## MARANTZ DESIGN AND SERVICE

Using superior design and selected high grade components, MARANTZ Company has created the ultimate in stereo sound. Only original MARANTZ parts can insure that your MARANTZ product will continue to perform to the specifications for which it is famous.

Parts for your MARANTZ stereo are generally available within 72 hours throughout the nation via a toll-free line to our National Parts Depot in California. The sales professionals who take your call immediately refer to their own desk top computer terminal and can quickly determine the availability and price information you require. If, for some reason, your order should exceed our available stock, we usually can instantly provide an alternate replacement part or current delivery information. When the order is placed and confirmed, the computer simultaneously generates "hard copy" orders at the distribution center. As hard copies come directly from the computer to the national parts depot, your requested stock is assembled and prepared for shipment and placed on the first available carrier for delivery to you.

### ORDERING PARTS

Phone orders will eliminate mail delays, and we encourage the use of this method. If you order by mail, use MARANTZ parts order forms which are available from our National Parts Depot located at the following address:

SUPERSCOPE NATIONAL PARTS DEPARTMENT  
20525 Nordhoff Street  
Chatsworth, California 91311  
Phone: 1-800-423-5108  
1-213-998-9333

The following information must be supplied to eliminate delays in processing your order:

1. Complete address.
2. Complete part numbers.
3. Complete description of parts.
4. Model number for which part is required (indicate MARANTZ).
5. Account number (for account customers only).

Direct consumers will be provided with the current retail price quotation on available parts in order to advise them of the cost of the parts and shipping.

### OVERSEAS PARTS ORDERING

Parts may also be ordered from the following overseas addresses:

#### CANADA

Superscope Canada, Ltd.  
3710 Nashua Drive  
Mississauga  
Ontario, Canada L4V1M5

#### AUSTRALIA

Superscope (Australasia) Pty., Ltd.  
32 Cross Street (P.O. Box 604)  
Brookvale 2100 N.S.W.  
Australia

#### JAPAN

Marantz Japan, Inc.  
3622 Kamitsuruma  
Sagamihara Shi  
Kanagawa, Japan

#### EUROPE

Superscope Europe, S.A.  
Avenue Leopold III, 2  
7 120 Peronnes-Lez-Binche  
Belgium

Marantz France  
Rue Louis Armand 9  
92600 Asnieres  
Hauts-de-Seine  
France

Marantz Audio U.K. Ltd.  
London Road, 203  
Staines  
Middlesex  
England

Superscope GmbH  
Max-Planck-Strasse 2 2  
D-6072 Dreieich 1  
West Germany

All of the above locations are fully equipped to take care of your total service needs. Because various countries have differing configuration requirements, it is necessary that you contact the service facility in your particular country. In the event that there is no service location listed for your country, please contact the nearest facility for the necessary assistance.

## MARANTZ MODEL SD4000 STEREO CASSETTE DECK

### INTRODUCTION

This service manual are prepared for use by Authorized Warranty Station and contains service information for Marantz Stereo Cassette Deck.

Service information and voltage data included in this manual are intended for use by the knowledgeable and experienced technician only. All instructions should be read carefully. No attempt should be made to proceed without a good understanding of the operation of the Cassette Deck.

The parts list furnishes information by which replacement parts may be ordered from the Marantz Company. A simple description is included for parts which can be usually obtained through local suppliers.

### 1. P.W. BOARDS

As can be seen from the circuit diagram, the chassis of your Cassette Deck consists of the following units. Each unit mounted on a printed circuit board is described within the square enclosed by a bold dotted line on the circuit diagram.

1. Pre Amp . . . . . mounted on P.W. Board P100
2. Fuse . . . . . mounted on P.W. Board P400
3. Compuskip. . . . . mounted on P.W. board P450
4. Dolby . . . . . mounted on P.W. Board P500
5. LED Meter Amp . . . . . mounted on P.W. Board P600
6. LED Meter. . . . . mounted on P.W. Board P650
7. Power LED . . . . . mounted on P700
8. MIC Amp & Vol . . . . . mounted on P.W. Board P700
9. Power Supply . . . . . mounted on P.W. Board P900

### 2. TEST EQUIPMENT REQUIRED FOR SERVICING

For measuring or checking your Cassette Deck, the following instruments and materials are necessary.

- VTVM
- Audio Oscillator (AF OSC)
- Attenuator (600  $\Omega$ )
- Oscilloscope
- Bandpass Filter (1 kHz)
- IEC A-Curve Filter
- Wow and Flutter Meter
- Torque Meter (Cassette Type)
- Digital Frequency Counter
- Distortion Meter
- Blank Tapes (Completely erased with bulk eraser)
  - TDK AC-211 (Normal)
  - TDK AC-511 (Special/CrO<sub>2</sub>)
  - SONY CS-30 (Fe-Cr)
  - TDK AC701

**NOTE:** If any doubt is noted in a measured value, use new tape.

- Test Tapes (New Tape)
  - MTT-111 Wow and Flutter, Tape Speed [1-7/8 I.P.S. (4.75 cm/sec)]
  - MTT-111SP Wow and Flutter, Tape Speed [3-3/4 I.P.S. (9.5 cm/sec)]
  - MTT-112 Measurements of Output Level and Signal-to-Noise Ratio
  - MTT-150 Adjustment of Output Level
  - MTT-216 Frequency Response (for Normal)
  - MTT-316 Frequency Response (for CrO<sub>2</sub>, Fe-Cr, Metal)
  - MTT-121 Cross Talk
  - MTT-141 Channel Separation

### 3. CIRCUIT DESCRIPTION

#### 3.1 TAPE SPEED SELECTOR

Tape speed is changed by switching the motor speed to 1,800 rpm for 1-7/8 ips (4.75 cm/sec) or to 3,600 rpm for 3-3/4 ips (9.5 cm/sec). In fast-forward or rewind operation, however, the motor always rotates at 1,800 rpm.

- As shown in the figure below, the motor rotates at 1,800 rpm when R310 (5 kΩ) is shorted by S301 (speed selector) or S090 (FF/REW).
- When R945 is not shorted, the motor rotates at 3,600 rpm.
- R945 is used for precisely adjusting the motor speed to 3,600 rpm.
- To precisely adjust the motor speed to 1,800 rpm, turn the variable resistor built-in the motor.

**NOTE:** The motor speed is known by playing back the test tape MTT-111 and measuring the reproduced frequency.

Motor speed (rpm)	Reproduced frequency (Hz)
1800	3000
3600	6000

#### 3.2 PLAYBACK EQUALIZER CIRCUIT

A block diagram of the playback equalizer circuit is shown below.

Time constants of the playback equalizer circuit at each tape speed and selector position are as follows:

TAPE SELECTOR POSITION	NORMAL	SPECIAL/ CrO <sub>2</sub>	FeCr	METAL
TAPE SPEED 1-7/8 IPS	120 μs	70 μs	70 μs	70 μs
TAPE SPEED 3-3/4 IPS	70 μs	35 μs	35 μs	35 μs

#### Circuit Function at Each Time Constant

##### (1) 120μs

S302 is Tape Selector Switch for normal position. In the diagram, this switch is in the depressed position, causing Q153 and Q154 to turn OFF due to zero bias voltage. In this case, the playback time constant is set to 120μs by C157 and R158~R160.

##### (2) 70μs

When the tape speed is 1-7/8 ips (4.75 cm/sec) and S302 is OFF (S302 turns OFF when the other tape selector switch is depressed), a bias voltage is applied to the base of Q153 which is then turned ON. When the tape speed is 3-3/4 ips and S302 is ON, Q153 is also ON. In either case, the playback time constant is set to 70μs by C157, R158~R160, C161 and R163.

##### (3) 35μs

When the tape speed is 3-3/4 ips (9.5 cm/sec) and S302 is OFF, Q154 is ON and the playback time constant is set to 35μs by C157, R158~R160, C163, C164 and R165.

#### 3.3 RECORDING COMPENSATING CIRCUIT

(Tape Speed: 3-3/4 ips)

In the circuit diagram, C108 and R115 are used for high range compensation, and R116 and C109 for low range compensation. The compensating circuit for 1-7/8 ips (4.75 cm/sec) tape speed is not shown in the diagram.

L102, R133~R136 and C123~C126 form a peaking circuit. Peaking frequency and the amount of compensation are selected by the tape selector switch.

R130~R132 and C120~C122 are used for medium range compensation. The amount of compensation is selected by the tape selector switch (not available at "Normal" position).

#### 3.4 RECORDING CURRENT SETTING CIRCUIT

Recording currents at each tape speed and each position of the tape selector switch are obtained from the following circuit:

The switch (S304) for the FeCr position is not included in the above circuit. The recording current at this position is determined by R109 and R111 or R110 and R112. The resistors used to determine recording current at each tape speed and each tape selector switch position are

shown in the table below.

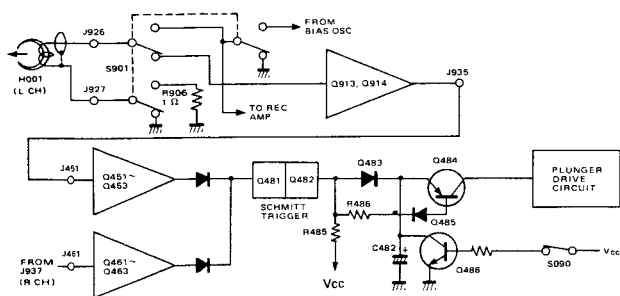

TAPE SELECTOR POSITION		NORMAL	SPECIAL/ CrO <sub>2</sub>	FeCr	METAL
TAPE SPEED	1-7/8 IPS	R109, R107 R111	R109, R105 R111	R109 R111	R111
	3-3/4 IPS	R110, R108 R112	R110, R106 R112	R110 R112	R112

### 3.5 LED METER CIRCUIT

1. The signal amplified and rectified by Q601 and Q602 is applied to the LED drive IC(Q651).
2. The LED drive IC(Q651 makes LEDs light during playback or recording operation.
3. During fast-forward or rewind operation, Q463 is OFF, so that the regulating transistor (Q642) in the LED power supply is OFF.
4. Since Q642 is OFF, noise signals are prevented from lighting LEDs.

### 3.6 SKIP CIRCUIT FUNCTION

In the above diagram, H001 represents the recording head. During the skip operation, the cassette tape is set in CUE or REVIEW mode, so the gap in the playback head must be in the center of the cassette; otherwise, the head output varies.

In SD4000, a combination head (H001) is employed, which is mounted and tilted toward the right so that the recording head gap is aligned with the center of the cassette. Thus, the recording head is used as a playback head for the skip operation. During the skip operation, the playback output of the recording head is fed to the skip circuit, while the output of the playback head is fed to the playback amplifier as usual. In the recording mode, the recording head functions as a normal recording head through S901. R906 is a resistor to measure the bias current.

#### Principles of Circuit Operation:

During the skip operation, the playback output of the recording head passes through the flat amplifier (Q913, Q914) and is amplified by Q451~Q453 (this circuit is a narrow band amplifier and protects the skip circuit from misoperation due to playback noise).

The output of Q453 is rectified to DC voltage which turns on Q481 and Q482 off. At this time, C482 is charged through R485 and Q483.

When the input ceases at the blank space between programs, Q481 turns off and Q482 on, while C482 is discharged through Q484, Q485, R486 and Q482. The current discharged flows into the base of Q484 and hence Q484 turns on. The current from C482 also flows into the plunger drive circuit via Q484.

C482 is shorted by Q486 to prevent skip operation during normal playback. Q486 turns off when FF/REW button is pressed. Conversely, when the FF/REW button is released at the end of skip operation, Q486 turns on and thus the output of Q482 remains in the "0" level.

### 3.7 BIAS OSCILLATOR CIRCUIT/ERASE OSCILLATOR CIRCUIT

The SD4000 has a bias oscillator circuit and an erase oscillator circuit to provide optimum bias and erase current for the use of metal tapes.

- The bias oscillator circuit is driven by a regulated amplifier power supply.
- The erase oscillator circuit is driven by the motor power supply.

The bias current for any particular type of tape is selectable by the circuit shown below (selection of bias current is independent of tape speed).

Referring to the above diagram, the bias current is adjusted by Q302 which changes the operating voltage of the BIAS OSC circuit at each tape selector switch position. In the "Metal" position, the operating voltage is set by R304 and R303, while its bias current is determined by R912 (R913).

- Erase current is increased only at the "Metal" position by shorting the series resistor (R916) of the oscillator circuit power supply with S305 (Metal).

## 4. DISASSEMBLY

### 4.1 REMOVING THE CASSETTE CASE ESCUTCHEON

Remove the two screws holding the escutcheon and take this out for removal.

### 4.2 REMOVING THE FRONT PANEL

Remove the six knobs 1, 2, 3, 4, 5, and 6. Then, remove the five screws A, B, C, D, and E.

### 4.3 REMOVING THE MECHANICAL CHASSIS

Remove the two screws F and G holding the bracket, which installing the Skip P.W. board (P450) on the rear of the main chassis. Take the bracket out for removal.

1. Remove the front panel.
2. Remove the two screws H and I holding the push-switch on the Skip P.W. board to the front bracket.
3. Remove the five screws A, B, C, D and E holding the mechanical chassis.
4. Remove the record lever spring assembly J. Then, draw the chassis out with taking care of the tape counter and operating levers.

### 4.4 REMOVING THE PRE AMP P.W. BOARD

1. Remove the seven screws A, B, C, D, E, F, G and H holding the Pre Amp P.W. board.
2. Remove the nut I holding the speed selector switch. Then, draw it out with taking care of not applying excessive force to any lead wire.

## 5. MECHANICAL ADJUSTMENTS

### 5.1 ADJUSTING THE FLYWHEEL THRUST

Adjust the thrust screw at the flywheel bracket until the clearance between the capstan tail end and thrust bearing is 0.1 to 0.3 mm as shown, using a phillips screw driver. For adjusting, feel of axial dropping of the flywheel for proper clearance as this cannot be seen through. Then paint the screw to lock.

### 5.2 ADJUSTING THE PAUSE TIMING

Set the unit in the play mode of operation. Then, adjust the bend angle of the pinch roller bracket arm (point A in the line drawing) until the clearance between the pinch roller and capstan is 0.1 to 0.3 mm at the time when the take-up reel is stopped by slowly pressing the PAUSE pushbutton down.

**NOTE:** To widen the clearance, make the bend angle smaller (in the direction C). To make the clearance narrower, widen the bend angle (in the direction B).

### 5.3 ADJUSTING THE PINCH ROLLER PRESSURE

Measure the pressure of the pinch roller using a gauge as shown. For measurement, draw the pinch roller in the arrow direction in which it is detached from the capstan shaft and gradually return it toward the capstan. Read the gauge at the time when the pinch roller starts turning. The standard pressure is  $300 \pm 50$  g. If the pressure is out of the range, bend the pinch roller spring around the point A in the direction B or C.

**NOTE:** To make the pressure strong, bend in the direction B. To make the pressure weak, bend in the direction C.

### 5.4 ADJUSTING THE PLAY TIMING

It is normal that when the PLAY pushbutton is depressed, the take-up reel table turns first, then the pinch roller is rotated. The reel table and pinch roller must not start turning at the same time.

**NOTE:** Make certain that such a subsequent operation is made irrespective of locking state is depressed slowly without loading the tape.

#### 1. Checking for Adjustment

Check whether or not the clearance between the pinch roller and capstan is 0.2 to 0.5 mm when the take-up reel table starts turning with the PLAY pushbutton depressed slowly.

#### 2. Adjustment

Bend the pinch roller bracket at the point that touches the head chassis stopper. In the line drawing, bending left reduces the clearance between the capstan and pinch roller.

**NOTE:** Make certain that the pinch roller bracket does not leave touching the head chassis stopper in the play mode of operation as a result of excessive bending.

### 5.5 ADJUSTING THE PLAY TORQUE

Put the two pawls of the circular plate spring on proper stepped position of the reel rest. The adjustable torque range is 40 to 70 g-cm.

To make the torque high, put the pawls on a shallow step. For lower torque, put them on a deeper step.

- **Checking the take-up clutch for sliding**

Make certain that the flywheel rotates freely when the reel table is locked. The flywheel that revolves irregularly or stops is not acceptable.

### 5.6 ADJUSTING THE FAST FORWARD AND REWIND TORQUE

The fast forward and rewind idler has a torque adjust plate spring (part A in the line drawing), which has two pawls (part B) at its ends. Set the pawls in proper one of the three steps. To make the torque high, set the pawls in the shallowest step. For lower torque, set in the deepest step.

### 5.7 POSITIONING THE MOTOR PULLEY

Loosen the set screw and adjust the motor pulley position until the clearance between the pulley and motor is 4 mm as shown. Tighten the set screw.

### 5.8 ADJUSTING THE REWIND IDLER SIDE PRESSURE

Make certain that in the rewind mode of operation, the rewind idler does not slip on the supply reel table when this is held by hand. If it slips, change the hanging position of the rewind idler arm return spring on the chassis in the arrow direction step by step until it does not slip.

## 5.9 POSITIONING THE SWITCHES

### 5.9.1 Normal Motor Speed Switch

This switch turns OFF in PLAY, FF or REW mode. The functions of the switch are as follows:

- 1) The tape speed select switch (manual type switch on front panel) circuit will not function when the switch is ON.
- 2) The tape speed select switch circuit is activated when the switch is OFF.

### 5.9.2 Pause Muting Switch (S003)

In the stop state, loosen the screw holding the pause muting switch and position this so that the clearance between its end tip and pause arm may be 1 to 1.5 mm.

## 5.9.3 SKIP, FF/REW and Cassette Switches

### a) SKIP and FF/REW Switches

- When installing, observe the following points:
  - 1) This switch is activated by the lever (1).
  - 2) This switch should be installed so that it is quickly depressed by the lever (1).
- The functions of the switch are as follows:
  - 1) Turns ON and OFF the SKIP circuit.
  - 2) Sets the motor speed to 1000 rpm in FF/REW (CUE/REV) mode.

### b) Cassette Switch

- When installing, observe the following points:
  - 1) Make sure that the switch does not contact other parts of the mechanism.
  - 2) Check that the switch turns ON when cassette tape is loaded. (Motor starts running.)
- Function of switch:
  - 1) Improves the motor speed rising characteristic.

### 5.9.4 Play Muting Switch

In the stop state, loosen the screw holding the play muting switch and position this so that the clearance between its end tip and play lever may be 4 mm.

### 5.9.5 Play Start Muting Switch

When installing, observe the following points:

- 1) Press the PLAY button and check that this switch is set to OFF → ON → OFF until locked.
- 2) Check that this switch remains OFF in CUE/REV mode.

### Caution for Installing the Solenoid L010

For skipping tape, either REW or FF button together with the PLAY button should be depressed to lock. When skipping ends, the skip circuit energizes the solenoid to release the REW or FF button only. If the solenoid is not positioned well, however, this would result in releasing the PLAY button too. In such an event, correct the solenoid position so that the PLAY button cannot be released.

## 6. ELECTRICAL ADJUSTMENTS

### Precautions before Adjustment

1. Before playing the test tape back, thoroughly demagnetize the heads, capstan and similar metal parts using an eraser as the test tape-recorded tone is easily erased.
2. Do not place the test tape on any measuring instrument.
3. Do not put the test tape near a place where the eraser is used.
4. Method of Demagnetization: — Turn the eraser power switch on at a remote position far away from the heads. Bring the eraser close to the heads, capstan and other parts to be demagnetized, and move it up and down four or five times to demagnetize. Slowly separate the eraser far away from the parts, and turn the power switch off.
5. Do not use any magnetized adjusting tool. When using it, demagnetize it from time to time in the course of each adjustment.
6. Do not turn semi-fixed resistor more than needed.
7. Do not apply locking bond excessively.

### Definitions

1. The "normal playback state" is an operating state of the tape deck which plays back the MTT-150 test tape and is adjusted so as to produce a 580mV output at the LINE OUTPUT terminal with the load assuming the measuring instrument input impedance of greater than 100 k $\Omega$  and with the TAPE SELECTOR switch set at the NORMAL position.
2. The "normal recording state" is an operating state of the tape deck which records a 1 kHz signal to a specified recording level for which the recording level control is adjusted with the 1 kHz signal applied at a specified input level to the MIC terminal.  
In the normal recording state, therefore, this tape deck is set up with the level control to the state that the Peak Level Displays may illuminate to the 0 VU with a 1 kHz, 1 mV input signal applied.

### 6.1 HEAD AZIMUTH ADJUSTMENT

#### SET UP

1. Power voltage:- 50 or 60 Hz AC voltage rated for the unit to be used in a market country.
2. TAPE SELECTOR switch position:- NORMAL.
3. Load:- Measuring instrument input impedance.
4. Output terminal used:- LINE OUTPUT.
5. Test tape used:- MTT-115C (31.5 Hz to 14 kHz).
6. Tape Speed:- 1-7/8 IPS (4.75 cm/sec).

#### PROCEDURES

1. Play the 315 Hz and 10 kHz portions of the test tape MTT-115C back. Adjust the head azimuth adjusting screw for maximum VTVM read.
2. If the peak output reads of the right and left channels are different, set the screws to obtain the mechanical center between the peaks.
3. After adjustment, lock the screw with bond.

Mode: Playback

#### CAUTION

After adjustment, repeat the playback and stop setting a few times to make certain of no head azimuth deviation.

## 6.2 TAPE SPEED ADJUSTMENT

### SET UP

1. Power voltage:- 50 or 60 Hz AC voltage rated for the unit to be used in a market country.
2. Output terminal:- LINE OUTPUT (or DIN).
3. Test tape used:- MTT-111 (3 kHz Tone) at 1-7/8 IPS (4.75 cm/sec).  
MTT-111SP at 3-3/4 IPS (9.5 cm/sec).
4. Unit position:- Vertical.

### PROCEDURES

1. For 1-7/8 ips (4.75 cm/sec), play the mid portion of the test tape MTT-111 back. Adjust the tape speed adjusting variable resistor inside the motor for 2990 to 3010 Hz counter indication.
2. For 3-3/4 ips (9.5 cm/sec), play the mid portion of the test tape MTT-111SP back. Adjust R310 for 2990 to 3010 Hz counter indication.

### CAUTIONS

1. For adjustment, the tape deck should be set up in the normal operating condition.
2. Do not adjust the variable resistor more turns than needed.
3. Do not proceed with adjustment after the tape deck temperature has changed.
4. If a strong shock or similar vibration is applied to the tape deck after adjustment, make certain that the measured tape speed had not changed.
5. If the tape speed deviation occurs, perform the adjustment again.
6. Be careful that the counter may indicate a wrong value because of too low counter input level.
7. Before adjustment, allow for 30 seconds or more after depressing of the PLAY pushbutton.

**NOTE:** Be sure to carry out the 1-7/8 ips (4.75 cm/sec) tape speed adjustment for first.

### 6.3 PLAYBACK EQUALIZER ADJUSTMENT

#### SET UP

1. Power voltage:- 50 or 60 Hz AC voltage rated for the unit to be used in a market country.
2. TAPE SELECTOR switch position:- NORMAL.
3. Load:- Measuring instrument input impedance.
4. Output terminal:- LINE OUTPUT.
5. Test tape used:- MTT-115C.
6. Tape Speed:- 1-7/8 IPS (4.75 cm/sec).

#### PROCEDURES

1. Play the test tape MTT-115C. Let the 315 Hz signal level be reference as 0 dB.
2. Adjust R160 and R260 (5 k $\Omega$  each) for 10 kHz frequency response of 0 to  $\pm 1$  dB in reference to the 315 Hz signal level.

- NOTES:**
1. Proceed both for the right and left channels in the same manner.
  2. Note that clockwise turning of R160 and R260 will increase the 10 kHz signal output level.

Mode: Playback

### 6.4 PLAYBACK OUTPUT ADJUSTMENT

#### SET UP

1. Power voltage:- 50 or 60 Hz AC voltage rated for the unit to be used in a market country.
2. TAPE SELECTOR switch position:- NORMAL.
3. Load:- Measuring instrument input impedance.
4. Output terminal:- LINE OUTPUT.
5. Test tape used:- MTT-150.
6. Tape Speed: 1-7/8 IPS (4.75 cm/sec).

#### PROCEDURES

Play the test tape MTT-150 back. Adjust R166 and R266 (50 k $\Omega$  each) for 580 mV playback output level.

**NOTE:** Proceed both for the right and left channels in the same manner.

Mode: Playback

#### CAUTION

This adjustment should be performed after the one for the playback equalizer. If the playback equalizer is adjusted after the playback output adjustment, the playback output should be readjusted.

## 6.5 LED PEAK LEVEL METER ADJUSTMENT

### SET UP

1. Power voltage:- 50 or 60 Hz AC voltage rated for the unit to be used in a market country.
2. TAPE SELECTOR switch position:- NORMAL.
3. Input terminal:- J601, J621.
4. Test tape used:- MTT-150
5. Tape Speed:- 1-7/8 ips (4.75 cm/sec).

### PROCEDURES

1. Supply DC 3 V between J601 and J621.
2. Depress the PLAY button.
3. Adjust R602 and R622 for 0VU LED meter reading.
4. Remove DC 3 V from J601 and J621.
5. Play the test tape MTT-150 back.
6. Adjust R610 and R630 for +2 dB LED meter reading.

## 6.6 RECORDING BIAS CURRENT ADJUSTMENT

### SET UP

1. Power voltage:- 50 or 60 Hz AC voltage rated for the unit to be used in a market country.
2. TAPE SELECTOR switch:- METAL.
3. Load:- Measuring instrument input impedance.

### PROCEDURES

Set up the tape deck in the recording mode of operation. Connect the VTVM to R906 (Lch) and R907 (Rch). Adjust the variable resistor R912 and R913 for 2 mV VTVM read.

**NOTE:** Proceed both for the right and left channels in the same manner.

## 6.7 RECORDING CURRENT ADJUSTMENT

### SET UP

1. Power voltage:- 50 or 60 Hz AC voltage rated for the unit to be used in a market country.
2. Input signal:- 1 kHz, 1 mV.
3. TAPE SELECTOR switch position:- NORMAL.
4. Load:- Measuring instrument input impedance.
5. Tape Speed:- 1-7/8 IPS (4.75 cm/sec) or 3-3/4 IPS (9.5 cm/sec).

### PROCEDURES

1. Stop the recording bias current oscillation by disconnecting the bias circuit. For example, connect the base and emitter of Q910 the base and emitter of Q911. (Complete adjustment as quickly as possible.)
2. Set up the tape deck to the normal recording state. Connect the VTVM across the  $10\ \Omega$  resistor connected to the head. Supply 1 kHz, 1 mV to the MIC terminal. Adjust the RECORD LEVEL control until the LED meter indicates 0VU. Adjust the variable resistors R111 (or R112\*) and R211 (or R212\*) until the VTVM reads 0.5 mV, respectively.
3. Operate the oscillation circuit. Record 1 kHz, 1 mV signal. Play back the recorded signal and adjust R111 (or R112\*) and R211 (or R212\*) for 0VU LED meter reading.

- NOTES:**
1. Proceed both for the right and left channels in the same manner.
  2. After adjustment, release the recording bias current.
  3. Resistors marked \* are to be adjusted for 3-3/4 ips (9.5 cm/sec).

## 6.8 MPX FILTER ADJUSTMENT

### SET UP

1. Power voltage:- 50 or 60 Hz AC-voltage rated for the unit to be used in a market country.
2. Input terminal:- MIC.
3. TAPE SELECTOR switch:- NORMAL.
4. Output terminal:- LINE OUTPUT.
5. Load: Measuring instrument input impedance.

### PROCEDURES

1. Connect the 19 kHz, -60 dB input signal to the MIC terminal. Adjust the LINE LEVEL control for 0 VU.
2. Turn the MPX FILTER pushswitch to the ON position. Adjust the L101 and L201 for minimum output level at the LINE OUTPUT terminal.

**NOTE:** Proceed both for the right and left channels in the same manner.

Mode: Record

### CAUTIONS

1. The 19 kHz input signal should be as precise as  $19 \pm 0.01$  kHz.
2. If the filter characteristic is better than 30 dB, the adjusting coil needs not to be adjusted since it is factory set.

## 6.9 RECORD-PLAYBACK FREQUENCY RESPONSE ADJUSTMENT

### SET UP

1. Power voltage:- 50 or 60 Hz AC voltage rated for the unit to be used in a market country.
2. Input signal:- 1 kHz, -60 dB with -20 dB referenced as 0 dB.
3. TAPE SELECTOR switch:-METAL.
4. Output terminal:- LINE OUTPUT.
5. Load:- Measuring instrument input impedance.
6. Playback output level:- 43 mV (same as recorded signal level).
7. Test tape used:-METAL C-46.
8. Tape Speed:- 1-7/8 IPS (4.75 cm/sec).

### PROCEDURES

1. Connect the input signal to the MIC terminal. Set up the tape deck to the normal recording state.
2. In turn, reduce the input level by 20 dB with the use of the attenuator. Record the 1 kHz and 12.5 kHz tones.
3. Play the 1 kHz, 20 dB-down recorded tone back as 0 dB. Adjust the recording bias current until the 12.5 kHz response is within  $\pm 1$  dB as referenced to the 1 kHz, 0 dB response by adjusting R912 and R913.
4. Adjust the recording bias current by using test tapes AC701, AC-511 and CS-30 in the same manner.  
 AC701 : R305 (Metal)  
 AC-511 : R306 (CrO<sub>2</sub>/Special)  
 CS-30 : R307 (FeCr)

- NOTES:**
1. Proceed both for the right and left channels in the same manner.
  2. If the recording bias current is reduced in the above adjustment, be sure to measure the distortion.

Mode: Record

AF OSC

## 7. VOLTAGE CONVERSION

To convert the unit to a different power source voltage, change the position as illustrated in the drawing below.

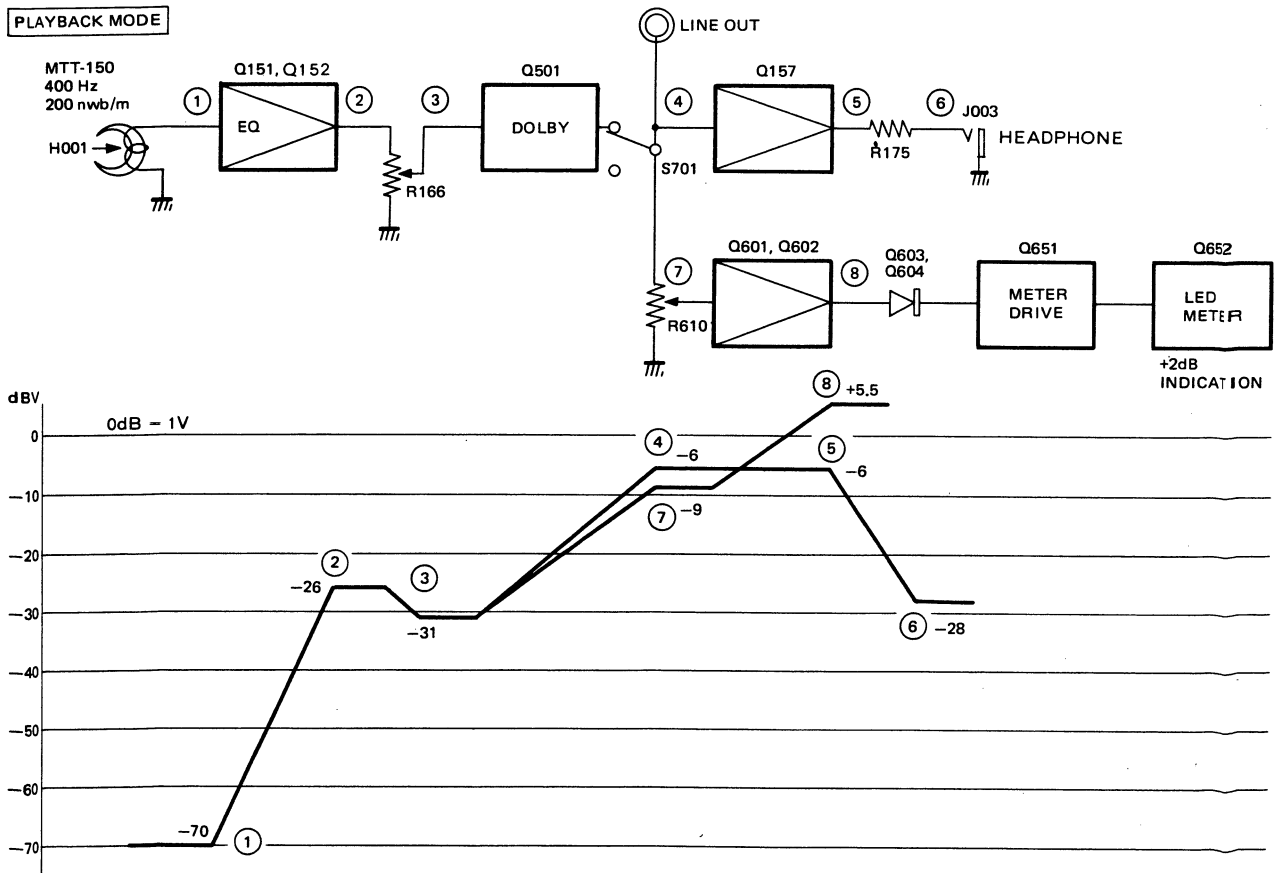

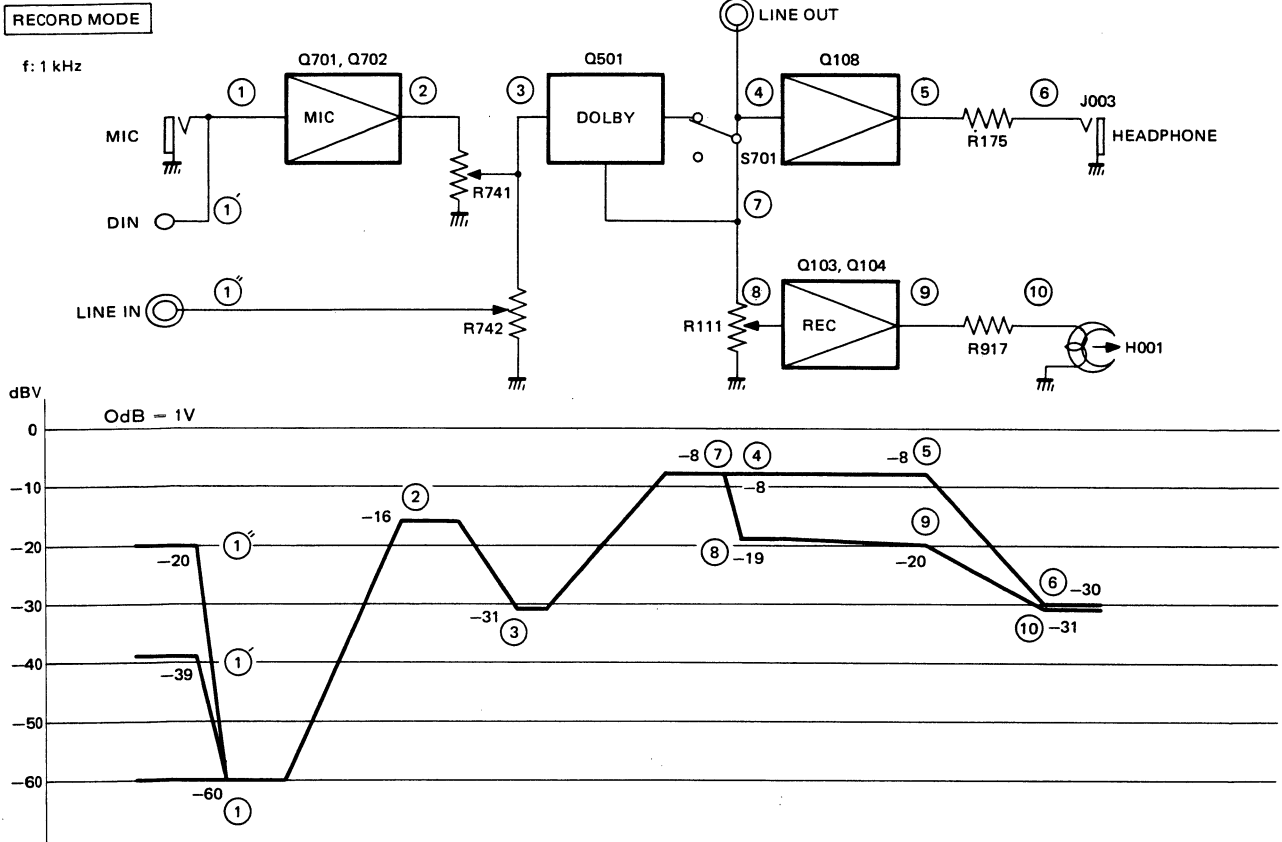

**CAUTION: DISCONNECT POWER SUPPLY CORD FROM AC OUTLET BEFORE CONVERTING VOLTAGE. DO NOT DISASSEMBLE THE VOLTAGE SELECTOR ABSOLUTELY.**

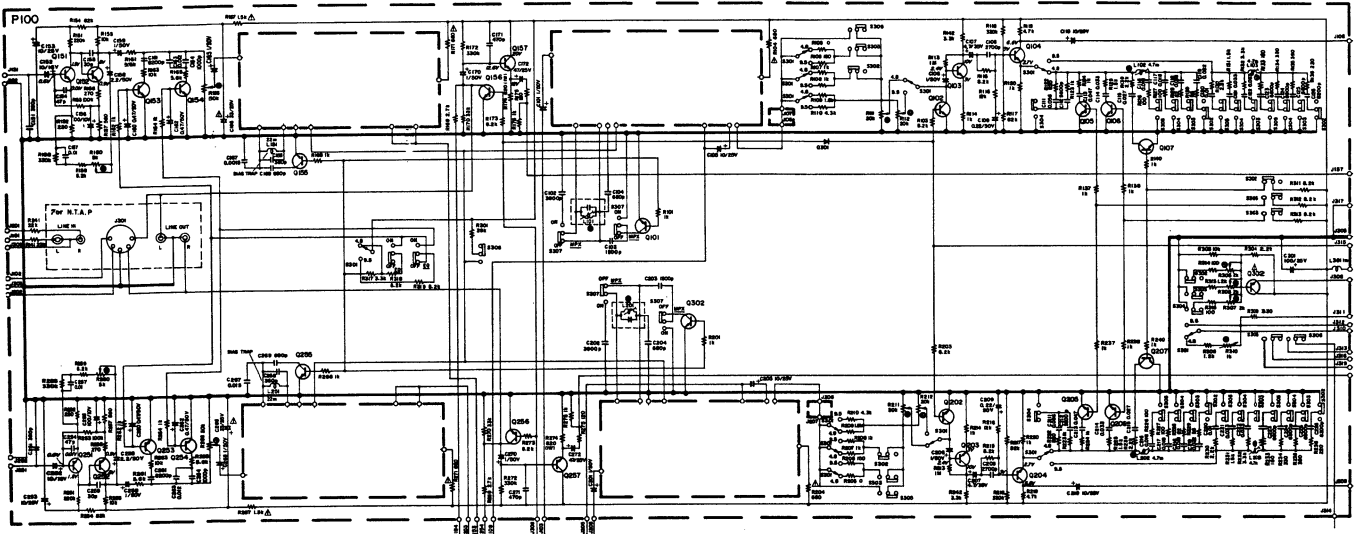

**NOTE ON SAFETY:** THE PARTS MARKED WITH  ARE IMPORTANT PARTS ON THE SAFETY. PLEASE USE THE PARTS HAVING THE DESIGNATED PARTS NUMBERS WITHOUT FAIL.

## 10. TECHNICAL SPECIFICATIONS

### [FOR U.S.A. & CANADA]

Type	Front loading 4-Track, 2-Channel Stereo Record/Playback System	
Tape	Phillips-type Compact Cassette	
Tape Speeds	High: 3-3/4 ips (9.52 cm/sec) Standard: 1-7/8 ips (4.75 cm/sec)	
Motor Drive System	DC Servo Motor (x1) with Single Capstan Drive	
Heads	.3 Head System Erase Head: Permalloy Record Head/Play Head: Sendust Alloy	
Level Indicators	Left and Right Peak Level Displays	
Noise Reduction System	Dolby NR	
Semiconductors		
Transistors	59	
IC's	6	
Diodes	34	
LED's	6	
	High Speed (3-3/4 I.P.S.)	Standard Speed (1-7/8 I.P.S.)
Wow and Flutter (WRMS)	0.04%	0.06%
Frequency Response		
(Overall, -20 dB below 0 VU)		
Metal	30 Hz ~ 22 kHz (±3 dB)	30 Hz ~ 19 kHz (±3 dB)
Ferrichrome (FeCr)	30 Hz ~ 20 kHz (±3 dB)	30 Hz ~ 17 kHz (±3 dB)
Chromium Dioxide (CrO <sub>2</sub> )	30 Hz ~ 20 kHz (±3 dB)	30 Hz ~ 17 kHz (±3 dB)
Ferric (Normal)	30 Hz ~ 18 kHz (±3 dB)	30 Hz ~ 15 kHz (±3 dB)
Signal-to-Noise Ratio		
Dolby ON	70 dB	67 dB
Dolby OFF	60 dB	57 dB
Outputs		
Line: Level	650 mV	
Impedance	2.5 kΩ	
Headphone: Level	43 mV	
Impedance	100 Ω	
Inputs (Level at 0 VU)		
Line: Sensitivity	-23 dBV (70 mV)	
Impedance	82 kΩ	
Mic: Sensitivity	-72 dBV (0.25 mV)	
Impedance	Low Z	
Fast Rewind Time	Approx. 100 sec. (C-60 cass.)	
Fast Forward Time	Approx. 100 sec. (C-60 cass.)	
Bias Frequency	100 kHz	
Power Requirements	120 V AC, 60 Hz	
Power Consumption	18 Watts	
Dimensions (W x H x D)	16-3/8 in. x 5-3/4 in. x 9-9/16 in. (41.6 cm) x (14.6 cm) x (24.3 cm)	
Net Weight	15.7 lbs. (7 kg)	

#### NOTES:

1. Reference recording level: 0 VU (16 nW/M)
2. Reference frequency: 315 Hz
3. Wow and flutter measured at: 3.0 kHz NAB WGTD RMS
4. Frequency response measured at: 20 dB below 0 VU recording level reference (Dolby off)
5. S/N ratio measured at the recorded level equivalent to 3% THD, IEC "A" WGTD, 70 μSec. EQ.
6. Recording reference tapes:
  - Standard: TDK AC211
  - CrO<sub>2</sub>: TDK AC511
  - FeCr: Sony CS30
  - Metal: TDK. AC701 Metafine

**[FOR EUROPE]**

Style . . . . .	Front load

**N.B.** Following precautions should be used when putting order for service manual:

- (1) The original Service manual will not be delivered if the P/N 4277855040 (Flysheet) is used for ordering.
- (2) When comprehensive manual are required, please use both P/N of 4277855010 (Original) and 4277855040 (Flysheet) simultaneously.
