Parts marked with the symbol  have critical characteristics. Use ONLY replacement parts recommended by the manufacturer. It is recommended that the unit be operated from a suitable DC supply or batteries during initial check-out procedures.

CAUTION:

Before returning the unit to the customer, make sure you make either (1) a leakage current check or (2) a line to chassis resistance check. If the leakage current exceeds 0.5 milliamp, or if the resistance from chassis to either side of the power cord is less than 240 k ohms, the unit is defective.

CA-5EII/CA-5AII/CA-5II Load Impedance Alteration Abschlußimpedanz-Anpassung des CA-5EII/CA-5AII/CA-5II Modification de l'impédance de charge du CA-5EII/CA-5AII/CA-5II

- For Dealers Only
- Nur für Händler
- Pour les distributeurs uniquement

The plastic bags contain five resistors each for the left and right channels. The load impedance when an MC-type cartridge is used can be altered by installing these resistors on the printed circuit boards in the CA-5EII/CA-5AII/CA-5II. (The load impedance is factory-set to 100 ohms.)

When wishing to make this alteration, contact your dealer. Never attempt to install the resistors yourself, as opening the unit involves a considerable risk of electric shock.

Die Plastiktüten enthalten je fünf Widerstände für rechten und linken Kanal. Bei Verwendung eines MC-Tonabnehmers kann die Lastimpedanz bei Bedarf durch Anbringen der Widerstände auf den Platinen des CA-5EII/CA-5AII/CA-5II verändert werden. (Die ab Werk eingestellte Impedanz beträgt 100 Ohm.) **Diese Anpassung darf nur durch autorisierte Händler durchgeführt werden, da bei Eingriffen in das Gerät Stromschlaggefahr besteht.**

Les sacs en plastique contiennent chacun cinq résistances pour les canaux gauche et droit. Lors de l'utilisation d'une tête de lecture à bobine mobile, l'impédance de charge peut être modifiée en installant ces résistances sur les circuits imprimés du CA-5EII/CA-5AII/CA-5II. (L'impédance de charge est réglée sur 100 ohms à la sortie de l'usine.)

Lorsque vous désirez effectuer cette modification, contactez votre distributeur. Ne jamais essayer d'installer les résistances par vous-même car l'ouverture de cet appareil peut entraîner de forts risques d'électrocution.

■ Procedure for installing resistors

Two resistors (one each for left and right channel) must be soldered to the circuit boards, as shown in the illustration. Be sure to turn the power OFF and unplug the power cord before opening the unit.

- Select the resistors for the desired load impedance according to their color codes, as indicated in the table on the reverse side.
- Trim the resistor leads as shown on the reverse side. Then insert the leads into the gold-plated sockets on the input section of the MC head amplifier board and solder each resistor solidly in place. Make sure that equal resistor values are used for the two channels.
- The resistors may be mounted in either direction.

■ Einbau

Zwei Widerstände (je einer für rechten und linken Kanal) müssen an den dafür vorgesehenen Stellen auf die Schaltplatinen gelötet werden, wie in der Abbildung gezeigt.

- Wählen Sie die zur Erzielung der gewünschten Abschlußimpedanz erforderlichen Widerstände nach ihrer Farbkodierung aus, wie in der umseitigen Tabelle aufgeführt.
- Kürzen Sie die Anschlußdrähte der Widerstände, wie umseitig gezeigt, und stecken Sie die Drähte in die vergoldeten Ösen auf der Platine (Eingangsstufe des MC-Vorverstärkers). Löten Sie dann die Drähte gut an. Achten Sie darauf, gleiche Widerstandswerte für beide Kanäle zu verwenden.
- Die Ausrichtung der Widerstände ist beliebig.

■ Pour l'installation des résistances

Les 2 résistances (une pour le canal gauche et une pour le canal droit) doivent être soudées sur les panneaux des enceintes. Vérifier que le courant n'est pas allumé et que la prise d'alimentation soit débranchée avant d'ouvrir le couvercle de l'appareil.

- Choisir les résistances suivant l'impédance de charge désirée en vous aidant des couleurs servant de repères, comme indiqué sur le tableau ci-après.
- Régler le bout des résistances comme indiqué au dos. Insérer ensuite les bouts dans les supports dorés dans la section d'entrée du pré-amplificateur et souder chaque résistance solidement à leur place. Vérifier que les résistances utilisées pour les deux courants soient de valeur égale.
- Les résistances peuvent être montées dans n'importe quel sens.
