

## SPECIFICATIONS

### [Format]

System.....Minidisc digital audio system  
 Laser.....Semiconductor laser  
 Recording method.....Field modulation overwrite method  
 Audio compression.....ATRAC  
 (Adaptive Transform Acoustic Coding)  
 Playing rotation.....Approx. 400 rpm ~ 900 rpm (CLV)

### [D/A conversion]

D/A conversion.....1 Bit  
 Oversampling.....8 fs (352.8 kHz)

### [A/D converter]

A/D converter.....5 th order sigma-delta conversion  
 + D.R.I.V.E conversion  
 Sampling frequency.....44.1 kHz

### [Digital audio performance]

Frequency response (playback mode)  
 .....8 Hz ~ 20 kHz, ±1 dB  
 Signal to noise ratio (playback mode).....More than 105dB  
 Dynamic range (playback mode).....More than 92dB  
 Total harmonic distortion (1 kHz, playback mode)  
 .....Less than 0.007 %  
 Wow & flutter.....Less than unmeasurable limit  
 Analog input sensitivity / input impedance  
 .....500 mV / 22 kΩ or more

### Analog output level / output impedance

.....2.0 V / Less than 600 Ω  
 Headphone output.....20 mW / 32 Ω load  
 Digital input  
 Coaxial.....0.5 Vp-p / 75 Ω  
 Optical(Wave length 660 nm).....-15 dBm ~ -21 dBm  
 Digital output  
 Coaxial.....0.5 Vp-p / 75 Ω  
 Optical(Wave length 660 nm).....-15 dBm ~ -21 dBm

### [General]

Power consumption.....25 W  
 Dimensions.....W : 440 mm (17 - 5 / 16")  
 H : 94 mm (3 - 11 / 16")  
 D : 373 mm (14 - 11 / 16")  
 Weight (Net).....5.0 kg (11.0lb)

1. KENWOOD follows a policy of continuous advancements in development. For this reason specifications may be changed without notice.
2. Sufficient performance may not be possible at very low temperatures(0 °C or less).

### Note:

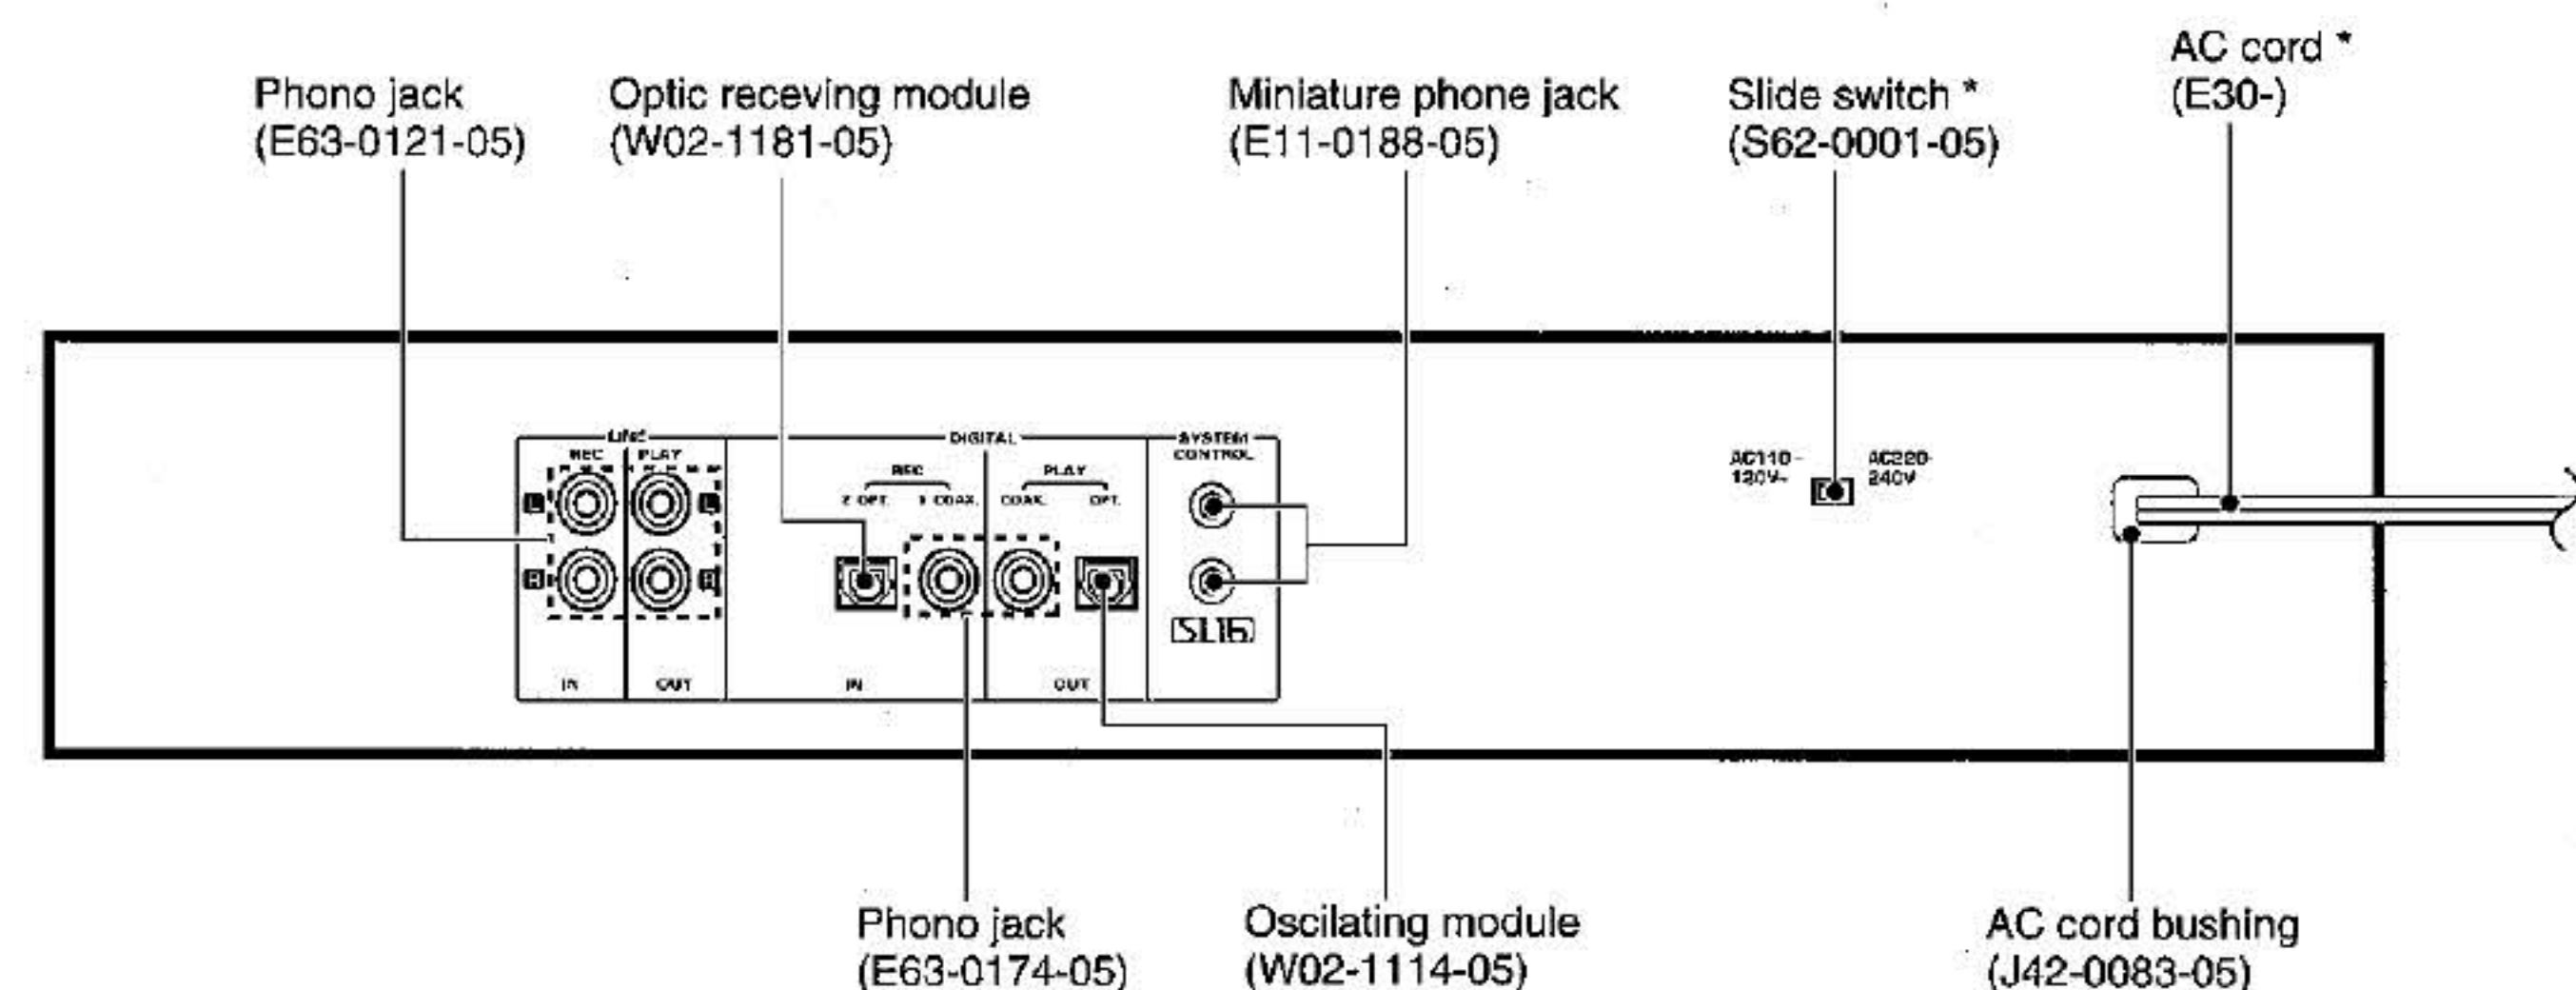

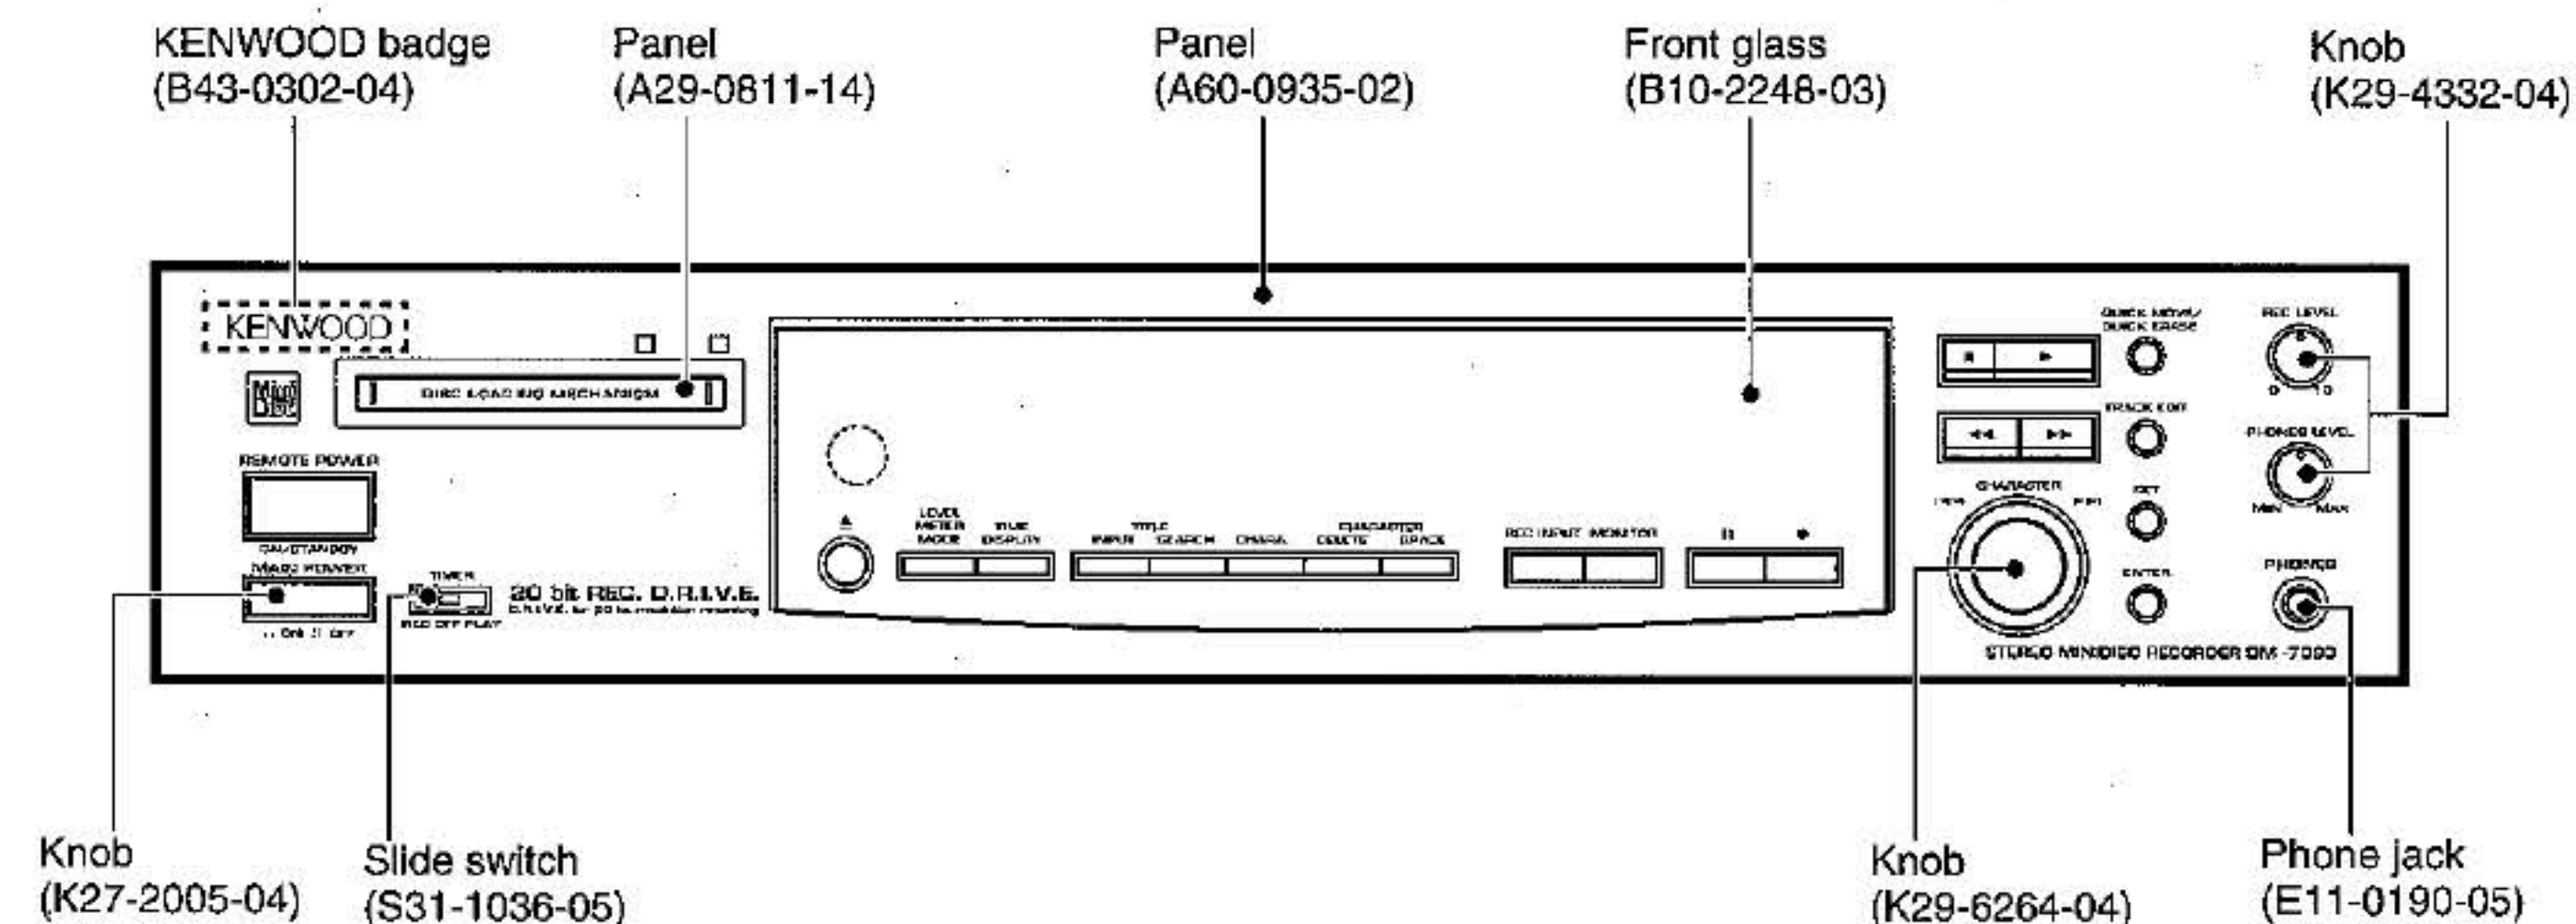

Component and circuitry are subject to modification to insure best operation under differing local conditions. This manual is based on Europe (E) standard, and provides information on regional circuit modification through use of alternate schematic diagrams, and information on regional component variations through use of parts list.

### Cautions

**Beware of condensation**  
When water vapor comes into contact with the surface of cold material, water drops are produced. If condensation occurs, correct operation may not be possible, or the unit may not function correctly. This is not a malfunction, however, and the unit should be dried. (To do this, turn the POWER switch ON and leave the unit for several hours.)

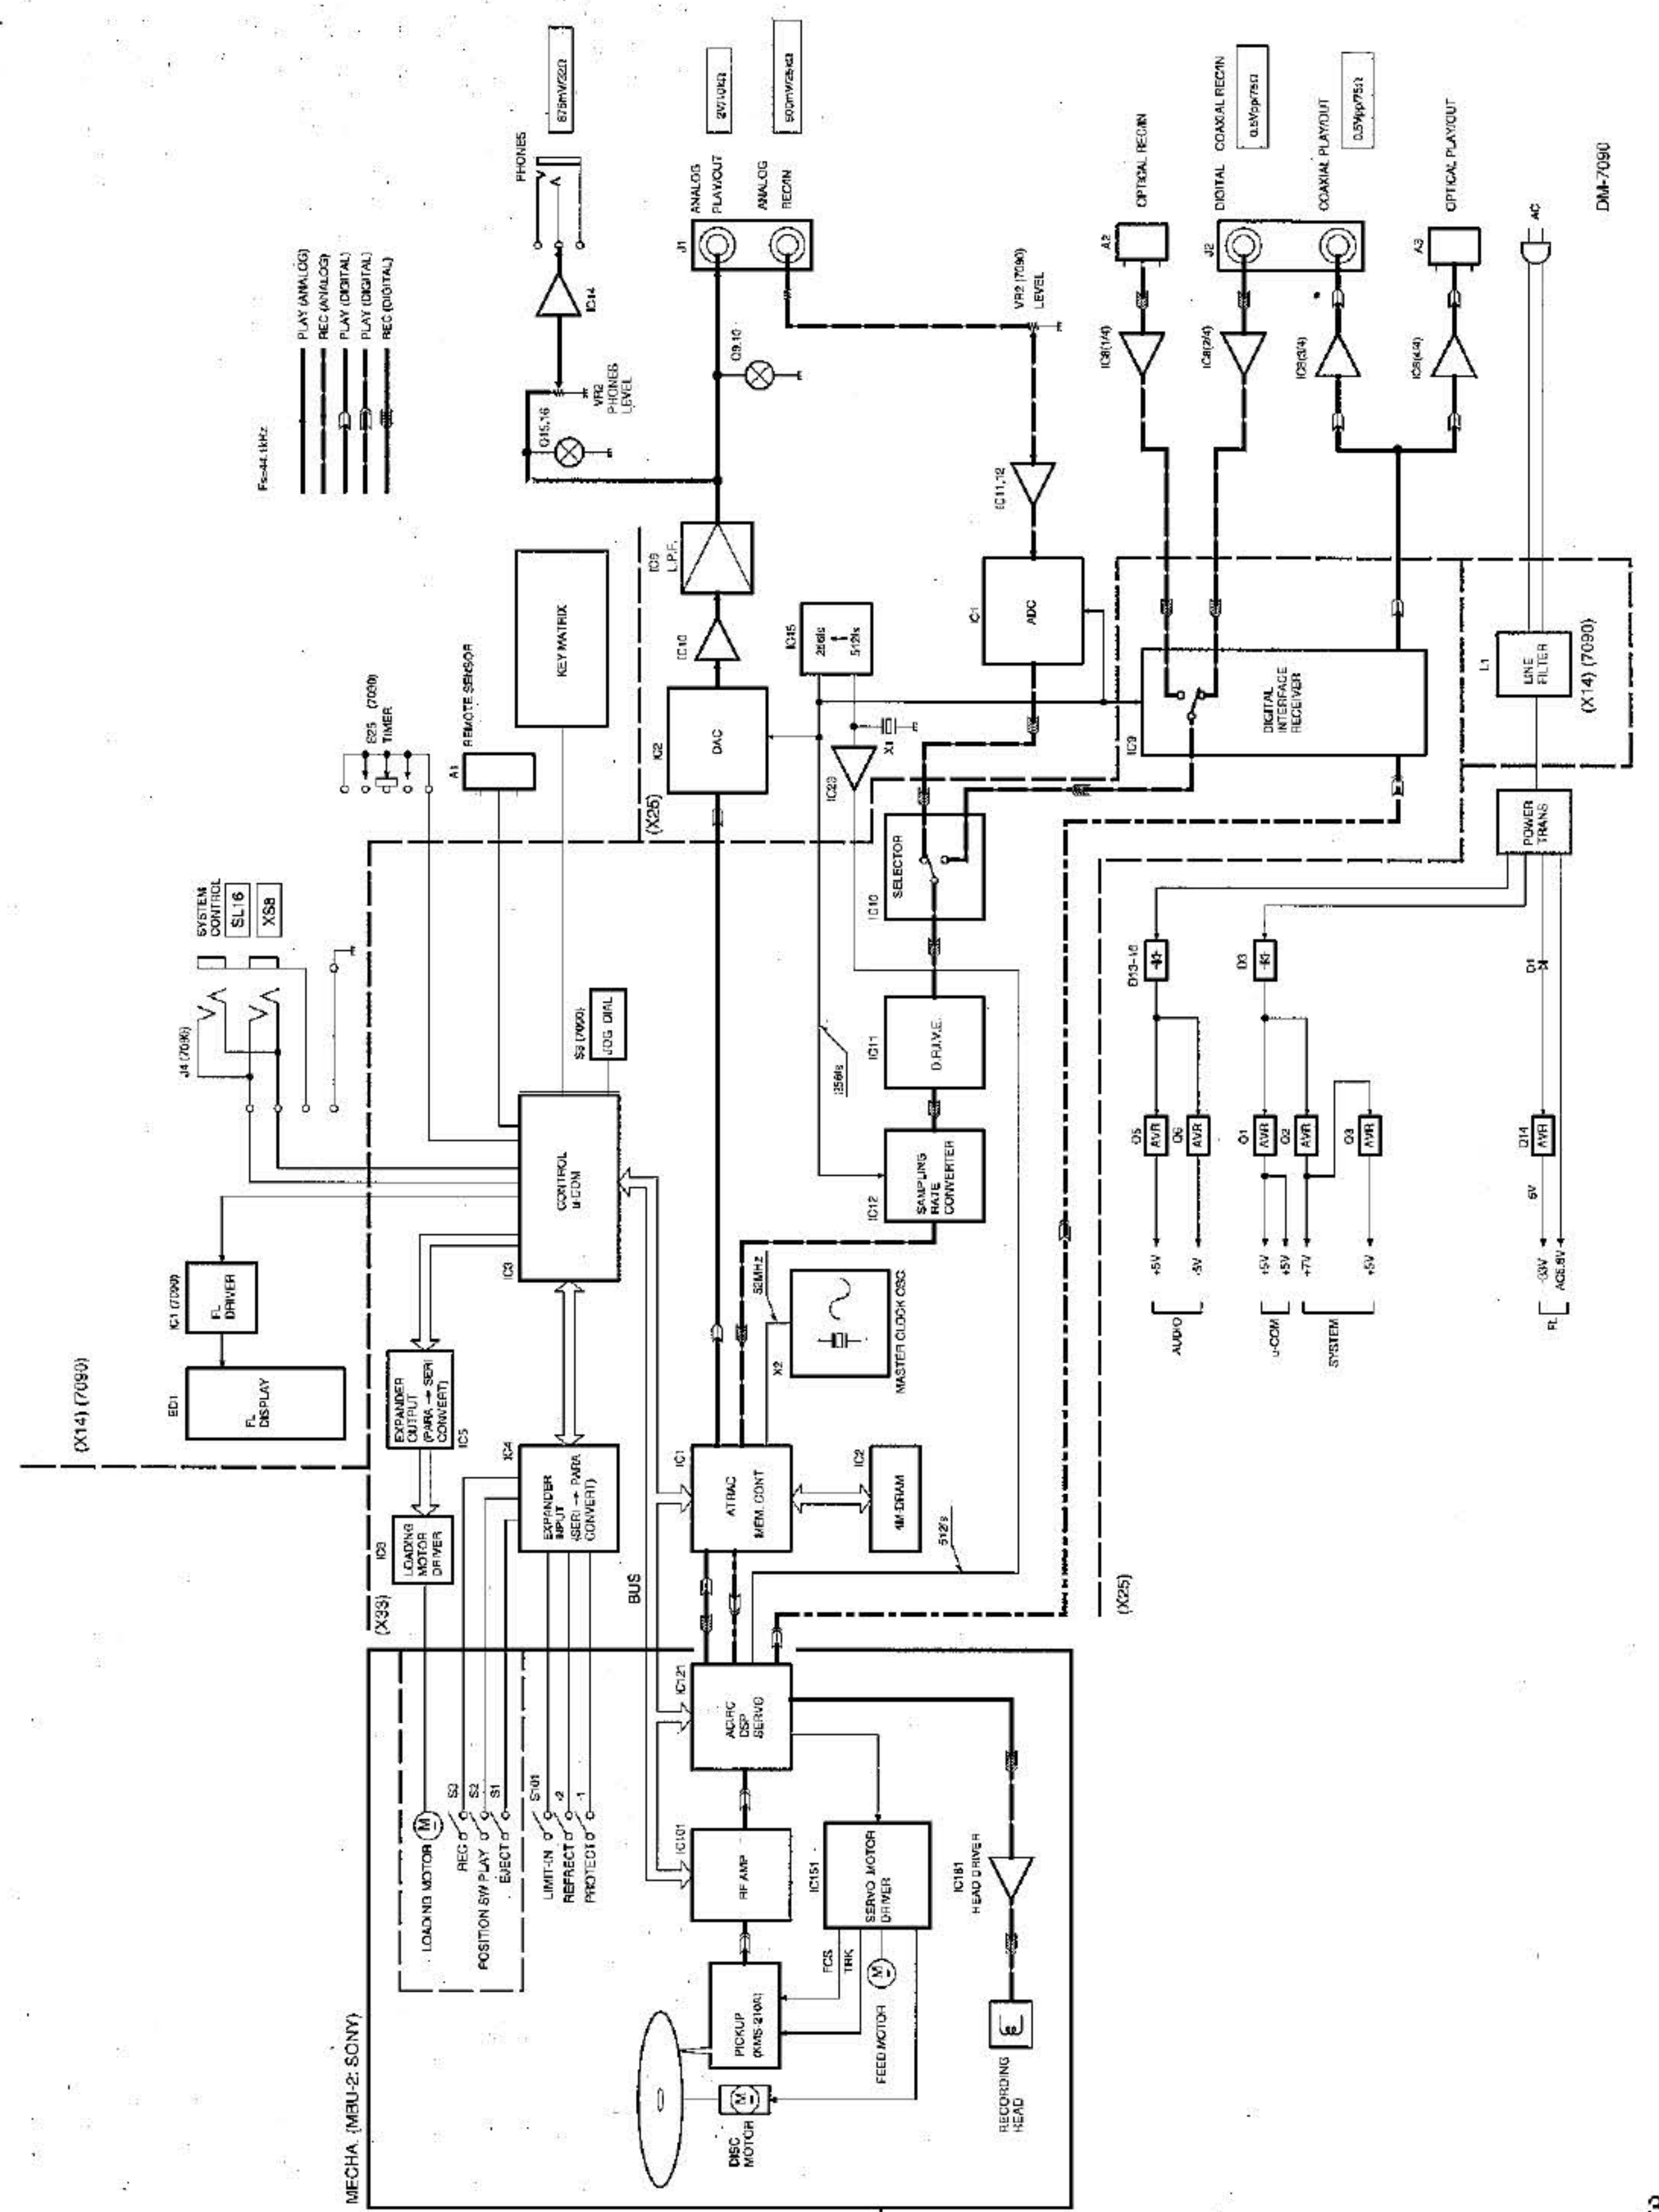

**Be especially careful in the following conditions:**

- When the unit is brought from a cold place to a warm place, and there is a large temperature difference.
- When a heater starts operating.
- When the unit is brought from an air-conditioned place to a place of high temperature with high humidity.
- When there is a large difference between the internal temperature of the unit and the ambient temperature, or in conditions where condensation occurs easily.

**Note related to transportation and movement**  
Before transporting or moving this unit, carry out the following operations.

1. Make sure that the Mini Disc is not loaded in the unit, press the MAIN POWER key to OFF and press the REMOTE POWER key to ON.
  - Check that no disc is present in the unit.
2. Wait a few seconds and verify that the display shown appears.
3. Press the REMOTE POWER key to off(STANDBY), then Press the MAIN POWER key to OFF.

NO DISC

CIRCUIT DESCRIPTION

CIRCUIT DESCRIPTION

1. Test mode

1-1. Setting the test mode

Connect a plug of AC power cord to an outlet of AC, while pressing POWER key.

1-2. Canceling the test mode

Unplug the AC power cord. Connect a plug of AC power cord to an outlet of AC, while pressing EJECT key.

1-3. Basic operation in test mode

All operations are performed using the Rotary encoder, ENTER key, and TRACK EDIT key. The functions of each key are shown in the table below.

Function	Description
Rotary encoder	Changes the parameter and mode.
ENTER key	Proceeds for definition.
TRACK EDIT key	Returns for interrupt.

1-4. Selection of test mode

Eight test modes are selected by turning the Rotary encoder.

Display	Description	Section
TMP ADJUST	The work of adjustment is unnecessary in this mode	-
LDPWR ADJUST	Laser power adjustment	2-5
EFBAL ADJUST	Traverse adjustment	2-6
FBIAS ADJUST	Focus bias adjustment	2-7
FBIAS CHECK	The work of adjustment is unnecessary in this mode	-
CPLAY MODE	Continuous playback mode	1-4-1
CREC MODE	Continuous recording mode	1-4-2
EEP MODE	Nonvolatile memory mode *	1-4-3

For more information on each adjustment mode, refer to each section of 2, "Electrical adjustment".

If other adjustment mode has been entered incorrectly, press the TRACK EDIT key to exit the mode.

\*The EEP mode is not used for service. If this EEP mode has been entered incorrectly, press the TRACK EDIT key immediately to exit the mode.

1-4-1. Operation in continuous playback mode

- Entering the continuous playback mode
  - Insert a recordable disc or compact disc (CD) into the unit.
  - Turn the Rotary encoder to display "CPLAY MODE".
  - Press the ENTER key. The display then changes from "CPLAY MODE" to "CPLAY IN".
  - After the access operation is completed, the display changes from "CPLAY IN" to "CPLAY(####)".

- Change the playback point.
  - Press the ENTER key during continuous playback. The display then changes to "CPLAY MID" and "CPLAY OUT".

- After the access operation is completed, the display changes from "CPLAY MID" and "CPLAY OUT" to "CPLAY(####)".

- Terminating the continuous playback mode
  - Press the TRACK EDIT key. The display then changes to "CPLAY MODE".
  - Press the EJECT key to take out the disc.

Note : The playback start addresses of IN, MID, and OUT are described below.

IN	40H cluster
MID	300H cluster
OUT	700H cluster

1-4-2. Operation in continuous recording mode

- Entering the continuous recording mode
  - Insert a recordable disc into the unit.
  - Turn the Rotary encoder to display "CREC MODE".
  - Press the ENTER key. The display then changes from "CREC MODE" to "CREC IN".
  - Select "CREC-IN" "CREC-MID" "CREC-OUT" by pressing SET key. Press ENTER key after this selection work.
  - After the access operation is completed, the display changes from "CREC IN" to "CREC(####)". The REC display then lights.

- Terminating the continuous recording mode
  - Press the TRACK EDIT key. The display then changes to "CREC MODE" and the REC display goes off.
  - Press the EJECT key to take out the disc.

Notes : 1. The recording start addresses of IN, MID, and OUT are described below.

IN	40H cluster
MID	300H cluster
OUT	700H cluster

- The TRACK EDIT key can be pressed at any time to stop the recording.
- An erasure prevention control is not detected in the test mode. Be careful not to enter the continuous recording mode using a disc containing the data that should not be erased.
- Do not record continuously for more than five minutes.
- Take care that no vibration is applied during continuous recording.

1-4-3. Nonvolatile memory mode

The nonvolatile memory mode is used to read or write the contents of nonvolatile memory. This mode is not used for service. If this mode has been entered incorrectly, press the TRACK EDIT key immediately to exit this mode.

Note: The # display on the screen indicates an arbitrary figure.

1-5. Other key functions

Function	Description
▶/II	Plays back continuously when this key is pressed during stop. Turns on and off the tracking servo when it is pressed during continuous playback.
MONITOR	Selects the spindle servo mode. (CLV-S and CLV-A)
DISPLAY MODE	Selects the contents of the display every time this key is pressed.

Note : An erasure prevention control is not detected in the test mode. Notice that recording is performed irrespective of the erasure prevention control position when the REC key is pressed.

1-6. Display in test mode

The display is selected in the order of MODE display, error rate display, and address display every time the DISPLAY MODE key is pressed.

- MODE display
 

"TMP ADJUST" and "CPLAY MODE" are displayed as the MODE display.

- Address display
 

The address display appears as described below.  
h = #### a = #### (Recordable groove and pre-mastered disc)  
h = Header address, a = ADIP address (Pre-mastered : a=0000)

\* When no address can be read, "-" display appears.

- Error rate display
 

The error rate display appears as described below.

C1 = ##### AD = #####  
C1 = C1 error, AD = ADER

1-7. Other displays

Display	Description	
	Lights	Goes off
▶	Continuous playback	Stop
II	Tracking servo OFF	Tracking servo ON
PGM	CVL LOCK	CLV UNLOCK
P.C.	Low reflection	High reflection
TOTAL	CLV-S	CLV-A

1-8. Precaution on use of test mode

\* An erasure prevention control is not detected in the test mode. Therefore, when the recording laser power mode such as continuous recording mode and traverse adjustment mode is entered, the contents of the existing recording are erased irrespective of the control position. Be careful not to enter the continuous recording mode and traverse adjustment mode when using a disc, containing the data that should not be erased, in the test mode.

2. Electrical adjustment

2-1. Precaution during confirmation of Laser Diode emission

During adjustment, do not view the emission of a laser diode from just above for confirmation. This may damage your eyes.

2-2. Precaution on handling of Optical pick-up (KMS-210A)

The laser diode in an optical pick-up is easy to be subject to electrostatic destruction. Therefore, solder-bridge the laser tap on the flexible board when handling the optical pick-up. When removing the flexible board from the connector, make a solder bridge in advance, then remove the board. Be careful not to remove the solder bridge before inserting the connector. Moreover, take careful measures against electrostatic destruction. The flexible board is cut easily. Handle the flexible board with care.

2-3. Precaution during adjustment

1) Perform the adjustment and confirmation marked with "O" in the order shown in the table when the parts below are replaced.

	Optical pick-up	BD board		
		IC171	D101	IC101,IC121,IC191
1. Laser power adjustment	O	X	X	O
2. Traverse adjustment	O	O	X	O
3. Error rate confirmation	O	O	X	O

2) In the test mode, perform the adjustment. After adjustment is completed, cancel the test mode.

3) Perform the adjustment in the order described.

4) Use the following tools and measurement equipment.

- CD test disc TDYS-1
- Laser power meter
- Oscilloscope (with bandwidth of more than 40 MHz) (Calibrate the probe before measurement.)
- Digital voltmeter
- Thermometer

5) Take care that VC and GND (ground) are not connected on the oscilloscope when two or more signals are monitored on the oscilloscope. (VC and GND are short-circuited in this case.)

6) Do not move VR105 on the BD board. If VR105 is replaced, set new VR105 to the mechanical center position of a semi-fixed resistor.

Note: The # display on the screen indicates an arbitrary figure.

CIRCUIT DESCRIPTION

CIRCUIT DESCRIPTION

2-4. Creating the recordable continuous recording disc

This disc is used for focus bias adjustment and error rate confirmation. How to create the recordable continuous recording disc is described below.

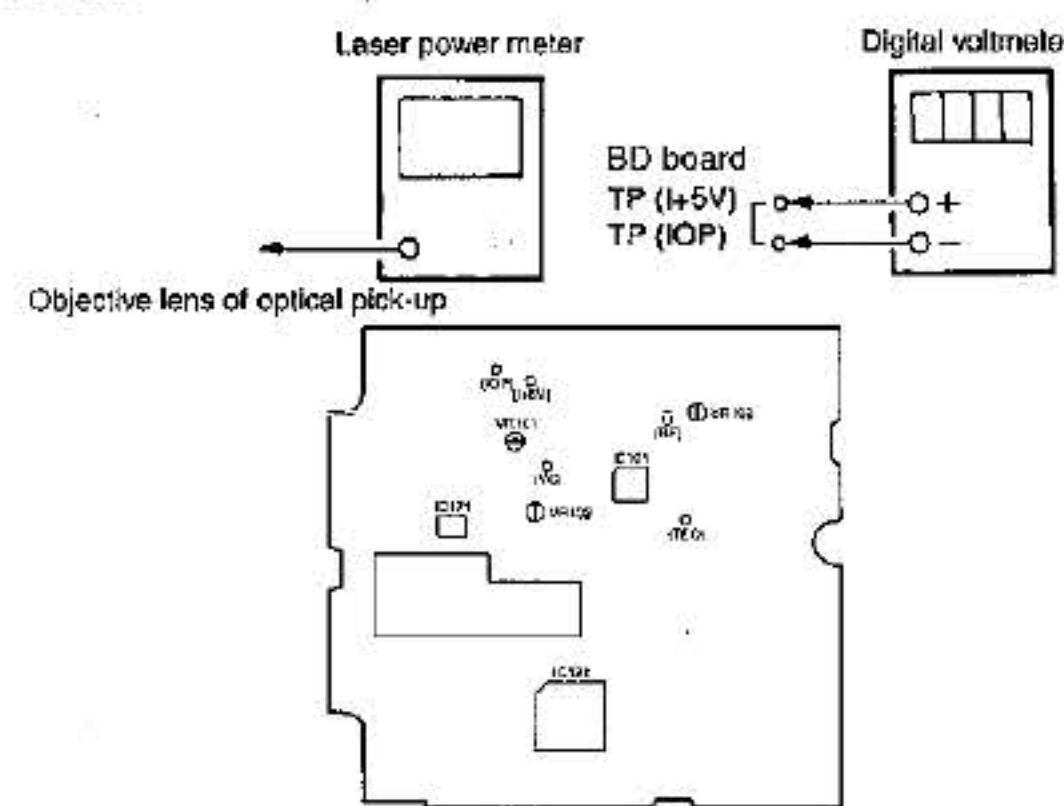

1. Insert a commercial recordable disc (blank disc).
2. Turn the Rotary encoder to display "CREC MODE."
3. Press the ENTER key to display "CREC IN".
4. A display indicates "CREC-MID" by pressing SET key. Next a display indicates "CREC(02FF)" by pressing ENTER key and recording begins.
5. Terminate the recording within five minutes.
6. Press the TRACK EDIT key to stop the recording.
7. Press the EJECT key to take out the recordable disc.

As a result, a continuously recorded disc can be created for focus bias adjustment and error rate confirmation.

Note : Take care that no vibration is applied during continuous recording.

2-5. Laser power adjustment

Connection :

Adjustment :

1. Put the laser power meter on the objective lens of the optical pick-up. Connect the digital voltmeter to TP(IOP) and TP(I+5V).
2. Turn the Rotary encoder to display "LDPWR ADJUST". (Laser power : For adjustment use)
3. Press the ENTER key two times to display "LDS4B=3.5mW".
4. Adjust VR102 on the BD board so that the laser power meter reads 3.4 mW.
5. Press the ENTER key to display "LDS96=7.0mW". (Laser power : MO write)
6. Confirm that the laser power meter and digital voltmeter at that time read the specified value.

Note :  
 1. The "#" display on the screen indicates an arbitrary figure.  
 2. "VR###" printed on Schematic diagram and Parts list through "RV###" printed on PCB.

Specification :

Reading of laser power meter : 7.0 ±0.3 mW  
 Reading of digital voltmeter : Optical pick-up indication value ±10%

(Optical pick-up label) :

In this case, Iop = 82.5 mA

Iop(mA) = Reading of digital voltmeter (mV)/1(Ω)

7. Press the ENTER key to display "LDS0F=0.7mW". (Laser power = MO read)
8. Confirm that the laser power meter at that time reads the specified value.

Specification :

Reading of laser power : 0.70 ±0.1 mW

9. Press the key to display "LDPWR ADJUST" and stop the laser emission. (The ERASE key can be pressed at any time to stop the laser emission.)

2-6. Traverse Adjustment

Connection :

Adjustment :

1. Connect the oscilloscope to TP(TEO) and TP(VC) on the BD board.
2. Insert a commercial recordable disk.
3. Turn the Rotary encoder to display "EFBAL ADJUST".
4. Press the ENTER key to display "EFBAL MO-W". At this time, optical pick-up moves to 0100h cluster. (Laser power WRITE power, focus servo ON, tracking servo OFF, and spindle(S) servo ON)
5. Adjust VR101 on the BD board so that the waveform on the oscilloscope satisfies the specified value. (MO groove write power traverse adjustment)

Specification : A = B

6. Enter the ENTER key to display "EFB=\$#MO-R". (The display may require much time for its change or may not change. However, proceed to the next adjustment because adjustment is possible.) (Laser power : MO read)

7. Turn the Rotary encoder so that the waveform on the oscilloscope satisfies the specified value. (When the Rotary encoder is turned, the #-marked figure in "EFB=\$#" changes and the waveform also changes.) During this adjustment, the oscilloscope changes in units of about 3%. Adjust so that the waveform comes nearest to the specified value. (MO groove read power traverse adjustment)

Specification : A = B

8. Press the ENTER key to display "EFB=\$#SAVE" momentarily and save the adjustment result in non-volatile memory. After that, "EFBAL MO-P" is displayed. After save, a pick-up moves automatically to pit block area.
9. Press the ENTER key to display "EFB=\$#MO-P". The optical pick-up automatically moves to the area of the pit block to establish a servo. (The display may require much time for its change or may not change. However, proceed to the next adjustment because adjustment is possible.)

10. Turn the Rotary encoder so that the waveform on the oscilloscope comes near to the specified value. During this adjustment, the waveform changes in units of about 3%. Adjust so that the waveform comes nearest to the specified value.

Specification : A = B

11. Press the ENTER key to display "EFB=\$#SAVE" momentarily and save the adjustment result in non-volatile memory. After that, "EFBAL CD" is displayed. The disc rotation stops automatically.
12. Press the EJECT key to take out a recordable disc.
13. Insert test disc TDYS-1.
14. Press the ENTER key to display "EFB=\$#CD". A servo is established automatically.
15. Turn the Rotary encoder so that the waveform on the oscilloscope comes near to the specified value. During this adjustment, the waveform changes in units of about 3%. Adjust so that the waveform comes nearest to the specified value.

Note :  
 1. The "#" display on the screen indicates an arbitrary figure.  
 2. "VR###" printed on Schematic diagram and Parts list through "RV###" printed on PCB.

Specification : A = B

16. Press the ENTER key to display "EFB=\$#SAVE" momentarily and save the adjustment result in non-volatile memory. After that, "EFBAL ADJUST" is displayed.
17. Press the EJECT key to take out test disc TDYS-1.

Notes :

1. Data is erased during MO write when a recorded disc is used for this adjustment.
2. If the traverse waveform is difficult to be monitored, connect an oscilloscope as shown in the figure below.

2-7. Focus bias adjustment

Connection :

1. Insert a continuously recorded disc (refer to 2-4, "Creating the recordable continuous recording disc").
2. Turn the Rotary encoder to display "CPLAY MODE".
3. When the access of "CPLAY IN" presses ENTER key once again after completion, a display indicates "CPLAY MID".
4. Press the DISPLAY MODE key two times. Press the TRACK EDIT key when "CPLAY(030#)" is displayed.
5. Turn the Rotary encoder to display "FBIAS ADJUST".
6. Press the ENTER key to display "####/#a=##". The first four-digit figure indicates the C1 error rate, the two-digit figure after "/" indicates ADER, and the two-digit figure after "a=" indicates the focus bias value.
7. Turn the Rotary encoder clockwise and detect the focus bias value in which the C1 error rate becomes 220.
8. Press the ENTER key to display "####/#b=##".
9. Turn the Rotary encoder counterclockwise and detect the focus bias value in which the C1 error rate becomes 220.
10. Press the ENTER key to display "####/#c=##".
11. Confirm that the C1 error rate at that time is less than 50 and that ADER is 00, then press the ENTER key.
12. If the value indicated by "(##)" in the "##-##-##(##)" display is more than 20, press the ENTER key. If it is less than 20, press the TRACK EDIT key and readjust steps 2 and later.
13. Press the EJECT key to take out a continuous recording disc.

CIRCUIT DESCRIPTION

CIRCUIT DESCRIPTION

Notes :

1. The relation between the C1 error and focus bias value is shown in the figure below. Points "a" and "b" in the figure are detected by the above adjustment. Focal position "C" is automatically obtained from points "a" and "b" by calculation.
2. The C1 error rate fluctuates. Therefore, perform the adjustment according to the observed mean value.

2-8. Error rate confirmation

2-8-1. CD error rate confirmation

Confirmation :

1. Insert test disc TDYS-1.
2. Turn the Rotary encoder to display "CPLAY MODE".
3. Press ENTER key once again when the access of "CPLAY IN" finished.
4. "C1=####AD=##" is displayed.
5. Confirm that the C1 error rate is less than 20.
6. Press the TRACK EDIT key to stop the playback, then press the EJECT key to take out a test disc.

2-8-2. MO error rate confirmation

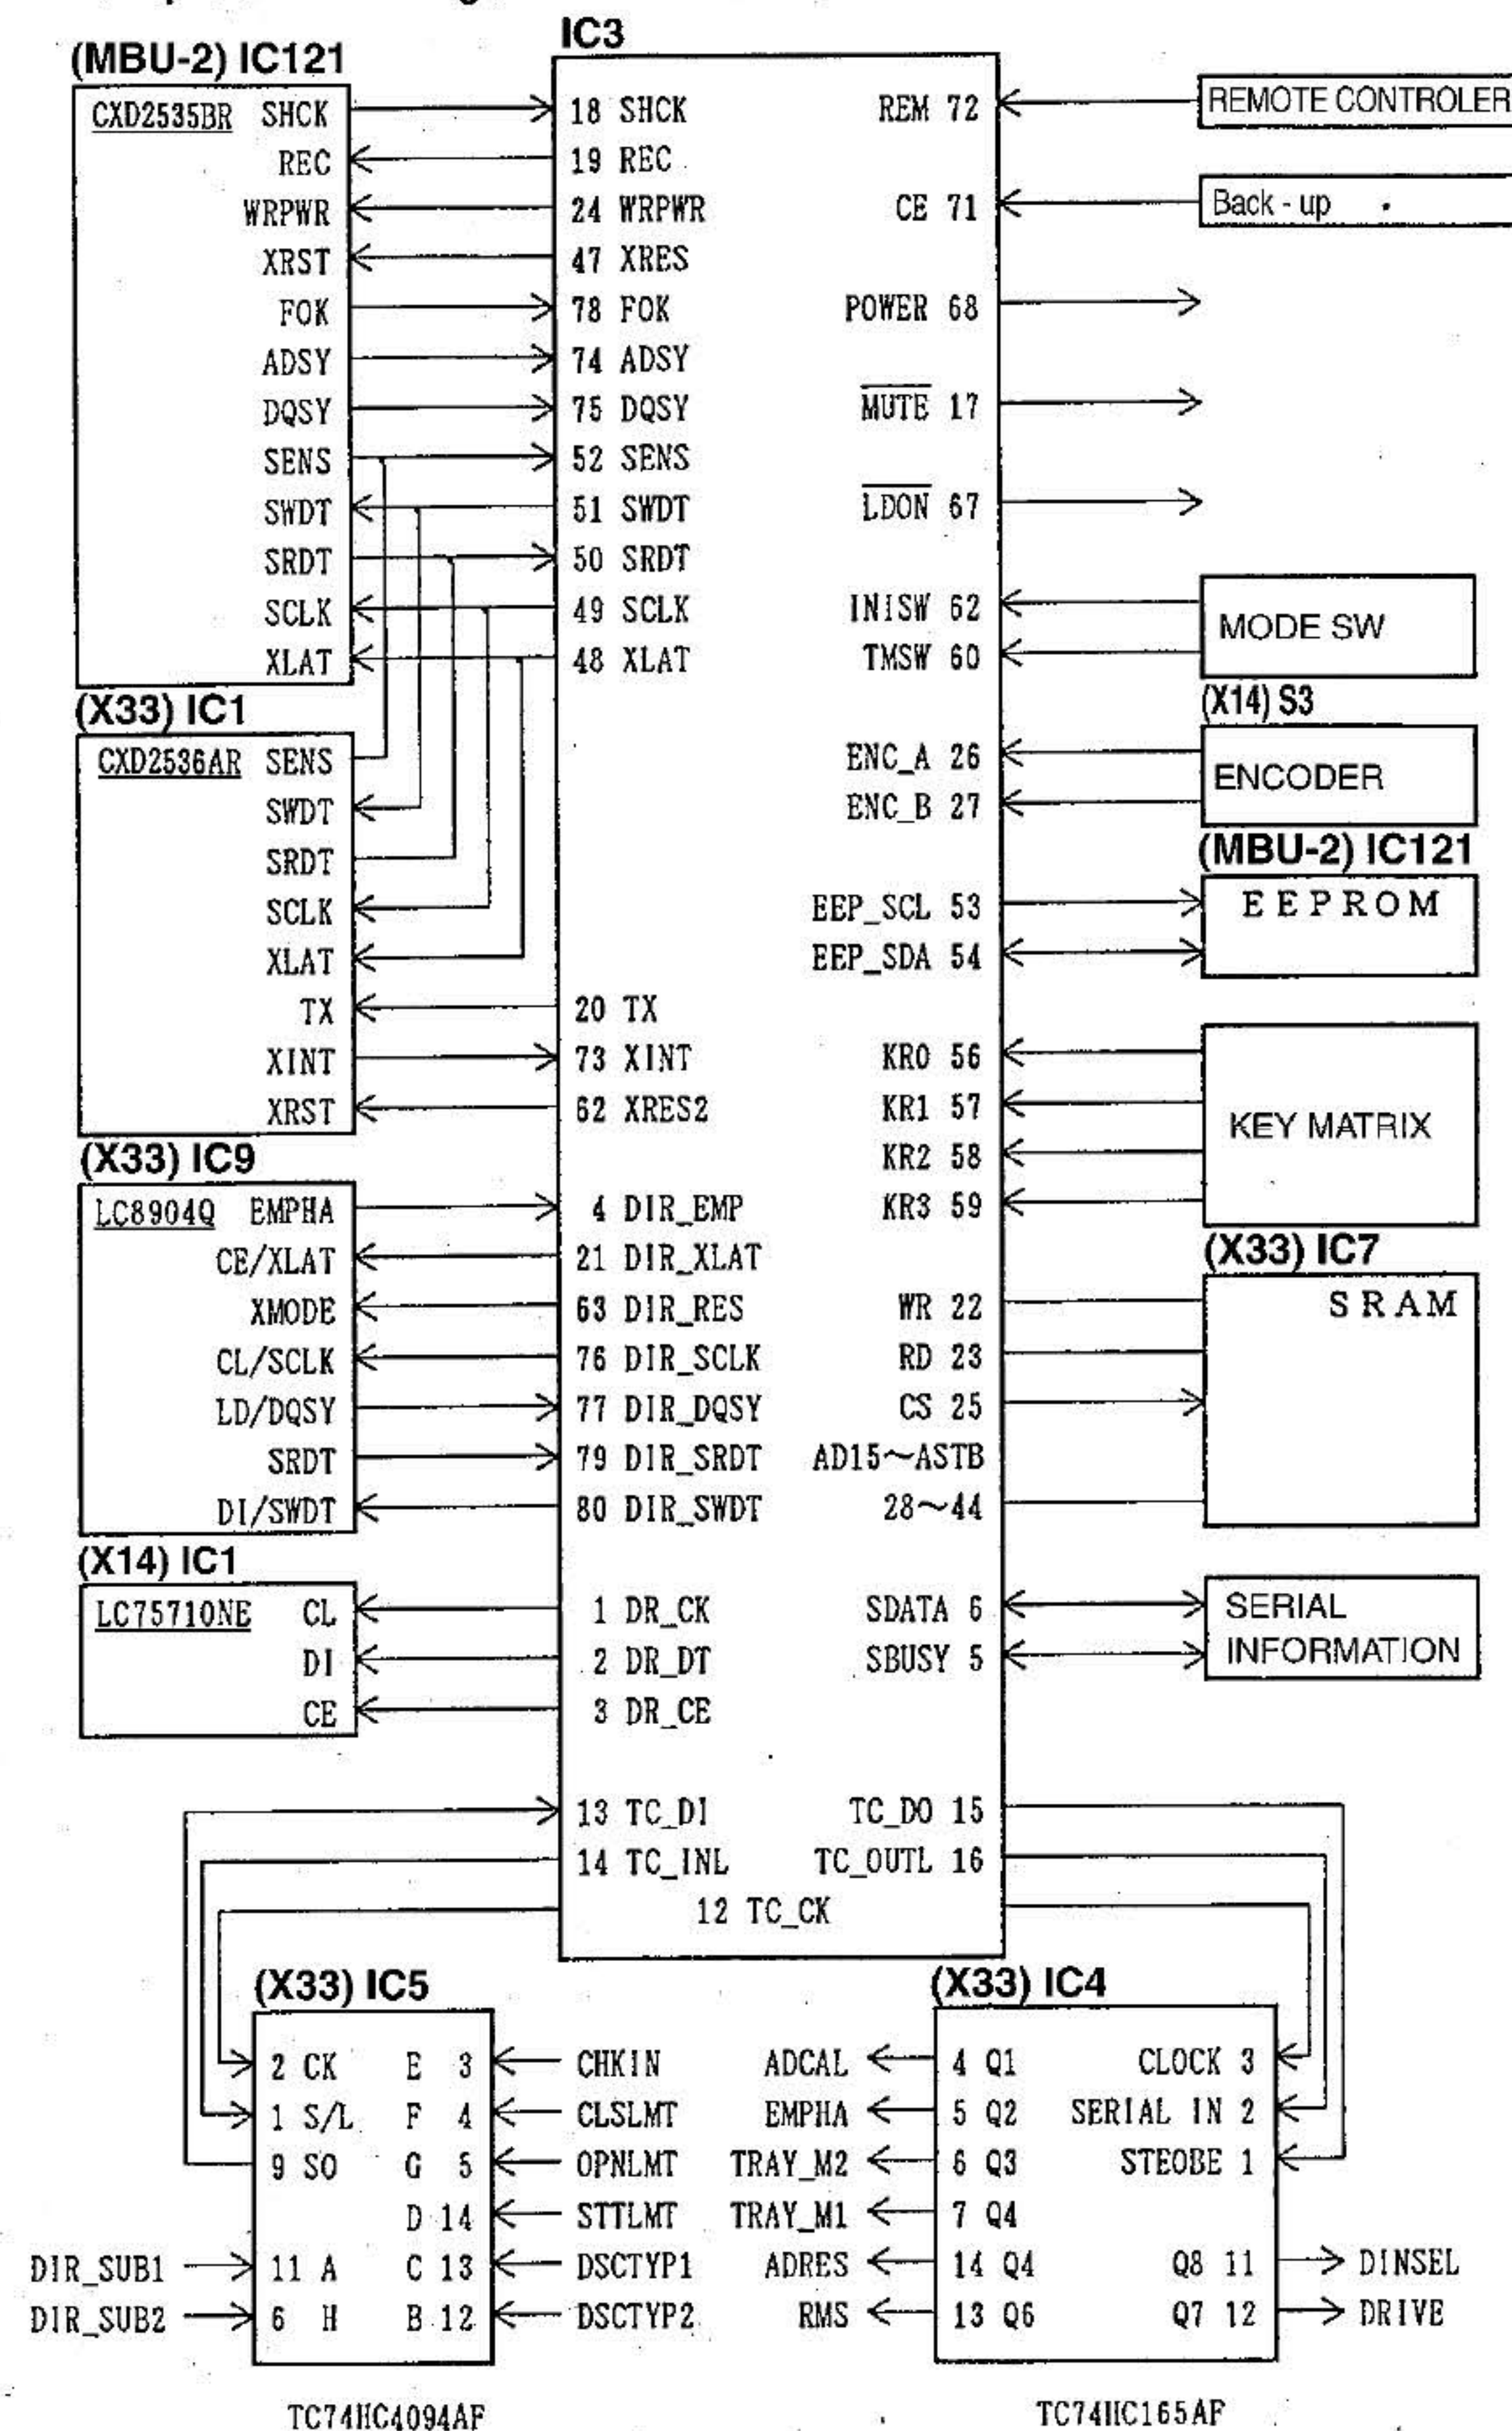

Confirmation :

1. Insert a continuously recorded disc (refer to 2-4, "Creating the recordable continuous recording disc").
2. Turn the Rotary encoder to display "CPLAY MODE".
3. When the access of "CPLAY IN" presses ENTER key once again after completion, a display indicates "CPLAY MID".
4. "C1=####AD=##" is displayed.
5. Confirm that the C1 error rate is less than 50 and that ADER is 00.
6. Press the TRACK EDIT key to stop the playback, then press the EJECT key to take out a continuous recording disc.

Note: The '#' display on the screen indicates an arbitrary figure.

3. Microprocessor :  $\mu$ PD784026GC 501 (X33 : IC3)

3-1.  $\mu$ -COM Block diagram

KR3(A/D)	MONITOR	REC INPUT	CHR SPACE	CHR DELETE	CHARACTER	TIME DISP	off

1. EJECT

1. Shaft of loading motor (LM) turns counter clock wise (1) and pulley gear turns same direction (2).
2. Middle gear turns clock wise (3) and idle gear turns same direction.
3. Slider-lift moves front wards (4) by turning of idle gear (5).
4. Eject arm pushes eject switch (6) by moving of slider-lift front (4) wards.
5. LM stops to turn.

2. LOADING

1. Eject switch releases by sliding of slider-lift (7) backwards.
2. LM turns clock wise. Idler and middle gears turn counter-clock wise, and pulley gear does clock wise. Slider-lift moves backwards (8).
3. Sloder-lift and holder assy move backwards (9).
4. Holder assy moves downwards by groove of slider and boss(A) of holder assy.
5. play switch works by play arm (10) and moving of slider-lift backwards.
6. LM and slider-lift stops to work.

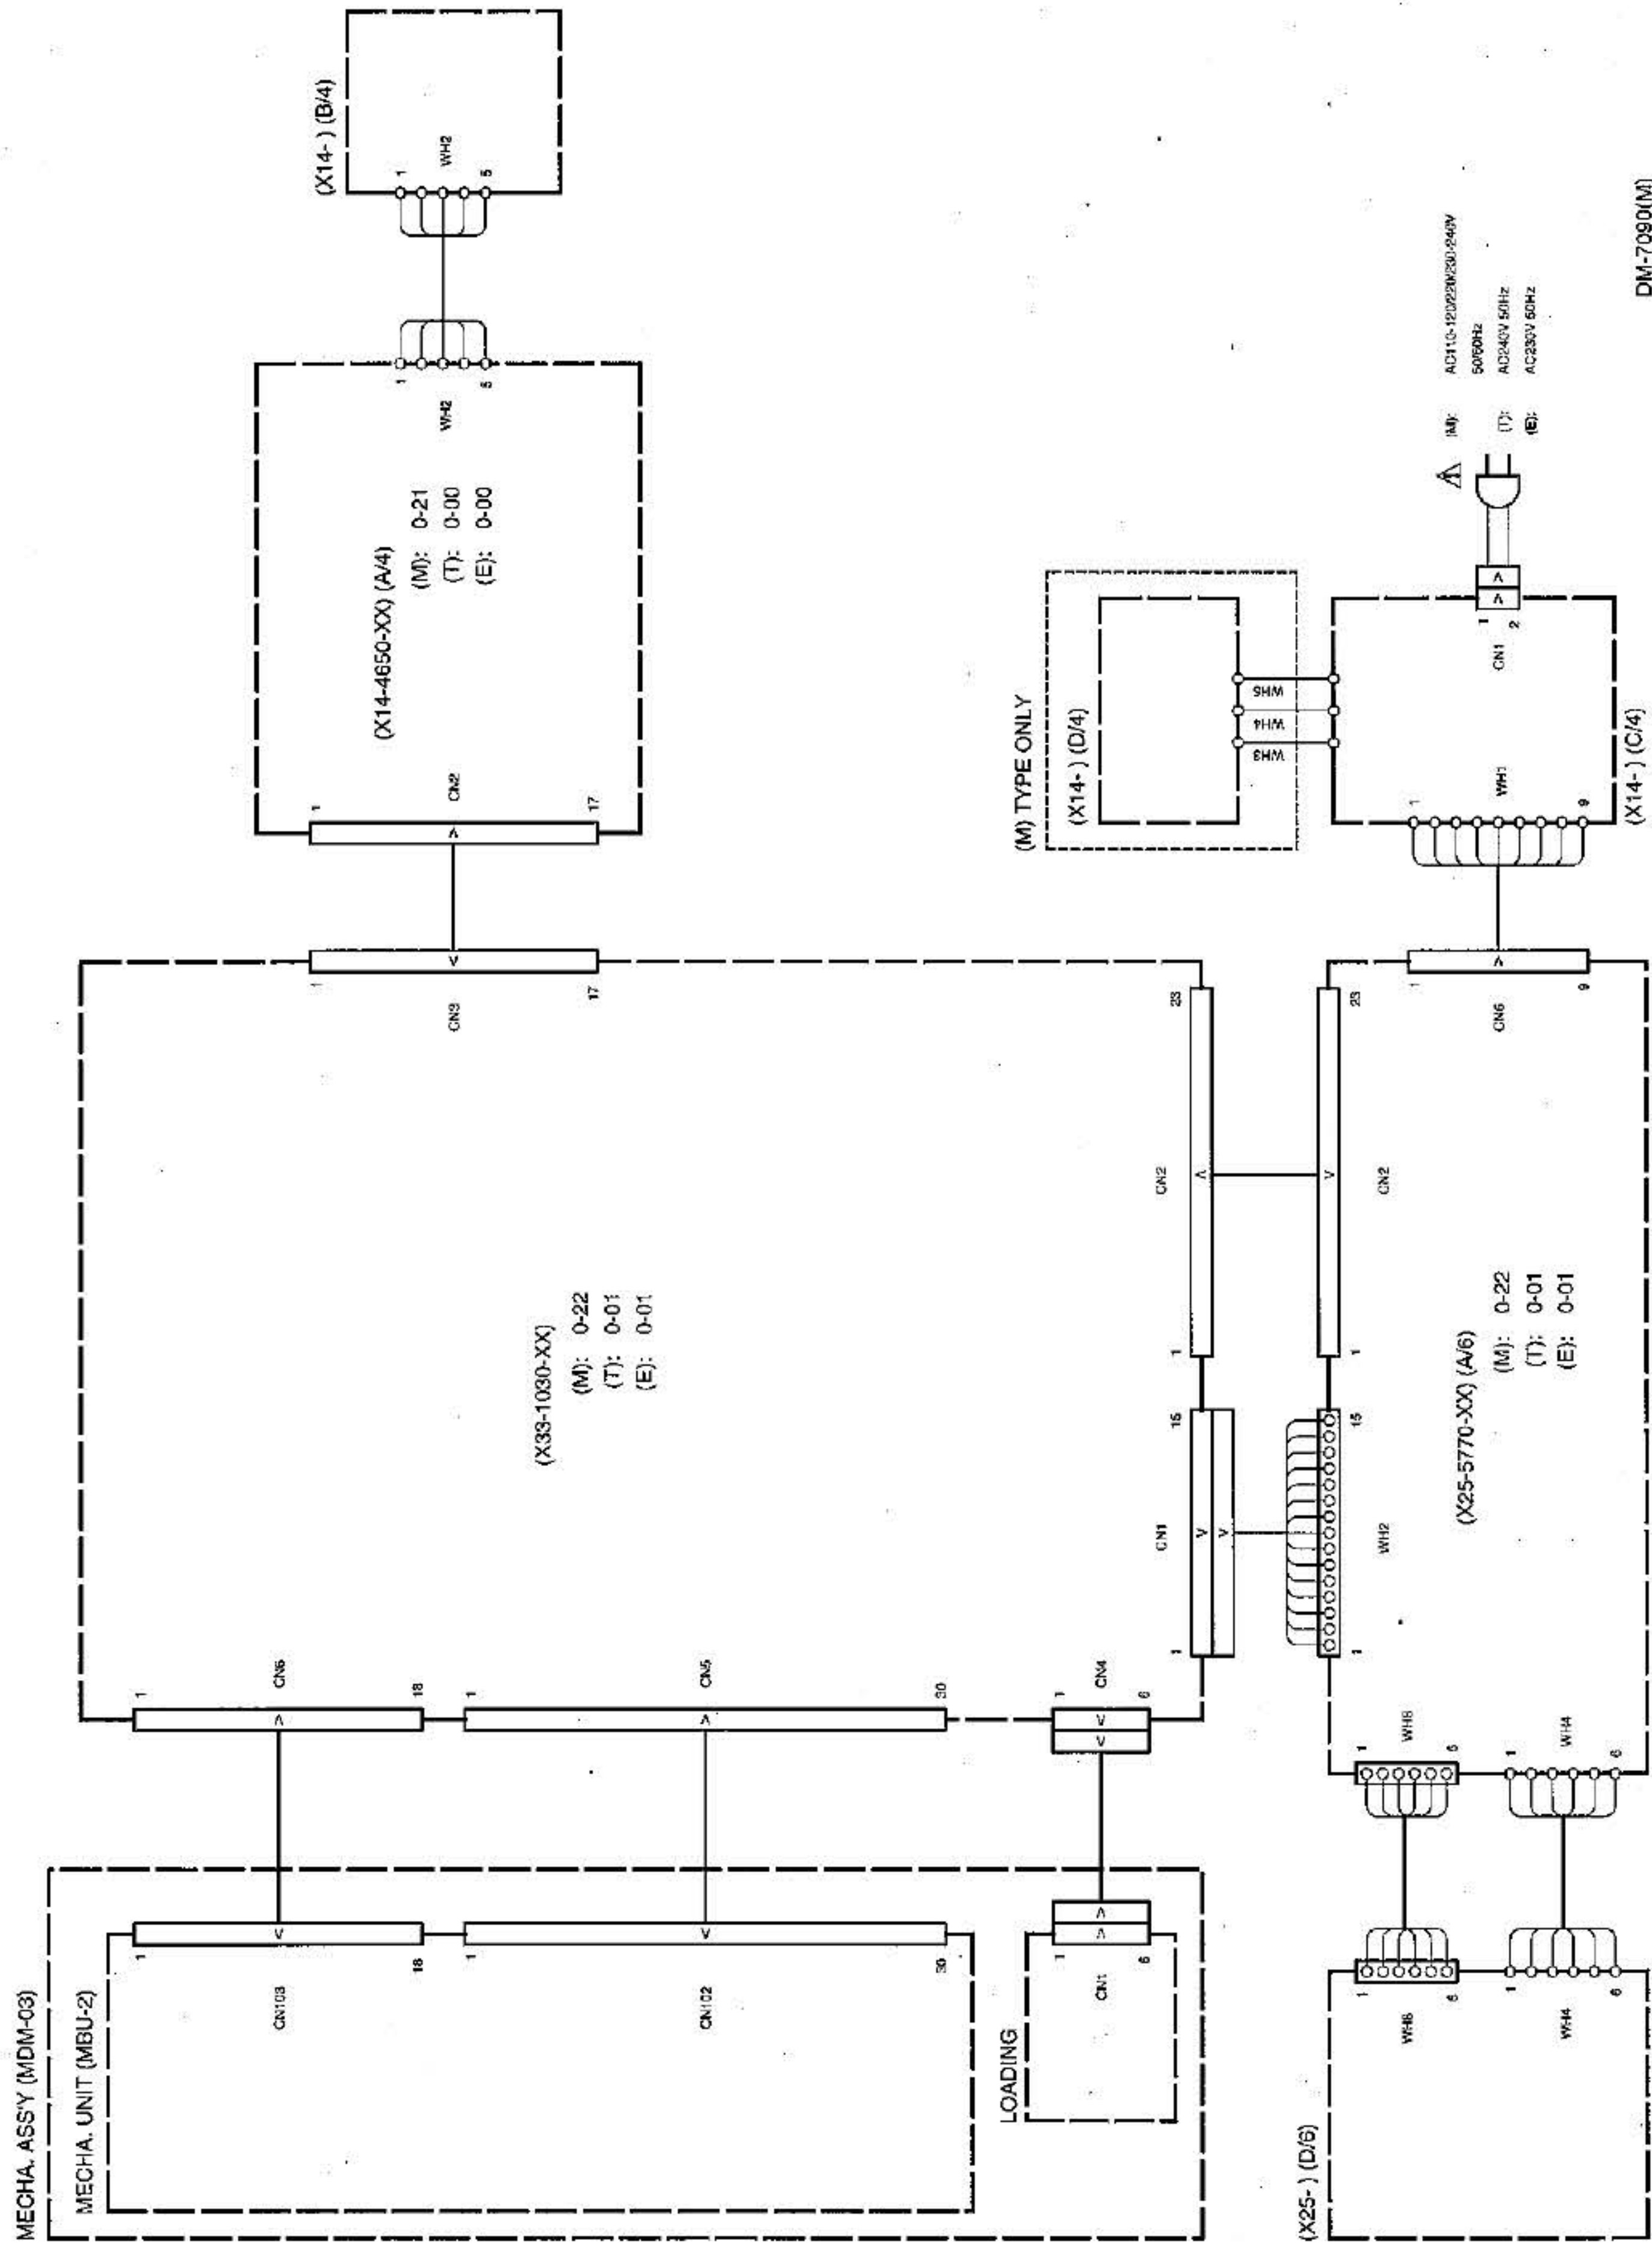

3. RECORDING

1. LM turns more clock wise and slider-lift moves backwards more.
2. Head of pickup moves downwards (11,12) by release of head arm (13) and moving of slider-lift backwards (14).
3. Rec switch works(play switch keeps on) by being pushed rec arm and moving of slider-lift backwards more.
4. LM and slider stops to work.

4. SWITCH FUNCTION
