## SPECIFICATION

\* Measurements identified by an asterisk are taken in accordance with the new IHF A-202 amplifier measurement standard.

### Power Amplifier Section

* Continuous average power output at 8 ohms	20–20K Hz both channel driven	30W
Rated distortion, 20–20K Hz		< 0.09%
* Clipping headroom at 8 ohms		+ 1.2dB
Clipping power at 8 ohms		40W
at 4 ohms		50W
at 2 ohms		60W
Dynamic headroom at 8 ohms		+2.2dB
Dynamic power at 8 ohms		50W
at 4 ohms		60W
at 2 ohms		70W
* Reactive load rating		+1.7dB
* Transient Overload Recovery Time		< 1μsec.
* Slew Factor		> 50
Slew Rate		15V/μsec.
Damping factor at 50 Hz (Ref. 8 ohms)		50
T.H.D. 20–20K Hz From 250 mW to 30 W		< 0.09%
S.M.P.T.E. I.M.D. (60 Hz + 7KHz, 4:1) From 250mW to 30W		< 0.09%
I.H.F. I.M.D. (19KHz + 20KHz) at 30W		< 0.09%
T.I.M. (15KHz Sine + 3.18KHz Square Wave) at 30W		< 0.09%
Frequency Response, 20–20K Hz		± 0.5dB
Frequency Response Range ± 3dB		5–45K Hz

### Preamplifier Section

* Input Impedance	Resistance/Capacitance	47KΩ/47PF
Input Sensitivity (1KHz)	* For 1 watt out	0.5mV
	30 Watt out	2.5mV
Input Overload at 1KHz		190mV
20 Hz		19mV
20 KHz		1.9 V
THD (20–20K Hz) and IMD at + 30dB input level		< 0.02%
RIAA Response Accuracy		± 0.3dB
Signal to Noise Ratio A-weighted		
(a) with phono cartridge connected	Ref 10mV	> 80dB
	* Ref 5mV	> 74dB
(b) with short-circuit input	Ref 10mV	> 84dB

### High level input

* Input impedance	Resistance/Capacitance	50KΩ/100PF
Input sensitivity	* For 1 watt out	30mV
	For 30 watt out	150mV
Signal to Noise Ratio, A-Weighted		
(a) with mute off	* Ref 1 watt out	> 80dB
	Ref 30 watt out	> 92dB
(b) with mute on	Ref 1 watt out	> 85dB
* Maximum input signal		infinite
Frequency Response, 20–20K Hz		± 0.5dB

### Controls

Bass control, range at 50 Hz	± 10dB
Treble control, range at 10 KHz	± 10dB
Infrasonic filter Turn over frequency	20 Hz
Slope (dB/octave)	12
High filter Turn over frequency	7 KHz
Slope (dB/octave)	6
Mute	–20dB

### Physical Specification

Dimensions	W x H x D	inch	15.4 x 5.5 x 12
		cm	39 x 14 x 30.5
Net weight			20 lbs/9 kg
Shipping weight			22 lbs/10 kg
Power Consumption at 1 watt out			30VA
30 watt out			200VA

## ALIGNMENT

### 1. IDLE CURRENT ALIGNMENT

1. 5 Minutes minimum pre-heating is necessary for idle current alignment.
2. Set the volume control at minimum position.
3. Speaker switch should be set at off position.
4. Connect DC voltmeter across R637 for right channel and across R638 for left channel. (see fig. 1)
5. Record the reading of DC voltmeter and refer to the following chart to find the appropriate value resistor to connect in parallel with R625 (right channel), or R626 (left channel) on the bottom side (pattern side) of PCB.
- \* Important notice: The power switch must be in the off position when soldering is done.

Reading of DC Voltmeter	Parallel Resistor	Reading of DC Voltmeter	Parallel Resistor
0.4 to 0.8 mV	1k ohm	3.1 to 4.0 mV	2k2 ohm
0.9 to 1.2 mV	1k2 ohm	4.1 to 5.0 mV	2k7 ohm
1.3 to 2.0 mV	1k5 ohm	5.1 to 6.0 mV	3k3 ohm
2.1 to 2.4 mV	1k8 ohm	6.1 to 7.0 mV	3k9 ohm
2.5 to 3.0 mV	2k ohm	7.1 to 10 mV	4k7 ohm

6. Read the DC voltage across to R637 (right channel) and R638 (left channel) again.
7. If the DC voltage were between 10 mV and 20 mV, then the alignment is completed.
8. If the DC voltage were less than 10 mV, the value of parallel resistor should be increased until the DC voltage is between 10 mV and 20 mV.
9. If the DC voltage were more than 20 mV, the value of parallel resistor should be reduced until the DC voltage is between 10 mV and 20 mV.

### 2. POWER METER ALIGNMENT

1. Feed a 1KHz sine wave approx 150mV RMS to both channel's Aux inputs.
  2. Connect an 8 ohm (+20%) dummy load and an AC voltmeter and oscilloscope to the "main speaker" terminals on the rear panel.
  3. Set the volume control at maximum position and other controls are set at their normal positions.
  4. Set the speaker switch to "main" position.
  - \* 5. Adjust the input signal level till the output voltage is 15.5 V making sure that no clipping of the waveform is occurring.
  6. Adjust VR 1 (for right channel) and VR 2 (for left channel) for a meter indication of 30 W. (or 0 dB). (sec. fig. 3)
- \* In cases of poor mains regulation it is possible that slight clipping occurs at 15.5 V when both channels are driven simultaneously. If this is the case, do the calibration one channel at a time.

## ALIGNMENT

### 3 DC OFFSET ALIGN MENT

1. 5 minutes minimum pre-heating is necessary for DC offset adjustment.
  2. Set the volume control at minmum position.
  3. Speaker switch should be set to "main" position.
  4. Connect a DC milli-voltmeter to the "main speaker" terminals of each channel. The meter sensitivity should be set for 100-300mV full scale deflection. The positive input of the meter should be connected to the red (+) speaker terminal.
  5. If the readings are within + 50mV, then no adjustment is necessary.
  6. If the reading is more than + 50mV then refer to Table I to find the appropriate value resistor to connect from point A (right) to C (right) on the bottom side (pattern side) of PCB. (see fig. 1 )  
B (left) to D (left)
  7. If the reading is less than -50mV then also refer to Table I to find the appropriate value resistor to connect from point A (left) to E (left) one the bottom side (pattern side) of PCB. (see fig. 1 )  
B (right) to F (right)
  8. Use a piece of insulating sleeve on the resistor legs to avoid shorting to PC board tracks, and make sure the resistor is not pressed against a sharp cut edge of a component leg.
- \* Important notice: The power button must be in the off position when soldering is done.

Table I

<u>Reading of DC Milli Voltmeter</u>	<u>*Resistor</u>
50 to 60 mV	100k ohm OR 330k ohm
60 to 75 mV	82k ohm OR 270k ohm
75 to 90 mV	68k ohm OR 220k ohm
90 to 110 mV	56k ohm OR 180k ohm
110 to 135 mV	47k ohm OR 150k ohm
135 to 165 mV	39k ohm OR 120k ohm
165 to 200 mV	33k ohm OR 100k ohm
to mV	ohm OR ohm

9. After having soldered in the resistor, repeat steps 1 through 5.

\* If the feedback resistors of power amplifier (R 613, R614) are 10 kohm then select from colum A if 33 kohm then select from colum B.

## ALIGNMENT
