

ONKYO® SERVICE MANUAL

COMPACT DISC PLAYER MODEL DX-1400

Black model

BUDN, BUD	120V AC, 60Hz
BUG	220V AC, 50Hz
BUU	110/120/220/240V AC, 50/60Hz
BUQA, BUQB	240V AC, 50Hz

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY MARK  ON THE SCHEMATIC DIAGRAM AND IN THE PARTS LIST ARE CRITICAL FOR RISK OF FIRE AND ELECTRIC SHOCK. REPLACE THESE COMPONENTS WITH ONKYO PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL.

MAKE LEAKAGE-CURRENT OR RESISTANCE MEASUREMENTS TO DETERMINE THAT EXPOSED PARTS ARE ACCEPTABLY INSULATED FROM THE SUPPLY CIRCUIT BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

SPECIFICATIONS

Signal readout system:	Optical non-contact
Reading rotation:	About 500~200 r.p.m. (constant linear velocity)
Linear velocity:	1.2~1.4m/s
Error correction system:	Cross interleave readsolomon code
Decoded bits:	18 bits linear
Sampling frequency:	352.8kHz (8 times oversampling)
Number of channels:	2 (Stereo)
Frequency response:	5Hz~20kHz
Total harmonic distortion:	0.004% (at 1kHz)
Dynamic range:	98dB
Signal to noise ratio:	100dB
Channel separation:	100dB (at 1kHz)
Wow and Flutter:	Below threshold of measurability
Power consumption:	12 watts
Output level:	2 volts r.m.s.
Dimensions (W×H×D):	435×112×301mm 17-1/8"×4-7/16"×11-13/16"
Weight:	4.6kg. 11-13/16 lbs.

Specifications are subject to change without notice.

NOTE ON COMPACT DISC

• Holding Compact Discs

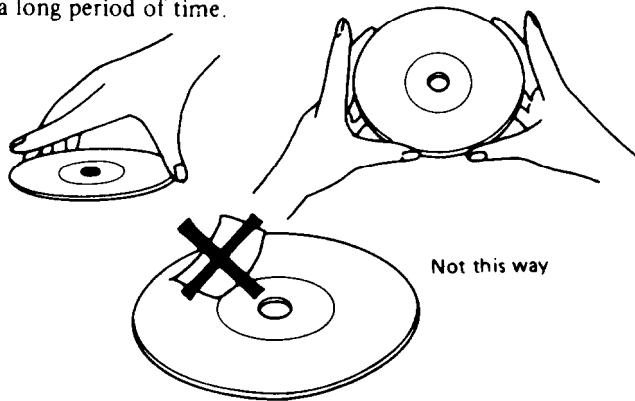

Hold Compact Discs by the edges so that you do not touch the surface of disc. Remember that the side of the disc with the "rainbow" reflection is the side containing the audio information.

Do not attach tape or paper to the label side of the disc and always be careful not to leave fingerprints on the side that is played.

• Storing Compact Discs

Store Compact Discs in a location protected from direct sunlight, high heat and humidity and extremely high and low temperatures. Discs should never be left in the trunk or interior of an automobile in the sun since the temperature can become very high in such a closed environment.

Always store Compact Discs in the holders in which they were sold. Never leave a disc in the player's disc holder for a long period of time.

SERVICE PROCEDURES

1. Safety-check out

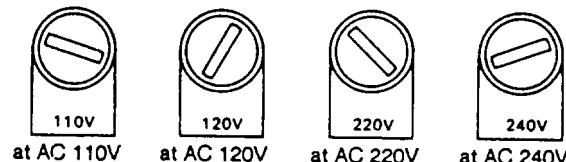

After correcting the original service problem, perform the following safety check before releasing the set to the customer:

Connect the insulating-resistance tester between the plug of power supply cable and chassis.

Specifications: more than 10Mohm at 500V.

2. Voltage selector (back panel)

Worldwide models are equipped with a voltage selector to conform with local power supplies. Be sure to set this selector to match the voltage of the power supply in your area before turning the power switch on. Voltage is changed by turning the voltage selector with a screwdriver or similar instrument to the 110V, 120V, 220V or 240V position. Confirm that the selector has been set to the correct position before turning the power switch on. If there is no voltage selector switch on the unit you have purchased, it can only be used in areas where the power supply voltage is the same as that of the unit.

• Cleaning Compact Discs

Before playing a disc wipe off the playing surface with a soft cloth to remove dust and other soil. Wipe the surface in straight lines from the center of the disc outward, not in a circular motion as you would with a phonograph record.

Do not use benzene, chemical cleansers or phonograph record cleaning solutions to clean Compact Discs. Also avoid static electricity prevention solutions since they can damage the surface of Compact Discs.

Fig. 9

Problems Caused by Dew

Dew can form inside a Compact player when it is brought from a cold environment into a warm room, when a room is rapidly heated and if a player is left in a humid environment.

This dew can prevent the laser pickup from reading the data contained in the pits in the disc surface. If the player does not operate properly because of dew, remove the disc and leave the player's power switch on for about one hour to remove all moisture.

CAUTION ON REPLACEMENT OF OPTICAL PICKUP

The laser diode in the optical pickup block is so sensitive to static electricity, surge current and etc. that the components are liable to be broken down or its reliability remarkably deteriorated.

During repair, carefully take the following precautions.
(The following precautions are included in the service parts).

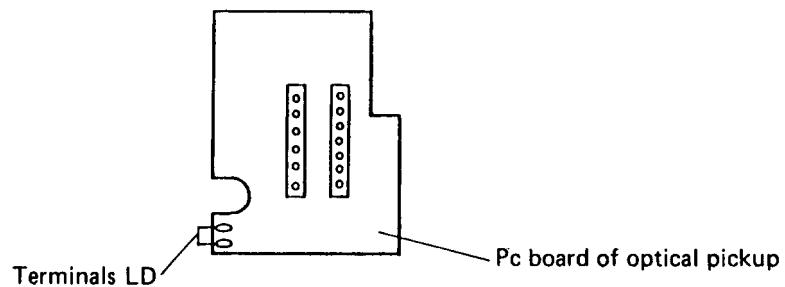

PRECAUTIONS

- | | |
|--|--|
| <p>1. Ground for the work-desk.
Place a conductive sheet such as a sheet of copper (with impedance lower than $10^6 \Omega$) on the work-desk and place the set on the conductive sheet so that the chassis.</p> <p>2. Grounding for the test equipment and tools.
Test equipments and toolings should be grounded in order that their ground level is the same the ground of the power source.</p> | <p>3. Grounding for the human body.
Be sure to put on a wrist-strap for grounding whose other end is grounded.
Be particularly careful when the workers wear synthetic fiber clothes, or air is dry.</p> <p>4. Select a soldering iron that permits no leakage and have the tip of the iron well-grounded.</p> <p>5. Do not check the laser diode terminals with the probe of a circuit tester or oscilloscope.</p> |
|--|--|

Care should be taken with the optical pickup.

The optical pickup is sensitive to static electricity, surge currents, and other high electrical noise, and because there is the possibility of damage to performance, in the handling of the pickup, the utmost care must be taken, particularly with regard to static electricity.

1. When checking the laser terminal, avoid making connections using the probes of a tester or oscilloscope, or an ordinary power supply.
2. When replacing the optical pickup, first short the LD terminals and remove the connector. Also, when attaching the new optical pickup, after attaching the connector, unsolder the LD terminals.

PROTECTION OF EYES FROM LASER BEAM DURING SERVICING

This set employs a laser. Therefore, be sure to follow carefully the instructions below when servicing.

WARNING!!

WHEN SERVICING, DO NOT APPROACH THE LASER EXIT WITH THE EYE TOO CLOSELY. IN CASE IT IS NECESSARY TO CONFIRM LASER BEAM EMISSION, BE SURE TO OBSERVE FROM A DISTANCE OF MORE THAN 30cm FROM THE SURFACE OF THE OBJECTIVE LENS ON THE OPTICAL PICK-UP BLOCK.

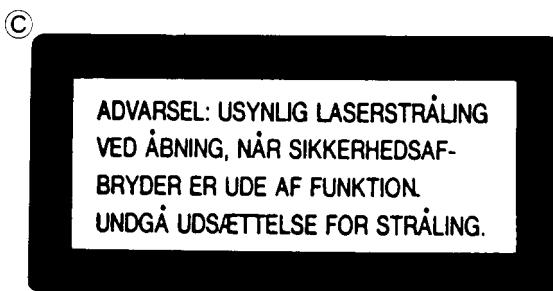

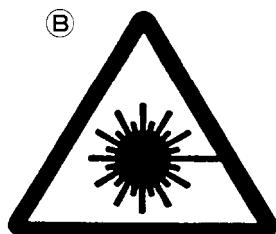

LASER WARNING LABEL

The label shown below are affixed.

1. Warning label

This label is located on the arm of mechanism.

(A) **DANGER** —INVISIBLE LASER RADIATION WHEN OPEN AND INTERLOCK FAILED OR DEFECTED. AVOID DIRECT EXPOSURE TO BEAM.
CAUTION —HAZARDOUS LASER AND ELECTROMAGNETIC RADIATION WHEN OPEN AND INTERLOCK DEFECTED.
ATTENTION —RAYONNEMENT LASER ET ELECTROMAGNETIQUE DANGEREUX SI OUVERT AVEC L'ECLENCHEMENT DE SECURITE ANNULE.

(A) : Danger label

(B) : Except 120V model

(C) : Except 120V model

Laser Diode Properties

- Material: GaAs/GaAlAs
- Wavelength: 780nm
- Emission Duration: continuous
- Laser output: max. 0.5mW*

*This output is the value measured at a distance about 1.8mm from the objective lens surface on the Optical Pick-up Block.

2. Certification label (120V model)

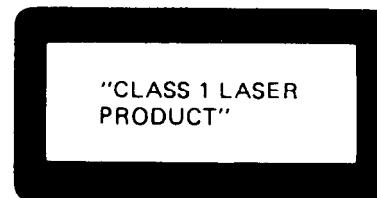

This label is located on the back panel.

PRODUCT IS CERTIFIED BY THE MANUFACTURER TO COMPLY WITH DHHS RULES 21 CFR SUBCHAPTER J APPLICABLE AT THE DATE OF MANUFACTURE

MANUFACTURED

3. Class 1 label (Except 120V model)

This label is located on the back panel.

ADVARSEL

Denne mærkning er anbragt på apparatets højre side og indikerer, at apparatet arbejder med laserstråler af klasse 1, hvilket betyder, at der anvendes laserstråler af svageste klasse, og at man ikke på apparatets yderside kan blive utsat for utiladelig kraftig stråling.

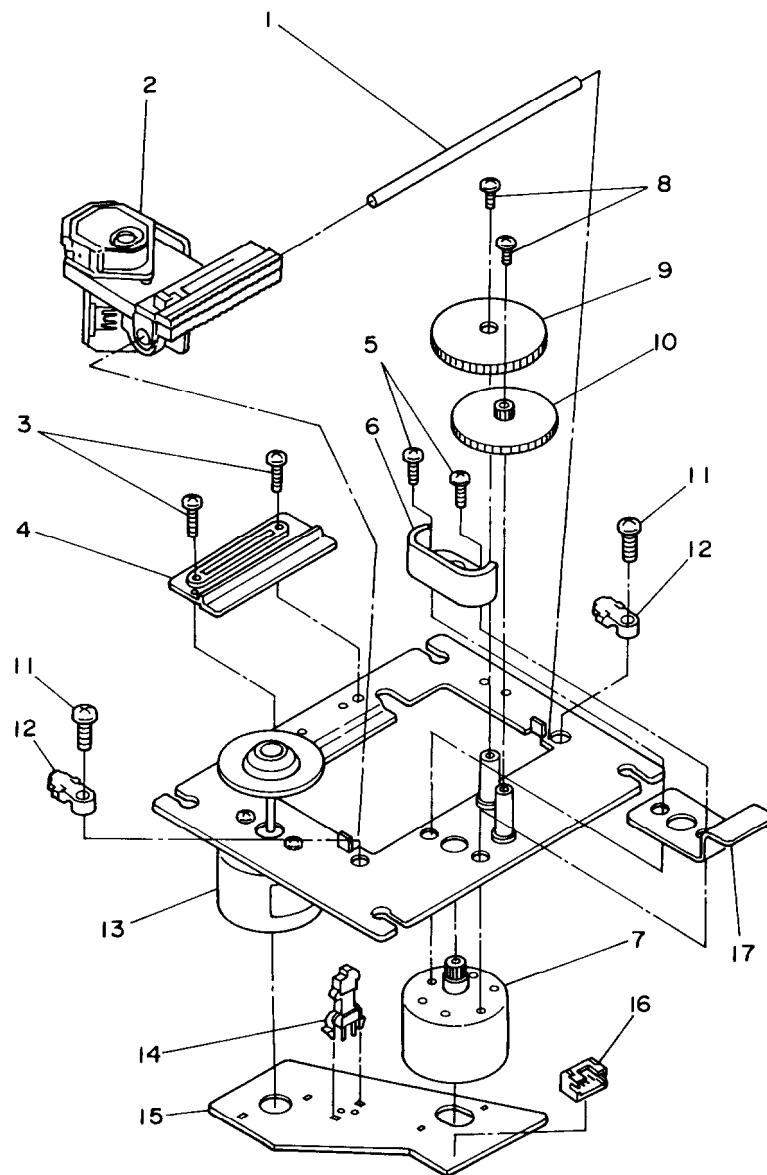

APPARATET BØR KUN ÅBNES AF FAGFOLK MED SÆRLIGT KENDSKAB TIL APPARATER MED LASERSTRÅLER!

Indvendigt i apparatet er anbragt den her gengivne advarselsmærkning, som advarer imod at foretage sådanne indgreb i apparatet, at man kan komme til at udsætte sig for laserstråling.

VAROITUS! Laite sisältää laserdiordin, joka lähettilää (näkymätöntä) silmille vaarallista lasersäteilyä.

REMOVAL OF DISC TRAY

1. Loosen the screw for stopper until the head of screw and tray are the same height.
2. Turn POWER switch to on.
3. Press OPEN/CLOSE button to open the tray.
4. Turn POWER switch to off.
5. Remove the tray.

2	RFO	Output terminal of RF summing amplifier	17	V _{EE}	Negative power supply terminal
3	RF-	Input terminal of RF summing amplifier feedback	18	FE BIAS	Non-inversion bias terminal of focus error amplifier CMR adjustment of focus error amplifier
4	P/N	Switching terminal of P-SUB/N-SUB of LD (laser diode)	19	FE	Output terminal of focus error amplifier
5	LD	Output terminal of APC LD amplifier	20	TE	Output terminal of tracking error amplifier
6	PD	Input terminal of APC PD (Pin diode) amplifier	21	DEFECT	Output terminal of defect comparator
7	PD1	Inversion input terminal of RF I-V amplifier (1) Connect to A+C of PIN diodes.	22	MIRR	Output terminal of mirror comparator
8	PD2	Inversion input terminal of RF I-V amplifier (2) Connect to B+D of PIN diodes.	23	CP	Connection terminal of capacitor for mirror hold Non-inversion input of mirror comparator
9	VC	Connect to GND.	24	CB	Connection terminal of capacitor for defect bottom hold
10	F	Inversion input terminal of F I-V amplifier Connect to F of PIN diode.	25	DGND	Connect to GND
11	E	Inversion input terminal of E I-V amplifier Connect to E of PIN diode.	26	ASY	Auto asymmetry control input terminal
12	E0	Output terminal of E I-V amplifier	27	EFM	Output terminal of EFM comparator
13	E1	Feedback input terminal of E I-V amplifier Gain adjustment of E I-V amplifier	28	FOK	Output terminal of FOK comparator
14	VR	DC voltage output terminal of $(V_{cc} + V_{EE})/2$	29	LD ON	ON/OFF switching terminal of laser diode
15	CC2	Input terminal from defect bottom hold output signal via the coupling capacitor	30	V _{cc}	Positive power supply

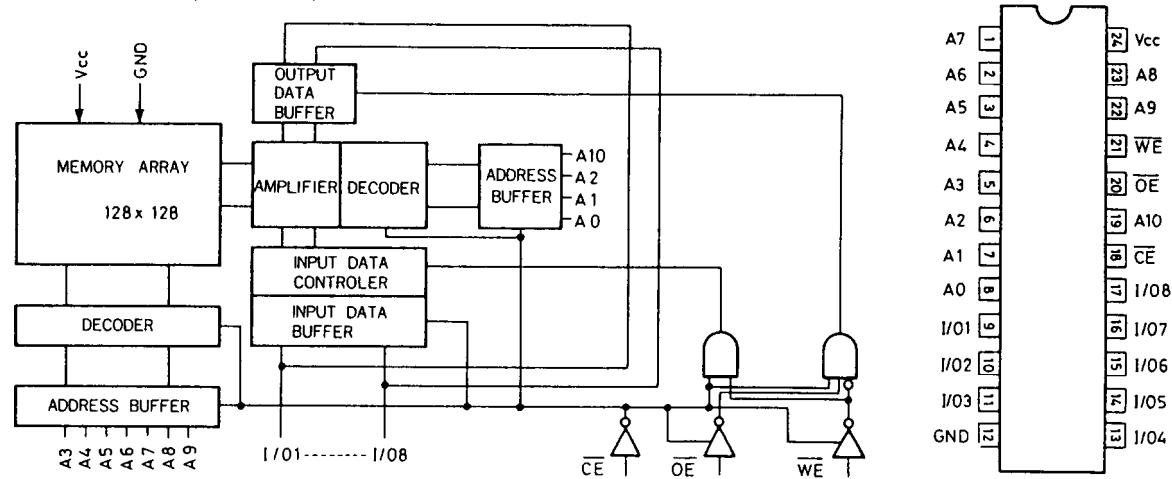

Pin No.	Symbol	Function	Pin No.	Symbol	Function
2	DECT	Defect signal input terminal.	26	C. OUT	Signal output terminal for count of track numbers.
3	TE	Tracking error signal input terminal.	27	DIRC	Use when jumps one track.
4	TZC	Tracking zero cross comparator input terminal.	28	XRST	Reset input terminal. Reset at the low level.
5	ATSC	Window comparator input terminal for ATSC detection.	29	DATA	Serial data input terminal from microprocessor.
6	FE	Focus error singal input terminal.	30	XLT	Latch input terminal from microprocessor.
8	FGD	Insert the capacitor between this terminal and pin 9 when drop the high frequency gain of focus servo.	31	CLK	Clock input terminal serial data transmitter from microprocessor.
9	FS3	Switching terminal of high frequency gain of focus servo.	33	BW	Time constant terminal of loop filter.
10	FLB	Time constant switching terminal when raise the low frequency gain of focus servo.	34	PDI	Input terminal of phase comparator output PDO.
11	FEO	Focus drive output terminal.	35	ISET	Flow the current to decide the focus search, track jump, and kick height.
12	FE-	Inversion input terminal of focus amplifier.	36	VCOF	VCO free run frequency is proportion to resistor value between pins 31 and 37.
13	SRCH	Time constant terminal to make the fous search waveform.	38	C864	VCO (8.64MHz) output terminal.
14	TGU	Time constant terminal for high frequency gain switching of tracking.	39	LOCK	Sled motor run away prevention circuit is operated at low level.
15	TG2	Time constant terminal for high frequency gain switching of tracking.	40	MDP	Connection terminal to terminal MDP of CXD1130Q.
17	TAO	Tracking drive output terminal.	41	MON	Connection terminal to terminal MON of CXD1130Q.
18	TA-	Inversion input terminal of tracking amplifier.	42	FSW	LPF time constant terminal of CLV servo error signal.
19	SL+	Non-inversion input terminal of sled amplifier.	44	SPDL-	Inversion input terminal of spindle drive amplifier.
20	SLO	Sled drive output terminal.	45	SPDLO	Spindle drive output terminal.
21	SL-	Inversion input terminal of sled amplifier.	46	WDCK	Clock input terminal. (88.2kHz)
22	SSTOP	Limit switch ON/OFF detector signal terminal for disc innermost position detector.	47	FOK	Focus OK input terminal.
23	FSET	Terminal for peak of phase compensation of tracking and f_0 setting LPF.	48	MIRR	Mirror signal input terminal.
24	SENS	FZC, AS, TZC, SSTOP and etc. signals are output by the command from microprocessor.

46	SUBQ	I	Subcode Q input terminal.
47	SQCK	I/O	Subcode Q read clock.
48	CLK	O	Serial data transmission clock output terminal.
49	XLT	O	Command execution output terminal.
50	CRC	I	Subcode check input terminal.
51	OPEN	O	Tray motor control output terminal.Tray opens at "H".
52	CLOSE	O	Tray motor control output terminal.Tray closes at "H".
53	MUT	O	Muting ON/OFF output terminal.Muting switch turns on at "H".
54	EMP	O	Emphasis ON/OFF output terminal.Emphasis switch turns on at "H".
55	SENSE	I	Interface of signal processor and microprocessor ICs.
56	FOK	I	Focus OK input terminal.Focus OK at "H".
57	IN SW	I	Tray close detection input terminal.
58	OUT SW	I	Tray open detection input terminal.
59	LSR	O	Optical pickup control output terminal.Optical pickup turns on at "L".
60	NRSCO	O	Remote control signal output terminal.
61	NRI	I	RI signal input terminal.
62	NRSI	I	Remote control signal input terminal.
74	C4M	I	System clock input terminal.(4.2336MHz)
76	VFDP		Power supply terminal.Connect to -22V.
77~80	a,b,f,g	O	Fluorescent tube segment drive output terminals.

M51943ASL (Rest IC)

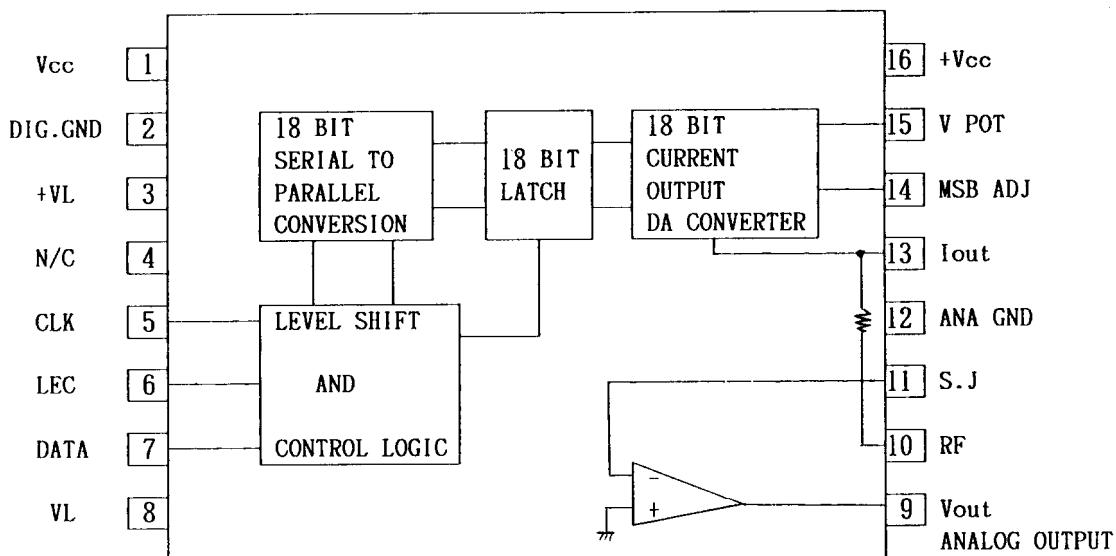

Q116

YM3433 (18 bits/8 times Oversampling Digital Filter)

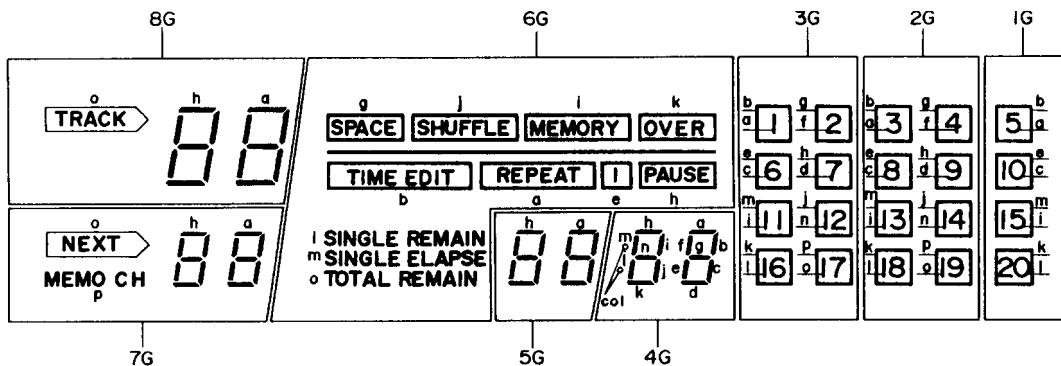

Pin No.	Terminal	Function
1	SHL	ST=L(1 DAC):L channel deglitch signal output. ST=H(2 DACs):L and R channels deglitch signal output. (Not used.)
2	XO	Connect the crystal oscillator for the system clock to these terminals.
3	XI	Connect the crystal oscillator for the system clock to these terminals.
4	VDD2	Power supply terminal for crystal oscillator and deglitch signal system.
5	BCI	Bit clock input terminal of input data.
6	SDSY	Clock input terminal to show the input timing and L/R channels partitioned of input data.
7	SDI	Data input terminal.
8	VDD1	Power supply terminal.(Connect to 5V.)
9	DLO	ST=L(1 DAC):L and R channels data output terminal. ST=H(2 DAC):L channel data output terminal.
10	DRO	R channel data output terminal.
11	WCO	Word clock output terminal for output data DLO/DRO.
12	BCO	Bit clock output terminal for output data DLO/DRO.
13	VSS	Ground terminal.
14	ST	1 DAC/2 DAC selection terminal.(1 DAC at low level and 2 DAC at high level.)
15	16/18	Bit number selection terminal.(16 bits at low level and 18 bits at high level.)
16	SHR	1 DAC(ST=L):R channel deglitch signal output.(Not used.)

ADJUSTMENT PROCEDURES

Instruments required

Dual trace oscilloscope, Frequency counter, AF oscillator, Test disc (SONY YEDS-18), AC voltmeter, Jitter meter, and Socket P4(Part no. 25050138)

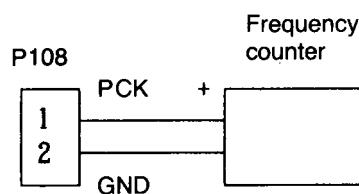

1. VCO frequency adjustment

Connect the frequency counter to terminal P108.

Turn the power switch to ON.(No load the disc.)

Adjust R154 until the frequency counter reading becomes $4322 \pm 5\text{kHz}$.

After adjustment, disconnect the frequency counter.

2. Focus offset adjustment

Load the test disc YEDS-18 on the tray and play the track 2.

Connect the oscilloscope or jitter meter to terminal P106.

(Oscilloscope)

Adjust R110 until a clear trace of waveform pattern as shown photo 1 appear on the oscilloscope.

When the amount of jitter is broad, set R110 to mechanical center.

(Jitter meter)

Adjust R110 until the jitter meter reading becomes minimum.(Less than 10ns.)

After adjustment, disconnect the oscilloscope or jitter meter.

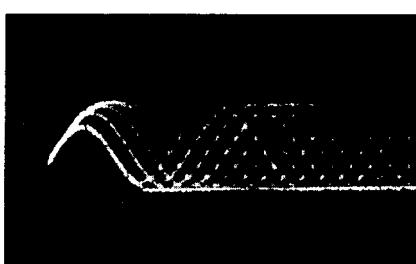

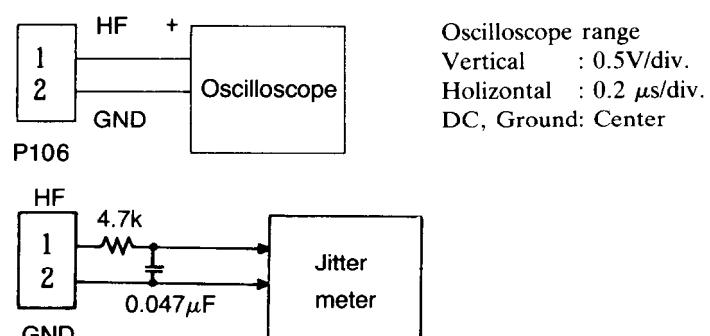

Photo 1

3. Tracking offset adjustment

Load the test disc YEDS-18 on the tray and play the track 2.

Turn R132 to minimum position.(Counter clockwise)

Connect the oscilloscope between pin 3 (TR) of P107 and pin 2 (GND) of P106.

Adjust R108 until the center of tracking error signal on the oscilloscope becomes GND level.

Turn R132 to the mechanical center.

After adjustment, disconnect the oscilloscope.

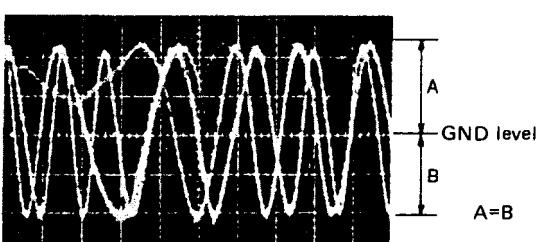

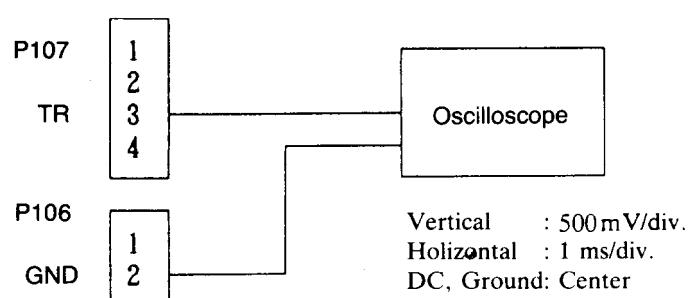

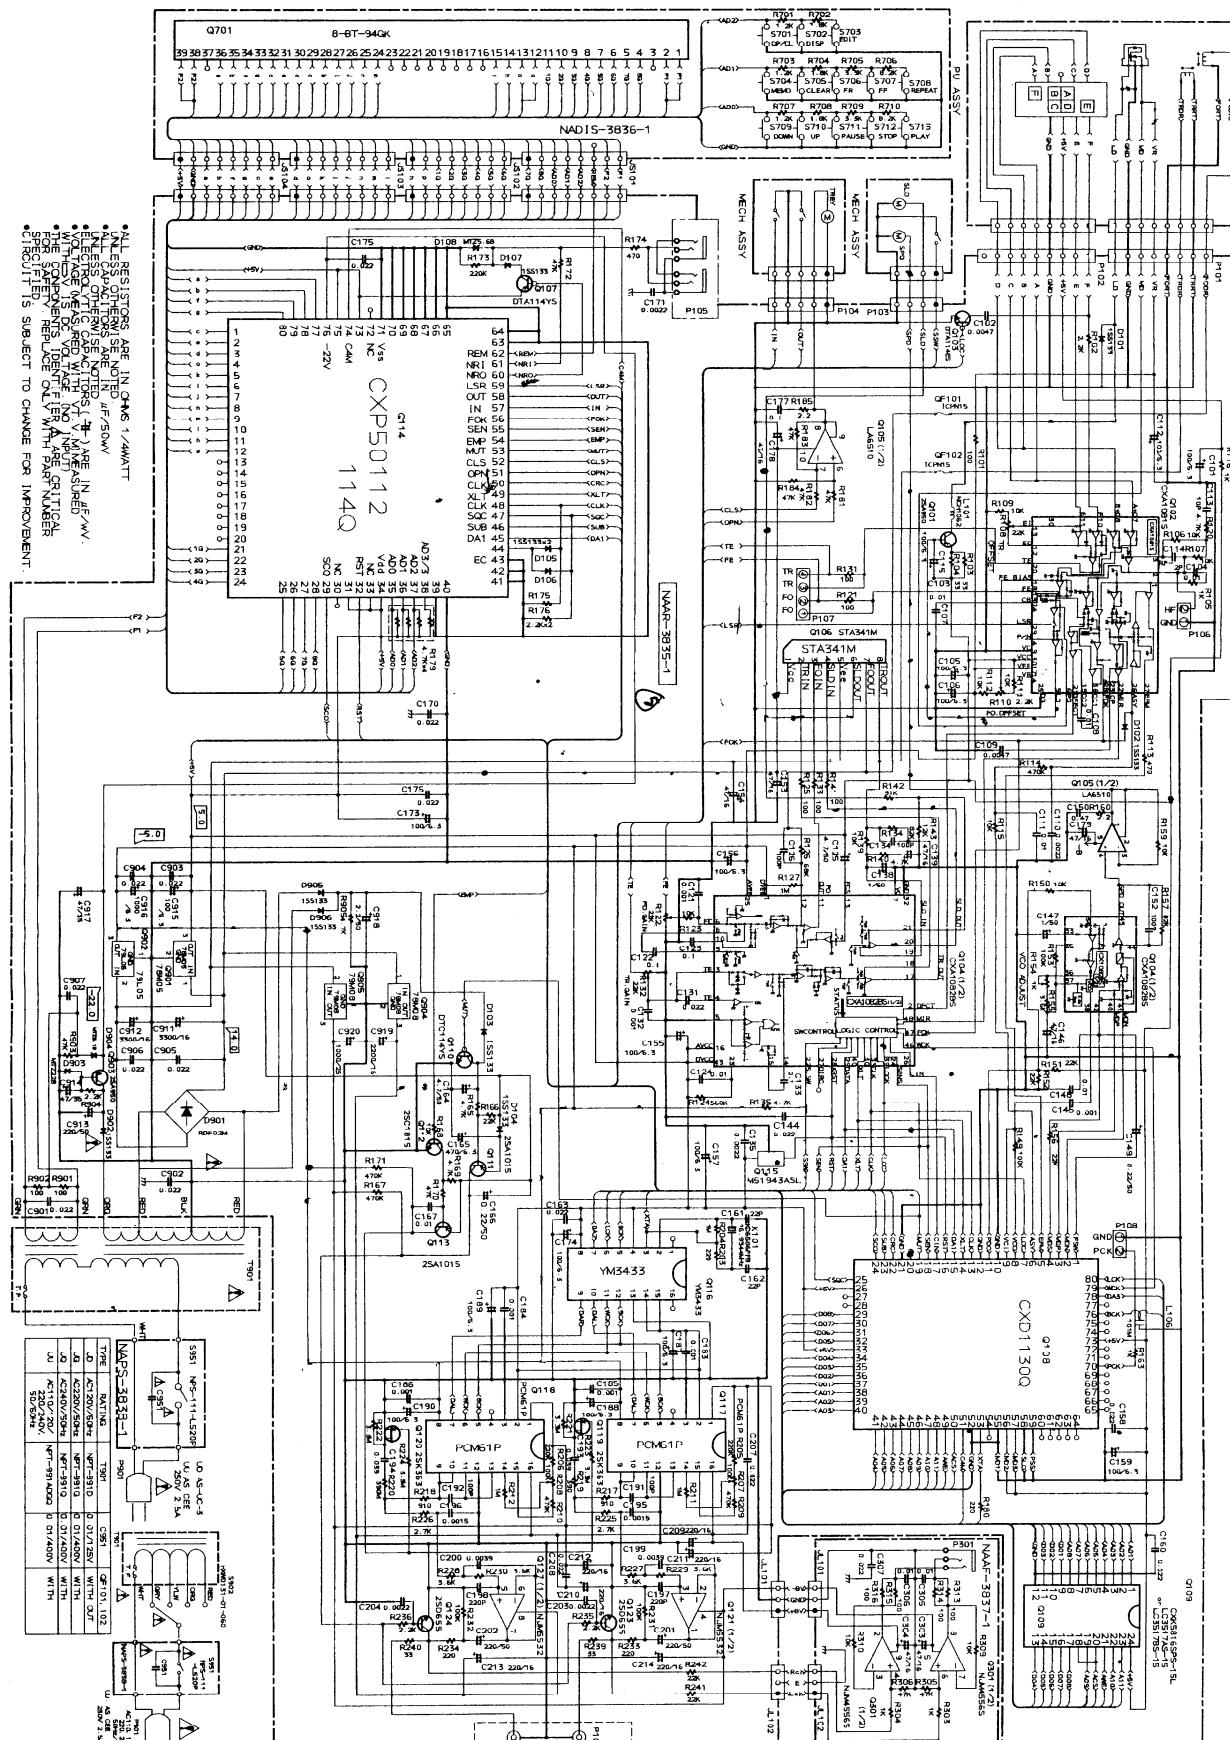

Photo 2

SCHEMATIC DIAGRAM

A B C D E F G H

ALL RESISTORS ARE IN OHMS 1/4-WATT
ALL CAPACITORS ARE IN MICROFARADS
UNLESS OTHERWISE SPECIFIED
UNLESS OTHERWISE NOTED
CAPACITORS ARE RADIAL
WITH NO. 100V DC VOLTAGE
THE COMPONENTS REPRINTED ON THIS SHEET
SPECIFIED CIRCUITS SUBJECT TO CHANGE FOR IMPROVEMENT.

4. Focus gain adjustment

Set the output of AF oscillator to 800Hz, 1~1.5Vp-p.

Play the track 2 of test disc.

Connect the oscilloscope and the AF oscillator as shown below.

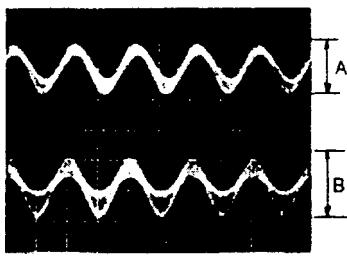

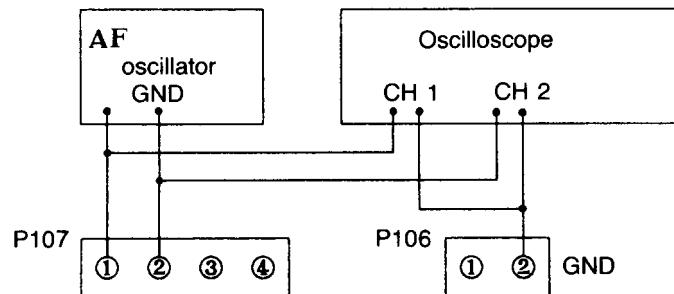

Photo 3

Vertical : 0.2V/div.
Horizontal: 0.5 ms/div.

Adjust R122 until 800Hz components of channels 1 and 2 on oscilloscope become same level.

After adjustment, disconnect the AF oscillator and the oscilloscope.

5. Tracking gain adjustment

Set the output of AF oscillator to 1.2kHz, 1~1.5Vp-p.

Play the track 2 of test disc.

Connect the oscilloscope and the AF oscillator as shown below.

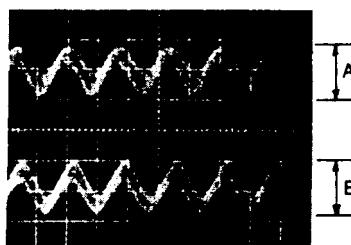

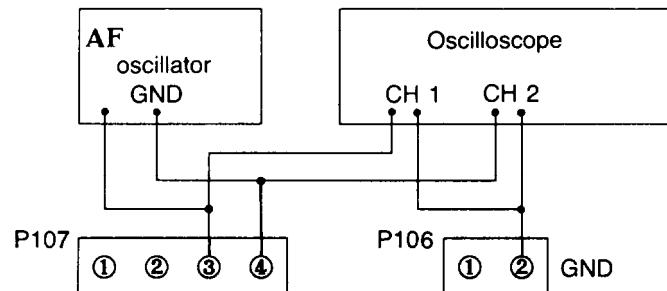

Photo 4

Vertical : 0.2V/div.
Horizontal: 0.5 ms/div.

Adjust R132 until 1.2kHz components of channels 1 and 2 on oscilloscope become same level.

After adjustment, disconnect the AF oscillator and the oscilloscope.

After adjustment, confirm that the center of tracking error signal becomes GND level.

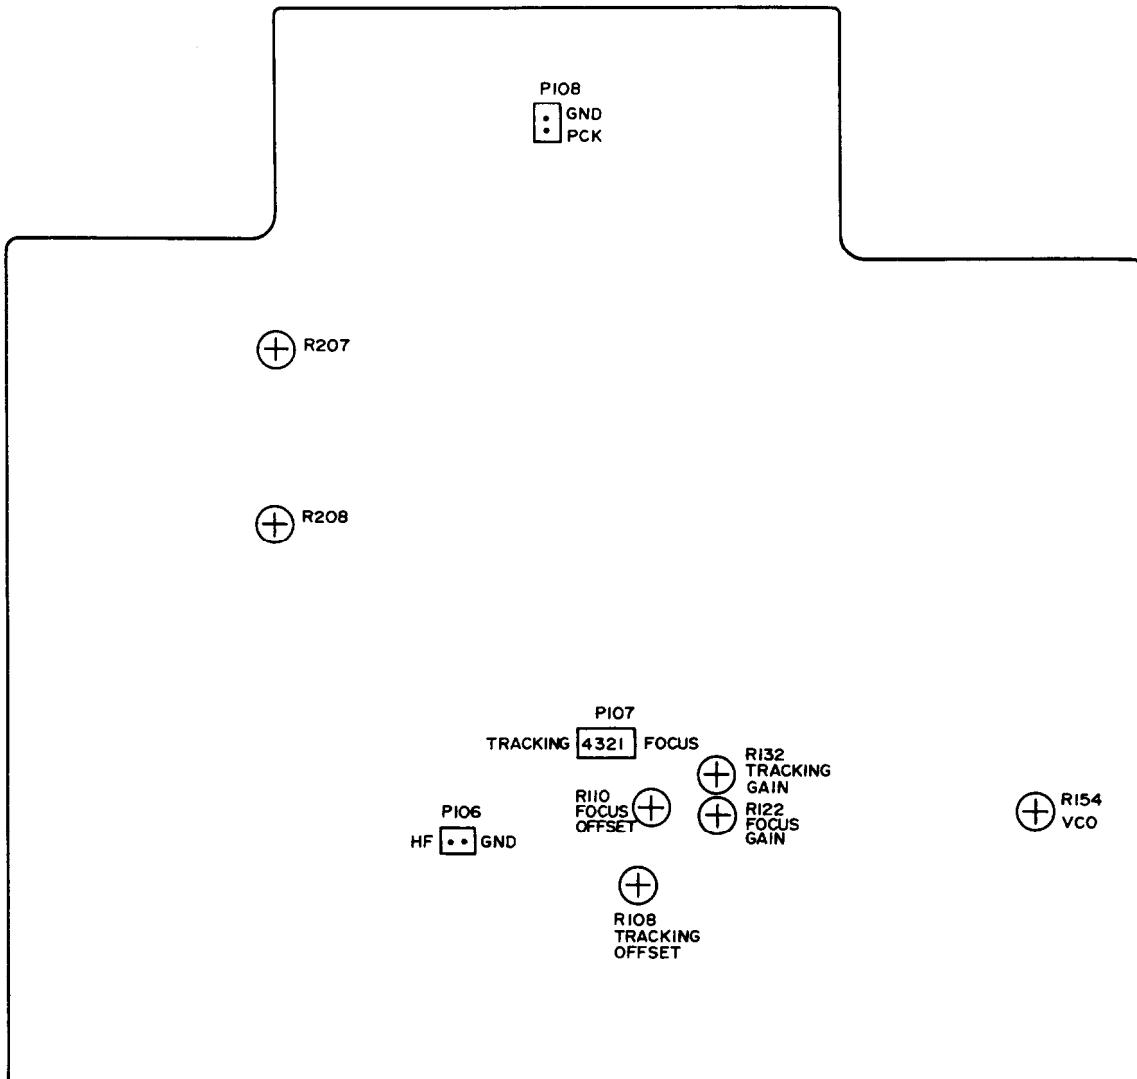

6. Audio circuit adjustment

Connect the AC voltmeter to output terminal of left channel (right channel).

Load the test disc and play the track 2.

Next, play the track 17.

Adjust R207(R208) so that the output discrepancy between track 2 and track 17 is $60 \pm 0.25\text{dB}$.
