2. TEST MODE

2-1. Initializing

The system is initialized when the power is turned on while pressing the POWER key.

(1) Contents of operation

■ All the functions are initialized.

2-2. AMP test mode using main unit's keys

2-2-1. Entering the AMP test mode

■ Turn on the power while pressing the BAND key.

2-2-2. Canceling the AMP test mode

■ By turning off the power, the system is initialized and the test mode is canceled.

2-2-3. Contents of AMP test mode

(1) Automatic POWER ON

■ The POWER ON state is entered whenever the power is turned on while pressing the BAND key. All functions are then initialized and activated in the all-lighting mode.

■ Sub-clock oscillation diagnosis function

The oscillation diagnosis (existence of oscillation and measurement of period) of a sub-clock is performed before the test mode is entered. If the diagnosis result is OK, the system enters the test mode.

If the diagnosis result is NG, the oscillation of the sub-clock is diagnosed again. If the result is OK, the system enters the test mode. If the diagnosis result is continuously NG five times, the system stops with ERR 1 and ERR 2 displayed.

(2) All-lighting mode

■ All the fluorescent display indicators and LED lamps light when the power is turned on while pressing the BAND key.

■ After that, the all-lighting mode is canceled when any main unit's key is pressed. The normal display obtained when the selector is set to TUNER then appears.

3) CONSTRAINT IDLING CURRENT CHANGEOVER MODE when selector is set to positions other than TUNER.

[PURE A key] Every time this key is pressed.
idling current mode is selected cyclically.

→ NORMAL(B class) → PURE A(IDLING MID) → PURE A(IDLING HIGH)
PURE A NORMAL (MID ← → HIGH AUTO CHANGEOVER)

IDLING CURRENT MODE	DISPLAY
PURE A IDLING MID (constraint)	PURE A M
PURE A IDLING HIGH (constraint)	PURE A H
PURE A NORMAL MID (less than VOL.10.00)	PURE A * M
PURE A NORMAL HIGH (more than VOL.10.01)	PURE A * H

(4) Others

■ The AMP test mode is not terminated even if the selector is set to positions other than TUNER.

■ In the AMP test mode, the muting during mode selection is not controlled. However, the operation during the power-on sequence is the same as the normal operation.

■ The SP protection operation is also the same as the normal operation.

■ In the AMP test mode using main unit's keys, the keys below provide a special operation according to the position where the selector is set. The main unit's keys except described below and the rotary encoder provide the normal operation.

(5) When selector is set to TUNER

Key	Operation
PURE A key	Increments the P.CALL every time this key is pressed.
N.B. key	Decrement the P.CALL every time this key is pressed.
ENTER key	Selects the display cyclically in the order below every time this key is pressed.

① Write data in the unused area of E2PROM, then read the written data. If the read data is the same as the written data, "RAM OK" is displayed in the fluorescent display indicator. If the former is different from the latter, "RAM NG" is displayed.

A Set the TUNER ATT to OFF and display the S level in hexadecimal when the ENTER key is pressed. ("ATT OFF ***" is displayed in the fluorescent display indicator.)

B Set the TUNER ATT to ON and display the S level in hexadecimal when the ENTER key is pressed. ("ATT ON ***" is displayed in the fluorescent display indicator.)

* The special display using the ENTER key is continued until the next operation is carried out. (**: S LEVEL)

When keys other than ENTER are pressed in items ① to ③ above, the TUNER ATT is set to OFF and the normal display appears. The operation corresponding to the key that has been pressed is performed in this case.

CIRCUIT DESCRIPTION

(6) When selector is set to positions other than TUNER [ENTER key] Every time this key is pressed, master VOLUME level is selected cyclically.

INITIALIZE level → MAX → MID → MIN →

Value of Master VOLUME	Press the ENTER key.	Press the PURE A key, then press the ENTER key.
MAX	86	16.00
MID	40	8.00
MIN	1	0.20
INITIALIZE	7	1.40

[AUTO key] Selects the MUTE operation and equalizer cyclically in the order below for operation display every time this key is pressed.

→ MUTE operation → Minimum → Maximum → ↗Pre-condition ↘

- f In the operation for except the AUTO key, become pre-condition equalizer.
- f Pre condition : The equalizer becomes the condition to be pushed the AUTO key before (include N.B. circuit).

(7) SERIAL TEST CODE LIST

Refer to Service manual (B51-5210-00) of R-SA7 on page 7.

[BAND key] Every time this key is pressed, all the displays go off and the normal display is selected cyclically.

2-3. RDS test mode using main unit's keys

2-3-1. Entering the RDS test mode

E Turn on the power while pressing the TUNING UP key.

2-3-2. Canceling the RDS test mode

E By turning off the power, the system is initialized and the test mode is canceled.

2-3-3. Contents of RDS test mode

E The POWER ON state is entered whenever the power is turned on while pressing the TUNING UP key. All the functions are then initialized.

E In the RDS test mode using main unit's keys, the keys below provides a special operation according to the position where the selector is set. The main unit's keys except described below and the rotary encoder provide the normal operation.

Key	Operation
CLASS A key	Performs the same operation as for remote control key "DISPLAY" every time this key is pressed.
INPUT SEL. key	Performs the same operation as for remote control key "PTY" every time this key is pressed.
N.B. key	Performs the same operation as for remote control key "TA" every time this key is pressed.
ENTER key	Selects the display cyclically in the order below every time this key is pressed.

@Write data in the unused area of EEPROM, then read the written data. If the read data is the same as the written data, "RAM OK" is displayed in the fluorescent display indicator. If the former is different from the latter, "RAM NG" is displayed.

A Set the TUNER ATT to OFF and display the S level in hexadecimal when the ENTER key is pressed. ("ATT OFF **" is displayed in the fluorescent display indicator.)

B Set the TUNER ATT to ON and display the S level in hexadecimal when the ENTER key is pressed. ("ATT ON **" is displayed in the fluorescent display indicator.)

* The special display using the ENTER key is continued until the next operation is carried out. (**: S LEVEL)

When keys other than ENTER are pressed in items @ to B above, the TUNER ATT is set to OFF and the normal display appears. The operation corresponding to the key that has been pressed is performed in this case.

2-4. SERIAL TEST MODE

(1) Setting the serial test mode

The unit is put into the serial test mode when a serial code "TEST ON" is input during the POWER-ON sequence.

In the 16-bit serial test mode, serial code C27FH is input.

E In the serial test mode, all remote control keys and ordinary serial codes are disabled. Only the panel keys perform the same operation as usually.

(2) Canceling the serial test mode

E The serial test mode is canceled to return to the ordinary mode by inputting a "TEST OFF" code (C27 EH). After the ordinary mode was returned, the serial mode is returned to the state before the test mode is entered.

The backup operation is not initialized.

E The serial test mode is also canceled when the AC power is turned OFF.

(3) Cautions

E The serial test code is prescribed as a 16-bit code only.

E The operations below are inhibited in the serial test mode.
The operations mentioned above cannot be guaranteed when they are performed in the serial test mode.

E An identical code is output when the serial test mode code is input.
