When replacing the parts marked with  , be sure to use the designated parts to ensure safety.

1. Specifications

FM Section (Based upon IHF Standard)

Tuning Range	: 87.9 – 107.9 MHz
CH Space	: 200 kHz (U.S.A. & Canada) 100 kHz (Other Areas)
Usable Sensitivity	: 0.85 μ V/75 Ω (9.8 dBf)
50 dB S/N Sensitivity	
Mono	: 1.5 μ V/75 Ω (14.8 dBf)
Stereo QSC AUTO	: 9.8 μ V/75 Ω (31.0 dBf)
QSC OFF	: 19 μ V/75 Ω (36.8 dBf)
Signal to Noise Ratio	
Mono	: 83 dB (73 dB, DIN)
Stereo	: 78 dB (69 dB, DIN)
Distortion	
Mono	100 Hz : 0.05 % 1 kHz : 0.05 % 6 kHz : 0.05 %
Stereo	100 Hz : 0.08 % 1 kHz : 0.08 % 6 kHz : 0.15 %
Capture Ratio	: 1.0 dB
Alternate Channel	: 80 dB, \pm 400 kHz
Selectivity	
Image Rejection	: 80 dB
IF Rejection	: 100 dB
Spurious Rejection	: 100 dB
AM Suppression	: 60 dB
Stereo Separation	1 kHz : 55 dB

Frequency Response : 30 Hz ~ 15 kHz +0.3 dB -1.0 dB

Sub-Carrier Suppression : 68 dB

Output Level : 600mV/2.2k Ω

MW Section

Tuning Range	: 530 – 1620 kHz or 531 – 1602 kHz
CH Space	: 9 kHz/10 kHz selectable
Sensitivity	
Bar Antenna	: 300 μ V/m
Ext Antenna	: 30 μ V
Total Harmonic Distortion	: 0.3 %
Signal to Noise Ratio	: 50 dB
Selectivity	: 40 dB \pm 9 kHz
Image Rejection Ratio	: 55 dB
IF Rejection Ratio	: 60 dB
Spurious Rejection	: 55 dB

Dimensions and Weight

Designated Areas	Dimensions (cm)			Weight (kg)	
	Height	Width	Depth	Net	Gross
U.S.A. & Canada	7.9 (3-1/8")	47.4 (18-3/4")	34.5 (13-5/8")	4.5 (9.9 lbs)	5.5 (12.1 lbs)
Other Countries	7.9 (3-1/8")	45.0 (17-3/4")	34.5 (13-5/8")	4.1 (9.0 lbs)	5.5 (12.1 lbs)

POWER SPECIFICATIONS

Designated Areas	Line Voltage & Frequency	Power Consumption
U.S.A. & Canada	AC 120 V~, 60 Hz	10 W
Other Countries	AC 110/120/220/240 V~ selectable, 50/60 Hz (See Fig. 1)	10 W

This set (except for U.S.A. and Canada) is switchable to the proper line voltage by turning the Voltage Selector with a screwdriver or coin.

Voltage Selector is placed on the Rear Panel but not mounted for U.S.A. and Canada.

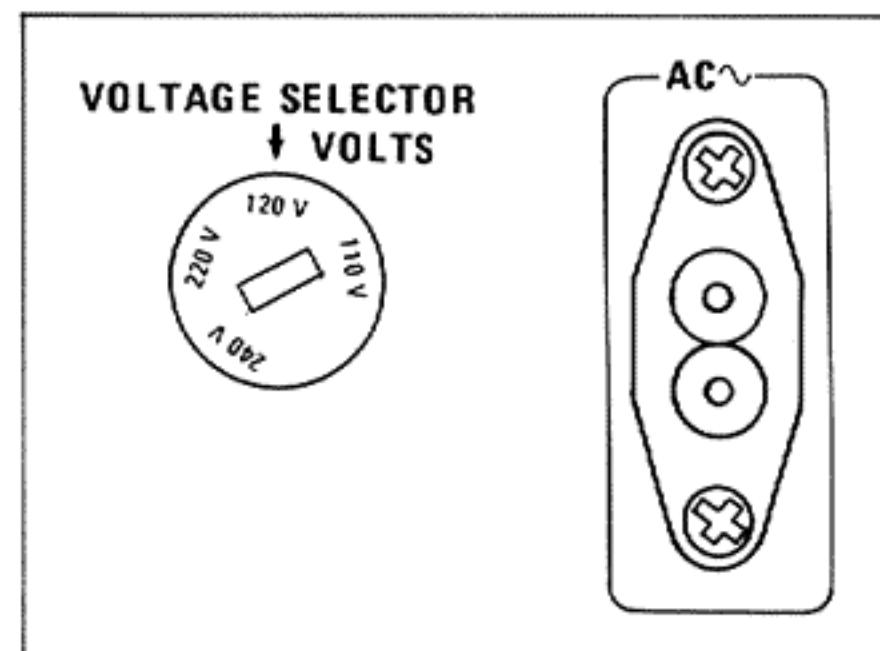

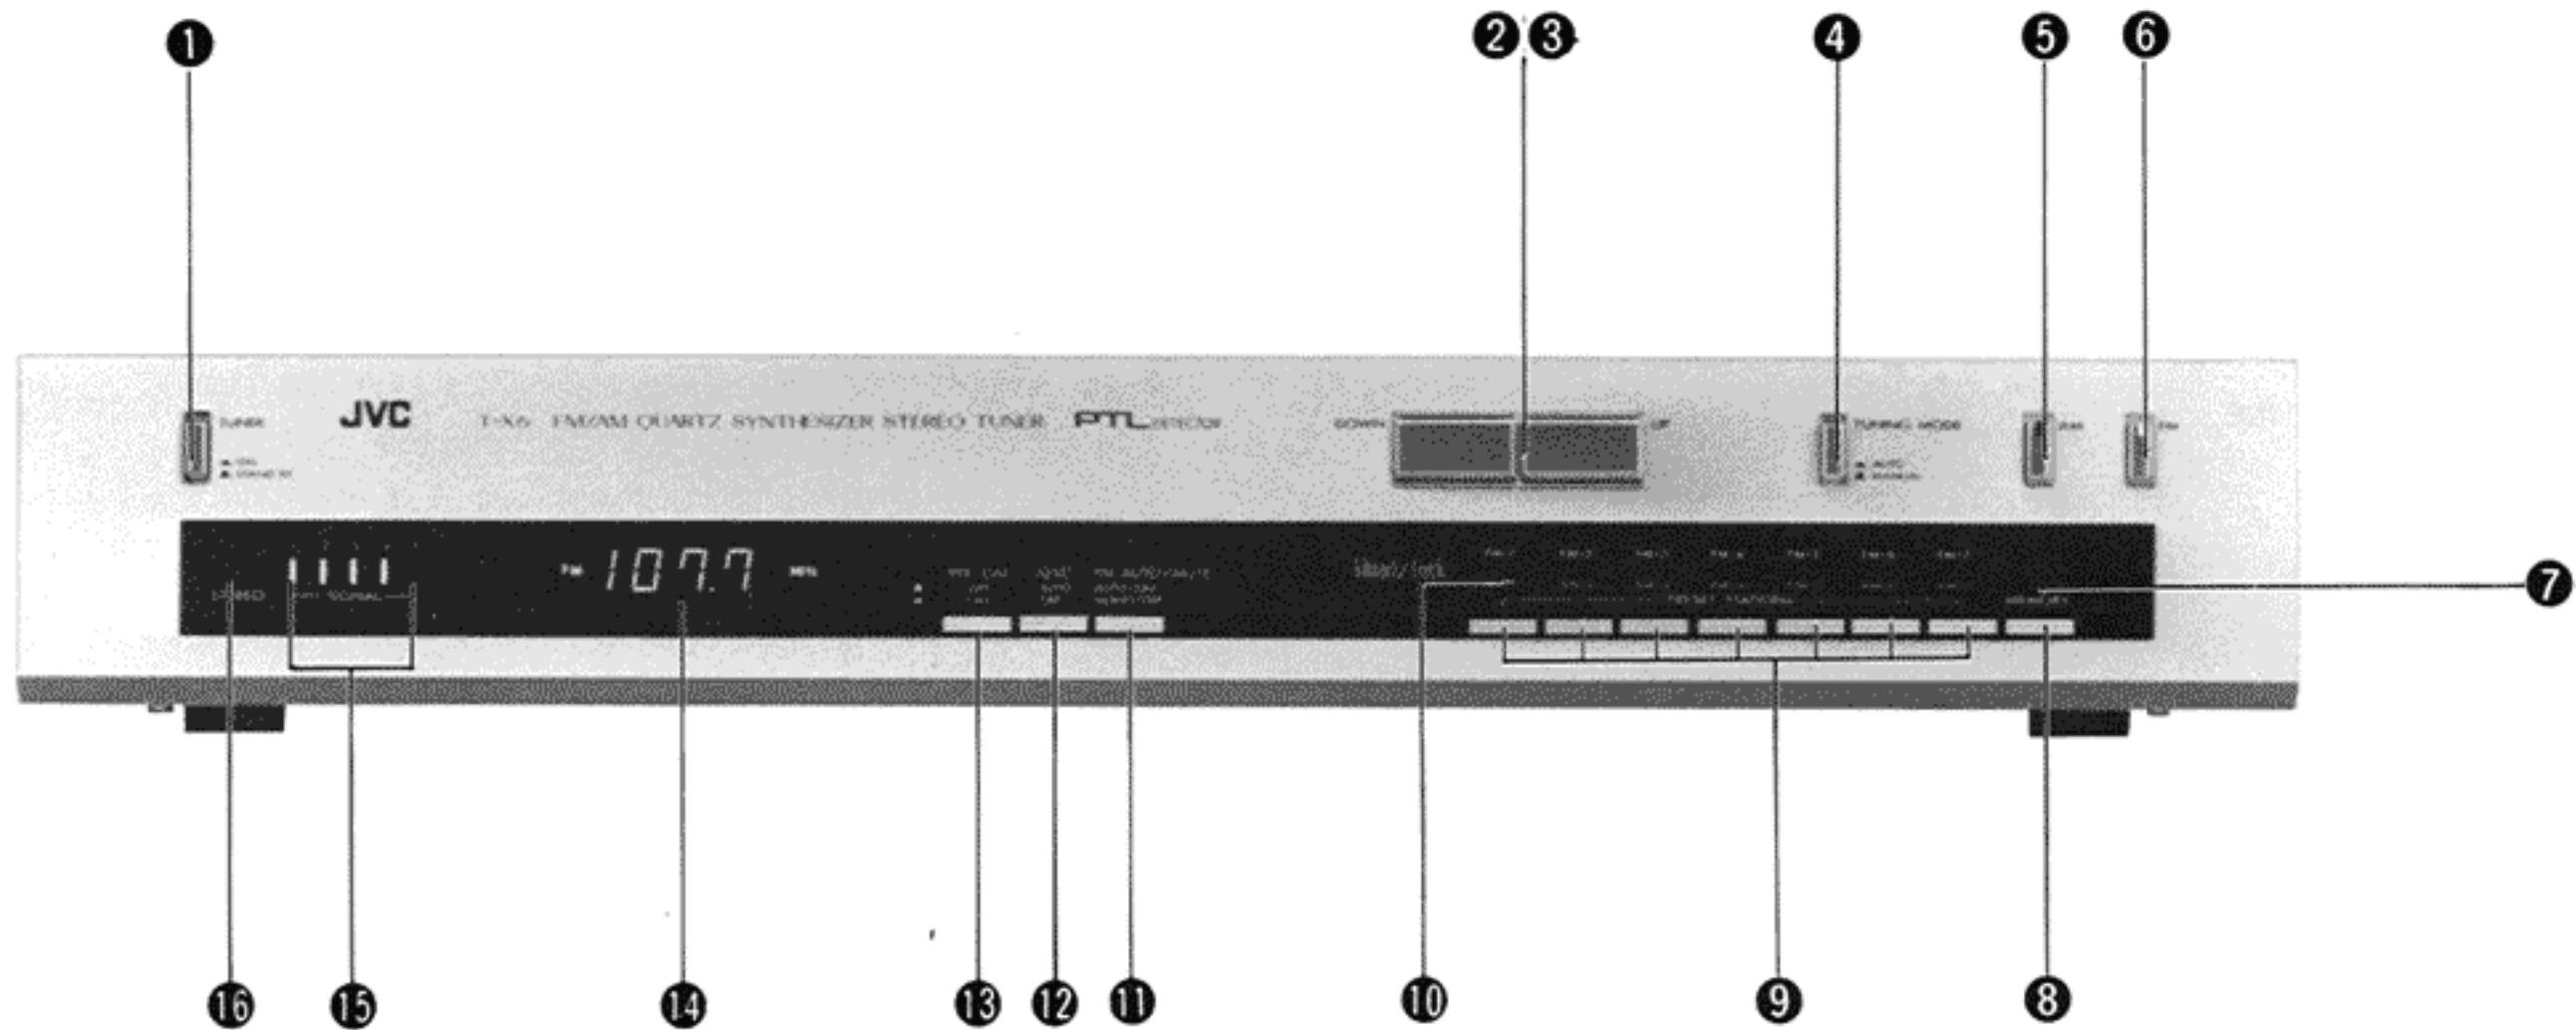

Fig. 1

2. Names of Controls and Their Functions

1. TUNER switch

ON: Press to ON (■) to listen to broadcasts.
STAND BY: When the power cord is plugged into the AC wall outlet, the preset stations are not subject to cancellation or alteration. The preset data are maintained even in the case of a power failure or when the power cord is disconnected, if the period of non-applied power does not exceed a couple of days.

2,3. UP/DOWN buttons (TUNING)

Auto tuning

When the UP or DOWN button is pressed (but do not keep it pressed), scanning will be made automatically and simultaneously the frequency-display changes successively, until a broadcasting station is tuned in. When a station is tuned in, the scanning stops automatically and the display shows the frequency of the station tuned in. In the course of automatic scanning (tuning), when the frequency number reaches the upper or lower limit of the band, scanning will automatically reverse and continue scanning until a station is tuned in.

When the UP scanning button is pressed, the frequency number changes in the direction of increasing frequencies. When the DOWN button is pressed, the frequency number change in the direction of decreasing frequencies.

Manual tuning

Manual tuning is possible to set the TUNING MODE switch to the out position (■). Pressing the Up-Down-scanning buttons, the tuned-in frequency changes in steps of predetermined frequencies (see table below). Tapping this button changes the tuner step by step, continuous pressing (more than 0.6 sec.) changes tuning in a high speed scanning sequence which released.

AM channel spacing switch is provided on the rear panel for selecting 9 kHz steps to which your channel frequency may change in the future.

Channel spacing

Band Area	FM	AM
USA, Canada	200 kHz	* 10kHz/9kHz
Other	100 kHz	* 9kHz/10kHz

Note: * Preset at the factory.

4. TUNING MODE switch

Press this switch in for AUTO tuning (■) and press again to set to the out position (■) for MANUAL tuning.

5. AM button

Press to listen to AM broadcasts.

6. FM button

Press to listen to FM broadcasts.

7. MEMORY indicator

When the MEMORY button is pressed, this MEMORY indicator lights to show that the unit is ready to register the preset station to memory. This indicator will go out automatically in about 5 sec. or by pressing the except PRESET STATIONS button.

8. MEMORY button

When this button is pressed, the MEMORY indicator lights. If the PRESET STATIONS button is pressed while this indicator is lighting the frequency of the station being received is displayed and becomes preset to that channel. When the PRESET STATIONS button is pressed after this indicator extinguishes, the frequency of the previously preset station is displayed on the frequency indicator. In that case, perform tuning once again and press the MEMORY button.

9. PRESET STATIONS buttons

These buttons are used to select one of the preset stations or to preset the station for an individual channel. For presetting, press one of these buttons while the MEMORY indicator remains lit after the MEMORY button has been pressed. Then the station which is being received will be "memorized". One of the PRESET STATIONS indicators will light to show which channel is in operation.

FM 7, AM 7, stations are possible to be preset.

10. PRESET STATIONS indicators

The indicator, corresponding to the selected station, lights when one of the PRESET STATIONS buttons is pressed.

11. FM AUTO/MUTE

AUTO/ON: For FM stereo and monaural broadcasts.

(■) Set to this "out" position for normal FM reception. This also eliminates inter-station noise during FM tuning.

MONO/OFF: For sub-standard FM broadcasts.

(—) Both stereo and monaural broadcasts are received in mono with less noise. Select this "in" position to bring in distant FM stations so that the muting circuit may not mute the broadcast signal.

12. QSC switch

AUTO: Hiss noise is liable to occur if input signals are weak during FM stereo reception. When this switch is set to its "AUTO" position (■), the Quieting Slope Control Circuit is activated automatically to reduce hiss noise if the signal strength is insufficient for lighting the SIGNAL strength indicator up to 3, (i.e. if the indicator should light up to only 2). If the input signal becomes higher than that level, the circuit is automatically released.

OFF: No noise reduction effect is obtainable (—) irrespective of the input signal level.

13. REC CAL switch

OFF: For normal broadcast listening.

CAL: Set to this position for level adjusting when recording FM broadcasts.

14. FREQUENCY indicator

The tuned-in frequency is displayed digitally. Four digits (kHz) are displayed for AM reception and four digits (MHz) are displayed for FM reception.

15. SIGNAL strength indicator

Indicates the strength of the signal being received. Best reception is obtained when all five LEDs light. Adjust the antenna so that the maximum number of LEDs light.

16. STEREO indicator

This indicator lights when you are tuned to a FM stereo broadcast with the FM AUTO/MUTE switch at "AUTO/ON".

3. Explanation of New Technology

3-(1) S/N of PLL Synthesizer System

■ S/N Ratio of PLL Synthesizer System

The PLL synthesizer tuner having accurate and stable tuning frequencies is chiefly characterized by the easy formation of preset selecting functions. However, the only demerit of the PLL synthesizer tuner is that its S/N ratio is lower than that of an analog tuner.

The main causes of S/N deterioration are broadly divided into two categories:

- 1) Logic noise entering into each section of the receiver.
- 2) Harmonic component of the logic noise that corresponds exactly to the reception frequency, intermediate frequency or the like.

The following is a typical example of the former. The variable capacitor has an applied voltage to control the tuner local oscillation frequency, in this case the logic noise slightly remains without DC conversion.

For example, with a variable capacitor with a 3 V – 23 V range, the AC noise level present when obtaining on 80 dB S/N is about 20 μ V from the point of calculation. To get an AC noise level of less than 20 μ V, it would be required to completely eliminate single spectrum noise. Possibly the main cause of noise is the dynamic interference from the indicator section, noise from the control logic section, hum induction from the power supply, reference frequency leakage, etc.

In general, the method of reducing the induction and leakage of the logic pulse is as follows:

- 1 To completely stop logic pulse by making the logic section static.
- 2 To make the pulse signal power sufficiently small.
- 3 To shorten the pulse signal transmission line.
- 4 To decrease the number of pulse signal lines, and the like.

Especially, high power pulses for operation of LEDs and fluorescent display tubes of the indication section are noise sources.

Since the T-X6 employs a newly developed static driver LSI for indicating the tuned frequency and the preset station, indication noise is completely eliminated.

In addition, since it is impossible to stop the logic circuit from controlling the system, the PLL synthesizer LSI in the T-X6 suppresses noise to a very low level through the use of an extremely low power CMOS.

Since the control and synthesizer sections are included in one chip LSI, running of data and clock lines to the PLL synthesizer on the circuit board is not necessary, thus removing the noise radiated by these lines.

Concerning hum induction, the output of the local oscillator and the DC line to the variable capacitors, both susceptible to induction noise are shielded thus permitting great reduction of hum induction.

For the reference frequency of the PLL synthesizer, a sufficiently high frequency outside the audio band is used; the employment of the pulse swallow system permits 25 kHz at FM. Thus, the S/N deterioration by the reference frequency is completely covered.

The latter (item 2) relates especially to the division ratio of the local oscillator including the prescaler. The tuner reception section is directly affected by the relatively high frequency pulse of the prescaler, etc. and thus a beat occurs. This occurrence may degrade the S/N.

Since a high frequency response is required for the prescaler, the ECL process is frequently used. Generally, in this process, the current consumption is about several tens of mA and therefore large, while in the prescaler of the T-X6, the current consumption is several mA and small so that no beat occurs.

Many factors of S/N deterioration in the PLL synthesizer tuner exist. This is the reason that S/N improvement is extremely difficult.

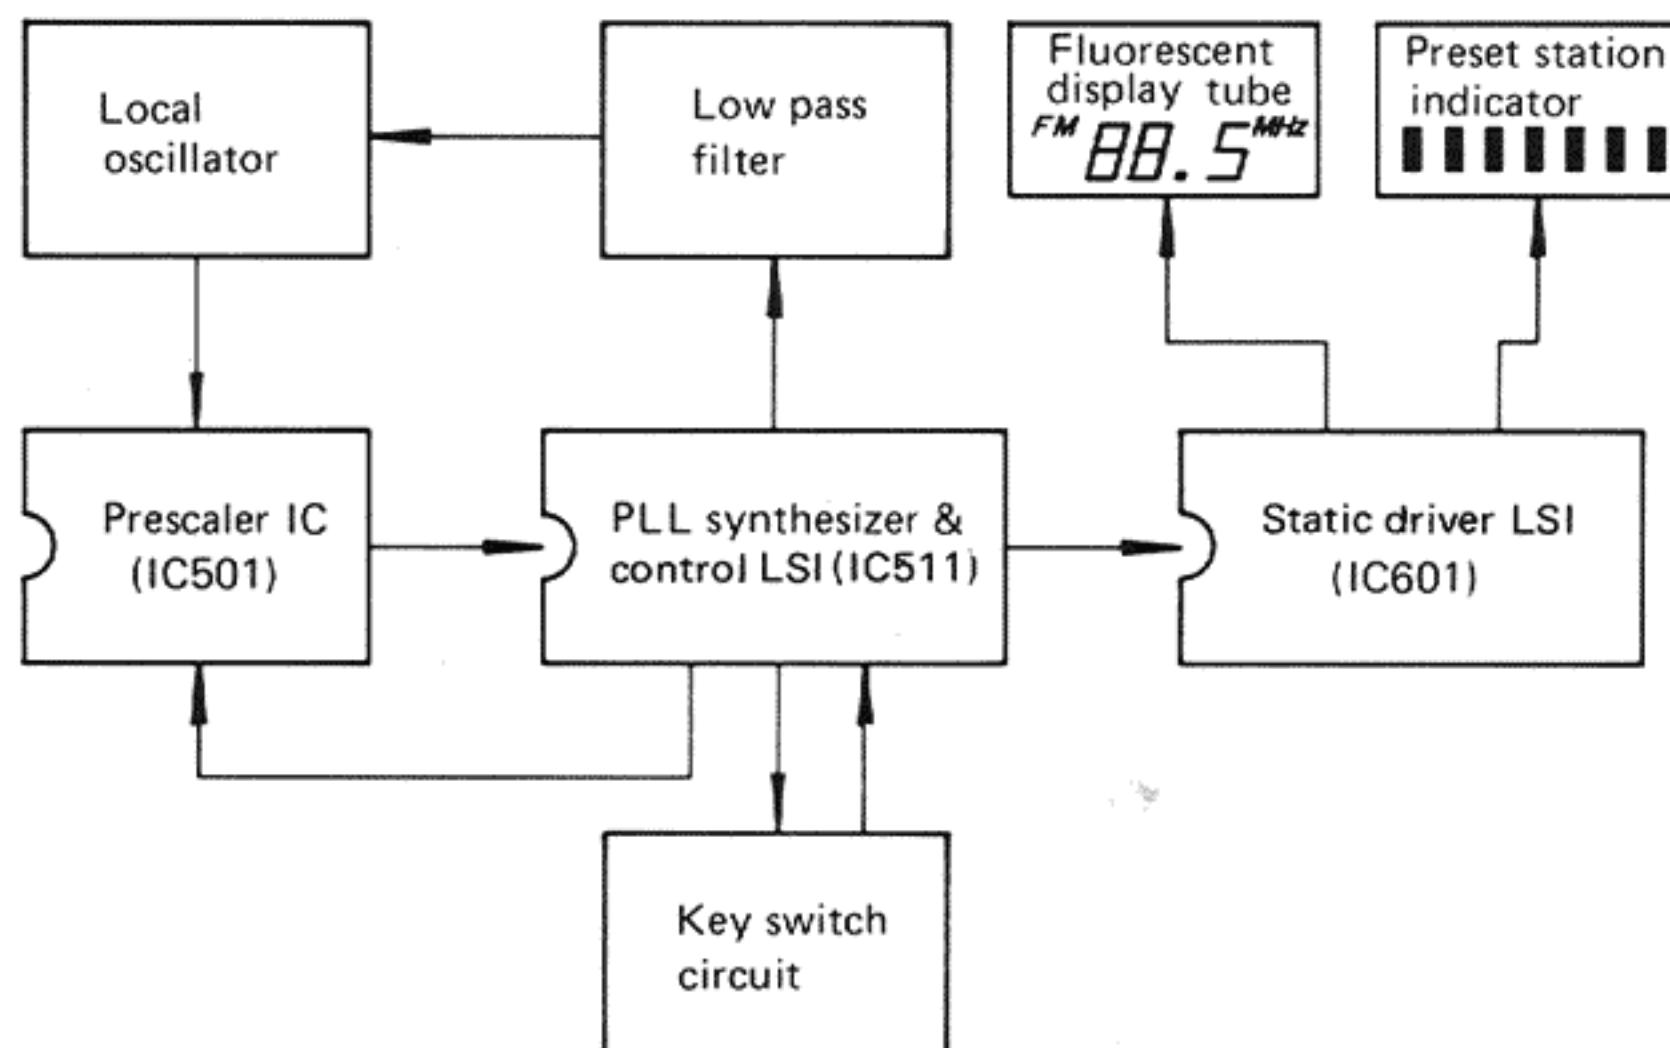

The newly developed PLL synthesizer system employed in the T-X6 solves these problems one by one to permit high S/N.

3-(2) Composition of New PLL Synthesizer System

■ Configuration of the newly developed PLL Synthesizer Tuner System

In the T-X6, the PLL synthesizer system consists of a newly developed PLL synthesizer LSI (IC511), an ex-

clusive-use prescaler IC (IC501) and a static driver LSI (IC601).

Conventionally, the PLL synthesizer section and the control section are composed of two chip ICs. In the T-X6, they are made into one chip LSI through use of high integration technology and their configuration is very simple.

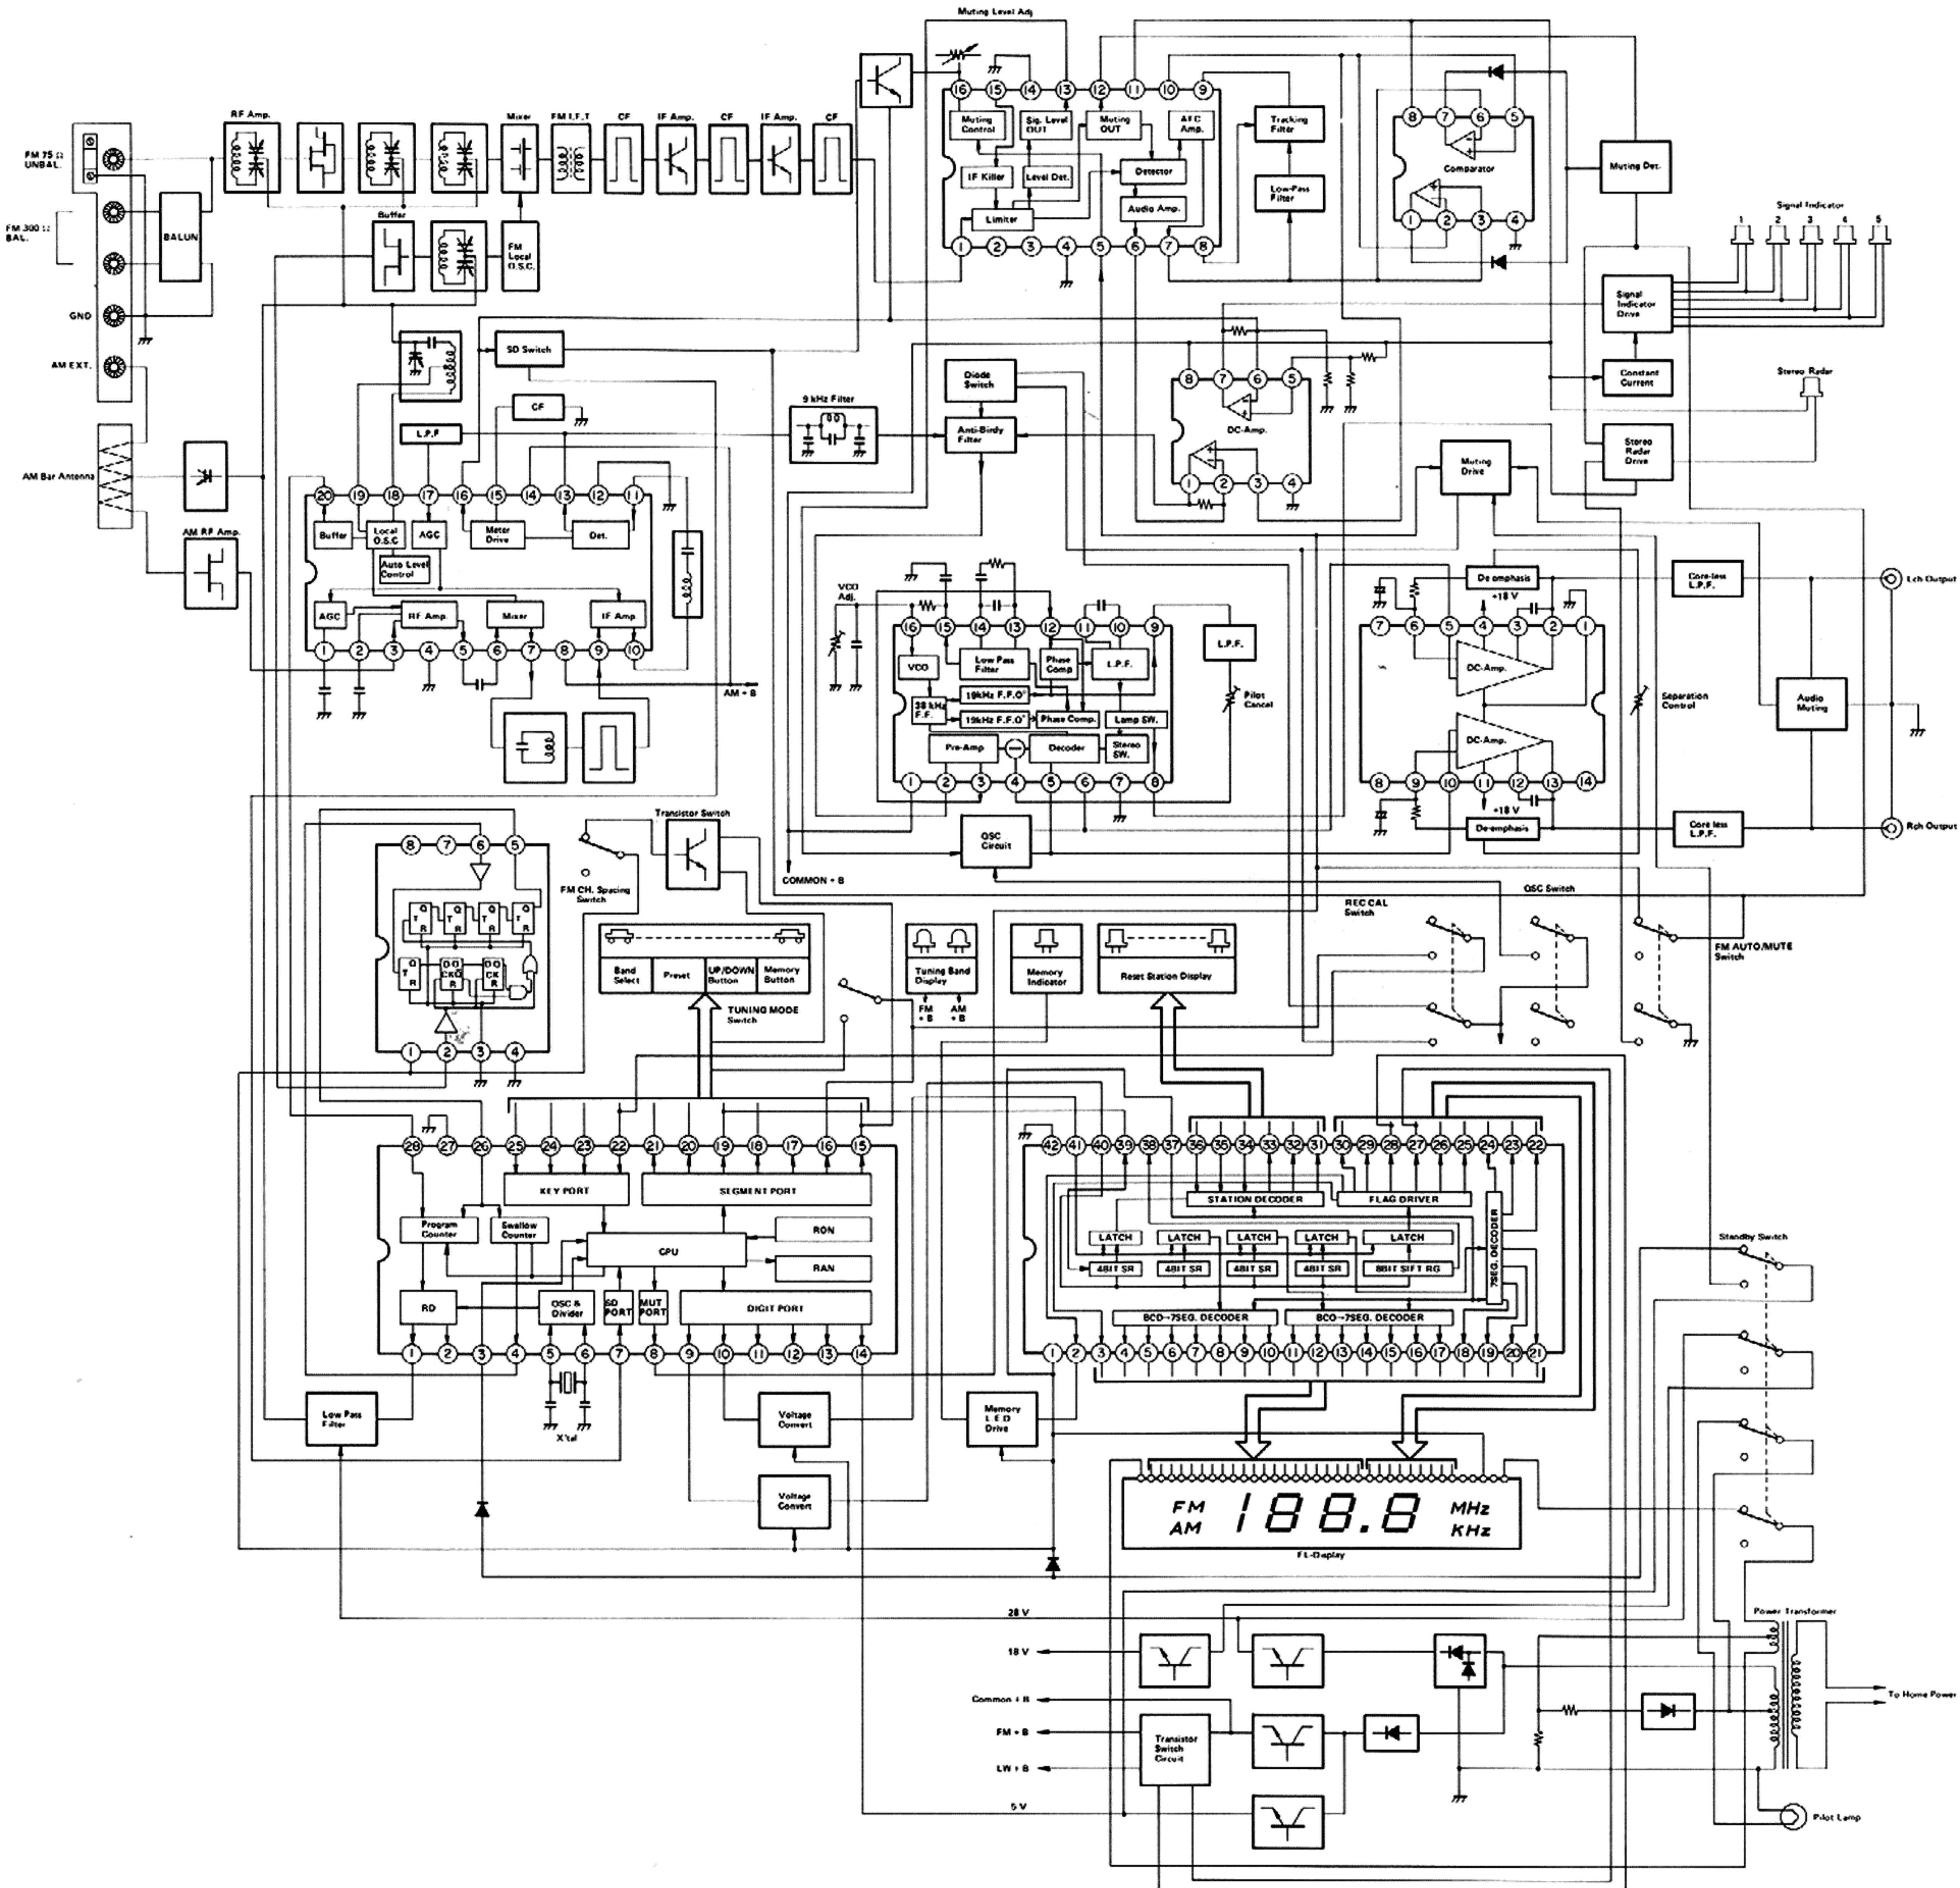

Fig. 1 shows the block diagram of the T-X6. It is recommended that this block diagram is compared with the block diagram on page 27 in the previously issued service note (No. 2869) of the T-40P.

Since the control section in the PLL synthesizer LSI employs a 16-bit microcomputer, finer control operation is possible. In addition, since the PLL synthesizer section uses the pulse swallow system, heightening of the FM reference

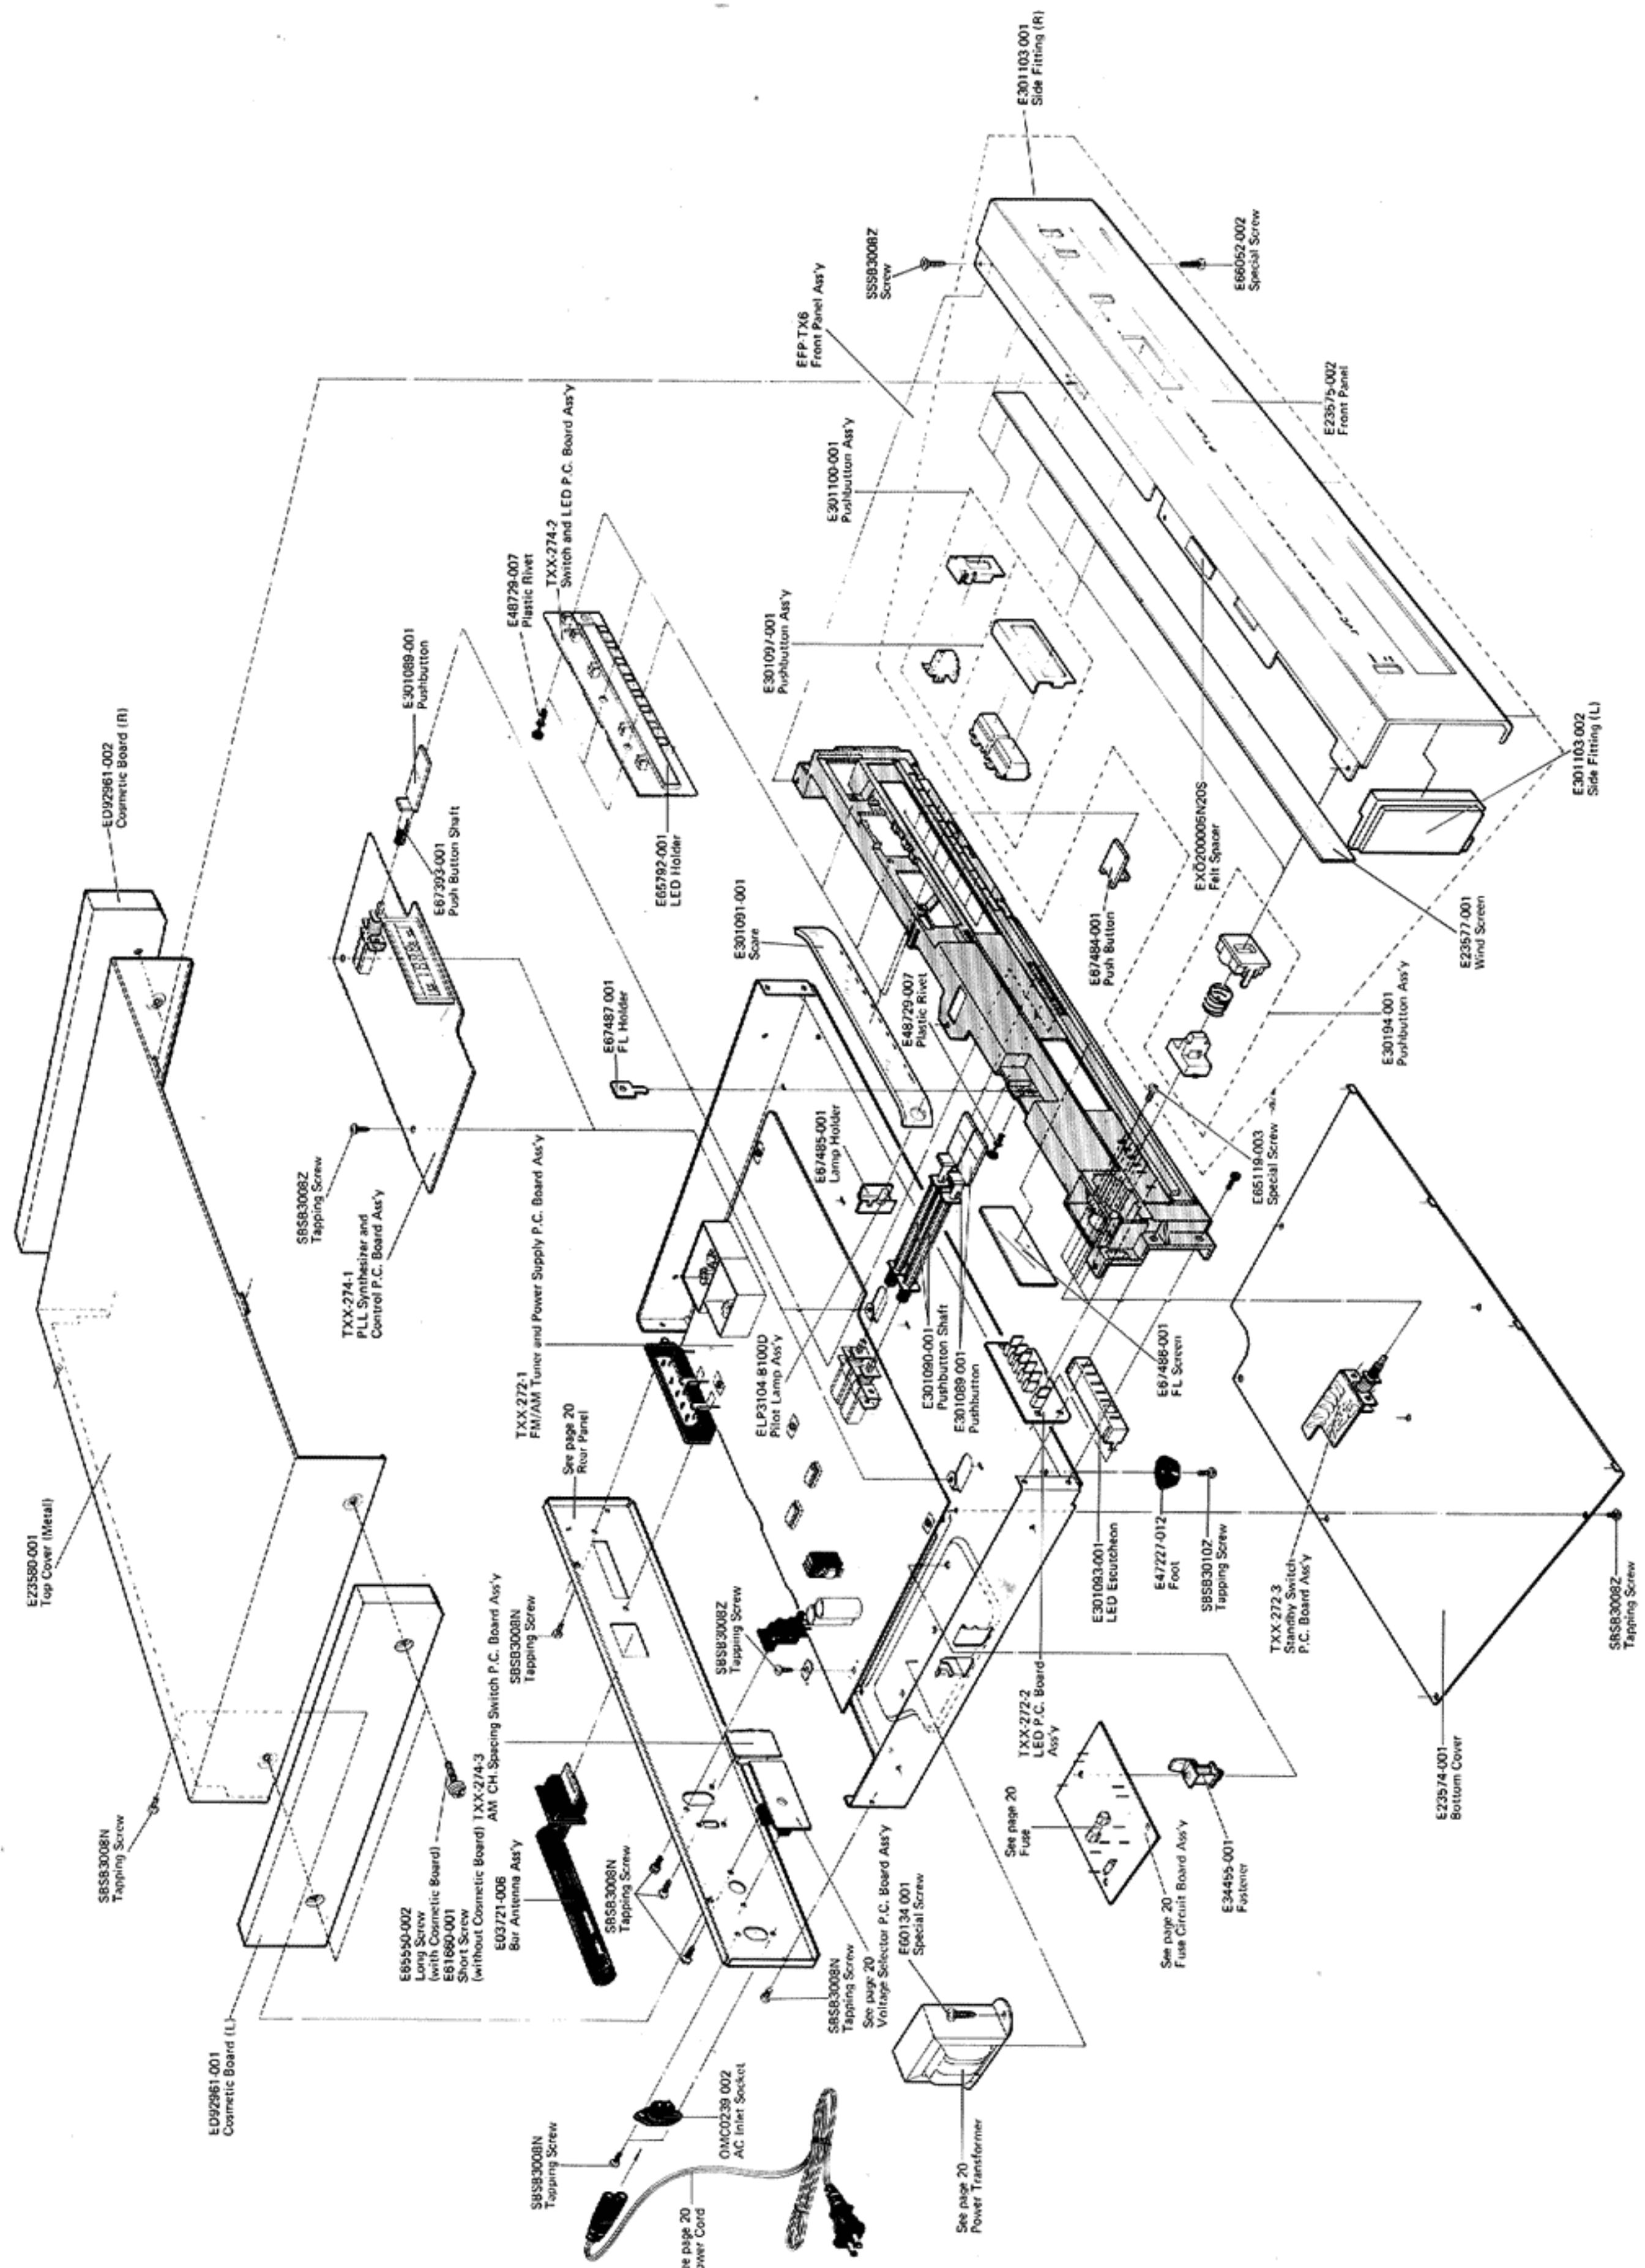

frequency is possible, thus improving the S/N of FM. Likewise, the static driver LSI greatly improves the S/N of both AM and FM because it can indicate the tuned frequency and the preset station without the occurrence of noise.

The display data is emitted serially in synchronization with the clock pulse, from the microcomputer in the PLL synthesizer LSI, and is latched in the static driver LSI.

4. Block Diagram

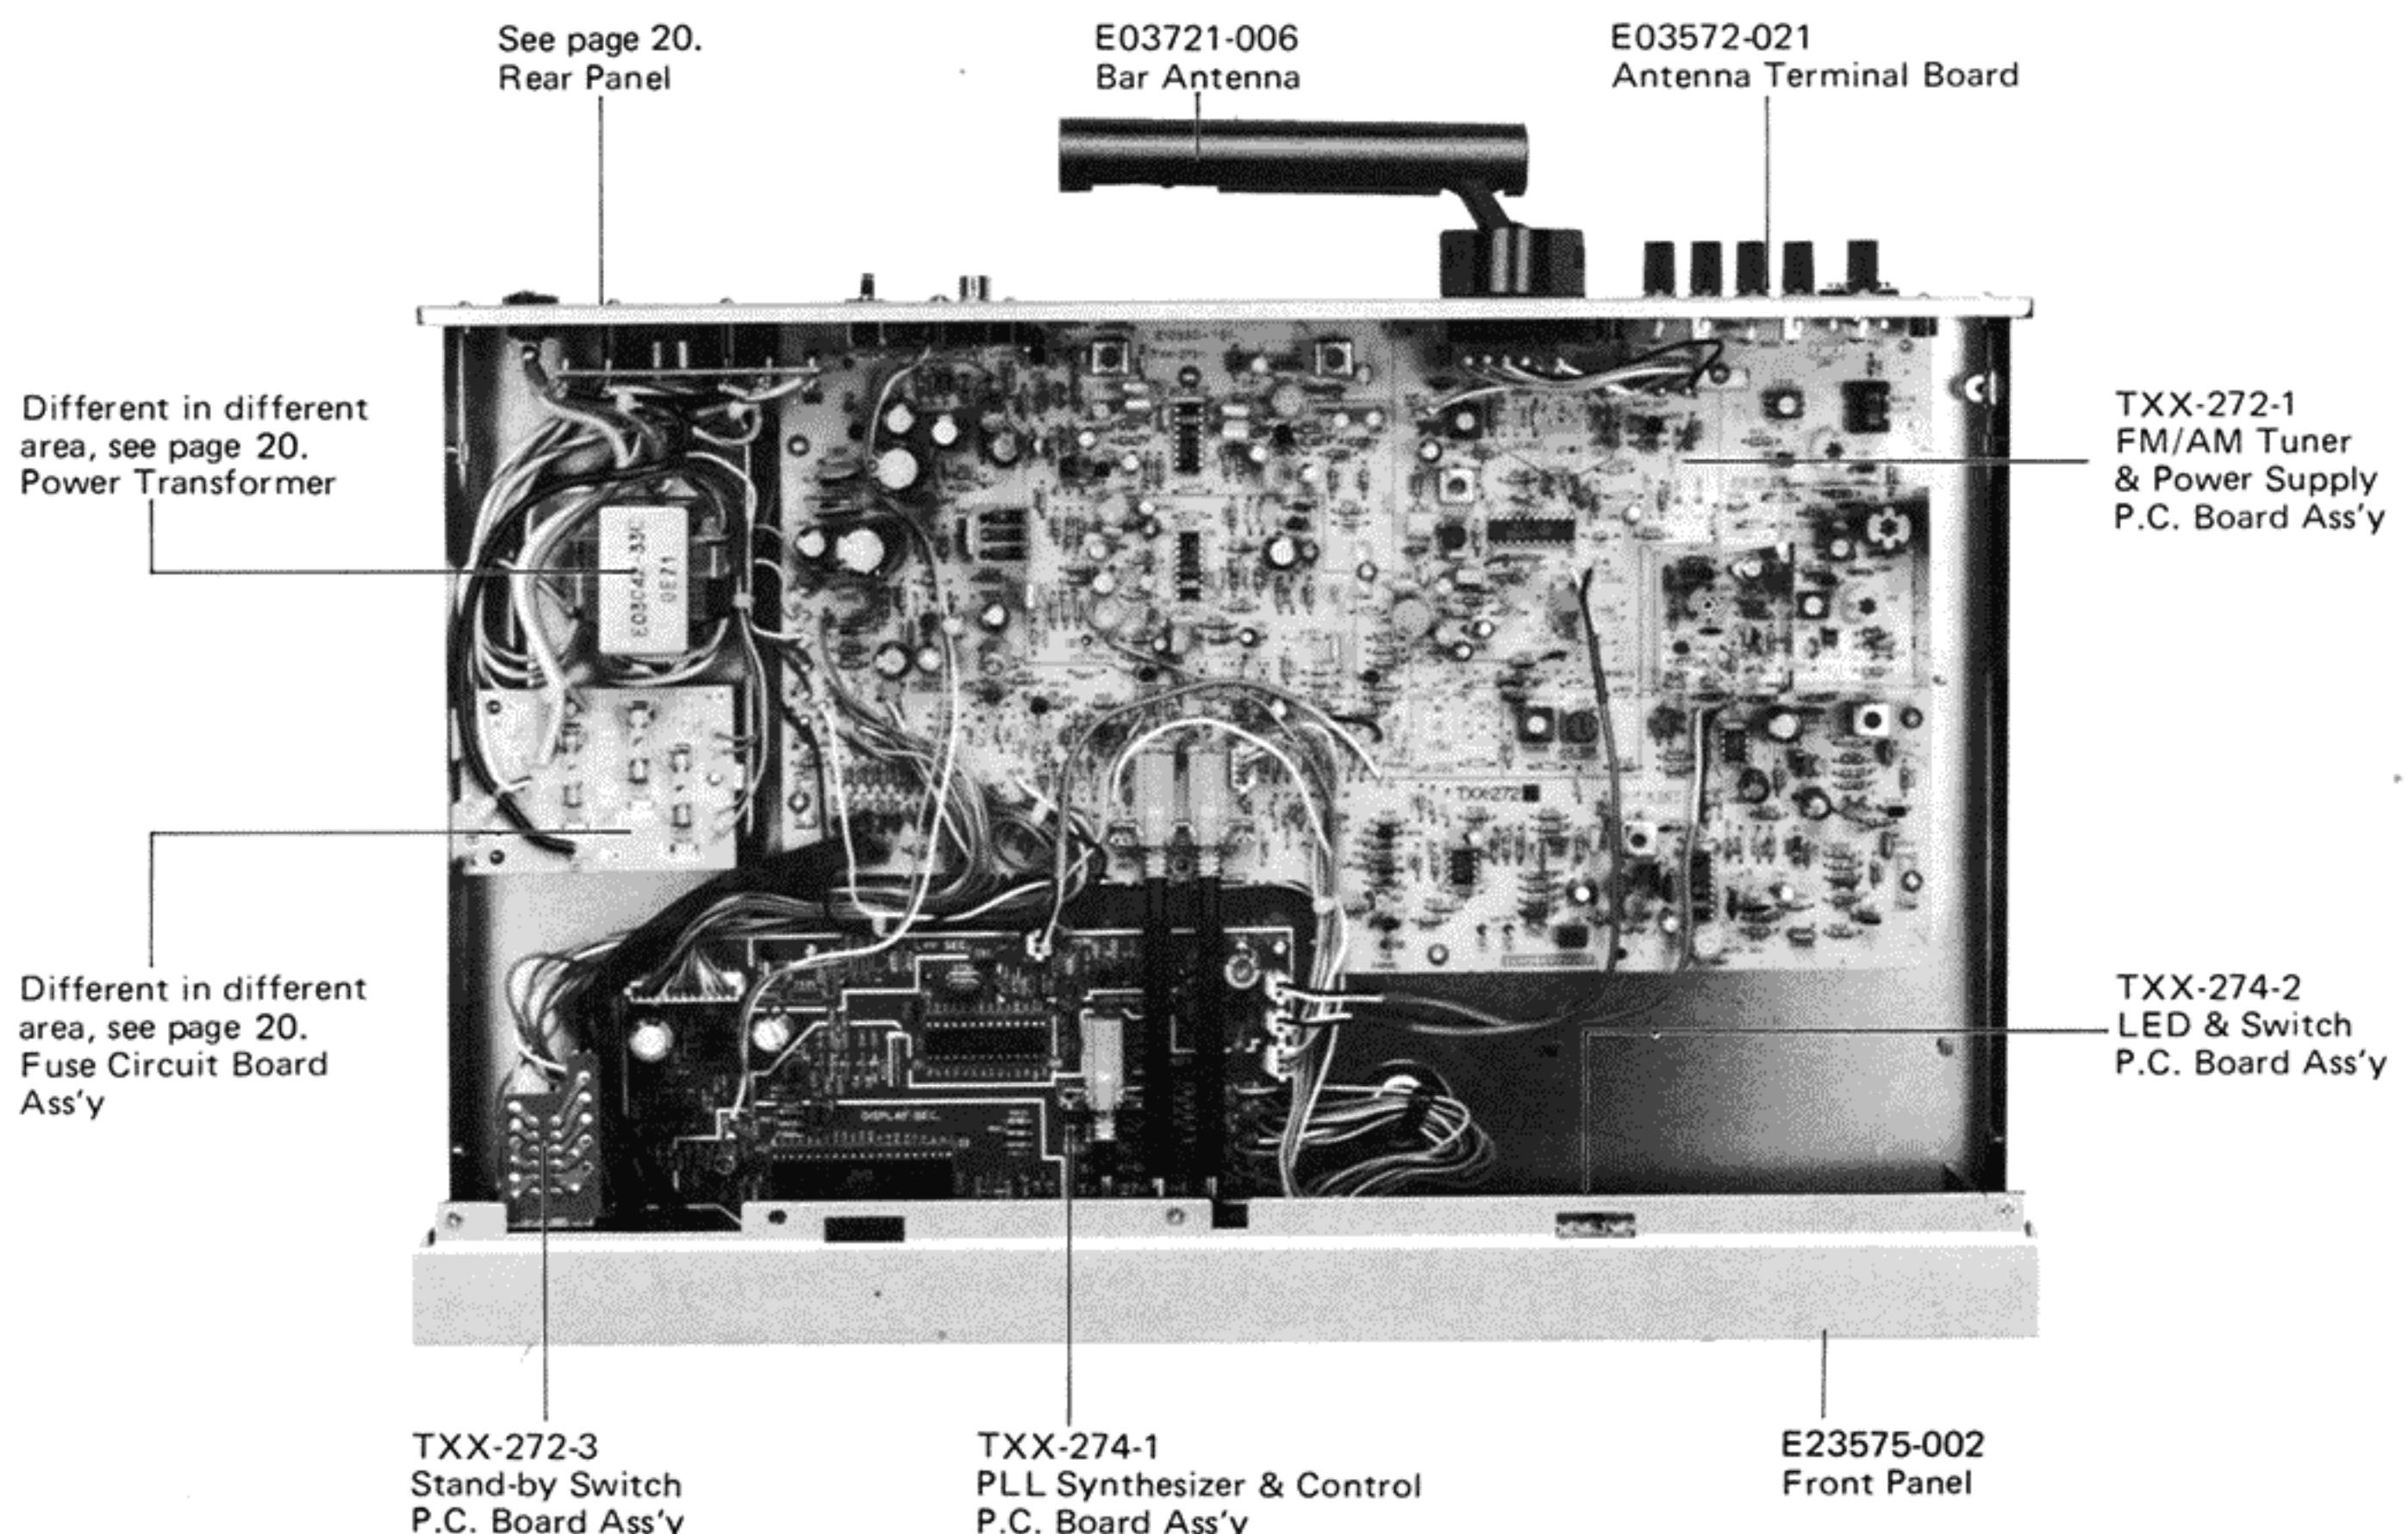

5. Exploded View and Part Numbers

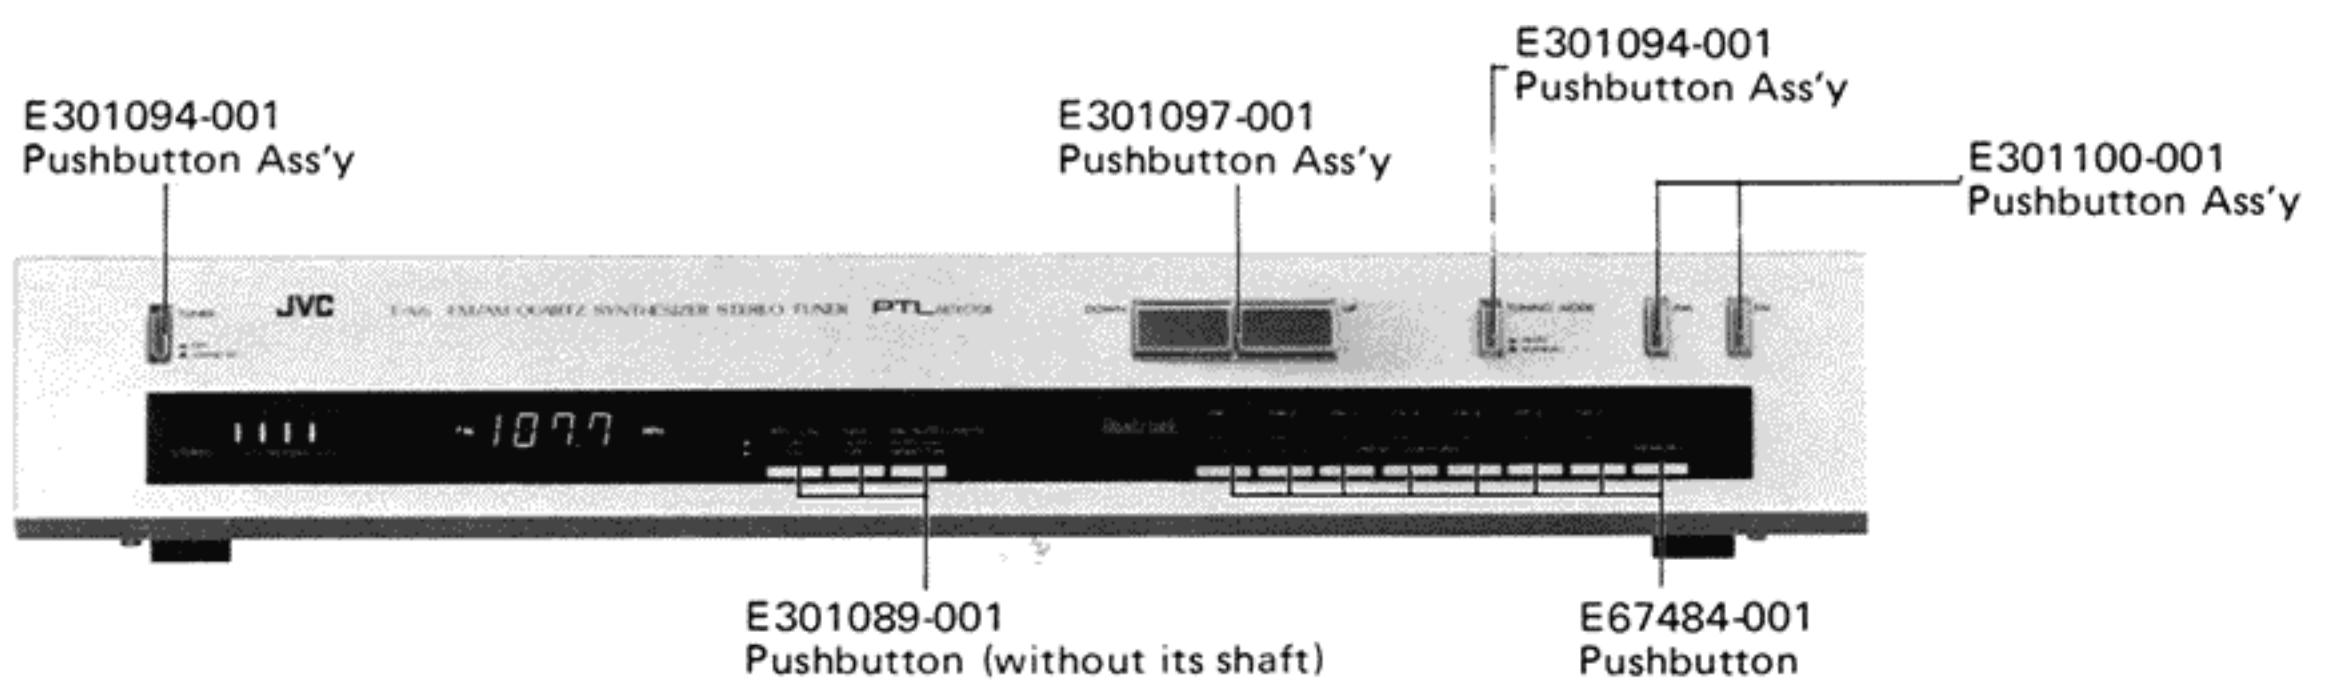

6. Main Parts Location

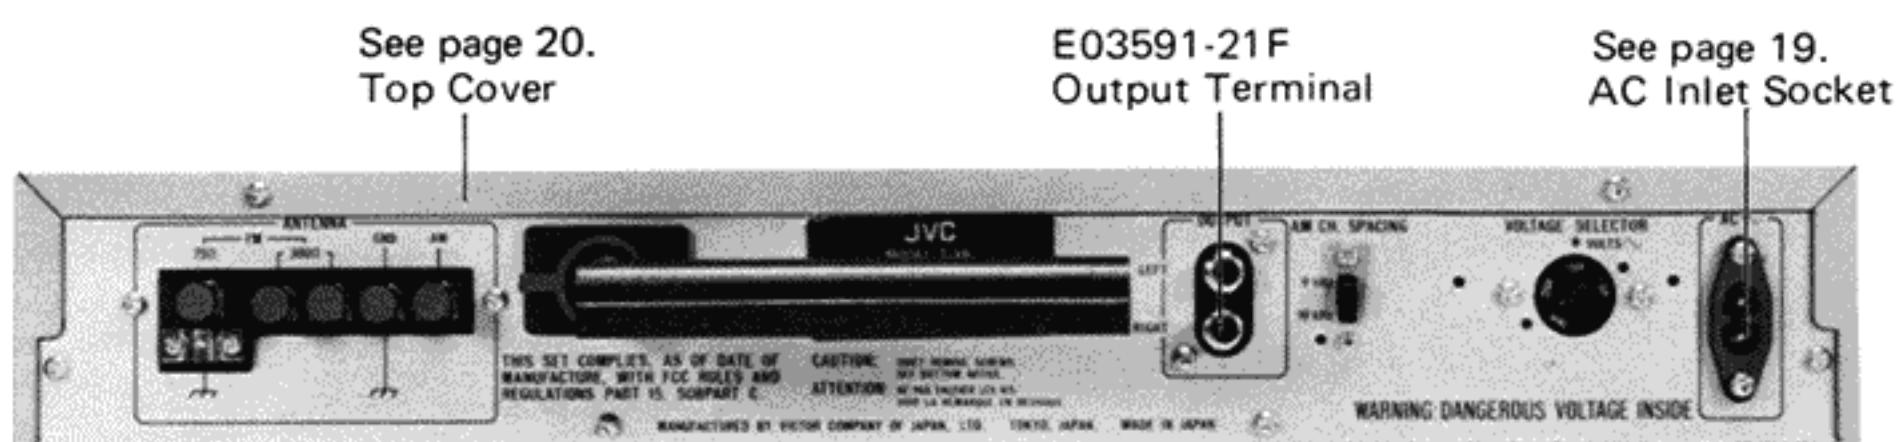

6 -(1) Top View

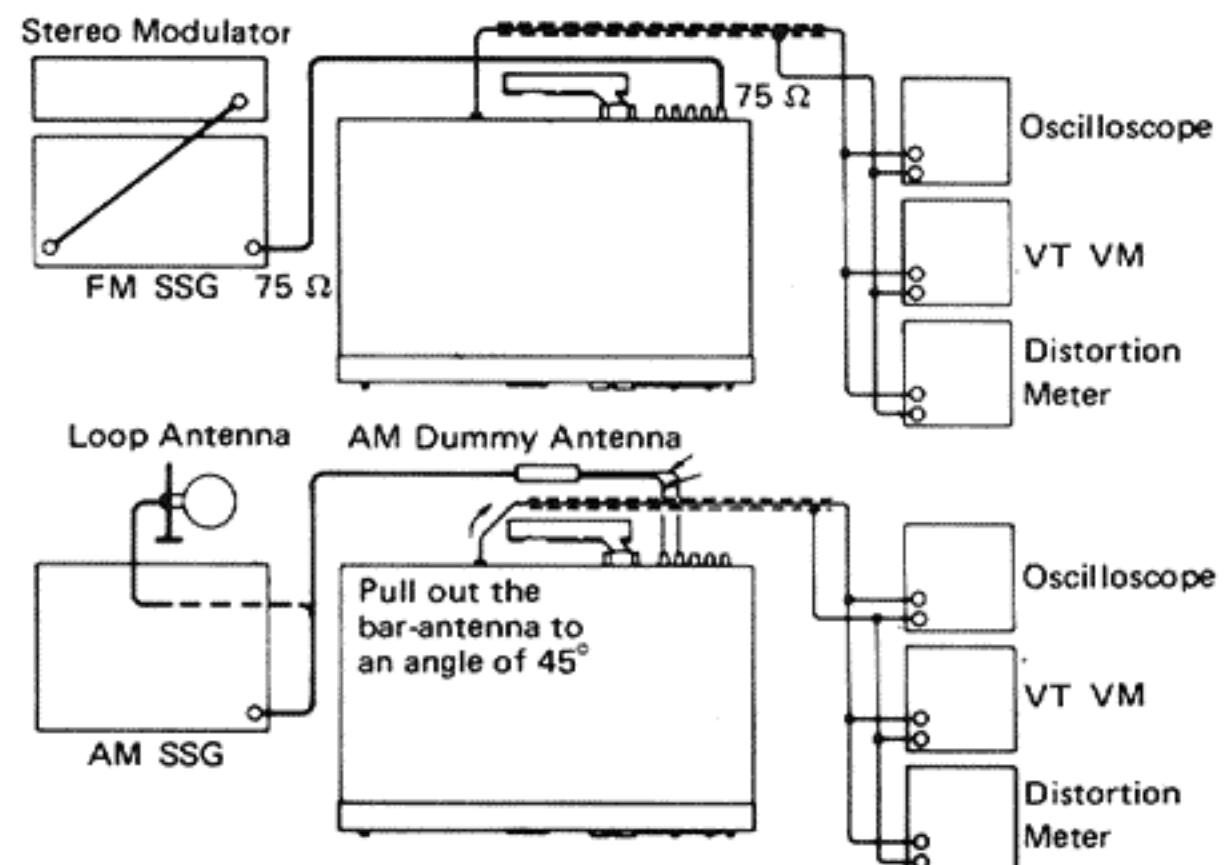

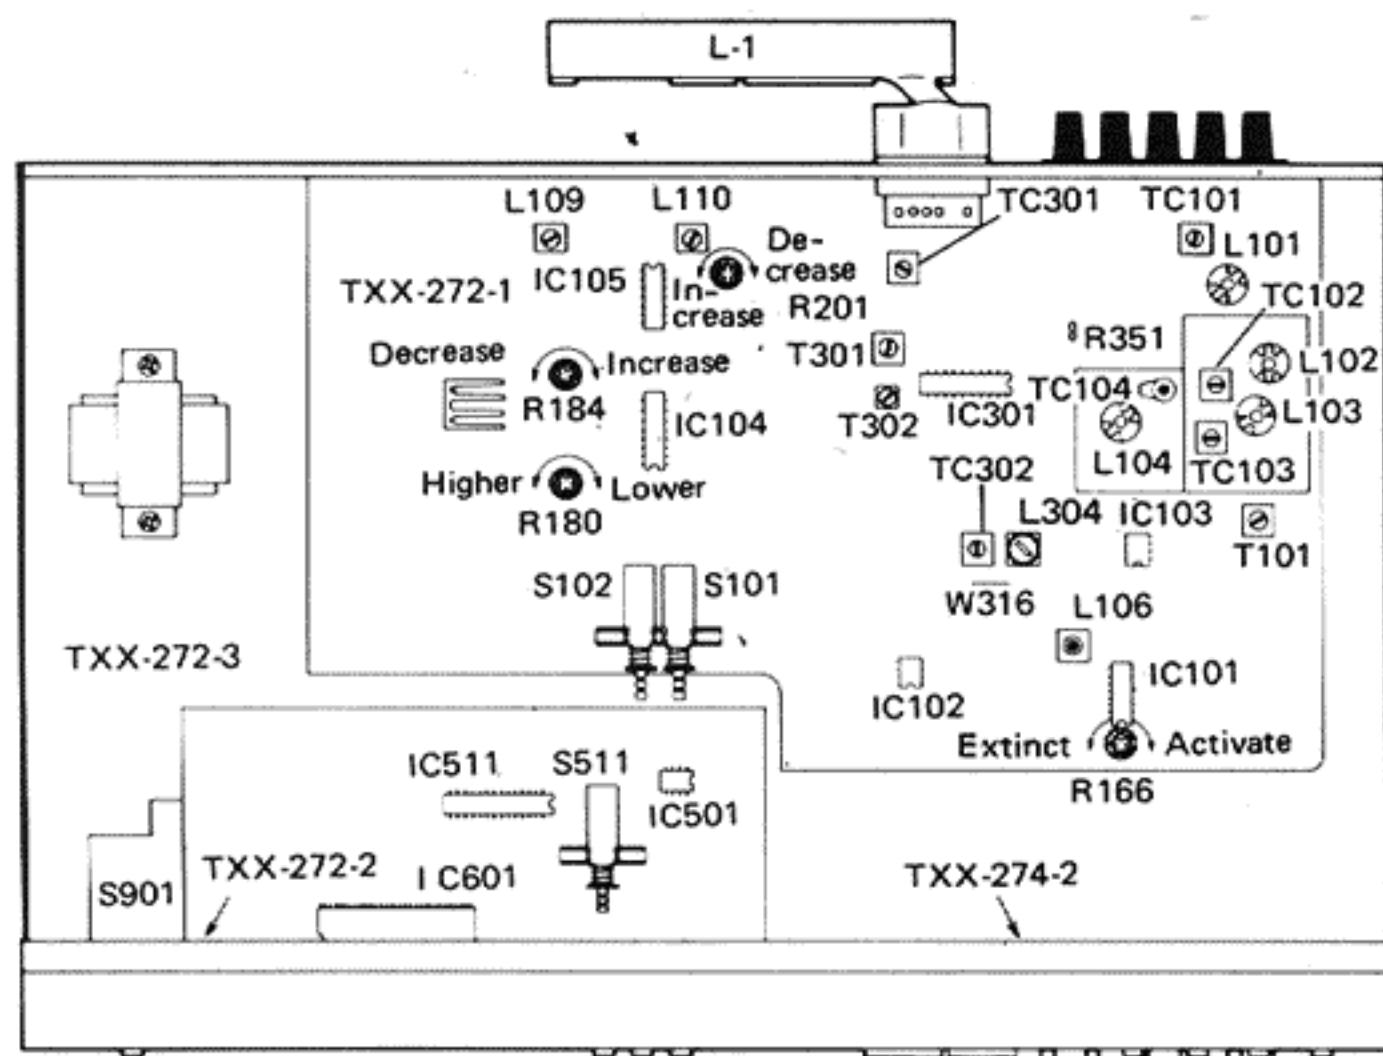

6 -(2) Front View

6 -(3) Rear View

7. FM/AM Tuner Adjustment Procedures

7-(1) Frontend Section

L104: FM oscillator tuning coil
 TC104: FM oscillator tuning trimmer
 L101: FM ANT tuning coil
 L102: FM RF1 tuning coil
 L103: FM RF2 tuning coil
 TC101: FM ANT tuning trimmer
 TC102: FM RF1 tuning trimmer
 TC103: FM RF2 tuning trimmer

Tune in to 87.9 MHz. Adjust the voltage at bus-wire W316 to 3.0 ± 0.1 V.
 Tune in to 107.9 MHz. Adjust the voltage at bus-wire W316 to 22.0 ± 0.1 V.
 } Maximize the sensitivity at 89.9 MHz.
 } Maximize the sensitivity at 105.9 MHz.

7-(2) FM Section

T101: FM IFT
 L106: FM detector coil
 R166: Muting level adjusting resistor
 R180: MPX VCO free-run frequency adjusting resistor
 R184: MPX pilot cancel control
 R201: Stereo separation adjusting resistor

Optimize sensitivity while the antenna input is reduced.
 Connect the center meter to TP6 and 7 and adjust L106 for the center meter reading of "0" (zero).
 Set the FM AUTO/MUTE switch to AUTO/ON. Receiving a stereo signal, adjust the control so that muting circuit is activated when the antenna input is at about 15 dB.
 Adjust it so that the free-run frequency becomes 76 kHz between TP ② and ground.
 Receiving a stereo signal, adjust the control so that leakage of the 19-kHz pilot signal is minimized.
 Adjust it so that the channel separation becomes maximum.

7-(3) AM Section

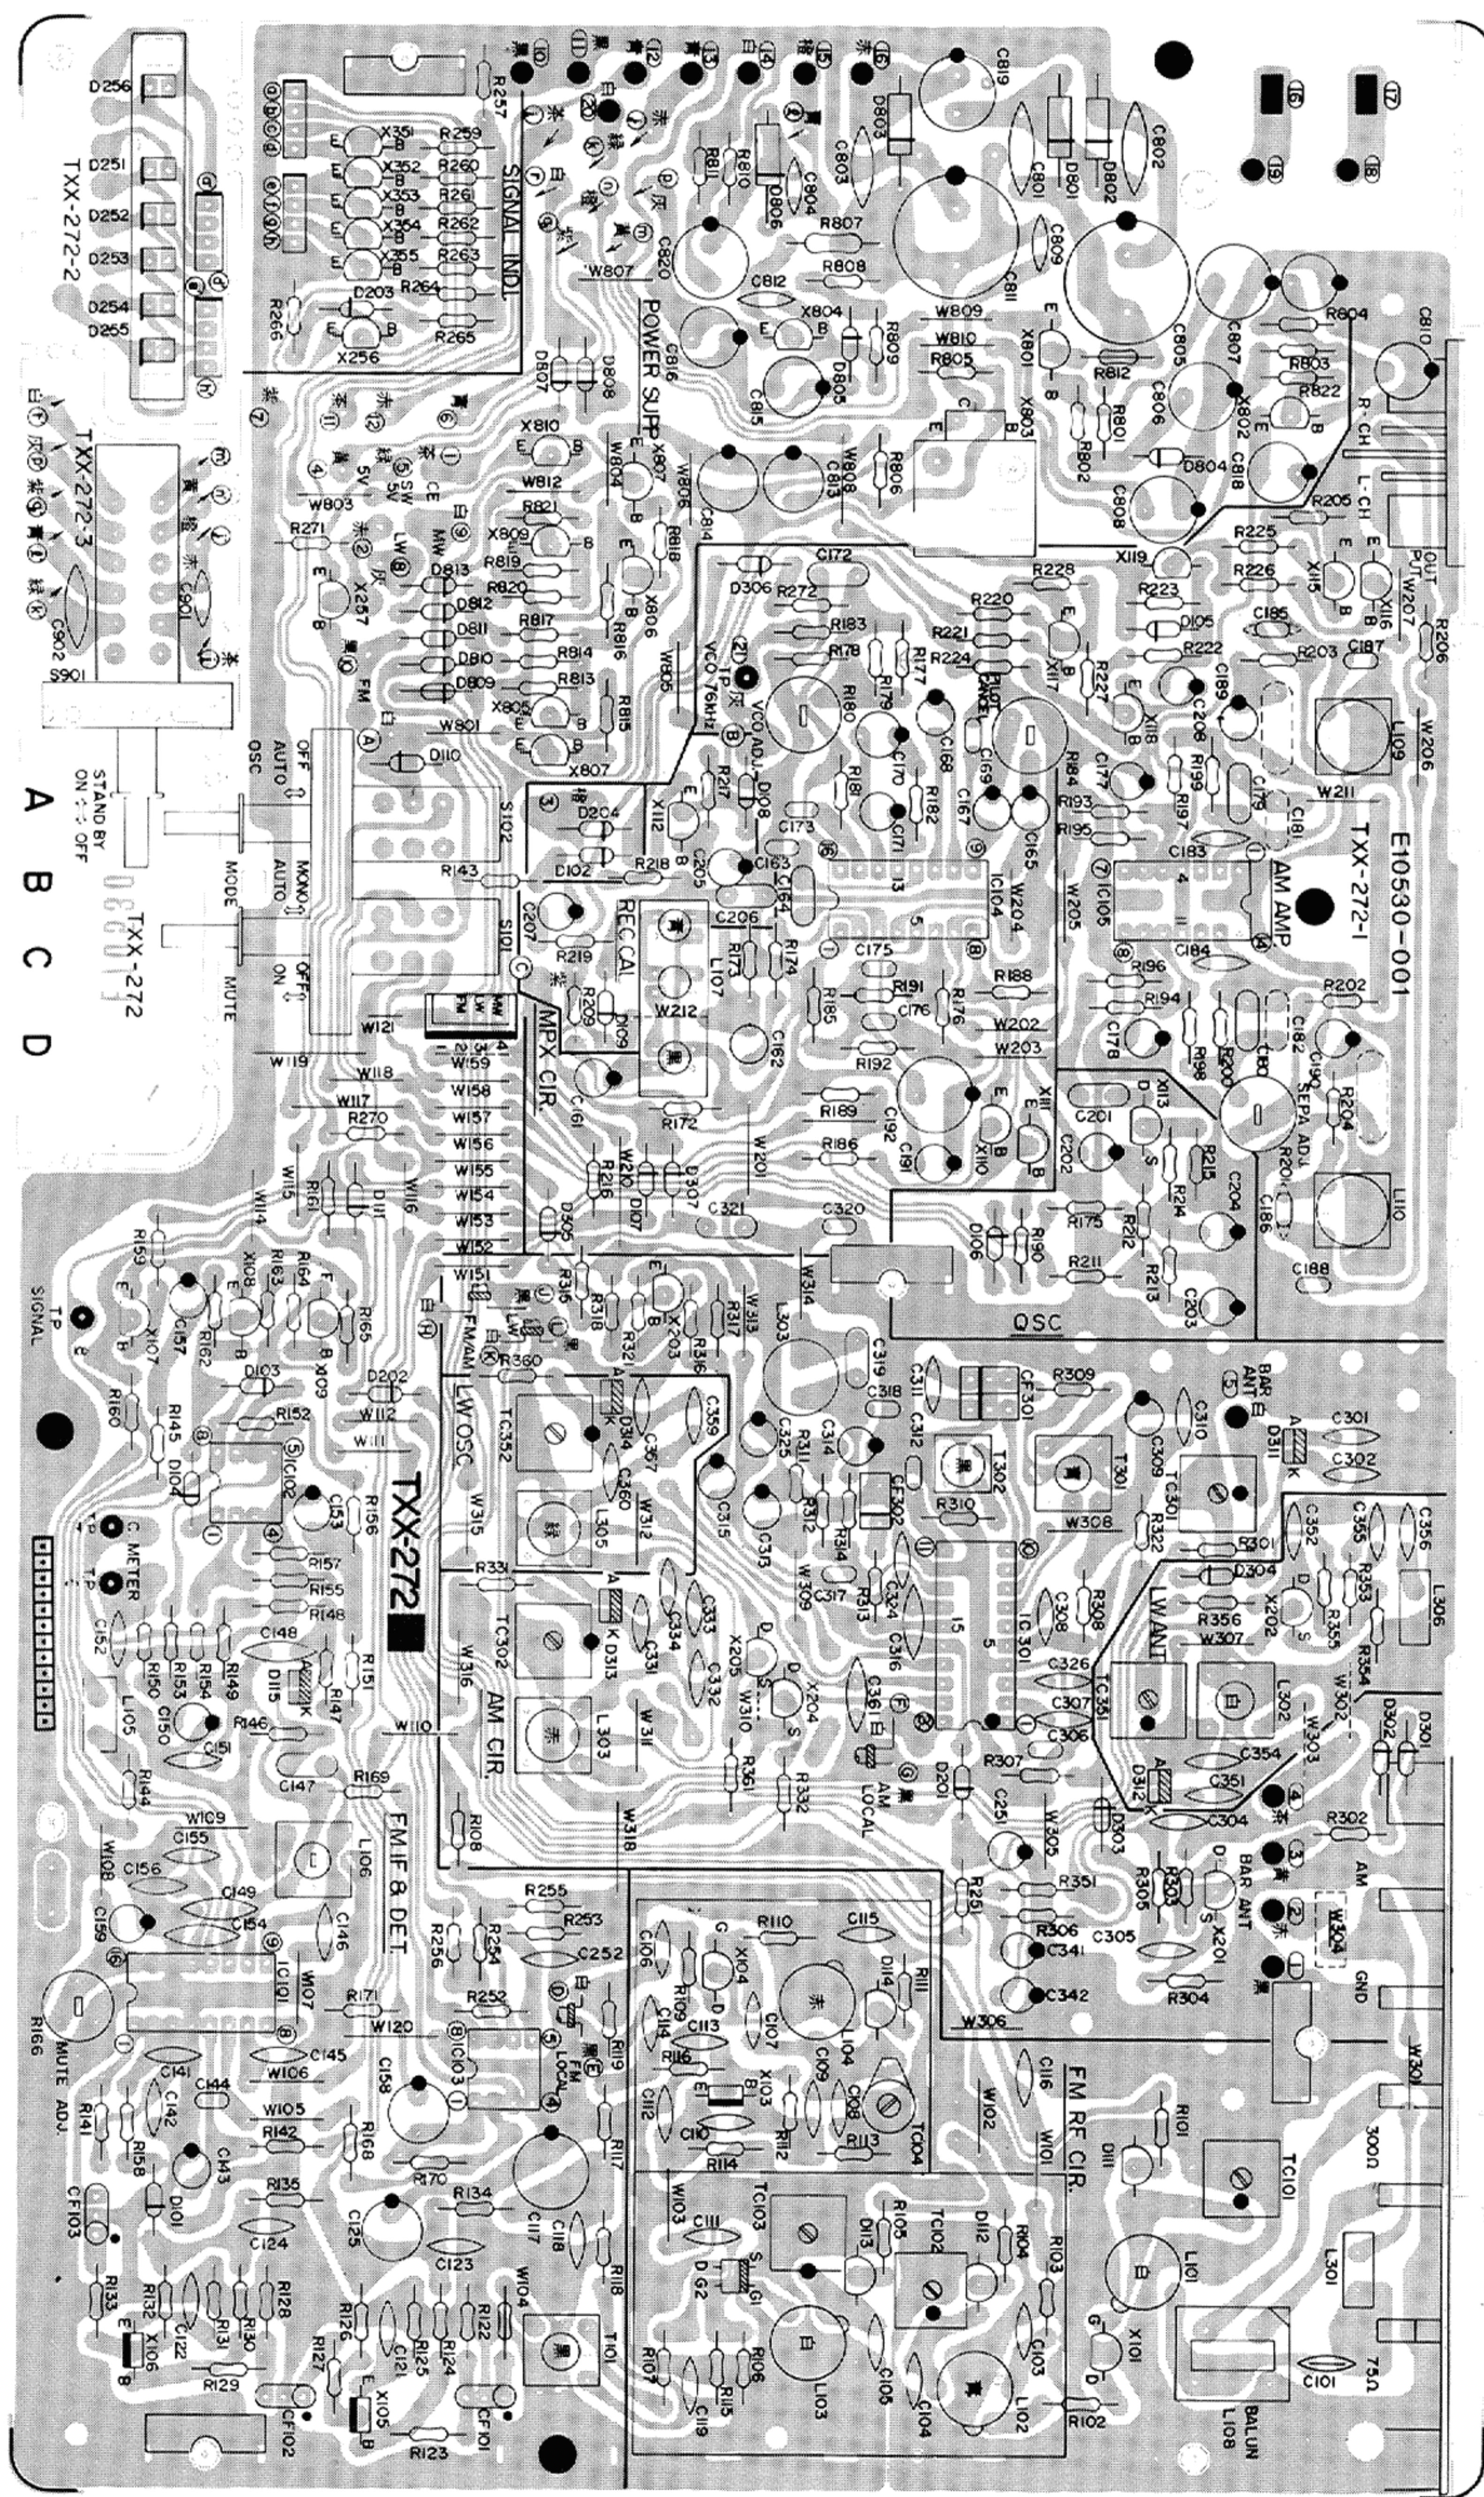

L304: AM oscillator tuning coil
 TC302: AM oscillator tuning trimmer
 L-1: AM bar antenna coil
 TC301: AM antenna tuning trimmer

Tune in to 530 (or 531) kHz. Adjust the voltage at bus-wire W316 to 2.0 ± 0.1 V.
 Tune in to 1620 (or 1602) kHz. Adjust the voltage at bus-wire W316 to 22.0 ± 0.1 V.
 Maximize the sensitivity at 600 (or 603) kHz
 Maximize sensitivity at 1400 (or 1404) kHz

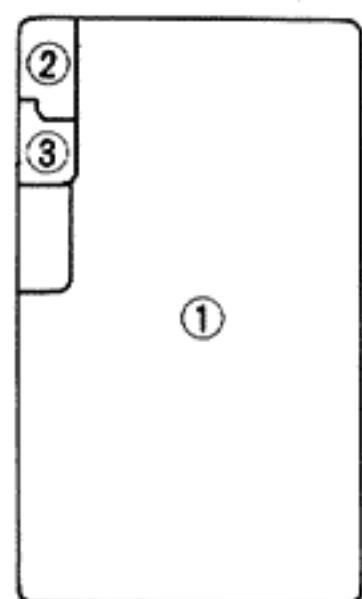

8. Printed Curcuit Board Ass'y and Parts List

8-(1) TXX-272 FM/AM Tuner and Power Supply

P.C. Board Ass'y

Each Individual P.C. Board Location

Note: The specific symbols (赤, 黒, 白 . . . etc.) on a surface of P.C. Board are actually unrelated to the repair service and are significant denotement in order to process the proper assembly of P.C. Board at the factory.

1. TXX-272-1 FM/AM Tuner & Power Supply P.C. Board Ass'y
2. TXX-272-2 LED P.C. Board Ass'y
3. TXX-272-3 Stand-by Switch P.C. Board Ass'y

	E301093-001			LED Escutcheon

**8-(3) TPS-281 Fuse Circuit Board
Ass'y**

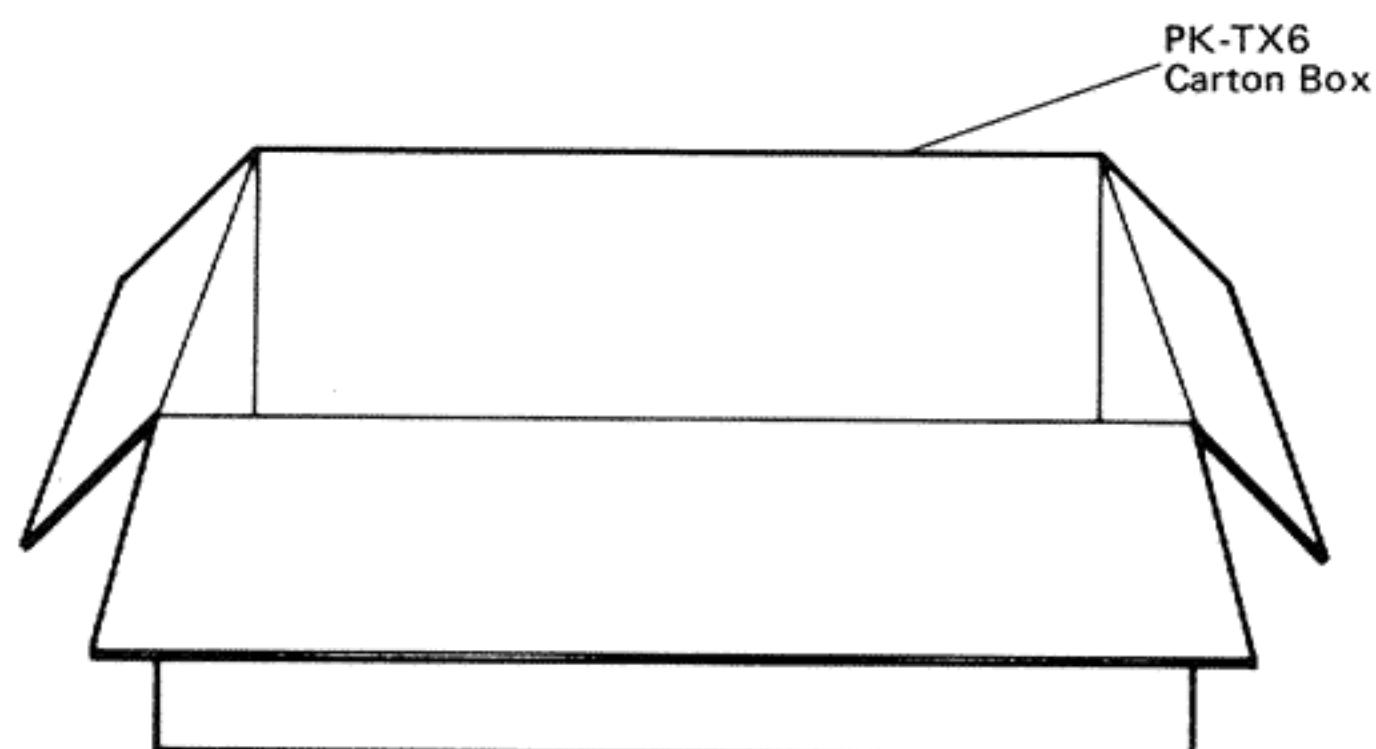

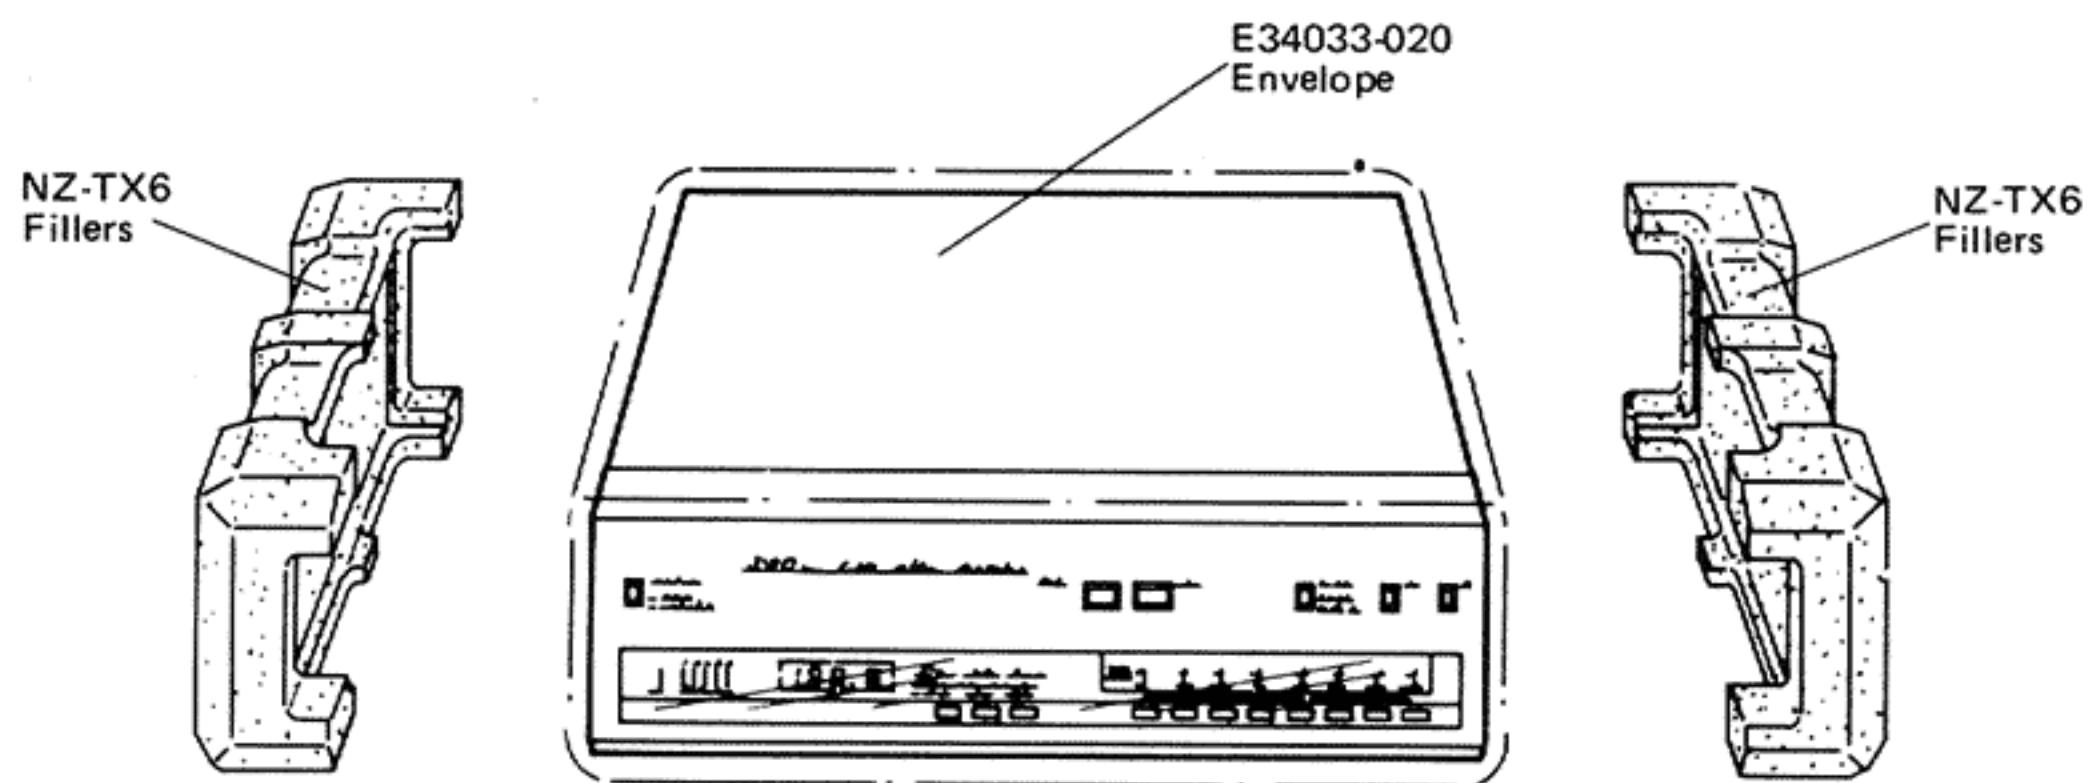

Part Number	Description
See page 20	Fuse Clip
E43727-002	TAB
E301137-001	P.C. Board
See page 20	Resistor (composition)

**8-(4) TPS-266 Voltage Selector P.C.
Board Ass'y (except U.S.A.&Canada)**

Part Number	Description
QSR0074-001	Voltage Selector
E66342-001	Voltage Selector Holder
E43727-002	TAB
E67025-002	P.C. Board
