

Service Manual

CD Stereo System

Model No. SA-AKX80LM

Product Color: (K)...Black Type

Please refer to the original service manual for:

- CD Mechanism Unit (BRS12C) , Order No. PSG1303059AE
- Speaker system SB-AKX16LM , Order No. PMX1505002CE

⚠ WARNING

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

IMPORTANT SAFETY NOTICE

There are special components used in this equipment which are important for safety. These parts are marked by **⚠** in the Schematic Diagrams, Circuit Board Diagrams, Exploded Views and Replacement Parts List. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent shock, fire or other hazards. Do not modify the original design without permission of manufacturer.

1 Safety Precautions

1.1. General Guidelines

1. IMPORTANT SAFETY NOTICE

There are special components used in this equipment which are important for safety. These parts are marked by Δ in the Schematic Diagrams, Circuit Board Layout, Exploded Views and Replacement Parts List. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent X-RADIATION, shock, fire, or other hazards. Do not modify the original design without permission of manufacturer.

2. An Isolation Transformer should always be used during the servicing of AC Adaptor whose chassis is not isolated from the AC power line. Use a transformer of adequate power rating as this protects the technician from accidents resulting in personal injury from electrical shocks. It will also protect AC Adaptor from being damaged by accidental shorting that may occur during servicing.
3. When servicing, observe the original lead dress. If a short circuit is found, replace all parts which have been overheated or damaged by the short circuit.
4. After servicing, see to it that all the protective devices such as insulation barriers, insulation papers shields are properly installed.
5. After servicing, make the following leakage current checks to prevent the customer from being exposed to shock hazards.

1.1.1. Leakage Current Cold Check

1. Unplug the AC cord and connect a jumper between the two prongs on the plug.
2. Measure the resistance value, with an ohmmeter, between the jumpered AC plug and each exposed metallic cabinet part on the equipment such as screwheads, connectors, control shafts, etc. When the exposed metallic part has a return path to the chassis, the reading should be between $1M\Omega$ and $5.2M\Omega$.

When the exposed metal does not have a return path to the chassis, the reading must be ∞

1.1.2. Leakage Current Hot Check

1. Plug the AC cord directly into the AC outlet. Do not use an isolation transformer for this check.
2. Connect a $1.5k\Omega$, 10 watts resistor, in parallel with a $0.15\mu F$ capacitors, between each exposed metallic part on the set and a good earth ground such as a water pipe, as shown in Figure 1-1.
3. Use an AC voltmeter, with 1000 ohms/volt or more sensitivity, to measure the potential across the resistor.
4. Check each exposed metallic part, and measure the voltage at each point.
5. Reverse the AC plug in the AC outlet and repeat each of the above measurements.
6. The potential at any point should not exceed 0.75 volts RMS. A leakage current tester (Simpson Model 229 or equivalent) may be used to make the hot checks, leakage current must not exceed 1/2 milliamp. In case a measurement is outside of the limits specified, there is a possibility of a shock hazard, and the equipment should be repaired and rechecked before it is returned to the customer.

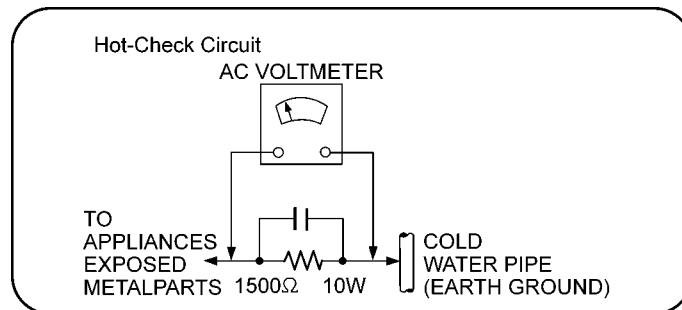

Figure 1-1

1.2. Before Repair and Adjustment

Caution:

DO NOT SHORT-CIRCUIT DIRECTLY (with a screwdriver blade, for instance), as this may destroy solid state devices.
After repairs are completed, restore power gradually using a variac to avoid overcurrent.

Current consumption at AC 127 V, 60 Hz during Power ON in FM Tuner at volume minimal should be ~ 250 mA.

1.3. Protection Circuitry

The protection circuitry may have operated if either of the following conditions are noticed:

- No sound is heard when the power is turned on.
- Sound stops during a performance.

The function of this circuitry is to prevent circuitry damage if, for example, the positive and negative speaker connection wires are "shorted", or if speaker systems with an impedance less than the indicated rated impedance of the amplifier are used.

If this occurs, follow the procedure outlined below:

1. Turn off the power.
2. Determine the cause of the problem and correct it.
3. Turn on the power once again after one minute.

Note:

When the protection circuitry functions, the unit will not operate unless the power is first turned off and then on again.

1.4. Power Supply using SMPS Module

This model uses Switching Mode Power Supply (SMPS Module) to provide the power supply to the unit. Here is the supplied part no. for the SMPS Module

N0AB3GK00008

Disconnect AC power to discharge the AC Capacitors (C2) through a 10Ω , 10 W resistor to ground.

1.4.2.

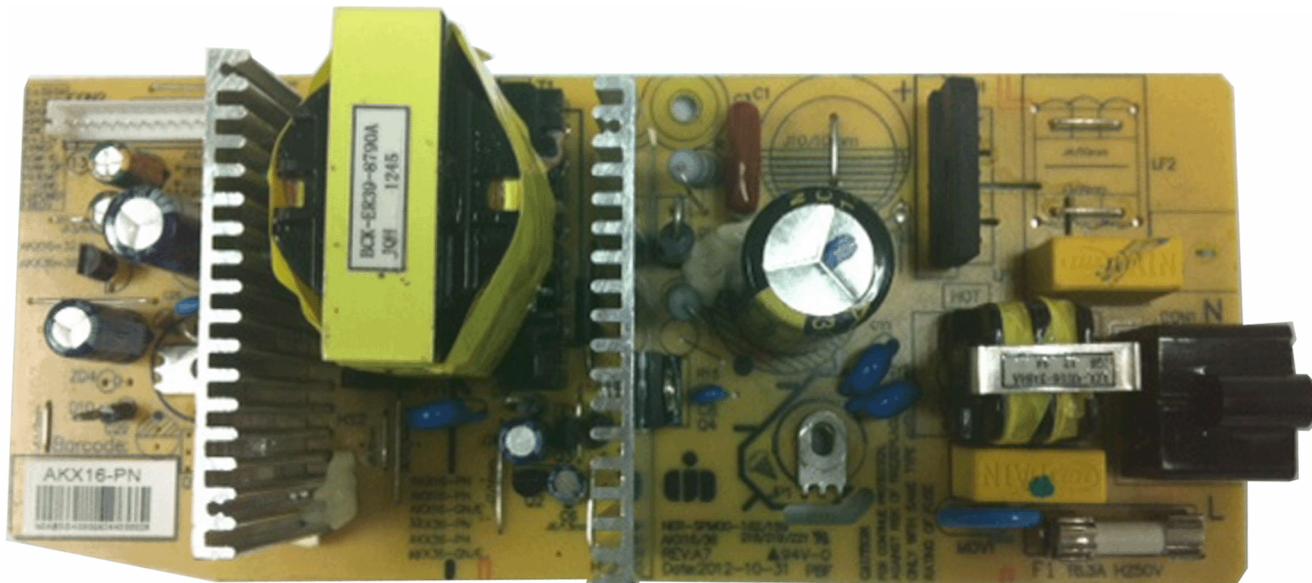

Figure 1-3

1.5. Safety Parts Information

Safety Parts List:

There are special components used in this equipment which are important for safety.

These parts are marked by  in the Schematic Diagrams, Exploded View & Replacement Parts List. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent shock, fire or other hazards. Do not modify the original design without permission of manufacturer.

Model: SC-AKX80LM

Safety	Part Name	Part No.
	AC CORD.	K2CB2CB00022
	O/I BOOK (SP)	RQTM0226
	SWITCHING POWER SUPPLIES(AC-DC CONVERTER)	N0AB3GK00008
	TOP CABINET (BEND)	RXRM0004
	TOP CABINET (UNBEND)	RKMX1011Z-KL1
	CD UNIT	RD-DDL112-PX
	REAR PANEL	RXTM0004F

2 Warning

2.1. Prevention of Electrostatic Discharge (ESD) to Electrostatically Sensitive (ES) Devices

Some semiconductor (solid state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive (ES) Devices.

Examples of typical ES devices are IC (integrated circuits) and some field-effect transistors and semiconductor "chip" components.

The following techniques should be used to help reduce the incidence of component damage caused by electrostatic discharge (ESD).

1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any ESD on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging ESD wrist strap, which should be removed for potential shock reasons prior to applying power to the unit under test.
2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.
4. Use only an anti-static solder removal device. Some solder removal devices not classified as "anti-static (ESD protected)" can generate electrical charge sufficient to damage ES devices.
5. Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ES devices.
6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material).
7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.

CAUTION:

Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.

8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity (ESD) sufficient to damage an ES device).

IMPORTANT SAFETY NOTICE

There are special components used in this equipment which are important for safety. These parts are marked by  in the Schematic Diagrams, Circuit Board Diagrams, Exploded Views and Replacement Parts List. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent shock, fire or other hazards. Do not modify the original design without permission of manufacturer.

2.2. Precaution of Laser Diode

CAUTION:

THIS PRODUCT UTILIZES A LASER.

USE OF CONTROLS OR ADJUSTMENTS OR PERFORMANCE OF PROCEDURES OTHER THAN THOSE SPECIFIED HEREIN MAY RESULT IN HAZARDOUS RADIATION EXPOSURE.

Caution:

This product utilizes a laser diode with the unit turned "on", invisible laser radiation is emitted from the pickup lens.

Wavelength: 790 nm (CD)

Maximum output radiation power from pickup: 100 µW/VDE

Laser radiation from the pickup unit is safety level, but be sure the followings:

1. Do not disassemble the pickup unit, since radiation from exposed laser diode is dangerous.
2. Do not adjust the variable resistor on the pickup unit. It was already adjusted.
3. Do not look at the focus lens using optical instruments.
4. Recommend not to look at pickup lens for a long time.

2.3. General description about Lead Free Solder (PbF)

The lead free solder has been used in the mounting process of all electrical components on the printed circuit boards used for this equipment in considering the globally environmental conservation.

The normal solder is the alloy of tin (Sn) and lead (Pb). On the other hand, the lead free solder is the alloy mainly consists of tin (Sn), silver (Ag) and Copper (Cu), and the melting point of the lead free solder is higher approx.30 degrees C (86°F) more than that of the normal solder.

Definition of PCB Lead Free Solder being used

The letter of "PbF" is printed either foil side or components side on the PCB using the lead free solder.

(See right figure)

PbF

Service caution for repair work using Lead Free Solder (PbF)

- The lead free solder has to be used when repairing the equipment for which the lead free solder is used.
(Definition: The letter of "PbF" is printed on the PCB using the lead free solder.)
- To put lead free solder, it should be well molten and mixed with the original lead free solder.
- Remove the remaining lead free solder on the PCB cleanly for soldering of the new IC.
- Since the melting point of the lead free solder is higher than that of the normal lead solder, it takes the longer time to melt the lead free solder.
- Use the soldering iron (more than 70W) equipped with the temperature control after setting the temperature at 350±30 degrees C (662±86°F).

Recommended Lead Free Solder (Service Parts Route.)

- The following 3 types of lead free solder are available through the service parts route.
RFKZ03D01K-----(0.3mm 100g Reel)
RFKZ06D01K-----(0.6mm 100g Reel)
RFKZ10D01K-----(1.0mm 100g Reel)

Note

* Ingredient: tin (Sn), 96.5%, silver (Ag) 3.0%, Copper (Cu) 0.5%, Cobalt (Co) / Germanium (Ge) 0.1 to 0.3%

2.4. Handling Precautions for Traverse Unit

The laser diode in the optical pickup unit may break down due to static electricity of clothes or human body. Special care must be taken avoid caution to electrostatic breakdown when servicing and handling the laser diode in the traverse unit.

2.4.1. Cautions to Be Taken in Handling the Optical Pickup Unit

The laser diode in the optical pickup unit may be damaged due to electrostatic discharge generating from clothes or human body. Special care must be taken avoid caution to electrostatic discharge damage when servicing the laser diode.

1. Do not give a considerable shock to the optical pickup unit as it has an extremely high-precise structure.
2. To prevent the laser diode from the electrostatic discharge damage, the flexible cable of the optical pickup unit removed should be short-circuited with a short pin or a clip.

3. The flexible cable may be cut off if an excessive force is applied to it. Use caution when handling the flexible cable.
4. The antistatic FFC is connected to the new optical pickup unit. After replacing the optical pickup unit and connecting the flexible cable, cut off the antistatic FFC.

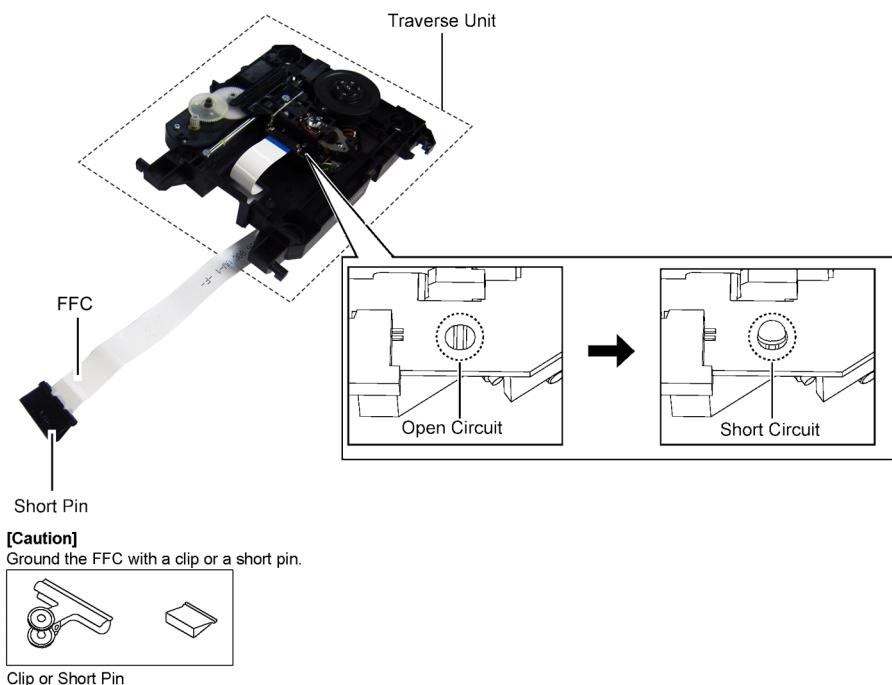

Figure 2-2

2.5. Grounding for electrostatic breakdown prevention

- As for parts that use optical pick-up (laser diode), the optical pick-up is destroyed by the static electricity of the working environment.
Repair in the working environment that is grounded.

2.5.1. Worktable grounding

- Put a conductive material (sheet) or iron sheet on the area where the optical pickup is placed and ground the sheet.

2.5.2. Human body grounding

- Use the anti-static wrist strap to discharge the static electricity from your body (Figure 2-3).

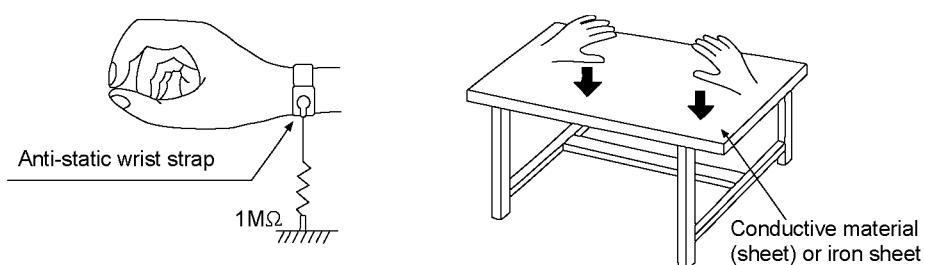

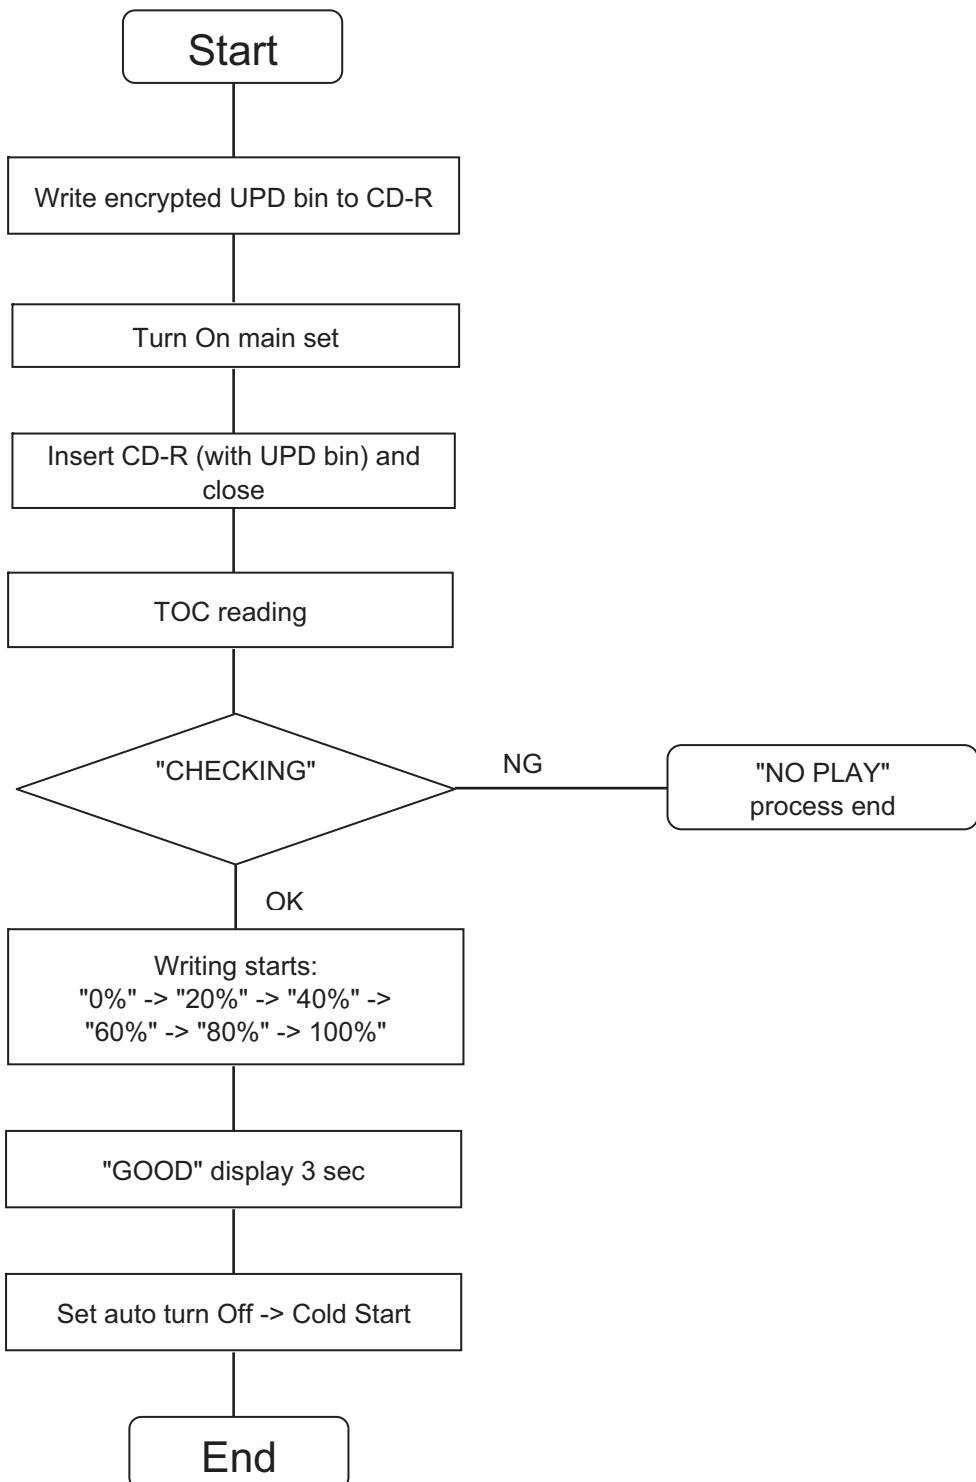

Figure 2-3

3 Service Navigation

3.1. Service Information

This service manual contains technical information which will allow service personnel's to understand and service this model.
Please place orders using the parts list and not the drawing reference numbers.
If the circuit is changed or modified, this information will be followed by supplement service manual to be filed with original service manual.

3.1.1. Firmware Update Procedure

4 Specifications

■ Amplifier section		■ General	
RMS output power stereo mode		Power supply	AC 127 V, 60 Hz
Front Ch (both ch driven)	175 W per channel ($4\ \Omega$), 1 kHz, 30% THD	Power consumption	55 W
Total RMS stereo mode power	350 W	Dimensions (W x H x D)	220 mm x 334 mm x 250 mm
PMPO Output Power	3900 W	Weight	2.8 kg
■ Tuner, terminals section		Operating temperature range	0 °C to +40 °C
Preset memory	FM 30 stations AM 15 stations	Operating humidity range	35% to 80% RH (no condensation)
Frequency modulation (FM)		Power Consumption in normal mode	55 Wh/day (considering 1 hour use per day)
Frequency range	87.5 MHz to 108.0 MHz (100 kHz step) 87.9 MHz to 107.9 MHz (200 kHz step)	Power Consumption in standby mode	6.9 Wh/day (considering 23 hours a day standby)
Antenna terminals	75 Ω (unbalanced)		
Amplitude modulation (AM)			
Frequency range	520 kHz to 1710 kHz (10 kHz step)		
Aux Input	Pin jack (1 system)		
■ Disc section			
Discs played (8 cm or 12 cm)	CD, CD-R/RW (CD-DA, MP3*)		
Pick up			
Wavelength	790 nm (CD)		
■ USB section			
USB Port			
USB standard	USB 2.0 full speed		
Media file format support	MP3 (*.mp3)		
USB device file system	FAT12, FAT16, FAT32		
USB port power	Max 500mA		
■ Speaker section			
Type	2 way, 2 speaker system		
Speaker unit(s)			
Woofer	16 cm cone type		
Tweeter	6 cm cone type		
Impedance	4 Ω		
Output sound pressure	85dB/W(1m)		
Frequency range	48Hz a 22 kHz (-16 dB) 52Hz a 20 kHz (-10 dB)		
Dimensions (W x H x D)	200 mm x 334 mm x 193 mm		
Weight	2.5 kg		

Note:

1. Specifications are subject to change without notice.
Weight and dimension are approximate.
2. Total harmonic distortion is measured by the digital spectrum analyzer.

5 Location of Controls and Components

5.1. Remote Control Key Button Operation

① Standby/on switch [Ø], [Ø/]

Press to switch the unit from on to standby mode or vice versa. In standby mode, the unit is still consuming a small amount of power.

② Numeric buttons [1 to 9, 0, ≥10]

To select a 2-digit number
Example: 16: [≥ 10] → [1] → [6]

③ Delete a programmed track

④ Select audio source

⑤ Basic playback control

⑥ Select the sound effects

⑦ Auto preset the radio station

⑧ View content information

Decrease the brightness of the display panel

Press and hold the button to use this function.
To cancel, press and hold the button again.

⑨ Set the clock and timer

⑩ Set the program function

⑪ Adjust the volume of the system

⑫ Mute the sound of the system

Press the button again to cancel.
“MUTE” is also canceled when you adjust the volume or when you switch off the system.

⑬ Set the play menu item

⑭ Set the radio menu item

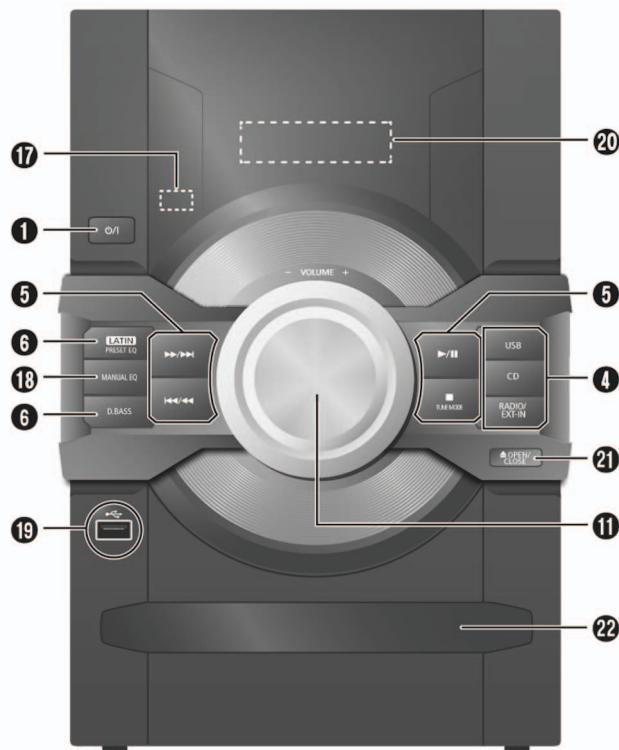

⑮ Select the option

⑯ Automatically switch off the system

When you are in disc, USB or AUX source, the auto off function switches off the system if you do not use the system for 30 minutes.

To cancel, press the button again.

5.2. Main Unit Key Button Operation

① Standby/on switch [\odot], [$\odot/|$]

Press to switch the unit from on to standby mode or vice versa. In standby mode, the unit is still consuming a small amount of power.

④ Select audio source

⑤ Basic playback control

⑥ Select the sound effects

⑪ Adjust the volume of the system

⑯ Remote control sensor

Distance: Within approximately 7 m

Angle: Approximately 20° up and down, 30° left and right

⑯ Select bass, mid or treble effect

⑲ USB port ($\bullet\rightleftarrows$)

⑳ Display panel

㉑ Open or close the disc tray

㉒ Disc tray

6 Service Mode

6.1. Cold Start

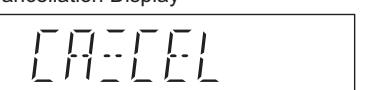

Item		FL Display	Key Operation
Mode Name	Description		Front Key
Cold Start	To carry out cold-start or initialize to shipping mode		<ol style="list-style-type: none"> 1. Unplug AC power cord. 2. Press & hold [POWER] button. 3. Plug in AC power cord while [POWER] button being pressed. 4. Release [POWER] button.

6.2. Doctor Mode Table

6.2.1. Doctor Mode Table 1

Item		FL Display	Key Operation
Mode Name	Description		Front Key
Doctor Mode	To enter into Doctor Mode		<p>In CD Mode:</p> <ol style="list-style-type: none"> 1. Press [■] button on main unit follow by [4] and [7] on remote control. 2. To exit, press [DELETE] button on remote control or, press [POWER, φ/I] button on Main Unit
EEPROM checksum check	Displaying of 1. Year Develop. 2. Model Type. 3. ROM Type. 4. Firmware Version.	<p>(Display 1)</p> <p>Version No. (001 ~ 999) → specific for each firmware</p> <p>(Display 2)</p>	<p>In CD mode:</p> <ol style="list-style-type: none"> 1. Enter into Doctor Mode
Cold Start	To active cold start upon next AC power up when reset start is execute the next time.		<p>In Doctor Mode:</p> <ol style="list-style-type: none"> 1. Press [SLEEP] button on the remote control.

6.2.2. Doctor Mode Table 2

Item		FL Display	Key Operation
Mode Name	Description		Front Key
Volume Setting Check	To check the volume setting of the main unit.	 Press [7]: VOL50 Volume Press [8]: VOL35 Press [9]: VOL0	In Doctor Mode: 1. Press [7], [8], [9] button on the remote control.
FL Display Check	To check the FL segment display. All segments will light up while all LED blink at 0.5s intervals.		In Doctor mode: 1. Press [1] button on the remote control. 2. To cancel this mode, press [0] button on the remote control.
Traverse Test	To determine the traverse unit operation for inner & outer access track. In this mode, ensure the CD is in the main unit.	 The counter will increment by one. When reach 99999999 will change to 00000000 Cancellation Display 	In Doctor Mode: 1. Press [10] → [1] → [2] button on the remote control. 2. To cancel this mode, press [0] button on the remote control.
Reliability Test (Combination)	To determine the traverse unit operation & open/close operation of the mechanism. In this mode, ensure the CD is in the main unit.	 The counter will increment by one. When reach 99999999 will change to 00000000 Cancellation Display 	In Doctor Mode: 1. Press [10] → [1] → [5] button on the remote control. 2. To cancel this mode, press [0] button on the remote control.
Loading Test	To determine the open & close operation of the CD Mechanism Unit. In this mode, the tray will open & close automatically.	 The counter will increment by one. When reach 99999999 will change to 00000000 Cancellation Display 	In Doctor Mode: 1. Press [10] → [2] → [1] button on the remote control. 2. To cancel this mode, press [0] button on the remote control.

6.3. Self-Diagnostic Mode

Item		FL Display	Key Operation
Mode Name	Description		Front Key
Self Diagnostic Mode	To enter into self diagnostic checking	— -- —	Step 1: Select CD mode (Ensure no disc is inserted). Step 2: Press & hold [■] button follow by [▶/▶▶] on main unit for 2 seconds.
Error Code Information	System will perform a check on any unusual/error code from the memory	Example: — -- — F- E 1	Step 1: In self diagnostic mode, Press [■] on main unit. To exit, press [◊/] on main unit or remote control.
Delete error code	To clear the stored in memory (EEPROM IC)	CLEAR	Step 1: In self diagnostic mode, Press [0] on remote control. To exit, press [◊/] on main unit or remote control.

6.4. Self-Diagnostic Error Code Table

Self-Diagnostic Function provides information on any problems occurring for the unit and its respective components by displaying the error codes. These error code such as U**, H** and F** are stored in memory and held unless it is cleared. The error code is automatically display after entering into self-diagnostic mode.

6.4.1. Power Supply Error Code Table

Item		FL Display	Key Operation
Mode Name	Description		Front Key
Error Code F61	Diagnosis Contents: Power Amp IC output abnormal. Upon power on, PCONT=HIGH, DC_DET_AMP after checking LSI.	F- E 1	Press [■] on main unit for next error.
Error Code F76	Diagnosis Contents: Power Amp IC output abnormal. DC_DET_PWR.	F- 7 E	Press [■] on main unit for next error.
Error Code F61-76	Diagnosis Contents: Power Amp IC output abnormal. Both DCDET (NG).	F- E 1 -- F- 7 E	Press [■] on main unit for next error.

6.4.2. CD Mechanism Error Code Table

Item		FL Display	Key Operation
Mode Name	Description		Front Key
Error Code CD H15	<p>Diagnosis Contents: CD Open Abnormal.</p> <p>During operation POS_SW_R On fail to be detected within 4 sec. Error No. shall be clear by force or during cold start.</p>		Press [■] on main unit for next error.
Error Code CD H16	<p>Diagnosis Contents: CD Closing Abnormal.</p> <p>During operation POS_SW_CEN On fail to be detected within 4 sec. Error No. shall be clear by force or during cold start.</p>		Press [■] on main unit for next error.
Error Code F26	<p>Diagnosis Contents: Communication between CD servo LSI and micro-p abnormal.</p> <p>During switch to CD function, if SENSE = "L" within fail safe time of 20ms.</p>		Press [■] on main unit for next error.

6.5. Sales Demonstration Lock Function

Item		FL Display	Key Operation
Mode Name	Description		Front Key
Entering into Sales Demonstration Lock Mode	To enter into the sales demonstration lock mode.		<ol style="list-style-type: none"> Turn on the unit. Select to any mode function. Press and hold [▲OPEN/CLOSE] and [CD] key for 5 sec or more. <p>The display will show upon entering into this mode for 2 sec.</p> <p>Note: [▲OPEN/CLOSE] button is invalid and the main unit displays "LOCKED" while the lock function mode is entered.</p>
Cancellation of Sales Demonstration Lock Mode	To cancel the sales demonstration lock mode.		<ol style="list-style-type: none"> Turn on the unit. Select to any mode function. Set volume to Vol 19. Press and hold [▲OPEN/CLOSE] and [CD] keys for 5 sec or more. <p>The display will show upon entering into this mode for 2 sec.</p>

7 Troubleshooting Guide

"Contents for this section is not available at time of issue"

8 Disassembly and Assembly Instructions

Caution Note:

- This section describes the disassembly and/or assembly procedures for all major printed circuit boards & main components for the unit. (You may refer to the section of “Main components and P.C.B Locations” as described in the service manual)
- Before carrying out the disassembly process, please ensure all the safety precautions & procedures are followed.
- During the disassembly and/or assembly process, please handle with care as there may be chassis components with sharp edges.
- Avoid touching heatsinks due to its high temperature after prolong use. (See caution as described below)

**CAUTION: HOT!!
PLEASE DO NOT
TOUCH THE HEAT SINK**

- During disassembly and assembly, please ensure proper service tools, equipments or jigs is being used.
- During replacement of component parts, please refer to the section of “Replacement Parts List” as described in the service manual.
- Select items from the following indexes when disassembly or replacement are required.
 - Disassembly of Top Cabinet
 - Disassembly of Front Panel Unit
 - Disassembly of Panel P.C.B. and LCD P.C.B.
 - Disassembly of Remote Sensor P.C.B.
 - Disassembly of USB P.C.B.
 - Disassembly of Rear Panel
 - Disassembly of Main P.C.B.
 - Disassembly of SMPS Module
 - Disassembly of CD Mechanism Unit
 - Disassembly of CD Interface P.C.B.

8.1. Type of Screws

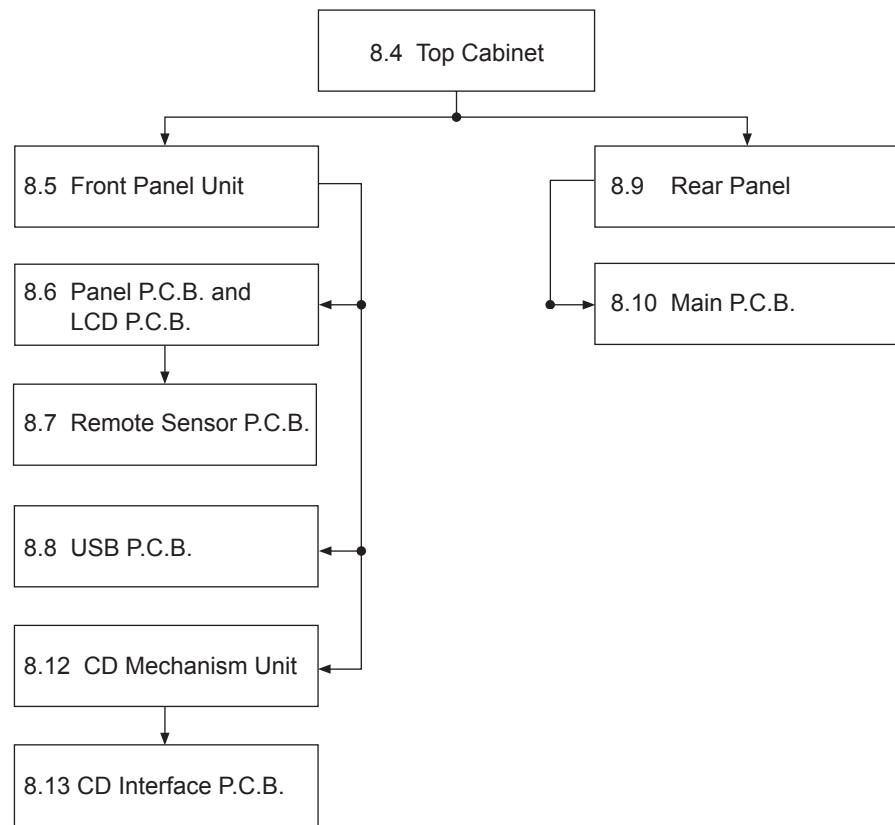

CAUTION NOTE:

Please use original screw and at correct locations.

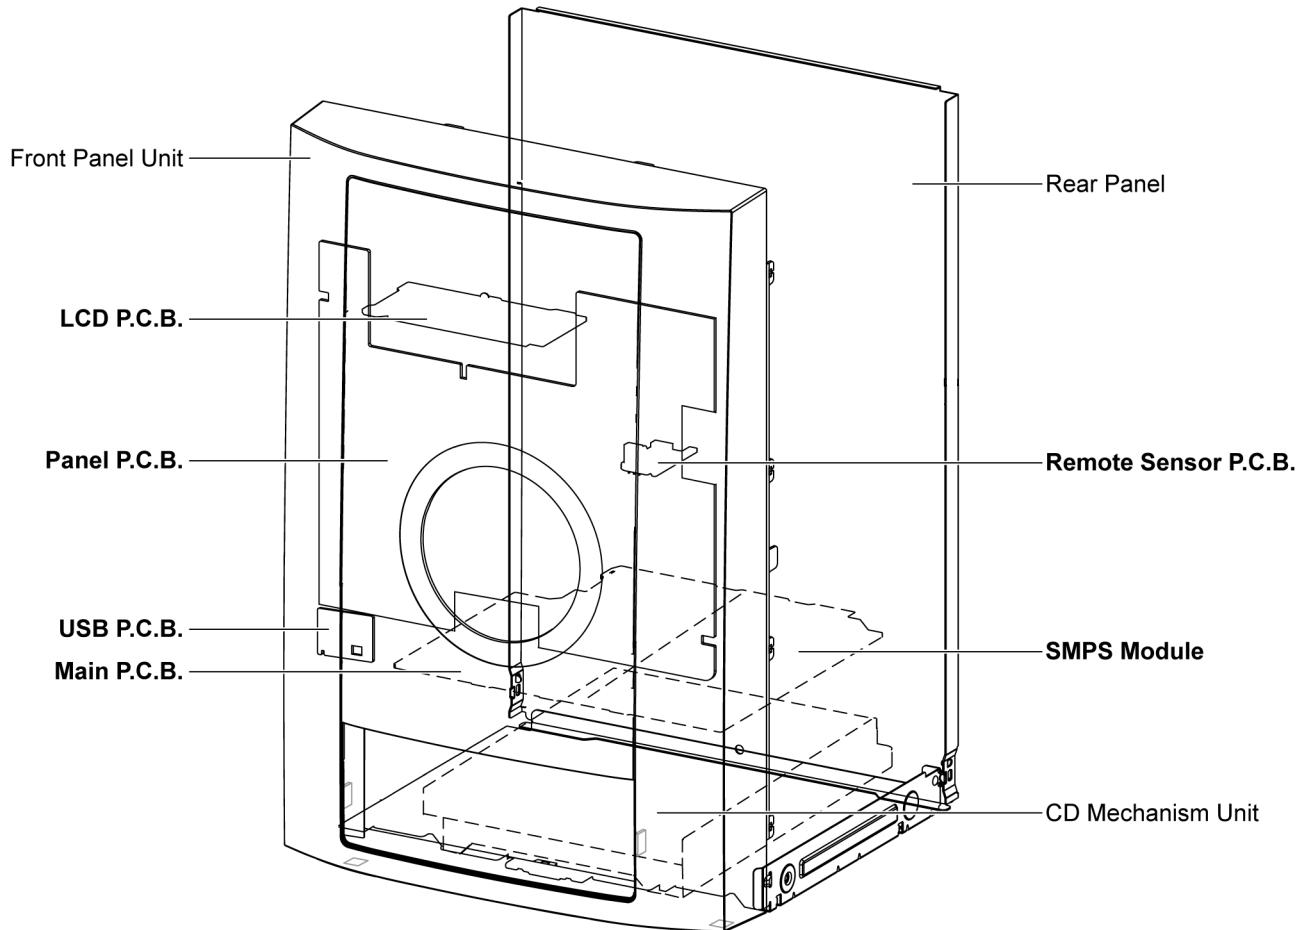

Below shown is part no. of different screw types used:

- | | | | |
|----------|----------------|----------|-------------|
| a | :RHD30007-K2JL | e | :RHDX031008 |
| b | :RHD30119-SL | | |
| c | :RHD26046 | | |
| d | :RHD30111-31 | | |

8.2. Disassembly Flow Chart

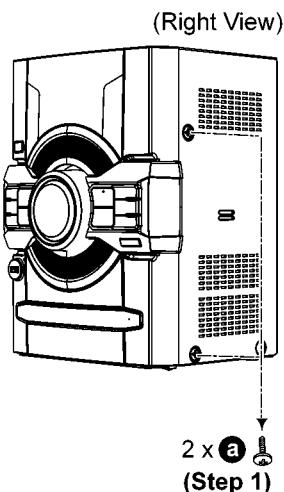

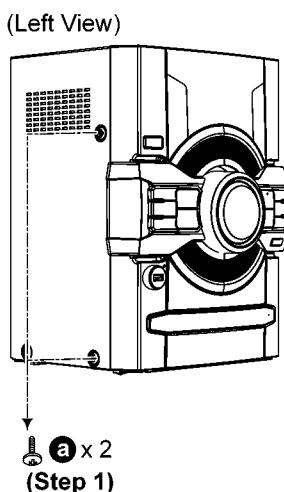

8.3. Main Components and P.C.B. Locations

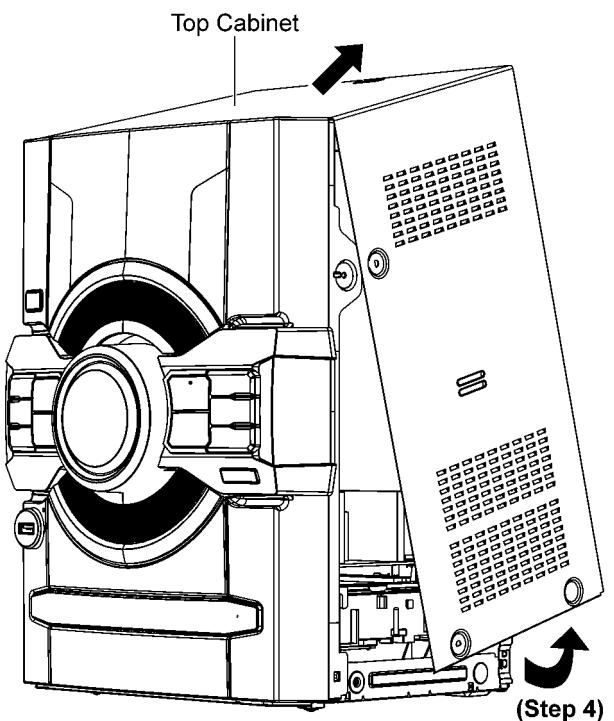

8.4. Disassembly of Top Cabinet

Step 1 Remove 2 screws on each side.

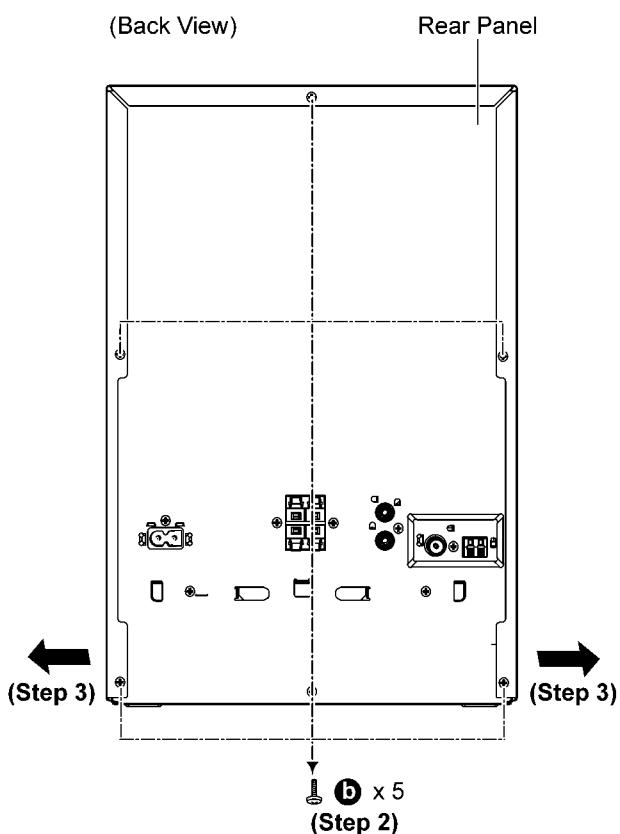

Step 4 Slightly lift up to remove Top Cabinet.

Step 2 Remove 5 screws.

Step 3 Release both sides of Top Cabinet as arrow shown.

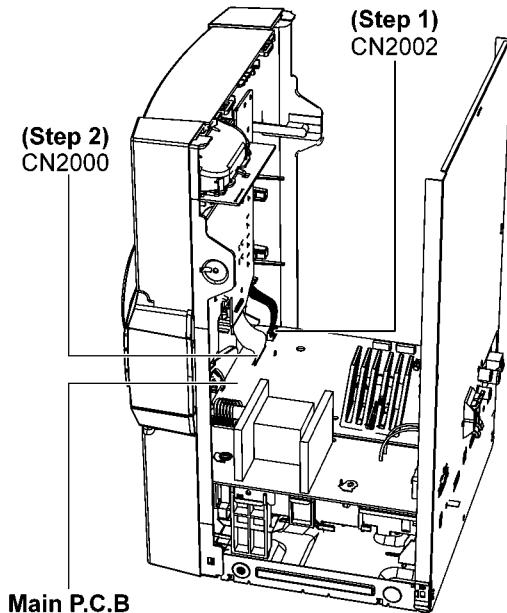

8.5. Disassembly of Front Panel Unit

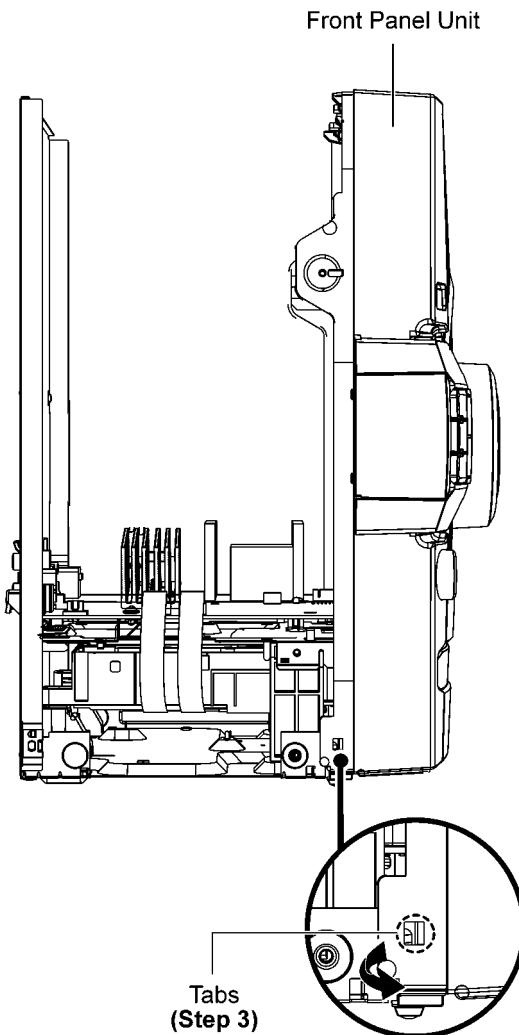

Step 3 Release tabs on both sides of Front Panel Unit.

- Refer to "Disassembly of Top Cabinet".

Step 1 Detach 5P Wire at connector (CN2002) on Main P.C.B.
Step 2 Detach 17P FFC at connector (CN2000) on Main P.C.B.

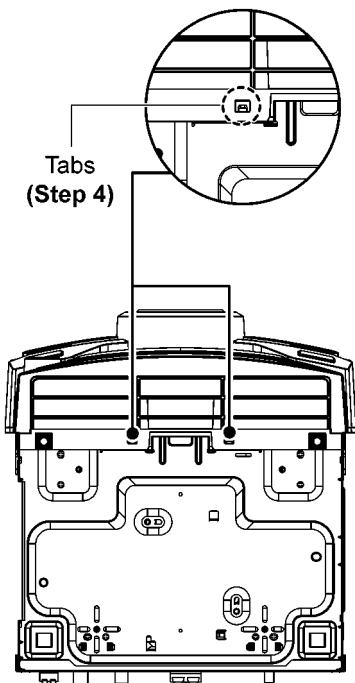

Main P.C.B

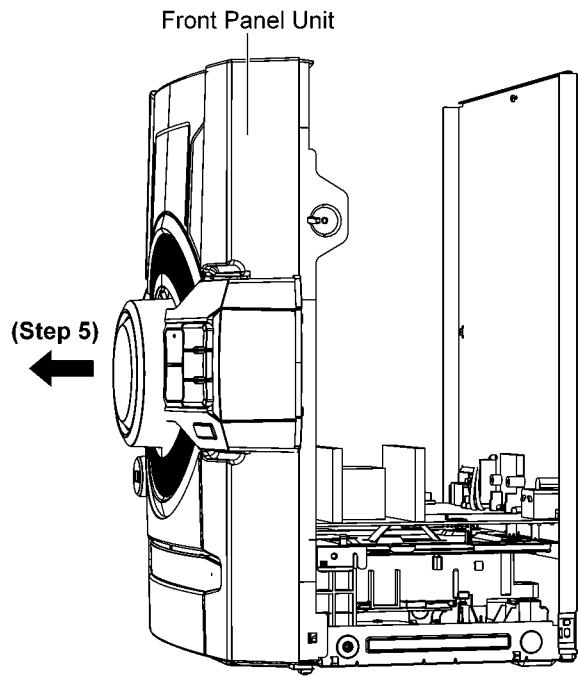

Tabs
(Step 3)

Step 4 Release tabs at bottom of unit.

Tabs
(Step 4)

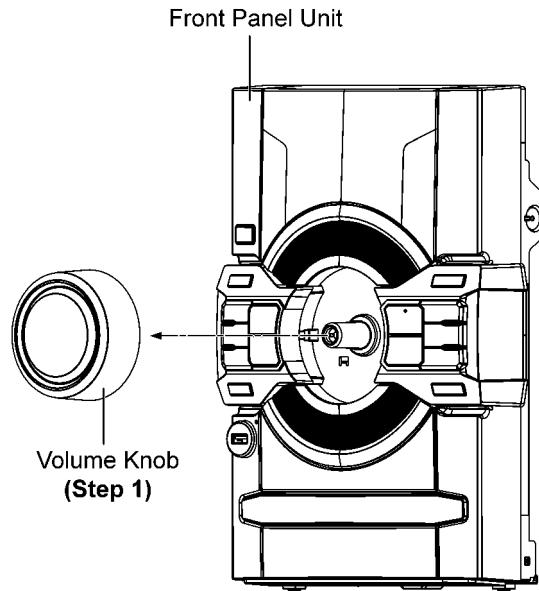

Step 5 Detach to remove Front Panel Unit

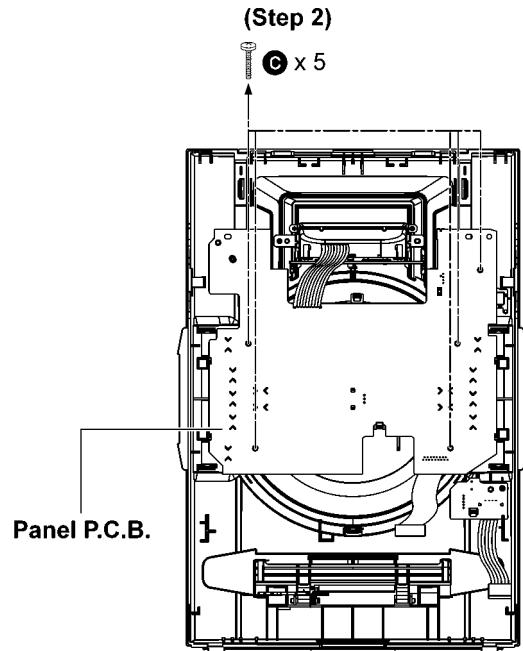

8.6. Disassembly of Panel P.C.B. and LCD P.C.B.

- Refer to "Disassembly of Top Cabinet".
- Refer to "Disassembly of Front Panel Unit".

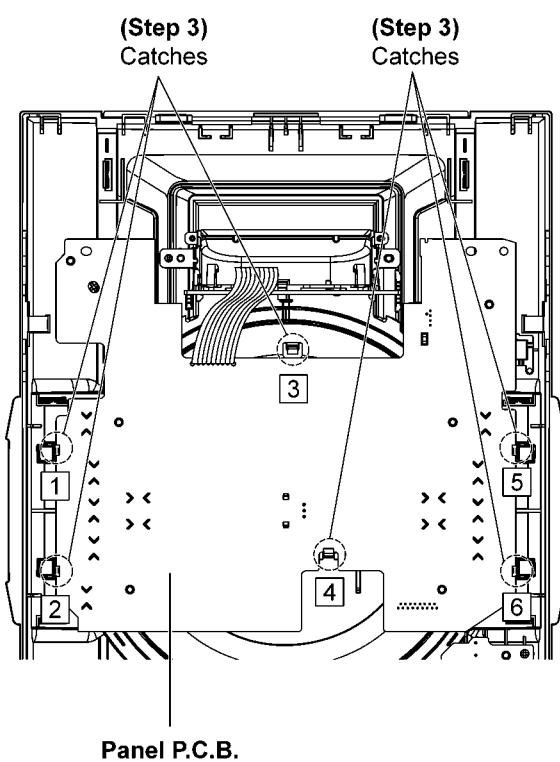

Step 1 Remove Volume Knob.

Step 2 Remove 5 screws.

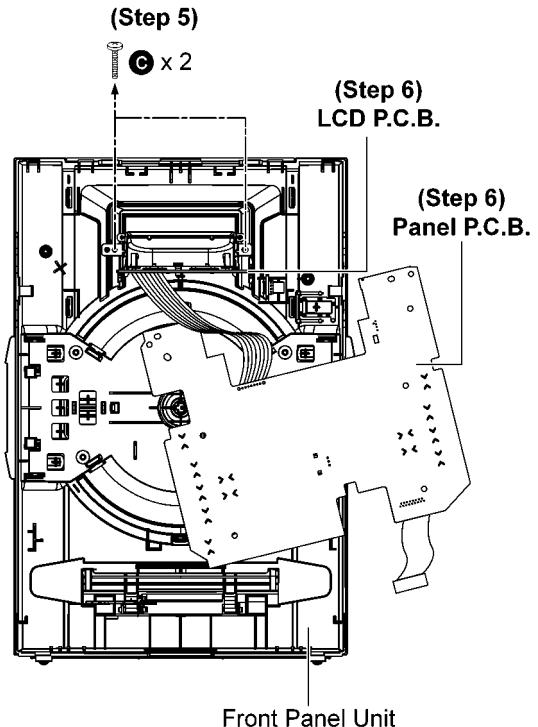

Step 3 Release catches in sequences (1-6).

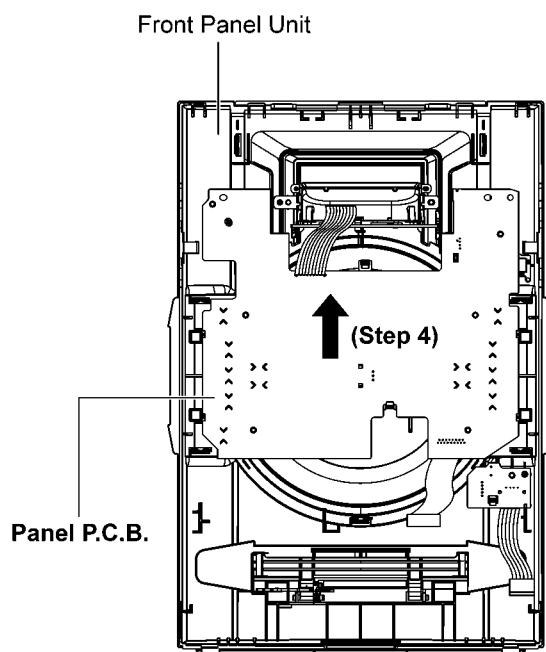

Step 5 Remove 2 screws.

Step 6 Remove Panel P.C.B. and LCD P.C.B..

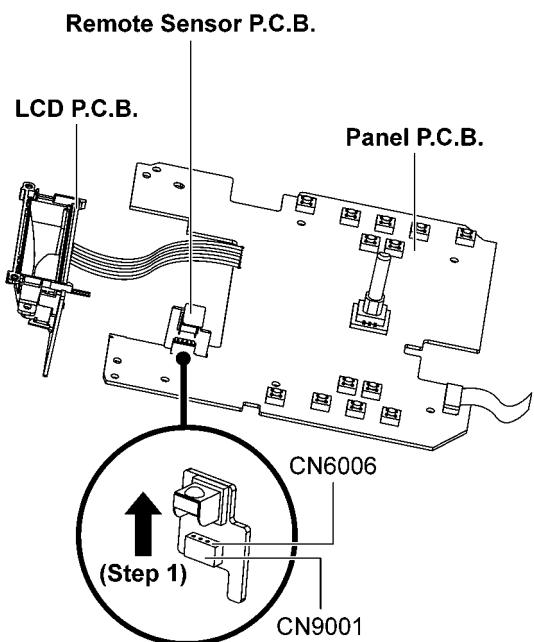

Step 4 Slightly lift up Panel P.C.B.

8.7. Disassembly of Remote Sensor P.C.B.

- Refer to "Disassembly of Top Cabinet".
- Refer to "Disassembly of Front Panel Unit".
- Refer to "Disassembly of Panel P.C.B. and LCD P.C.B.."

Step 1 Remove Remote Sensor P.C.B.

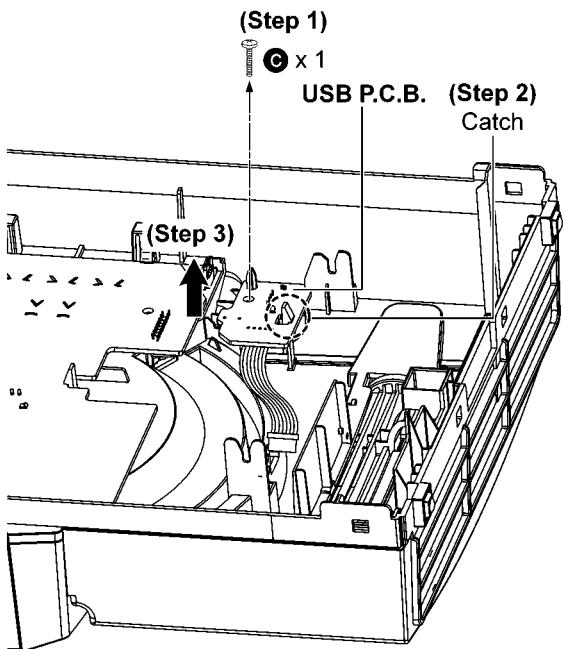

8.8. Disassembly of USB P.C.B.

- Refer to "Disassembly of Top Cabinet".
- Refer to "Disassembly of Front Panel Unit".
- Refer to "Disassembly of Panel P.C.B. and LCD P.C.B.".

Step 1 Remove screw.

Step 2 Release catch.

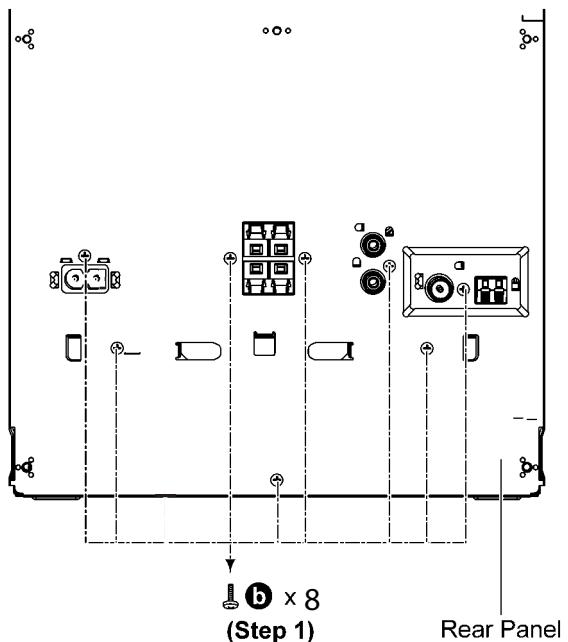

Step 3 Remove USB P.C.B..

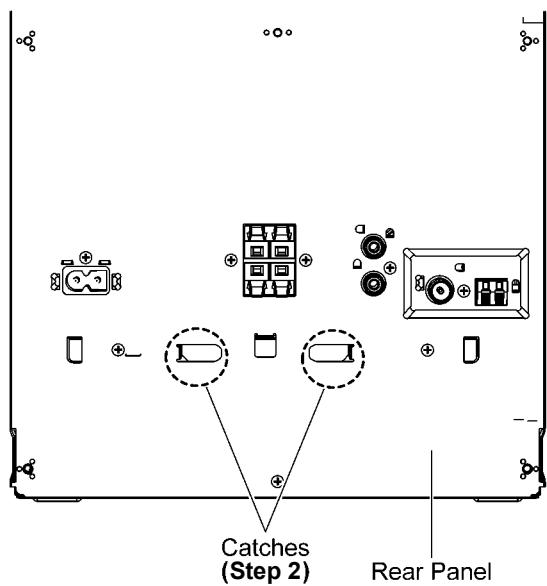

8.9. Disassembly of Rear Panel.

- Refer to "Disassembly of Top Cabinet".

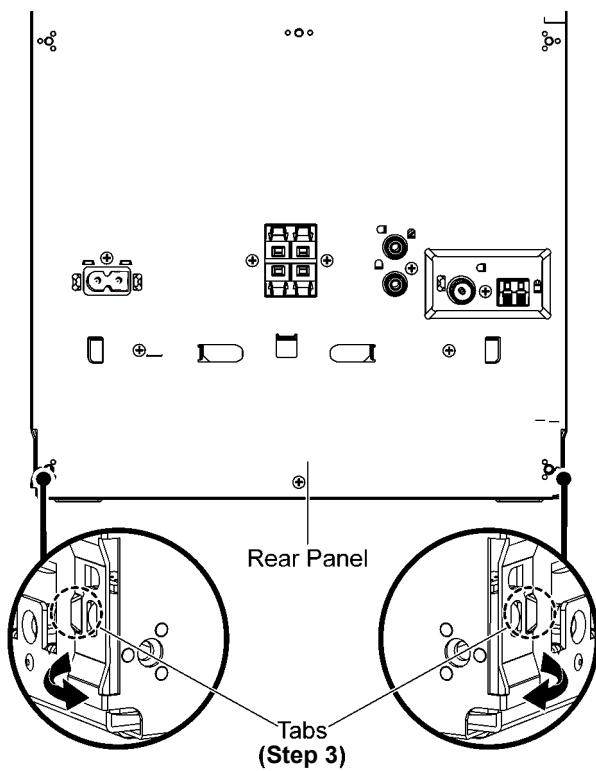

Step 1 Remove 8 screws.

Step 2 Lift up to detach Inner Chassis Unit.

Step 3 Release tabs.
Step 4 Remove Rear Panel.

8.10. Disassembly of Main P.C.B.

- Refer to "Disassembly of Top Cabinet".
- Refer to "Disassembly of Rear Panel".

Step 1 Detach 5P Wire at connector (CN2002) on Main P.C.B..
Step 2 Detach 17P FFC at connector (CN2000) on Main P.C.B..

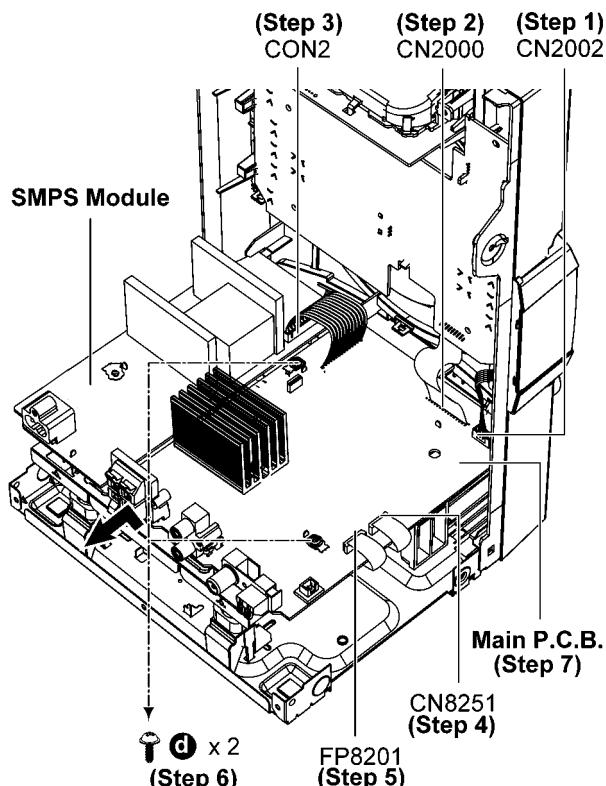

Step 3 Detach 13P Wire at connector (CON2) on SMPS Module.

Step 4 Detach 10P FFC at connector (CN8251) on Main P.C.B..

Step 5 Detach 24P FFC at connector (FP8201) on Main P.C.B..

Step 6 Remove 2 screws.

Step 7 Remove Main P.C.B..

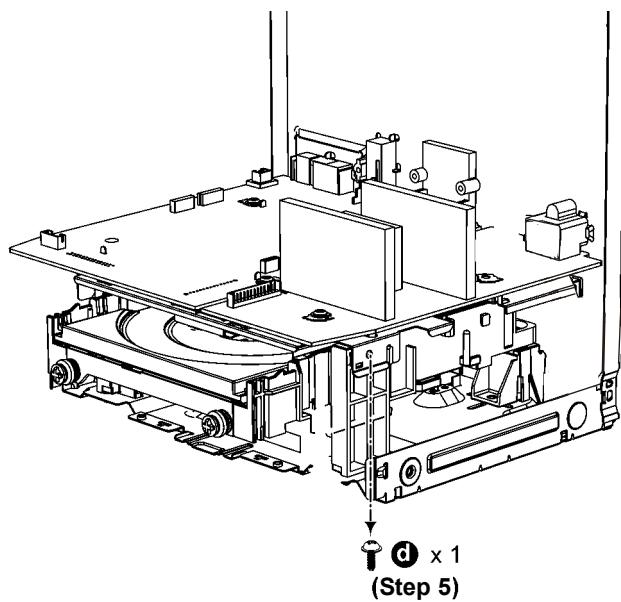

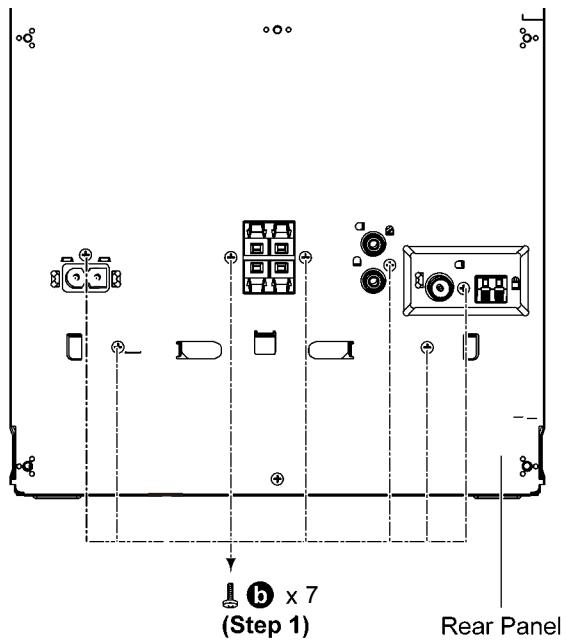

8.11. Disassembly of CD Mechanism Unit

Step 5 Remove screw.

- Refer to "Disassembly of Top Cabinet".
- Refer to "Disassembly of Front Panel Unit".

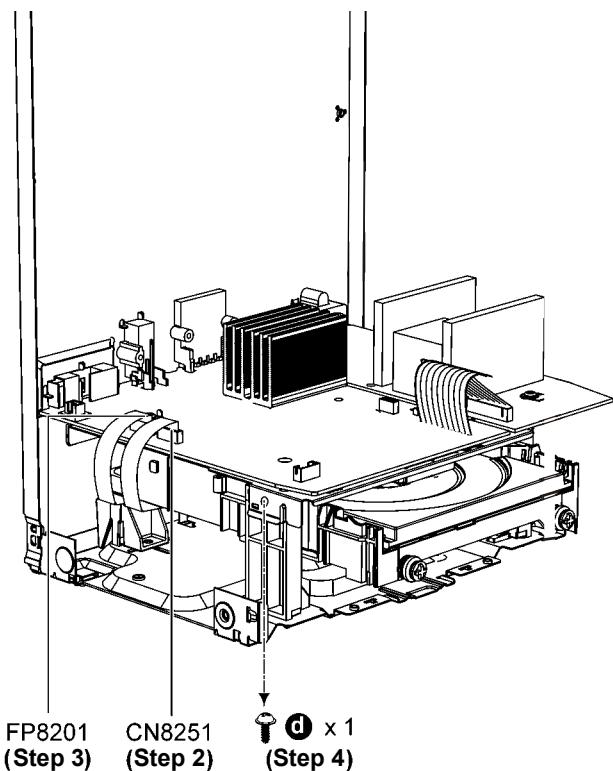

Step 1 Remove 7 screws.

Step 2 Detach 10P FFC at connector (CN8251) on Main P.C.B..

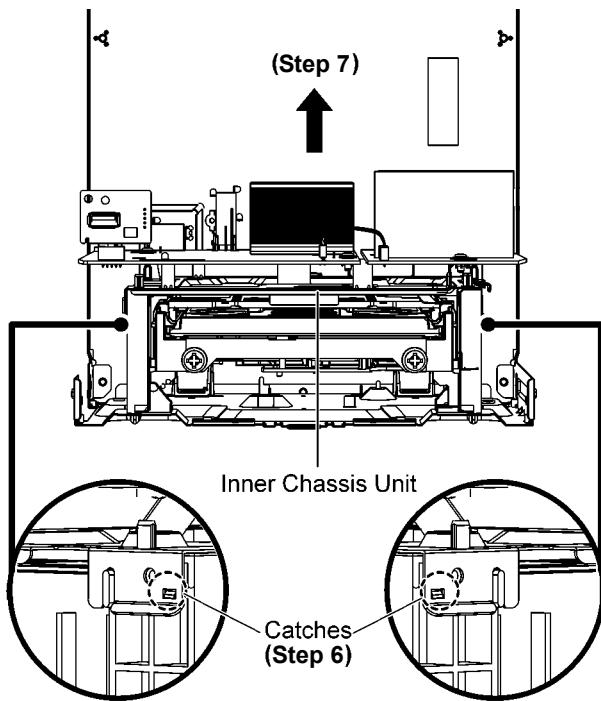

Step 3 Detach 24P FFC at connector (FP8201) on Main P.C.B..

Step 4 Remove screw.

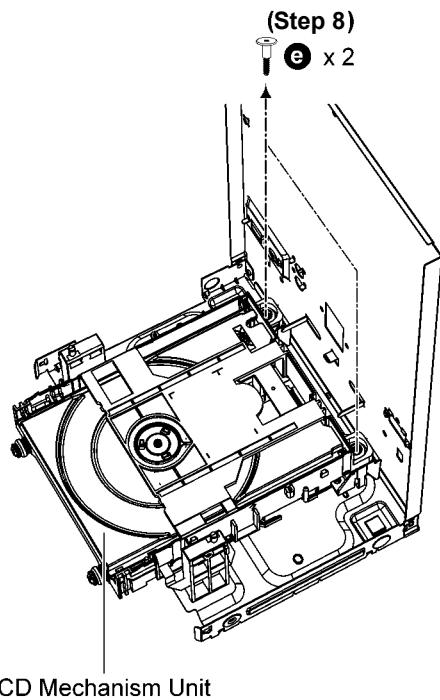

Step 6 Release catches.

Step 7 Lift up to remove Inner Chassis Unit..

Step 8 Remove 2 screws.

Step 9 Remove CD Mechanism Unit.

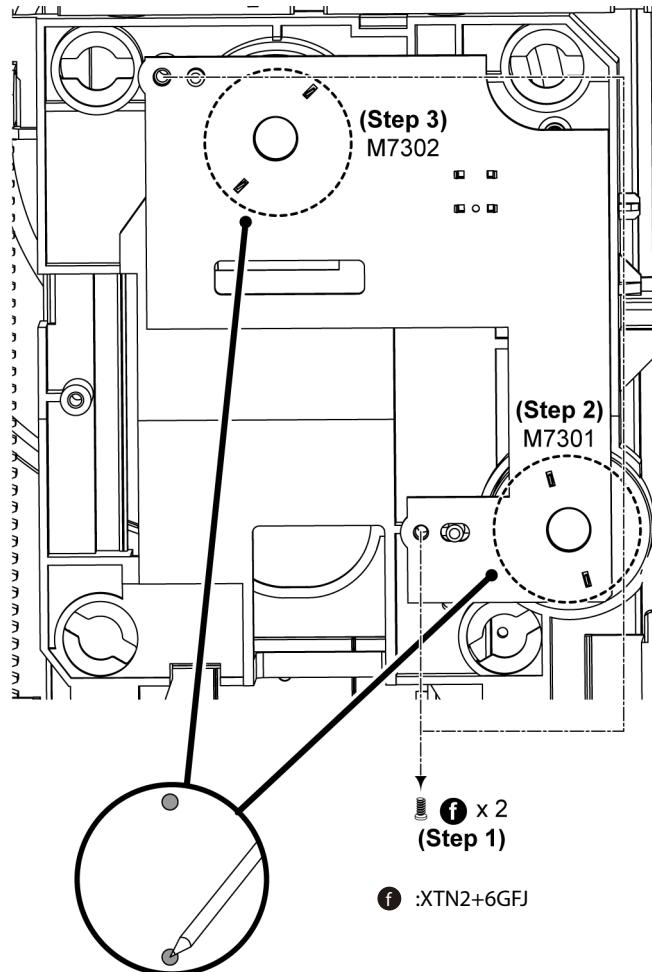

8.12. Disassembly of CD Interface P.C.B.

- Refer to "Disassembly of Top Cabinet".
- Refer to "Disassembly of Front Panel Unit".
- Refer to "Disassembly of CD Mechanism Unit".

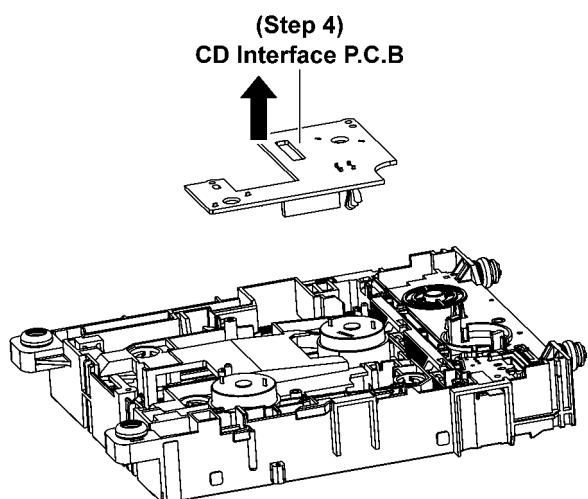

Step 1 Remove 2 screws.

Step 2 Desolder pins of the motor (M7301).

Step 3 Desolder pins of the motor (M7302).

Step 4 Remove CD Interface P.C.B..

9 Service Position

Note: For description of the disassembly procedures, see the Section 8.

9.1. Checking of Panel P.C.B. and LCD P.C.B.

Step 1 Remove Top Cabinet.

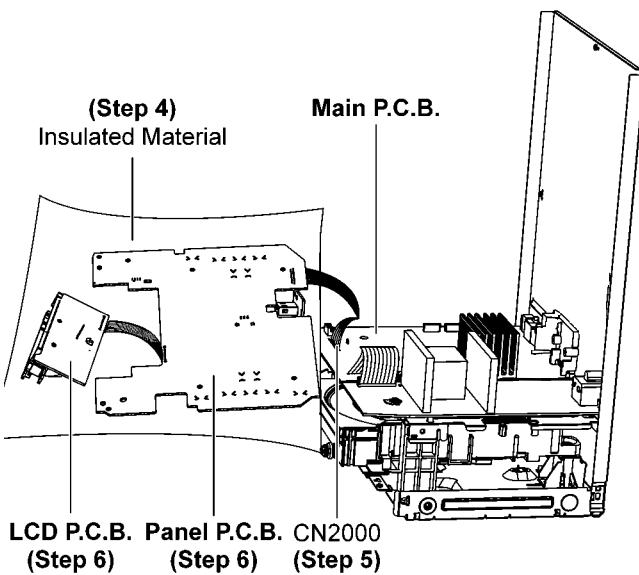

Step 2 Remove Front Panel Unit.

Step 3 Remove Panel P.C.B. and LCD P.C.B..

Step 4 Place Panel P.C.B. and LCD P.C.B. on the insulated material.

Step 5 Attach 17P FFC at connector (CN2000) on Main P.C.B. to Panel P.C.B..

Step 6 Panel P.C.B. and LCD P.C.B. can be checked at diagram shown.

9.2. Checking of Main P.C.B. and SMPS Module

Step 1 Remove Top Cabinet.

Step 2 Remove Front Panel Unit.

Step 3 Remove Rear Panel.

Step 4 Remove Main P.C.B..

Step 5 Remove SMPS Module

Step 6 Place Main P.C.B., SMPS Module on the insulated material.

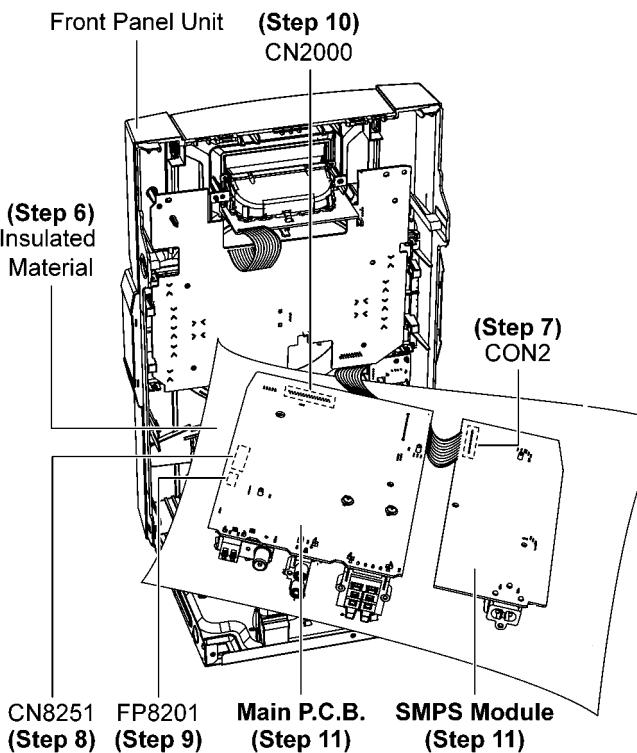

Step 7 Attach 13P Wire at connector (CON2) on SMPS Module.

Step 8 Attach 10P FFC at connector (CN8251) on Main P.C.B..

Step 9 Attach 24P FFC at connector (FP8201) on Main P.C.B..

Step 10 Attach 17P FFC at connector (CN2000) on Main P.C.B..

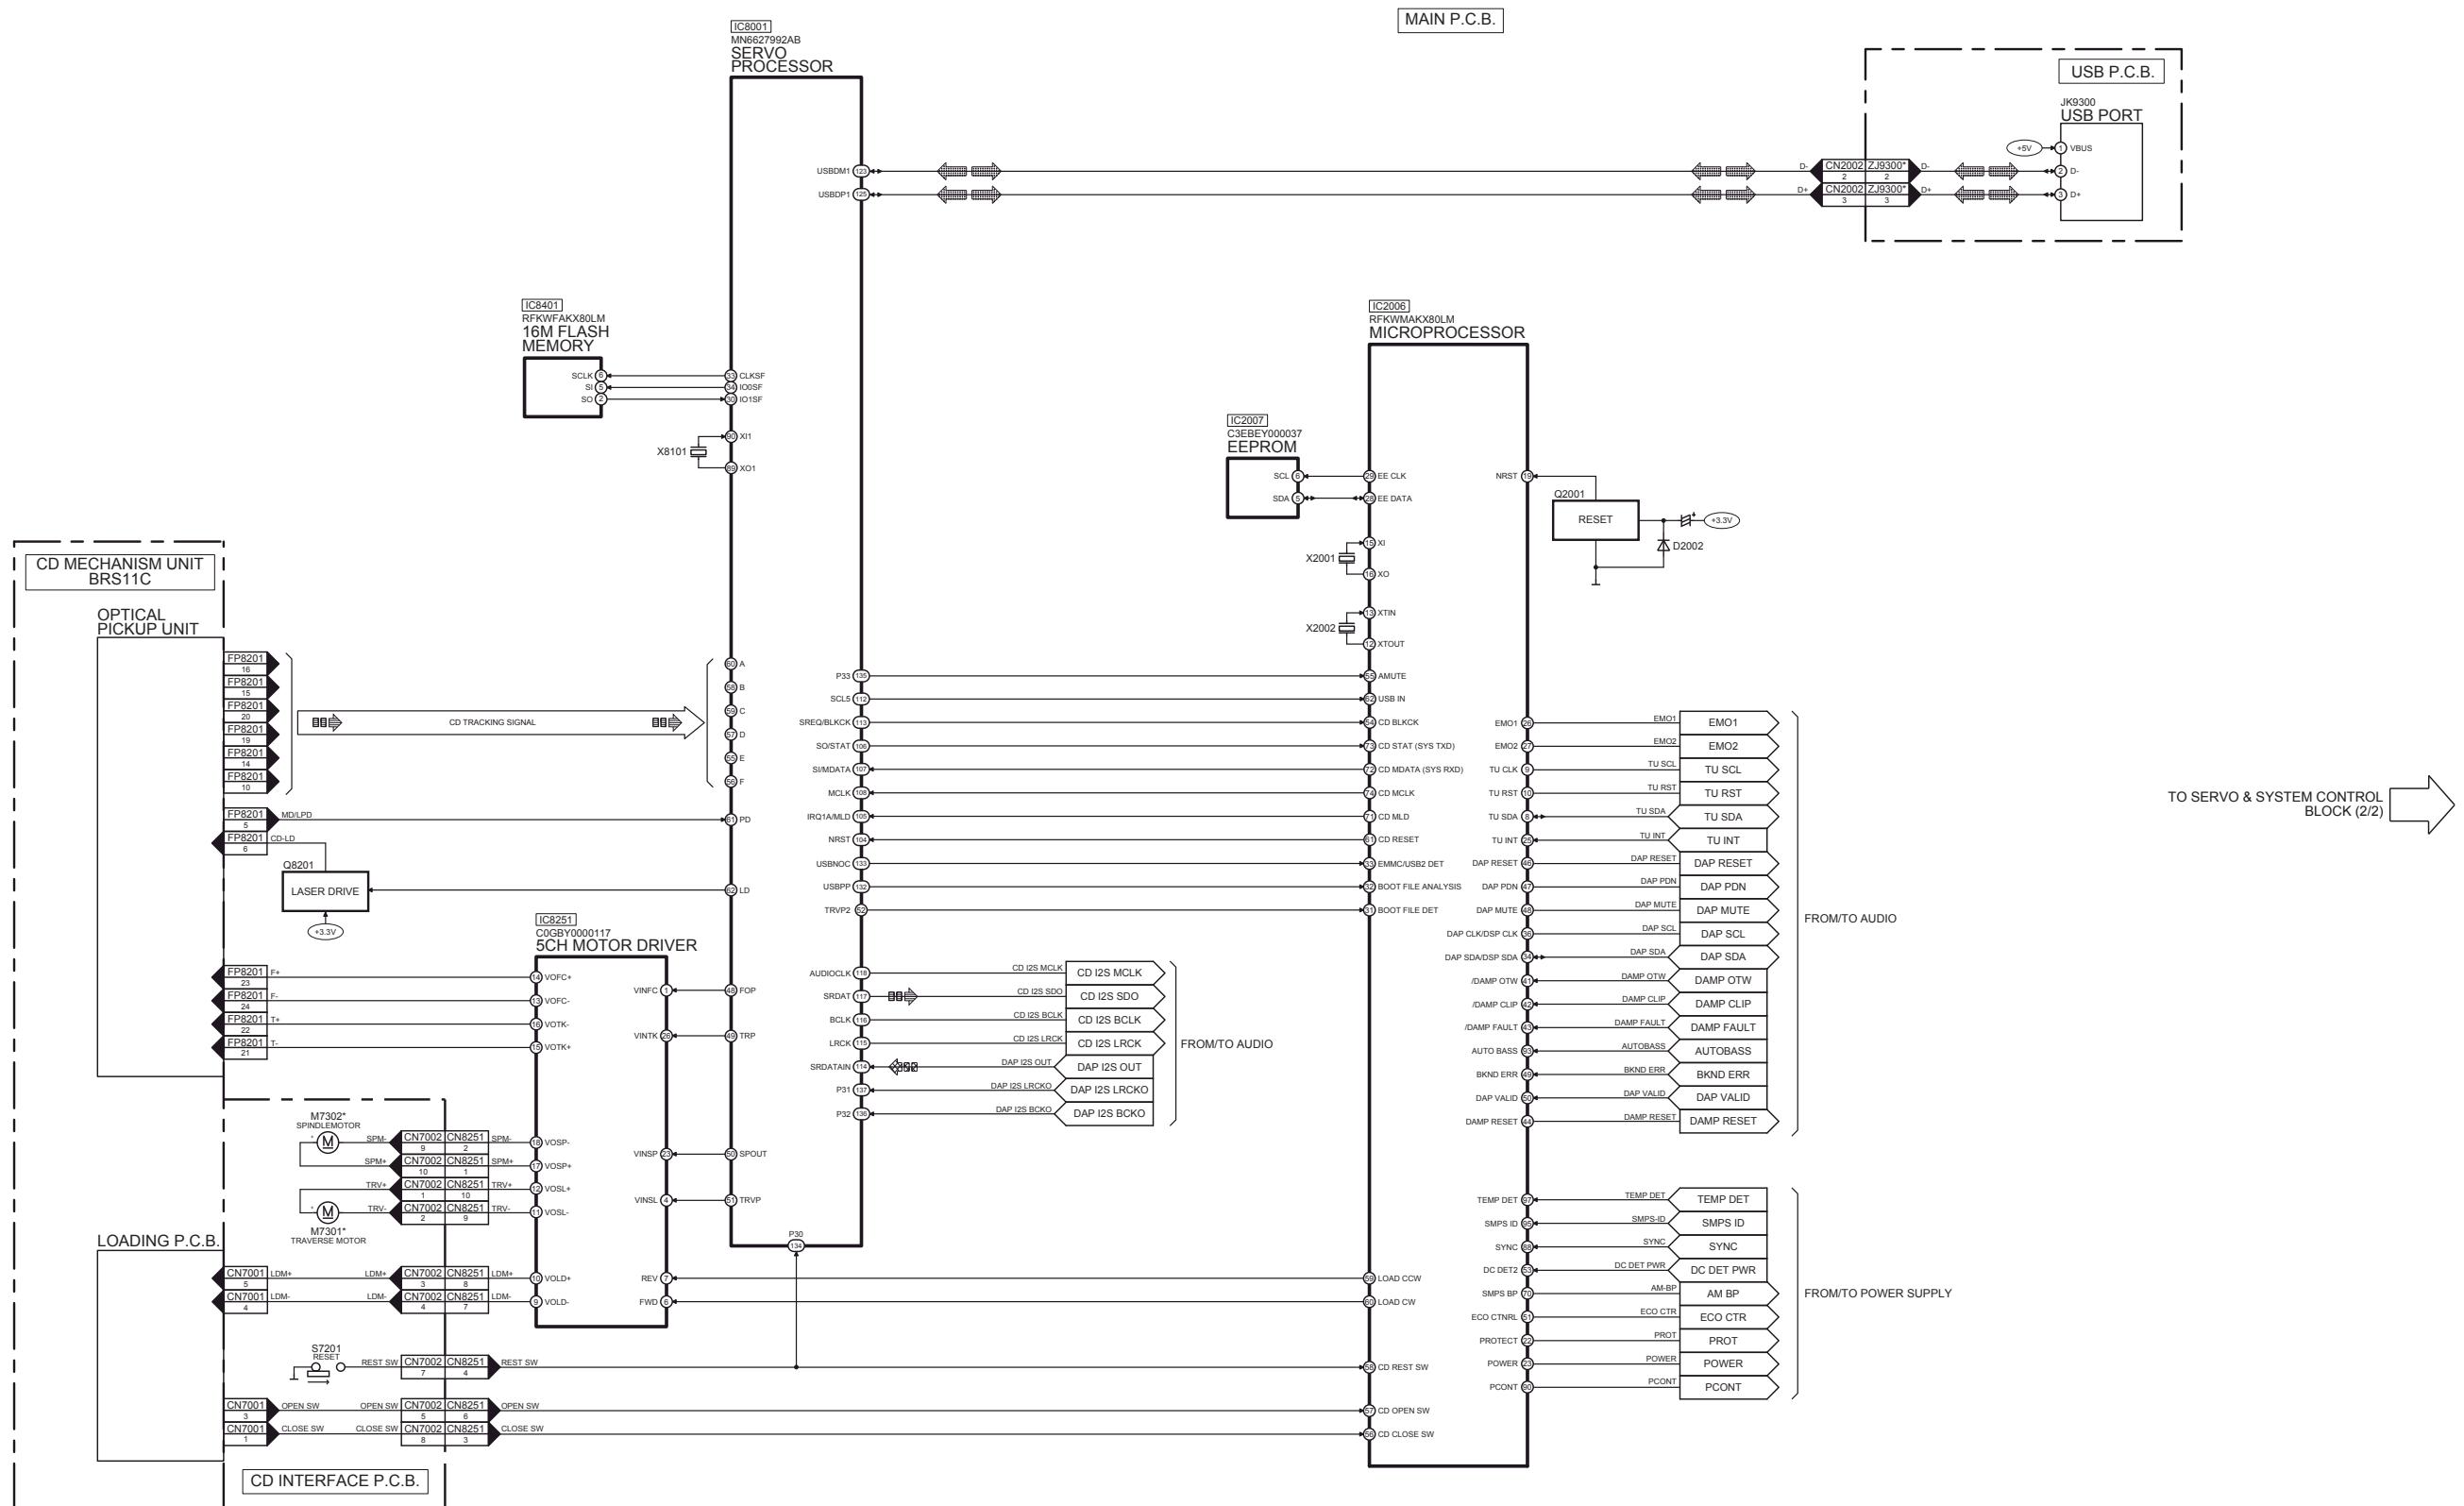

Step 11 Main P.C.B. and SMPS Module can be checked at diagram shown.
