers connected to the **FRONT SPEAKERS 2** terminals, press in the **SPEAKERS 2** button (ON), and press out the **SPEAKERS 1** button (OFF).

To use both sets of speakers, press in both the **SPEAKERS 1** and **2** buttons (ON). To use neither set of speakers, press out both the **SPEAKERS 1** and **2** buttons (OFF).

Note:

When only one set of the front speakers is connected to either the **FRONT SPEAKERS 1** or **2** terminals, do not press in both **SPEAKERS 1** and **2** buttons (ON). If you do, no sound comes out of the front speakers.

Adjusting the Volume

On the front panel:

To increase the volume, turn the **MASTER VOLUME** control clockwise.

To decrease the volume, turn it counterclockwise.

From the remote control:

To increase the volume, press the **VOLUME +** button.

To decrease the volume, press the **VOLUME -** button.

On the front panel

From the remote control

CAUTION:

Always set the **MASTER VOLUME** control to the minimum before starting any source. If the **MASTER VOLUME** control is left turned up, the sudden blast of sound energy can permanently damage your hearing and/or ruin your speakers.

Adjusting the Front Speaker Output Balance

If the sounds you hear from the front right and left speakers are unequal, you can adjust the speaker output balance with the **BALANCE** control.

To decrease the left channel sound, turn the **BALANCE** control clockwise.

To decrease the right channel sound, turn the **BALANCE** control counterclockwise.

When set to the **CENTER** position, no adjustment is applied.

Adjusting the Tone

You can increase or decrease the amount of bass and treble reinforcement.

Adjusting the bass

To increase the bass reinforcement, turn the **BASS** control clockwise.

To decrease the bass reinforcement, turn the **BASS** control counterclockwise.

When set to the **FLAT** position, no bass reinforcement is applied.

Adjusting the treble

To increase the treble reinforcement, turn the **TREBLE** control clockwise.

To decrease the treble reinforcement, turn the **TREBLE** control counterclockwise.

When set to the **FLAT** position, no treble reinforcement is applied.

Receiving Radio Broadcasts

You can browse through all the stations or use the preset function to go immediately to a particular station.

Tuning in Stations Manually

1. Press the **TUNER** button on the front panel. The last received station of the last received band is tuned in.
2. Press the **FM/AM** button to select the band. Each time you press the FM/AM button, the band alternates between FM and AM.
3. Press the **TUNING < or >** button on the front panel repeatedly until you find the frequency you want. Pressing the **TUNING >** button increases the frequency. Pressing the **TUNING <** button decreases the frequency.

Notes:

- You do not have to press the **TUNER** button to change the source to the tuner in Step 1. Pressing the **FM/AM** button in Step 2 can also change the source to the tuner.
- When you hold down the **TUNING < or >** button, the frequency keeps changing until you press the **TUNING < or >** button again or a station is tuned in.
- When a station of sufficient signal strength is tuned in, the **TUNED** indicator lights up on the display.
- When an **FM stereo** program is received, the **STEREO** indicator also lights up.

Using the Preset Tuning

Once a station is assigned to a channel number, the station can be quickly tuned. You can preset up to 40 stations at random. In some cases, test frequencies have been already memorized for the receiver since the factory examined the preset function before shipment. This is not a malfunction. You can preset the stations you want into memory by following the presetting method.

Storing the preset stations

1. Tune in the station you want to preset (see above).
2. Press the **MEMORY** button on the front panel. "----CH" and the **MEMORY** indicator appear on the display for 5 seconds.
3. Select a channel number within the 5 seconds.
 - On the front panel:
 - Press the **PRESET < or >** button.
 - Pressing the **PRESET >** button increases the channel number.
 - Pressing the **PRESET <** button decreases the channel number.
 - From the remote control:
 - Press the 10 keys.

Note:

When you use the remote control, be sure that the 10 keys are activated for tuner, not for the CD. (See page 18.)

4. Press the **MEMORY** button again while the selected channel number is flashing on the display. The selected channel number stops flashing and the **MEMORY** indicator goes off, and the station is assigned to the selected channel number.

To cancel a stored preset station
Storing a new station on a used number erases the previously stored one.

CAUTION:

Preset stations may be erased when power is cut off to the receiver, as when it is unplugged from the AC outlet or a power failure occurs. If the preset stations are lost, simply set the stations again using the above procedure.

Listening at Low Volume (Loudness)

Human ears are not sensitive to bass at low volume. To compensate for this, the loudness function automatically boosts the bass level as you lower the volume.

To use the loudness function, press the **LOUDNESS** button on the front panel. The **LOUDNESS** indicator lights up on the display.

To turn the function off, press the **LOUDNESS** button again. The **LOUDNESS** indicator goes off.

Muting the Sound

You can easily turn down the volume by pressing the **FADE MUTE** button on the remote control.

To mute the sound through all speakers and headphones connected
Press the **FADE MUTE** button so that "MUTING" appears on the display and the **VOLUME** control turns down.

To cancel the mute, press the **VOLUME +** button (or the **VOLUME -** button) on the remote control.

Recording a Source

You can record any source playing through the receiver to the cassette deck connected to the **TAPE** jacks and the **VCR** connected to the **VCR** jacks at the same time. While recording, you can listen to the selected sound source at whatever sound and tone settings you like, without affecting the sound levels of the recording.

Note:

- The output volume level, tone adjustments, as well as surround effects cannot affect the recording.

Listening with Headphones

A standard pair of headphones can be connected to the **PHONES** jack on the front panel. Be sure to turn down the volume before connecting or putting on headphones, as high volume can damage both the headphones and your hearing.

To listen with only headphones

Press out both the **SPEAKERS 1** and **2** buttons (OFF).

Tuning in a Preset Station

On the front panel:

1. Press the **TUNER** button.
The last received station of the last received band is tuned in.
2. Press the **PRESET < or >** button to select a preset channel number.
Pressing the **PRESET >** button changes preset channels in increasing order.
Pressing the **PRESET <** button changes preset channels in decreasing order.

On the front panel

From the remote control:

1. Press the **FM/AM** button.
The last received station of the last selected band is tuned in.
Each time you press the button, the band alternates between FM and AM.
2. Press the **10** keys to select a preset channel number.
Examples: For channel number 5, press 5. For channel number 15, press +10 then 5.
For channel number 20, press +10 then 10.

Note:
When you use the remote control, be sure that the 10 keys are activated for tuner, not for the CD. (See page 18.)

From the remote control

Selecting the FM Reception Mode

You can change the FM reception mode so that reception will be improved.

When an FM stereo broadcast is hard to receive or noisy
Press the **FM MODE/MUTE** button on the front panel. The **MUTE AUTO** indicator goes off on the display. Reception will be improved although you will lose the stereo effect. In this mode, you will hear noise while tuning into the stations.

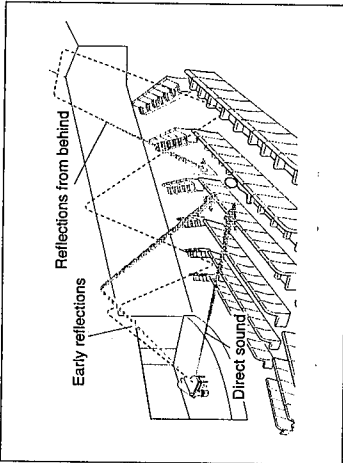

To restore stereo effect
Press the **FM MODE/MUTE** button again so that the **MUTE AUTO** indicator lights up on the display. In this mode, when a program is broadcast in stereo, you will hear stereo sound; when in monaural, you will hear monaural sounds. This mode is also useful to suppress static noise between stations.

Using the Surround Processor

The built-in surround processor provides three types of surround programs — Dolby Pro Logic, Dolby Channel Logic, and JVC's Hall Surround.

What is surround?

The sound heard in a concert hall or a movie theater consists of direct sound and indirect sound: early reflections and reflections from behind. The reflected sounds are always delayed by the distances of the ceiling and walls from the listener. These reflections are some of the most important elements of the acoustic surround.

On JVC's Hall Surround

In order to reproduce a more realistic sound field in your listening room while playing an ordinary stereo source, JVC's Hall Surround has been designed to give you clear vocals and to create the feeling of a concert hall. The sound is reproduced through the front speakers and rear speakers.

On Dolby Surround

Dolby Surround has been also developed to reproduce the important elements of the acoustic surround at home. To watch the soundtracks of video software bearing the mark **Dolby Surround**, which includes the same encoded surround information as found in Dolby Stereo films, the receiver can provide you with 2 Dolby Surround programs (Dolby Pro Logic and Dolby 3ch Logic).

Dolby Pro Logic: Select this mode when the optional rear speakers are connected.
Dolby 3ch Logic: Select this mode when a center speaker is connected without rear speakers.

*** Manufactured under license from Dolby Laboratories Licensing Corporation. Additionally licensed under Canadian patent number 1,037,877. "Dolby", "Pro Logic" and the double-D symbol are trademarks of Dolby Laboratories Licensing Corporation.**

Notes:

- The surround processor has no effect on monaural sources.
- The surround processor cannot be used for recording.

Using JVC's Hall Surround

You need to connect one set of rear speakers to obtain the full effect.

1. Press the **SURROUND ON/OFF** button (or the **ON/OFF** button on the remote control).
One of the surround program indicators (**PRO LOGIC**, **3CH LOGIC**, or **HALL**) lights up on the display.
2. Press the **SURROUND MODE** button (or the **MODE** button on the remote control) repeatedly until the **HALL** indicator lights up on the display.

To cancel **Hall Surround**, press the **SURROUND ON/OFF** button (or the **ON/OFF** button on the remote control) again.

Note:

You can also adjust the delay time (see Step 4 on page 16) and the sound level of the rear speakers (see Step 6 on page 17) for Hall Surround. Once you have adjusted the delay time for the Hall Surround, the receiver memorizes the setting.

Speaker arrangements for Dolby Surround

The following illustrations show how to obtain the optimum sound environment for various Dolby Surround settings. Try to find the speaker direction and location to create the optimum sound field.

CASE 1 When you have added a center speaker and rear speakers

- In this case:**
1. Select PRO LOGIC.
 2. Select NORMAL or WIDE for center mode.
- See pages 16 and 17 for more details.

CASE 2 When you have added rear speakers

- In this case:**
1. Select PRO LOGIC.
 2. Select PHANTOM for center mode.
- See pages 16 and 17 for more details.

CASE 3 When you have added a center speaker (without rear speakers)

- In this case:**
1. Select 3CH LOGIC.
 2. Select NORMAL or WIDE for center mode.
- See pages 16 and 17 for more details.

Preparing for Dolby Surround

The receiver memorizes two sets of Dolby Surround adjustments; one for Pro Logic and the other for 3ch Logic. However, the sound levels of center and rear speakers cannot be stored separately.

1. Press the **SURROUND ON/OFF** button (or the **ON/OFF** button on the remote control). One of the surround program indicators lights up on the display.

2. Press the **SURROUND MODE** button (or the **MODE** button on the remote control). Each time you press the button, the surround program changes as follows:

PRO LOGIC: Select this mode when you use the rear speakers
3CH LOGIC: Select this mode when you use no rear speakers
HALL: This is JVC's original surround program, and is different from Dolby Surround. To use this, see page 14.

3. Press the **CENTER MODE** button on the front panel. Each time you press the **CENTER MODE** button, the mode changes as follows.

PHANTOM: Select this mode when you have not connected a center speaker.
NORMAL: Select this mode when the size of the center speaker is smaller than that of the front speakers.
WIDE: Select this mode when the size of the center speaker is the same as that of the front speakers.
OFF: Select this mode to shut off the output of the center channel signal.

Note: When you have selected 3CH LOGIC in Step 2 above, you cannot select PHANTOM.

4. Press the **DELAY** button to set the delay time of the delayed sound. Each time you press the button, the delay time changes among 3 levels.

DELAY-1: When your distance to your rear speakers is greater than that to the front speakers.
DELAY-2: When your distance to your rear speakers is almost equal to that to the front speakers.
DELAY-3: When your distance to your rear speakers is less than that to the front speakers.

Note: When you have selected 3CH LOGIC in Step 2 above, you cannot adjust the delay time.

5. Press the **TEST** button on the remote control to check your setting. When you press the button, "TEST" starts flashing and a test tone comes out of the speakers in the following order:

Notes:

- No test tone comes out of the rear speakers when you have selected 3CH LOGIC.
- No test tone comes out of the center speaker when you select PHANTOM or OFF for the center mode.

Using the Remote Control

You can operate JVC's audio and video components with this receiver's remote control, since control signals for VCR components are preset in the remote control. To operate these components with the remote control, first select a source with the source selecting buttons on the remote control. Then, operate that source using the remote control.

Note:
If you choose a source on the front panel directly, the remote control will not operate that source. To operate a source with the remote control, the source must be selected using buttons on the remote control.

After pressing the FM/AM button, you can perform the following operations:
 FM/AM Alternates between FM and AM.
 1 - 10, +10 Selects a preset channel number directly.
 To select channel number 5, press 5. For channel number 15, press +10, then 5. For channel number 20, press +10, then 10.

After pressing the CD button, you can perform the following operations on a CD player:
 Starts playing
 Returns to the beginning of the current (or previous) track
 Skips to the beginning of the next track
 Stops playing
 Pauses
 Selects a track number directly
 To select track number 5, press 5. For track number 15, press +10, then 5. For track number 20, press +10, then 10.

After pressing the TAPE button, you can perform the following operations on a cassette deck:
 Starts playback
 Fast winds a tape from right to left
 Fast winds a tape from left to right
 Stops operation
 Pauses
 Selects a track number directly
 To select track number 5, press 5. For track number 15, press +10, then 5. For track number 20, press +10, then 10.

After pressing the VCR button, you can perform the following operations on a VCR:
 Starts playback
 Rewinds a video tape
 Fast winds a video tape
 Stops operation
 Pauses
 TV/VCR CH+/- Changes TV channels on a VCR

Note:
While you are playing the source other than VCR—such as the CD player or cassette deck, you cannot operate the VCR using the remote control.

After pressing the TV button (located at the leftmost portion of the remote control, not the one in the POWER section), you can perform the following operations on TV:
 TV/VCR CH+/- Changes TV channels

Notes:
 • When you press the TV button (located at the upper leftmost portion of the remote control, not the one in the POWER section), the TV's input mode changes to TV.
 • You can also turn the VCR or TV on and off by pressing the VCR or TV button in the POWER section of the remote control.

After pressing the CD-DISC button, you can perform the following operations on a CD player-changer:
 Select the number of a disc installed in a CD player-changer. Then continue to operate the CD player as described above.

Note:
 If you have the CD player-changer XL-MC100C and XL-MC100M, 1 - 6 buttons function as the DISC SKIP button.
 • Press 2, 4, or 6 to skip to the next disc.
 • Press 1, 3, or 5 to skip back to the previous disc.

6. Set the levels of the center and rear speakers.
 On the front panel:

Press the CENTER LEVEL +/- button to set the sound level of the center speaker.
 Press the REAR LEVEL +/- button to set the sound level of the rear speakers.

From the remote control:
 Press the CENTER +/- button while pressing the LEVEL CONTROL button to set the sound level of the center speaker.
 Press the REAR +/- button while pressing the LEVEL CONTROL button to set the sound level of the rear speakers.

- Notes:**
- You can adjust these levels in 1dB steps within the range of ±10 dB. The sound levels of the left and right rear speakers will be the same.
 - You cannot set the sound level of the rear speakers when you have selected 3CH LOGIC.
 - You cannot set the sound level of the center speaker when you select PHANTOM or OFF for the center mode.
 - Although the sound levels of the center and rear speakers can be stored, they are not stored separately for each surround program.

7. Press the TEST button on the remote control again to finish the preparation.
 The test tone stops.

Using Dolby Surround

Once you have set the Dolby Surround adjustments you can use the same adjustments every time you want to enjoy Dolby Surround.

- Press the SURROUND ON/OFF button (or the ON/OFF button on the remote control) so that one of the surround program indicator lights up on the display.
- Press the SURROUND MODE button (or the MODE button on the remote control) repeatedly if the surround program indicator (PRO LOGIC or 3CH LOGIC) you want does not light up. Each time you press the button, the display changes to show the following:
 PRO LOGIC (DOLBY) → 3CH LOGIC (DOLBY) → HALL
- Play a sound source which was processed with Dolby Surround and is labeled with the SURROUND mark.

To cancel Dolby Surround, press the SURROUND ON/OFF button (or the ON/OFF button on the remote control) again.

The COMPU LINK remote control system allows you to operate JVC audio components through the remote sensor on the receiver.

To use this remote control system, you need to connect JVC audio components through the COMPU LINK-3 SYNCHRO jacks (see page 7) in addition to the connections using cables with RCA pin plugs (see page 6). This remote control system allows you to use four functions listed below.

■ **Remote Control through the Remote Sensor on the Receiver**

You can control all audio components through the remote sensor on the receiver using this remote control. For details, see page 18.

Note:

Aim the remote control directly at the remote sensor on the receiver.

■ **Automatic Source Selection**

When you press the play (▶) button on a connected component or on its own remote control, the receiver automatically turns on and changes the source to the component. On the other hand, if you select a new source on the receiver or the remote control, the selected component begins playing immediately. In both cases, the previously selected source continues playing without sound for a few seconds.

■ **Automatic Power On/Off (only possible with the COMPU LINK-3 connection)**

Both the CD player and cassette deck turn on and off with the receiver.

When you turn on the receiver, the CD player or cassette deck will turn on automatically, depending which component has been previously selected.

When you turn off the receiver, both the CD player and cassette deck will turn off.

■ **Synchronized Recording**

Synchronized recording means the cassette deck starts recording as soon as a CD or record begins playing.

To use synchronized recording, follow these steps:

- 1 Put a tape in the cassette deck, and a disc in the CD player (or a record on the turntable).
- 2 Press the record (●) button and the pause (||) button on the cassette deck at the same time. This puts the cassette deck into recording pause.

Note:

If you do not press the record (●) button and pause (||) button at the same time, the synchronized recording feature will not operate.

3 Press the play (▶) button on the CD player or on the turntable.

The source changes on the receiver, and as soon as play starts, the cassette deck starts recording. When the play ends, the cassette deck enters recording pause, and stops 4 seconds later.

Notes:

- During synchronized recording, the selected source cannot be changed.
- If your CD player is playing in program mode, a 4-second blank is recorded between tracks so that the music scan feature of your cassette deck can be used on the recorded tape.
- If the power of any component is shut off during synchronized recording, the COMPU LINK remote control system may not operate properly. In this case, you must start again from the beginning.
- Refer also to the manuals supplied with your CD player and cassette deck.

Troubleshooting

Use this chart to help you solve daily operational problems. If there is any problem you cannot solve, contact your JVC service center.

PROBLEM	POSSIBLE CAUSE	SOLUTION
The display does not light up	The power cord not plugged in	Plug the power cord into an AC outlet
No sound from speakers	Speaker signal cables not connected	Check speaker wiring and reconnect if necessary
	The SPEAKERS buttons are not set correctly	Press the SPEAKERS buttons in or out correctly
	An incorrect source is selected	Select the correct source
Sound from one speaker only	Speaker signal cables are not connected properly	Check speaker wiring and reconnect if necessary
	The BALANCE control is set to one extreme	Adjust the BALANCE control properly
Continuous hiss or buzzing during FM reception	Incoming signal is too weak	Connect an outside FM antenna or contact your dealer
	The station is too far away	Select a new station
	An incorrect antenna is used	Check with your dealer to be sure you have a correct antenna
	Antennas are not connected properly	Check connections
Occasional cracking noise during FM reception	Ignition noise from automobiles	Move the antenna farther from automobile traffic
Howling during record playing	Your turntable is too close to speakers	Move speakers away from the turntable
Remote control does not work	There is an obstruction in front of the remote sensor on the receiver	Remove the obstruction
	Batteries are weak	Replace batteries

Specifications

Amplifier

Output Power	At Stereo operation	70 watts per channel, min. RMS, both channels driven into 8 ohms, 40 Hz to 20 kHz with no more than 0.8% total harmonic distortion.
	At Surround operation Front channels	50 watts per channel, min. RMS, driven into 8 ohms at 1 kHz with no more than 0.8% total harmonic distortion.
	Center channel	50 watts, min. RMS, driven into 8 ohms at 1 kHz, with no more than 0.8% total harmonic distortion.
	Rear channels	50 watts, min. RMS, driven into 8 ohms at 1 kHz, with no more than 0.8% total harmonic distortion.
Total Harmonic Distortion (8 ohms, 1 kHz)		0.8%* at 70 watts output (* Measured by JVC Audio Analysis System)
Frequency Response (8 ohms)	PHONO CD, TAPE, VCR, VIDEO	20 Hz to 20 kHz (±1 dB) 20 Hz to 20 kHz (±1 dB)
Audio Input Sensitivity/ Impedance (1 kHz)	PHONO CD, TAPE, VCR, VIDEO	3.0 mV/47 k ohms 220 mV/47 k ohms
Audio Output Level	TAPE, VCR	220 mV
Signal-to-Noise Ratio (*66 IHF/78 IHF)	PHONO CD, TAPE, VCR, VIDEO	70 dB/78 dB (at REC OUT) 87 dB/80 dB
RIAA Phono Equalization		±0.5 dB (20 Hz to 20 kHz)
LOUDNESS control (Volume Control at -40 dB)		+5 ±2 dB at 100 Hz
Tone Control Range	BASS TREBLE	+8 ±2 dB, -8 ±2 dB (at 100 Hz) +8 ±2 dB, -8 ±2 dB (at 10 kHz)
Video Input Sensitivity/ Impedance	VCR, VIDEO	1 V _{p-p} /75 ohms
Video Output Level	VCR, MONITOR OUT	1 V _{p-p} (at 1 V _{p-p} input)
Synchronization		negative
Signal-to-Noise Ratio		45 dB

FM tuner (IHF)

Tuning Range		87.5 MHz to 108.0 MHz
Usable Sensitivity		10.8 dBf (0.95 μV/75 ohms)
50 dB Quieting Sensitivity	Monaural Stereo	16.3 dBf (1.8 μV/75 ohms) 38.3 dBf (22.5 μV/75 ohms)
Signal-to-Noise Ratio (IHF-A weighted)	Monaural Stereo	80 dB at 85 dBf 73 dB at 85 dBf
Total Harmonic Distortion	Monaural Stereo	0.15% at 1 kHz 0.2% at 1 kHz
Stereo Separation at REC OUT		40 dB at 1 kHz
Capture Ratio		1.5 dB (10 mV)
Alternate Channel Selectivity		60 dB; (±400 kHz)
Frequency Response		30 Hz to 15 kHz; (+0.5 dB, -3 dB)

AM tuner

Tuning Range		530 kHz to 1,710 kHz
Usable Sensitivity	Loop antenna External antenna	300 μV/m 30 μV
Signal-to-Noise Ratio		50 dB (100 mV/m)

General

Power Requirements		AC 120V ₀ , 60 Hz
Power Consumption		170 watts/230 VA 5 watts (in standby mode)
Dimensions (W x H x D)		17 1/8 x 5 1/16 x 13 1/8 inches (435 x 147 x 346 mm)
Mass		16.4 lbs (7.4 kg)

3. Pin Functions

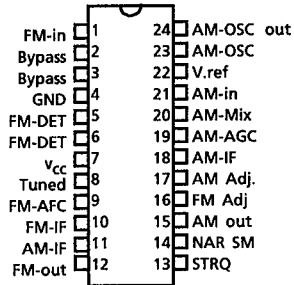

Pin No.	Symbol	I/O	Functions	Pin No.	Symbol	I/O	Functions
1	X in	I	Crystal oscillator (7.2MHz).	11	FM/AM IF	I	Universal counter input
2	CE	I	Fix the chip enable to "H" when inputting (DI) and outputting (DO) the serial data.	12	IF REQ	O	Output the "IF-signal request" to IC102
3	TDATA	I	Receive the control data from the controller (IC201).	13	AM IN	I	Input the local oscillator signal of AM.
4	CK	I	This clock is used to synchronize data when transmitting the data of DI and DO.	14	FM IN	I	Input the local oscillator signal of FM.
5	IFDATA	O	Transmit the data from LC72131M to the controller which is synchronized with CK.	15	V _{DD}	--	This is a terminal of power supply.
6	FM	O	It is "L" on FM mode.	16	PD	O	PLL charge pump output : When the local oscillator signal frequency is higher than the reference frequency high level signals will output. When it is lower than the reference frequency, low level signals will output. When it is same as reference frequency signals, it will be floating.
7	MW	O	It is "L" on MW mode.	17	LPF IN	I	Transistor used for the PLL active low-pass filter
8	LW	O	It is "L" on LW mode.	18	LPF OUT	O	Transistor used for the PLL active low-pass filter
9	AUTO/MONO	O	It is "L" on monaural, "H" on auto.	19	V _{SS}	--	Connected to GND
10	POWER	O	Regulator control signal P ON "H", STANDBY "L"	20	X out	O	Crystal oscillator (7.2MHz).

■ LA1266A (IC104) : FM AM IF AMP & detector

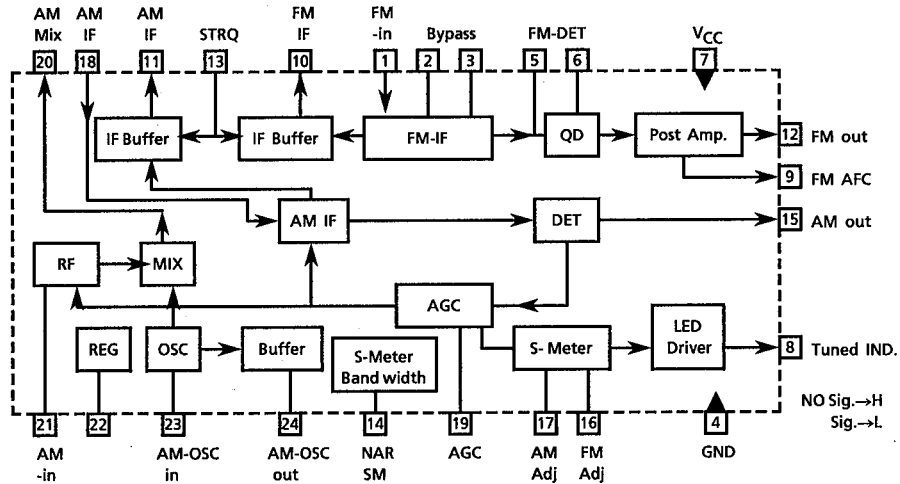

1. The main function descriptions

- (1) Amplify and detect of FM intermodulation frequencies.
- (2) It has local oscillator and mixer for AM, and amplify the AM-IF signal.

2. Top View

3. Block Diagram

4. Pin Function Description

Pin No.	Symbol	I/O	Functions and Operations
1	FM in	I	This is an input terminal of FM IF Signal.
2, 3	Bypass	--	Bypass of FM IF Amp.
4	GND	--	This is the device ground terminal.
5, 6	FM DET	--	FM detect transformer.
7	V _{CC}	--	This is the power supply terminal.
8	Tuned	O	When the set is tuning, this terminal become "L".
9	FM AFC	O	This is an output terminal of voltage for FM - AFC.
10	FM IF out	O	When the IF REQ signal of IC251(LC7218) applies to pin13, the signal of FM IF outputs.
11	AM IF out	O	When the IF REQ signal of IC251(LC7218) applies to pin13, the signal of AM IF outputs.
12	FM out	O	FM detection output.
13	STRQ	I	The IF-signals come out from pin10 (FM-IF) or pin11 (AM-IF) while this terminal goes to "High".
14	NAR.SM	--	Control the Band-width of AM signal meter.
15	AM out	O	AM detection output.
16	FM Adj	--	For adjust the stop level (or mute level) of FM.
17	AM Adj	--	For adjust the stop level (or mute level) of AM.
18	AM-IF	I	Input of AM IF Signal.
19	AM-AGC	I	This is an AGC voltage Input terminal for AM.
20	AM-MIX	O	This is an output terminal for AM mixer.
21	AM-IN	I	This is an input terminal for AM RF Signal.
22	V.REF	--	Control the Band-width of FM signal meter.
23	AM-OSC	--	This is a terminal of AM Local oscillation circuit.
24	AM-OSC out	O	AM Local Oscillation Signal output.

■ LA3401 (IC105) : FM MPX Detector

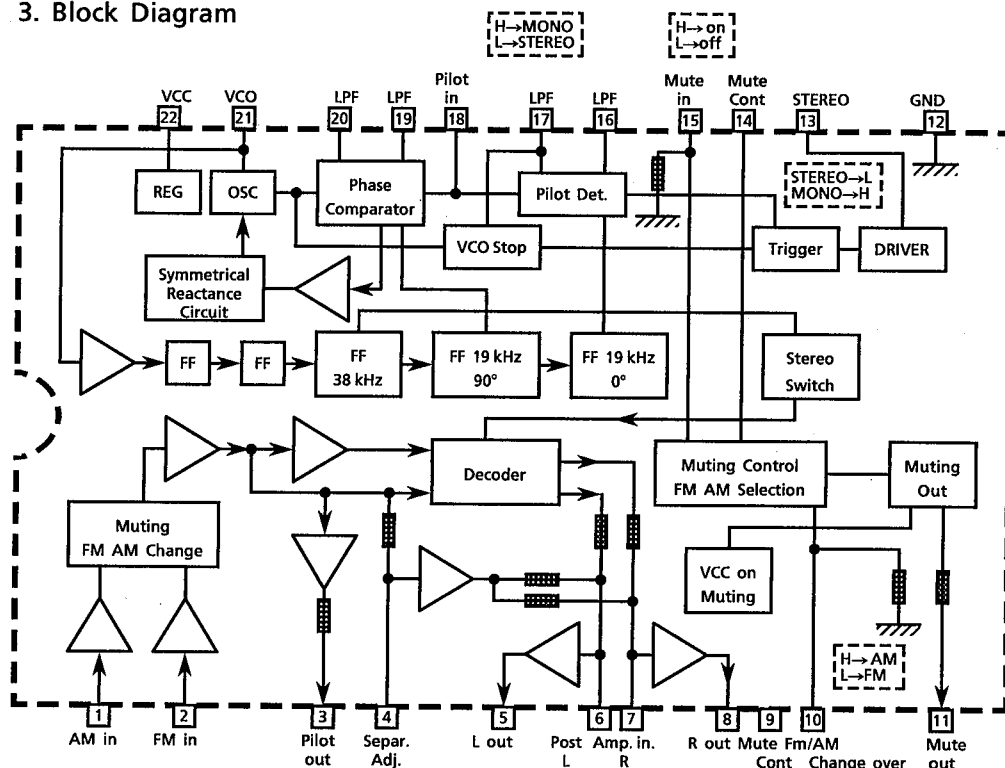

1. The main function descriptions

- (1) Detect the FM Multiplex Signal (Stereo signal).
- (2) When receiving FM Stereo Signal, it outputs the signal for indicator.
- (3) AM / FM Audio Amplifier.

2. Terminal Layout

3. Block Diagram

4. Pin Function Description

Pin No.	Symbol	I/O	Functions and Operations
1	AM in	I	This is an input terminal for AM detection signal.
2	FM in	I	This is an input terminal for FM detection signal.
3	Pilot out	O	Output of MPX pilot signal (Connect to Pin18).
4	Sepa. Adj.	--	Separation adjustment.
5	L. out	O	Left channel signal output.
6	L	O	Reversal output of Pin5.
7	R	O	Reversal output of Pin8.
8	R out	O	Right channel signal output
9	Mute Cont	--	The mute time is controlled by the connected capacitor when turning the power switch on.
10	FM / AM	I	Change over the FM / AM input. "H" : AM, "L" : FM
11	Mute out	--	Not use
12	GND	--	Ground terminal.
13	Stereo	O	Stereo indicator output. Stereo : "L", Mono : "H"
14	Mute Cont	--	The mute time is controlled by the connected capacitor when changing over the FM / AM .
15	Mute in	I	Mute signal input. "H" : Mute on, "L" : Mute off.
16	LPF	--	Low pass filter of pilot detector.
17	LPF	--	While this terminal goes to "H", the VCO stop.
18	Pilot in	I	Pilot input.
19	LPF	--	Low-pass filter of PLL.
20	LPF	--	Low-pass filter of PLL.
21	VCO	I	Voltage controlled oscillator terminal.
22	VCC	--	Power supply.

Disassembly Procedures

(1) Removing the top cover

1. Remove 4 screws **(A)** fastening both sides of top cover, and 3 screws **(B)** fastening the rear side.
2. Remove the top cover.

(2) Removing the Front panel Ass'y

1. Remove the top cover.
2. Remove the Master volume knob, bass knob, treble knob and balance knob.
3. Remove the nut fastening the Master volume knob, bass knob, treble knob and balance knob.
4. Remove the 4 screws **(C)** fastening bottom side of front panel ass'y.
5. Remove the 2 screws **(D)** fastening top side of front panel ass'y.
6. Remove it.

(A) .. E406308-001 **(B)** ... E73273-006 **(C)** ... SDSF3008M **(D)** ... SBSG308CC

(3) Removing the Front P.C. Board

1. Removing the top cover.
2. Removing the front panel assembly.
3. Removing the shield plate ass'y.
4. Removing the 13 screws (E).
5. Remove it.

* Assembling the 3 spacer (F)(E306805-122) fixing the shield plate ass'y.

(4) Removing the bottom cover with power trans

1. Removing the top cover.
2. Removing the 4 screws (D) and the 2 screws (H) fastening bottom side.
3. Removing the 5 screws (B) fastening rear panel.
4. Removing the 8 screws (C) and (C'') fastening same P.C. boards ass'y.
5. Cut the tie band of the FW801.
6. Remove it.

※ The screw (C) which secures the bottom cover is also used for ground.

It is necessary to ground before checking after the bottom cover is removed.

(B) E73273-006

(C)(C'') SMSG3008CC

(D) SDSF3008M

(E) SDSF2608Z

(H) SDSG3008M

(5) Removing the Power Transistor

1. Remove the (1) and (4).
2. Unsolder the broken transistor.
3. Remove the some screws (C) fastening it.
4. Remove it.

© .. E73525-003

ADJUSTMENT PROCEDURES

■ Tuner section

Tuning range

Area	Range	
	MW (kHz)	FM (MHz)
the U.S.A., Canada	530~1710	87.5MHz~108MHz

(1) Tuning Voltage

Confirm the voltages in the table at TP101.

FM Tuning voltage (Unit : V)

Area	Frequency	
	87.5MHz	108MHz
the U.S.A., Canada,	1.6±1.0	8.0±2.0

AM Tuning voltage (Unit : V)

Area	Frequency (MW)						
	522KHz	530KHz	531KHz	1600KHz	1602KHz	1629KHz	1710KHz
the U.S.A., Canada	—	1.0 > 0.5	—	—	—	—	8.0±0.8

(2) FM Center meter

Receive a broadcast by using the function of 'AUTO STOP'.

Adjust T105 (Detector coil) so taht the voltage at TP102 becomes 0±1.5mV.

■ Power Amplifier section

■ Idling current

- (1) Set the volume control to minimum during this adjustment. And set surround mode "OFF".
- (2) Turn VR741 and VR742 fully counterclockwise to warm up before adjustment.
If the heatsink is already warm from previous use the correct adjustment can not be made.
- (3) Connect a DC voltmeter to R771 resistor's leads for left channel, or to R772 for right channel.
- (4) Adjust R771 for left channel, or R772 for right channel, so that the DC voltmeter becomes 1mV~10mV.

- MEMO -
