ADJUSTMENTS

| No. | Measured Item | Input/Output and procedure | Point of Adjustment | Adjustment for |
|-----|---|---|---------------------|--|
| 1 | AM IF Adjustment [MW mode] | <ul style="list-style-type: none"> Set the IF sweep frequency to 455kHz. Connect IF sweep's OUT terminal to loop antenna. Connect IF sweep's IN terminal to TP1. (Fig. 6) | T5 T8 | Adjust T5 and T8 so that the waveform is maximum and symmetrical as in Fig. 4. |
| 2 | FM IF Adjustment [FM mode] (Coarse) | <ul style="list-style-type: none"> Set the IF sweep frequency to 10.7MHz. Connect IF sweep's OUT terminal to the FM antenna terminal through the 300Ω balanced dummy. (signal level 1 mV) IF sweep's IN terminal to TP2 and IF sweep's ground terminal to TP7 (GND). (Fig. 7) | T6 T7 | Adjust T6 and T7 so that the sweep waveform is maximum and symmetrical as in Fig. 5. |
| 3 | FM VCO Check | <ul style="list-style-type: none"> Connect digital voltmeter across TP5 and TP7 (GND). (Fig. 8) Set the function to the FM position, the reception frequency to 98MHz and check that voltage is $1.6 \pm 0.05V$. Set frequency to 108MHz and check that the voltage is $8 \pm 0.05V$. | | |
| 4 | FM IF Adjustment [FM mode] (Fine) | <ul style="list-style-type: none"> Set the FM signal generator to 98MHz and connect to the FM antenna terminal through the 300Ω balanced dummy. (signal level 1 mV) Set the function to the FM position and the reception frequency to 98MHz. Connect a distortion meter to the audio output of the onetouch connector. (Fig. 9) | T6 T7 | Adjust for minimum distortion. |
| 5 | MW VCO Adjustment | <ul style="list-style-type: none"> Connect digital voltmeter across TP6 and TP7 (GND). (Fig. 8) Set the function to the MW position, and the reception frequency to 522kHz (min. frequency). | T3 | Adjust T3 until voltage becomes $0.9 \pm 0.05V$. |
| | | <ul style="list-style-type: none"> Set the reception frequency to 1.611kHz (max. frequency). | TC3 | Adjust TC3 until voltage becomes $9.14 \pm 0.05V$. |
| | | <ul style="list-style-type: none"> Repeat the above adjustments two or three times until both adjustments are at best level. | | |
| 6 | MW Tracking Adjustment | <ul style="list-style-type: none"> Radiate each of the tracking point frequencies given below from the AM test loop (signal level 56dB/m) Receive each of the tracking point frequencies given below by means of the key or Tuning Up/Down Switch. Connect the AC voltmeter to the audio output of onetouch connector. (Fig. 10) | T1 TC1 | Adjust so that the output is maximum at each tracking point. |

| No. | Measured Item | Input/Output and procedure | Point of Adjustment | Adjustment for |
|-----|--------------------------------------|---|---------------------|--|
| 6 | MW Tracking Adjustment | <ul style="list-style-type: none"> • Tracking point frequency 1,395 kHz 999 kHz 603 kHz | | |
| | | <ul style="list-style-type: none"> • Repeat adjustment at each tracking points alternately. | | |
| 7 | LW VCO Adjustment | <ul style="list-style-type: none"> • Connect digital voltmeter across TP6 and TP7 (GND). (Fig. 8) • Set the function to the LW position and the reception frequency to 155kHz (min. frequency). | T4 | Adjust T4 until voltage becomes $1.4 \pm 0.05V$ |
| | | <ul style="list-style-type: none"> • Set the reception frequency to 353kHz (max. frequency). | TC4 | Adjust TC4 until voltage becomes $6.0 \pm 0.05V$ |
| | | <ul style="list-style-type: none"> • Repeat the above adjustments two or three times until both adjustments are at best level. | | |
| 8 | LW Tracking Adjustment | <ul style="list-style-type: none"> • Radiate each of the tracking point frequencies given below from the AM test loop (signal level 56dB/m) • Receive each of the tracking point frequencies given below by means of the key or Tuning Up/Down Switch. • Connect the AC voltmeter to the audio output of the onetouch connector. (Fig. 10) • Tracking point frequency 344 kHz 254 kHz 164 kHz | T2 TC2 | Adjust so that the output is maximum at each tracking point. |
| | | <ul style="list-style-type: none"> • Repeat adjustment at each tracking points alternately. | | |
| 9 | FM MPX Free Run Frequency Adjustment | <ul style="list-style-type: none"> • Set the FM signal generator (unmodulated) to 98MHz and connect it to the FM antenna terminal through the 300Ω balanced dummy. (signal level 1 mV) • Set the function to the FM position and 98MHz reception. • Connect the frequency counter to TP3 and GND. (Fig. 11) | | Adjust for a frequency of $19kHz \pm 100Hz$. |
| 10 | Separation Adjustment | <ul style="list-style-type: none"> • Connect the stereo signal modulator to the FM signal generator. Connect the 98MHz 1 mV signal to the FM antenna terminal through the 300Ω balanced dummy. • Set the function to the FM position and 98MHz reception. • Connect the AC voltmeter and oscilloscope to the audio output of the onetouch connector. (Fig. 9) | VR1 | Adjust for maximum L ch and R ch separation. |
