ACCESSORIES

 AC power supply cord. . . . . 1 pc.	 FM indoor antenna. . . . . 1 pc.
 Power plug adaptor . . . . . 1 pc.	 AM loop antenna . . . . . 1 pc.
 Remote control transmitter. . . . . 1 pc.	 Antenna holder . . . . . 1 pc.
 Remote control batteries UM-4, AAA, R03. . . . . 2 pcs.	 Mounting screws. . . . . 2 pcs.

■ BEFORE REPAIR AND ADJUSTMENT

Disconnect AC power, discharge both Power Supply Capacitors C541 and C542 through a 10W, 5W resistor to ground.
DO NOT SHORT-CIRCUIT DIRECTLY (with a screwdriver blade, for instance), as this may destroy solid state devices.
After repairs are completed, restore power gradually using a variac, to avoid overcurrent.
Current consumption at NO SIGNAL mode should be within the following range :

110V	350 ~ 480 mA
127V	300 ~ 420 mA
220V	170 ~ 240 mA
240V	140 ~ 200 mA

■ PROTECTION CIRCUITRY

The protection circuitry may have operated if either of the following conditions are noticed :
- No sound is heard when the power is turned on.
- Sound stops during a performance.

The function of this circuitry is to prevent circuitry damage if, for example, the positive and negative speaker connection wires are "shorted", or if speaker systems with an impedance less than the indicated rated impedance of the amplifier are used.
If this occurs, follow the procedure outlines below :
1. Turn off the power.
2. Determine the cause of the problem and correct it.
3. Turn on the power once again after one minute.

Note :
When the protection circuitry functions, the unit will not operate unless the power is first turned off and then on again.
