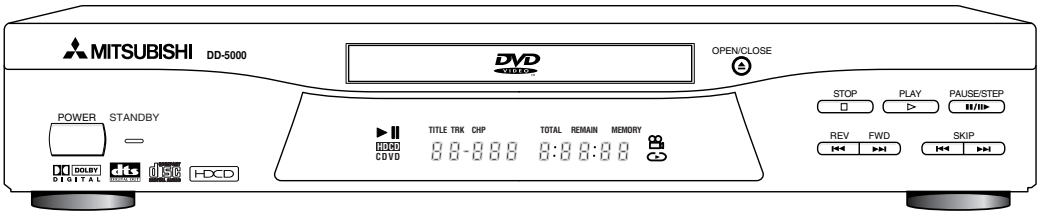
MITSUBISHI ELECTRIC

Service Manual

DVD Player

Model
DD-5000



CAUTION

Before servicing this chassis, it is important that the service person reads all SAFETY PRECAUTIONS and the SAFETY NOTICE in this manual.

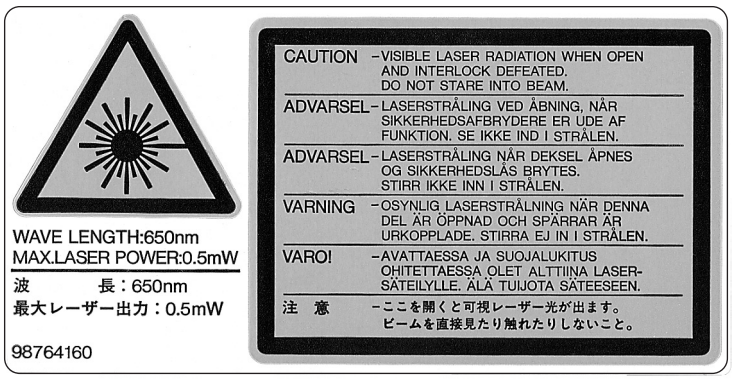
SPECIFICATIONS

Power Supply:	120V AC, 60 Hz
Power Consumption:	19W
Weight:	6.7 lb.
External Dimensions:	17"x 3-1/4"x12-1/4" (W/H/D)
Signal System:	Standard NTSC
Laser:	Semiconductor laser, wavelength 650 nm
Frequency Range:	(Digital Audio)
Audio CD:	4 Hz to 20 kHz
DVD Linear -	
48 kHZ Sampling:	4 Hz to 22 kHz
96 kHZ Sampling:	4 Hz to 44 kHz
Signal-To-Noise Ratio:	More than 112 dB (EIAJ)
Audio Dynamic Range:	More than 106 dB (EIAJ)
Harmonic Distortion:	Less than 0.001%
Wow and flutter:	Below measurable level (less than ± 0.001% (W.PEAK)) (EIAJ)

Operating conditions:	Temperature: 5 °C to 35°C
Operation status:	Horizontal
Video output:	1.0 V (p-p), 75Ω, negative sync., pin jack x 1
S Video output:	(Y) 1.0 V (p-p), 75Ω, negative sync., Mini DIN 4-pin x 1 (C) 0.286 V (p-p), 75Ω
Color Difference output:	(Y) 1.0 V (p-p), 75Ω, negative sync., pin jack x 1 (Cr)/(Cb) 0.7 V (p-p), 75Ω, pin jack x 2
Digital Audio output:	(Bitstream/PCM) 0.5 V (p-p), 75Ω, pin jack x 1, Optical connector x 1
Analog Audio output:	2.0 V (rms), 330Ω, pin jack 2 CH L R x 2, 5.1 CH SURROUND x 6

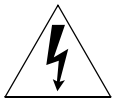
MITSUBISHI DIGITAL ELECTRONICS AMERICA, INC.
9351 Jeronimo Rd. Irvine, CA 92618

LASER BEAM CAUTION LABEL



When the power supply is on, do not remove this laser caution label. If it is removed, laser radiation may be recceived.

SAFETY NOTICE



The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of uninsulated “dangerous voltage” within the product’s enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

SAFETY PRECAUTIONS

LEAKAGE CURRENT CHECK

Plug the AC line cord directly into a 120V AC outlet (do not use an isolation transformer for this check). Use an AC voltmeter, having 5000 Ω per volt or more sensitivity.

Connect a 1500 Ω 10 W resistor, paralleled by a 0.15 µF 150V AC capacitor between a known good earth ground (water pipe, conduit, etc.) and all exposed metal parts of the cabinet (antennas, handle bracket, metal cabinet screwheads, metal overlays, control shafts, etc.).

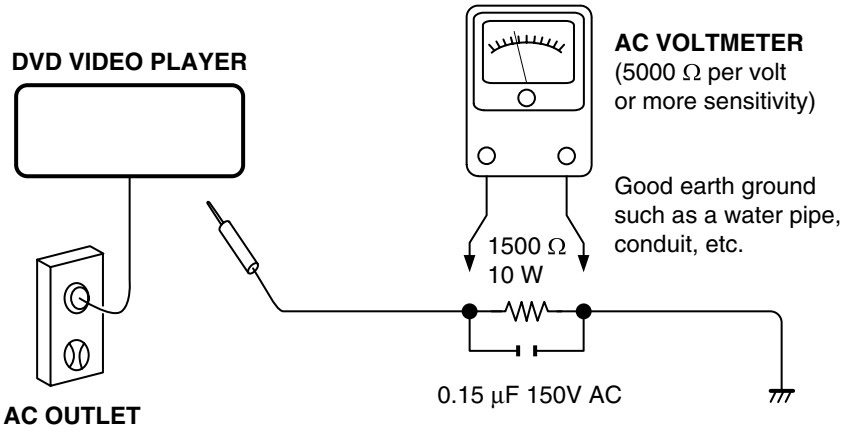
Measure the AC voltage across the 1500 Ω resistor.

The test must be conducted with the AC switch on and then repeated with the AC switch off. The AC voltage indicated by the meter may not exceed 0.3 V. A reading exceeding 0.3 V indicates that a dangerous potential exists, the fault must be located and corrected.

Repeat the above test with the DVD VIDEO PLAYER power plug reversed.

NEVER RETURN A DVD VIDEO PLAYER TO THE CUSTOMER WITHOUT TAKING NECESSARY CORRECTIVE ACTION.

READING SHOULD NOT EXCEED 0.3V



Test all exposed metal.
Voltmeter Hook-up for Leakage Current Check

PARTS LIST

SECTION 1
General Descriptions

1. PREPARATION FOR SERVICING

The Pickup Head consists of a laser diode that is very susceptible to external static electricity.

Although it may operate properly after replacement, if subjected to electrostatic discharge during replacement, its life may be shortened. When replacing the laser diode, LSI's and IC's, use a conductive mat, soldering iron with ground wire, etc. to protect against damage from static electricity.

SECTION 2
PART REPLACEMENT AND ADJUSTMENT PROCEDURES

CAUTIONS BEFORE STARTING SERVICING

Electronic parts are susceptible to static electricity and may easily damaged, so do not forget to take a proper grounding treatment as required.

Many screws are used inside the unit. To prevent missing, dropping, etc. of the screws, always use a magnetized screwdriver in servicing. Several kinds of screws are used and some of them need special cautions. That is, take care of the tapping screws securing molded parts and fine pitch screws used to secure metal parts. If they are used improperly, the screw holes will be easily damaged and the parts can not be fixed.

1. REPLACEMENT OF MECHANICAL PARTS

1-1. Cabinet Replacement

1-1-1. Top Cover

1. Remove five screws (1) and remove the top cover (2).

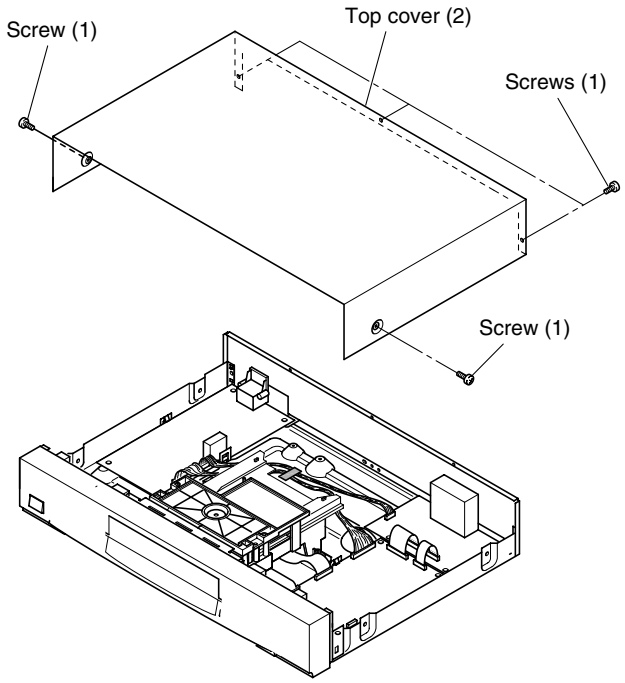

Fig. 2-1-1

1-1-2. Clamper Stay

<Removal>

1. Remove two screws (1).
2. Release two claws and remove the clamper stay (2).

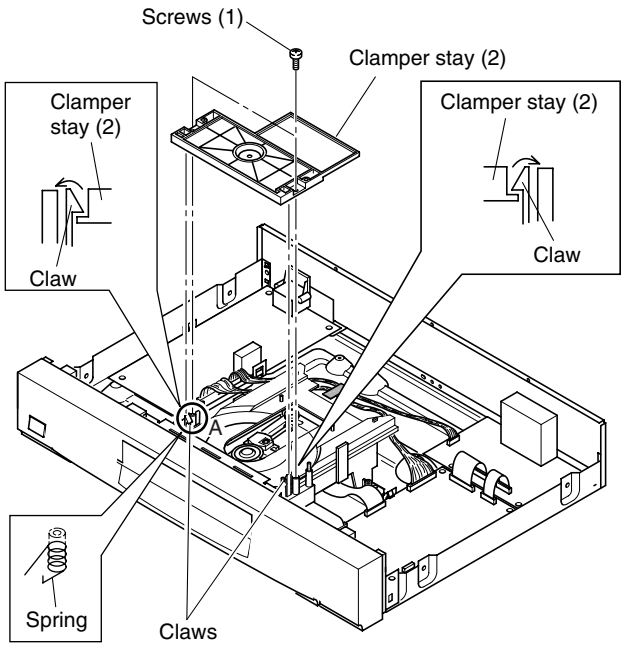

Fig. 2-1-2

<Mounting >

1. The spring for tray side pressure is inserted into the portion “A”. (Refer to Fig. 2-1-2.)
2. By referring to Fig. 2-1-3, insert the spring normally and mount the clamper stay.

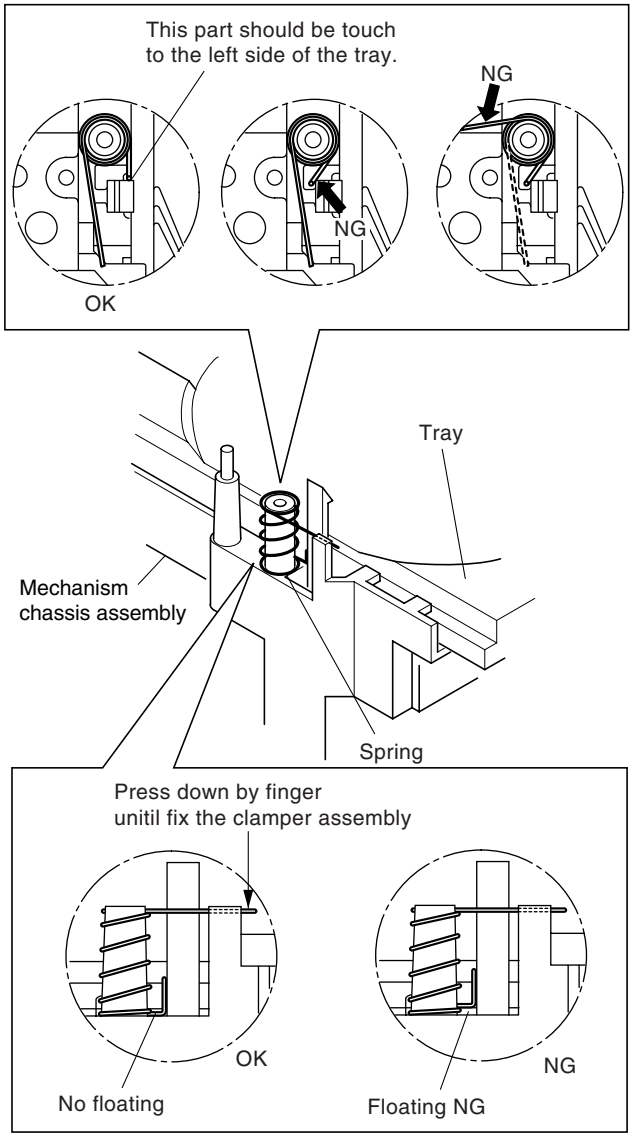

Fig. 2-1-3

1-1-3. Tray Panel

<Tray Ejection>

1. Slide the slider (2) of the mechanism chassis assembly (1) with a screwdriver, etc. in the arrow direction, so that the tray (3) is ejected.

Note:

- Take care not to damage the pickup and other parts.

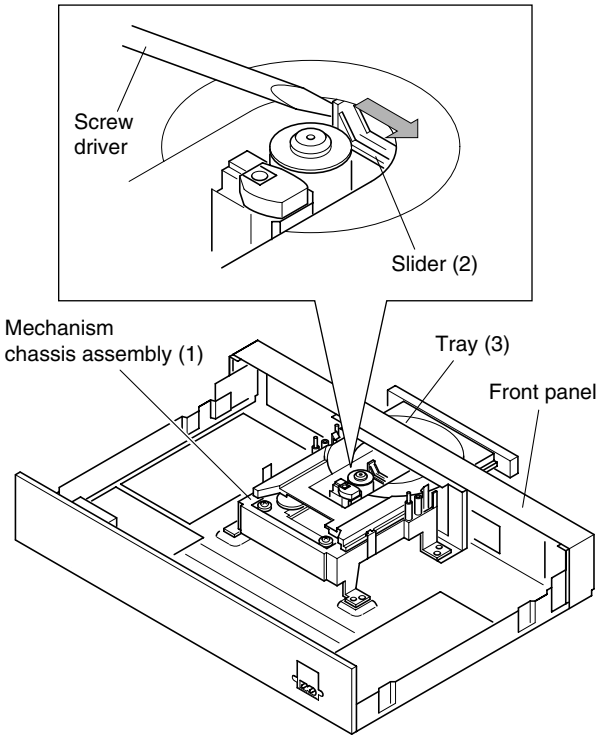

Fig. 2-1-4

<Tray Panel Removal>

1. Eject the tray (3).
2. Twist the tray panel (4) a little in the arrow A direction with the tray (3) hold by hand to release two claws and lift up the tray panel (4) in the arrow B direction, then the tray panel (4) is removed. (Refer to Fig. 2-1-5.)
3. When mounting the tray panel (4), insert the tray panel (4) along the grooves of the both sides of the tray (3) until clicking.

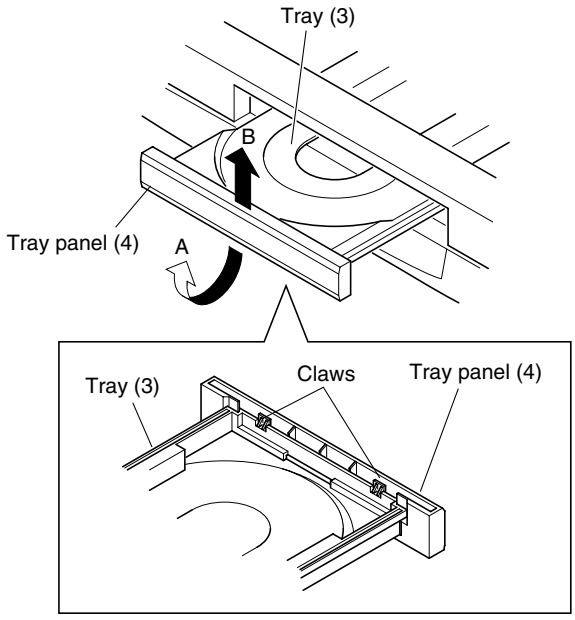

Fig. 2-1-5

1-1-4. Front Panel and Tray

1. Remove the flexible cable (1).
2. Release four claws and remove the front panel (2).
3. Pull out the tray (3) to this side.

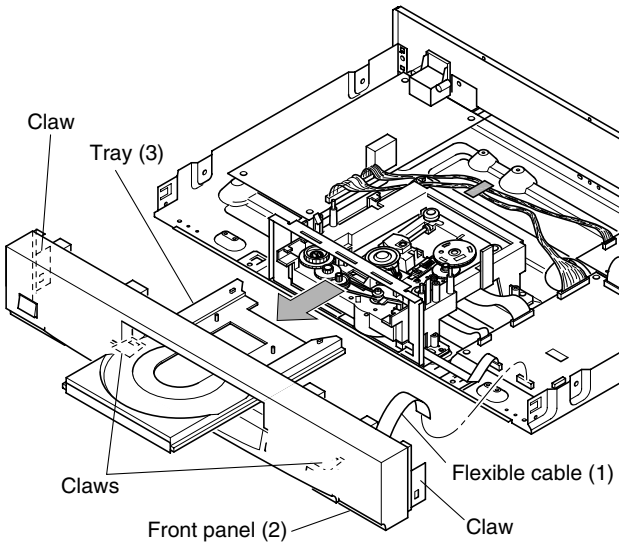

Fig. 2-1-6

Note:

- Insert the tray (3) with the front side of the pickup mechanism assembly descended. (The slider positions to the left side.)
- The gears are required to match their phases each other. After setting the gear (4) as shown in the figure "A", insert the tray (3). When inserting a tray (3), push the rack gear side shown by the arrow.
- After inserting the tray (3), confirm that the mark of the gear (4) matches with that of the rack gear on the tray (first tooth of the gear). (Refer to Fig. B.)

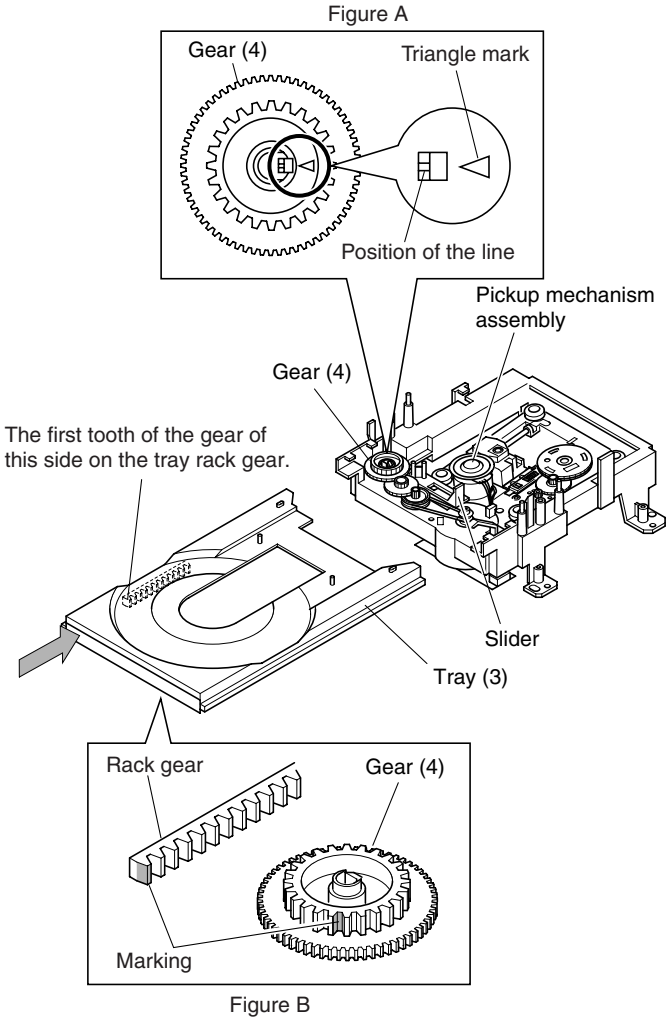

Fig. 2-1-7

1-1-5. Rear Panel

1. Remove three screws (1) and remove the rear panel (2).

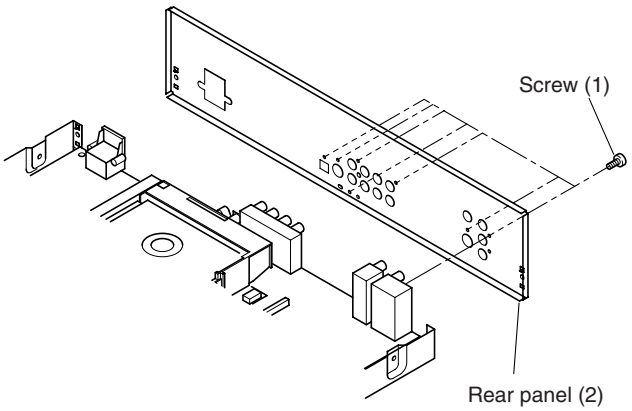

Fig. 2-1-8

1-2. PC Board Replacement

1-2-1. Main PC Board

Note:

- Before removing the main PC board (4), be sure to short-circuit the laser diode output land.

  After replacing, open the land as it was after inserting the flexible cables (1).

1. Remove the top cover. (Refer to item 1-1-1.)
2. Remove six flexible cables (1) and remove one connector (3).
3. Remove four screws (2).
4. Release two claws and remove the main PC board (4).

Note:

- When mounting, be sure to twist the wire for the connector (3) several times.

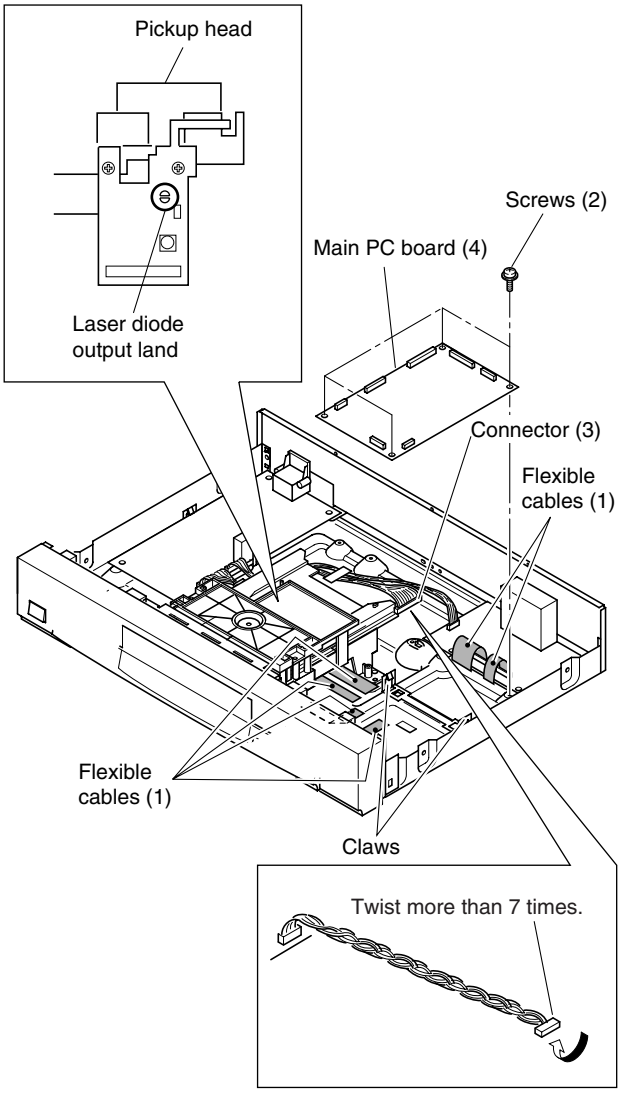

Fig. 2-1-9

1-2-2. Output PC Board

1. Remove the rear panel. (Refer to item 1-1-4
2. Peel off the tape (1).
3. Remove the connector (2).
4. Disconnect two flexible cables (3).
5 Remove the wire part of the connector (5) from the binding band (4).
6. Remove three screws (6) and remove the output PC board (7).

Note:

- When mounting, keep the wire part of the connector

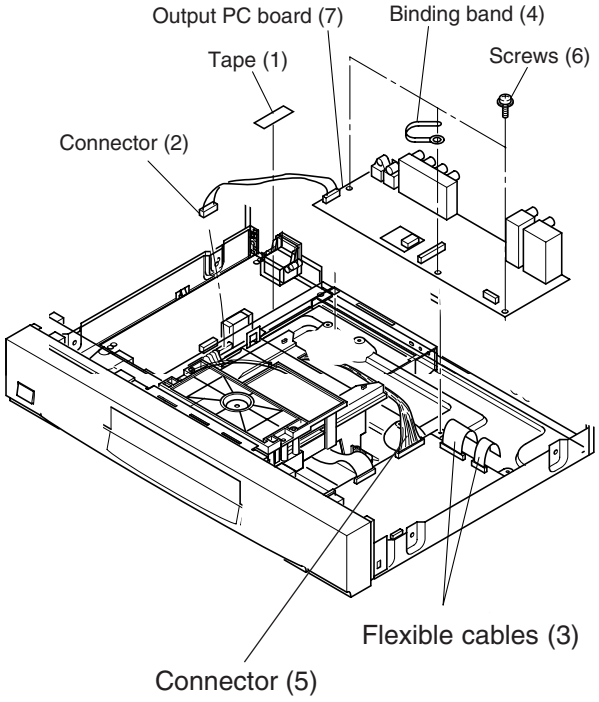

Fig. 2-1-10

1-2-3. Power PC board

1. Peel off the tape (1).
2. Remove the connectors (2) and (3).
3. Release the wire part of the connector with the binding band (4) tightened.
4. Remove three screws (5).
5. Remove two screws (6).
6. Release two claws and remove the power supply PC board (7).

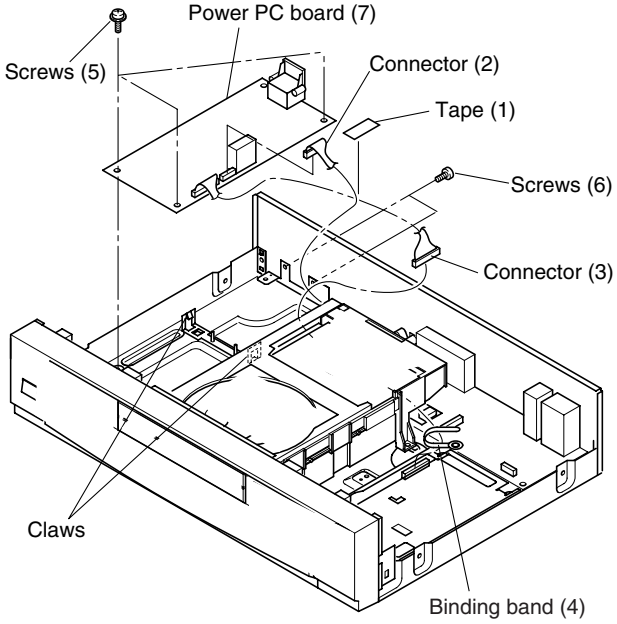

Fig. 2-1-11

1-2-4. Front PC Board

1. Remove the front panel. (Refer to item 1-1-4.)
2. Remove four screws (1) and remove the front display PC board (2)
3. Remove two screws (3) and remove the power switch PC board (4).

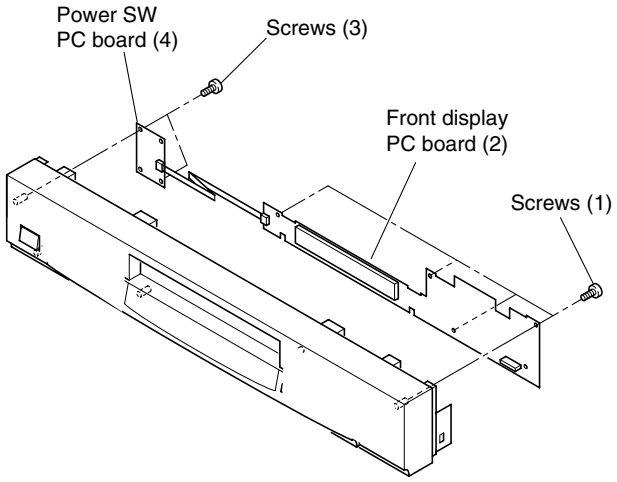

Fig. 2-1-12

1-3. Mechanism Parts

1-3-1. Mechanism Chassis Assembly

Note:

- When removing the mechanism chassis assembly (3), be sure to short-circuit the laser diode output land before removing the connector and the flexible cables.

  After replacing, open the land as it was after inserting the connector and flexible cables.

1. Remove the tray. (Refer to items 1-1-3 and 1-1-4.)
2. Remove three flexible cables (1).
3. Remove four screws (2) and remove the mechanism chassis assembly (3).

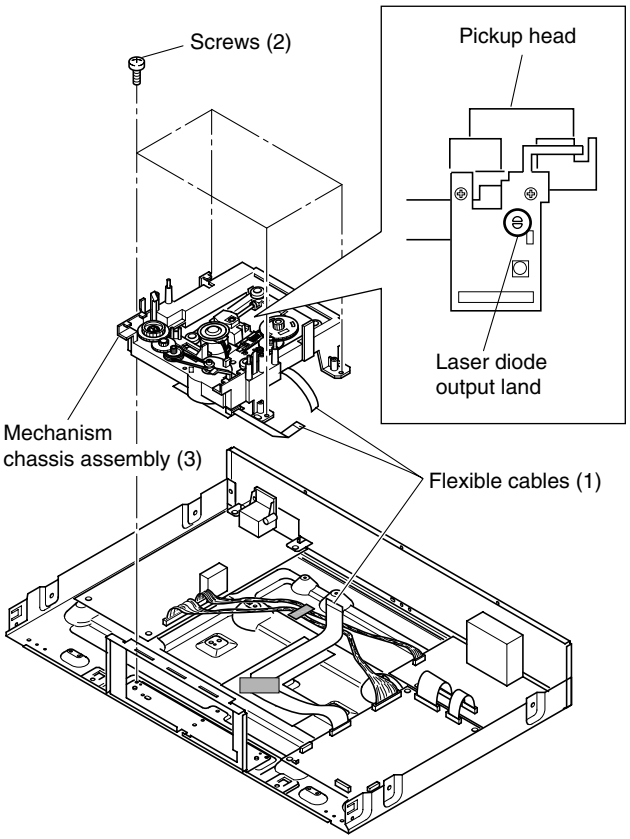

Fig. 2-1-13

1-3-2. Loading Belt

1. Remove the gear (1) by releasing the claw.
2. Remove the gear (2).
3. Remove the gear (3) and the loading belt (4).
4. Replace the loading belt (4) with a new one.
5. When mounting, perform the reverse order of the removal.

Note:

- When mounting the loading belt (4), twisting and attaching of a grease, etc. are not allowed.

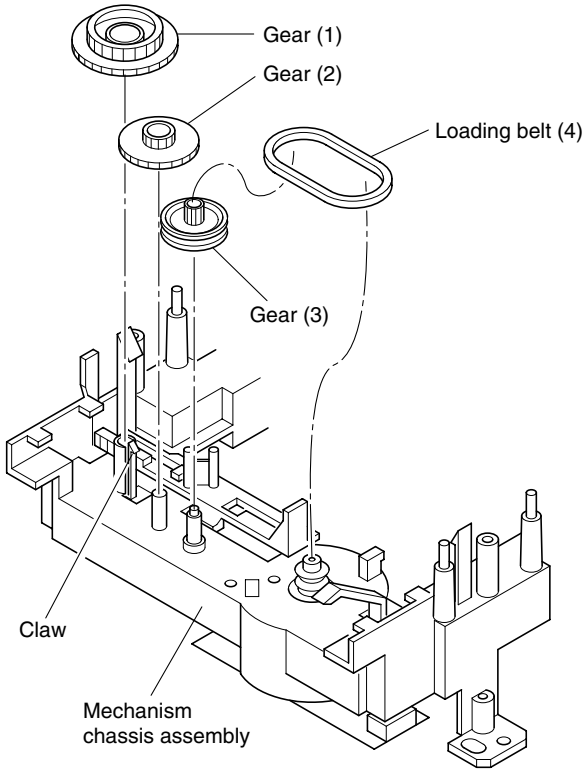

Fig. 2-1-14

1-3-3. Loading Motor

1. Remove the loading belt. (Refer to item 1-3-2.)
2. Remove two screws (1) and two claws. Then remove the loading motor (2) (with the loading motor PC board (3) attached).
3. Desolder the terminal section of the loading motor (2) and remove the loading motor PC board (3).
4. Replace the loading motor (2) with a new one.
5. When mounting, perform the reverse order of the removal.

Note:

- When replacing the loading motor, meet the polarity phase of the terminals. (Mount the motor with the label positioned as shown in Fig. 2-1-15.)

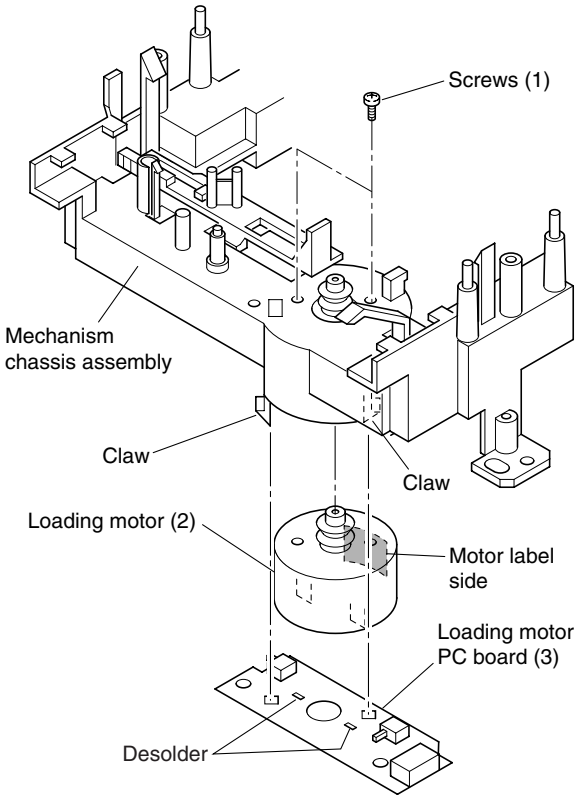

Fig. 2-1-15

1-3-4. Sub Chassis (with a pickup mechanism)

1. Turn the mechanism chassis assembly (1) upside down.
2. Remove one screw (2) and release the boss "A" from the claw. Then remove the sub chassis (3) (with the pickup mechanism) by sliding in the arrow direction.
3. When mounting, perform the reverse order of the removal.

Note:

- When mounting the sub chassis (3) (with the pickup mechanism), first, insert the boss "C" along the groove of the cam slider up/down cam (4) and next, the boss "B" and "A".
- The boss "A" and "B" may be used with washers. (One or two washers are used to prevent from the slust rattling. In some cases, no washer is used.)

  When the washer(s) is used, be sure to assemble as it was without losing.

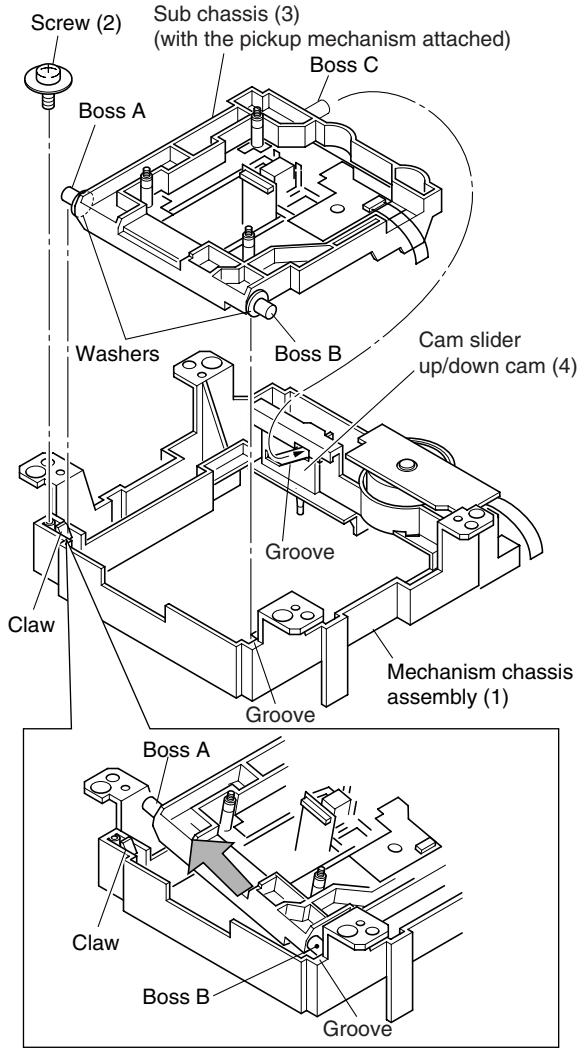

Fig. 2-1-16

1-3-5. Pickup Mechanism Assembly

<Removal>

1. Remove four screws (1) and four washers (2) and then remove the pickup mechanism assembly (3).

<Mounting>

1. Replace the pickup mechanism assembly (3) with a new one.
2. When mounting, perform the reverse order of the removal.

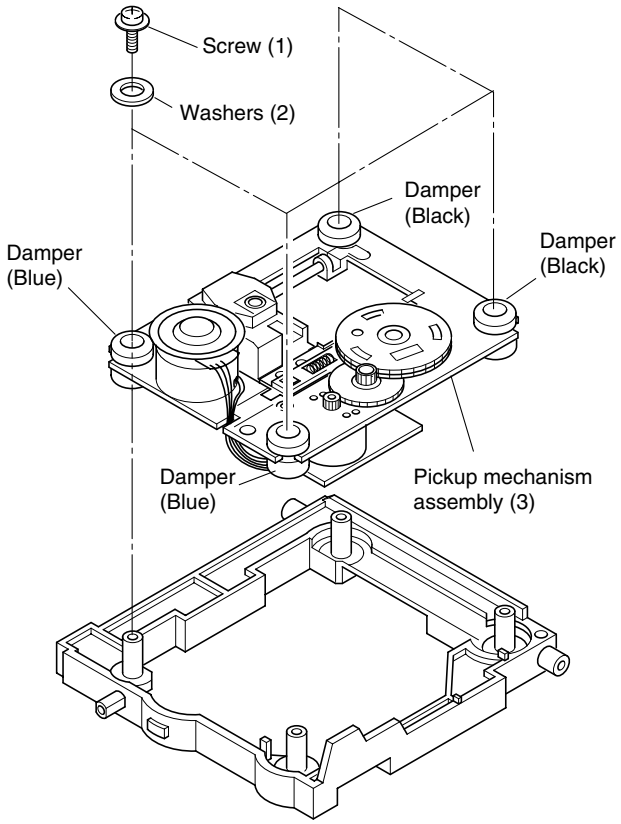

Fig. 2-1-17

Note:

- The dampers' color differs when used for the front side and the rear.
- When mounting the pickup mechanism assembly (2) with the screws (1), push the pickup mechanism assembly (2) downward without being caught and tighten the screws (1) after placing the washer with the damper bent.

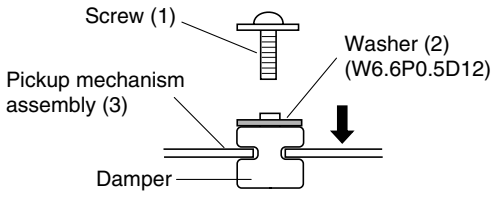

Fig. 2-1-18

1-3-6. Gear B Assembly, Gear A and Rack Gear Assembly

<Removal>

1. Remove one screw (5) and remove the gear B assembly (1).
2. Remove the gear A (2).
3. Remove one screw (3) and remove the rack gear assembly (4).

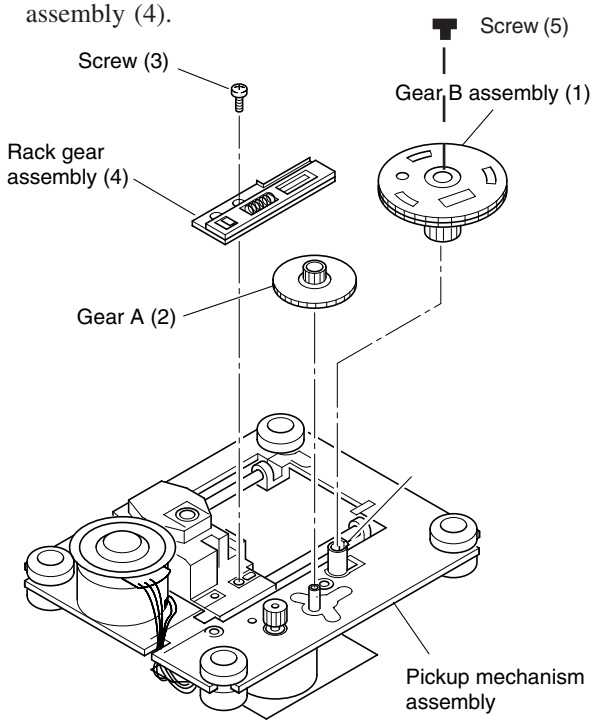

Fig. 2-1-19

<Mounting>

1. When mounting, perform the reverse order of the removal.
2. Mount the gear B assembly (1) by pushing the pickup head (5) to the disc motor side (arrow A direction) and shifting the upper gear of the rack gear assembly (4) in the arrow B direction. (Refer to Fig. 2-1-20.)
3. Fit the positioning holes on the upper gear and lower gear of the gear B assembly (1) and mount on the pickup mechanism assembly with the phase matched.

   At this time, note that the phase of the gear B assembly (1) and the gear A (2) shows the status in the Fig. 2-1-21.

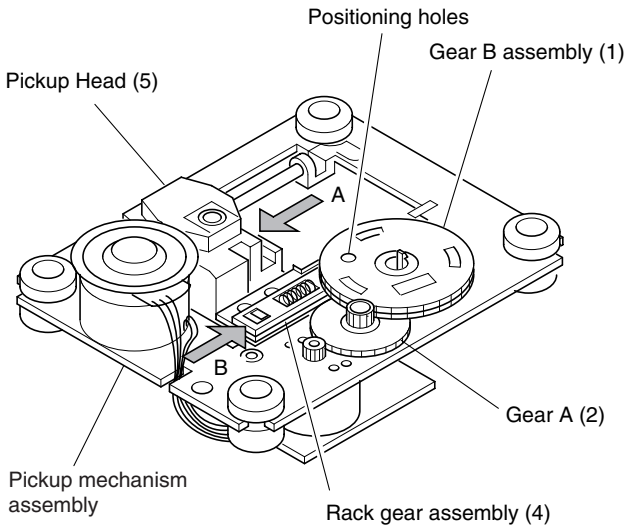

Fig. 2-1-20

Note:

- Mount the gear B assembly (1) and the gear A (2) with their gear teeth placed more than one tooth at least inside the shaded portion.

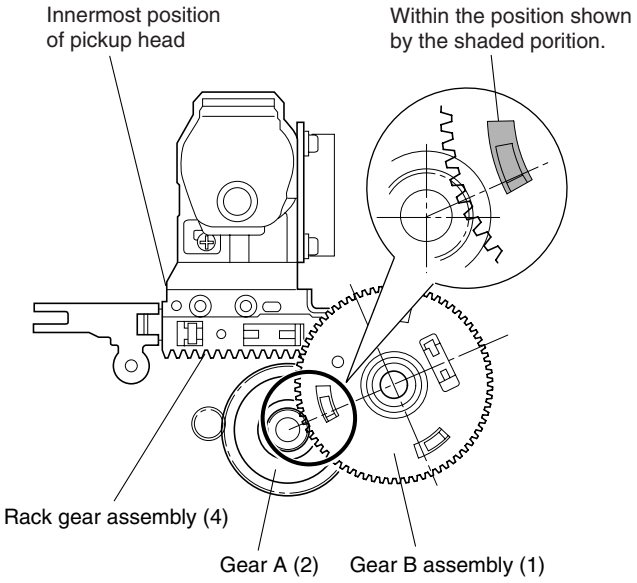

Fig. 2-1-21

1-3-7. Feed Motor

<Removal>

1. Remove the gear B assembly (1) and the gear A (2). (Refer to item 1-3-6.)
2. Remove two screws (1) and remove the feed motor (2) (with the feed motor PC board (3) attached). (Refer to Fig. 2-1-22.)
3. Desolder the terminals of the feed motor (2) and remove the feed motor PC board (3).

<Mounting>

1. Tighten the feed motor (2) on the pickup mechanism assembly with two screws (1).
2. Insert the feed motor PC board (3) with the positioning pin on the chassis matched and solder the terminals.
3. Perform the reverse order of the removal.

Note:

- After mounting, put the lead wires through the notch of the pickup mechanism assembly.
- When replacing the loading motor, meet the polarity phase of the terminals. (Mount the motor with the label positioned as shown in Fig. 2-1-22.)

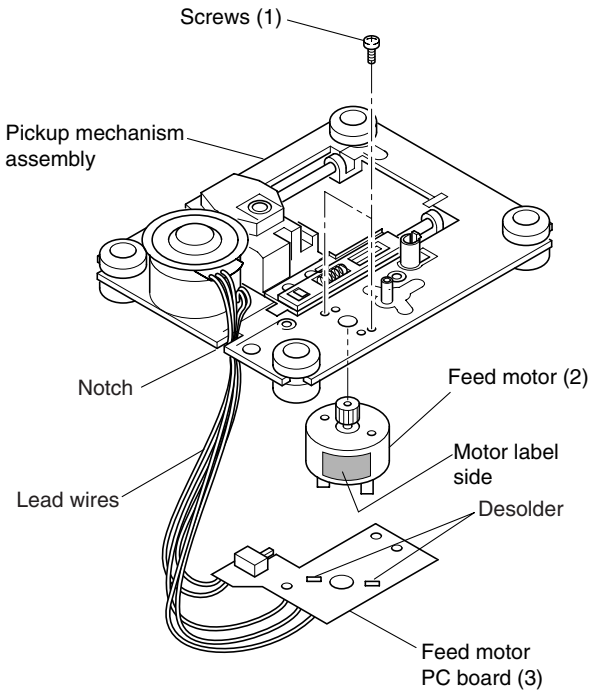

Fig. 2-1-22

This page is not printed.

SECTION 3
SERVICING DIAGRAMS

1. STANDING PC BOARDS FOR SERVICING

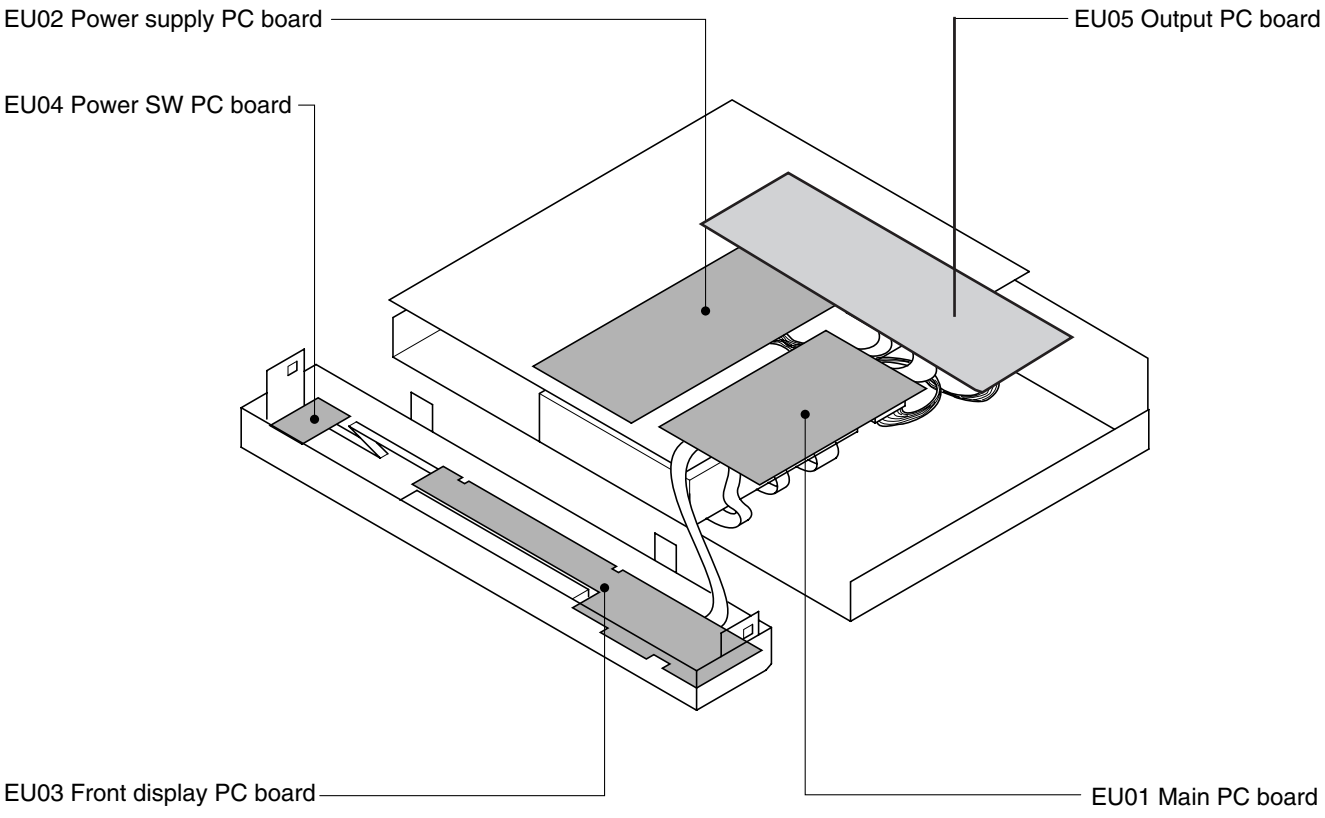

Fig. 3-1-1

2. CIRCUIT SYMBOLS AND SUPPLEMENTARY EXPLANATION

2-1. Precautions for Part Replacement

- In the schematic diagram, parts marked ⚠ (ex. ⚠ F801) are critical part to meet the safety regulations, so always use the parts bearing specified part codes (SN) when replacing them.
- Using the parts other than those specified shall violate the regulations, and may cause troubles such as operation failures, fire etc.

2-2. Solid Resistor Indication

Unit	None .....Ω K .....kΩ M .....MΩ
Tolerance	None .....±5% B .....±0.1% C .....±0.25% D .....±0.5% F .....±1% G .....±2% K .....±10% M .....±20%
Rated Wattage	(1) Chip Parts None ..... 1/16W (2) Other Parts None ..... 1/6W Other than above, described in the Circuit Diagram.
Type	None .....Carbon film S .....Solid R .....Oxide metal film W .....Metal film W .....Cement FR .....Fusible

Eg. 1

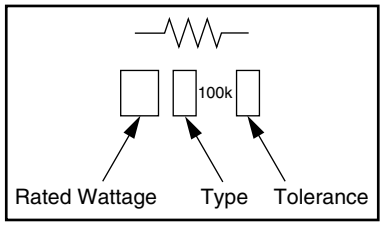

FIg. 3-2-1

2-3. Capacitance Indication

Symbol	.....Electrolytic, Special electrolytic NP .....Non polarity electrolytic .....Ceramic, plastic M .....Film .....Trimmer
Unit	None .....F μ .....μF p .....pF
Rated voltage	None .....50V For other than 50V and electrolytic capacitors, described in the Circuit Diagram.
Tolerance	(1) Ceramic, plastic, and film capacitors of which capacitance are more than 10 pF. None .....±5% or more B .....±0.1% C .....±0.25% D .....±0.5% F .....±1% G .....±2% (2) Ceramic, plastic, and film capacitors of which capacitance are 10 pF or less. None .....more than ±5% pF B .....±0.1 pF C .....±0.25 pF (3) Electrolytic, Trimmer Tolerance is not described.
Temperature characteristic (Ceramic capacitor)	None .....SL For others, temperature characteristics are described. (For capacitors of 0.01 μF and no indications are described as F.)
Static electricity capacity (Ceramic capacitor)	Sometimes described with abbreviated letters as shown in Eg. 3.

Eg. 2

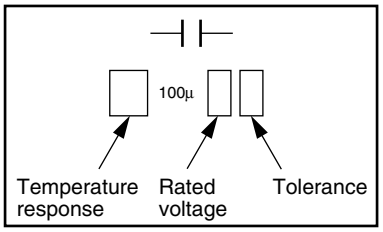

Fig. 3-2-2

Eg. 3

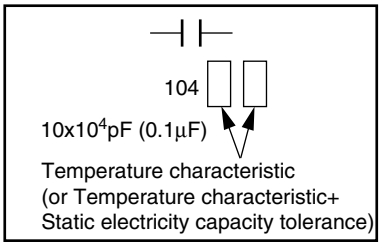

Fig. 3-2-3

2-4. Inductor Indication

Unit	None	H
	µ	µH
	m	mH
Tolerance	None	±5%
	B	±0.1%
	C	±0.25%
	D	±0.5%
	F	±1%
	G	±2%
	K	±10%
	M	±20%

Eg. 4

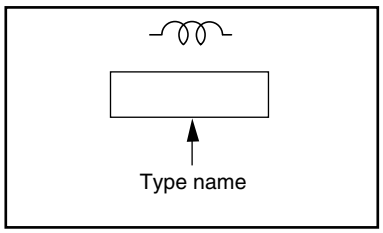

Fig. 3-2-4

2-5. Waveform and Voltage Measurement

- The waveforms for CD/DVD and RF shown in the circuit diagrams are obtained when a test disc is played back.
- All voltage values except the waveforms are expressed in DC and measured by a digital voltmeter.

Eg. 5

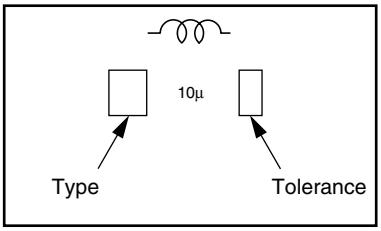

Fig. 3-2-5

2-6. When Replaced ROM ICs or Upgraded Firmware

1. When replaced the following ROM ICs, it is necessary to write the data into the new ICs.
   1) IC615 (firmware)
   2) IC613 (Setup default data and other information)
2. When the firmware is upgraded, rewriting the new firmware into IC615 may be requested for servicing.
3. Connect a computer to the main PC board of the DVD video player with using DATA UPDATE KIT (P/No. 79080074). (Fig. 3-2-6)
4. Writing operation

   Refer to the instruction attached to the data floppy disc.

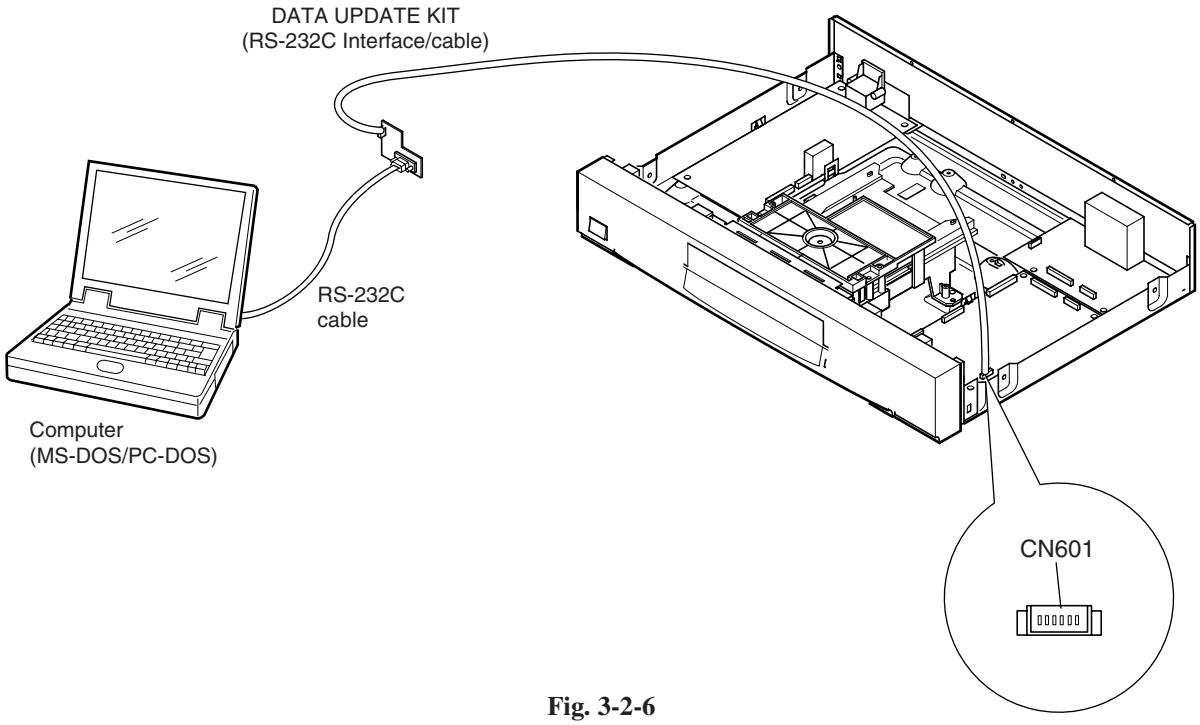

Fig. 3-2-6

Note:

- The firmware and setup data floppy discs are not available as service parts.

Main ICs Function

Table 3-5-1

Ref. No.	IC Name	Function	Detail
IC613	S24C01AFJ-TB	EE-PROM	Setup default, memorization of specification setting.
IC306	ADV7170	Video Encorder	Built-in D/A converter. Encodes digital video signal to analog video signal of NTSC/PAL system.
IC301	MD36710X	AV Decorder	Decryption, MPEG-2 Decode, Audio Decode, Sub Picture Decode, OSD.
IC502	TC9453F	SERVO & Data Processor	Performs servo control of DVD or CD, and performs demodulation and correction of RF signal.
IC501	TA1293F	RF Signal processing IC	Equalizes of playback RF signal and generates error detection signal required for each servo operation.
IC504	KA3032	5-CH Motor Driver	5ch driver for motor driving.
IC901	PCM1727	DA Converter	Stereo audio DA converter with a dual PPL built-in.
IC601	TMP94CS40AF-0103(Z)	Main Micro Processor	Performs system control for all circuits.
IC201	TC203G08AF	Track Buffer	Rate control and Buffer control.
IC615	MBM29F800TA-55	Flash ROM	Memorization for firmware.
IC309	TC203G08AF-0101(Z)	3D DNR	3 Dimension Digital Noise Reduction.

Table 3-5-2 (1/2) ADV7170

Pin No.	Name	Function
1	V_{AA}	Power supply
2 3 4 5 6 7 8 9	P5-P12	8 bit, 4:2:2 Multiplexed Y/Cr/Cb pixel port (P7-P0) or 16 bit Y/Cr/Cb pixel port (P15-P0). P0 represents the LSB.
10	GND	Ground
11	V_{AA}	Power supply
12 13 14	P13-P15	8 bit, 4:2:2 Multiplexed Y/Cr/Cb pixel port (P7-P0) or 16 bit Y/Cr/Cb pixel port (P15-P0). P0 represents the LSB.
15	HSYNC	HSYNC (Modes 1 & 2) control signal. Master Mode: control signal output Slave Mode: control signal acceptance
16	FIELD/ VSYNC	Dual function field (Mode 1) and VSYNC (mode 2) control signal. Master Mode: control signal output Slave Mode: control signal acceptance
17	BLANK	Video blanking control signal. The pixel inputs are ignored when this is logic level "0". This signal is optional.
18	ALSB	TTL address input. This signal set up the LSB of the MPU address.
19	GND	Ground pin
20	V_{AA}	Power supply
21	GND	Ground pin
22	RESET	This pin resets the on-chip timing generator and sets the ADV7170 into default mode. NTSC operation, timing slave mode 0, 8 bit operation, 2 x composite & S VHS OUT.
23	SCLOCK	MPU port serial interface clock input
24	SDATA	MPU port serial data input/output
25	COMP	Compensation pin. Connect a 0.1μF capacitor from COMP to V_{AA}. For optimum dynamic performance in low power mode, the value of the COMP capacitor can be varied as described in low power mode section.

Table 3-5-2 (2/2) ADV7170

Pin No.	Name	Function
26	RED/ CHROMA/V	RED/S-VHS C/V analog output.
27	GREEN/ LUMA/Y	Green/S-VHS Y/Y analog output.
28	V_{AA}	Power supply
29	GND	Ground pin
30	V_{AA}	Power supply
31	BLUE/ CVBS/U	Blue/Composite/U analog output
32	COMPO-SITE (CVBS)	PAL/NTSC composite video output.
33	V_{REF}	Voltage reference input for DACs or voltage reference output.
34	R_{SET}	A 150 ohm resistor connected from this pin to GND is used to control full scale amplitudes of the video signal.
35	SCRESET/ RTC	This pin can be configured as an input by setting MR22 and MR21 of mode register 2. It can be configured as a subcarrier reset pin, in which case a high to low transition on this pin will reset the subcarrier to field 0. Alternately it may be configured as a real time control (RTC) input.
36	TTX REQ	Teletext data request signal Defaults to GND when teletext not selected (enables backward compatibility to ADV7175/ADV7176).
37	TTX V_{AA}	Teletext data Defaults to V_{AA} when teletext not selected (enables backward compatibility to ADV7175A/ADV7176.)
38 39 40 41 42	P0-P4	8 bit, 4:2:2 Multiplexed Y/Cr/Cb pixel port (P7-P0) or 16 bit Y/Cr/Cb pixel port (P15-P0). P0 represents the LSB.
43	GND	Ground pin
44	CLOCK	TTL clock input.

Table 3-5-3 KA3032

Pin No.	Name	Function
1	OUT1	CH1 OP-AMP output
2	IN2.1	CH2 OP-AMP input (+)
3	IN2.2	CH2 OP-AMP input (-)
4	OUT2	CH2 OP-AMP output
5	IN3.1	CH3 OP-AMP input (+)
6 7	GND	Ground
8	IN3.2	CH3 OP-AMP input (-)
9	OUT3	CH3 OP-AMP output
10	IN4.1	CH4 OP-AMP input (+)
11	IN4.2	CH4 OP-AMP input (-)
12	OUT4	CH4 OP-AMP output
13	CTL	CH5 motor speed control
14	FWD1	CH5 forward input
15	REV1	CH5 reverse input
16	SGND	Signal ground
17	OPOUT	OP-AMP output
18 19	GND	Ground
20	OPIN(+)	OP-AMP input (+)
21	IPIN(-)	OP-AMP input (-)
22	MUTE4	CH4 mute
23	MUTE3	CH3 mute
24	MUTE1,2	CH1,2 mute
25	PVCC1	Power supply voltage (for CH5)
26	DO5.2	CH5 drive output
27	DO5.1	CH5 drive output
28	DO4.2	CH4 drive output
29	DO4.1	CH4 drive output
30 31	GND	Ground
32	DO3.2	CH3 drive output
33	DO3.1	CH3 drive output
34	PGND	Power ground
35	DO2.2	CH2 drive output
36	DO2.1	CH2 drive output
37	DO1.2	CH1 drive output
38	DO1.1	CH1 drive output
39	PVCC2	Power supply voltage (for CH1, CH2, CH3, CH4)
40	GEG50	Regulator output
41	REG050	Regulator 5V output
42 43	GND	Ground
44	RES50	Regulator reset
45	SVCC	Signal supply voltage
46	REF	Bias voltage input
47	IN1.1	CH1 OP-AMP input (+)
48	IN1.2	CH1 OP-AMP input (-)

Table 3-5-4 MBM29F800TA-55

Pin No.	Name	Function
1 | 8 16 | 24 25 45 48	A_{-1}, A_0 - A_{18}	Address input
29 | 36 38 | 45	DQ_0 - DQ_{15}	Data I/O
26	$\overline{CE}$	Chip enable
28	$\overline{OE}$	Output enable
11	$\overline{WE}$	Write enable
12	$\overline{RESET}$	Hardware reset
15	RY/$\overline{BY}$	Ready/busy output
47	$\overline{BYTE}$	8 bit, 16 bit mode switch
27	V_{SS}	Ground
37	V_{CC}	Power supply
9 10 13 14	N.C.	Not connected.

Table 3-5-5 MD36710X (1/5)

Pin No.	Name	Function
Host Interface, CD-DSP interface, Sub ode interface (32 pins)		
	HD [15:12]	When connecting HWID to V_{DD}, become data lines 15:12 of 16 bit host data bus. When connecting HWID to GND, the lines become CD-DSP serial input port pins defined as below.
3	CDERR (HD [15])	CD-DSP data error input
4	CDFRM (HD [14])	CD-DSP LR clock (frame) input
5	CDDAT (HD [13])	CD-DSP data input
6	CDDAT (HD [12])	CD-DSP bit clock input
	HD [11:8]	When connecting HWID to V_{DD}, become data lines 11:8 of 16 bit host data bus. When connecting HWID to GND, the lines become sub code port pins defined as below.
7	SCCLK (HD [11])	Sub code bit clock output
9	SCDAT (HD [10])	Sub code bit clock input
10	SCSYN (HD [9])	Sub code sync signal display input
11	SCFRM (HD [8])	Sub code frame sync input
12 14 | 16 19 | 21	HD [7:0]	8 l.s. host data bus. When connecting HWID to GND, only the 8 l.s. signal is defined as a host data signal. When connecting HWID to V_{DD}, 8 l.s. line is used for of 16 bit data bus.
22 24 25 26	HA [3:0]	Host address input. Inputs address signal that specifies physical address inside MD36710X.
27	HWR# (HR/W#)	Host protocol, type A (HTYPE=GND): HR/W#. Decides direction of host access. Host protocol, type B (HTYPE=V_{DD}): HWR#. Host writing input (active low).
29	HCS#	Host chip select input. Active low.
30	HRD# (HDS#)	Host protocol, type A (HTYPE=GND): HDS#. Data strobe input (active low). Host protocol, type B (HTYPE=V_{DD}): HRD#. Host writing input (active low).
31	HRDY	Host ready output (active high). Use this signal to transmit bit stream via host bus. External pull-up resistor is required. Transmission of CodBurstLen byte length is determined as 1 packet. Check that the signal is active before transmitting each packet. Possible to write the bit stream serially up to CodBurstLen byte to MD36710X.
32	HACK#	Host acknowledge output (active low). Protocol is type A, MD36710X asserts this output and notify completion of reading or writing cycle. If this signal is not active, 3-state condition occurs (External pull-up resistor is required.). If protocol is type B, the signal functions as wait output signal. When high speed host (microprocessor) is used, this signal may not be used.
34	HIRQ#	Interruption requirement (active low). Deassert when host reads interruption status resister of MD36710X. Also deassert after host masks interruption in the interrupt mask resister of MD36710X or reseting. If HIRQ# is not asserted, 3-state condition occurs (External pull-up resistor is required.)

Table 3-5-5 MD36710X (2/5)

Pin No.	Name	Function
35	HWID	Determines data bus width of host interface. It can be changed only during reset. Host interface of MD36710X is set to 8 bit width at low level (GND) and set to 16 bit width at high level (V_{DD}).
36	HORD	Determines byte order for data bus of host interface in 16 bit width setting. (HWID: V_{DD}). It can be changed only during reset. Set MD36710X to obtain I/O signals of m.s. byte in HD [15:8] at low level (GND) and those in HD [7:0] at high level. If HWID is GND level, connect to GND.
37	HTYPE	Determines protocol of host bus. It can be changed only during reset. Sets MD36710X to type A at low level and type B at High level.
130	STNDBY#	Standby input (active low). All output pins and bidirectional pins become float state if asserting with RESET# and MD36710X is cut electrically from peripheral circuits. All internal operation stop and power consumption is confined to the minimum. Contents of SDRAM are not stored at stanby.
141	RESET#	Reset input (active low). Initializing process of MD36710X starts at the time deasserting is carried out from assert state.
142	IDLE	Idle, init or reset states display output (active high).
GPI/O signal (4 pins)		
2	GPSI	General input controlled by DVP micro code.
122 123	GPAI/O [1:0]	General bidirectional pin controlled by ADP micro code. After resetting, this pin is defined as an input pin. ADP command specifies the setting.
159	GPSO	General output conrolled by DVP micro code.
PLL signal (6 pins)		
126	GCLK1	Master clock input for audio. Must be connected to GCLK for usual operation.
128	XO	Output to the crystal connected to GCLK. If the crystal is not used for GCLK, XO is not connected.
129	GCLK	Clock for main processor or crystal input.
135 137	PLLCFG [1:0]	PLL configuration input. It can be changed only during reset. Both pins must be connected to GND (digital) for usual operation.
136	PLLCA	Capacitor connection pin for PLL. Connect the other terminal of the capacitor to PLLGND.

Table 3-5-5 MD36710X (3/5)

Pin No.	Name	Function
Digital video port (24 pins)		
84	VCLK	VCLKx2 signal is divided by 2. Used as a qualifier of data and sync signal.
85	VMASTER	Video master/slave selection input. At high level, video sync in MD36710X enters master mode. (Video sync and clock signals are developed.) After low level, video sync enters slave mode. (Video sync and clock signals are entered.) Only during reset, setting of terminal can be changed.
87	VDEN#	Video enable input (active low). When active, MD 36710X develops video data. When deasserting, pixel output becomes 3-state condition. (But sync and clock signals are kept to be active.) Input is changeable at any time but becomes effective at the next VCLKx2.
89	VSYNC	Vertical sync bidirectional signal pin. Polarity and length are programmable.
90	HSYNC	Horizontal sync bidirectional signal pin. Polarity and length are programmable.
91	FI	Field identification bidirectional signal pin. Polarity is programmable.
92 94 | 97 99 | 101	Y [7:0]	At 16 bit video mode (Video 8=0), develop luminance signals. At 8 bit mode (Video 8=1), develop luminance and color difference signals multiplexed in time sequence according to the ITU-R656 standard (in no relation to presence of SAV and EAV sync code).
98	CBLANK	Composite blank output. Waveforms are programmable other than polarity.
102 104 105 106 107 109 | 111	C [7:0] OSDPLT (C [4]) OSDPEL [3:0] (C [3:0])	At 16 bit video mode (Video 8=0), develop color difference signal. At 8 bit mode (Video 8=1), m.s. line 3 pin (c [7:5]) is not used, l.s.5 pin (C [4:0]) is used as input from external OSD device. On-chip OSD palette selector. Selects OSD Palette0 at low level and OSD Plette1 at high level. OSD pixel input. Used as an entry signal to on-chip OSD palette.
124	VCLKx2	Main video clock input or output.
Digital audio port (8 pins)		
112	AIN	Serial input of PCM stereo audio for ADC
114 115 116	AOUT [2:0]	Serial output of PCM stereo audio for DAC. After reset, develop signals of low level. Only AOUT [0] supports 24 bit sample width.
117	S/PDIF (AOUT [3])	S/PDIF transmitter output. Possible to connected to DAC as the forth audio output (AOUT [3]). After reset, develop signal of low level.
118	ALRCLK	LR clock output of AOUT [3..0] and AIN. Becomes square waveform in sampling frequency. Polarity of LR is programmable.
119	ABCLK	Bit clock output of AOUT [3..0] and AIN. At rising/falling edges (programmable) AOUT is developed and AIN is latched.

Table 3-5-5 MD36710X (4/5)

Pin No.	Name	Function
132	AMCLK	Audio master clock I/O. 384 fs, 256 fs, 192 fs and 128 fs of sampling frequency can be selected (programmable).
DVD-DSP interface (13 pins)		
143	DVDERR	DVD-DSP error input (Polarity programmable)
144	DVDSOS	DVD-DSP data selector start input (Polarity programmable)
146	DVDVALID	DVD-DSP data effective input (Polarity programmable)
147	DVDSTRB	DVD-DSP data bit strobe (clock) input. Polarity programmable.
148	DVDREQ	DVD-DSP data requirement output (Polarity programmable)
149 151 | 154 156 | 158	DVDDAT [7:0]	DVD-DSP data input bus
SDRAM interface (35 pins)		
38 39 42 | 47 49 | 52	RAMADD [11:0]	SDRAM address bus output
54	RAMCS0#	SDRAM chip select (active low) output. Lower bit for 2 Mbyte device.
55	RAMCS1#	SDRAM ship select (active low). Upper bit for 2 Mbyte device.
56	RAMRAS#	Row selection of SDRAM (active low) output
57	PCLK	SDRAM clock output (same as internal process clock).
59	RAMCAS#	Column selection of SDRAM (active high) output
60	RAMWE#	SDRAM write enable (active low) output
61	RAMDQM	SDRAM data masking (active high) output
62 64 | 67 69 | 72 74 | 79 82	RAMDAT [15:0]	SDRAM bidirectional data bus
TEST signal (3 pins)		
83	TESTMODE	Test pin. Connects to V_{DD} for normal.
127	SCNENBL	Test pin. Connects to GND for normal.
139	ICEMODE	Test pin. Connects to V_{DD} for normal.

Table 3-5-5 MD36710X (5/5)

Pin No.	Name	Function
Power signal (35 pins)		
1 40 41 53 68 80 81 93 108 120 121 125 131 145 160	GND	Digital GND
8 28 33 48 58 63 73 86 78 113 133 140 150 155	VDD	Digital power supply (3.3V)
134	PLLGND (GNDA)	GND of internal PLL circuit
138	PLLV_{DD} (V_{DD}A)	Power supply of internal PLL circuit

Table 3-5-6 PCM1727

Pin No.	Name	Function
1	XT1	PLL master clock input or crystal connector terminal
2	PGND	PLL GND
3	V_{CP}	PLL power supply
4	MCKO	Master clock buffer output
5	RSV	Not connected. Use the pin with open.
6	SCKO3	PLL-2 generation system clock output.
7	ML	Serial control data enable input.(1)
8	MC	Serial control data clock input.(1)
9	MD	Serial control data, data input.(1)
10	$\overline{\text{RSTB}}$	External reset input, reset at L.(1)
11	V_{OUT}R	Rch analog audio output
12	AGND	Analog GND
13	V_{CA}	Analog power supply
14	V_{OUT}L	Lch analog audio output
15	CAP	Internal analog bias (connected with a bypass capacitor)
16	$\overline{\text{ZERO}}$	Infinity zero detection output.(2)
17	BCK	PCM audio data, bit clock input.(3)
18	DATA	PCM audio data, data input.(3)
19	LRCK	PCM audio data, LRCK input (f_S)(3)
20	SCKO2	PLL-1 generation system clock output
21	SCKO1	PLL-1 generation system clock output
22	V_{DD}	Digital power supply
23	DGND	Digital GND
24	XT2	Crystal oscillator connection terminal, connected to GND at external clock input.

Note:
(1) With internal pull-up. Schmitt trigger input.
(2) Open drain output.
(3) Schmitt trigger input.

Table 3-5-7 S-24C01AFJ-TB-01

Pin No.	Name	Function
1	A0	Address input
2	A1	Address input
3	A2	Address input
4	GND	Ground
5	SDA	Serial data I/O
6	SCL	Serial clock input
7	TEST	Connect to GND.
8	V_{CC}	Power supply

Table 3-5-8 (1/2) TA1293F

Pin No.	Name	Function
1	GNDP	GND terminal
2	LDO2	Drive terminal
3	MDI2	Monitor terminal
4 5	NC	- - -
6	VrA	Analog V_{REF}
7	Vrfi	Filter capacity for reference
8	VrD	Digital V_{REF}
9	Vdd	Power supply terminal
10	DPAC	DPD AC coupling capacity 1
11	DPBD	DPD AC coupling capacity 2
12	DPD1	DPD integration capacity 1
13	DPD2	DPD integration capacity 2
14	SCB	Control line (bit clock)
15	SCL	Control line (latch signal)
16	SCD	Control line (serial data)
17	VRCK	Reference clock input
18 19	NC	- - -
20	VCKF	Capacity for time constant adjustment
21	VccP	Power supply terminal
22 23 24 25	NC	- - -

66	VSS3	Digital ground
67 68 69 70	PD5 PD6 PD7 PD8	DVD/CD data output
71	/PSYC	DVD data sector sync signal
72	/PDRQ	DVD data transfer block
73	PDCK	DVD data transfer clock
74	VDD5	Power supply for 5V
75	TESM3	Test terminal
76	DIGI	1 bit DAC digital IN input
77	TESM4	Test terminal
78	VDD3	Digital power supply
79 80 81 82	BA0 BA1 BA2 BA3	External RAM address output
83	VSS5	Ground
84 85 86 87 88	BA4 BA5 BA6 BA7 BA8	External RAM address output
89	VDD3	Digital power supply
90	/BOE	External RAM/OE signal
91	/BRAS	External RAM/RAS signal
92	/BCAS	External RAM/CAS signal
93	/BWL	External RAM Lower/WE signal
94	/BWU	External RAM Upper/WE signal
95	VDD5	Power supply
96 97 98 99 100 101 102 103 104	BD0 BD1 BD2 BD3 BD4 BD5 BD6 BD7 BD8	External RAM data I/O
105	VSS3	Digital ground
106 107 108 109	BD9 BD10 BD11 BD12	External RAM data I/O
110	VSS5	Ground
111 112 113	BD13 BD14 BD15	External RAM data I/O
114 115	NC	- - -
116	VDD3	Digital power supply
117	PLCK	PLL clock I/O

Table 3-5-9 (3/4) TC9453F

Pin No.	Name	Function
118 119 120 121	TESM5 TESM6 TESM7 TESM8	Test terminal
122	VSS3	Digital ground
123	CFC1	VCO frequency control signal
124	CFC2	VCO frequency control signal
125	PPW	Phase comparator offset adjustment voltage output
126	PESV	Phase comparator offset adjustment signal input
127	PVSS	Exclusive ground for PLL
128	PESP	Phase comparator offset adjustment signal output
129	PDOP1	DVD/CD phase control signal (Positive polarity)
130	PDON1	DVD/CD phase control signal (Negative polarity)
131	PDOP2	DVD/CD phase control signal (Positive polarity)
132	PDON2	DVD/CD phase control signal (Negative polarity)
133	LPFN	Data PLL low pass filter inverted input
134	LPFO	Data PLL low pass filter output
135	PVREF	Exclusive reference power supply for data PLL
136	VCOREF	VCO reference
137	VCOF	VCO automatic adjustment filter output
138	PVDD	Exclusive power supply for PLL
139	SLCO1	Data slice 6 bit DAC output
140	TESM9	Test terminal
141	TEST2	Test mode terminal
142	RFCD	CD RF signal input
143	RFDVD	DVD RF signal input
144	AVDD	Exclusive power supply for analog
145	RFCT	RFRP center voltage input (zero cross)
146	RFZI	RFRP signal input (zero cross)
147	TEZI	Tracking error signal input (zero cross)
148	AWIN	Active wide PLL control signal input
149	AVSS	Exclusive ground for analog
150	FEI	Focus error signal input
151	TEI	Tracking error signal input
152	RFSB	RF level or sub beam signal addition input
153	RFRP	RFRP signal input
154	AVSS	Exclusive ground for analog
155	TESM10	Test terminal
156	EXTAD	General external ADC input
157	VREF	Exclusive reference power supply for analog
158	FOO	Focus EQ output
159	TRO	Tracking EQ output
160	AVDD	Exclusive power supply for analog
161	AWCTL	Active wide PLL control output
162	FMO	Focus EQ output
163	DMO	Disc EQ output

Table 3-5-9 (4/4) TC9453F

Pin No.	Name	Function
164	TEBC	Tracking balance control signal
165	FEBC	Focus balance control signal
166	DPDC	DPD error signal pit depth adjustment signal
167	EQBC	RF wide range boost adjustment signal
168	ANMON	General PWM output
169	/DFCT	Black dot detection signal
170	VRCK	RF EQ characteristic control clock
171	VSS3	Digital ground
172	SCD	Head amplifier serial data
173	SCL	Head amplifier serial data latch pulse
174	SCB	Head amplifier serial data clock
175	FGIN	Disc FG signal input (with self-bias circuit)
176	NC	- - -

* " / " indicated at the head of pin name means active "L" pin.

Table 3-5-10 (1/5) TMP94CS40AF

Pin No.	Name	Function
77 | 84	P00 - P07 D0 - D7	Port 0: I/O port. Data 0-7: data bus 0-7. Function is selectable by setting of AM0/1 terminal. It becomes high impedance at no external memory access.
86 | 93	P10 - P17 D8 - D15	Port 1: I/O port. Data 8-15: data bus 8-15. Function is selectable by setting of AM0/1 terminal. It becomes high impedance at no external memory access.
95 | 102	P20 - P27 D16 - D23	Port 2: I/O port. Data 16-23: data bus 16-23. Function is selectable by setting of AM0/1 terminal. It becomes high impedance at no external memory access.
104 | 111	P30 - P37 D24 - D31	Port 3: I/O port. Data 24-31: data bus 24-31. Function is selectable by setting of AM0/1 terminal. It becomes high impedance at no external memory access.
113 | 120	P40 - P47 A0 - A7	Port 4: I/O port. Address 0-7: address bus 0-7. Function is selectable by setting of AM0/1 terminal. Signal does not change at no external memory access.
122 | 129	P50 - P57 A8 - A15	Port 5: I/O port. Address 8-15: address bus 8-15. Function is selectable by setting of AM0/1 terminal. Signal does not change at no external memory access.
131 | 138	P60 - P67 A16 - A23	Port 6: I/O port. Address 16-23: address bus 16-23. Function is selectable by setting of AM0/1 terminal. Signal does not change at no external memory access.
75	P70 RD	Port 70: output port. (Initializes to "1" output.) Read: strobe signal reading external memory. Function is selectable by setting of AM0/1 terminal. Strobe signal is not developed at no external memory access.
74	P71 WRLL	Port 71: output port. (Initializes to "1" output.) Write: strobe signal writing D0-D7 of external memory. Strobe signal is not developed at no external memory access.
73	P72 WRLH	Port 72: output port. (Initializes to "1" output.) Write: strobe signal writing D8-D15 of external memory. Strobe signal is not developed at no external memory access.
72	P73 WRHL	Port 73: output port. (Initializes to "1" output.) Write: strobe signal writing D16-D23 of external memory. Strobe signal is not developed at no external memory access.
71	P74 WRHH	Port 74: output port. (Initializes to "1" output.) Write: strobe signal writing D24-D31 of external memory. Strobe signal is not developed at no external memory access.

Table 3-5-10 (2/5) TMP94CS40AF

Pin No.	Name	Function
70	P75 BUSRQ	Port 75: I/O port. Bus request: signal with memory interface terminal requested to be high impedance. The following pins become high impedance, but no change is made when used as a port. A0 - A23, D0 - D31, RD, WRLL, WRLH, WRHL, WRHH, CS0 - CS5, OE0 - OE1, WE0-WE1, RAS group, CAS group
69	P76 BUSAK	Port 75: output port. (Initializes to "1" output.) Bus acknowledge: signal, that indicates request of BUSRQ received.
67	P80 CS0	Port 80: output port. (Initializes to "1" output.) Chip select 0: "L" level is developed if address is within the assigned address range.
66	P81 CS1 RAS0	Port 81: output port. (Initializes to "1" output.) Chip select 1: "L" level is developed if address is within the assigned address range. Low address strobe 0: RAS strobe signal for DRAM is developed if address is within the assigned address range.
65	P82 CS2	Port 82: output port. (Initializes to "0" output.) Chip select 2: "L" level is developed if address is within the assigned address range.
64	P83 CS3 RAS1	Port 83: output port. (Initializes to "1" output.) Chip select 3: "L" level is developed if address is within the assigned address range. Low address strobe 1: RAS strobe signal for DRAM is developed if address is within the assigned address range.
63	P84 CS4	Port 84: output port. (Initializes to "1" output.) Chip select 4: "L" level is developed if address is within the assigned address range.
62	P85 CS5	Port 85: output port. (Initializes to "1" output.) Chip select 5: "L" level is developed if address is within the assigned address range.
49	P86 WAIT	Port 86: I/O port. Wait: Bus wait request signal
60	PA0 CAS0 LCAS0	Port A0: output port. (Initializes to "1" output.) Column address strobe 0: CAS strobe signal for DRAM is developed if address is within the assigned address range. Lower column address strobe 0: lower CAS strobe signal for DRAM is developed if address is within the assigned address range.
59	PA1 UCAS0	Port A1: output port. (Initializes to "1" output.) Upper column address strobe 0: upper CAS strobe signal for DRAM is developed if address is within the assigned address range.
58	PA2 OE0	Port A2: output port. (Initializes to "1" output.) Out enable 0: out enable signal for DRAM is developed.
57	PA3 OE1	Port A3: output port. (Initializes to "1" output.) Out enable 1: out enable signal for DRAM is developed.
56	PA4 WE0	Port A4: output port. (Initializes to "1" output.) Write enable 0: write enable signal for DRAM is developed.

Table 3-5-10 (3/5) TMP94CS40AF

Pin No.	Name	Function
55	PB0 $\overline{CAS1}$ $\overline{LCAS1}$ $\overline{LLCAS1}$	Port B0: output port. (Initializes to "1" output.) Column address strobe 1: $\overline{CAS}$ strobe signal for DRAM is developed if address is within the assigned address range. Lower column address strobe 1: lower $\overline{CAS}$ strobe signal for DRAM is developed if address is within the assigned address range. Lower-lower column address strobe 1: lower-lower $\overline{CAS}$ strobe signal for DRAM is developed if address is within the assigned address range.
54	PB1 $\overline{UCAS1}$ $\overline{LUCAS1}$	Port B1: output port. (Initializes to "1" output.) Upper column address strobe 1: upper $\overline{CAS}$ strobe signal for DRAM is developed if address is within the assigned address range. Lower-upper column address strobe 1: lower-upper $\overline{CAS}$ strobe signal for DRAM is developed if address is within the assigned address range.
53	PB2 $\overline{HLCAS1}$	Port B2: output port. (Initializes to "1" output.) Upper-lower column address strobe 1: upper lower $\overline{CAS}$ strobe signal for DRAM is developed if address is within the assigned address range.
52	PB3 $\overline{HUCAS1}$	Port B3: output port. (Initializes to "1" output.) Upper-upper column address strobe 1: upper-upper $\overline{CAS}$ strobe signal for DRAM is developed if address is within the assigned address range.
51	PB4 $\overline{WE1}$	Port B4: output port. (Initializes to "1" output.) Write enable 1: write enable signal for DRAM is developed.
140	PC0 TO1 TO7	Port C0: I/O port. Timer output 1: 8 bit timer 0 or timer 1 is developed. Timer output 7: 16 bit timer 7 is developed.
141	PC1 TO3 TOB	Port C1: I/O port. Timer output 3: 8 bit timer 2 or timer 3 is developed. Timer output B: 16 bit timer B is developed.
17	PD0 TO4	Port D0: I/O port. Timer output 4: 16 bit timer 4 is developed.
18	PD1 TI4 INT4	Port D1: I/O port. Timer input 4: 16 bit timer 4 is entered. Interrupt request terminal 4: programmable at rising/falling edges.
19	PD2 TI5 INT5	Port D2: I/O port. Timer input 5: 16 bit timer 4 is entered. Interrupt request terminal 5: Interrupt request terminal at rising edge.
20	PD4 TO6	Port D4: I/O port Timer output 6: 16 bit timer 6 is developed.
21	PD5 TI6 INT6	Port D5: I/O port. Timer input 6: 16 bit timer 6 is entered. Interrupt request terminal 6: programmable at rising/falling edges.
22	PD6 TI7 INT7	Port D6: I/O port. Timer input 7: 16 bit timer 6 is entered. Interrupt request terminal 7: Interrupt request terminal at rising edge.
24	PE0 TO8	Port E0: I/O port. Timer output 8: 16 bit timer 8 is developed.
25	PE1 TI8 INT8	Port E1: I/O port. Timer input 8: 16 bit timer 8 is entered. Interrupt request terminal 8: programmable at rising/falling edges.
13	PE2 TI9 INT9	Port E2: I/O port. Timer input 9: 16 bit timer 8 is entered. Interrupt request terminal 9: Interrupt request terminal at rising edge.

Table 3-5-10 (4/5) TMP94CS40AF

Pin No.	Name	Function
14	PE4 TOA	Port E4: I/O port. Timer output A: 16 bit timer A is developed.
15	PE5 TIA INTA	Port E5: I/O port. Timer input A: 16 bit timer A is entered. Interrupt request terminal A: programmable at rising/falling edges.
16	PE6 TIB INTB	Port E6: I/O port. Timer input B: 16 bit timer A is entered. Interrupt request terminal B: Interrupt request terminal at rising edge.
24	PF0 TXD0	Port F0: I/O port. Serial transfer data 0 (open drain output capability)
25	PF1 RXD0	Port F1: I/O port. Serial reception data 0
26	PF2 $\overline{CTS0}$ SCLK0	Port F2: I/O port. Serial transfer capability 0 Serial clock I/O 0
27	PF4 TXD1	Port F4: I/O port. Serial transfer data 1 (open drain output capability)
28	PF5 RXD1	Port F5: I/O port. Serial reception data 1
29	PF6 $\overline{CTS1}$ SCLK1	Port F6: I/O port. Serial transfer capability 1 Serial clock I/O 1
152 | 159	AN0 – AN7	Analog input: input of 10 bit A/D converter.
6	PH0 TC0	Port H0: I/O port. Terminal count 0: Strobe output signal is developed at "H" level when count value of micro DMA channel 0 is 0.
7	PH1 TC1	Port H1: I/O port. Terminal count 1: Strobe output signal is developed at "H" level when count value of micro DMA channel 1 is 0.
8	PH2 TC2	Port H2: I/O port. Terminal count 2: Strobe output signal is developed at "H" level when count value of micro DMA channel 2 is 0.
9	PH3 TC3	Port H3: I/O port Terminal count 3: Strobe output signal is developed at "H" level when count value of micro DMA channel 3 is 0.
10	PH4 INT0	Port H4: I/O port (schmitt input) Interrupt request terminal 0: programmable at level/rising edge. (Schmitt input)
31	$\overline{NMI}$	Nonmaskable interrupt request terminal: interrupt request terminal at falling edge. Available at rising edge by using a program.
32	$\overline{WDTOUT}$	Watchdog timer output terminal
4 5	AM0,1	Address mode: selects start-up external data bus width after releasing reset. AM1= "0" AM0= "0": starts with 8 bit external data bus AM1= "0" AM0= "1": starts with 16 bit external data bus AM1= "1" AM0= "0": starts with 32 bit external data bus AM1= "1" AM0= "1": starts from internal ROM
43 48	TEST0,1	Test: used with "GND" fixed.
36	CLK	Clock: develops system clock.
38 40	X1/X2	Oscillation connection terminal

Table 3-5-10 (5/5) TMP94CS40AF

Pin No.	Name	Function
33	$\overline{\text{RESET}}$	Reset: initializes device (with pull-up resistance) (schmitt input)
160	VREFH	Reference voltage input terminal (H) for 10 bit A/D converter
1	VREFL	Reference voltage input terminal (L) for 10 bit A/D converter
4	ADVCC	10 bit A/D converter power supply terminal
2	ADVSS	10 bit A/D converter GND terminal
37	CLVCC	Power supply terminal for clock doubler
39	CLVSS	GND terminal for clock doubler
30	DVCC	Digital power supply terminal
23	DVSS	Digital GND terminal

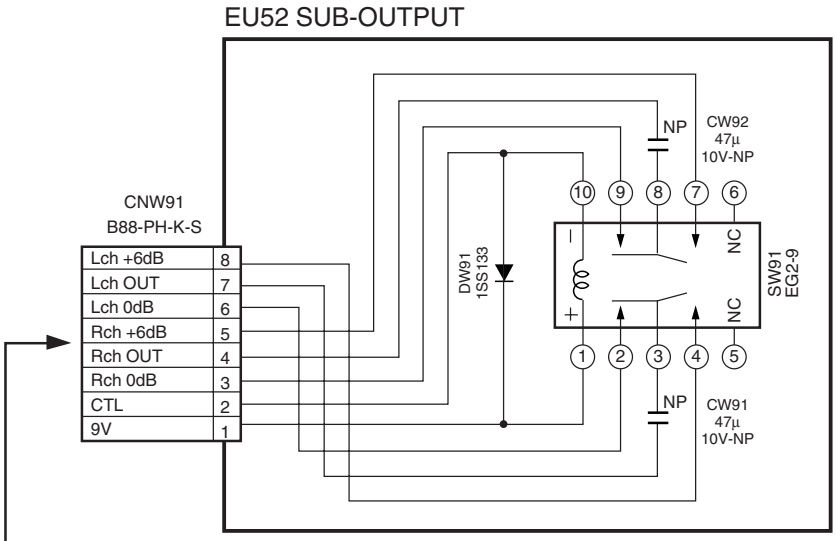
Output Circuit Diagram (With Sub Output Circuit)

Sub output circuit is provided depending on units. For more information, please refer to the circuits below.



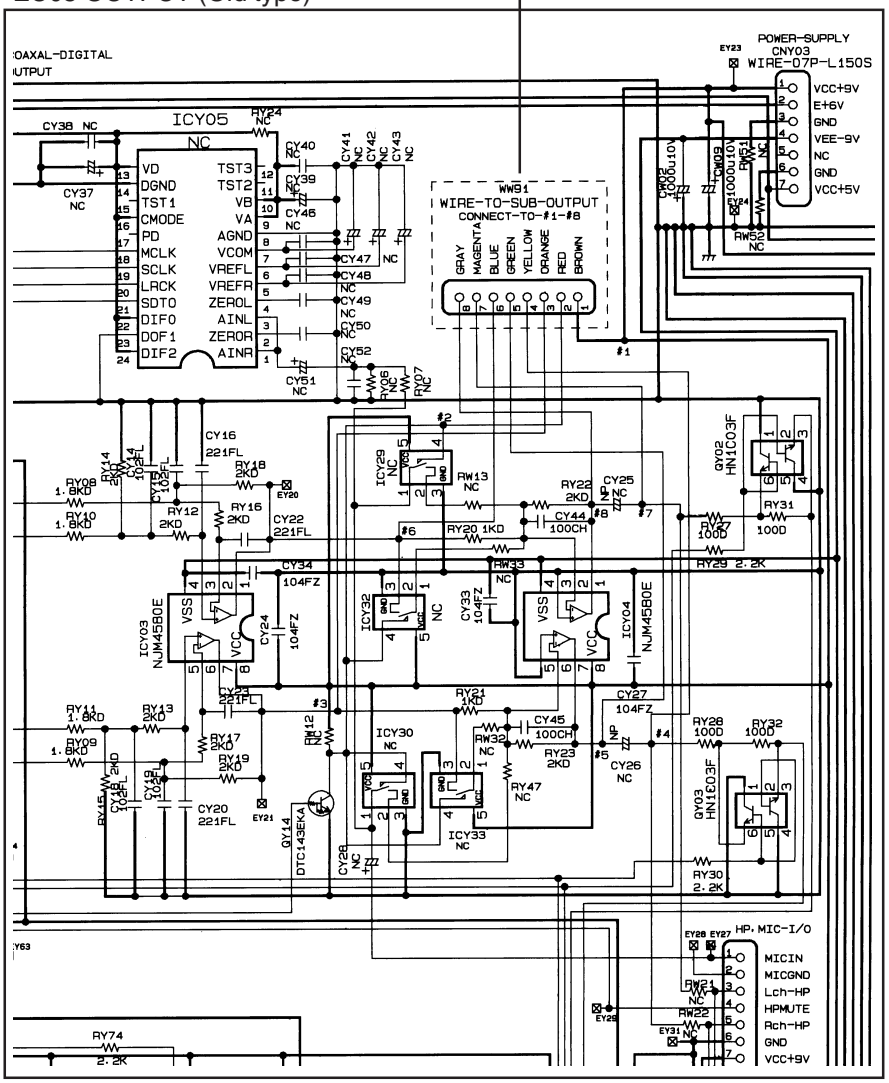


Fig. 3-5-8

This page is not printed.

SECTION 4
PARTS LIST

SAFETY PRECAUTION

The parts identified by ⚠mark are critical for safety. Replace only with part number specified.

The mounting position of replacement is to be identical with originals.

The substitute replacement parts which do not have the same safety characteristics as specified in the parts list may create shock, fire or other hazards.

NOTICE

The part number must be used when ordering parts in order to assist in processing, be sure to include the model number and description.

Parts marked # are of chip type and mounted on original PC boards.

However, when they are placed for servicing works, use discrete parts listed on the parts list.

ABBREVIATIONS

1. Integrated Circuit (IC)

2. Capacitor (Cap)

- **Capacitance Tolerance (for Nominal Capacitance more than 10pF)**

Table 4-2-1

Symbol	B	C	D	F	G	J	K	M	N
Tolerance %	± 0.1	± 0.25	± 0.5	± 1	± 2	± 5	± 10	± 20	± 30

Symbol	P	Q	T	U	V	W	X	Y	Z
Tolerance %	+ 100 0	+ 30 – 10	+ 50 – 10	+ 75 – 10	+ 20 – 10	+ 100 – 10	+ 40 – 20	+ 150 – 10	+ 80 – 20

Ex. 10µF J = 10µF ± 5%

- **Capacitance Tolerance (for Nominal Capacitance 10pF or less)**

Table 4-2-2

Symbol	B	C	D	F	G
Tolerance pF	± 0.1	± 0.25	± 0.5	± 1	± 2

Ex. 10pF G = 10pF ± 2pF

3. Resistor (Res)

- **Resistance tolerance**

Table 4-3-1

Symbol	B	C	D	F	G	J	K	M
Tolerance %	± 0.1	± 0.25	± 0.5	± 1	± 2	± 5	± 10	± 20

Ex. 470ΩJ = 470Ω± 5%
