Service Bulletin
No. : MZ08-US05
Date: November 30, 2009

Model: SR4003, SR5003, SR6003, SR5004, SR6004

Subject: Reset Procedure

Symptom: These units have been modified to never be powered ON by any means once they go into standby with the standby led flickering every 125m sec., unless the specialized procedure (*1) described below is performed.

Solution: *1: If the unit cannot be powered on after being plugged in again (with the STANDBY LED flickering every 125m seconds), the power amp has failed. The unit still can be powered on again through the following method, but it can further damage the power amplifier. Never give this information to customers, or allow the end-user to perform this reset procedure.

SR4003, SR5003, SR6003, SR5004, SR6004:

Press and hold the **SURROUND + EXIT + CLEAR** to reset.
