Destination	Type of Band	Receiving Frequency Range	Channel Space	Reference Frequency	Intermediate Frequency
Europe	MW	531 ~ 1602 kHz	9 kHz	9 kHz	450 kHz

● Channel Selecting Function

- (1) Automatic Up/Down Tuning (sawtooth wave mode)
A channel is selected at a speed of approx. 60 ms/step until high-level input is developed at pin (26) of the SD terminal.
- (2) Manual Up/Down Tuning (sawtooth wave mode)
Single-finger depression of the momentary switch allows stepwise forward, and continuous depression for 0.5 second or longer runs the tape fast forward at approx. 60 ms/step.
- (3) Preset Memory Access
FM 8 channels, M1 ~ M8
LW/MW . . . 8 channels, M1 ~ M8 in random access

● Preset Memory Write

A frequency being currently received is written by depressing the preset key while the ME lamp is lit.

● Programmable Preset Recording Function

Programs can be reserved up to six channels in FM, MW and LW bands by the memory and preset keys while the PRG-REC lamp is lit.

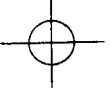

Whenever the chip enable signal changes from high to low level during operation of the PRG-REC lamp, a channel is accessed in the order of reservation. Reserved channels are displayed every second when the MONITOR key is depressed in that state.

● Remote Control Function

The following actions are allowed by remote control.

- (1) Preset memory access
- (2) Band change-over
- (3) Manual/automatic up/down channel selection

5.3 CONFIGURATION OF KEY MATRIX

	K ₃	K ₂	K ₁	K ₀	Type of Key
S _a	M1	M2	M3	M4	Momentary switch 
S _b	M5	M6	M7	M8	
S _c	UP	DOWN	MEMO		
S _d	P-REC	FINE	MONI		
S _e	MW (AM)	FM	LW	WIDE/NARROW	Initialize diode matrix 
S _f	BAND 2	BAND 1		N/N + 2	
S _g				LW	

5.4 DESCRIPTION OF KEY MATRIX

● Momentary Key

- (1) M1 ~ M8
These function as the preset memory data write-in keys, preset call-out keys, and unattended recording reservation keys.
- (a) Data Write (Excluding P-REC mode)
Press any one of the M1 ~ M8 keys within approximately 5 seconds after the MEMO key is pressed (while the ME indicator is lit up). The frequency presently being received, the WIDE/NARROW data (FM only), and the FINE mode (FM only) will be written into the memory area corresponding to the key depressed.
- (b) Preset Call
When any one of the M1 ~ M8 keys is pressed, the memory contents (frequency, WIDE/NARROW, FINE) corresponding to the key pressed will be called out. Up to 8 FM presets can be programmed and called out, and 8 MW/LW presets can be programmed and called at random.
- (c) Preset recording program reservation
A program can be reserved by depressing any one of the M1 ~ M8 keys within about 5 seconds after depression of the MEMO key in P-REC mode. Programs can be reserved up to six channels in FM, MW and LW bands at random. An ordinary access to the memory is taken unless the ME lamp is lit even in P-REC mode.
- (2) MEMO
The key shows preset memory write mode or preset recording program reservation enable mode. When the key is depressed, the ME lamp is lit for about 5 seconds and enable mode is set.
- (3) UP/DOWN
Automatic/manual channel selection key (sawtooth wave mode).
- (a) Manual
Frequency is stepped up or down (channel step) whenever the key is depressed. Continuous depression of these keys for about 0.5 second or longer allows continuous forward of the tape at about 60 ms/step.
- (b) Automatic
When the key is released with continuous forward run in manual mode, frequency is automatically stepped up or down. Scanning is stopped when the high level is inputted to the SD (station detector) terminal or when these keys are redepressed.
- (c) FINE TUNING
Pressing either key when the FINE mode is activated, will shift the frequency up or down in 10 kHz steps (display will not change).
Fine tuning range: Japan, America -40 kHz ~ +50kHz
Europe ±20 kHz
The mute output will not function when the above limits are exceeded.

- (4) FINE (FM only)
Pressing this key will cause the FINE indicator to light up, indicating that fine tuning can be carried out. The FINE mode can be cancelled by pressing the FINE key once again, pressing the UP or DOWN keys or pressing any other key excluding the ME keys.
- (5) P-REC
The P-REC lamp comes on with the key depressed to display preset record enable mode. Redepression of the key clears the same mode. The UP/DOWN key does not function in P-REC mode.
- (6) MONITOR
The key operates only in P-REC mode. When the key is depressed, the contents of reserved programs are displayed every second and the tape stops in the last.
- (7) FM, MW (AM) and LW
When any one of these keys is depressed, a last channel of a band corresponding to the depressed key is accessed. However, the LW key is ignored if LW null is selected on the diode matrix.
- (8) WIDE/NARROW (FM only)
WIDE or NARROW will be selected alternately each time this key is pressed.
The WIDE/NARROW mode can be entered into the preset memory (for FM only).

5.5 DIODE MATRIX INITIAL SETTINGS

- (1) BAND 1, BAND 2
Determine the region of use.

	U.S.A.	Europe	Japan
BAND 1	0	0	1
BAND 2	0	1	1

1: Diode installed
0: Open

- (2) LW
Install a diode when the LW band is received.
- (3) N/N+2
Determines the frequencies which can be received when SD checks are performed at 9 kHz intervals.
1: (9 x N) 153, 162, 171, , 270, 279 (kHz)
0: (9 x N+2) 155, 164, 171, , 272, 281 (kHz)

5.6 INDICATORS

(1) Indicators are static displays using the μ PD6320G.

6. VOLTAGE CONVERSION

• EUROPEAN MODEL ONLY

To convert the unit to a different power source voltage, change the position as illustrated in the drawing below.

CAUTION
DISCONNECT POWER SUPPLY CORD FROM AC
OUTLET BEFORE CONVERTING VOLTAGE.
