## 1. GENERAL

### 1.1 PACKING MATERIALS and OWNER'S MANUAL

The OMS-4/4A/4E/40 is equipped with the Remote Control Unit RM-4-CD.  
The Remote Control Unit RM-4CD will be supplied per unit as for space parts.

<u>Part No.</u>	<u>Description</u>	<u>Q'ty</u>

### 1.2 WARNING

#### 1.2.1 IN SERVICE MANUAL

This unit uses an invisible semiconductor laser to pick up the digital signal on the disc. Since the laser can takes the signal without contact, there's no anxiety of rubbing down the disc and the Pickup Ass'y.

But you must treat the laser with the greatest of care. In servicing, please pay attention to the following.

- 1) Avoid direct exposure to beam.  
Laser can be radiated when the interlocks fail or are defeated.
- 2) Do not break up the Laser Pickup Ass'y.
- 3) Refered to in itme 2.7 Laser Pickup Ass'y on page 5.

#### 1.2.2 LASER SPECIFICATION

The laser provided in the unit is GaAlAs semiconductor laser. The theory of the laser emitting is the same as the light emitting of LEDs. The difference is that the laser has only one wavelength and is coherent.

One of the characteristics of laser diodes is that the threshold level can be changed accordance with the surrounding temperature. To correct this characteristic, the laser diode used in this unit provides a monitor photo diode and controls the output power level of the laser to be constant.

The Laser Pickup Ass'y consists of a laser diode, 6-split photodiode, object lens, beam splitter and coils. The object lens moves forward or back by the focus servo coil and also moves left or right by the tracking servo coil. The laser passes through the prisms and the lenses and is emitted through the object lens. The power of it is decreased to 0.3mW passing through these optical instruments. The laser reflected by the disc passes through the optical instruments again and detected by the 6-split photo diode.

#### 1.2.3 CAUTION

Before returning the unit to the customer, make sure you make either (1) a leakage current check or (2) a line to chassis resistance check. If the leakage current exceeds 0.5 milliamp, or if the resistance from the chassis to either side of the power cord is less than 240k ohms, the unit is defective.

**WARNING – DO NOT return the unit to the customer until the problem is located and corrected.**

#### 1.2.4 Main P.C.B

The Main P.C.B. Ass'y C230, C231, C501 – C509, C510, C520, C351, C353, C215, are attached with Sony Bond SC12N.

After replacing any of these components, be certain to apply them with Sony Bond SC12N.

## 2. REMOVAL PROCEDURES

### 2.1. Top Cover Ass'y and Bottom Cover Ass'y

- (1) Refer to Fig. 2.1.
- (2) Remove F01 and F02, then lift and remove F03 (Top Cover Ass'y).
- (3) Remove F04, F05, F06 and F07, then lift and remove F08 (Bottom Cover Ass'y).

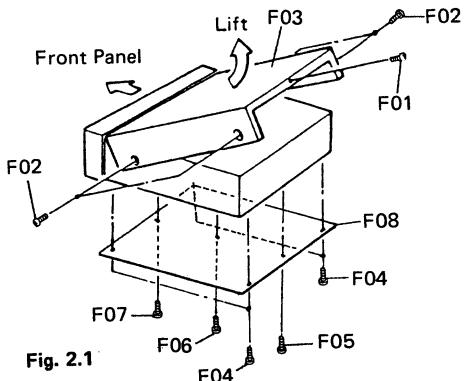

Fig. 2.1

### 2.2. Servo P.C.B. Ass'y

- (1) Refer to Fig. 2.2 and Fig. 2.3.
- (2) Remove the Top Cover Ass'y and the Bottom Cover Ass'y referred to in item 2.1.
- (3) Remove F01 and F02 (P.C.B. Support) and five connectors (CN-101, CN-102, CN-103, CN-202 and CN-203), then F03 (Servo P.C.B. Ass'y).

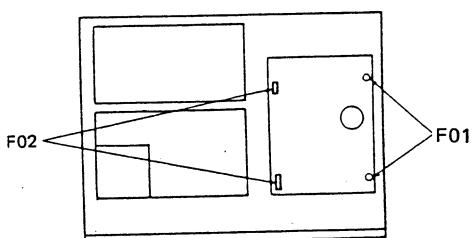

Fig. 2.2

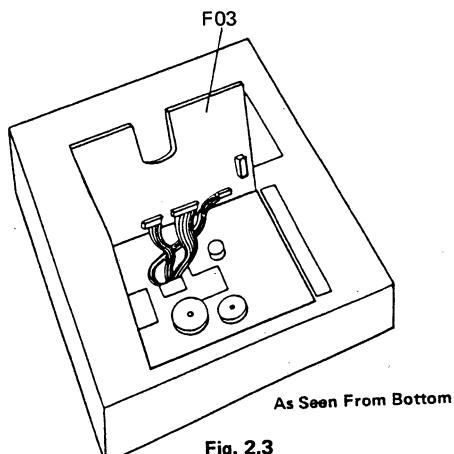

Fig. 2.3

### 2.3. Front Panel Ass'y

- (1) Refer to Fig. 2.4 and Fig. 2.5.
- (2) Remove the Top Cover Ass'y and the Bottom Cover Ass'y referred to in item 2.1.
- (3) Eject the Disc Tray Ass'y and remove F01 (Disc Drawer Cover) by pressing it down with your fingers.
- (4) Remove F02 and F03, then release the latches located on both sides of the Chassis.
- (5) Remove two connectors (CN-401 and CN-402), then F04 (Front Panel Ass'y).

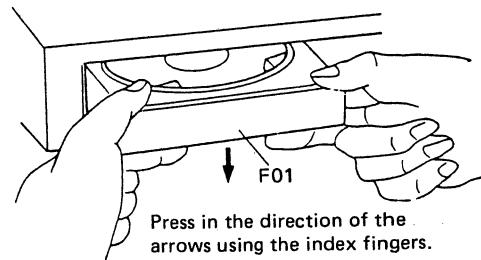

Fig. 2.4

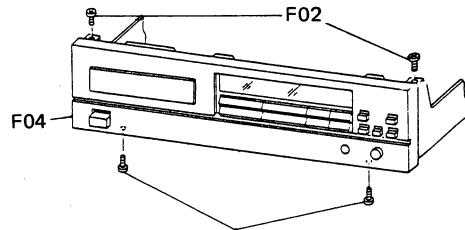

Fig. 2.5

F03

### 2.4. Control & Display P.C.B. Ass'y

- (1) Refer to Fig. 2.6.
- (2) Remove the Front Panel Ass'y referred to in item 2.3.
- (3) Remove F01, then release the latches located on the Front Panel Ass'y, then F02 (Control & Display P.C.B. Ass'y).

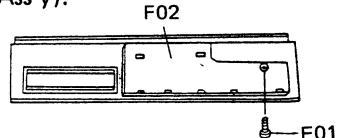

Fig. 2.6

### 2.5. Main P.C.B. Ass'y and Disc Mechanism Ass'y

- (1) Refer to Fig. 2.7.
- (2) Remove the Front Panel Ass'y referred to in item 2.3.
- (3) Remove F01, F02, F03, F04 (P.C.B. Holder), F05, F06 and F07, then F08 (Main P.C.B. Ass'y).
- (4) Remove F09, then F10 (Disc Mechanism Ass'y).

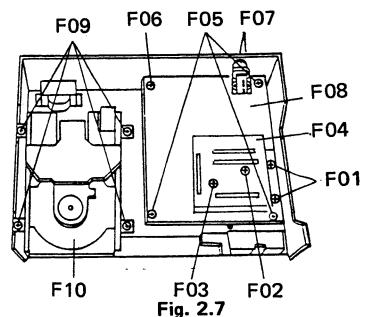

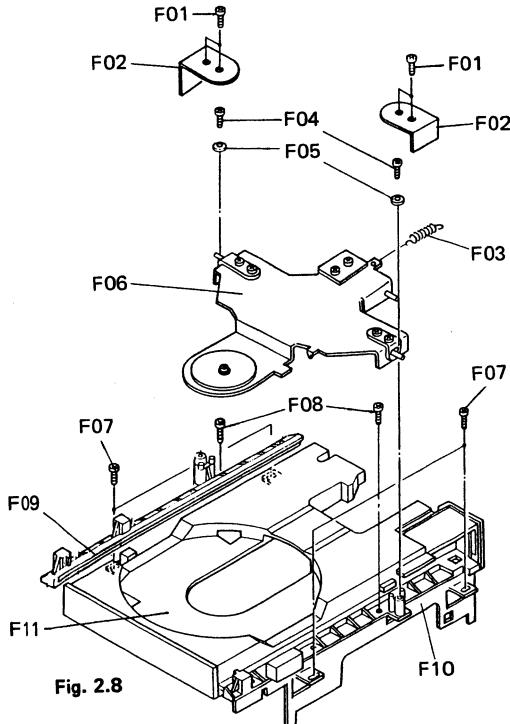

Fig. 2.7

## 2.6. Chuck Arm Ass'y and Disc Tray Ass'y

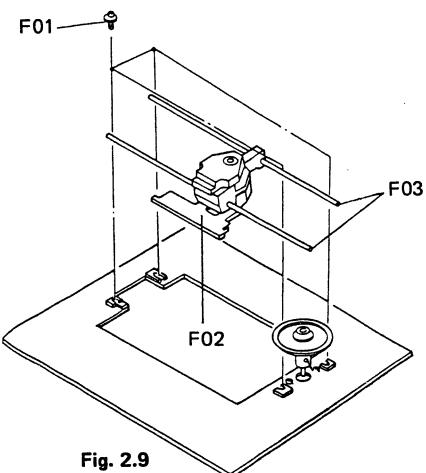

- (1) Refer to Fig. 2.8.
- (2) Remove the Front Panel Ass'y refered to in item 2.3.
- (3) Remove F01, then F02 (Chuck Arm Plate), F03 (Chuck Arm Spring), F04 and F05 then F06 (Chuck Arm Ass'y).
- (4) Remove F07 and F08, then F09 (Disc Drawer Guide L), F10 (Disc Drawer Guide R), then F11 (Disc Tray Ass'y).

## 2.7. Laser Pickup Ass'y

- (1) Refer to Fig. 2.9.
- (2) Remove the Disc Tray Ass'y refered to in item 2.6.
- (3) Remove the three connectors (CN-101, CN-102 and CN-103) from the Servo P.C.B. Ass'y.
- (4) Remove F01, then F02 (Laser Pickup Ass'y) along with F03 (Pickup Guide Rail).

**NOTE:** IF IT IS NOT CERTAIN THAT THE LASER PICK-UP ASS'Y IS DEFECTIVE, DO NOT REMOVE THE THREE CONNECTORS (CN-101, CN-102 and CN-103). IF YOU REMOVE THESE THREE CONNECTORS, THE LASER DIODE OF THE LASER PICKUP ASS'Y WILL BE DAMAGED.

## Installing a new Laser Pickup Ass'y

- (1) When installing a new Laser Pickup Ass'y you must connect its three connectors (CN-101, CN-102 and CN-103) to the Servo P.C.B. Ass'y first.
- (2) Then using a grounded tip soldering iron only, remove the short-circuiting solder in the area of the dotted circle as shown in Fig. 2.10; this small P.C.B. which is incorporated with the Laser Pickup Ass'y.

**CAUTION: IF THE SHORT-CIRCUITING SOLDER IS REMOVED BEFORE THE THREE CONNECTORS (CN-101, CN-102 and CN-103) ARE CONNECTED, DAMAGE TO THE LASER DIODE OF THE LASER PICKUP ASS'Y COULD OCCUR IN A MATTER OF SECONDS, CAUSING FAILURE OF THE NEW LASER PICKUP ASS'Y.**

**NOTE: THE LASER PICKUP ASS'Y STOCKED AS SPARE PART, MUST BE SHORTED TO DOTTED CIRCLE OF THE SMALL P.C.B. WHICH IS INCORPORATED WITH THE LASER PICKUP ASS'Y AS SHOWN IN Fig. 2.10.**

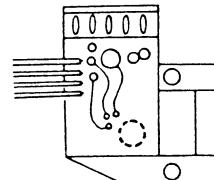

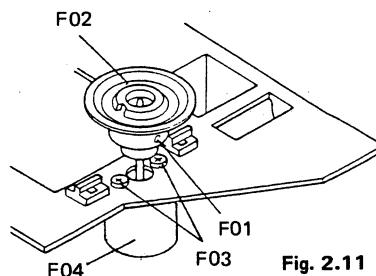

Fig. 2.10

## 2.8. Disc Motor

- (1) Refer to Fig. 2.11.
- (2) Remove Disc Tray Ass'y refered to in item 2.6.
- (3) Remove F01, then pull up F02 (Turntable B Ass'y)
- (4) Remove F03, then F04 (Disc Motor).

## RE-ASSEMBLY OF THE DISC MOTOR:

- (1) Refer to Fig. 2.12.
- (2) When re-assembling the Disc Motor, adjust the height of the turntable using the Turntable Adjustment Gauge (OC82258A).

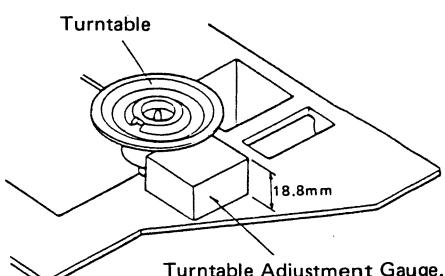

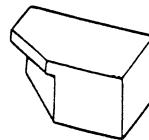

Fig. 2.12

### 3. ADJUSTMENT PROCEDURES

#### 3.1 Meters and Gauge

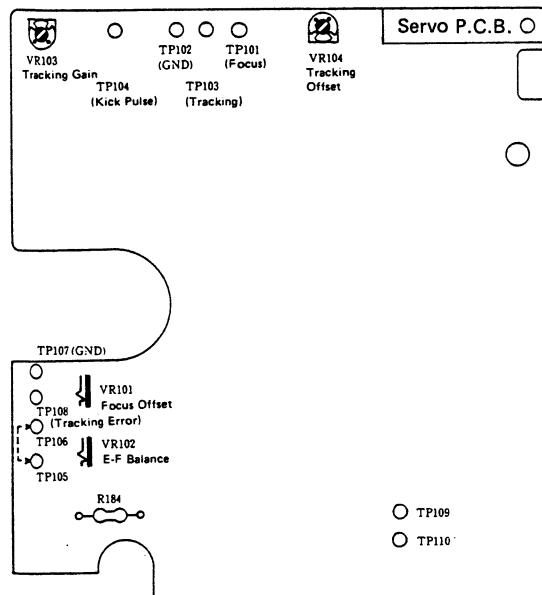

- (1) Oscilloscope (15 MHz or more)
- (2) AC Voltmeter
- (3) DC Voltmeter
- (4) Optical Power Meter
- (5) Phillips Test Sample Disc 5/5A
- (6) Sony Test C.D. Type III (YEDS-7)
- (7) Frequency counter
- (8) Distortion Meter
- (9) Turntable Adjustment Gauge (Fig. 3.1)

Turntable Adjustment Gauge (OC82258A)

Fig. 3.1

#### 3.2 Parts Location for Adjustment

**NOTE:** The above Semi-fixed VR positions are for initial presetting.

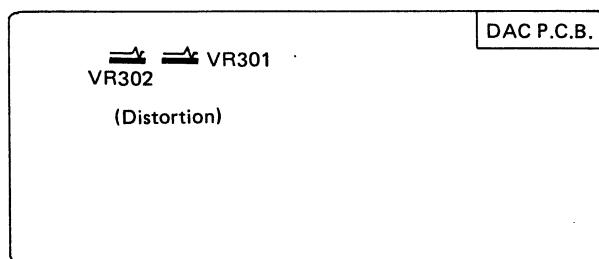

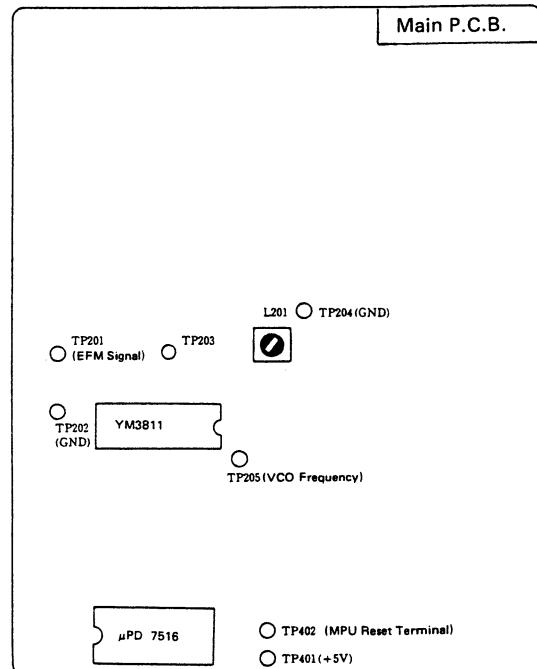

Fig. 3.2

### 3.3 Laser Pickup Laser Power Check

- (1) Remove the Top Cover Ass'y refered to in item 2.1 on page 4.
- (2) Short-circuit TP105 and TP106 located on the Servo P.C.B. Ass'y.
- (3) Place the optical power meter against the pickup (Fig. 3.3), and check that the laser power is between 0.15mW and 0.4mW.

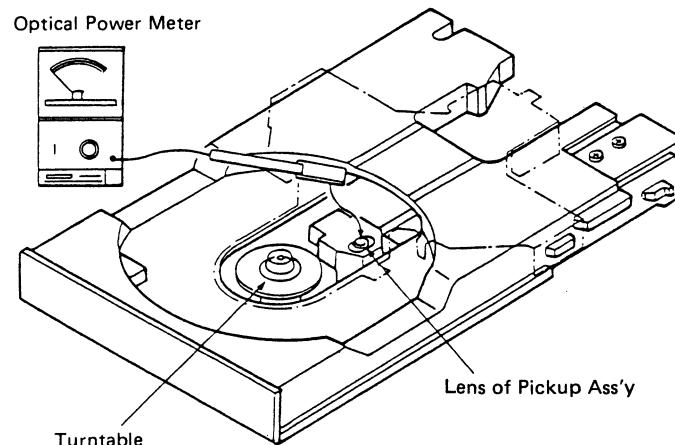

Fig. 3.3

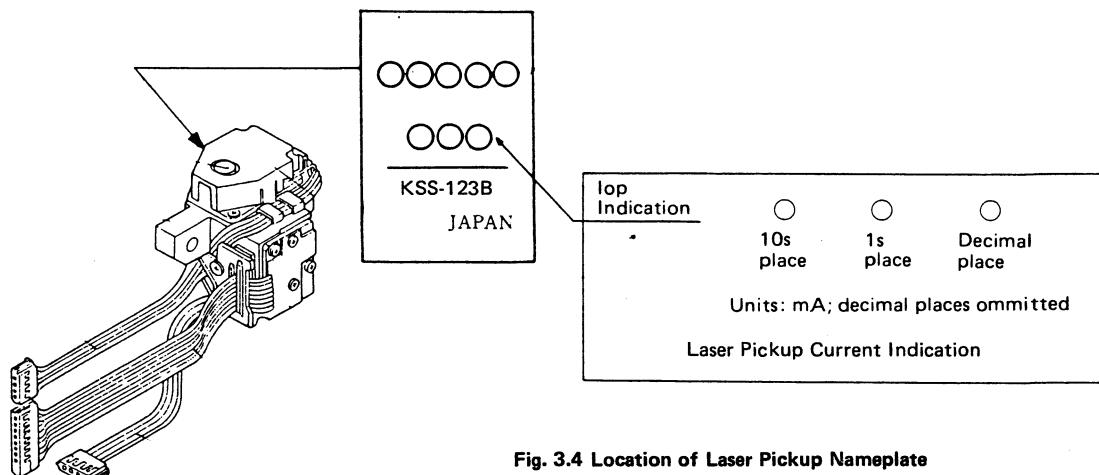

Fig. 3.4 Location of Laser Pickup Nameplate

### 3.4 Adjustment of VCO on Main P.C.B. Ass'y

#### 3.4.1 VCO Frequency Adjustment (OMS-4 is No signal.)

- (1) Connect the frequency counter to TP205 (VCO Frequency) and TP204 (GND).
- (2) Remove CN-203 connector cord, turn the power switch on, and short-circuit TP201 and TP202.
- (3) Rotate the L201 core and adjust so that the frequency counter shows a value of 4.322MHz.
- (4) After adjusting, turn the power off and connect the CN-203 connector cord.

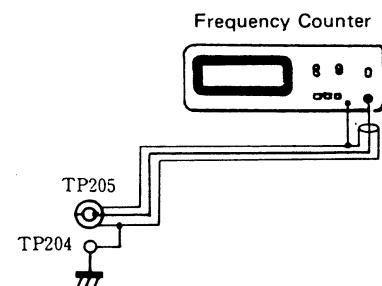

Fig. 3.5

### 3.5 Adjustment of Servo P.C.B. Ass'y

#### 3-5-1 Setting of initial position of the semi-fixed volume

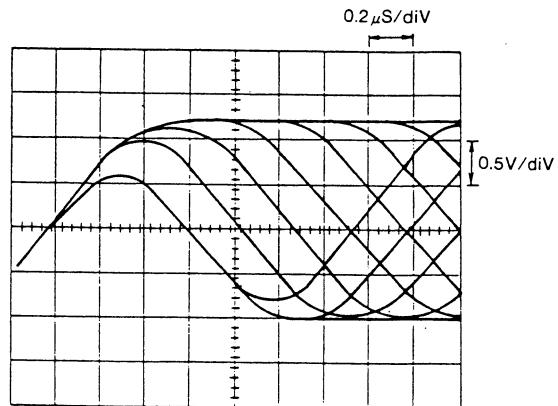

Before adjusting, preset all semi-fixed volumes are their mechanical center (VR101, 102, 103, 104).

#### 3.5.2 Tracking Offset Adjustment

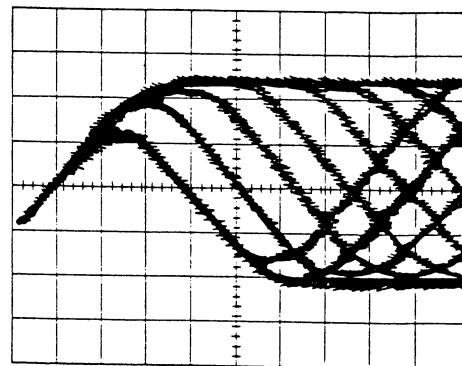

- (1) Rotate VR103 fully clockwise.
- (2) Short circuit TP105 and TP106, and without inserting a disc adjust VR104 so that the voltage of TP103 (Tracking Coil Output) and TP102 (GND) is  $0 \pm 5\text{mV}$ .
- (3) Disconnect TP105 and TP106, then preset VR103 to mechanical center.

#### 3.5.3 Focus Offset Adjustment

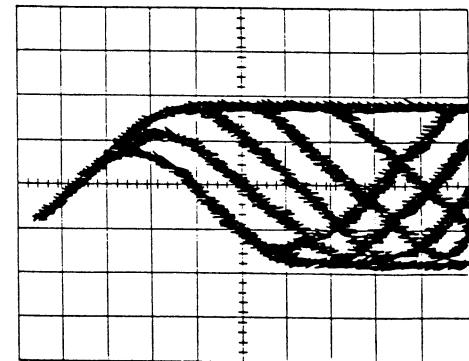

- (1) Connect a DC voltmeter across R184 ( $120\Omega$ ) on Servo P.C.B. Ass'y.
- (2) Short circuit TP105 and TP106 (Laser Power On) on Servo P.C.B. Ass'y.
- (3) Turn the power switch on, and calculate the current from voltage on both ends of R184, and check that the difference compared to the laser pickup indication (Fig. 3.6) is within  $\pm 10\%$  for the negative side. Next turn the power switch off and disconnect the AC voltmeter.
- (4) Turn the power back on, set the Philips Test Sample 5 test disc, and observe the TP201 output waveform (EFM signal).
- (5) Adjust the VR101 so that the EFM signal level becomes high and the waveform becomes distinct, so that the lines are not thick (Fig. 3.6).

Focus Offset VR (VR101) Adjustment

Focus Offset VR (VR101) at Maximum  
(Level is high but waveform is unclear)

Focus Offset VR (VR101) at Minimum  
(Level is low and waveform is unclear)

Fig. 3.6 Focus Offset VR EFM Signal Waveforms

### 3.5.4 E-F Balance Adjustment (Supplementary Beam Balance Adjustment)

- (1) Turn the power off and use a  $10k\Omega$  resistor to short TP105 and TP106.
- (2) Connect the oscilloscope between TP201 (EFM signal) and TP202 (GND), and also between TP108 (Tracking Error) and TP107 (GND).
- (3) Turn the power switch, load the Philips Test Sample 5 test disc and playback from the first selection.
- (4) Connect TP402 (MPU Reset Terminal) and TP401 (+5V) on the Main P.C.B. Ass'y. (As the microprocessor is in the Reset mode, the LED does not light)
- (5) Rotate VR103 (Tracking) fully clockwise.
  - a) Oscilloscope Ranges
  - b) Voltage Range (AC): CH1 . . . 1V  
CH2 . . . 2V
  - c) (Set trigger on CH2)
  - d) Sweep Range: 1ms

- (6) Observe the tracking error waveforms (Fig. 3.7) and adjust VR102 so that the GND line is positioned at exactly half the waveform P-P value.
- (7) Turn the power switch off, disconnect the oscilloscope, TP401 (+5V) and TP402 (MPU Reset terminal), and set VR103 to the mechanical center.

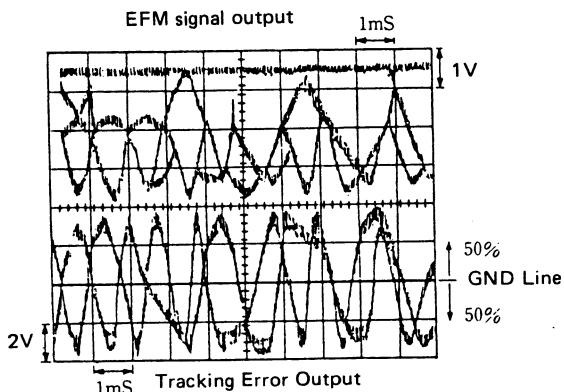

Fig. 3.7

### 3.6 DISTORTION ADJUSTMENT

(Adjust after the Servo P.C.B. adjustment has been completed) Play the 20th selection on the Sony Type III test disc (1kHz – 60dB). Connect the L.P.F. (20kHz) to the AC voltmeter and the distortion meter.

Adjust the VR301/302 so that distortion in the 3% range is as low as possible.

> Dynamic range is greater than 91 dB.

< Check to make sure that distortion is below 0.007%.

### 3.5.5 Tracking Gain Adjustment

- (1) Load the Philips Test Sample 5 test disc (non-scratched), observe the noise voltage on the voltmeter, and adjust VR103 so that the noise voltage on TP103 (Tracking) and TP102 (GND) is 0.26V RMS  $\pm 0.01V$  (Fig. 3.8).

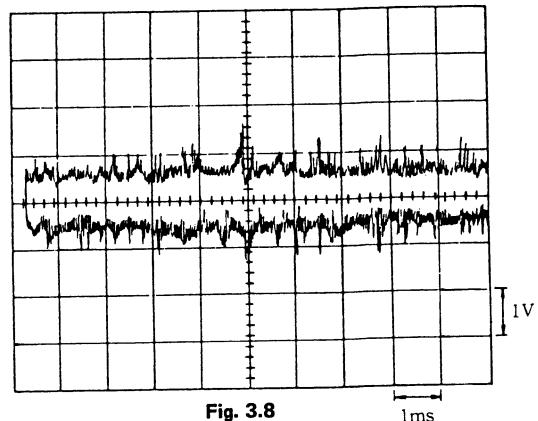

Fig. 3.8

### 3.5.6 Lens Kick Gain Check

- (1) Connect TP201 (EFM signal) and TP202 (GND) to CH1 on the oscilloscope, and TP104 (lens kick pulse) and TP102 (GND) to CH2.
- (2) Insert the Philips Test Sample 5 test disc and check the size of the TP201 (EFM signal) output waveform (Fig. 3.9).
- (3) Pause at selection 10 on the Philips Test Sample 5 test disc.  
Oscilloscope Range:  
Voltage Range (AC): CH1 . . . 1V  
CH2 . . . 2V  
Sweep Range: 0.2ms  
Set a trigger on the leading edge of the TP104 waveform on CH2 (Lens Kick) and observe the TP201 waveform (Fig. 3.10).

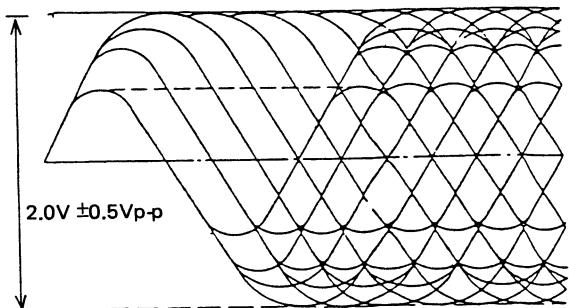

Fig. 3.9 EFM Signal

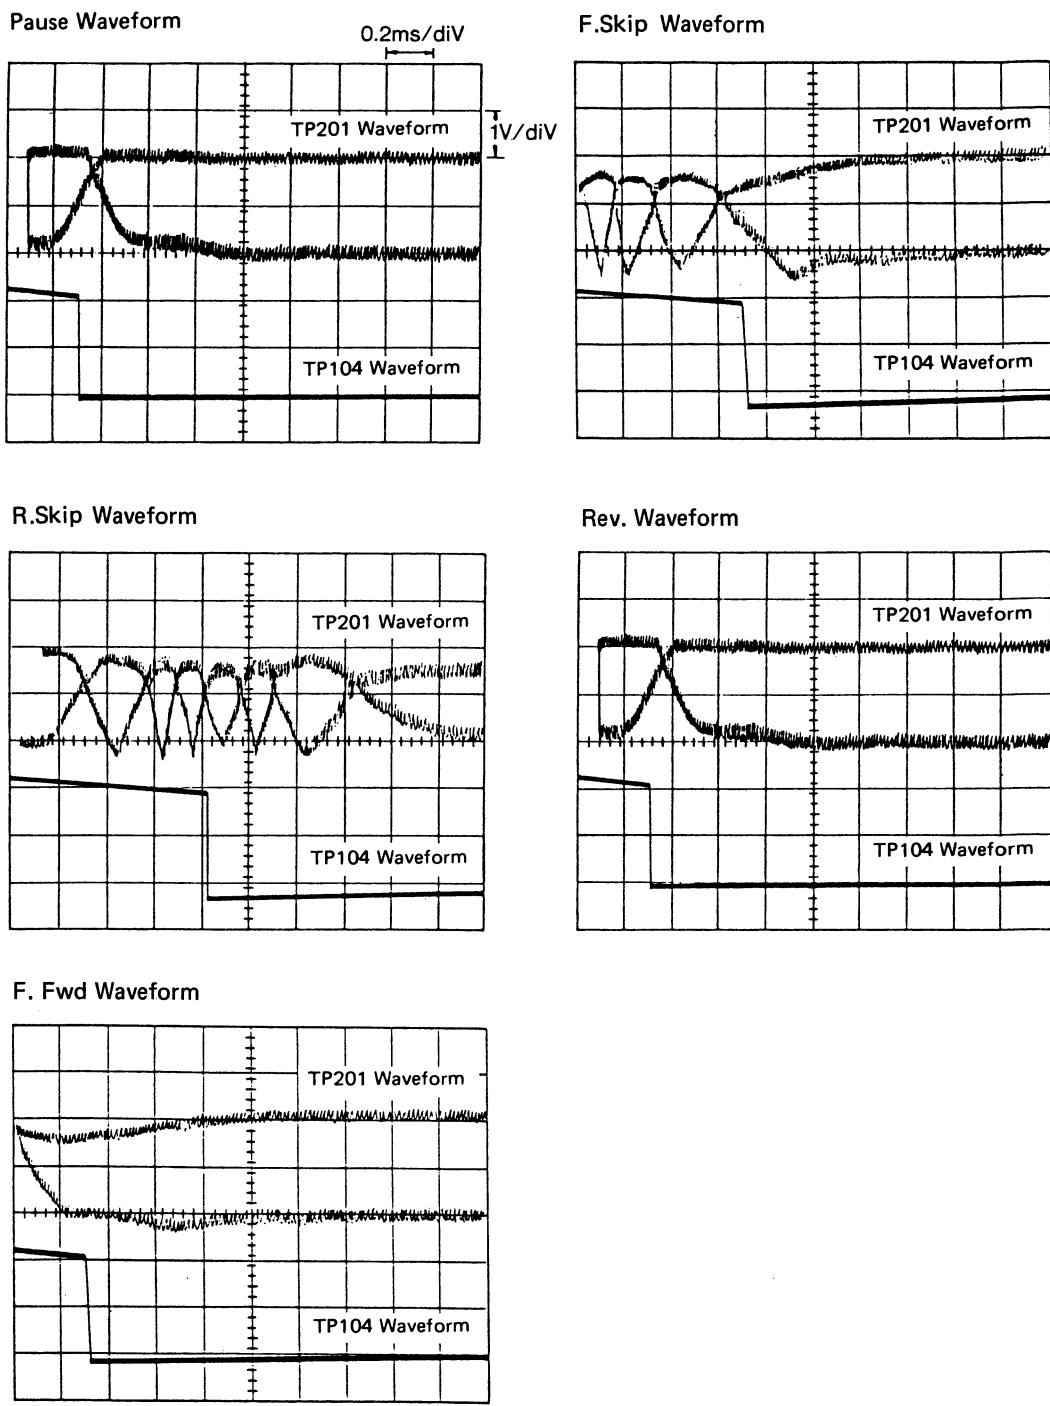

Fig. 3.10 EFM Signal Waveforms Upon Track Jump

### 3.7 Operation Check

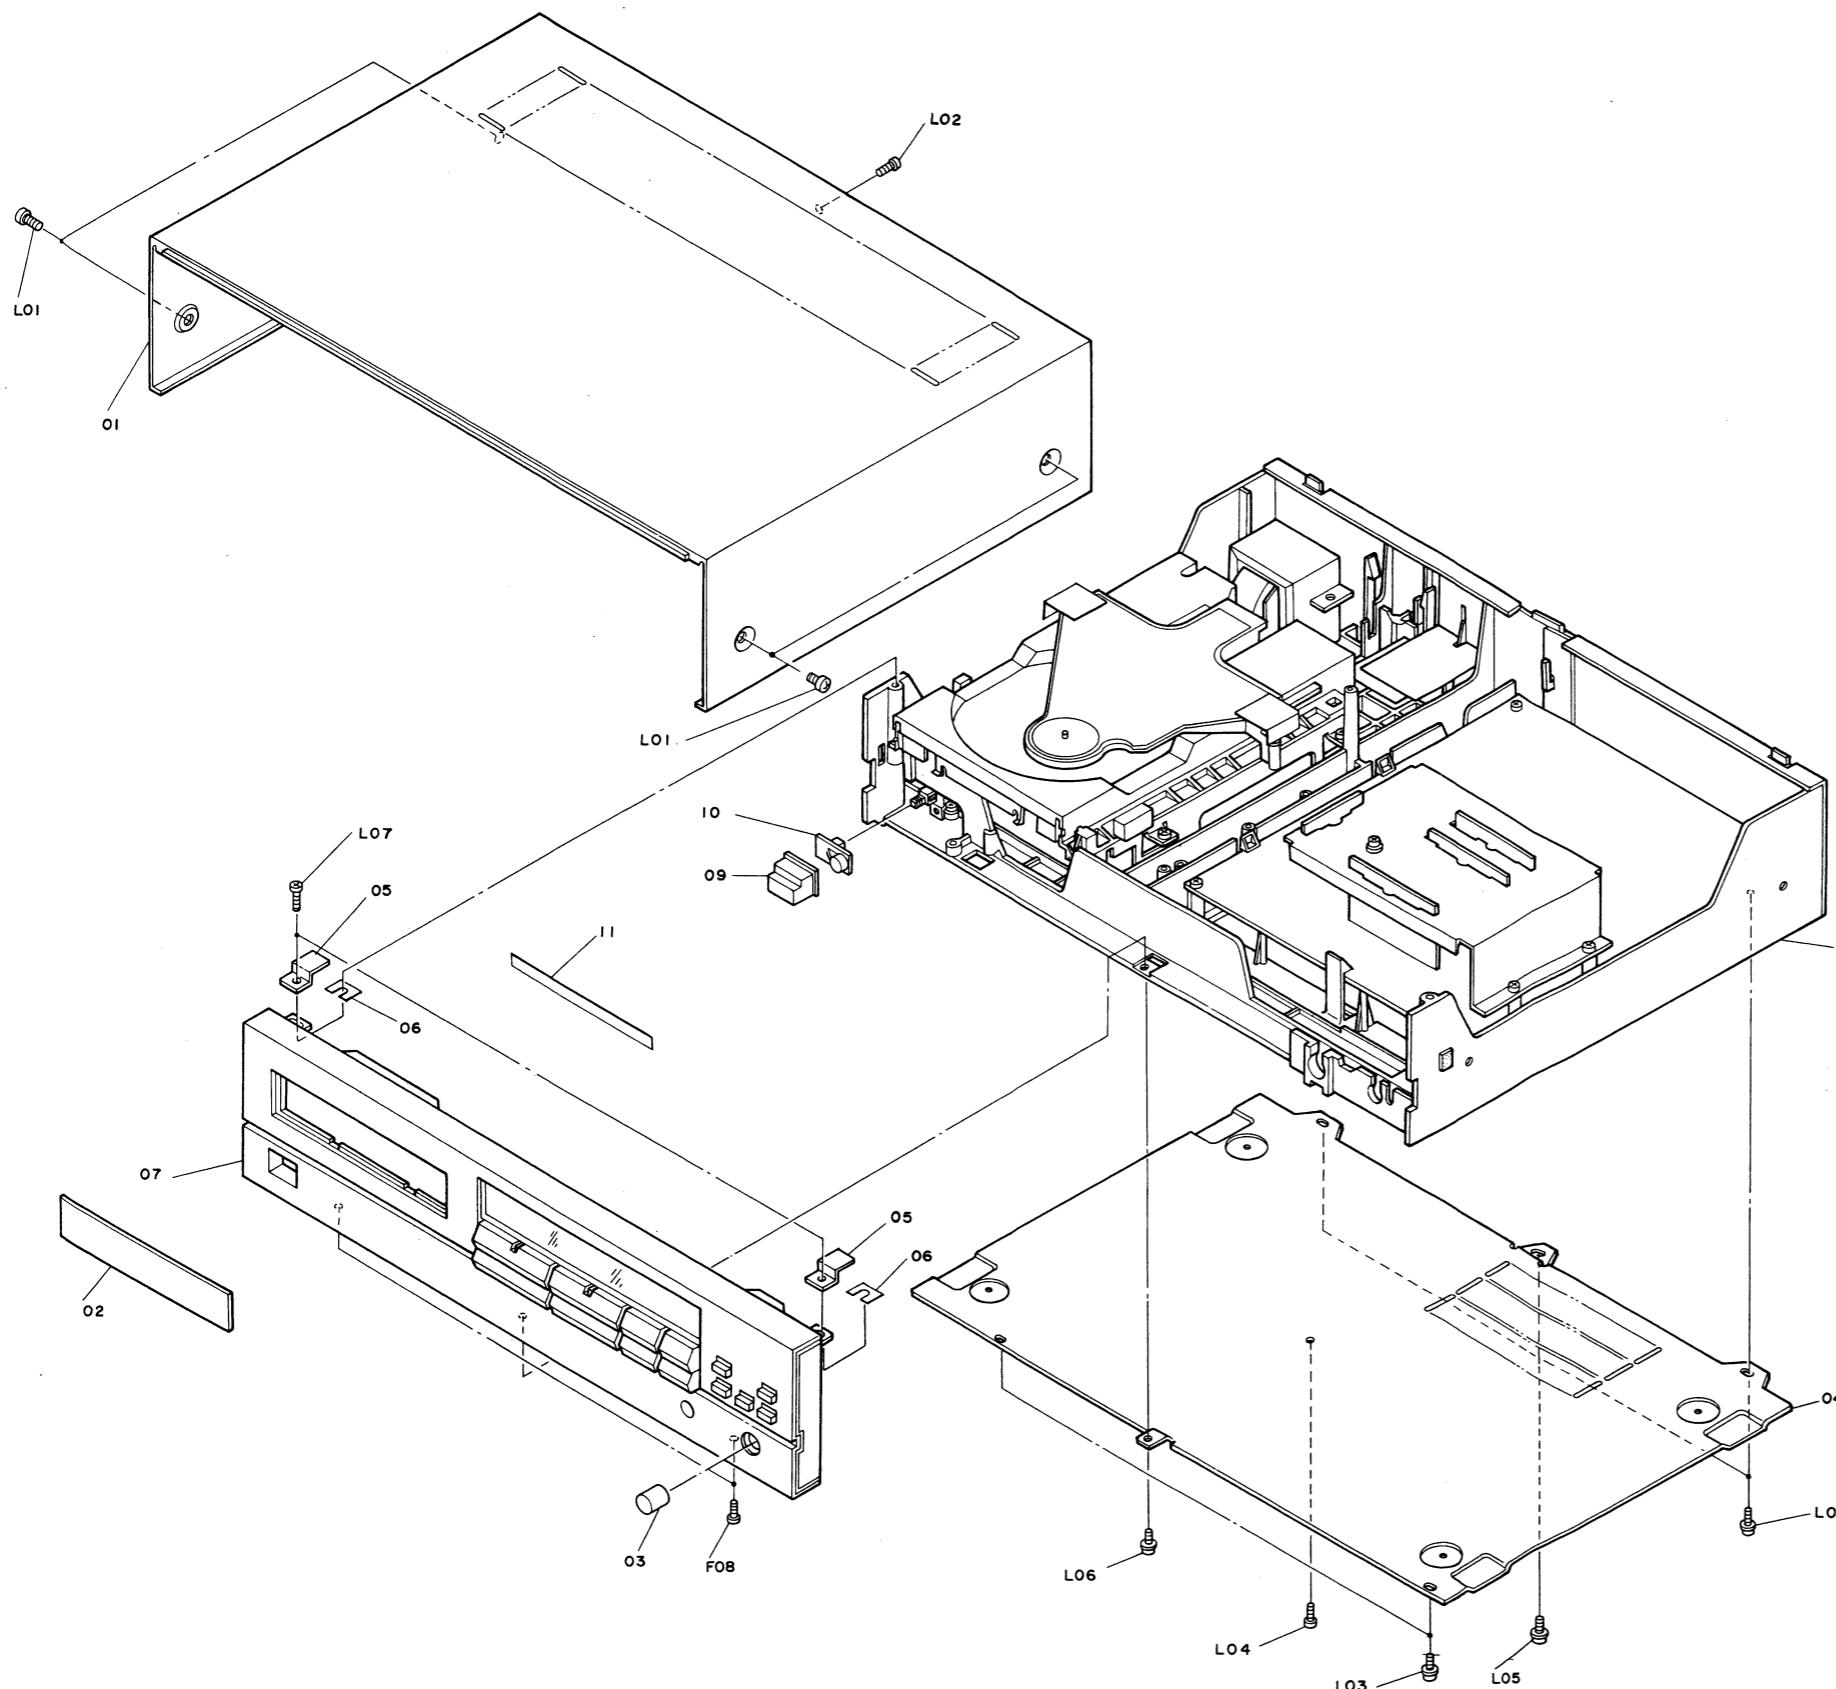

#### 3.7.1 Playability

Use the Philips Test 5A (scratched) test disc, play the following portions and make sure no tracks are jumped.

- (1) Wedge (Interruption)  
Selection 6 0'00" – 0'30"
- (2) Black Spot (Black Dot)  
Selection 12 1'10" – Selection 13 0'30"
- (3) Fingerprint  
Selection 19 0'00" – 0'30"

## 5. MOUNTING DIAGRAMS AND PARTS LIST

### 5.1. Main P.C.B. Ass'y

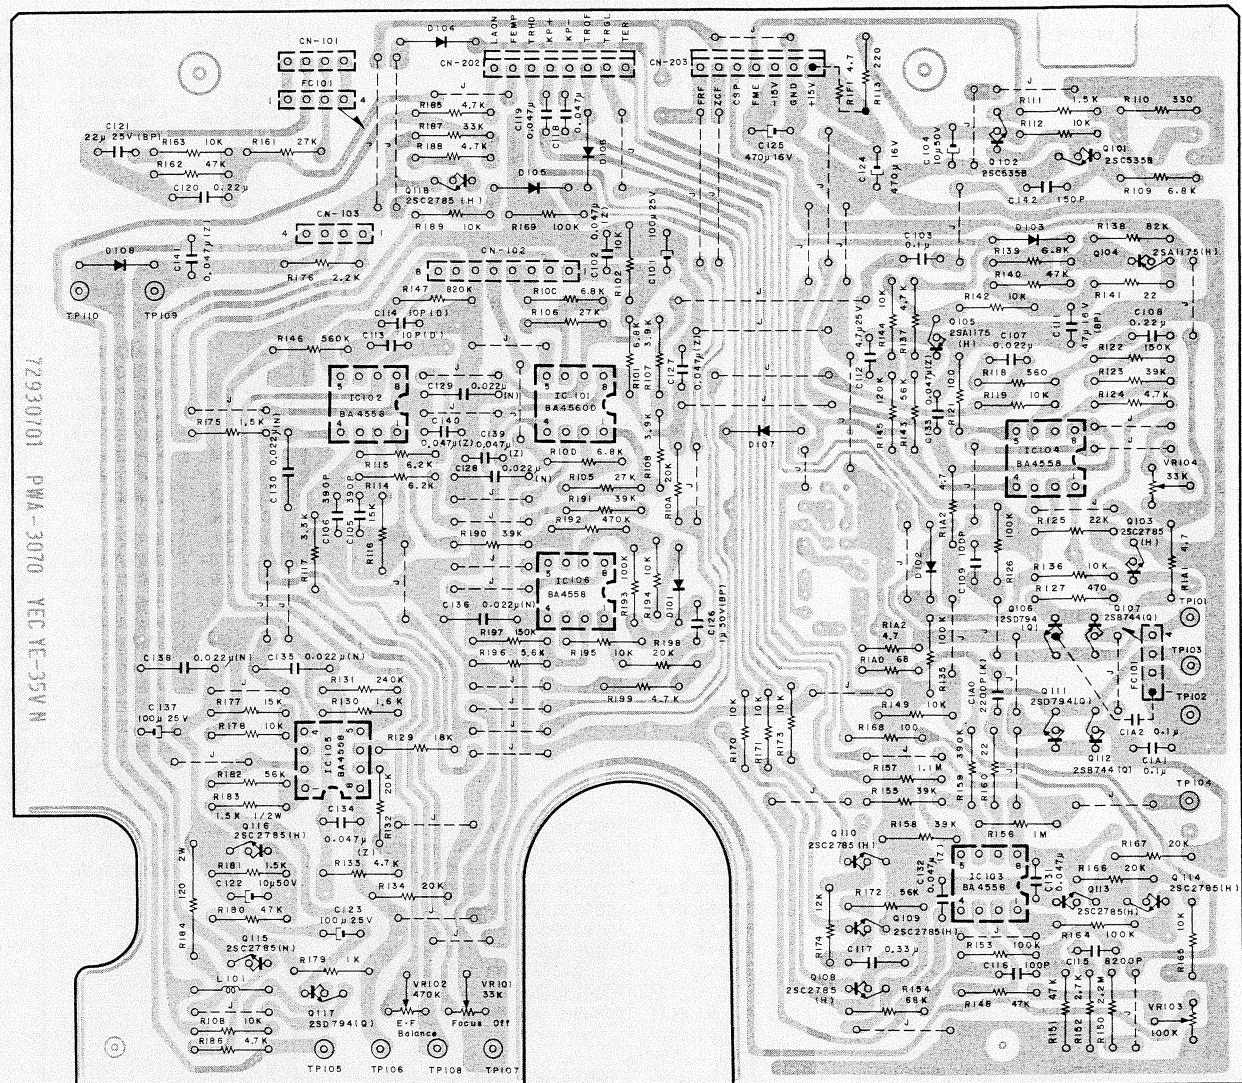

Notes:

1. Mounting diagram shows a dip side view of the printed circuit board.
2. Diode is 1S2473 unless otherwise specified.
3. Abbreviation for part name:
  - TR – Transistor, SiD – Silicon Diode, Varicap – Variable Capacitance Diode
  - RK – Carbon Resistor, RM – Metal Film Resistor, RF – Fail Safe Type Resistor
  - CE – Electrolytic Capacitor, CM – Mylar Capacitor, CC – Ceramic Capacitor,
  - CT – Tantalum Capacitor, C – Mica Capacitor
  - CF – Film Capacitor
  - CSP – Polystyrene Capacitor
  - CMM – Metalliged Mylar Capacitor

## 6. IC BLOCK DIAGRAM

### IC201 Terminal Functions

Terminal number	Terminal code	I/O	Outline of functions
1	VDD	I	+5V power supply terminal
2	VCOX	O	The LC resonance circuit is connected between these terminals.
3	VCOI	I	These terminals are used for the VCO clock oscillation (average 8.6436MHz).
4	PCO	O	This is the VCO clock control output terminal. This sets the VCO clock oscillation circuit so that the frequency increases when the average DC voltage between these terminals is high.
5 20	VCC VSS	I I	These are the grounding terminals.
6 7	EFMX EFMX	O O	Connect to the EFM signal slice level control circuit. This is the amplification-limited EFM signal output terminal. 8 > 7. The gain of 7 > 6 is 15.
8	EFMI	I	EFMI signal (1 – 2 VPP) into this terminal
9	SYEQ	O	This is the monitor output terminal that gives a "H" level signal when the synchronization signal of the EFM signal and the synchronization signal of the internal counter correspond.
10 11	DM + DM -	O O	These are the DISC Motor output terminals, connected to the disc motor driver circuit. It is not possible for both terminals to register "H" simultaneously.
12	FCS	O	This is the focusing output terminal.
13	FZC	I +	Based on the focus error signal, an "L" signal will be input when the focus point is reached.
14	FRF	I	An "H" signal will be entered into this terminal when reflected light is received.
15	H <sup>F</sup>	I	The EFM envelope signal (amplitude logic level) is entered into this terminal.
16	TER	I	The tracking error signal (amplitude logic level) is entered into this terminal.
17	TEST	I +	This test terminal is to be grounded, and contains pull-up resistors.
34	TCL	I +	This test terminal is ungrounded, and contains pull-up resistors.
18	TROF	O	This is the output terminal that switches off the tracking signal of the tracking servo circuit.
19	TRGL	O	This output terminal minimizes the gain of the tracking servo circuit.
20	TRHD	O	This output terminal holds the tracking error signal of the tracking servo circuit while KP+ or KP- (see below) are being output.
22 23	KP + KP -	O O	These output terminals are for the track kick function, and are connected to the tracking servo circuit.
24	FEOF	O	This output terminal is used to switch off the input signal of the feed servo circuit.
25 26	FEM + FEM -	O O	This request output terminal is connected to MPU, and requests that connected to the feed servo circuit.
27	WQ	O	This request output terminal is connected to MPU, and requests that data be sent from SVC > MPU.

Terminal number	Terminal code	I/O	Outline of functions
28	R/W	0	This output terminal is connected to MPU, and is used for the switching of the data transmission mode. When R/W = "L", data is transmitted from SVC > MPU, and when R/W = "H", data is transmitted from MPU > SVC.
29	DOUT	0	This data output terminal is connected to MPU. When R/W = "L", data can be transmitted from SVC > MPU according to the SCK clock input.
30	DIN	I	This data input terminal is connected to MPU. When R/W = "H", data is transmitted from MPU > SVC according to the SC key clock input.
31	SCK	I	Connected to MPU, this terminal is for the clock input, required for data transmission.
32	XFSY	I	This is the frame synchronization signal (7.35kHz) input terminal, connected to the SCG output.
33	φ4	I	This is the crystal clock (4.321MHz) input terminal, connected to the SGP output.
35	RCX	I +	Connected to MPU, this terminal is for the clock input, required for the subcode transmission. It is disconnected when not being used.
36	VFSY	0	This is the VCO frame synchronization signal (average 7.35kHz) output terminal, connected to MPU. Detecting the change form "H" > "L", this can be used as a request signal, requesting that the subcode be transmitted from SVC > MPU.
37	SUB	0	This is the subcode output terminal, connected to MPU. The subcode can be transmitted from SVC > MPU according to the RCK clock input.
38	DSY	0	This is the synchronization signal output terminal for the serial signals (see below), connected to the SGP input.
39	DATA	0	This is the serial signal output terminal for the 8 bit EFM demodulation signals and the 5 bit control signals, connected to the SGP input.
40	CK	0	This is the VCO clock (average 4.3218MHz) output terminal, connected to the SGP input.

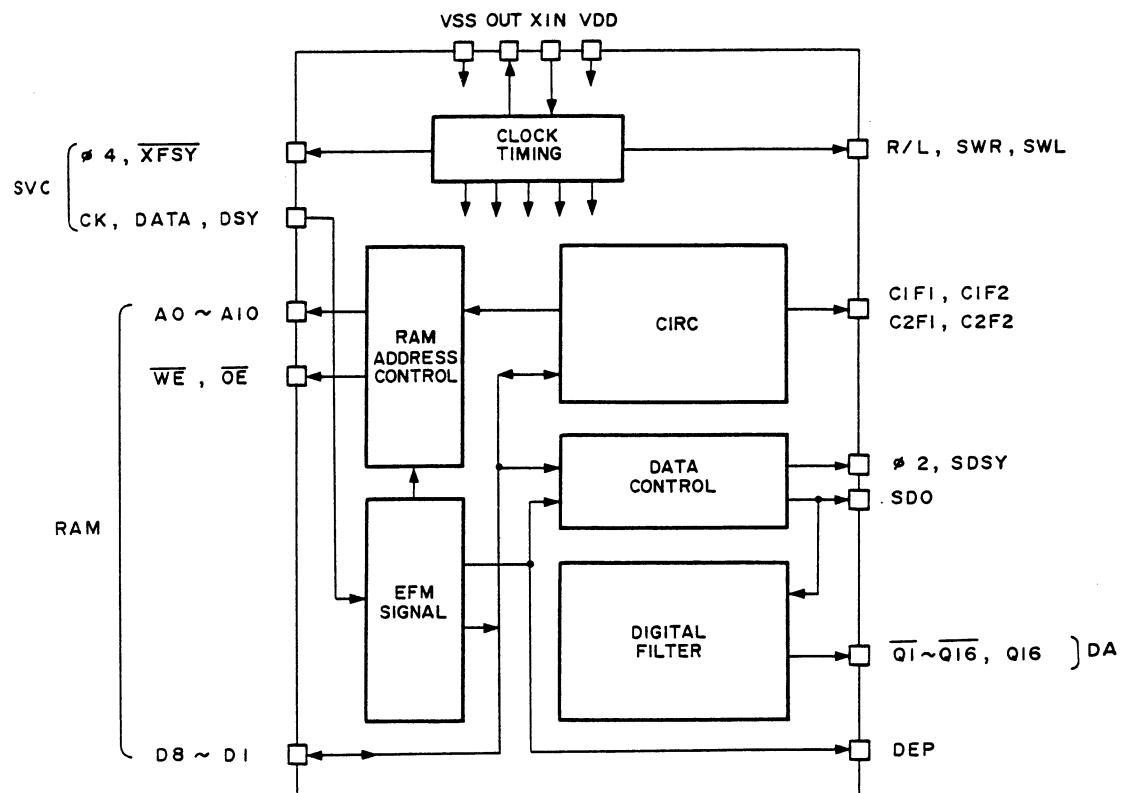

IC MOS YM3811  
IC201

#### 4. IC202 Terminal Functions

Terminal number	Terminal code	I/O	Outline of functions
1 17	VSS VSS	I I	These are the grounding terminals.
2 3 7 8	TEST 1 TEST 2 TEST 3 TCL	I + I + I + I +	These test terminals are ungrounded, and contain pull-up resistors.
4	CK	I	This is the VCO clock (average 4.3218MHz) input terminal, connected to the SVC output.
5	DATA	I	This is the serial signal input terminal for the 8 bit EFM demodulation signals and the 5 bit control signals, connected to the SVC output.
6	DSY	I	This is the synchronization signal input terminal for the serial signals (see above), connected to the SVC output.
9	φ4	O	This is the crystal clock (4.3218MHz) output terminal, connected to the SVC input.
10	XFSY	I/O	This is the frame synchronization signals (7.35kHz) output terminal, connected to the SVC input. (During test operations, the synchronization can be resynchronized by setting this terminal to the "L level".)
11 12 13 14 15 16 18 19 20 21 24	A0 A1 A2 A3 A4 A5 A6 A7 A8 A9 A10	0 0 0 0 0 0 0 0 0 0 0	These are the address output terminals, connected to the RAM address terminals.
22	WE	O	This is connected to the RAM WE terminal. When a "L level" signal is registered, the RAM will be set to the WRITE mode.
23	OE	O	This is connected to the RAM OE terminal. When a "L level" signal is registered, the RAM will be set to the READ mode.
25 26 27 28 29 30 31 32	D8 D7 D6 D5 D4 D3 D2 D1	I/O I/O I/O I/O I/O I/O I/O I/O	These are connected to the RAM data terminals. The output mode is set when the cycle at the data input terminal is WE = "L", and the input mode is set when the cycle is WE = "H".
33	DEP	O	This is the output terminal for the audio frequency characteristics switching signals of the audio filter. The emphasis will be required when "H" is registered.

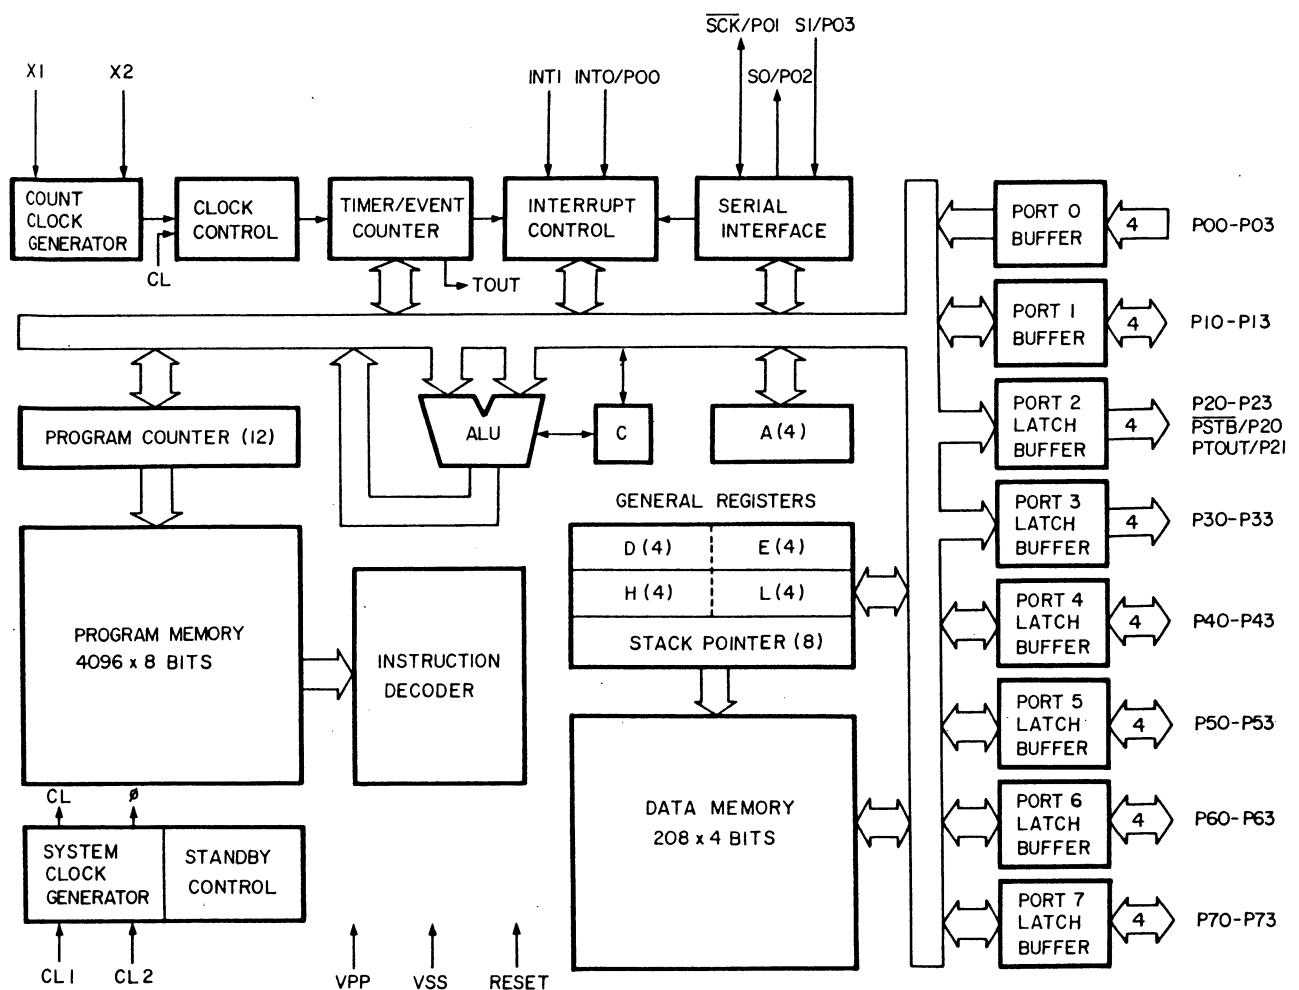

Terminal number	Terminal code	I/O	Outline of functions
34	$\bar{Q}1$	0	Connected to the DAC input, the parallel signals are output by way of the internal digital filter from these terminals. The output is in alternation from the left and right channels. The output rate for each channel is 88.2kHz. Connect either Q16 or ( $\bar{Q}16$ ), according to the DAC to be used.
35	$\bar{Q}2$	0	
36	$\bar{Q}3$	0	
37	$\bar{Q}4$	0	
38	$\bar{Q}5$	0	
39	$\bar{Q}6$	0	
40	$\bar{Q}7$	0	
41	$\bar{Q}8$	0	
42	$\bar{Q}9$	0	
43	$\bar{Q}10$	0	
44	$\bar{Q}11$	0	
45	$\bar{Q}12$	0	
46	$\bar{Q}13$	0	
47	$\bar{Q}14$	0	
48	$\bar{Q}15$	0	
49	$\bar{Q}16$	0	
50	Q16	0	
51	$\phi 2$	0	This is the crystal clock (2.1609MHz) output.
52	SDO	I/O	This is the serial signal output for the DAC. Using a $\phi 2$ clock beat rate, the signals are output from LSB in the order of L channel 24 bit – R channel 25 bit.
53	SDSY	0	This is the synchronization signal output for the above serial signals. The level is "H" for L channel and "L" for R channel.
56	TEST	I+	This test terminal contains pull-up resistors, and is normally disconnected. Using an "L" signal, it is also possible to input serial signals with the same format as the above serial signals from the SDO terminal into the digital filter.
54	C1F1	0	This monitor output terminal depicts the C1 and C2 error correction operation mode.
55	C1F2	0	
57	C2F1	0	
58	C2F2	0	
59	R/L	0	This is the output terminal for the channel allocation signal of the DAC analog output. "H" is for the R channel, and "L" is for the L channel.
60	SWR	0	This is the deglitch signal for the respective channels of the DAC analog output.
61	SWL	0	
62	VDD	I	This is the +5V power supply terminal.
63	XIN	I	A crystal oscillator is connected between these terminals, which are used for the crystal clock (8.6436MHz) oscillation.
64	XOUT	O

## 7. SCHEMATIC DIAGRAM

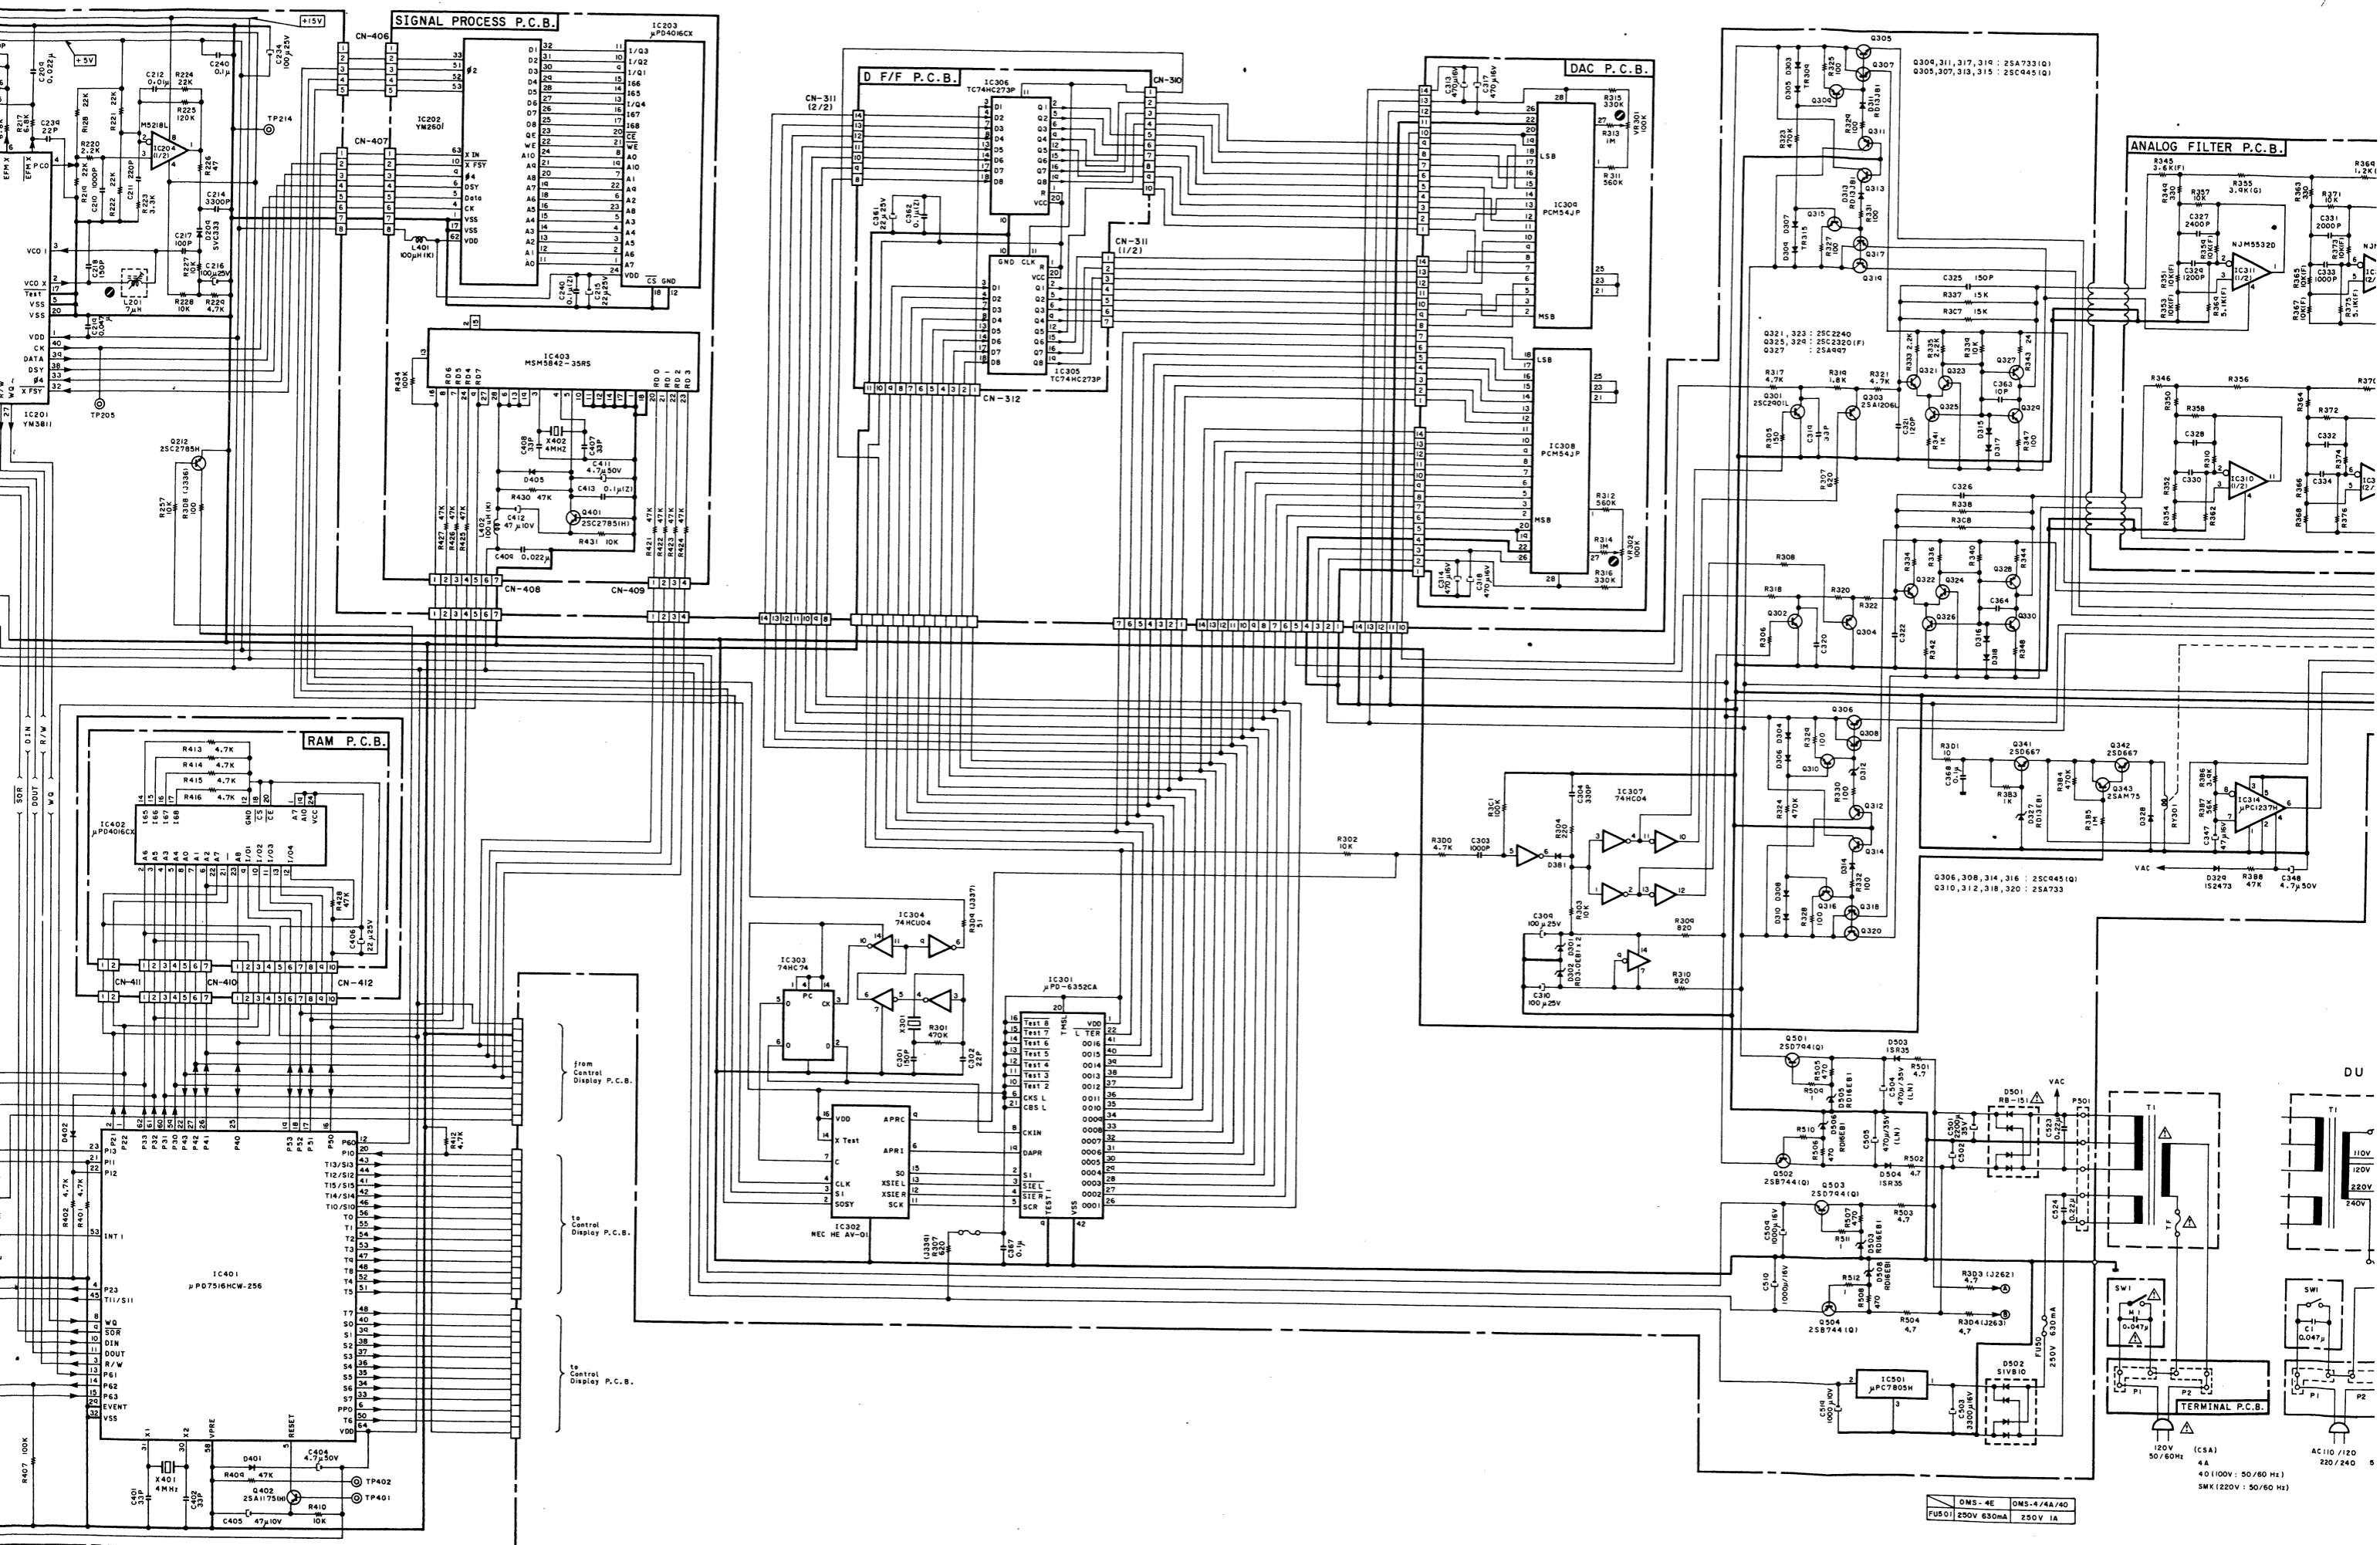

### Notes:

1. Diode is 1S2473 unless otherwise specified.
2. Resistor and capacitor marked with \* show typical value.

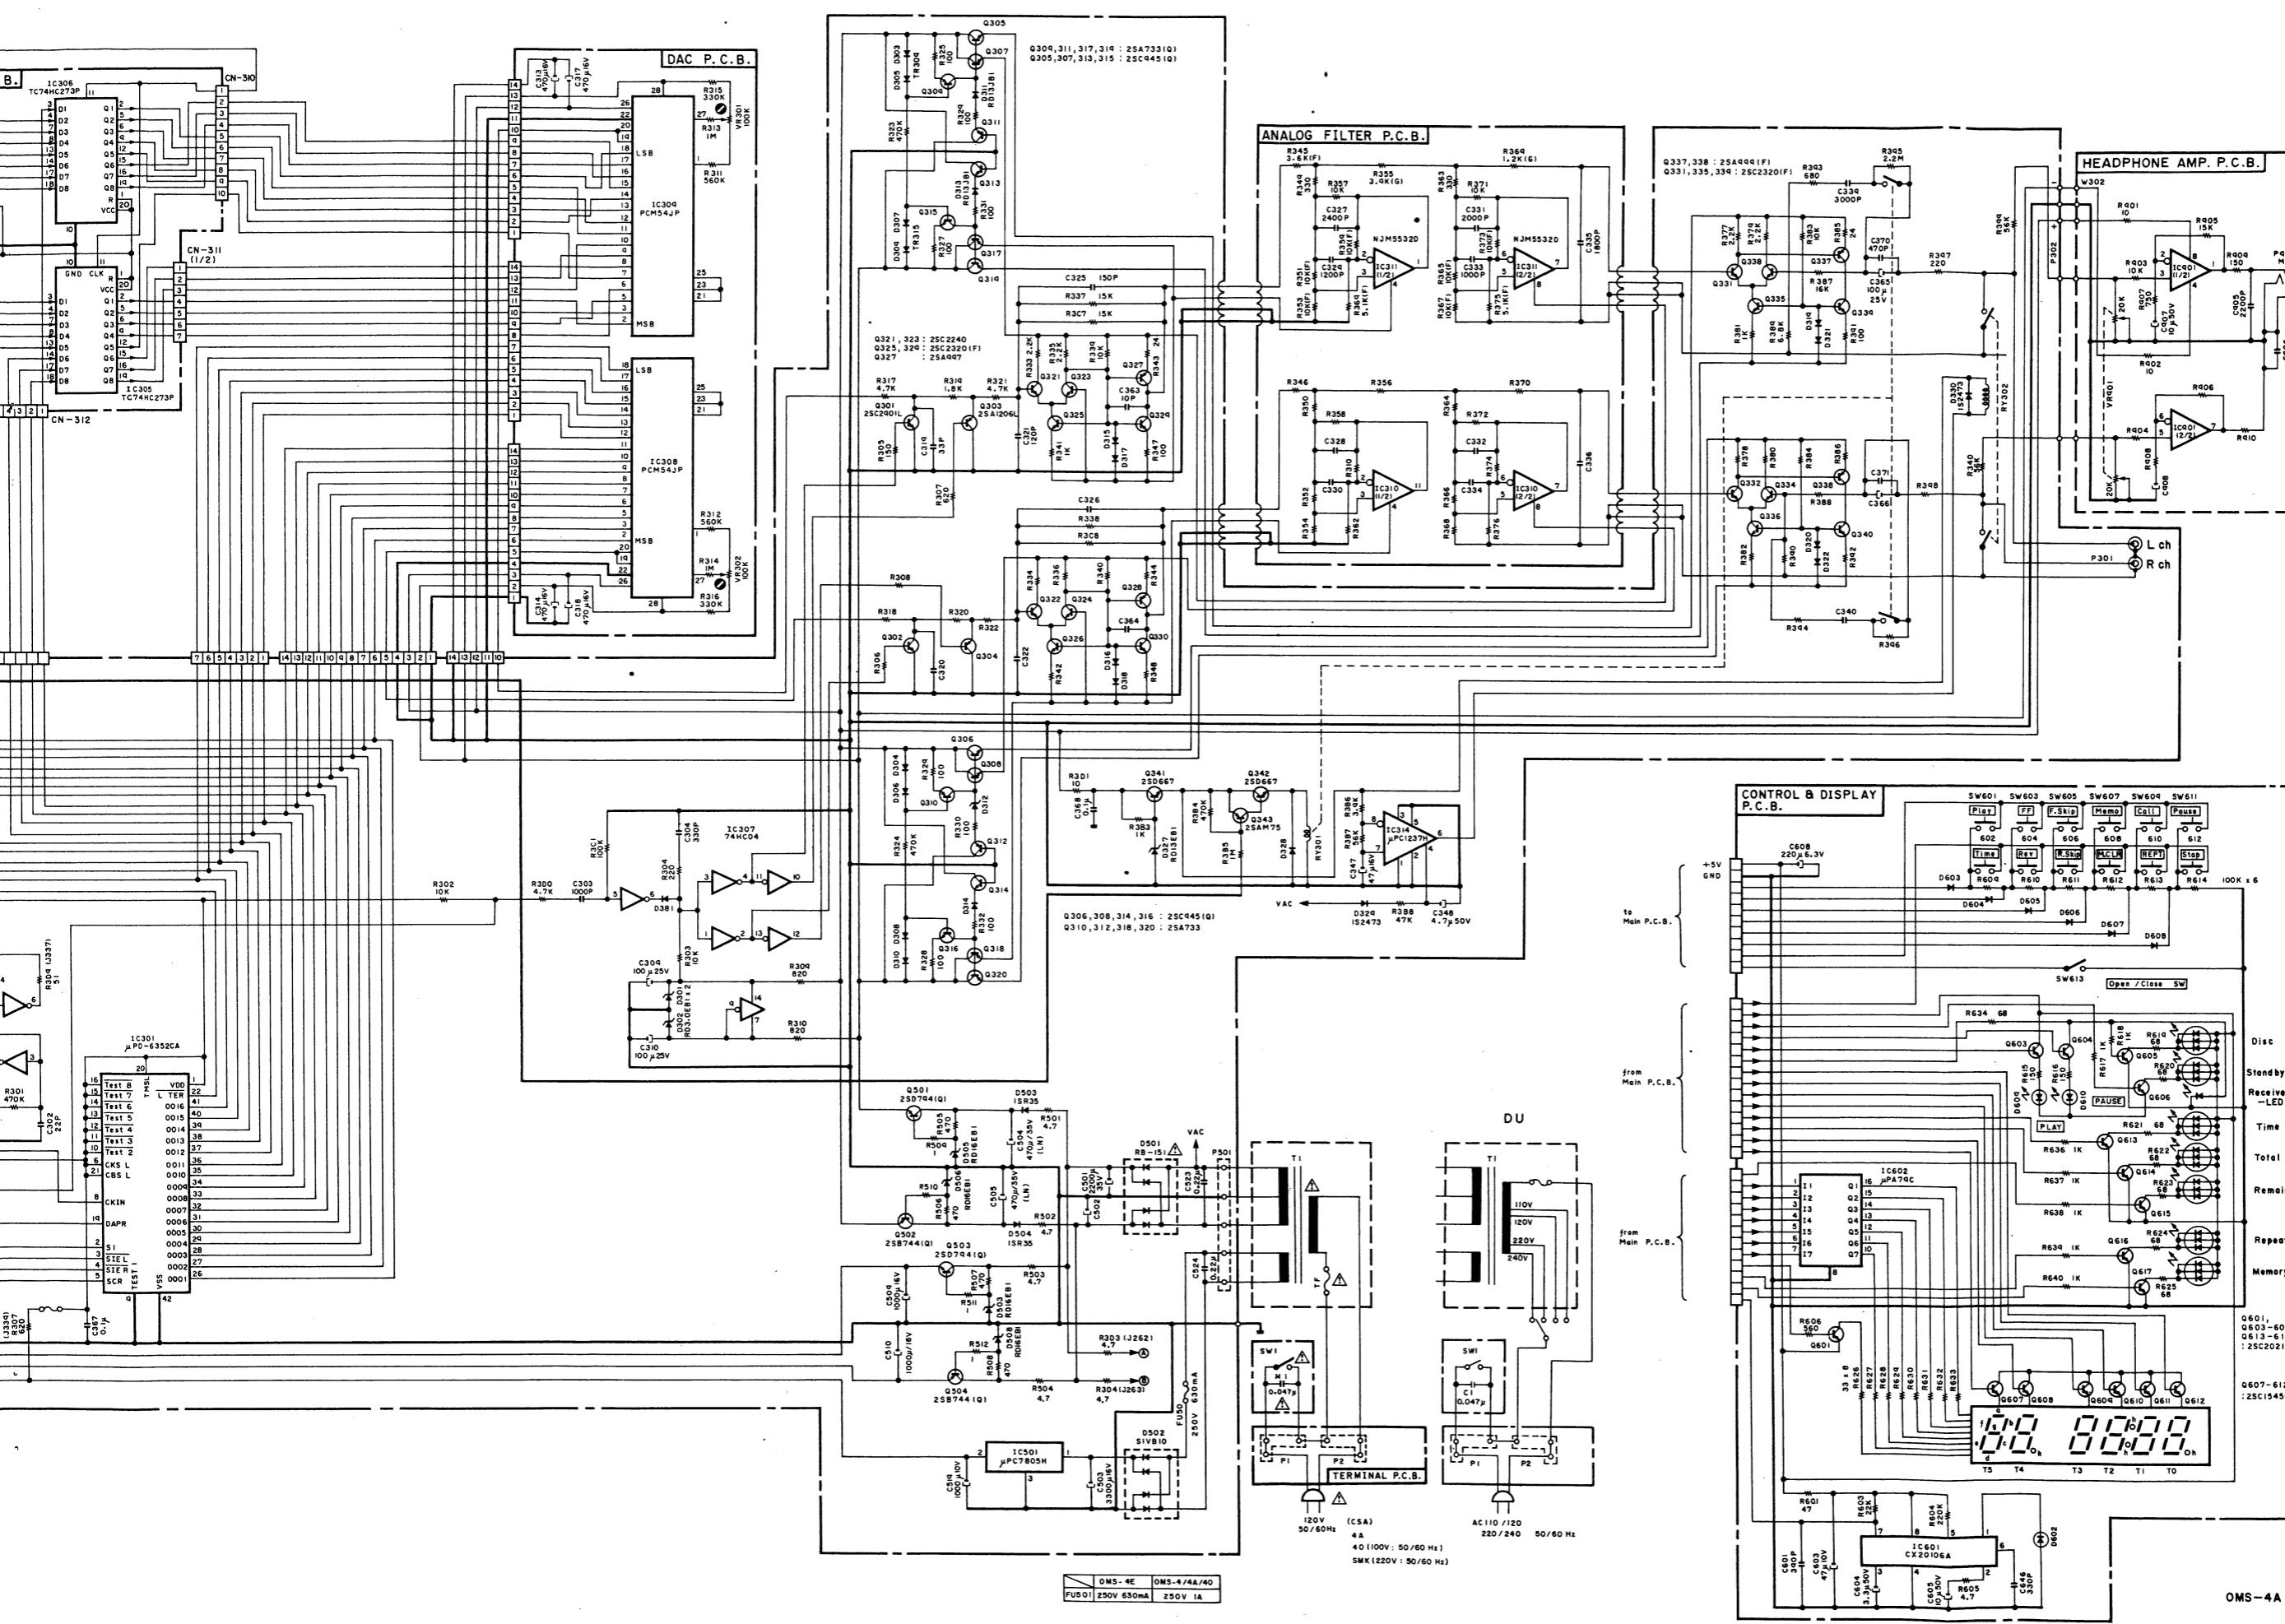

### Warning:

Parts marked with the symbol  $\Delta$  have critical characteristics.  
Use ONLY replacement parts recommended by the manufacturer. It is recommended that the unit be operated from a suitable DC supply or batteries during initial check-out procedure.

### ■ Main Unit

System . . . . . Compact Disc digital audio  
Signal Readout . . . . . Optical (semiconductor laser)  
Error Correction . . . . . CIRC principle  
Number of Channels . . . . . 2 channels, stereo  
Sampling Frequency . . . . . 44.1 kHz  
Quantization . . . . . 16 bit linear  
Disc Rotational Velocity . . . . . Approx 200 to 500 rpm  
(constant linear velocity)  
Wow-and-Flutter . . . . . Below measurement limit  
Frequency Response . . . . . 5 – 20,000 Hz ±0.5 dB  
Signal-to-Noise Ratio . . . . . Better than 100dB  
(IHF A-WTD)  
Dynamic Range . . . . . Better than 93 dB  
Total Harmonic Distortion . . . . . 0.004%  
(1kHz)  
Total Harmonic Distortion + Noise (1 kHz) . . . . . 0.0055%  
Channel Separation . . . . . Better than 94 dB  
Output (Line 1kHz 0dB) . . . . . 2.5V/220Ω  
(Headphone 1kHz, 0dB) . . . . . Approx. 35mW into 40Ω  
Power Requirements . . . . . 120, 220, 240 or  
110-120/220 – 240V  
AC, 50/60 Hz  
(According to country of sale)  
Power Consumption . . . . . 40 W max.  
Dimensions . . . . . 430 (W) x 100 (H) x 322 (D) mm  
16-15/16 (W) x 3-15/16 (H) x 12-11/16 (D) inches  
Approximate Weight . . . . . 7.1 kg, 15 lbs. , 10 oz.

### ■ Remote Control Unit (RM-4CD)

Principle . . . . . Infrared Pulse system  
Power Supply . . . . . 3V DC (1.5 V x 2)  
Dimensions . . . . . 50 (W) x 19 (H) x 162 (D) mm  
2 (W) x 3/4 (H) x 6-3/8 (D) inches  
Approximate Weight . . . . . 100 g, 3-1/2 oz (including batteries)
