## Specifications

Power Output (20Hz~20kHz)	95W
Headphones Output (100W / 8 ohm, 1kHz)	0.52±0.1V
Input Sensitivity (1kHz)	Line: 150±30mV Phono (MM): 2.5±0.4mV (MC): 200±40μV
Input Impedance (1kHz)	Line (Straight=ON): 46k±7kohm Phono (MM): 47k±7kohm (MC): 100±15ohm
Frequency Response	Line: (20Hz~70kHz) 1dB -3dB Phono: (100Hz) 13.09±1dB Phono: (10kHz) -13.73±1dB
T.H.D (20Hz~20kHz) LINE STRAIGHT ON	0.04%
Loudness Control (VR-30dB)	(100Hz) 6.5±2dB (10kHz) 4.5±2dB
Tone Controls	Bass: (100Hz) ±10±2dB Treble: (10kHz) ±10±2dB
S / N Ratio (Input Terminal Shorted)	Phono (MM): 63dB (MC): 43dB Line: 83dB
Cross Talk (1kHz, Between Channels)	Phono (MM): 55dB (MC): 40dB Line: 55dB
Residual Noise	1.5mV
Power Supply	220V / 50Hz
Semiconductors	24 IC's, 47 Transistors, 2 FET's, 65 Diodes, 1 Zener Diode
Dimensions	438 (W)×160 (H)×330 (D) mm
Weight	14kg

**NOTE :** Due to continuing product improvement, specifications and designs are subject to change without notice.

## In Case of Difficulty

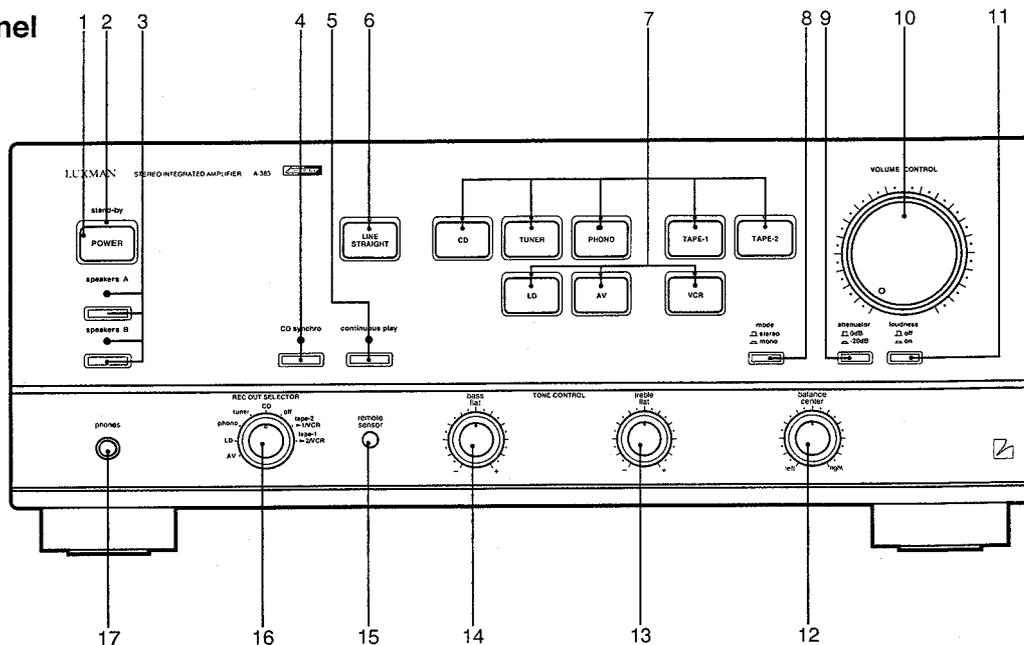

If you encounter a problem, please review the items in the following checklist. Also, be sure to thoroughly check other connected components, such as speakers,

turntable, CD player, TV, cassette deck, equalizer, etc.

PROBLEM	PROBABLE CAUSE AND SOLUTION
Power does not come on.	<ul style="list-style-type: none"> <li>• Check AC power cord to ensure good connection at AC outlet.</li> </ul>
No sound.	<ul style="list-style-type: none"> <li>• Incorrect input selected. Check input leads on rear panel (be sure they match input selected).</li> <li>• Line inputs and outputs of a connected tape deck are reversed.</li> <li>• SIGNAL PROCESSOR OUT/IN jumper bars are removed. Replace.</li> <li>• "VOLUME" control (item #10) is set at its minimum position.</li> <li>• Incorrect "speakers A/B" buttons (item #3) setting or rear panel SPEAKER LEAD connections. (Check for shorted speaker leads.)</li> </ul>
No record signal.	<ul style="list-style-type: none"> <li>• Incorrect settings of "REC OUT SELECTOR" (item #16).</li> </ul>
Remote inoperative.	<ul style="list-style-type: none"> <li>• Check "AA" batteries.</li> <li>• Reset unit. Unplug power cord for 15 seconds. Then replug.</li> </ul>

## Names & Functions of Parts

### Front Panel

#### 1. "POWER" button

Pressing this button turns the unit on and off. When this button is pressed, the time delay muting circuit is turned on, putting the amplifier into perfect operational condition in about 7 seconds.

#### 2. "stand-by" indicator

This indicator shows that the unit is ready to receive remote control commands and will stay lit at all times as long as the power cord is plugged in.

#### 3. "speakers A and B" buttons and indicators

Two sets of stereo speaker systems may be used with the A-383; A and B buttons corresponding with "SPEAKERS A and B" terminals (item #42) on the rear panel. You may choose independent or simultaneous operation of the two systems by using these buttons.

#### Note:

The impedance of each speaker system should equal or exceed 8 ohms when driving two sets at the same time.

#### 4. "CD synchro" button and indicator

CD play and tape recording can be started simultaneously by simply pressing the "CD synchro" button. In addition the LED indicator will blink.

#### Notes:

- CD Synchro only works with a BUS connected system.
- The "REC OUT SELECTOR" switch (item #16) must be in the "CD" position.

#### 5. "continuous play" button and indicator

When this button is depressed during cassette or CD play, the cassette deck or CD player will continue to operate even when the Input Selector is switched. However, you can hear the sound of the selected source with the Input Selector.

#### 6. "LINE STRAIGHT" button and indicator

Press this button to bypass control and switching functions.

#### 7. Input Select buttons and indicators

Press one of these buttons to select any one of eight sources; CD, TUNER, PHONO, TAPE-1, TAPE-2, LD, AV and VCR. The LED indicator for the selected input source will light up to tell which source is selected with the Input Select buttons.

**8. "mode stereo/mono" button**

Place in the mono (in) position for mono sources, for balance control adjustment, for lower noise operation from high noise stereo source, or for checking speaker phasing. Otherwise, leave it in the stereo (out) position.

**9. "attenuator OdB/-20 dB" button**

Press this button to reduce the volume level by -20 dB.

**10. "VOLUME CONTROL"**

Allows precision, low noise adjustment of volume level. It is recommended that the volume control be set to a low position prior to power turn on and when switching between sources.

**11. "loudness off/on" button**

Depressing this button introduces a moderate boost of the very low and high frequencies when the volume control is set below the half-way position. This compensates for the human ear's characteristic at low listening levels.

**12. "balance" control**

Adjusts for unequal volume level between channels. Normally, with today's high quality sources, it is seldom necessary to move this control from its precision centre detent position.

**13. "treble" control**

This control will increase or decrease high frequency content in the program material. At the centre detent position, a flat frequency response results.

**14. "bass" control**

This control will increase or decrease low frequency content in the program material. At the centre detent position, a flat frequency response results.

**15. "remote sensor"**

When using the hand held remote control, it must be pointed toward this sensor to activate operational functions.

**16. "REC OUT SELECTOR" switch**

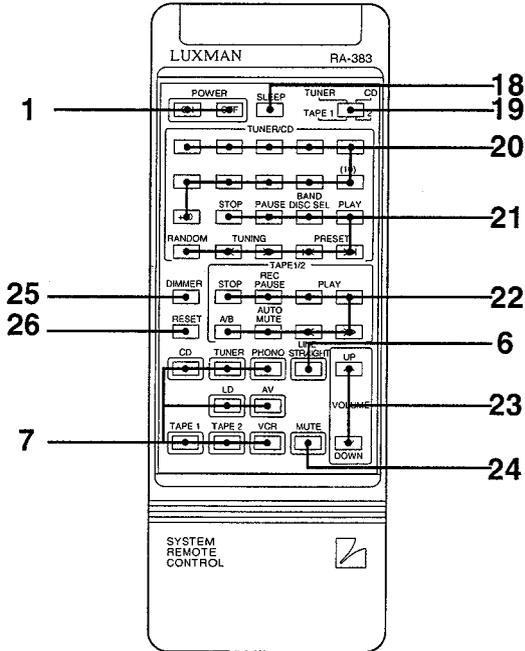

This 8 position rotary switch selects any one of 5 sources, AV, LD, phono, tuner and CD, to be fed to the "IN" jacks of VCR, tape 1 and tape 2 for recording purpose. And two tape dubbing positions, tape-1▶2/VCR and tape-2▶1/VCR, are also selectable. All of these recording operations can be performed independently of any selected source that you may wish to listen to at the same time.

Set it to the off position, when recordings or dubs are not being made.

**17. "phones" jack**

Connection of stereophonic headphones to this jack allows private listening. There is signal at the jack at all times.

Remote Control Unit (RA-383)

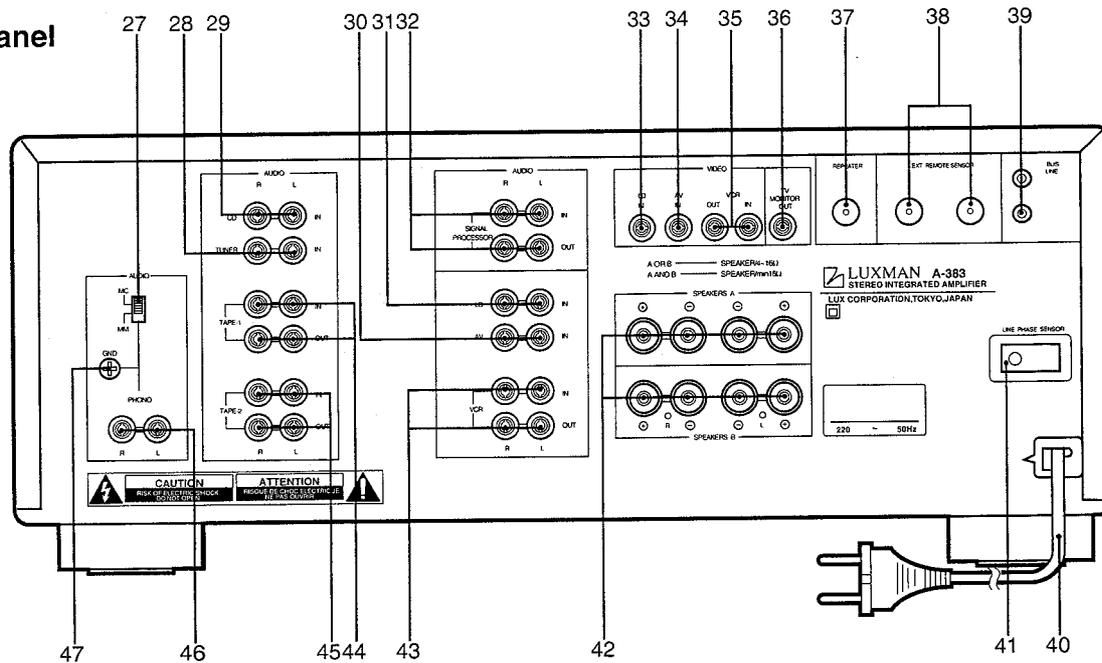

- 18. "SLEEP" button
- 19. "TUNER CD/TAPE-1 TAPE-2" Select switch
- 20. "TUNER" Station Presets/"CD" Direct Access buttons (1 -10 and +10)
- 21. CD/TUNER Control buttons
- 22. Tape Deck Control buttons
- 23. "VOLUME UP/DOWN" buttons
- 24. "MUTE" button
- 25. "DIMMER" button
- 26. "RESET" (dimmer) button

**Note:**

Some models are not equipped with the dimmer function. Refer to the Owner's Manual of the unit in use for details.

## Rear Panel

**27. "MM/MC" Cartridge Select switch**

Use this switch to match with the cartridge type connected to the A-383's PHONO IN jacks (item #46).

**Note:**

See Reference Illustrations, for typical connections to all jacks and terminals (items #27 through 47).

**28. "TUNER IN" jacks**

This set of jacks is for connection of a tuner. They may also be used for any other high level signal source as well.

**29. "CD IN" jacks**

This set of jacks is for connection of a CD (compact disc) player. They may also be used for any other high level signal source as well.

**30. "AV IN (AUDIO)" jacks**

Connect the audio output terminals of a video deck or laser disc player to these jacks.

**31. "LD IN (AUDIO)" jacks**

Connect the audio output terminals of a laser disc player to these jacks.

**32. "SIGNAL PROCESSOR IN and OUT" jacks**

For connection of a surround sound processor, an equalizer or other signal processor as desired.

**Note:**

Jumper bars are factory installed in these jacks. They need to be removed only when connecting a processor. Retain for possible future reuse.

**33. "LD IN (VIDEO)" jacks**

Connect the video output terminals of a laser disc player to these jacks.

**34. "AV IN (VIDEO)" jacks**

Connect the video output terminals of a video deck or laser disc player to these jacks.

**35. "VCR IN and OUT (VIDEO)" jacks**

Connect the video output/input terminals of a video deck to the VCR IN/OUT (VIDEO) jacks on the A-383 respectively.

**36. "TV MONITOR OUT" jack**

Connect the video input jack of a TV to the "TV MONITOR OUT" jack of the A-383.

**37. "REPEATER" jack**

For connection of Luxman's remote control command repeater, RC-503.

**38. "EXT. REMOTE SENSOR IN" jacks**

These "F" type coaxial connectors are for connection of Luxman's RC-501 remote room sensor "eyes." This permits remote control of a complete A-383 system from other rooms.

**39. Remote Control "BUS LINE" jacks**

Use these jacks only with Luxman CD players, Tape Decks and Tuners that are also equipped with BUS line jacks, such as the D-373 and the K-373.

When interconnecting these units with the A-383, the mini phone cables may be inserted into either of their two BUS jacks (the control signals are bidirectional, therefore no "IN OUT" protocol is required).

**40. AC Power Cord**

Insert the AC plug of the A-383 into an appropriate wall outlet.

**41. "LINE PHASE SENSOR" indicator**

When plugging the AC power cord into the wall outlet, check the polarity of the AC power cord at this sensor and indicator. When the sensor is touched after connecting the AC power cord, the polarity is correct if the indicator remains unlit. If the indicator lights up, unplug the AC power cord then plug its other side into the AC wall outlet.

**Note:**

Check the polarity before connecting any sources. If you live in an apartment building where the power supply is floating, the indicator may not change status.

**42. "SPEAKERS A and B" terminals**

You may connect 2 pairs of stereo speaker systems to these terminals, one pair to the upper "A" terminals and a 2nd pair to the lower "B" terminals.

The speaker systems may be switched on and off by the front panel "speakers A and B" buttons (item #3).

**43. "VCR IN and OUT (AUDIO)" jacks**

Connect the audio output/input terminals of a video deck to the VCR IN/OUT (AUDIO) jacks on the A-383 respectively.

**44. "TAPE-1 IN and OUT (AUDIO)" jacks**

Connect the LINE IN and LINE OUT jacks of your audio tape deck to these OUT and IN jacks respectively.

**45. "TAPE-2 IN and OUT (AUDIO)" jacks**

Connect a 2nd tape deck to these jacks in the same manner as item #44 above.

**46. "PHONO IN" jacks**

Connect a phono turntable equipped with an MM (moving magnet) or MC (moving coil) cartridge. Set the MM/MC cartridge select switch (item #27) in the matching position.

**47. "GND" terminal**

Connect the common (ground) lead of your phono turntable to this terminal.

## Operation Guidelines

The following guidelines assume that all connections have been made according to the "Reference Illustrations,"

### Power and Source Switching

To prevent the possibility of excessive, sudden sound levels, it is recommended that the volume control be placed at a low level position each time the power button is turned on or when switching between sources by the INPUT SELECTORS.

### To Play Source Units

1. Turn the power on to all the components in use.
2. Choose your desired source with the Input Selector buttons (item #7).
3. Operate the source unit.

## TAPE DECK OPERATIONS

### Tape Recording Operations

To make a tape recording of any source, proceed as follows:

1. Rotate the "REC OUT SELECTOR" (item #16) to the source you wish to record.
2. The source signal will now be fed to the tape deck. Follow the recording instructions for the tape deck in use.
3. If you have a 3 head deck, you can monitor the actual recording by pressing the corresponding "TAPE-1" or "TAPE-2" buttons (item #7) on the A-383.

### Video Recording

To make a video tape recording of any video source, proceed as follows:

1. Rotate the "REC OUT SELECTOR, (item #16) to the source you wish to record (LD or AV).
2. The source signal will now be fed to the connected VCR. Follow the recording instructions for the VCR in use.

### Tape Dubbing

Tape copies can be made from TAPE-1 to TAPE-2/VCR or from TAPE-2 to TAPE-1/VCR as follows:

1. To dub from TAPE-1 to TAPE-2/VCR, rotate the "REC OUT SELECTOR" (item #16) to the tape-1▶2/VCR dubbing position.
2. Place tape deck 1 in the PLAY mode and deck 2 in the RECORD mode.
3. If the audio tape deck 2 is a 3 head machine, actual monitoring of the audio recording can take place by selecting "tape-2" on the Input Select button (item #7).
4. Similarly, to dub from TAPE-2 to TAPE-1/VCR, rotate the "REC OUT SELECTOR" to the tape-2▶1/VCR dubbing position.
5. Follow steps (2) and (3) above except remember decks 1 and 2 are reversed.

### Remote Control Operation

#### To Turn Power ON or OFF

Press "POWER ON/OFF" buttons (item #1).

#### Operating the A-383

- To select a desired source, press a source button (item #7), CD, TUNER, PHONO, LD, AV, TAPE-1, TAPE-2 and VCR.
- To turn up the volume, press "VOLUME UP" button (item #23).
- To turn down the volume, press "VOLUME DOWN" button (item #23).
- To mute the sound temporarily, press "MUTE" button (item #24).
- To restore the sound, press it again. (During muting, the volume indicator blinks.)

## BUS SYSTEM OPERATIONS

Products connected to the "BUS LINE" jack allow following operations from the RA-383 remote control unit.

### Automatic Source Switching and Play of Music Sources

When a source button on the RA-383 is pressed, the corresponding source unit will automatically be placed in the PLAY mode and be heard. Similarly, when a play button is pressed on a source unit or the tuning or station preset buttons pressed on the tuner, the input source selector on the A-383 will automatically be switched to the corresponding source. This feature works only with Luxman CD players, Tuners and Tape Decks that are equipped with BUS line jacks.

### Operating the Cassette Deck

The operations in the following table are possible for either one or two "SYSTEM BUS" decks connected to the "TAPE-1" and "TAPE-2" jacks. Choose the desired deck with the "TAPE-1/TAPE-2" selector (item #19).

To start playback	>
To start reverse playback	<
To fast forward to the right/rewind to the right	>>
To fast-forward to the left/rewind to the left	<<
To music search to the right • Each time a >> or << button is pressed, a track is added. (Up to 8 tracks in both directions.)	> or < ↓ >>
To music search to the left • Each time a >> or << button is pressed, a track is added. (Up to 8 tracks in both directions.)	> or < ↓ <<
To select deck A or B	A/B
To stop playback or recording	STOP
To set the cassette deck to recording pause mode	REC PAUSE
To record • Press the < or > button, use direction that is the same as that indicated by the tape direction indicator on the tape deck.	REC PAUSE ↓ < or >

### Note:

Location of the switches will be different depending upon the models connected, so perform operations by referring to the Owner's Manual for each model.

### Operating a CD Player

The following operations are possible.  
Set the "TUNER CD" switch (item #19) to the CD position.

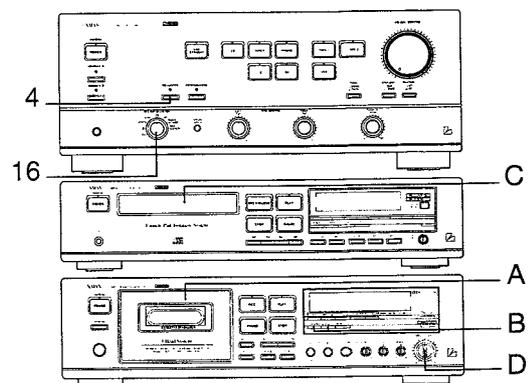

To start play	PLAY
To stop play	STOP
To stop play temporarily	PAUSE
To skip tracks in forward direction	>>
To skip tracks in backward direction	<<
To search a track in forward direction	>>
To search a track in backward direction	<<
To select a disc in a CD changer	DISC SEL ↓  << >>

### Note:

Location of the switches will be different depending upon the models connected, so perform operations by referring to the Owner's Manual for each model.

### "CD Synchro" Recording

When the A-383 is used with BUS line equipped source units, such as the Luxman D-373 CD player and K-373 cassette tape deck, synchronized start/record, pause and stop functions are possible when making recordings of CDs with the press of a single button. For instance, when the "CD synchro" button (item #4) on the A-383 is pressed, the K-373 cassette deck will go into record mode and the D-373 begins playing at the same time.

Use the following procedure:

1. Set the "REC OUT SELECTOR" (item #16) to "CD."
2. Insert a tape for recording into the deck (item #A in a previous diagram).
3. Select the Dolby NR mode with the "DOLBY NR" switch (item #B).

	DOLBY NR ON/OFF button	B/C button
To record in Dolby B NR mode	■ ON (depressed)	■ B (released)
To record in Dolby C NR mode	■ ON (depressed)	■ C (depressed)
To record without Dolby NR mode	■ OFF (released)	Any position

4. Place the disc in the CD player (item #C). Recordings can be made to fit the length of the tape used, if your CD player has an editing function. For further details, refer to the manual of the CD player.
5. Turn "REC LEVEL" control (item #D) to adjust the recording level.
6. Press "CD synchro" button (item #4) of the A-383. CD play and tape recording will start simultaneously. The recording level is indicated by the level indicator. When +3 lights up on music peaks, the level is set appropriately.
7. To stop synchronized recording, press the STOP button on the cassette deck or CD player.

---

#### Notes:

- CD Synchro recording can only be performed using the tape deck connected to the "TAPE-1" jacks on the A-383.
  - Be sure to advance past the leader tape before recording. Otherwise, the beginning of the CD may not be recorded.
  - Location of the switches will be different depending upon the models connected, so perform operations by referring to the Owner's Manual for each model.
  - To record on both sides using an auto-reverse deck, start with the front side. Recording cannot be continued from the reverse side to the front side. Therefore, when the recording on the reverse side is completed, it stops.
  - Recording will not start if the playback button for the opposite direction is pressed when using an auto-reverse deck.
- 

#### How to Use Sleep Timer

When a tuner with the sleep timer function is connected to the system control, timer operations are available. The power can be cut off automatically after 90 – 10 minutes. Setting step is 10 minutes.

1. Push the "SLEEP" button (item #18) during playback.
2. Set a desired time by repeatedly pushing the "SLEEP" button. The time will be changed by 10 minutes step each time the button is pushed.

With the tuner used, various timer playback can be made. For further details, refer to the manual for the tuner.

#### Timer Playback and Timer Recoding

When a Luxman tuner having the timer function and the "SYSTEM BUS" jacks is connected to the A-383, timer operations are possible. The power to your system can be turned on and off automatically at the set time.

If a Luxman cassette deck equipped with a timer recording button and the "SYSTEM BUS" jacks is connected to your system, unattended timer recordings are also possible.

To make a timer recording, select the desired recording source with the REC OUT SELECTOR switch (item #16) and set the Timer Recording switch on the cassette deck to the ON position. For further information, refer to the Owner's Manual for each unit in use.

---

**Note:**

Timer operations can be performed only when the units in use are "SYSTEM BUS" connected. The operation of the tuner will be different depending upon the model, refer to the Owner's Manual for the tuner connected.

---

**Remote Operations**

For reliable operation, use the hand-held remote control within the basic dimensional area.

**Battery Replacement**

1. Open the battery compartment cover on the rear of the remote control unit. The cover should open easily if you press on it with your thumb and slide it in the direction of the arrow.
2. Place two "AA" size dry batteries in the battery compartment in accordance with the diagram in the compartment, then replace the cover.

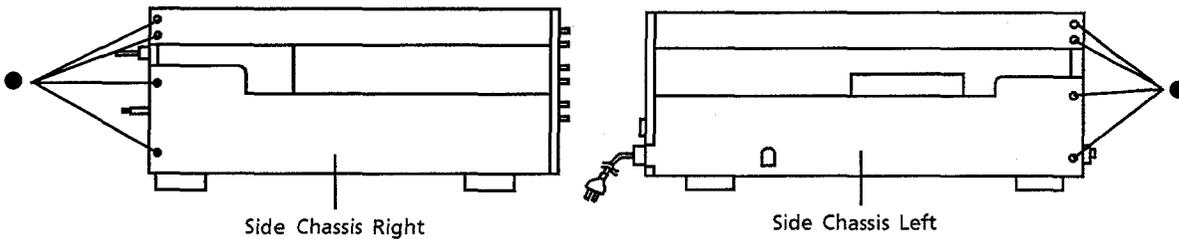

Incorrect use of batteries may lead to leakage or rupture. Be sure to follow these guidelines:

- A. Always insert batteries into the battery compartment correctly matching the positive (+) and negative (-) polarities as shown in the diagram inside the compartment.
- B. Never mix new and used batteries together.
- C. Both rechargeable and non-rechargeable batteries are available. Be sure to use your batteries in accordance with the instructions provided on the cells.

# Disassembly Instructions

## 1. Removal of Front Chassis

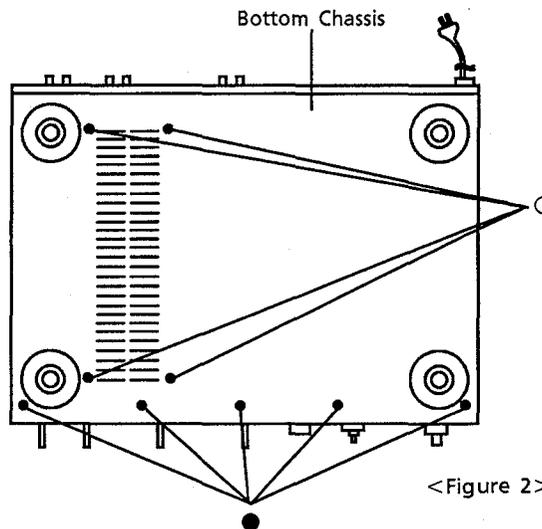

- (1) After removal of Front Panel, remove thirteen screws marked "●" as shown in Figures 1 and 2.
- (2) Disconnect all connectors from the P.C.Board.
- (3) Front Chassis with Control, Volume and Tone P.C.Boards can be removed completely.

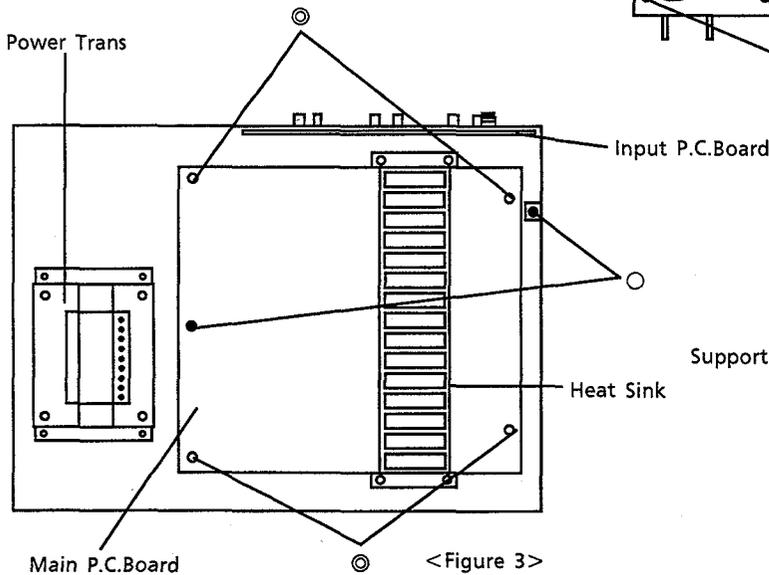

<Figure 1>

## 2. Removal of Main P.C.Board

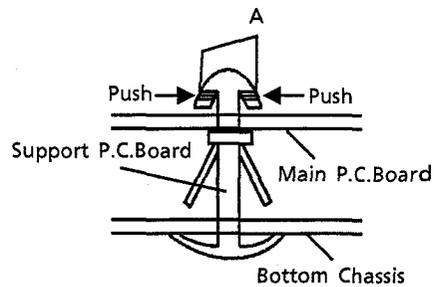

- (1) After removal of Front Chassis, Video and SP Terminal P.C.Boards, remove six screws marked "○" as shown in Figures 2 and 3.
- (2) Remove four Support P.C.Boards marked "◎" as shown in Figure 3, by pushing the point "A" as shown in Figure 4.
- (3) Disconnect all wires from the P.C.Board.
- (4) Main P.C.Board with Heat Sink can be removed completely.

<Figure 2>

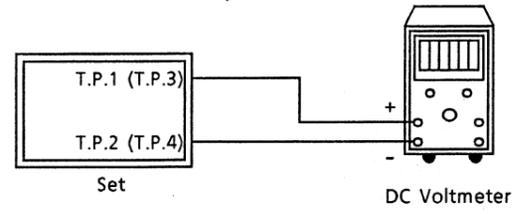

<Figure 3>

<Figure 4>

## Adjustment Procedures

### 1. Connection

<Figure 5>

### 2. Control Settings

Power Switch ..... ON  
 Others ..... OFF

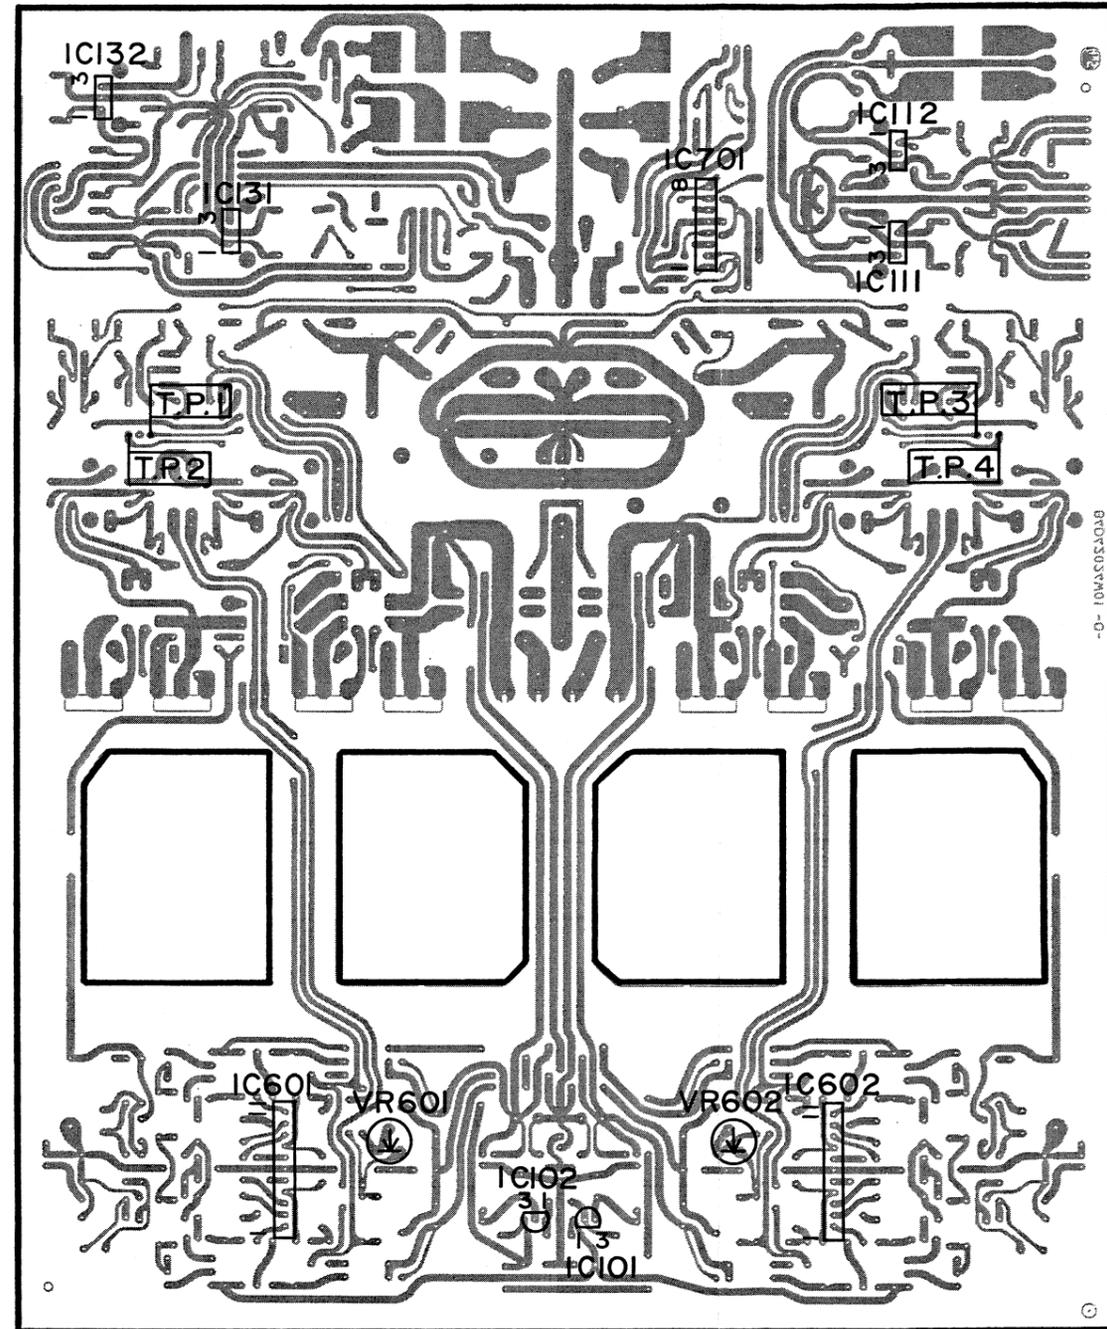

### 3. Adjustment Procedures

#### ● Idling adjustment

- (1) Set VR501 (sound volume) to its minimum.
- (2) Adjust VR601 (VR602) so that the voltage between T.P.1 (T.P.3) and T.P.2 (T.P.4) is 8mV.

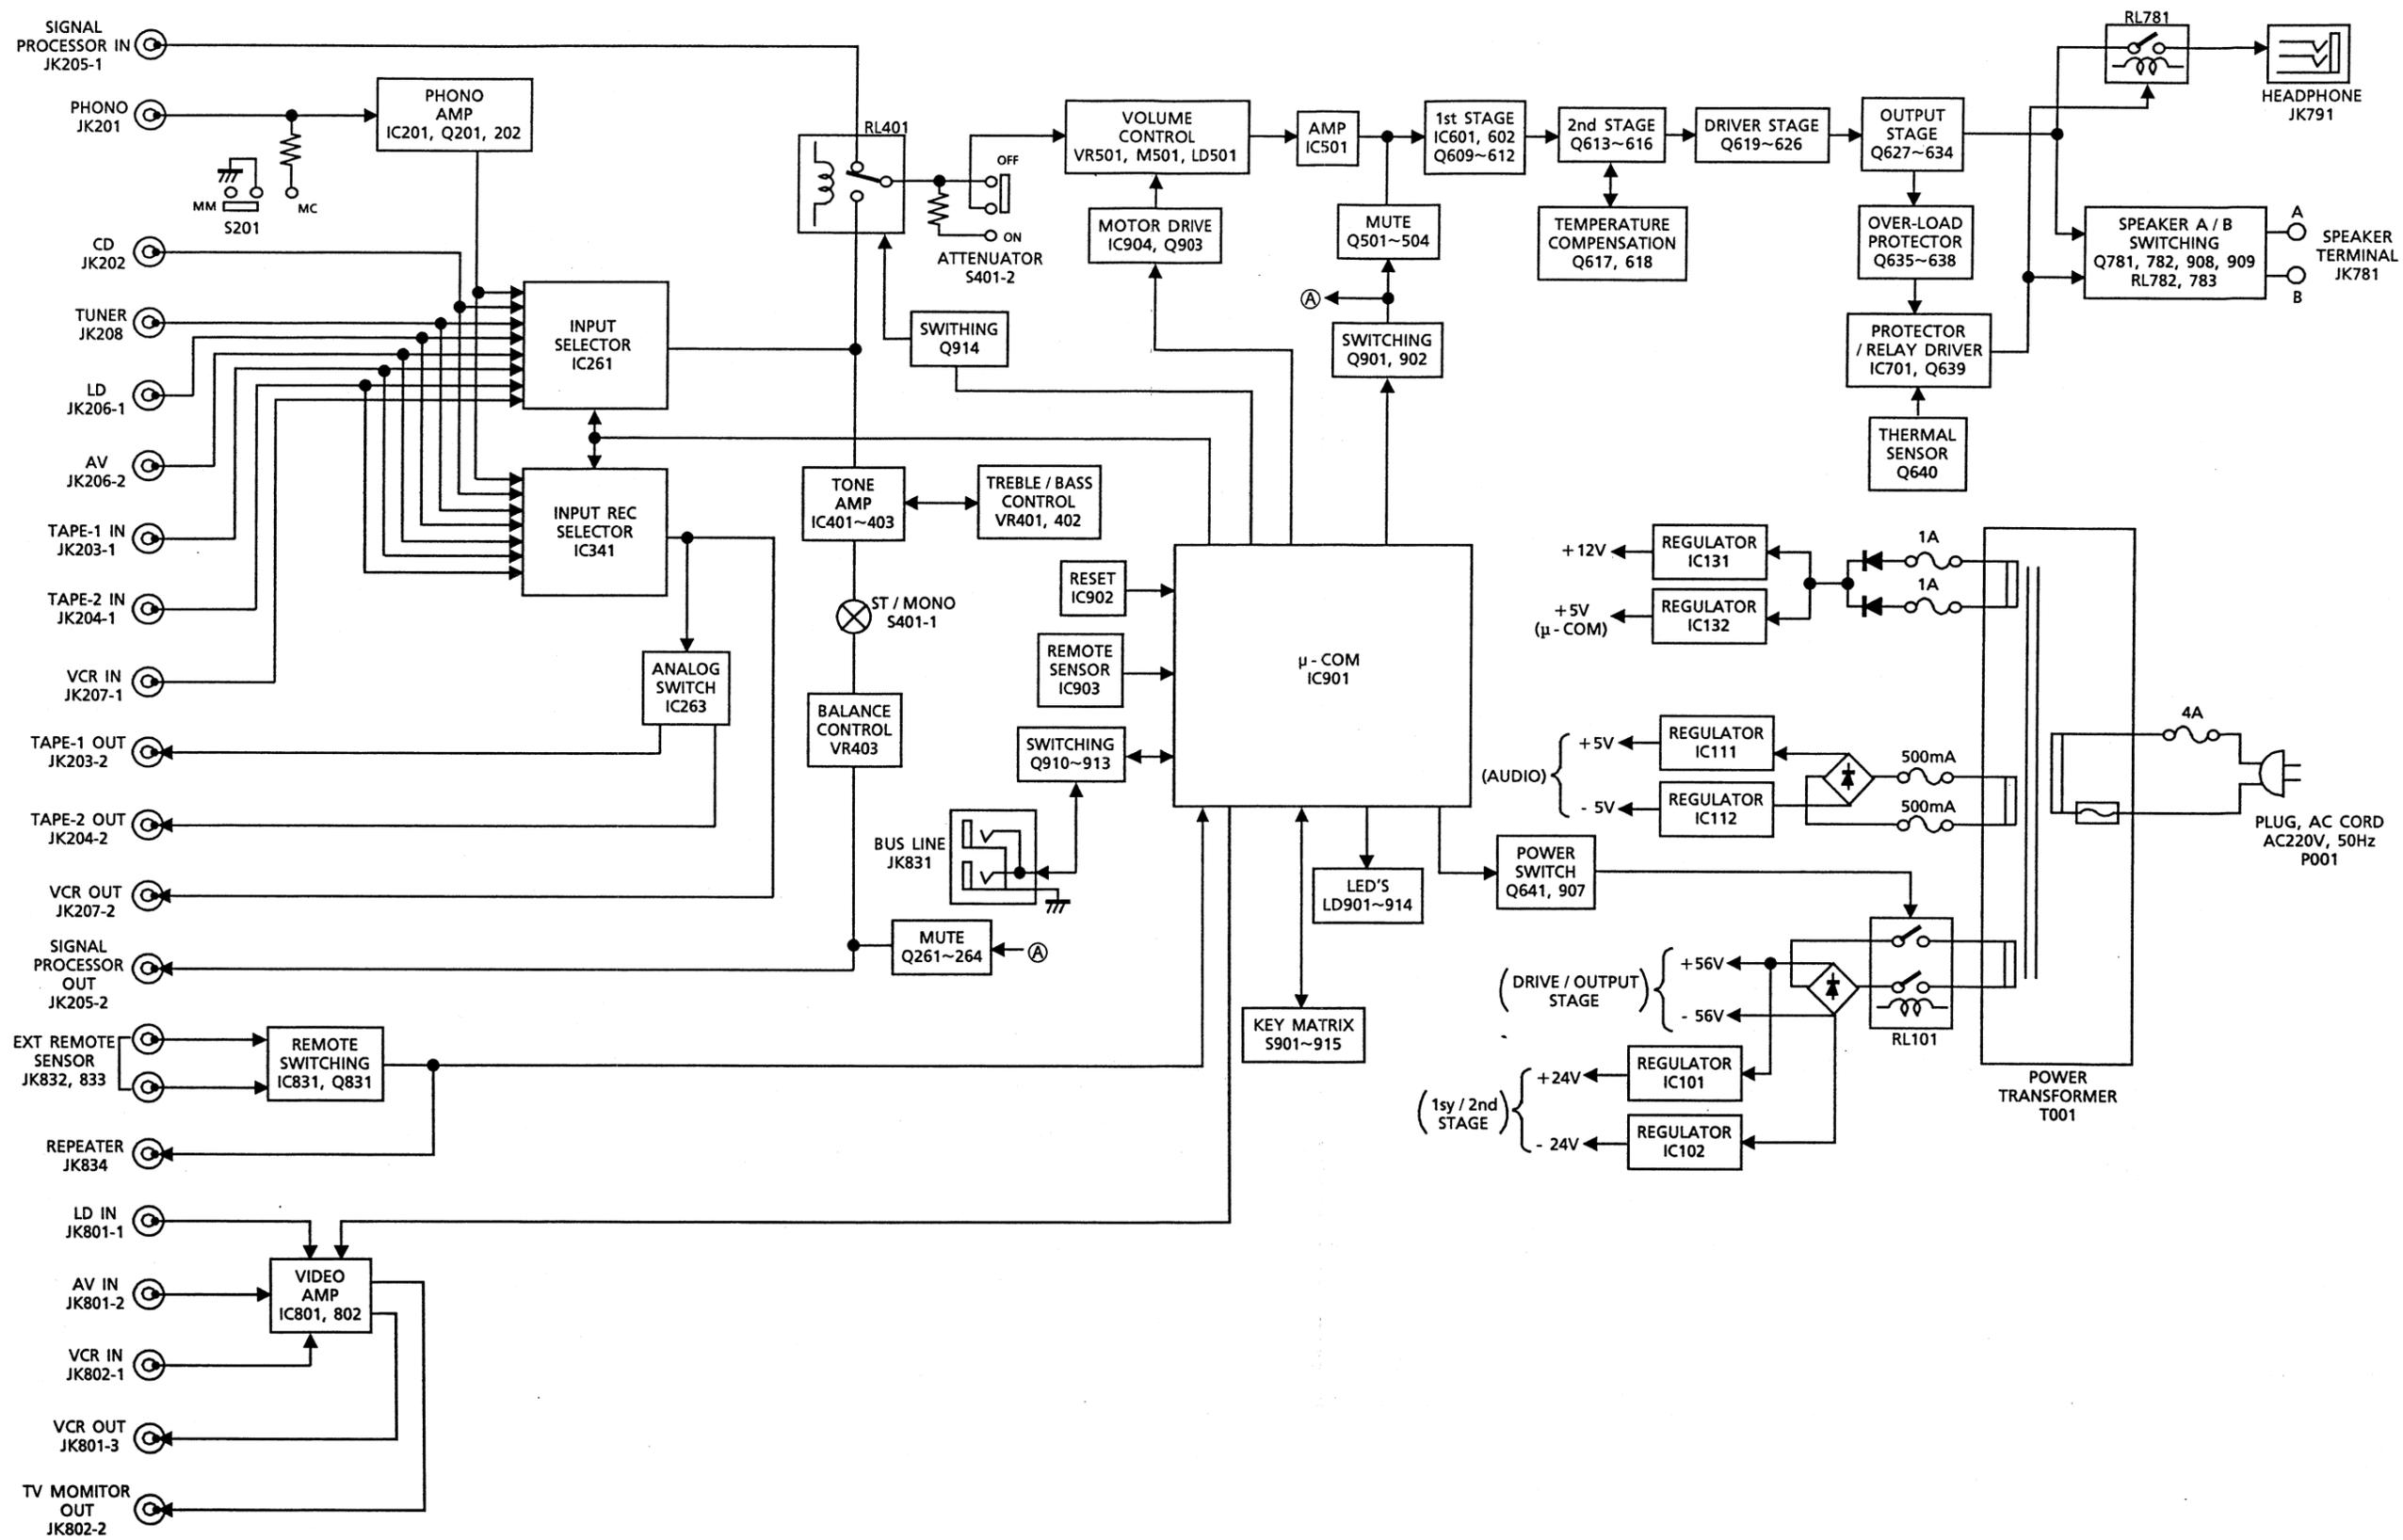

**Note:** Wait about 3 minutes after turning ON the power to make the above adjustment.

# Electrical Parts List

Resistor : Carbon resistors under 1 / 4 watts are not mentioned in the parts list, please confirm them by schematic diagram.

Capacitor :  $\mu\text{F}$  = microfarads, pF = picofarads

Abbreviations			Symbol No.	Part No.	Description

<p><b>M5220P : IC201</b></p>	 <p>Diagram showing an 8-pin component with pins 1 through 8. Pin 1 is OUT 1, pin 2 is INV IN1, pin 3 is NON INV IN1, pin 4 is V-, pin 5 is NON INV IN2, pin 6 is INV IN2, pin 7 is OUT 2, and pin 8 is V+.</p>

<p><b>TC9163 : IC261, 341</b></p>  <p>Diagram showing a 16-pin component with pins 1 through 16.</p>	 <p>Internal circuit diagram of TC9163 showing two 4-bit shift registers. Each register consists of four latches (L-S1 to L-S4) and four resistors (R-S1 to R-S4). The registers are connected to a common bus (COM1, COM2, COM3) and a shift resistor. The circuit is powered by VDD and VSS, and has a clock input (CK) and data input (DATA).</p>
<p><b>TC9215P : IC263</b></p>  <p>Diagram showing a 16-pin component with pins 1 through 16.</p>	 <p>Internal circuit diagram of TC9215P showing a 4-bit shift register with four switches (SW1, SW2, SW3, SW4) and four capacitors (C12, C34). The circuit is powered by VDD and VSS, and has a clock input (CK) and data input (DATA).</p>
<p><b>M5218L : IC401-403</b></p>  <p>Diagram showing an 8-pin component with pins 1 through 8.</p>	 <p>Internal circuit diagram of M5218L showing two operational amplifiers (CH1 and CH2). CH1 has inputs -IN1 and +IN1, and output OUT1. CH2 has inputs +IN2 and -IN2, and output OUT2. The circuit is powered by V+ and V-.</p>
