CONTROL AND INDICATOR

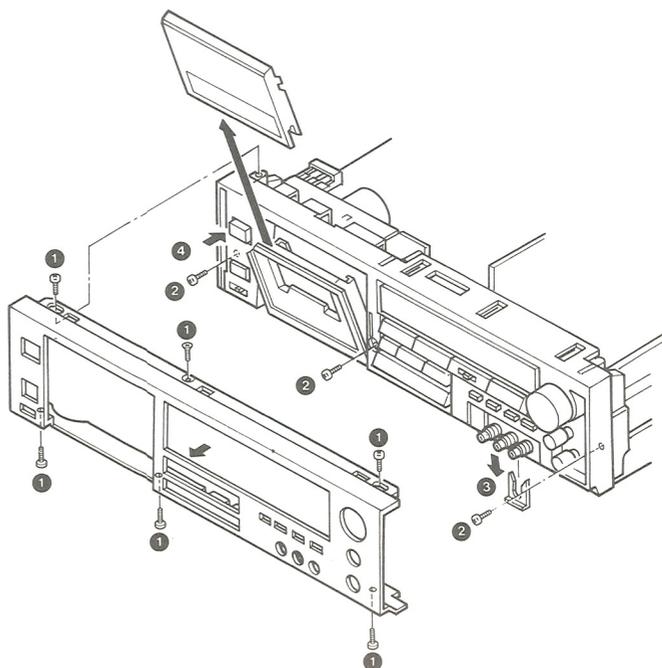

DISASSEMBLY FOR REPAIR

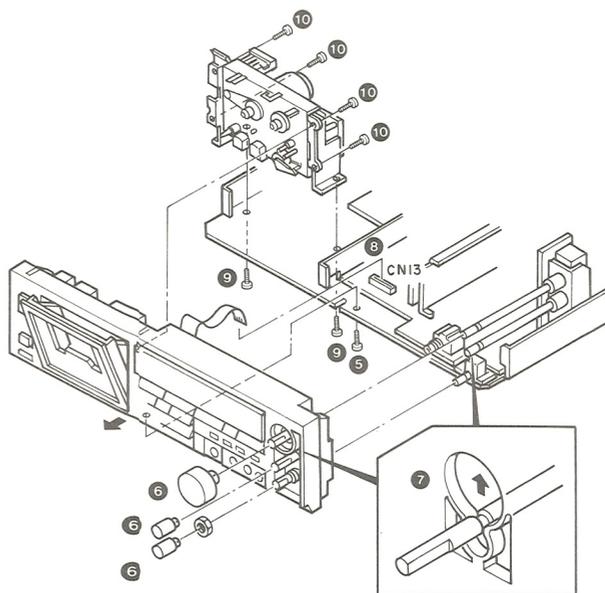

● Removing the front panel and mechanism ass'y

* Remove the case beforehand.

1. Remove the six screws ① and take out the front panel.
2. Remove the three screws ②.
3. Remove the PHONES jack fixture ③ in the direction of the arrow.
4. Press the EJECT knob and detach the cassette lid ④.

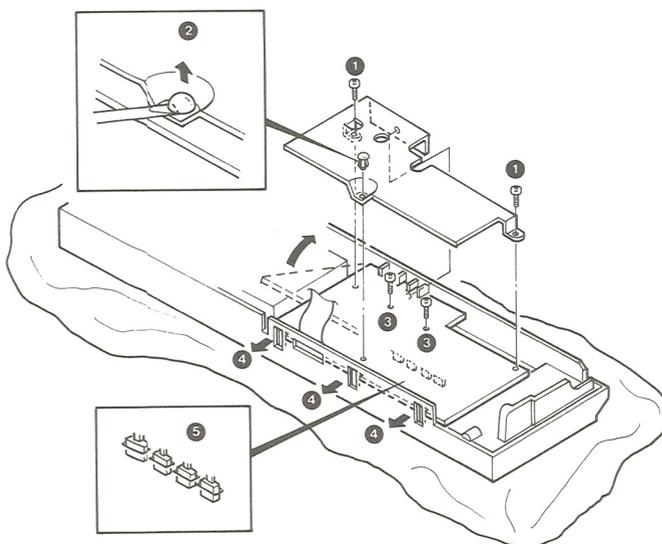

5. Remove the one screw ⑤.
6. Take out the REC LEVEL, REC BALANCE and PHONES LEVEL control knobs and remove the hexagonal nut of the PHONES LEVEL control knob . . . ⑥
7. Detach the two shafts from the sub panel in the direction of the arrow . . . ⑦
8. Disconnect the flexible board from X26-(A/3) CN13 . . . ⑧
9. Remove the two screws ⑨ fixing the mechanism.
10. Remove the four screws ⑩ and take out the mechanism ass'y.

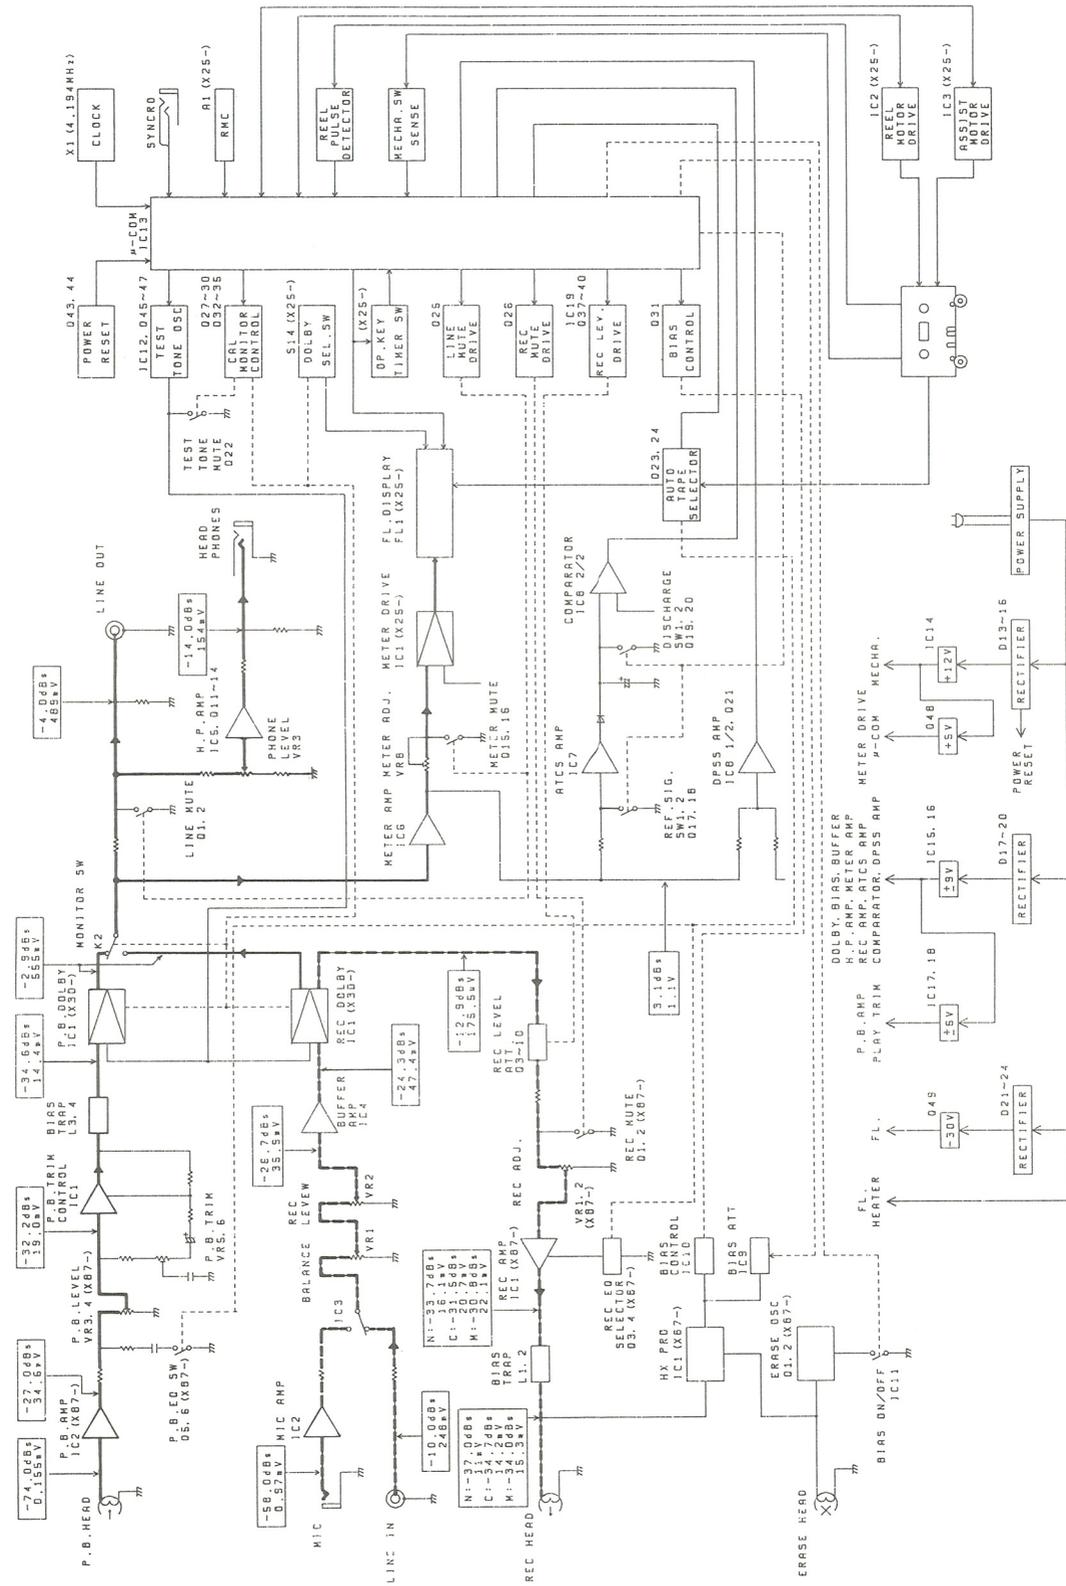

● Removing the operation section unit

1. Remove the two screws ①.
2. Drive off the push rivet ② by a screwdriver, etc. and detach the metal piece.
3. Remove the two screws ③.
4. Undo the catches in the directions of arrows and take out the operation section unit ④.

Note: When installing the operation section unit, put the DOLBY NR and MPX FILTER knobs into the cuts on the sub panel . . . ⑤

BLOCK LEVEL DIAGRAM

CIRCUIT DESCRIPTION

Functions of Components:

Display Unit (X25-3430-82: M, 2-72: T, E)

Component	Component Name	Use/Function	Operation/Condition/Compatibility
Q1, 2	2SA733 (A)(Q, P) 2SA933S (Q, R)	Grid control voltage control	When the FL tube lights, the pins 9 and 10 (meter's L and R dynamic signals are generated on duty cycle 25%) of IC1 become "L" and Q1 and Q2 turn ON to apply voltage to 1GB and 2GB.
Q3	2SC1740S (Q, R) 2SC945 (A)(Q, P)	Reel motor drive control voltage control	This component turns ON in the PLAY or REC mode. When an "H" signal is output from the pin 41 (RM.V-SW) of microprocessor IC13, Q3 turns ON so that the voltage at the pin 4 of IC2 becomes 3.8 V. In any other mode, Q3 turns OFF so that the voltage at the pin 4 of IC2 becomes 4.8—5 V.
Q4, 5	2SC1740S (Q, R) 2SC945 (A)(Q, P)	Rotation detection amplification	The switching signal (5 pulses) in proportion to the rotating speed of the reel stand is obtained from the mechanism for waveform shaping.
Q6, 8	DTC124EN	Grid control voltage control and key scan signal buffer	When "H" signals are output to the pin 47 (2GA) and pin 48 (1GA9) of microprocessor IC13, Q6—Q9 turn ON to apply voltage to the pin 20 (2GA) and pin 21 (1GA) of the FL tube, thus concurrently preventing the voltage drops across KR2 and KR4.
Q7, 9	DTA124EN		
IC1	BA6805A	Level meter drive	2-channel 16-point dynamic lighting
IC2	BA6229	Reel motor driver	
IC3	BA6209	Assist motor drive	

Cassette Unit (X26-1220-12)

Component	Component Name	Use/Function	Operation/Condition/Compatibility																				
Q1, 2	2SC2878 (B) 2SD1302 (S, T)	Line mute switch	In the PLAY, REC or REC PAUSE mode, the pin 7 (LM) of microprocessor IC13 becomes "H" and Q25 turns ON so that Q1 and Q2 turn OFF.																				
Q3—10	2SC1740S (Q, R) 2SC945 (A)(Q, P)	Recording level attenuation switch	<p>At the time of ATCS, the recording input level to the recording amplifier is varied to correct the tape recording sensitivity. (Max. 16 steps)</p> <p>Due to the H/L operation of the pins 11—14 (LEVEL#1—LEVEL#4) of microprocessor IC13, driver transistors Q37—Q40 turn OFF/ON so that transistors Q3—Q10 are turned OFF/ON correspondingly.</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th></th> <th>μ-COM</th> <th>DRIVER</th> <th>ATT switch</th> </tr> </thead> <tbody> <tr> <td>MSB</td> <td>LEVEL#4 (P14): H/L</td> <td>Q40: OFF/ON</td> <td>Q3, 4: OFF/ON</td> </tr> <tr> <td>MSB</td> <td>LEVEL#3 (P13): H/L</td> <td>Q39: OFF/ON</td> <td>Q5, 6: OFF/ON</td> </tr> <tr> <td>MSB</td> <td>LEVEL#2 (P12): H/L</td> <td>Q38: OFF/ON</td> <td>Q7, 8: OFF/ON</td> </tr> <tr> <td>LSB</td> <td>LEVEL#1 (P11): H/L</td> <td>Q37: OFF/ON</td> <td>Q9, 10: OFF/ON</td> </tr> </tbody> </table> <p>Initial value LEVEL#4="L" Q40=ON Q3, 4=ON LEVEL#1—3="H" Q37—39=OFF Q5—10=OFF</p>		μ-COM	DRIVER	ATT switch	MSB	LEVEL#4 (P14): H/L	Q40: OFF/ON	Q3, 4: OFF/ON	MSB	LEVEL#3 (P13): H/L	Q39: OFF/ON	Q5, 6: OFF/ON	MSB	LEVEL#2 (P12): H/L	Q38: OFF/ON	Q7, 8: OFF/ON	LSB	LEVEL#1 (P11): H/L	Q37: OFF/ON	Q9, 10: OFF/ON

MSB	LEVEL#2 (P12): H/L	Q38: OFF/ON	Q7, 8: OFF/ON																				
LSB	LEVEL#1 (P11): H/L	Q37: OFF/ON	Q9, 10: OFF/ON																				
Q11, 12	2SC2003 (L, K)	Headphone amplifier current buffer	Headphone amplifier output current buffer																				
Q13, 14	2SA954 (L, K)																						
Q15, 16	2SC2878 (B) 2SD1302 (S, T)	Meter mute switch	In the PLAY, REC or REC PAUSE mode, the pin 7 (LM) of microprocessor IC13 becomes "H" and Q25 turns OFF so that Q15 and Q16 are turned OFF.																				
Q17, 18	2SC1740S (Q, R) 2SC945 (A)(Q, P)	ATCS amplifier gate switch	At the time of ATCS, the test signal and reference signal recorded on the tape are distributed between IC7 1/2 and 2/2. In normal operation, Q17 and Q18 both turn ON.																				
Q19, 20	2SC1740S (Q, R) 2SC945 (A)(Q, P)	Discharge switch	For bias or level adjustment at the time of ATCS, these components turn OFF. Otherwise, they are ON.																				
Q21	2SC1740S (Q, R) 2SC945 (A)(Q, P)	DPSS amplifier sensitivity selection switch	In the PLAY mode, this component turns ON to raise the DPSS amplifier sensitivity. In the CUE or REVIEW mode, it turns OFF to lower the DPSS amplifier sensitivity.																				
Q22	2SC1740S (Q, R) 2SC945 (A)(Q, P)	Test signal mute switch	At the time of ATCS, this component is turned OFF to pass the test signal. In normal operation, it is ON.

CIRCUIT DESCRIPTION

Cassette Unit (X26-1220-12)

Component	Component Name	Use/Function	Operation/Condition/Compatibility															
Q41	DTC124EN	LINE/MIC input cutoff during tape playback	Alternating the voltage level of the T.F. -SW terminal at pin 62 of microcomputer IC13 between H and L during normal recording/playback (in modes other than ATCS mode) switches the control voltage supplied to analog SW IC3 ON and OFF. This causes muting of the LINE and MIC inputs during playback. Pin 62 of IC13 is switched to L only during tape playback, causing the control voltage to IC3 to be cut off.															
Q42	DTA124EN																	
Q43, 44	2SC1740S (Q, R) 2SC945 (A) (Q, P)	Microprocessor reset	At the time of power ON/OFF, an "L" signal is applied to the pin 61 (RESET) of microprocessor IC13 to reset. <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th></th> <th>Right after power ON</th> <th>Right after power OFF</th> </tr> </thead> <tbody> <tr> <td>Q43</td> <td>ON</td> <td>OFF</td> </tr> <tr> <td>Q44</td> <td>OFF after being ON for a fixed time</td> <td>OFF after being ON for a fixed time</td> </tr> </tbody> </table>		Right after power ON	Right after power OFF	Q43	ON	OFF	Q44	OFF after being ON for a fixed time	OFF after being ON for a fixed time

Dolby Unit (X30-1270-04, 05)

Component	Component Name	Use/Function	Operation/Condition/Compatibility
Q1—4	2SC1740S (Q, R) 2SC945 (A) (Q, P)	Multiplex filter switch	When the multiplex filter switch (S14-4: X25-3430A/6) is ON, an "H" signal is output to turn ON Q1-Q4 so that the filter is turned ON.
IC1	CX20188	Dolby B-C amplifier	This component works as the decoder and encoder.

Bias Oscillation Unit (X87-1270-01)

Component	Component Name	Use/Function	Operation/Condition/Compatibility
Q1	2SD863 (E, F)	Bias oscillation	Oscillation for erase head, and for HX excitation
Q2	2SD863 (E, F)	Bias oscillation control	This component turns CN in the REC mode.
IC1	μ PC1297CA	HX-PRO IC	

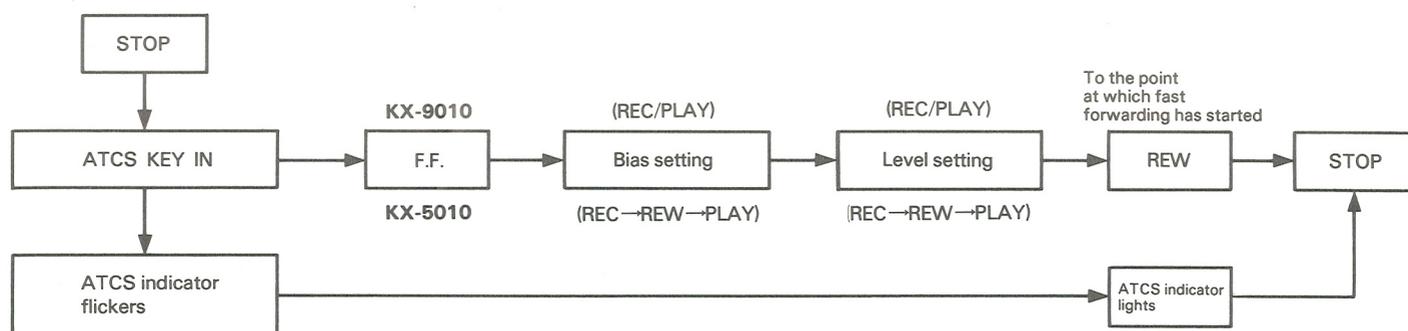

CIRCUIT DESCRIPTION

ATCS (Automatic Tape Calibration System)

For recording on a tape, the recording sensitivity and frequency response depending upon the tape type have been deviated from the reference values because of the irregularity in property between individual tapes except our reference tape. Conventionally, to correct this deviation, the manually operated REC CAL (correcting the recording sensitivity) and the manually operated BIAS CAL (correcting the frequency response) are provided to neutralize the irregularity in property between individual tapes. The ATCS feature provided to this deck automatically performs the REC CAL and BIAS CAL which are manually operated conventionally in order to neutralize the irregularity in property between individual tapes.

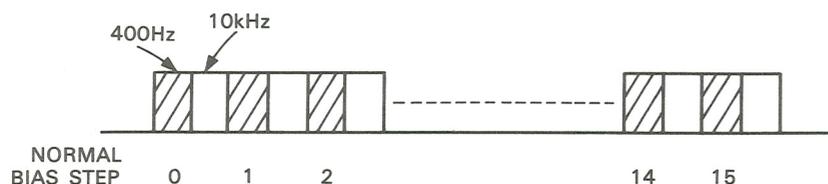

In the ATCS operation, when the ATCS key is pressed after a recordable tape is loaded, the bias and level settings are performed after a fast forwarding of 1 sec. Upon termination of the settings, the tape is rewound to the point at which its fast forwarding has started or to the start point of the tape.

- When it is necessary to stop the ATCS operation on its way, press the STOP key.
- After termination of the ATCS operation, when it is necessary to cancel the ATCS settings for the purpose of changing the tape type, press the ATCS key once again.

BIAS SETTING

- (1) Record 400 Hz and 10 kHz signals varying steppedly the bias from max. to min. at intervals of 100 msec. (Normal tape 0—15, CrO₂ tape 1—14, metal tape 2—13)

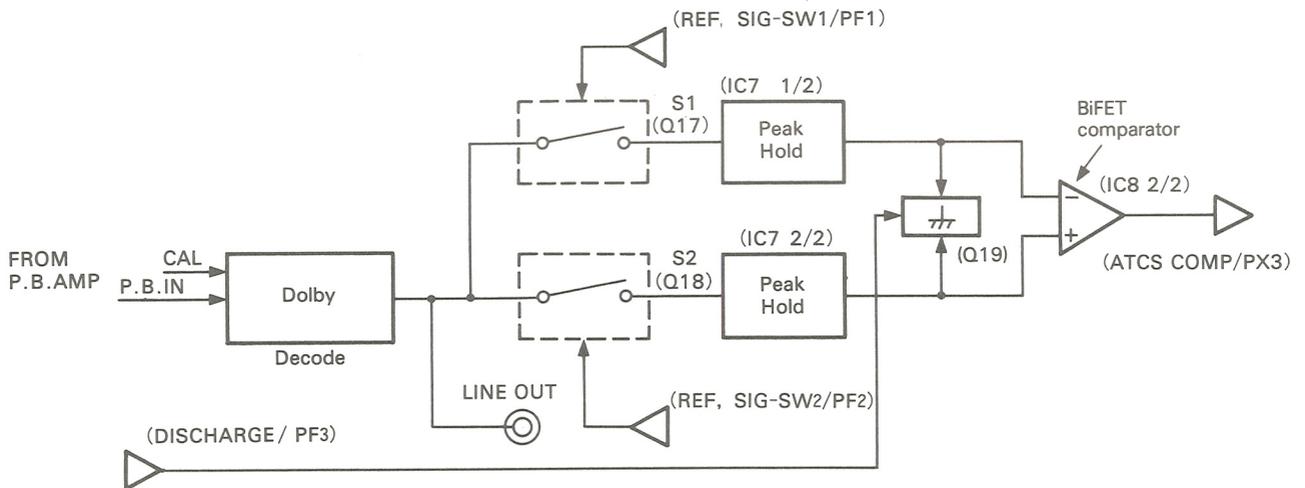

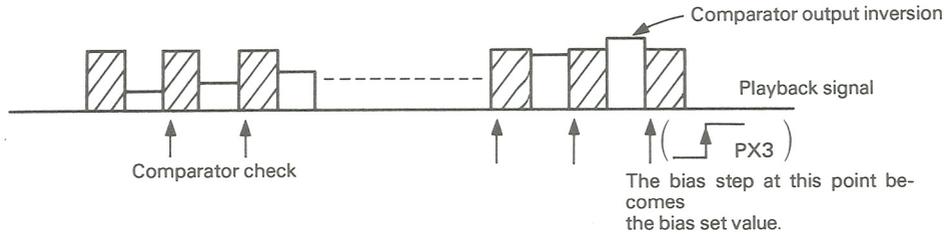

CIRCUIT DESCRIPTION

(2) After detecting the recording start point, playback is entered. Then, the playback signal is held and check is made for the inversion of the comparator output. The bias step value at the point of time that the comparator output is inverted (that is to say the rise of the COMP/PX3 pulse for ATCS is detected) becomes the

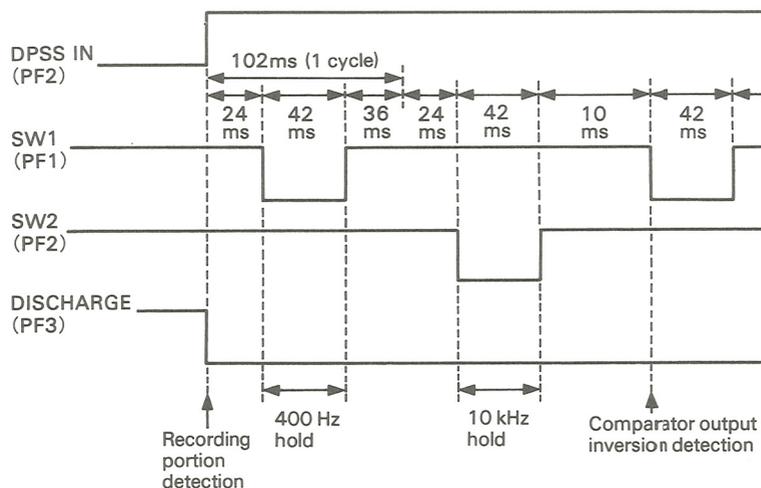

tape bias point.

(Comparator inversion . . . 400 Hz playback signal < 10 kHz playback signal)

(Unless the comparator output is inverted until the bias min. is reached, the bias setting is not good.)

Bias comparator output inversion detection:

400 Hz signal hold . . . S1 ON/S2 OFF

The hold process is applied for 40 msec that is seen as the stable period out of 100 msec of playback signal.

20 msec — (40 msec) — 40 msec

10 kHz signal hold . . . S1 OFF/S2 ON

The timing to hold is the same as with 400 Hz.

CIRCUIT DESCRIPTION

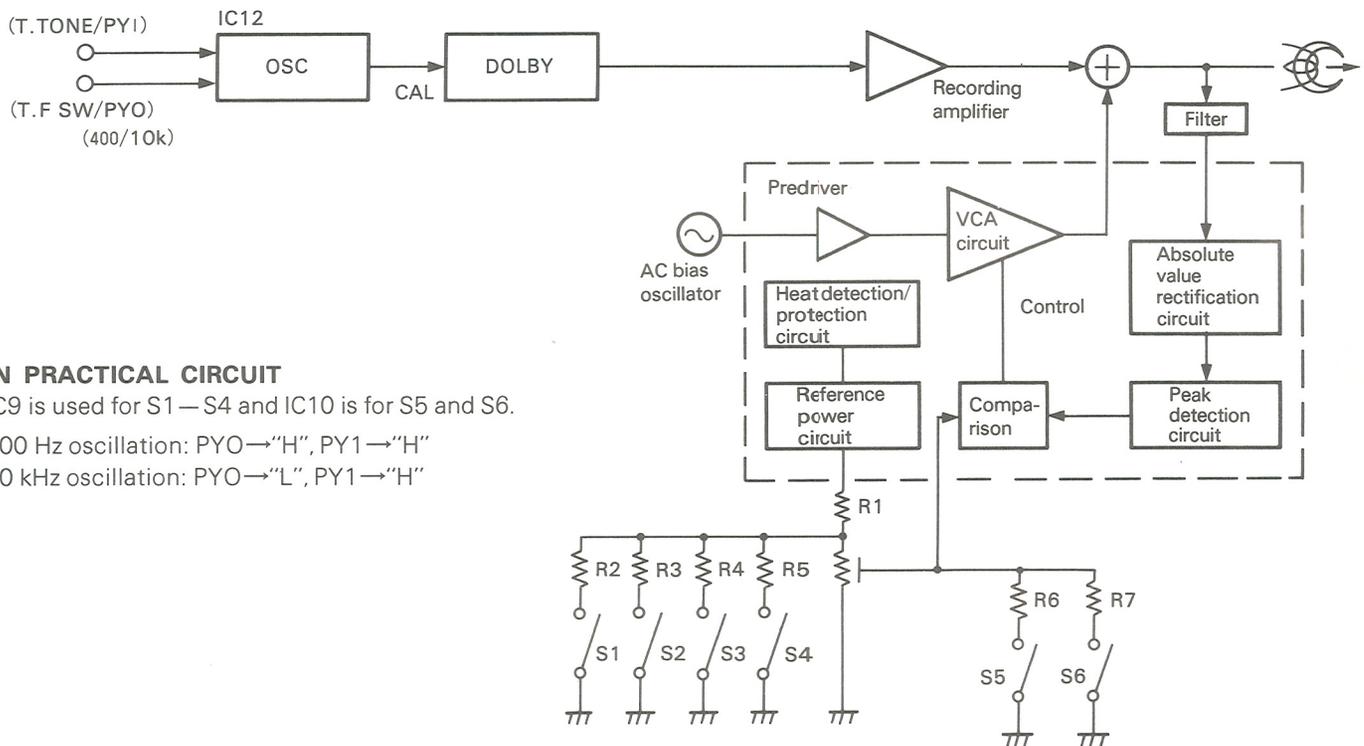

BIAS ATTENUATOR CIRCUIT

The bias attenuator circuit makes use of the Dolby HX PRO system for its aiming of attenuation. By dividing the reference voltage from the reference power circuit, the respective bias values of normal, CrO₂ and metal tapes are set through R6, R7, S5 and S6.

The set bias value of each tape can be varied in steps of

0.3 dB by the bias attenuator circuit consisting of R1—R5 and S1—S4. The standard value (the initial value) is of 7H with S1—S3=ON and S4=OFF.

(Of the microprocessor output port, it is of 7H with BIAS#1—#3="H" and BIAS#4="L".)

IN PRACTICAL CIRCUIT

IC9 is used for S1—S4 and IC10 is for S5 and S6.

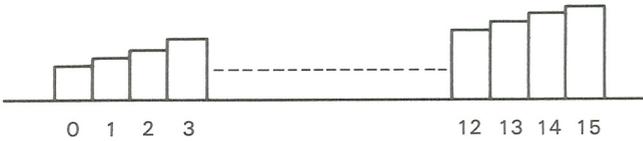

400 Hz oscillation: PYO→"H", PY1→"H"

10 kHz oscillation: PYO→"L", PY1→"H"

CIRCUIT DESCRIPTION

LEVEL SETTING

- Record the 400 Hz signal varying steppedly the level from min. to max. at intervals of 100 msec. (0—15, 16 steps)

Transistors Q3—Q10 are ON/OFF controlled by pins LEVEL#1—#4 of the microprocessor port to vary the 400 Hz signal level.

For the initial value, Q3 and Q4 alone are turned ON to set the level depending upon the ratio of R18 (3.3 k) and R20 (9.1 k).

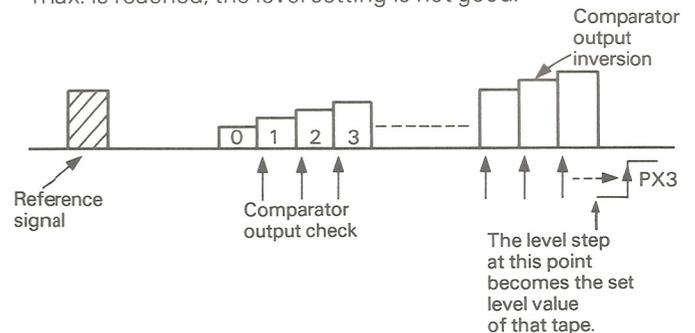

- After termination of recording, the point of tape at which recording has started is detected, after which the STOP mode is entered.

- Level reference signal hold
S1 ON/S2 OFF, R/P (PD2) → "H" (REC MODE) *Note
T.F SW (PYO) → "H", T.TONE (PY1) → "H" (ON)
The oscillation stable time is 700 msec, after which the reference signal is held at the S1 side for 100 msec.

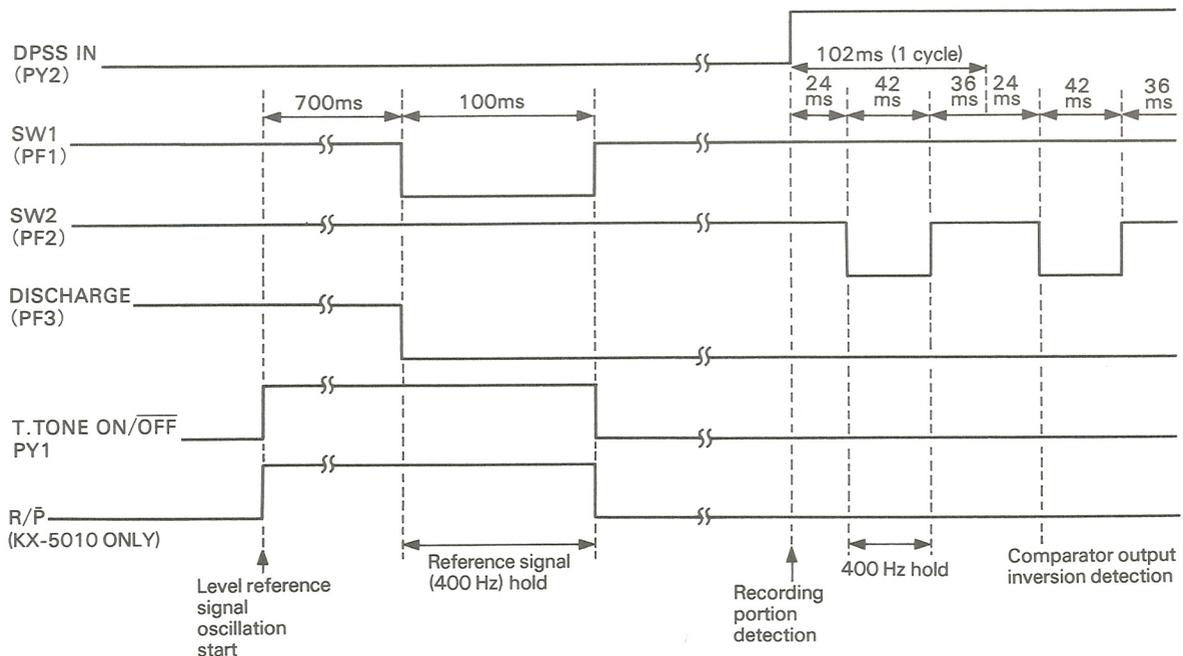

- After the termination of the reference signal hold process, the playback (PB) mode is entered. Then, after detecting the beginning of the signal, the signal is held and check is made as to the inversion of the comparator output. The level step value at the point of time that the comparator output is inverted (that is to say the rise of the PX3 pulse is detected) becomes the level point of that tape.

(Comparator output inversion... level reference signal < 400 Hz playback signal)

Unless the comparator output is inverted until the level max. is reached, the level setting is not good.

Level comparator output inversion detection:

* 400 Hz signal hold . . . S1 OFF/S2 ON, R/P → "L"
The hold process is applied for 40 msec that is seen as the stable period out of 100 msec of playback signal.

* When the bias and level settings are either not good, the ATCS operation is taken to fail and they are set to

the standard value.

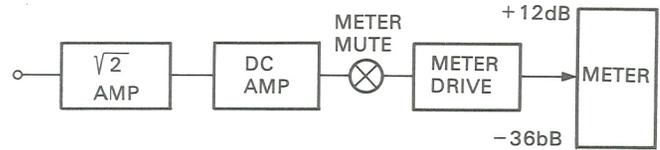

Standard value bias/level "7"

When either is good, the given values are taken as the set values.

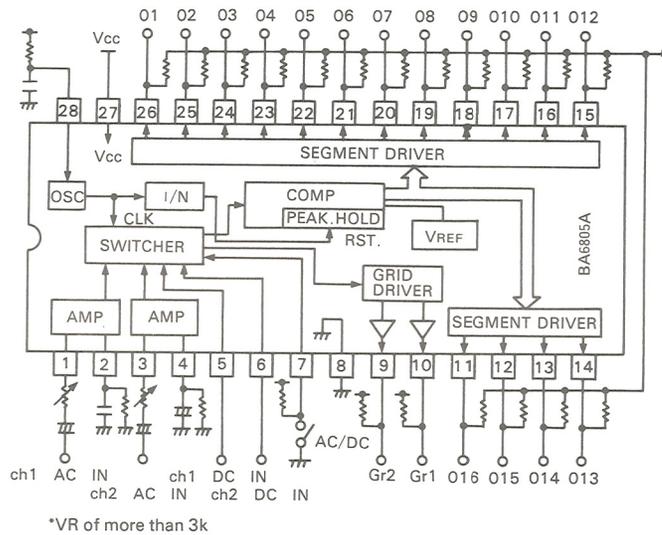

CIRCUIT DESCRIPTION

FLUORESCENT DISPLAY IC (BA6805A)

A conventional meter drive circuit is composed of a 1/2 power compression amplifier (BA6138) + a DC amplifier (NJM4558) + a meter IC (AN6870N).

The meter drive circuit of this time is unitized into a one-chip IC, conventionally being of 3 chips.

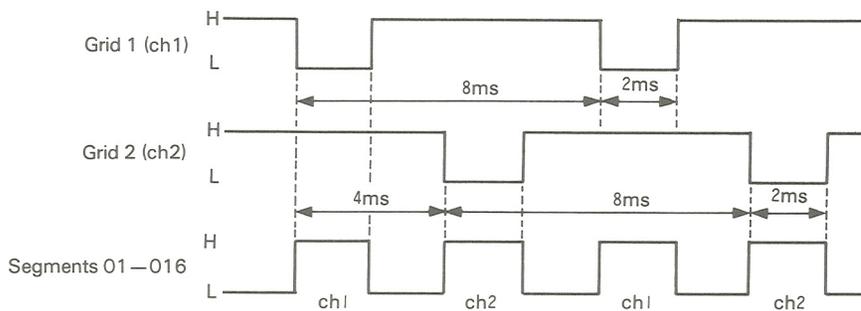

This IC features:

- DIP 28-pin, 16-point Lch/Rch display in dynamic drive system
- Selectable between AC and DC inputs by the H/L operation of 7 pins
- Peak hold function (2 sec) of 12 high-order points for AC input
- Built-in 1/2-power compression amplifier (For AC input)

Outputs grid 1 and grid 2 (pins 9 and 10), of NPN open collector, can be connected to the grids through PNP transistor buffers. Outputs segments 01—016 (pins 11—26), of PNP open collector, can be directly connected to the segments.

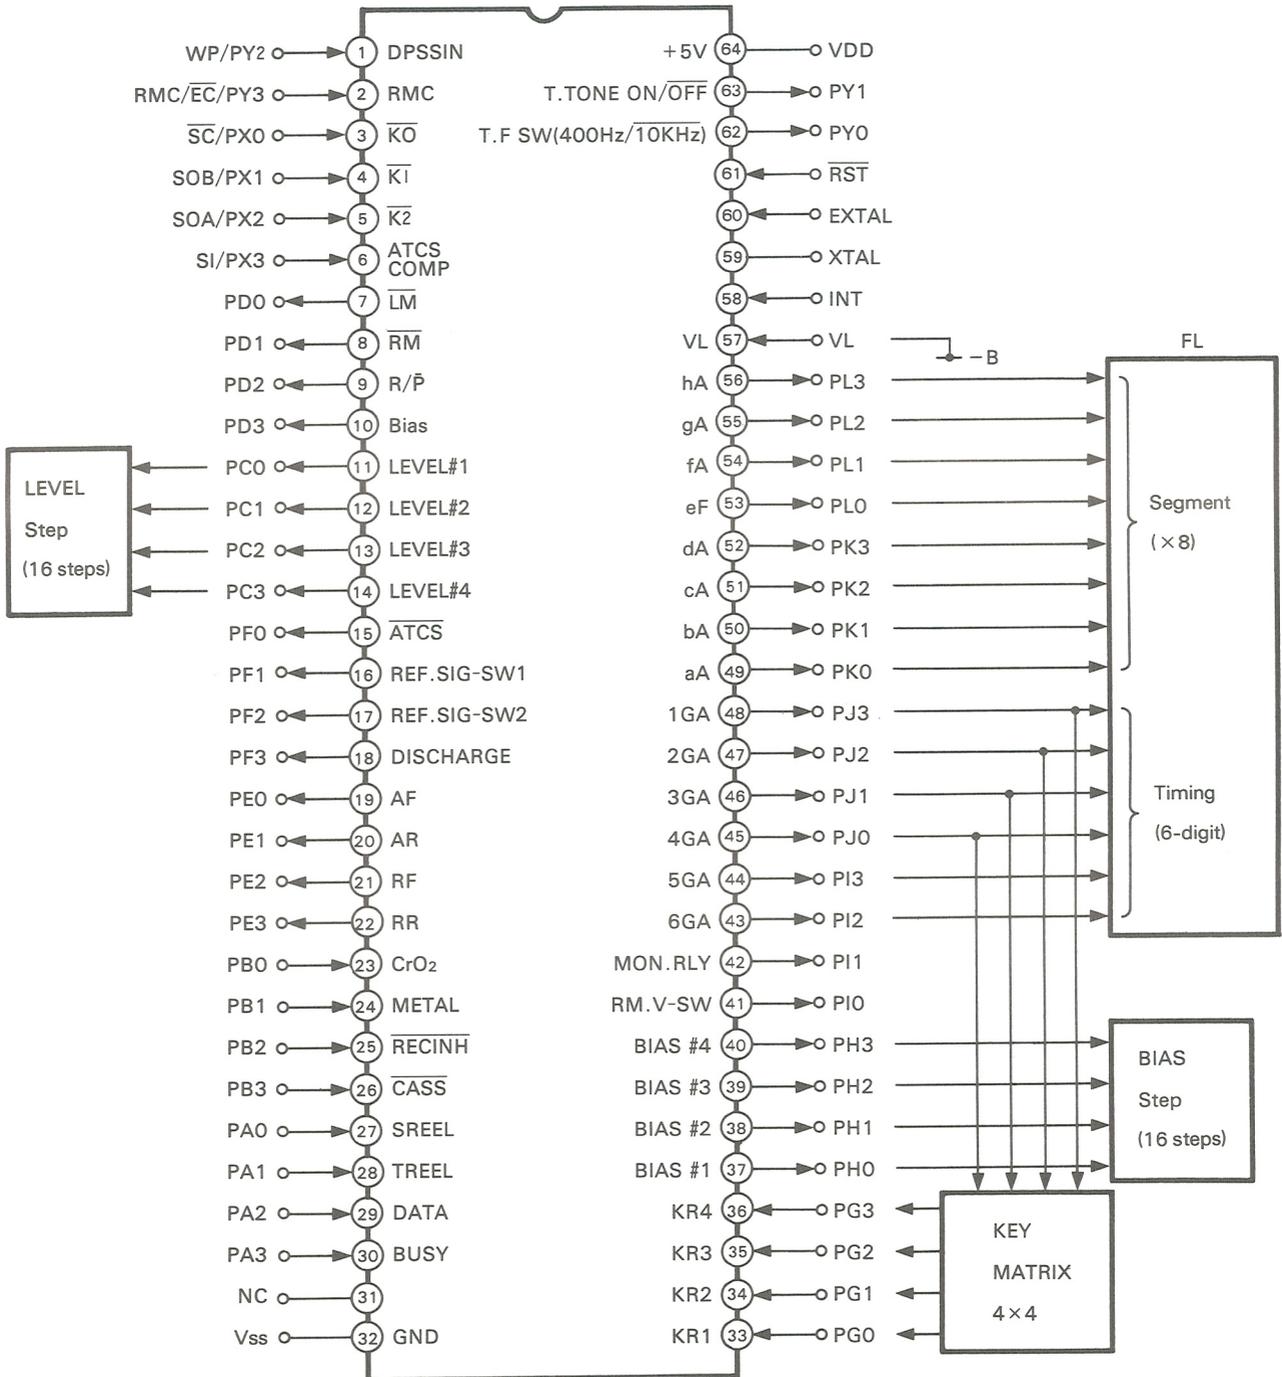

The following is the timing chart of grid and segment outputs.

Mechanism Switch Timing Chart (R/P: KX-5010 ONLY)

CIRCUIT DESCRIPTION

CIRCUIT DESCRIPTION

Test Mode:

1. TEST 1 (Shorted between TP3 and TP5)

- 1-1 At power ON, TIMER PLAY SW ON
→PLAY mode is engaged immediately.
- 1-2 TIMER REC SW ON
 - (1) Power ON→After recording of 15 sec, the tape is rewound to its point at which recording has started→STOP mode is engaged (inhibited with the hub broken).
 - (2) FF key ON→After recording of 3 sec, the tape is rewound to its point at which recording has started→PLAY mode is engaged. (Due to the repeat pressure of the FF key, a sequence of REC→REW→PLAY is performed.)
- 1-3 ATCS operation
 - ATCS key in→Bias varies in 16 steps (400 Hz and 10 kHz are reciprocally recorded in units of 100 msec)
 - Level varies in 16 steps (400 Hz is recorded in units of 100 msec)
 - Tape is rewound to its point at which recording has started
 - Playback starts.

2. TEST 2 (Assist motor operation inhibited)

- (Shorted between TP3 and TP4)
- 2-1 At power ON, all display lights immediately.
→After key in, normal display is made.

ADJUSTMENT

No.	ITEM	INPUT SETTINGS	OUTPUT SETTINGS	CASSETTE TAPE DECK SETTINGS	ALIGNMENT POINTS	ALIGN FOR	FIG.
CASSETTE DECK SECTION		TAPE: NORMAL, DOLBY: OFF, INPUT: LINE				0dBs = 0.775V	
I REC/PLAY HEAD							
[1]	DEMAGNETIZATION	-	-	POWER: OFF Remove the cassette door.	REC/PLAY head	Demagnetize the REC/PLAY head with a head demagnetizer.	
[2]	CLEANING	-	-	PLAY	REC/PLAY head erase head, capstan, pinch roller.	Clean the REC/PLAY head erase head, capstan and pinch roller using a cotton swab slightly damped with alcohol.	
[3]	AZIMUTH	(A) MTT-114, TCC-153 10kHz, -10dB	(B)	PLAY	Azimuth adjustment screw	Maximum output.	(a)
II DC MOTOR							
(1)	TAPE SPEED	(A) MTT-111, TCC-110 3kHz, -4dB	(B)	PLAY	Trimming potentiometer in the DC motor	Adjust the tape speed so that a 3kHz signal is produced at the center of the tape.	(b)
III PC BOARD							
<1>	PLAYBACK LEVEL	MTT-150 400Hz	(B)	PLAY	VR3 (L) VR4 (R) (X87-103 B/2)	Output level: -1.2dBs	
		MTT-256 315Hz				Output level: -4.0dBs	
		MTT-256U, TCC-160 315Hz				Output level: 0 dBs	
<2>	PLAY TRIM CONTROL	MTT-256 MTT-256U, TCC-160 315Hz, 10kHz	(B)	PLAY	VR5 (L) VR6 (R) (X26-122)	Adjust the variable resistors so that the level of 10kHz is +0.5dBs to the level of 315kHz.	
<3>	BIAS CURRENT	(A) 1kHz, -30dBs 10kHz, -30dBs	(B)	Adjust REC VR (LEVEL, BALANCE) so that the REC monitor output becomes -24dBs at 1kHz, then record and reproduce signal of 1kHz and 10kHz in alternation.	VR1 (L) VR2 (R) (X87-127)	Adjust the bias current adjusting VR so that the playback level of the 10kHz signal is +0.5dB higher than that of the 1kHz signal when recording a 1kHz signal and a 10kHz signal alternately.	
<4>	RECORD LEVEL	(A) 1kHz, -30dBs	(B)	Record and reproduce a 1kHz signal under the conditions set in <3>	VR1 (L) VR2 (R) (X87-103 A/2)	Adjust the variable resistors so that a playback level of -24dBs is obtained.	
<5>	FL PEAK LEVEL METER	(A) 1kHz, -10dBs	-	REC PAUSE Adjust REC VR (LEVEL, BALANCE) so that the monitor output is -4dBs at 1kHz.	VR8 (X26-122)	Adjust to the same level as that to L-channel	

REGLAGE

N°	ITEM	REGLAGE DE L'ENTREE	REGLAGE DE LA SORTIE	REGLAGE DU MAGNETO -PHONE A CASSETTE	POINTS DE L'ALIGNEMENT	ALIGNER POUR	FIG.	
SECTION DU MAGNETOPHONE		TAPE: NORMAL, DOLBY: OFF, ENTREE: LINE				0dBs=0,775V		
I TETE D'ENREGISTREMENT/LECTURE								
[1]	DEMAGNETISATION	-	-	POWER: OFF Eloigner la porte.	Tête D'ENREGISTREMENT/ LECTURE	Demagnétiser la tête D'ENREGISTREMENT/LECTURE avec un démagnétiseur de tête.		
[2]	NETTOYAGE	-	-	PLAY	Tête D'ENREGISTREMENT/ LECTURE tête d'effacement, cabestan, galetpresseur.	Nettoyer la tête D'ENREGISTREMENT/LECTURE la tête d'effacement, le cabestan et le galetpresseur avec un coton-tige légèrement imbibé d'alcool.		
[3]	AZIMUT	(A) MTT-114, TCC-153 10kHz. -10dB	(B)	PLAY	Vis d'azimut	Sortie maximer.	(a)	
II MOTEUR CC								
(1)	VITESSE DE DEFILEMENT	(A) MTT-111, TCC-110 3kHz, -4dB	(B)	PLAY	Résistance ajustable du moteur CC	Régler la vitesse de bande de façon qu'un signal de 3kHz soit produit au centre de la bande.	(b)	
III PLAQUE IMPRIMEE								
<1>	NIVEAU DE LECTURE	MTT-150 400Hz	(B)	PLAY	VR3 (G) VR4 (D) (X87-103 B/2)	Niveau de sortie: -1,2dBs		
		MTT-256 315Hz				Niveau de sortie: -4,0dBs		
		MTT-256U, TCC-160 315Hz				Niveau de sortie: 0 dBs		
<2>	COMMANDE D'APAIRAGE DE LECTURE	MTT-256 MTT-256U TCC-160 315Hz, 10kHz	(B)	PLAY	VR5 (G) VR6 (D) (X26-122)	Ajuster les résistances variables de manière à ce que le niveau de 10kHz soit +0,5dBs au niveau de 315kHz.		
<3>	COURANT DE POLARISATION	(A) 1kHz. -30dBs 10kHz. -30dBs	(B)	Régler REC VR (LEVEL, BALANCE) de façon que la sortie de moniteur REC soit de -24dBs à 1kHz, puis enregistrer et reproduire des sig- naux de 1kHz et 10kHz en alternance.	VR1 (G) VR2 (D) (X87-127)	Ajuster le courant de polarisation en ajustant VR pour que le niveau de lecture du signal 10kHz soit de +0,5dB supérieur à celui du signal 1kHz lors de l'enregistrement d'un signal 1kHz et d'un signal de 10kHz alternativement.		
<4>	NIVEAU D'ENREGISTREMENT	(A) 1kHz. -30dBs	(B)	Enregistrer et reproduire un signal de 1kHz dans les conditions précisées en <3>.	VR1 (G) VR2 (D) (X87-103 A/2)	Ajuster les résistances variables de façon à obtenir un niveau de lecture de -24dBs.		
<5>	INDICATEUR DE NIVEAU DE CRETE A FL	(A) 1kHz. -10dBs	-	REC PAUSE Ajuster REC VR (LEV- EL, BALANCE) de façon à ce que la sortie moniteur soit de -4dBs à 1kHz	VR8 (X26-122)	Ajuster sur le même niveau que le canal de gauche.		

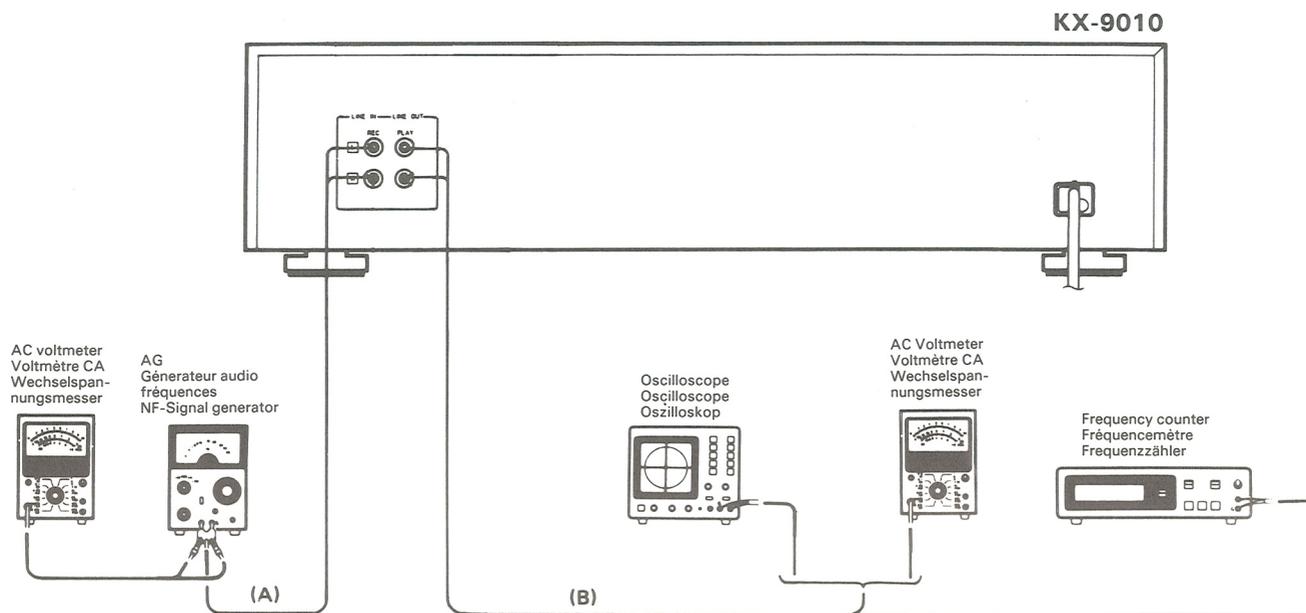

ABGLEICH

NR.	GEGENSTAND	EINGANGS-EINSTELLUNG	AUSGANGS-EINSTELLUNG	KASSETTENGERÄT-EINSTELLUNG	ABGLEICH PUNKTE	ABGLEICHEN FÜR	ABB.	
CASSETTEN-DECK ABTEILUNG		TAPE: NORMAL, DOLBY: OFF, EINGANG: LINE				0dBs = 0,775V		
I AUFNAHME/WIEDERGABE-KOPF								
[1]	ENTMAGNETISIERUNG	-	-	POWER: OFF Den Kassettenfach deckel oben herausziehen.	AUFNAHME/WIEDERGABE-Kopf	Entmagnetisierung von dem AUFNAHME/WIEDERGABE-Kopf mit einem Tonkopf Entmagnetisierungsdrössel.		
[2]	REINIGUNG	-	-	PLAY	AUFNAHME/WIEDERGABE-Kopf Löschkopf, Tonwelle, Andruckrolle.	AUFNAHME/WIEDERGABE-Kopf, Löschkopf, Tonwelle und Andruckrolle mit einem leicht mit Alkohol befeuch- teten Wattebausch reinigen.		
[3]	AZIMUT-EINSTELLUNG	(A) MTT-114, TCC-153 10kHz. -10dB	(B)	PLAY	Azimit- Einstellschraube	Maximale Ausgang.	(a)	
II GLEICHSTROMMOTOR								
(1)	BANDGESCHWINDIGKEIT	(A) MTT-111, TCC-110 3kHz, -4dB	(B)	PLAY	Trimmer potentiometer am Gleichstrommotor	Die Bandgeschwindigkeit so justieren, daß ein 3kHz Signal auf der Mitte des Bands erzeugt wird.	(b)	
III GEDRUCKTE SCHALTPLATTE								
<1>	WIEDERGABE-PEGEL	MTT-150 400kHz	(B)	PLAY	VR3 (L) VR4 (R) (X87-103 B/2)	Ausgangspegel: -1,2dBs		
		MTT-256 315kHz				Ausgangspegel: -4,0dBs		
		MTT-256U, TCC-160 315kHz				Ausgangspegel: 0 dBs		
<2>	WIEDERGABE-TRIMMERREGLER	MTT-256 MTT-256U TCC-160 315Hz, 10kHz	(B)	PLAY	VR5 (L) VR6 (R) (X26-122)	Die Regelwiderstände so einstellen, da der pegel von 10kHz +0,5dBs zum pegel von 315kHz beträgt.		
<3>	LEERLAUFSTROM	(A) 1kHz. -30dBs 10kHz. -30dBs	(B)	REC VR (LEVEL, BALANCE) so justieren, daß der REC Monitor- ausgang -24dBs bei 1kHz wird, und da- nach abwechselnd Signal von 1kHz und 10kHz aufnehmen und wiedergeben.	VR1 (L) VR2 (R) (X87-127)	Den Vormagnetisierungsstrom- Regelwiderstand so einstellen, daß der Wiedergabepegel des 10kHz Signals um +0,5dB höhen ist als der des 1kHz Signals, wenn ein 1kHz Signal und ein 10kHz Signal ab- wechselnd aufgenommen wurde.		
<4>	AUFNAHMEPEGEL	(A) 1kHz. -30dBs	(B)	Ein 1kHz Signal unter den in Punkt <3> beschriebenen Bedingungen aufnehmen und reproduzieren.	VR1 (L) VR2 (R) (X87-103 A/2)	Die Regelwiderstände so justieren, daß ein wiedergabepegel von -24dBs erzielt wird.		
<5>	FL SPITZEN-PEGELMESSER	(A) 1kHz. -10dBs	-	REC PAUSE REC VR(LEVEL, BALAN- CE) so einstellen, daß der Monitoraus- gang bei 1kHz, -4dBs ist.	VR8 (X26-122)	Auf den gleichen Pegel wie für den linken Kanal einstellen.

CAUTION: For continued safety, replace safety critical components only with manufacturer's recommended parts (refer to parts list). Δ Indicates safety critical components. To reduce the risk of electric shock, leakage-current or resistance measurements shall be carried out (exposed parts are acceptably insulated from the supply circuit) before the appliance is returned to the customer. DC voltages as measured with a high impedance voltmeter with a cassette loaded at playback mode. Values may vary slightly due to variations between individual instruments or/and units. Bias circuit DC voltages are as measured while in the record mode.

Les tensions c.c. doivent être mesurées haute impédance, une cassette étant tournée. Les valeurs peuvent différer légèrement inhérentes aux appareils et aux individus.

Die angegebenen Gleichspannungswerte sind mit einem Hochimpedanz-Voltmeter gemessen. Dabei wurden von Unterschieden zwischen den Messgeräten oder Geräten u. U. geringe Gleichspannungswerte der Vorwärtswerte in der Aufnahme-Betriebsart gemessen.

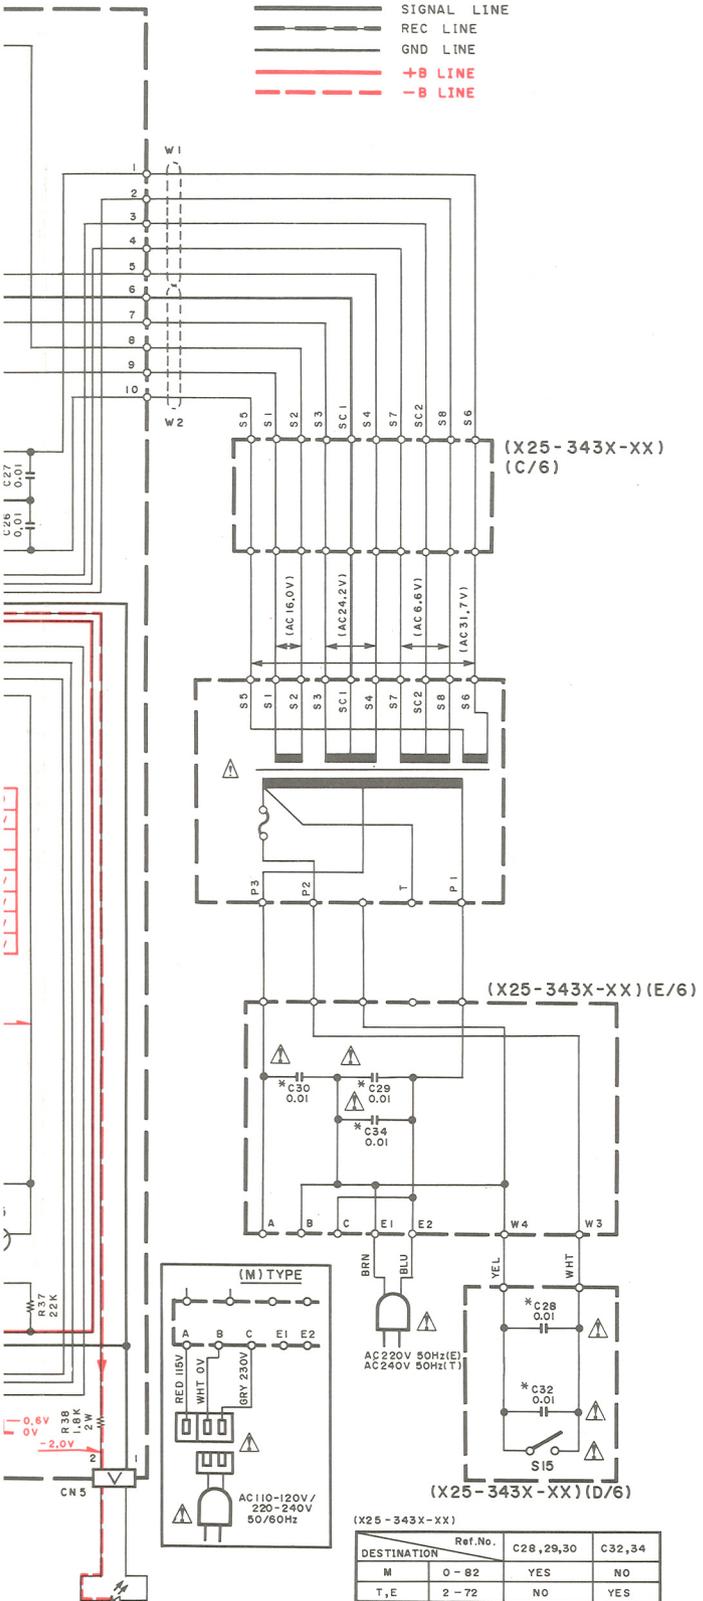

CAUTION: For continued safety, replace safety critical components only with manufacturer's recommended parts (refer to parts list). Δ Indicates safety critical components. To reduce the risk of electric shock, leakage-current or resistance measurements shall be carried out (exposed parts are acceptably insulated from the supply circuit) before the appliance is returned to the customer.

DC voltages are as measured with a high impedance voltmeter with a cassette loaded at playback mode. Values may vary slightly due to variations between individual instruments or/and units. Bias circuit DC voltages are as measured while in the record mode.

Les tensions c.c. doivent être mesurées avec un voltmètre à haute impédance, une cassette étant insérée en mode de lecture. Les valeurs peuvent différer légèrement du fait des variations inhérentes aux appareils et aux instruments de mesure individuels. Les tensions c.c. du circuit de polarité doivent être mesurées, l'appareil étant en mode d'enregistrement.

Die angegebenen Gleichspannungswerte wurden in der Wiedergabe mit einem hoch Spannungsmesser gemessen. Dabei schwanken die Werte aufgrund von Unterschieden zwischen einzelnen Instrumenten oder Geräten u. U. geringfügig. Die ang Gleichspannungswerte der Vormagnetisierungs wurden in der Aufnahme-Betriebsart gemessen.

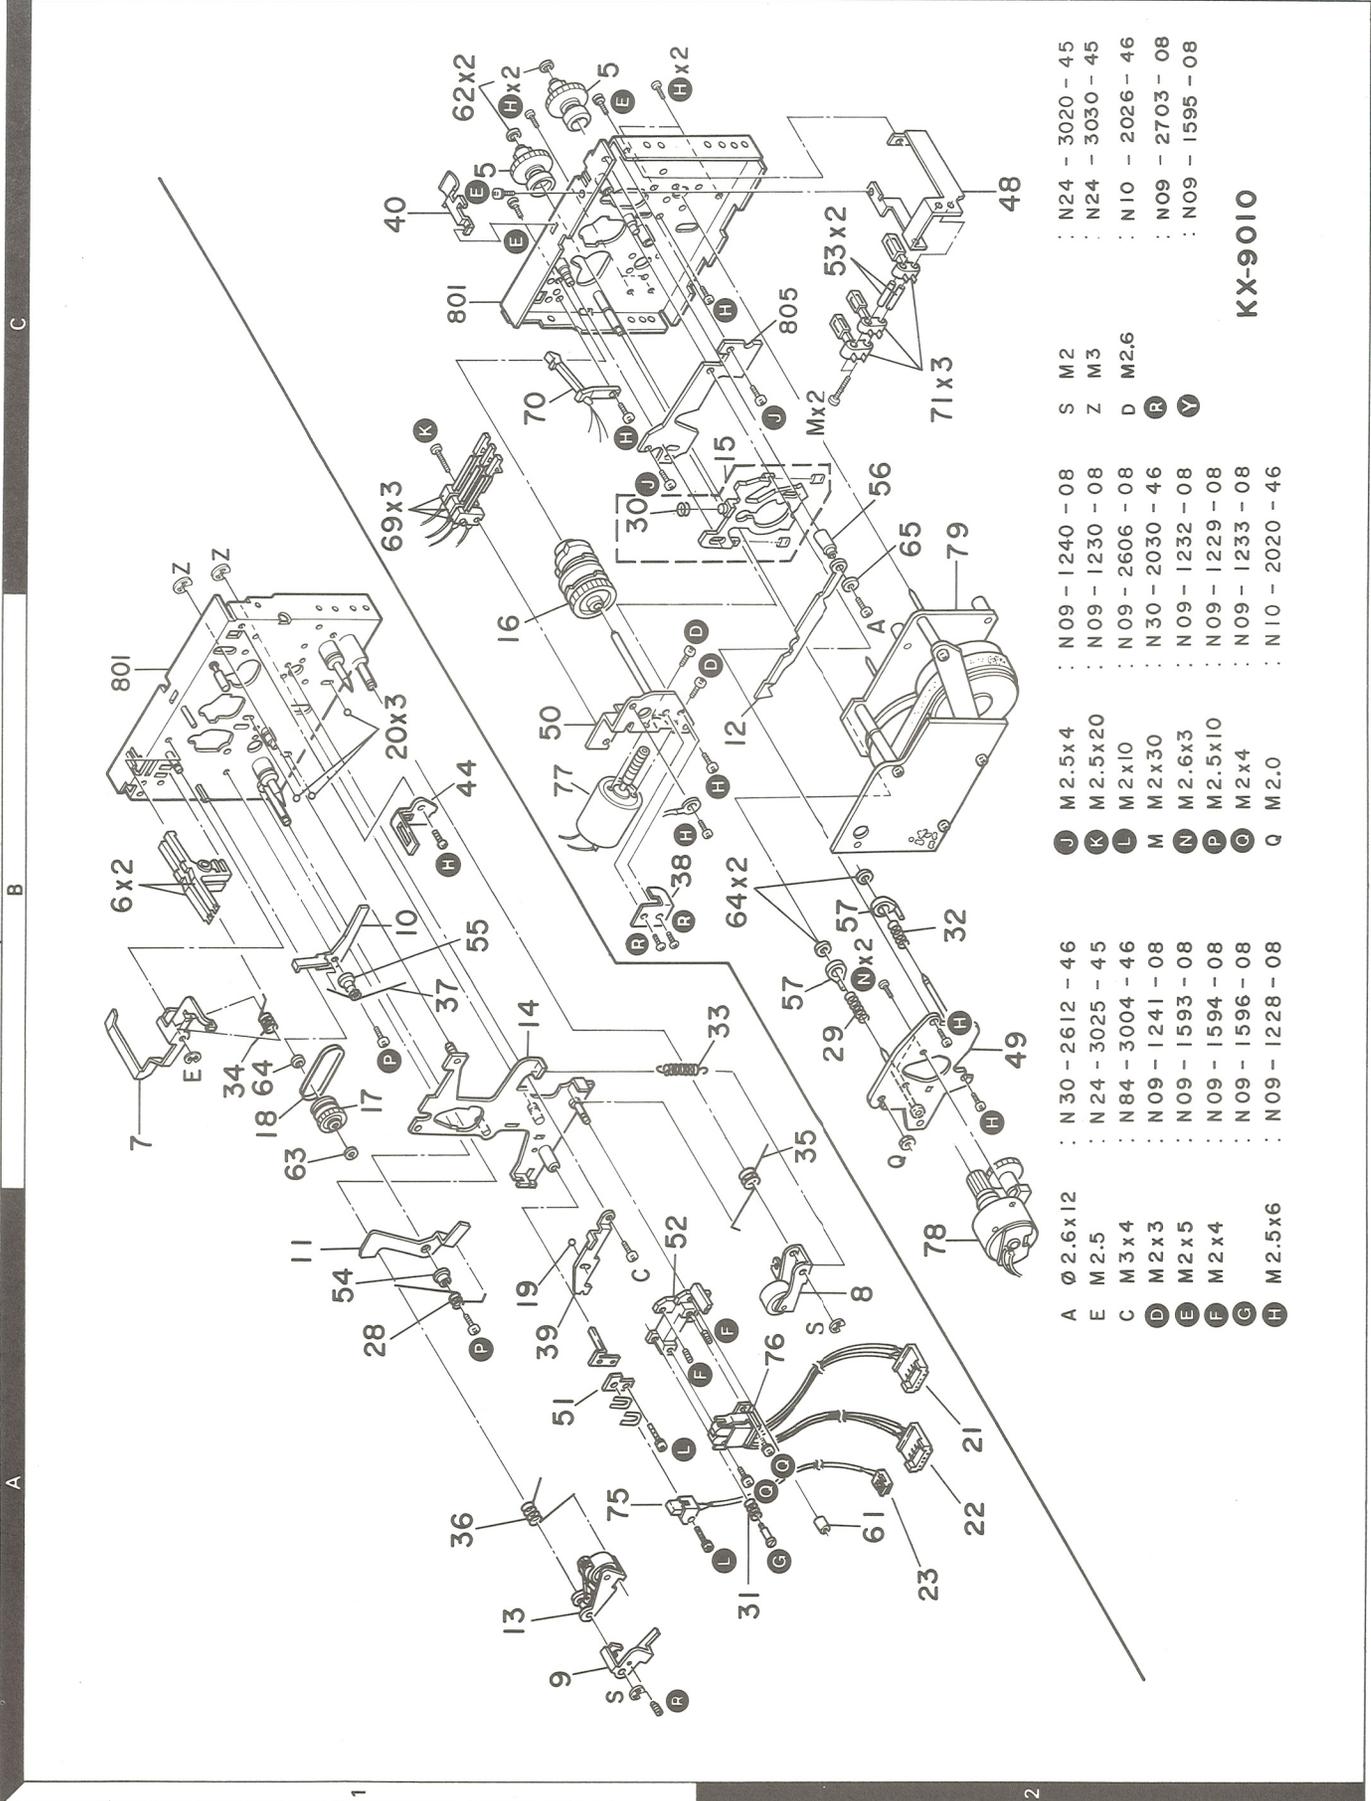

KX-9010(E) (2/2)
KX-9010(E) (2/2)

un voltmètre à 1 mode du lecture fait des variations de mesure être mesurées, Die angegebenen Gleichspannungswerte wurden bei eingesetzter Cassette in der Wiedergabe mit einem hochohmigen Spannungsmesser gemessen. Dabei schwanken die Meßwerte aufgrund von Unterschieden zwischen einzelnen Instrumenten oder Geräten u. U. geringfügig. Die angegebenen Gleichspannungswerte der Vormagnetisierungsschaltung wurden in der Aufnahme-Betriebsart gemessen.

Track system: 4-Track, 2-channel stereo
Recording system: AC Bias System
Heads: Record/play × 1
 Erase × 1
Motors: Capstan × 1
 Reel × 1
 Mechanism drive × 1
Wow & flutter: 0.025% (W.R.M.S.)
 ±0.055% (DIN)
Fast-winding time: About 80 seconds (C-60)
Frequency response (±3 dB) -20 dB recording:
Normal tape: 20 - 18,000 Hz
CrO₂ tape: 20 - 19,000 Hz
Metal tape: 20 - 22,000 Hz
Signal-to-noise ratio 74 dB (Dolby C-type NR ON)
 67 dB (Dolby B-type NR ON)
 59 dB (Dolby NR OFF)
Harmonic distortion 0.6% (at 1 kHz,
 0 VU with metal tape)
Input sensitivity/Impedance
LINE IN: 77.5 mV/50 k ohms
MIC: 0.3 mV/600 ohms
Output level/Impedance
LINE OUT: 490 mV/2 k ohms
Headphones: 3 mW/8 ohms

General
Power consumption: 30 W
Dimensions: W: 440 mm (17-5/16")
 H: 127 mm (5")
 D: 321 mm (12-5/8")
Weight (Net): 6.7 kg (14.7 lb)

Note:
 We follow a policy of continuous advancements in development.
 For this reason these specifications may be changed without
 notice.

Note:

Component and circuitry are subject to modification to insure best operation under differing local conditions. This manual is based on, the Europe (E) standard, and provides information on regional circuit modification through use of alternate schematic diagrams, and information on regional component variations through use of parts list.

Kenwood follows a policy of continuous advancements in development. For this reason specifications may be changed without notice.
