

ONKYO® SERVICE MANUAL

DIRECT DRIVE

AUTOMATIC RETURN TURNTABLE

Model CP-1017A

ONKYO®
AUDIO COMPONENTS

ADJUSTMENT PROCEDURES

1. Auto-return position adjustment

Auto-return position adjustment is made using the adjustment screw in Fig. 1.

2. Tonearm height adjustment

Remove the T.T. mat. Press the cueing button of right side (▼).

Manual operation

Height adjustment is made using the adjustment screw in fig. 2. Adjust the screw for 12—15mm height between the stylus tip and the turntable platter. Turning the screw counterclockwise lowers the tonearm clockwise raises it.

Auto-return and manual operation

Height adjustment of auto-return and manual is made using the adjustment screw in fig. 1. Adjust the screw for 12—15mm height between the stylus tip and turntable platter. Turning the screw clockwise lowers the tonearm counterclockwise raises it.

Note:

The tonearm height adjustment is performed simultaneously for auto-return and manual tonearm raising (by cue). Auto-return and manual cue cannot be adjusted separately.)

3. Microswitch gap adjustment

Adjust the microswitch gap by turning eccentric pin in fig. 2.

Adjust the eccentric pin for 0.3mm gap.

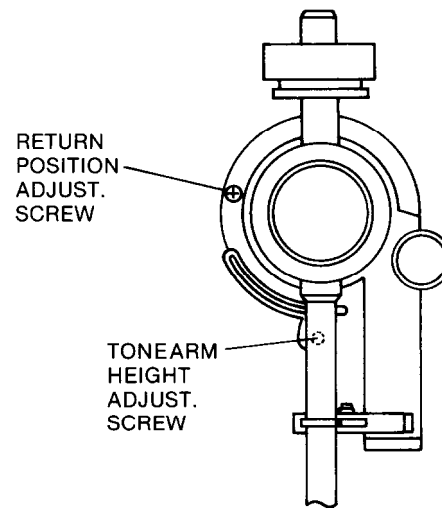

Fig. 1

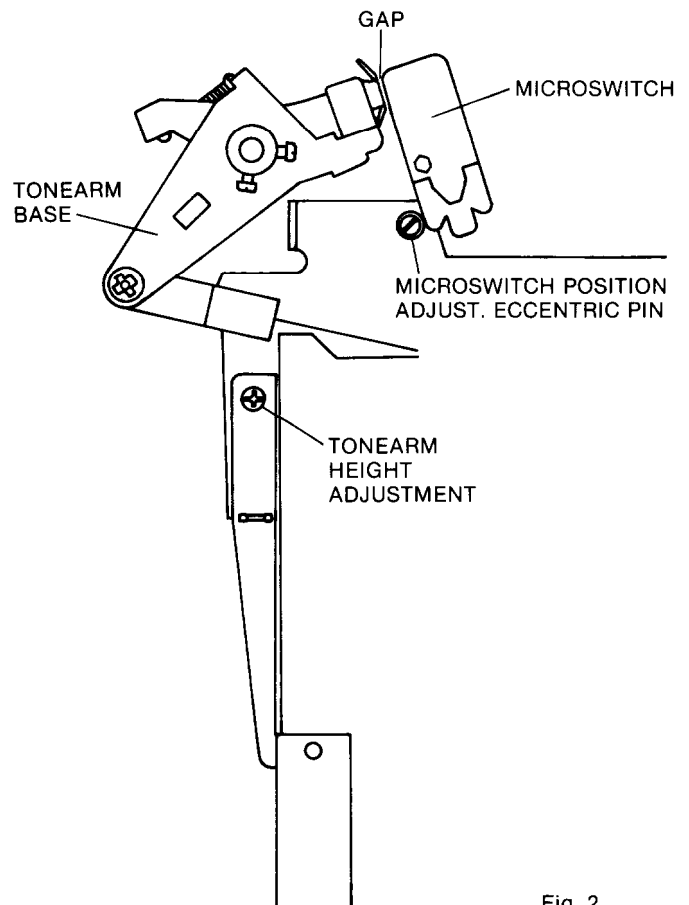

Fig. 2

4. Gear gap adjustment

The gap between the main and T.T gear is adjusted by loosening the motor or auto-return mechanism retaining screws and re-securing the motor or auto-return mechanism when the gap at A and B is 1.3mm.

Adjust the eccentric pin in fig. 3, so that the gap at A and B become same.

5. Speed adjustment

- Set the speed control to center position and confirm that the green L.E.D. lights up.
- Set the speed selector to 33 r.p.m., and adjust VR33 so that the stroboscope stripes appear to be stationary.
- Then switch over to 45 r.p.m., and adjust VR45 to obtain the same stationary stroboscope condition.

Fig. 3

Fig. 4

6. Tonearm lower speed adjustment

- Remove the elevation plate retaining screw in Fig. 5.
- Remove the large circlip. Withdraw the elevation shaft taking care not to damage it.

A. To raise the lowering speed:

Wipe out the (100,000 unit) silicon oil on the spring and area D, and remove a portion of the silicon oil in the oil cup.

B. To lower the lowering speed:

Add (100,000 unit) silicon oil to the oil cup and apply a small amount to area D. Faster lowering speed may be obtained by using a silicon oil of lower viscosity. Before checking the raising or lowering speed, raise and lower the elevation shaft a few times by hand to spread the oil evenly.

ZD902	224096	GZA5.6U
	Capacitors	
C902	352783319	330 μ F, 50V, Elect.
C903	352754709	47 μ F, 25V, Elect.
C904	352781009	10 μ F, 50V, Elect.
C905	352780479	4.7 μ F, 50V, Elect.
	Resistor	
VR201, VR202	5148051	N16RG2KB15, Speed control variable
	Switch	
SW201	25035215	NPS-122-L179, Speed selector
S900	25065109	NSS-2255P, Voltage selector (Only W model)

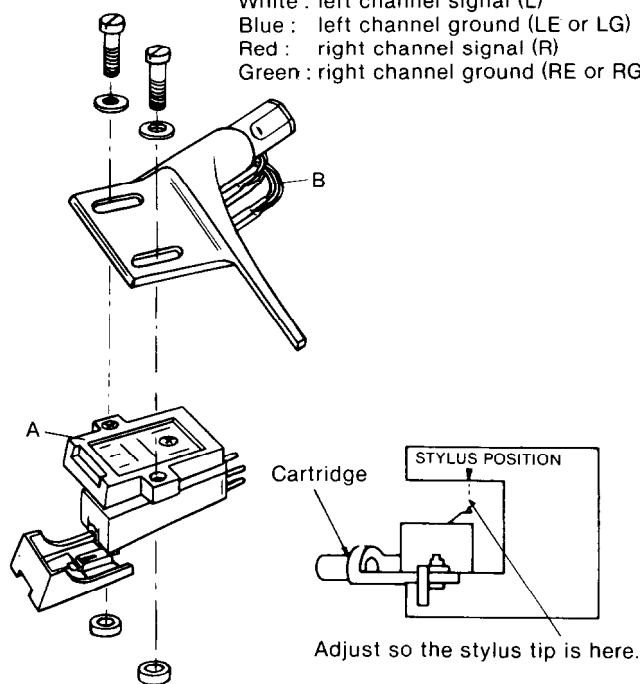

1. Attaching the cartridge

Please use the included headshell when attaching the cartridge. The headshell is designed for almost all cartridges on the market today; be careful not to buy a cartridge that is not compatible. In general cartridges with a mass of 5 — 9 grams should be employed.

Attach the cartridge as shown below, connecting each of the color coded lead wires to the proper terminal. If a mistake is made, no sound will be heard or stereo reproduction will be lost. Also, to prevent damage to the stylus during installation operations, leave its cover on or remove the stylus completely.

Use the included overhang gauge as shown placing the cartridge in the gauge and setting the location of the stylus tip as indicated.

- A. Cartridge
 B. Colors of the headshell lead wires and cartridge terminals:
 White: left channel signal (L)
 Blue: left channel ground (LE or LG)
 Red: right channel signal (R)
 Green: right channel ground (RE or RG)

2. Voltage conversion

Before connecting the unit to an AC outlet, check whether it is set for the local AC voltage. The turntable may be set to operate at either 110 ~ 120V or 220 ~ 240V. The voltage selector is under the turntable. If a voltage change is necessary, remove the lock plate, switch to the proper voltage, and replace the plate. Note that the CP-1017A operates at both 50 and 60Hz power frequencies.

Notice:

Some units have been designed to operate only on AC 240V 50Hz or 120V 60Hz, and are consequently not equipped with a voltage selector.

SPECIFICATIONS

D model	
Type :	Direct drive automatic-return turntable
Turntable Platter :	310mm (12-1/4") aluminum die-cast
Motor :	Electronic servo direct drive brushless DC motor
Speeds :	33-1/3, 45r.p.m., adjustable $\pm 3\%$
Wow & Flutter :	less than 0.028% (WRMS)
Signal-to-Noise Ratio :	better than 70dB (DIN B)
Tonearm :	Statically balanced straight type
Effective Arm Length :	224mm (8-7/8")
Overhang :	13mm (1/2")
Maximum Tracking Error :	+3 degrees, -1 degree
Suitable Cartridge Weight :	5 to 9 grams
Power Supply :	AC 120V, 50/60Hz
Dimensions (W x H x D) :	418mm x 135mm x 380mm
	16-1/2" x 5-3/8" x 15"
Weight :	5.0 kg (11 lbs.)

Due to further product improvements, specifications are subject to change without notice.

CP1017AKL

Cartridge	OC-52V V-magnet type (P.N. 24501388)
Frequency Response	20 — 20,000Hz
Impedance	47k Ω
Output	3.5mV
Stylus tip	0.6 mil diamond
Tracking force	2.0 g
Replacement Stylus	DN-52ST (P.N. 24501318)

G/W model	
Type :	2-speed automatic-return turntable
Speeds :	33-1/3, 45r.p.m., adjustable $\pm 3\%$
Wow & Flutter :	0.028% WRMS
Signal-to-Noise Ratio :	70dB (DIN-B)
Tonearm :	Static balanced straight-type pipe arm
	13mm (1/2")
Overhang :	
Cartridge :	OC-51M
Type :	Moving magnet
Recommended Tracking Force :	2 grams
Output Voltage :	3.5mV
Replacement Stylus :	DN-51ST
Power Supply Rating :	AC110 — 120, 220 — 240V
	50/60Hz (or one voltage only)
Dimensions (W x D x H) :	418 x 380 x 135mm
	(16-1/2" x 15" x 5-3/8")
Weight :	5.0 kg (11 lbs.)

Optional Recommended Headshell SH-21F

Due to further product improvements, specifications are subject to change without notice.
