Description of major ICs	1-18

Safety Precautions

1. This design of this product contains special hardware and many circuits and components specially for safety purposes. For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Services should be performed by qualified personnel only.
2. Alterations of the design or circuitry of the product should not be made. Any design alterations of the product should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacturer of responsibility for personal injury or property damage resulting therefrom.
3. Many electrical and mechanical parts in the products have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the Parts List of Service Manual. Electrical components having such features are identified by shading on the schematics and by (⚠) on the Parts List in the Service Manual. The use of a substitute replacement which does not have the same safety characteristics as the recommended replacement parts shown in the Parts List of Service Manual may create shock, fire, or other hazards.
4. The leads in the products are routed and dressed with ties, clamps, tubings, barriers and the like to be separated from live parts, high temperature parts, moving parts and/or sharp edges for the prevention of electric shock and fire hazard. When service is required, the original lead routing and dress should be observed, and it should be confirmed that they have been returned to normal, after re-assembling.

5. Leakage current check (Electrical shock hazard testing)

After re-assembling the product, always perform an isolation check on the exposed metal parts of the product (antenna terminals, knobs, metal cabinet, screw heads, headphone jack, control shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.

Do not use a line isolation transformer during this check.

- Plug the AC line cord directly into the AC outlet. Using a "Leakage Current Tester", measure the leakage current from each exposed metal parts of the cabinet, particularly any exposed metal part having a return path to the chassis, to a known good earth ground. Any leakage current must not exceed 0.5mA AC (r.m.s.)

- Alternate check method

Plug the AC line cord directly into the AC outlet. Use an AC voltmeter having, 1,000 ohms per volt or more sensitivity in the following manner. Connect a 1,500Ω 10W resistor paralleled by a 0.15μF AC-type capacitor between an exposed metal part and a known good earth ground.

Measure the AC voltage across the resistor with the AC voltmeter.

Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and measure the AC voltage across the resistor. Now, reverse the plug in the AC outlet and repeat each measurement. voltage measured Any must not exceed 0.75 V AC (r.m.s.). This corresponds to 0.5 mA AC (r.m.s.).

Warning

1. This equipment has been designed and manufactured to meet international safety standards.
2. It is the legal responsibility of the repairer to ensure that these safety standards are maintained.
3. Repairs must be made in accordance with the relevant safety standards.
4. It is essential that safety critical components are replaced by approved parts.
5. If mains voltage selector is provided, check setting for local voltage.

⚠ **CAUTION** Burrs formed during molding may be left over on some parts of the chassis. Therefore, pay attention to such burrs in the case of performing repair of this system.

Preventing static electricity

Electrostatic discharge (ESD), which occurs when static electricity stored in the body, fabric, etc. is discharged, can destroy the laser diode in the traverse unit (optical pickup). Take care to prevent this when performing repairs.

1.1. Grounding to prevent damage by static electricity

Static electricity in the work area can destroy the optical pickup (laser diode) in devices such as DVD players. Be careful to use proper grounding in the area where repairs are being performed.

1.1.1. Ground the workbench

1. Ground the workbench by laying conductive material (such as a conductive sheet) or an iron plate over it before placing the traverse unit (optical pickup) on it.

1.1.2. Ground yourself

1. Use an anti-static wrist strap to release any static electricity built up in your body.

1.1.3. Handling the optical pickup

1. In order to maintain quality during transport and before installation, both sides of the laser diode on the replacement optical pickup are shorted. After replacement, return the shorted parts to their original condition. (Refer to the text.)
2. Do not use a tester to check the condition of the laser diode in the optical pickup. The tester's internal power source can easily destroy the laser diode.

1.2. Handling the traverse unit (optical pickup)

1. Do not subject the traverse unit (optical pickup) to strong shocks, as it is a sensitive, complex unit.
2. Cut off the shorted part of the flexible cable using nippers, etc. after replacing the optical pickup. For specific details, refer to the replacement procedure in the text. Remove the anti-static pin when replacing the traverse unit. Be careful not to take too long a time when attaching it to the connector.
3. Handle the flexible cable carefully as it may break when subjected to strong force.
4. It is not possible to adjust the semi-fixed resistor that adjusts the laser power. Do not turn it

Important for Laser Products

- 1.CLASS 1 LASER PRODUCT**

2.DANGER : Invisible laser radiation when open and inter lock failed or defeated. Avoid direct exposure to beam.

3.CAUTION : There are no serviceable parts inside the Laser Unit. Do not disassemble the Laser Unit. Replace the complete Laser Unit if it malfunctions.

4.CAUTION : The compact disc player uses invisible laserradiation and is equipped with safety switches whichprevent emission of radiation when the drawer is open and the safety interlocks have failed or are de feated. It is dangerous to defeat the safety switches.
- 5.CAUTION :** If safety switches malfunction, the laser is able to function.

6.CAUTION : Use of controls, adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.
- CAUTION** Please use enough caution not to see the beam directly or touch it in case of an adjustment or operation check.

- VARNING :** Osynlig laserstrålning är denna del är öppnad och spårren är urkopplad. Betrakta ej strålen.

VARO : Avattaessa ja suojalukitus ohitettaessa olet alttiina näkymättömälle lasersäteilylle.Älä katso säteeseen.
- ADVARSEL :** Usynlig laserstrålning ved åbning , når sikkerhedsafbrydere er ude af funktion. Undgå udsættelse for stråling.

ADVARSEL : Usynlig laserstrålning ved åpning,når sikkerhetsbryteren er avslott. unngå utsettelse for stråling.

REPRODUCTION AND POSITION OF LABELS

WARNING LABEL

CAUTION	- LASER RADIATION WHEN OPEN. DO NOT STARE INTO BEAM.
ATTENTION	- RAYONNEMENT LASER EN CAS D'OUVERTURE. NE PAS REGARDER DANS LE FAISCEAU.

Disassembly method

< Main body >

■ Removing the top cover (See Fig.1)

1. Remove the four screws A on each side of the body.
2. Remove the two screws B on the back of the body.
3. Remove the top cover from behind in the direction of the arrow while pulling the lower part of the sides.

Fig.1

■ Removing the rear panel (See Fig.2)

- Prior to performing the following procedure, remove the top cover.

1. Remove the sixteen screws C on the back of the body.

Fig.2

■ Removing the fitting (See Fig.3 to 5)

- Prior to performing the following procedure, remove the top cover.

ATTENTION: To remove the front panel assembly and the DVD mechanism assembly, remove the fitting in advance.

1. Lower the mechanism by moving the lever marked a in the direction of the arrow from the upside of the body (Refer to Fig.3).
2. Manually eject the loading tray toward the front.
3. Remove the fitting from the loading tray by releasing the joints b on the both sides of the fitting.
4. Push and return the loading tray.

Fig.3

Fig.5

Fig.4

■ Removing the front panel assembly (See Fig.6 to 9)

- Prior to performing the following procedure, remove the top cover and the fitting.
1. Disconnect the card wire from connector CN818 on the regulator board.
 2. Turn back the body and remove the three screws D fixing the front panel assembly.
 3. Release the two joints c on both sides of the body and remove the front panel assembly toward the front.

■ Removing the DVD mechanism

(See Fig.10)

- Prior to performing the following procedure, remove the top cover and the fitting.
- It is not necessary to remove the front panel assembly.

1. Disconnect the card wire from connector CN816 and the harness from CN817 on the regulator board.
2. Disconnect the card wire from connector CN701 on the video board.
3. Disconnect the card wire from CN831 on the DSP board.
4. Remove the four screws E and the DVD mechanism assembly by pulling out from the front panel assembly backward.

■ Removing the regulator board

(See Fig.11 and 12)

- Prior to performing the following procedure, remove the top cover.
- It is not necessary to remove the rear panel.

1. Disconnect the card wire from connector CN816 and CN818 and the harnesses from CN815, CN817 and CN711 on the regulator board.
2. Remove the three screws F attaching the regulator board.
3. Remove the two screws C on the rear panel.

■ Removing the video board (See Fig.13 and 14)

- Prior to performing the following procedure, remove the top cover.

Ref. : It is not necessary to remove the rear panel.

1. Disconnect the harnesses from the connector CN711 on the regulator board.
2. Disconnect the card wire from connector CN701 on the video board.
3. Remove the five screws C on the rear panel.

Fig.13

■ Removing the Audio board 1,2 and 3 / the Audio board (See Fig.13,15 and 16)

- Prior to performing the following procedure, remove the top cover and rear panel.

1. Remove the three screws C attaching the audio board 1,2 and 3.
2. Disconnect the audio board 1,2 and 3 from the audio board respectively.
3. Disconnect the harnesses from connector CN815 on the regulator board.
4. Disconnect the card wire from connector CN831 on the audio board.
5. Remove the two screws G attaching the audio board.

Fig.14

Fig.15

Fig.16

■Removing the DVD servo board

(See Fig.17)

- Prior to performing the following procedure, remove the top cover and the DVD mechanism assembly.
1. Turn over the DVD mechanism assembly and disconnect the card wire from connector CN102 and CN103 on the DVD servo board.
 2. Remove the two screws H attaching the DVD servo board. Move the DVD servo board in the direction of the arrow to release the two corner joints d.

<Front panel assembly>

- Prior to performing the following procedure, remove the top cover and the front panel assembly.

■Removing the FL board / the power switch board (See Fig.18 and 19)

1. Remove the eight screws I and three screws J on the back of the front panel assembly. Remove the FL board and the power switch board at the same time.

2. Disconnect the harness from connector CN903 on the FL board.

Adjustment method

This model has the TEST mode for simple diagnosis of the internal function. Use the TEST mode for diagnosing and checking the set as mentioned below.

■ Details of the TEST mode

The TEST mode comprises the five modes of the following.

FL indication (*: numeral)

1. DVD AUDIO copyright protection key serial indication ----- *****
Indicates the content of the DVD AUDIO copyright at shipment. Use this mode for checking it.
2. Microcomputer's version number indication ----- ** ** **
Indicates the initial version number of the microcomputer at shipment. Use this mode for checking it.
3. Servo signal system check mode ----- CHECK
Use this mode for checking the laser pickup status.
4. Indication check mode ----- The FL and LED's go on in full.
The LED's and FL of the set go on in full. Use this mode for checking indications.
5. Microcomputer software upgrading mode ----- UPGRADE
Use this mode for upgrading the microcomputer software.

■ How to set the TEST mode

1. While pressing the STOP key and PLAY key of the set together, plug in the power cord.
*Continue to pressing both the STOP key and PLAY key until reading of disk data completes (until the "NOW READING" message changes into a DVD logo).
2. "TEST *" message appears on the FL. (* In the part of the sign, the sign is different according to the destination.)
3. The five modes of the TEST mode change one after another each time the DISPLAY OFF key of the set is pressed.
4. To recover the usual operation mode, turn off the set by pressing the POWER ON/OFF key.

■ How to check the laser pickup

Since the laser pickup of the set is easily affected by static electricity, heat, etc., it may be damaged depending on use condition. If the set shows such a symptom as it fails in reading disk data, check the laser pickup as follows.

* Checking laser current

1. Enter the set into the "servo signal system check mode" of the TEST mode.
2. Press the SKIP |◀◀ key of the set.

The laser is turned on and the LAS **** message appears on the FL display. **** in the message indicates the current in code. For knowing the actual laser current, read the first two figures (omitting the last two figures) and convert the number into the current (mA) referring to the following conversion table, because the FL indication is a hexadecimal number. Since the FL indication varies because of self-heating of the set, read the indication value about 20 seconds after the set was turned on. If the indicated value is the OK level (see the conversion table), the laser is judged to be normal in the initial status by this simple checking method.

3. Press the STOP key to set back the check mode to the initial status.

Laser current conversion table

FL indication	Current (mA)	Judgment	FL indication	Current (mA)	Judgment	FL indication	Current (mA)	Judgment
38	1. 2	OK	04	35. 6	OK	D0	70. 0	NG
34	3. 9	OK	00	38. 3	OK	CC	72. 7	NG
30	6. 5	OK	FC	40. 9	OK	C8	75. 3	NG
2C	9. 1	OK	F8	43. 6	OK	C4	78. 0	NG
28	11. 8	OK	F4	46. 2	OK	C0	80. 0	NG
24	14. 4	OK	F0	48. 8	OK	BC	83. 2	NG
20	17. 1	OK	EC	51. 5	OK	B8	86. 0	NG
1C	19. 7	OK	E8	54. 1	OK	B4	88. 5	NG
18	22. 4	OK	E4	56. 8	OK	B0	91. 2	NG
14	25. 0	OK	E0	59. 4	OK	AC	93. 8	NG
10	27. 7	OK	DC	62. 1	NG	A8	96. 5	NG
0C	30. 3	OK	D8	64. 7	NG	A4	99. 1	NG
08	33. 0	OK	D4	67. 4	NG			

* Automatic adjustment/Jitter value indication

1. Enter the set into the "servo signal system check mode" of the TEST mode.
2. Open the tray with the OPEN key of the set. Set the TEST disk VT-501 on the tray and put back the tray with the CLOSE key. Then, press the PAUSE key.
The TEST disk starts rotation to execute automatic adjustment. If the set is in the normal condition, the "CHECK OK" message appears. If there is something abnormal in the adjustment values, an error message appears and it mostly comes from a failure in the servo system (including the mechanism and pickup). In such the event, refer to the check points by errors.
When using the TEST disk VT-501, carefully check to see if there is neither damage nor dirt on the read surface of the disk beforehand.
3. Press the STOP key to return the check mode to the initial status.
4. After the automatic adjustment with the TEST disk completes, press the PLAY key.
The disk starts rotation and a jitter value (signal read precision in percentage) appears on the FL display (JIT 0**). If the indication value (in ** places) is 110 (11 %) or less, it can be judged by this simple checking method that the signal read precision of the set is satisfactory.
Before using the TEST disk VT-501, carefully check it if there is neither damage nor dirt on the read surface.
5. Press the STOP key to return the mode to the initial status.

■ Upgrading microcomputer software

The internally incorporated microcomputer software of this set can be revised in part for the reason that the set is designed to conform to new standards and to be capable of playing disks to be put on the market by other manufacturers. To upgrade the internal microcomputer software, use the upgrade disk and follow the procedure mentioned below.

* How to upgrade the microcomputer software

1. Set the upgrade disk in the set and enter it into the TEST mode.
2. After confirming that the set completes reading of the upgrade disk data while looking at the indication on the monitor screen, change the TEST mode to the microcomputer software upgrading mode and then press the PLAY key.
3. The set completes writing of the upgrade disk data approximately 1 minute later and it is automatically reset by the self-resetting function. Then the set again reads the upgrade disk and stops automatically.
4. Take the upgrade disk out of the set and turn it off with the POWER ON/OFF key.
5. Again enter the set into the TEST mode, and press the SKIP ►► key and then the PAUSE key.
6. Make sure that the DVD AUDIO indicator goes on a few seconds after the above-mentioned operation, check the version number of the microcomputer software in the microcomputer software version number indication mode.

*Carefully carry out the above procedure. If data write is interrupted in the middle of course by power failure or careless shutdown operation, not only the data of the internal software may be damaged but the set may fail in resetting. The version number of the internal microcomputer software is shown as follows.

FL indication: ** ** **
 [IC901] [IC401] [IC508/IC509]  Symbol number of microcomputer IC

■ Initializing the set

Initialization of the set returns it to the initial status at shipment.
Be sure to initialize the set after repair service.

* How to initialize the set

1. Enter the set into the TEST mode and press the SKIP ►► key first and the PAUSE key second.
2. Make sure that the DVD AUDIO indicator goes on a few seconds later.

■ DVD AUDIO copyright protection

To protect the DVD AUDIO copyright from infringement, a number proper to each DVD AUDIO set called a device key is assigned to each set. If a proper device key is not set for a set, it fails in playing a copyrighted disk.

The management number of the device key of a set can be checked by the DVD AUDIO copyright protection key serial indication in the TEST mode. If the "???...." message appears in this check mode, the set has a failure in the device key. If it occurs, inquire at the Service Section of the Audio and Communication Division, JVC.

Check points for each error

(1) Spindle start error

*Defective spindle motor

Are there 10ohms resistance between each pin of CN102 "1~4"?

(The power supply is turned off and measured.)

*Hall element: Is sine wave output between CN102 "10" and "11", between "12" and "13", and between "14" and "15" during rotation?

In either case, replace the mechanical unit.

*Defective spindle driver (IC251)

Is a driving wave output from CN102 "1~4" ?

Is IC251 "9" at "H" level (START)?

Servo IC --- Is control signal sent to the motor driver ?

IC201 "95" : Duty is 50% during stop, but varies during rotation (greatly varies at start).

--- If not sent, pattern or servo IC (IC201) is defective.

R259 : approx 2.5V during stop, but varies during rotation (greatly varies at start).

--- of not sent, pattern or servo IC (IC201) is defective.

Is FG input to servo IC ?

Observe FG wave from IC201 "89". --- If not output, pattern, IC251 or IC201 is defective.

(2) Disc Detection, Distinction error (no disc, no REFNV)

* Laser is defective.

* Front End Processor is defective (IC101).

* APC circuit is defective. --- Q101.

* Pattern is defective. --- Lines for CN101 "15" and "17".

Lines for between IC201 "2" and IC101 "2"(LDONA),
between IC201 "3" and IC101 "1" (LDONB).

* Servo IC is defective (IC201).

* Is signal sent to IC201(servo)"71" AS2 ?

* IC101 --- For signal from IC101 to IC301, is signal output from IC101 "88" (RFAS1) and IC101 "69" REENV ?

(3) Traverse movement NG

- * For automatic adjustment, traverse movement occurs only when the position is changed to retry judging the disc type after the 1st judgment resulted in an error. Therefore, traverse movement rarely occurs because, in most cases, disc judgment at the current position (1st time judgment) is executed successfully. (Of course, NG rarely occurs in this step.)

Note: 1st time judgment of disc type resulted in NG. --- The re-judgment of disc type may not be successful. Therefore, after removing the cause of traverse movement, re-execute automatic adjustment and confirm that no problem exists.

* Check point

- During stop
Whether 50% duty pulse is output to R273
Whether between R274 and C271 is at approx. 2.5VDC
Offset voltage between CN102 "1" and "2" (scores mV if exists)
- When tray is opened or closed
Check by oscilloscope whether a rectangular wave signal is output from CN102 "1" or "2".

If checking a) or b) resulted in NG, IC201 maybe defective.

(4) Focus ON NG

- * Is FE output ? --- Pattern, IC101
- * Is FCDRV signal sent ? (R286) --- Pattern, IC301
- * Is driving voltage sent ?
CN101 "1", "3" --- If NG, pattern, driver, mechanical unit (with the power turned off, measure the resistance between CN101 "20" and "21").
- * Does CN101 "8" become "H" and is the focus drawing in done?
--- Mechanical unit (laser power too low), IC101(defective gain)
--- Moreover, It is thought that abnormality is found in the disk.
- * Mechanical unit is defective.

(5) Tracking ON NG

- * When the tracking loop cannot be drawn in, IC201 "58" (/TRON) does not become "L".
- * Mechanical unit is defective.
Because the undermentioned adjustment value is abnormal, it is not possible to draw in normally.
- * Periphery of driver (IC271)
Constant or IC it self is defective.
(When passing without becoming abnormal while adjusting the following.)
- * Servo IC (IC201)
When improperly adjusted due to defective IC.

[Focus position rough adjustment]
[Phase difference cancellation rough adjustment]
[Tracking balance adjustment]

(6) Spindle CLV NG

- * When the spindle cannot be shifted to CLV Servo, does not become "H" between IC201 "18" and IC301"88".
- * IC201 Is signal output from IC101 "87" (RFOP)?
- * IC201 Is signal output from IC201 "60" to "64" (binary-coded clock and data)?
- * IC201 Is "58" (/TRON) at "L" level ?
- * IC301 "74" to "76" --- Is signal output to IC201 "24", "25", "28" (In case of only CD).
(Serial communication of rotation information)
- * Spindle motor driver is defective.
Even when one of the three phases is defective, item (1) may be passed.
--- Check the second item in (1) above.
- * C260 to C263 Defective soldering
If noise eliminating capacitors are not properly soldered, noise may ride on the waveform.
- * Besides, the undermentioned cause is thought though specific of the cause is difficult because various factors are thought.
Mechanism is defective.(jitter)
IC101, IC201.

(7) Address read NG

- * Besides, the undermentioned cause is thought though specific of the cause is difficult because various factors are thought.
Mechanism is defective. (jitter)
IC201, IC301, IC401.
The disc is dirty or the wound has adhered.

(8) Between layers jump NG (double-layer disc only)

- * When the focus flight is generated when jumps between layers.
Because all adjustments for L1 layer must be successful, this error may rarely be due to a circuit defect.
- * Crosstalk might occur from tracking to focus system. (See (11)) --- Replace the mechanical unit.
- * Driver surroundings.
- * Defect of constant and IC.
- * For double-layer discs, after checking CLV on layer L1, jumps to layer L0 after mode changes to FG. Then tracking is turned off, and adjustments are executed from the focus position coarse adjustment in order.
- * When the jump between layers is done on the single-layer disk, the disk distinction error is thought.
--- The laser power is low (RF level is confirmed by IC101"87" (RFOP)).
--- AS1, AS2, REFNV Is the signal sent to between IC101 and IC201 ?

(9) Neither picture nor sound is output

* Cannot search

a) Can the feed system be driven?

Check the waveform of TRSDRV signal (R273). --- Waveform between R274 and C271.

Search results in a change of duty
(three values with 2.5V at the center)
(The figure is exaggerated.)

Check the waveform of CN101 "1" and "2". --- After the driver (IC271)

For short-distance search, the waveform becomes roundish, not trapezoidal, and voltage is low.

b) Is kick available?

Check the TRDRV signal waveform from R289.

Check the waveform of CN101 "2" and "4" --- After the driver (IC271)

Although differs in amplitude and DC offset, the waveform is similar to that of R289

(10) Picture is distorted or abnormal sound occurs at intervals of several seconds.

(11) Others (unusual events experienced to date)

- * Problem occurs with double-layer discs although no problem occurs with single-layer DVD.
(Error occurs, or search becomes unstable and takes longer.)
Crosstalk might occur from tracking to focus system.
 - When FE was observed during search (skip, etc.), it was found that a wave resembling TE with an amplitude of 200mVp-p was riding on FE.
 - Mechanical unit was replaced.
- * Error frequently occurred in the outer part of discs although no error occurred in the inner part.
 - Mechanical unit was replaced because tilt seemed to be defective.

(12) CD During normal playback operation

- a) Is TOC reading normal? NO → Please refer to "Servo Volume" flow.
- Displays total time for CD-DA.
Shifts to double-speed mode for V-CD.
- ↓ YES
- b) Playback possible? NO →
 - *--:-- is displayed during FL serch.
 - According to [*Cannot serch] for DVD(9), check the feed and tracking systems.
 - *No sound is output although the time is displayed.(CA-DA)
 - *DAC, etc, other than servo.
 - *The passage of time is not stable, or picture is abnormal.(V-CD)
 - *The wound of the disc and dirt are confirmed.

(13) Others

V-CD : Frequent occurrence of error in inside and outer.
(Even the disk without the wound : when generated.)

Waveform observation

- Is the oscillation frequency of about 700~900Hz output?
(Borrow a pertinent disk for the complaint for the combination with the disk.)
- Exchanges mechanism for the mechanism resonance.

Description of major ICs

■ AN8706FHQ (IC101) : Front end processor

1.Pin layout

2.Block diagram

3.Pin function

AN8706FHQ (1/2)

Pin No.	Symbol	I/O	Functions
1	LDONB	I	Laser ON (CD Head) terminal
2	LDONA	I	Laser ON (DVD Head) terminal
3	LPCOA	O	Laser drive output terminal
4	LPC1	I	Laser PIN input terminal
5	VHARF	O	VHALF voltage output terminal
6	TGBAL	I	Tangential phase balance control terminal
7	POFLT	O	Track detection Threshold value level terminal
8	PTH	I	Track detection Threshold value level terminal
9	TBAL	I	Tracking balance control terminal
10	TG	O	Tangential phase error signal output terminal
11	FGCTL	I	Focus amplifier Gain control terminal
12	FBAL	I	Focus balance control terminal
13	FEOUT	O	Focus error signal output terminal
14	FEN	I	Focus error output amplifier reversing input terminal
15	VREFL	O	VREFL voltage output terminal
16	VREFC	O	VREFC voltage output terminal
17	VREFH	O	VREFH voltage output terminal
18	PULIN	I	DSL,PLL drawing mode switch terminal
19	SEN	I	SEN(Cereal data input terminal)
20	SCK	I	SCK(Cereal data input terminal)
21	STDI	I	STDI(Cereal data input terminal)
22	STNBY	I	Standby mode control terminal
23	XTRON	I	Tracking OFF holding input terminal
24	MTRON	I	Monitor output ON/OFF switch terminal
25	ROMRAM	I	ROM・RAM switch terminal
26	RSCL	O	Standard current source terminal
27	TEI	I	Tracking error output Amp reversing input terminal
28	TEOUT	O	Tracking error signal output terminal
29	TKCFLT	O	Track count detection filter terminal
30	TKCNT	O	Track count output terminal
31	VREF1	O	VREF1 voltage output terminal
32	GND1	O	Earth terminal 1
33	DBAL	I	Data slice offset adjustment terminal
34	IDDLY	I	Data slice delay adjustment terminal
35	VPWOFT	I	OFTR detection level setting terminal
36	VPWBDO	I	BDO detection level setting terminal
37	VREF3	O	VREF3 voltage output terminal
38	DCFLT	O	Capacity connection terminal for data slice input filter
39	FLTOUT	O	Filter amplifier output terminal
40	DSLO	O	Data slice single data output terminal
41	DSLFLT	O	Constant filter terminal when data is sliceddelly
42	DTMONP	O	PLL differential motion 2 making to value edge signal moniter output (+)
43	DTMONN	O	PLL differential motion 2 making to value edge signal moniter output (-)
44	VCC4	I	Power terminal 4 (5V)
45	GND4	O	Earth terminal 4
46	GND5	O	Earth terminal 5
47	RDTN	O	PLL differential motion making to synchronization RF signal reversing output
48	RDTP	O	PLL differential motion making to synchronization RF signal rotation output
49	RDCKN	O	PLL differential motion making synchronization clock reversing output
50	RDCKP	O	PLL differential motion making synchronization clock rotation output

Pin No.	Symbol	I/O	Functions
51	VCC5	I	Power terminal 5 (3.3V)
52	IDGT	I	Data slice part address part gate signal input terminal (For RAM)
53	DTRD	I	Data slice data read signal input terminal(For RAM)
54	CAPA	I	Data slice CAPA(Address)signal input terminal (For RAM)
55	VCC3	I	Power terminal 3 (5V)
56	PCPO	O	PLL phase gain set terminal
57	FCPO	O	PLL frequency gain set terminal
58	PLFLT2	O	PLL low region filter terminal
59	PLFLT	O	PLL high region filter terminal
60	VCOIN	I	PLL VCO input terminal
61	ITDLI	O	PLL jitter free current ripple removal filter terminal
62	FUPDN	I	PLL frequency control input terminal
63	GND3	O	Earth terminal 3
64	JITOUT	O	Detection signal output of jitter
65	BDO	O	BDO output terminal
66	OFTR	O	OFTR output terminal
67	BOOST	I	Booth control terminal for filter
68	FC	I	FC control terminal for filter
69	RFENV	O	RF enve output terminal
70	BOTTOM	O	Bottom enve detection filter terminal
71	PEAK	O	Peak enve detection filter terminal
72	AGCG	O	AGC amplifier gain control terminal
73	DCAGC	O	AGC amp filter terminal
74	CSAG	O	Sag cancellation circuit filter terminal
75	CBDOSL	O	BDO detection capacitor terminal
76	CBDOFS	O	BDO detection capacitor terminal
77	RBCA	O	BCA detection level setting terminal
78	TESTSG	I	TEST signal input terminal
79	RFINP	I	RF signal positive moving input terminal
80	RFINN	I	RF signal reversing input terminal
81	VCC2	I	Power terminal 2 (5V)
82	GND2	O	Earth terminal 2
83	VREF2	O	VREF2 voltage output terminal
84	COFTFS	O	OFTR detection capacitor terminal
85	COFTFL	O	OFTR detection capacitor terminal
86	RFON	O	RF signal output terminal P
87	RFOP	O	RF signal output terminal N
88	TS	O	All addition amplifier (DVD) output terminal
89	DCRF	O	All addition amplifier capacitor terminal
90	FS	O	All addition amplifier (CD) output terminal
91	VIN6	I	Focus input of external division into two terminal
92	VIN5	I	Focus input of external division into two terminal
93	VCC1	I	Power terminal 1 (5V)
94	VIN1	I	External division into four (DVD/CD) RF input terminal 1
95	VIN2	I	External division into four (DVD/CD) RF input terminal 2
96	VIN3	I	External division into four (DVD/CD) RF input terminal 3
97	VIN4	I	External division into four (DVD/CD) RF input terminal 4
98	VREF4	O	VREF4 voltage output terminal
99	DIFP	O	RF signal (RAM) output terminal P
100	DIFN	O	RF signal (RAM) output terminal N

1.Pin layout

2.Pin function

JCV8005-2 1/2

Pin No.	Symbol	I/O	Description
1	VDD	-	Power supply
2	GND	-	Connect to ground
3~10	HDATA0~7	I/O	Data input/output terminal (both by 8 bits)
11	VDD	-	Power supply
12	GND	-	Connect to ground
13~20	HADDR0~7	I	8 bit address bus to internal address (connect to host)
21	VDD	-	Power supply
22	GND	-	Connect to ground
23	NCS	I	Chip select signal from host
24	NRD	I	Data read signal from host
25	NWR	I	Data write signal from host
26	NIRQ	O	Interrupt of request to host
27	WAIT	O	Wait demand to host
28	NRESET	I	Reset signal from host
29	VDD	-	Power supply
30	GND	-	Connect to ground
31	VDD	-	Power supply
32	GND	-	Connect to ground
33~36	STD7~4_OUT	O	Data output to DVD decoder (8 bits)
37	GND	-	Connect to ground
38~41	STD3~0_OUT	O	Data output to DVD decoder (8 bits)
42	VDD	-	Power supply
43	GND	-	Connect to ground
44	REQ_IN	I	Request signal for forwarding control by decoder
45	DACK_OUT	O	Output signal to decoder which shows effective data
46	STCLK_OUT	O	Data strobe signal to decoder
47	SYNC_OUT	O	Sector sink signal to decoder
48	STERROUT	-	Non connect
49	VDD	-	Power supply
50	GND	-	Connect to ground
51	VDD	-	Power supply
52	GND	-	Connect to ground
53	NG_RD	I	Glue logic input signal from host
54	NG_WR	I	Glue logic input signal from host
55	G_WITODC	I	Glue logic input signal from front end
56	G_CSDEC	I	Glue logic input signal from host
57	G_WITDEC	I	Glue logic input signal from decoder
58	VDD	-	Power supply
59	GND	-	Connect to ground
60	WAIT1	O	Glue logic output signal to host

2.Pin function

JCV8005-2 2/2

Pin No.	Symbol	I/O	Description
61	WAIT2	-	Non connect
62	WAITIN	I	Glue logic input signal (connect to 27 pin)
63	VDD	-	Power supply
64	GND	-	Connect to ground
65	TEST_IN	I	Connect to ground
66,67	NC	-	Non connect
68	VDD	-	Power supply
69	GND	-	Connect to ground
70	CLKOCTL	I	Input terminal for crystal-oscillator circuit on/off control
71	NC	-	Non connect
72	OSCI	I	Crystal oscillation terminal (input side)
73	OSCO	O	Crystal oscillation terminal (output side)
74	NC	-	Non connect
75	VDD	-	Power supply
76	GND	-	Connect to ground
77	33OUT	O	Oscillation output terminal
78	16OUT	O	Oscillation output terminal
79	VDD	-	Power supply
80	GND	-	Connect to ground
81	VDD	-	Power supply
82	GND	-	Connect to ground
83	STERR_IN	I	Presence of data error from front end
84	SYNC_IN	I	Sector sink signal from front end
85	STCLK_IN	I	Data clock signal from front end
86	DACK_IN	I	Signal which shows effective data from front end
87	REQ_OUT	O	Request signal for forwarding control to front end
88	VDD	-	Power supply
89	GND	-	Connect to ground
90~93	STD0~3_IN	I	Data input from front end (8 bits)
94	GND	-	Connect to ground
95~98	STD4~7_IN	I	Data input from front end (8 bits)
99	VDD	-	Power supply
100	GND	-	Connect to ground

1. Pin layout

2. Block diagram

3. Pin function

Symbol	Pin name	Function
A19~A0	Address Inputs	To provide memory addresses. During sector erase A19~A11 address lines will select the sector. During block erase A19~A15 address lines will select the block.
DQ15~DQ0	Data Input/Output	To output data during read cycles and receive input data during write cycles. Data is internally latched during a write cycle. The outputs are in tri-state when OE# or CE# is high.
CE#	Chip Enable	To activate the device when CE# is low.
OE#	Output Enable	To gate the data output buffers.
WE#	Write Enable	To control the write operations.
VDD	Power Supply	To provide 3-volt supply (2.7V-3.6V).
Vss	Ground	
NC	No Connection	Unconnected pins.
